3. Post-exilic observances.—The Samaritans continued to observe the detailed ordinances of Ex 12. But the Jews learned in time to disregard some of the details, as applicable only to the first or Egyptian Passover. Such details were the choice of the lamb on the tenth day, its slaughter at home, the sprinkling of the blood on the house-door, the admission of the unclean, the posture and attire of the partakers, etc. Various alterations and elaborations were introduced. The month Adar was devoted to a thorough purification of lands and houses, sepulchres being whitened, roads and bridges repaired. On the evening of 13th Abib all leaven was sought out. On the 14th the Passover was offered by indiscriminate companies of ten to twenty people. It was slain in relays at the Temple, and the blood thrown before the altar by the priests. The lambs were then dressed, and the fat offered, while the Levites chanted the Hallel (Pss 113–118). The lambs were taken home and roasted; each of the guests brought four **cups of red wine**, and the meal was eaten with **bitter herbs** and **unleavened cakes**. The posture at the meal was recumbent (as a token, according to the Pharisees, of the rest which God had given to His people). A blessing was said over the first cup (perhaps implied in Lk $22^{17\text{a}}$). Then followed the washing of hands and offering of prayer. At the second cup came the son's question as to the significance of the feast, and the father's explanation. This was succeeded by the singing of Pss 113 and 114. Grace was said over the third cup, and with the fourth came the singing of Pss 115–118. Large numbers assembled at Jerusalem for the feast, and such occasions were always carefully supervised by the Romans for fear of insurrection. Hence perhaps would come the custom of releasing a selected prisoner; but we have no hint of the origin of the custom.

PATARA.—A great seaport on the coast of Lycia, a few miles (60 stadia) SE. of the mouth of the Xanthus. The valley of this river is the best part of Lycia, and doubtless from early times Patara had a local trade, but

its importance depended on its convenient position for the trade between the West and the Levant. The prevailing winds in this part of the Mediterranean are from the west (especially in the autumn), and ships sailing from the Aegean or from Italy to Phoenicia or Egypt would often risk the voyage straight across the sea from Patara. Thus we find St. Paul on his last journey to Jerusalem (Ac 21^2), after coasting in a slow vessel along the Aegean, taking a vessel that was sailing straight from Patara to Tyre. Cf MYRA.

Lycia was never definitely colonized by Greeks, and the Lycians spoke a non-Aryan language, which they abandoned for Greek in the 3rd cent. B.C. when they were ruled by the Ptolemies. Patara had an early culture—its coins date from 400 B.C.—and the chief Lycian god was identified with Apollo, whose celebrated oracle at Patara gave him the title Patareus (Hor. *Od.* III. iv. 64). PATHEUS, 1 Es 9^{23} (AV, RV).—See PETHAHIAH, 2.

PATHROS (Is 11^{11}, Jer $44^{1, 15}$, Ezk 29^{14} 30^{14}).—The name of Upper Egypt, in Egyptian *p³-t³-rś*, 'the southland,' comprising both the Thebaid and Middle Egypt from somewhat S. of Memphis to Syene at the First Cataract. '**Miṣraim**' was generally limited to Lower Egypt, *i.e.* the Delta and some distance up the valley to include the nome of Memphis. This division of Egypt was very ancient, corresponding, at least roughly, to the two kingdoms before Menes. While Lower Egypt was familiar to both Greeks and Hebrews, Upper Egypt was comparatively unknown, as witness Herodotus' woeful ignorance of Egypt above the Fayyum, and Nahum's description of No-Amon (see No). Yet there is abundant evidence in the Aramaic papyri from Elephantine of an important settlement of Jews at the southernmost extremity at Syene before 525 B.C. (cf SYENE, ELEPHANTINE PAPYRI); and the passages in which Pathros is mentioned refer to Jews in the Upper Country more than half a century before that, after the destruction of Jerusalem. So also Greek and Phoenician mercenaries had reached Syene, and even *Abū Simbel*, far south in Nubia, in the 6th or 7th cent. B.C.: soldiers and traders of many nations must have passed frequently up and down the Nile in those days, yet without giving to their fellow-countrymen at home any clear idea of the Upper Country. In Gn 10^{14} the **Pathrusim** are the people of Pathros. They are represented as begotten of Egypt (*Miṣraim*).

F. Ll. G.

PATHRUSIM.—See PATHROS.

PATIENCE.—See LONGSUFFERING.

PATMOS.—An island W. of Caria, now called *Patino*, with an area of 16 square miles and a population of about 4000. In the Middle Ages its palms gained for it the title of Palmosa, but it is no longer fertile. Its Cyclopean remains show that it was very early inhabited. It is the traditional place to which **St. John** (q.v.) was banished by Domitian, and in which he wrote the Apocalypse (Rev 1^9). The 'Cave of the Apocalypse' is still shown in which the Apostle is said to have seen the visions. The chief remaining interest of the island is the monastery of St. John, founded in the 11th cent. It once contained a valuable library, from which was purchased in 1814 the 9th cent. codex of Plato now in the Bodleian. It also contained a number of Biblical MSS.

A. E. H.—F. C. G.

PATRIARCH.—This term is usually applied to (1) the antediluvian fathers of the human race; (2) the three great progenitors of Israel—Abraham, Isaac, Jacob (see separate articles); (3) in the NT it is extended to the sons of Jacob (Ac 7^{8f}), and to David (Ac 2^{29}).

PATRIMONY.—The meaning of the expression which stands in Dt 18^8 is very uncertain (see S. R. Driver, *Deut.* [*ICC*], p. 218). All that can be said is that it denotes some private source of income.

PATROBAS.—The name of a member of the Roman Church greeted by St. Paul in Ro 16^{14}.

PATROCLUS.—The father of Nicanor (2 Mac 8^9).

PATTERN.—This word is used to render several Hebrew and Greek terms in OT and NT, some of which denote a *model*, as in Ex $25^{9, 40}$ of the building model of the Tabernacle shown to Moses on the mount (cf Nu 8^4—a different original—and ARTS AND CRAFTS, 3), others a *copy* of the original model as He 8^5 RV (AV, RSV 'pattern'). See, for a full examination of the different passages, Hastings' *DB*, *s.v.* A. R. S. K.

PAU.—See PAI.

PAUL THE APOSTLE.—1. The Authorities.—The primary source for a reconstruction of the life of Paul is the corpus of epistles bearing his name, nine of which (Romans, 1 and 2 Corinthians, Galatians, Philippians, Colossians, 1 and 2 Thessalonians, Philemon) are now almost universally recognized as genuine. The authenticity of Ephesians is still a matter of dispute, but this letter contains little historical information and few of its theological ideas are without parallel in the other nine. The Pastoral Epistles, written by a disciple of Paul, may incorporate genuine fragments of Pauline correspondence, but provide no clear indication of the period of the apostle's life to which these fragments belong. The valuable evidence of the epistles, however, yields by itself no connected narrative, and for this we have to rely on the secondary source, the Acts of the Apostles. The collation of evidence from these two sources produces a number of acute problems, to which there is at present no agreed solution, and leaves some considerable gaps which we have no means of filling. Where there is a conflict, the primary source is to be preferred; but these conflicts are neither so frequent nor so serious as to impugn the general veracity of Acts. It must be assumed, however, that the speeches in Acts are Thucydidean, *i.e.* that they are free compositions by the author, based perhaps on tradition or reminiscence, in which he puts into the mouths of others words which he himself considers suitable to the speaker and to the occasion.

2. Early Life and Training.—The placard which was nailed to the Cross, written in Hebrew and Greek and Latin, is a constant reminder of the three streams of history and culture at whose meeting-place Christianity had its origin; and of all the early Christians Paul most clearly belonged to each of the three streams.

He was a Jew. His parents, with the Jewish enthusiasm for genealogies, could trace their descent back to the tribe of Benjamin, and had named their son Saul after the most famous member of that tribe (Ph 3^5). Although they lived outside of Palestine they had adopted the voluntary but rigorous discipline of the Pharisees, and brought their son up to live by the same rule (Ph 3^5, Ac 23^6 26^5). So successful were they in imparting to him their own devotion to the Law, that he went to Jerusalem to study under Gamaliel, one of the greatest of the 1st-cent. Rabbis (Ac 22^3), and there he managed to outstrip his contemporaries in zeal for the traditions of the past (Gal 1^{14}). He had a fierce pride of race which in later life was to survive the repeated onslaughts of his Jewish adversaries (Ro 9^{1-5}, 2 Co 11^{22}, Ph 3^5). His native language was Greek and he habitually read the Scriptures in the LXX version, but he could also speak fluent Aramaic (Ac 22^2). Throughout his epistles his Jewish antecedents make themselves apparent in his constant appeal to the OT, in his Rabbinic exegesis (*e.g.* Gal 4^{21-31}), in his use of midrashic legends (1 Co 10^4, Gal 4^{29}), in his apocalyptic expectations, and in the unquestioned assumptions of his theology.

He was a Greek. Tarsus in Cilicia, his native city (Ac 21^{39}), was a perfect example of the cosmopolitan Hellenism in which the classical culture of Greece had become blended with the unbridled vigour of the ancient Orient. It was a centre of commerce, situated on the great trade route which ran from the East through the Cilician Gates to the Aegean. It was a university city and the birthplace of some of the leading Stoic philosophers. Probably Paul never received a formal, Greek education—his upbringing was too strictly Jewish for

PAUL THE APOSTLE

that—but he certainly underwent the liberal education of life in a Greek city. As an Israelite he automatically divided mankind into Jews and Gentiles, but as a citizen of Tarsus he was equally accustomed to dividing them into Greeks and barbarians (Ro 1[14], Col 3[11]). Like Socrates, he belonged in the city and was a stranger to the countryside, so that most of his metaphors are drawn from city life—the stadium (1 Co 9[24], Ph 3[14]), the theatre (Ro 1[32], 1 Co 4[9]), the law-courts (Gal 4[1-2]), the processions (2 Co 2[14], Col 2[15]), the market (2 Co 1[22] 5[5]). Without betraying any profound influence of philosophy on his thinking, he nevertheless shows acquaintance with the terminology of Stoic popular teaching—'nature' (Ro 1[26] 2[14, 27] 11[24], 1 Co 11[14], Gal 2[15] 4[8]), 'conscience' (Ro 2[15] 9[1] 13[5], 1 Co 8[7, 10, 12] 10[25, 27ff], 2 Co 1[12] 4[2]), 'sufficiency' (2 Co 9[8], Ph 4[11]). He had some superficial familiarity with the language of the mystery cults (Ph 4[12]). In Tarsus, too, he must first have become aware of the darker side of city life, the moral corruption which, when he met it elsewhere, seemed to him to be the working out of God's wrath against idolatrous religion (Ro 1[18-32]).

He was a Roman. He had inherited the coveted Roman citizenship from his father, who presumably had been awarded it for outstanding public service (Ac 16[37] 22[25, 28]). As a Roman he must have had the threefold Roman name. His *praenomen* and *nomen* are unknown to us, but his *cognomen* was Paulus, the name by which he is most commonly called. His Roman citizenship was one of his most prized possessions, and he seems to have found it easy to be on good terms with Roman officials. He understood what Rome was trying to do for the world in providing a world-wide commonwealth of law, order, and peace, and not only approved of it as a task ordained by God (Ro 13[1-7]), but found in it the model for the Divine commonwealth to which his own aspirations reached forward (Ph 3[20]). During his missionary work he concentrated on the great centres of Roman influence and was not content until he reached Rome itself (Ro 1[13] 15[22-29]). All this powerfully suggests that he worked with a missionary strategy which aimed at nothing less than the winning of the Roman world for Christ ('Their voice has gone out to all the earth, and their words to the ends of the world,' Ro 10[18]). The vision of a united Empire under the sole dominion of Caesar had conjured up in his mind the corresponding vision of a single empire of the spirit in which Christ should reign until all his enemies submitted to his authority (1 Co 15[25]).

It has sometimes been supposed that Paul had an unhappy adolescence. This supposition has its basis in Ro 7, interpreted as an autobiographical account of an actual event in Paul's childhood, when his first awareness of the Law's demands brought to a close the age of innocence and condemned him to a perpetual and fruitless struggle with an uneasy conscience. Elsewhere, however, Paul gives us the impression that his pre-Christian life had been entirely free from guilty qualms and inner tension: 'I advanced in Judaism beyond many of my own age among my people, so extremely zealous was I for the traditions of my fathers' (Gal 1[14]); '... as to righteousness under the law blameless' (Ph 3[6]). It is likely, therefore, that Ro 7 represents not what Paul actually experienced in his youth but his pre-Christian life seen through Christian eyes, a Christian evaluation of the unregenerate life, described in terms reminiscent of the fall of Adam. In this case we have no reason to suppose that Paul the Jew had any other than the normal Jewish experience of rejoicing in the Law of the Lord and of self-congratulation at his place in the Divine favour (Ro 2[17-20]). It was not dissatisfaction with the Law that prepared the way for the experience of Christ; rather, it was Christ who for the first time revealed to him the inadequacy of the Law.

3. Conversion.—Even as a Pharisee Paul must have had some acquaintance with the Christian church and its teaching. It is, indeed, unlikely that he ever saw Jesus during His earthly ministry—his remark about having known Christ after the flesh is correctly interpreted by the RSV to mean that his former estimate of Christ had been based on worldly standards (2 Co 5[16]). But he became a violent persecutor of the church, and no man persecutes anything unless he knows enough about it to fan the flames of his hatred (Gal 1[13], Ph 3[6] Ac 8[3]). He must have had opportunity to hear Christians on trial examined concerning the nature of their beliefs. Above all we know that he listened to Stephen and approved of his death. At this time his attitude to Christianity was plain and uncompromising. He believed that Jesus had been condemned—and justly—as a blasphemer and a breaker of the Law. Convinced of the reality of God's justice, he saw in the Cross the seal of Divine disapproval on an ungodly life, the proof of the curse of God which rests on the condemned criminal (Dt 21[23], Gal 3[13]). As long as the Jerusalem church was content to remain loyally within the framework of Judaism, observing the Law and attending Temple and synagogue, Paul could afford to acquiesce in Gamaliel's policy of leaving the new movement to the judgment of history (Ac 5[38-39]). But when Stephen began to develop those aspects of the teaching of Jesus which had earned him the enmity of the Pharisees, Paul determined that the Christian Way was a menace to all that he counted most dear.

No doubt Paul's conversion was prepared by his contact with Christians, by the logic of their Scriptural arguments, by the dynamic quality of their lives, by their confidence and fortitude under persecution. Luke clearly indicates his own opinion that the martyrdom of Stephen led straight to the conversion of Paul (Ac 8[1-3] 9[1-9]; cf Bengel: 'Si Stephanus non orasset, Ecclesia Paulum non habuisset'). But according to Paul himself, as well as the three accounts in Acts (9[1-9] 22[3-16] 26[4-18]), the episode on the road to Damascus was a great act of God which by itself sufficiently explained the change it produced in his life. God the Creator who had said, 'Let there be light,' had performed a new act of creation (2 Co 4[6] 5[17]). He 'was pleased to reveal his Son in me' (Gal 1[16]). Christ had arrested him and made him His own (Ph 3[12]). Christ had appeared to him, not in a vision which could be classed with Paul's later visions and ecstasies (2 Co 12[1-4], Ac 16[9]), but in an event which was comparable to the resurrection appearances to Peter, James, and the other apostles (1 Co 15[3-8]).

This event produced in Paul three convictions which were to dominate his thoughts and actions from that time forward. He was convinced that Christ was alive and that he must therefore revise his whole estimate of Christ's life and teaching and especially of his death: and out of this profound disturbance of his religious assumptions came his gospel of Christ crucified (Gal 1[11-12]). He was convinced that God had called him to be an apostle and throughout his life he constantly reiterated that his apostleship was neither of human origin nor received through human mediation (Gal 1[1], Ro 1[1, 5], 1 Co 1[1] 9[1] 15[10]). He was convinced that the purpose of his call was to bring in the Gentiles into the new people of God (Ro 11[13] 15[16], Gal 1[16] 2[7], Eph 3[8]). In the three accounts of Paul's conversion in Acts, three different versions of this commission are given: in Ac 9 the call to preach to the Gentiles is given through Ananias at Damascus; in Ac 22 it comes in a subsequent vision in the Temple at Jerusalem; in Ac 26 it is spoken by the Lord Himself as Paul lay by the roadside, blinded by the light from heaven. But these variations do not really conflict with Paul's settled habit of associating his call as apostle to the Gentiles with his conversion.

4. From Damascus to Antioch.—The immediate sequel to Paul's conversion involves one of the problems already mentioned. Paul tells us that the three years prior to his first Jerusalem visit were spent partly in Arabia (Nabataea?) and partly in Damascus (Gal 1[17-18]). In Acts we are told that a prolonged stay in Damascus was brought to an end by a Jewish plot, from which Paul escaped by being lowered over the wall in a basket (9[23-25]). In another letter Paul mentions this incident without associating it with any definite period of his

career, but seems to imply that it happened at a time when Damascus was under the rule of the Nabataean king Aretas (2 Co 11[32]). Damascene coinage proves that in A.D. 33–34 the city was under the direct rule of Rome, and in view of Aretas' feud with Tiberius many scholars have felt it to be unlikely that it should have been transferred to him before the accession of Caligula in A.D. 37; but to place Paul's first visit to Jerusalem as late as this involves serious difficulties for the chronology of his subsequent career, and is unjustifiable on such problematic evidence.

After a brief visit to Jerusalem (Gal 1[18–19], Ac 9[26–30]) he returned to his native province, and there for a time we lose sight of him. But in view of his forceful character, his apostolic commission, and his explicit statement in Gal 1[21–23], we can assume that these years were packed full of missionary activity in Syria and Cilicia. Almost certainly we must allocate to this period many of the hardships and trials enumerated in 2 Co 11[23–27], which must have occurred before the writing of the epistle in A.D. 56, but which cannot reasonably be fitted into the detailed account of the missionary journeys in Acts. The visionary experience of 2 Co 12[1–4] also belongs to this period. These 'hidden years' came to an end when Barnabas arrived in Tarsus to invite Paul to return with him to Antioch to help lead the Gentile mission which had spontaneously opened up in that city (Ac 11[25–26]).

5. The Second Visit to Jerusalem [A.D. 46?].—At this point we are confronted with the most puzzling of all Pauline conundrums, the question of his visits to Jerusalem. Acts recounts five visits in all (9[26] 11[30] 15[2] 18[22] 21[15]), while Paul, writing to the Galatians an exhaustive list of his contacts with other apostles, mentions only two (Gal 1[18] 2[1]). In spite of minor differences we have already equated the first visit in Galatians with the first visit in Acts, but the second visit in Galatians has been variously identified with the second, third or fourth visit in Acts. On the whole it may be said that the equation of Gal 2[1] with Ac 11[30] is the simplest solution which leaves fewest loose ends and results in the most satisfactory and convincing reconstruction of events; and this is the solution here adopted.

According to this theory, then, the admission of Gentiles to full membership of the Christian fellowship at Antioch raised in the minds of some of their Jewish-Christian brethren a question about the conditions of church membership, a group of them holding the opinion that before a Gentile could become a Christian he must first become a Jew by the rite of circumcision. Paul and Barnabas, having been commissioned by the church in Antioch to carry a famine relief fund to Jerusalem (Ac 11[30]), took the opportunity to hold a private conference with Peter, James and John, where Paul expounded his gospel of justification by faith in Christ crucified, which left no room for the Law as a way of salvation; and the Jerusalem apostles agreed that this was substantially the same gospel as their own and that Gentile converts should not be required to submit to the regulations of the Jewish Law (Gal 2[1–10]).

This private agreement between the apostles did not, however, solve the problem of social contact between Jewish and Gentile Christians, since a Jew could not eat with a Gentile without incurring ceremonial defilement, unless the Gentile had himself avoided defilement by observing certain provisions of the Law. The church in Antioch solved the problem by ignoring it, and Jew and Gentile joined in the fellowship meals and communion services of the one church, a practice which had the support of Barnabas and Peter as well as Paul. But when news of this reached Jerusalem, it proved an embarrassment to the church there, which was desperately trying by meticulous observance of the Law to keep open the possibility of missionary work among the Jews. Some members of the Jerusalem church came to Antioch to suggest that the embarrassment could be avoided if Jewish and Gentile Christians would hold separate meals and separate celebrations of the Lord's Supper. Peter and Barnabas agreed, but Paul resisted the proposal on the ground that it was tantamount to forcing the Gentiles to accept Jewish practices, since even this would be preferable to a breach in the fellowship of the one body of Christ (Gal 2[11–14]). This controversy necessitated a further conference to decide the terms on which Jewish and Gentile Christians could enter into table-fellowship without involving the Jewish Christians in a violation of their national tradition; and such a conference is described in Ac 15.

6. The First Missionary Journey, Ac 13–14 [A.D. 47–48].—In the meantime the church of Antioch, under prophetic guidance (Ac 13[1–3]; cf 1 P 1[12], Eph 3[5–6]), decided to embark on a new programme of missionary expansion throughout the Gentile world, and commissioned Paul and Barnabas as their first missionaries. Taking with them Barnabas's cousin, John Mark (Col 4[10]), they set out for Barnabas's native Cyprus (Ac 4[36]) and traversed it from Salamis to Paphos, where they had an interview with the governor, Sergius Paulus (Ac 13[4–13]). Crossing to the mainland of Pamphylia, they landed at Perga. Here Mark left them to return home, perhaps because he had agreed to go only to Cyprus and had not bargained for any further extension of the tour; whatever his reasons may have been, Paul regarded his departure as a desertion (Ac 15[38]).

We do not know what Paul's intentions were at this point, though in view of his subsequent career it is reasonable to suppose that he was heading for the cities of the Aegean seaboard. Assuming the S. Galatian theory to be sound, however, we can say that at Perga he suffered an illness which compelled him to change his plans and to go for the sake of his health into the highlands of Pisidia (Gal 4[13]). This was probably a bout of a recurring illness which he refers to elsewhere as his 'thorn in the flesh' (2 Co 12[7]). The once common suggestion that it was epilepsy has nothing to commend it; Ramsay's suggestion of malaria is much more plausible.

The revised plan brought the apostles first to the Roman colony of Antioch, where Paul formulated what was to be his regular missionary practice, preaching first in the synagogue, until this was made impossible by Jewish hostility, and then concentrating on a mission to the Gentiles (Ac 13[46] 17[2] 18[6] 19[8–10], Ro 1[16]). Persecution drove them on to Iconium, where they were able to preach for a long time before a threat of violence caused them to continue their journey. At Lystra they were first mistaken for local deities, but subsequently Paul was stoned and left for dead. Only at Derbe were they allowed to work unmolested. But the threats must have been short-lived, for they were able to return on their tracks and visit again all the churches they had founded, before returning to their base at Antioch.

This tour was followed by a third visit to Jerusalem for the Apostolic Council (Ac 15), which, unlike the private discussion described in Gal 2[1–10], was a public meeting of the whole Jerusalem church. According to Acts, this meeting began by opening again the debate about circumcision which the apostles had already settled among themselves, but ended with the issuing of a statement concerning the terms of table-fellowship between Jewish and Gentile Christians. The Gentiles were asked to meet their Jewish brethren halfway by observing certain of the Jewish rules of ceremonial purity.

7. The Second Missionary Journey, Ac 15[36]–18[22] [A.D. 49–52].—When a new missionary tour was projected, a sharp quarrel arose, because Barnabas wished to take Mark with them and Paul refused to do so on account of his earlier defection. Accordingly, Barnabas and Mark set out for Cyprus and Paul chose as his new companion Silas, a Jerusalem Christian who had had a share in drawing up the official statement of the Apostolic Council (Ac 15[28]). Apart from his other accomplishments Silas had one very useful qualification that, like Paul himself, he was a Roman citizen (Ac 16[37]). Paul was accustomed to refer to him by his Roman name Silvanus (1 Th 1[1], 2 Th 1[1]).

The missionaries first visited the churches of Syria and

Cilicia and then crossed the Taurus by the Cilician Gates to Derbe and Lystra, where they were joined by Timothy, a young Christian of mixed Jewish and Greek parentage. Paul now intended (for the second time?) to carry his missionary activity into the rich province of Asia, but was 'forbidden by the Holy Spirit' (Ac 16[6]), speaking perhaps by the mouth of the prophetic Silas. They therefore turned N. through that part of the old kingdom of Phrygia which now belonged to the Roman province of Galatia, making for the large Roman cities on the Black Sea coast. (On the N. Galatian theory they made a lengthy detour through the territory which was ethnically Galatian, inhabited by tribes which had broken away from the main Celtic migration into Europe, and there founded the churches to which the Epistle to the Galatians was later written. This theory grew up in the early patristic period when the boundaries of the province of Galatia had been altered to exclude the southern territory in which Antioch, Iconium, Lystra and Derbe were situated, so that it did not occur to the fathers that the Epistle to the Galatians could have been written to the churches in these towns.) At the borders of Bithynia the Spirit again intervened to bar their further advance, and they turned westward to Troas, where Paul had his vision of a man of Macedonia asking him to come and help them. At this point the narrative of Acts changes from the third to the first person, which is usually taken to mean that the author here joined the party (16[10]).

The Macedonian mission began at the Roman colony of Philippi, where a church was founded which of all Paul's churches was to give him most satisfaction and least anxiety. It was also the only church that attempted to share in his missionary work by making contributions to his travelling expenses (Ph 4[15–16]). The work here, however, was interrupted by the cure of a clairvoyant slave-girl whose masters brought against Paul and Silas a charge of non-Roman activities, though the real reason for their enmity was financial. The missionaries made their escape by appealing to their Roman citizenship and moved on to Thessalonica. Here they were able to preach for three weeks in the synagogue before the Jews incited the city mob to an anti-Christian riot and lodged a charge of treason against Paul, Silas and their host, Jason. At Beroea there seemed to be a better chance of success (Luke rather naïvely remarks that there was a better class of Jews there), had not the Jews of Thessalonica pursued them there with accusations.

Paul now proceeded alone to Athens where he preached before the Council of the Areopagus and won a mere handful of converts, including one member of the Council. It has been thought that Paul's failure to found a church at Athens was due to an attempt on his part to resort to philosophic arguments to convince the educated Athenians, and that at Corinth he forswore this mistaken strategy and 'decided to know nothing among you except Jesus Christ and him crucified' (1 Co 2[2]). But this theory depends on the very doubtful assumption that the speech assigned to him in Acts is an accurate report of what he said and not a free composition of the author, after the manner of the Greek historians. A much more likely explanation is that Paul was sick with anxiety about the church of Thessalonica which he had been forced to abandon to the threat of imminent persecution (cf his anxiety about the church of Corinth which prevented him from grasping an opportunity for effective work at Troas, 2 Co 2[12–13]), and that he also had an attack of his recurrent illness. He tells us (1 Th 2[18]) that at Athens he repeatedly formed the intention of returning to Thessalonica but was hindered by Satan (cf 2 Co 12[7], 'a thorn was given to me in the flesh, a messenger of Satan'). He had been joined at this time by Timothy, but so great was his distress of mind that he was 'willing to be left behind at Athens alone'—a small concession if he had been fit, but a very large one for a sick man—and sent Timothy back to Thessalonica to discover what the situation there actually was.

As soon as he was able Paul went on to Corinth 'in weakness and in much fear and trembling' (1 Co 2[3]).

PAUL THE APOSTLE

Here he found lodgings with a Jewish couple, Aquila and Priscilla, who, like himself, were tent-makers, and who were to be among his most intimate friends. Under an edict of Claudius in A.D. 49 they had been compelled, along with other Jews, to leave Rome. Nothing is said about their being converted by Paul; on the contrary, when we next hear of them at Ephesus, they are already instructing Apollos in the Christian faith. We must assume, therefore, that they were Christians before they came to Corinth and that there was a church in Rome before A.D. 49.

Before long Silas and Timothy arrived in Corinth bringing a report from Thessalonica. In general the report was better than Paul had dared to expect, but there were one or two disquieting features about it. The Jews were now trying to undermine Paul's work by a campaign of systematic slander, insinuating that his preaching was based on hallucinations and moral corruption, that he was a charlatan, a smooth-tongued rascal whose motives were gain and self-assertion (1 Th 2[3–6]). Within the church Paul's preaching about the return of Christ had caused some confusion and perplexity. On hearing this news Paul wrote his first letter to the Thessalonians, and some weeks later, when his messenger reported that the nervous anticipation of the Parousia had become more serious, he wrote a second letter in a sterner vein.

Altogether, Paul remained a little over eighteen months in Corinth. Towards the end of this period an event occurred which is of great importance for us, because it provides us with our only certain date in the life of Paul. When Gallio became proconsul of Achaea, the Jews laid before him an accusation against Paul. The Gallio inscription at Delphi provides enough data to show that Gallio must have entered on his year of office on July 1, A.D. 51. Paul, then, must have arrived in Corinth in the early months of A.D. 50. Shortly after the dismissal of his case he left the city to travel via Ephesus to Caesarea, to pay his fourth visit to Jerusalem, and to remain for a brief period at Antioch.

8. The Third Missionary Journey, Ac 18[23]–21[16] [A.D. 52–57].—After a prolonged tour through Galatia and Phrygia Paul came at last to Ephesus, which he made his headquarters for almost three years. The only incidents which Acts assigns to this period are daily lectures in the school of Tyrannus, the discomfiture of a Jewish exorcist and his seven sons, and a riot provoked by the guild of metalworkers because they found that Paul's preaching was adversely affecting their trade. We can, however, fill in a few more details from the epistles. At some time during these three years Paul was 'utterly, unbearably crushed,' whether by illness or persecution, so that he 'despaired of life itself' and felt that he 'had received the sentence of death' (2 Co 1[8–10]). On this or some other occasion Aquila and Priscilla 'risked their necks for my life' (Ro 16[3]). In 2 Co 11[23] Paul refers to repeated imprisonments and elsewhere speaks of kinsmen who have shared a prison cell with him (Ro 16[7]). One or more of these imprisonments must have occurred during his Ephesian mission.

During this same three-year period Paul had prolonged and complex dealings with the church in Corinth. First he wrote a letter to the church which has not survived (1 Co 5[9]), unless a fragment of it is preserved in 2 Co 6[14–7]1. In reply he received a letter from the church (1 Co 7[1]), asking for instruction on a number of difficult subjects—marriage and divorce, the eating of meat which had been sacrificed to a pagan god, the veiling of women, speaking with tongues, and the resurrection of the body. At about the same time he had some visitors from Corinth whom he calls 'Chloe's people' (1 Co 1[11]), who reported the existence of serious disorders in the church—the division of the congregation into rival factions, tolerance of blatant immorality, litigation between church members in the public lawcourts, and unseemly conduct at the Lord's Supper. To deal with all this Paul wrote a second letter which we know as 1 Corinthians. Next, there arrived in Corinth with

letters of recommendation from another church (perhaps Jerusalem) certain men whom Paul was to describe in the heat of argument as 'super-apostles' (2 Co 3^1 11^5). The result of their coming was the growth of opposition to Paul's authority and criticism of his doctrine, and the disturbance seems to have had its centre in one man (2 Co 2^{5-11}). On hearing of this Paul changed his plans. He had intended to spend the following summer travelling through Macedonia to Corinth, there to make another prolonged stay. Now instead he paid a flying visit, presumably by sea. He calls it a 'painful visit' (2 Co 2^1 13^1), which suggests that it was not a success. His opponents taunted him with being humble when face to face and bold when away, and said, 'His letters are weighty and strong, but his bodily presence is weak, and his speech of no account' (2 Co $10^{1, 10}$). Having returned in chagrin to Ephesus, Paul wrote a third letter, a severe and bitter letter full of angry reproaches, sent it off by the hand of Titus, and immediately regretted that he had done so (2 Co 2^{1-4} 7^8). Some scholars think that 2 Co 10–13 is a part of this letter. Titus had been told to return by the overland route, and Paul was so anxious that he set out to meet him at Troas. Not finding him there, he pressed on to Macedonia, and there Titus met him with the news that the troubles in Corinth were now satisfactorily resolved. In a fervour of affection and gratitude Paul wrote his fourth letter, which is 2 Corinthians (with or without chs. 10–13).

Another activity to which Paul had devoted much thought and energy since his last visit to Palestine was the organizing of a collection for the relief of the penurious church of Jerusalem. Galatia, Asia, Macedonia, and Achaea were all included (1 Co 16^{1-4}, 2 Co 8–9, Ro 15^{25-32}). Paul set great store by this collection as a symbol of church unity, believing that it would bring home to his converts their debt to the mother church and their responsibility towards her, and that it would prove to the sceptical Christians of Jerusalem the value of his Gentile mission.

Perhaps it was during his journey through Macedonia that Paul made the excursion into Illyricum to which he refers in Ro 15^{19} (cf Tit 3^{12}). Here we are in the realm of conjecture. But we know that he arrived in Corinth for his final visit early in A.D. 57 and during his three months' stay wrote the Epistle to the Romans. [See CHRONOLOGY OF THE NEW TESTAMENT.] This was the only letter he ever wrote to a church which neither he nor his associates had founded, and he had a special reason for writing it. He had long desired to visit Rome and now had hopes of realizing his desire. His immediate purpose was to travel to Jerusalem along with the representatives of the churches who were to carry the collection, but once this duty had been discharged he intended to go to Rome and hoped that the Roman Church would sponsor him on a new missionary venture in Spain (Ro 1^{11-15} 15^{23-24}). To this end he wrote, setting before the church a systematic exposition of the gospel which he preached.

After leaving Corinth, Paul celebrated the Passover at Philippi and completed the rest of his journey in haste, so as to be in Jerusalem by Pentecost (Ac $20^{6, 16}$). He was accompanied by the representatives of the churches, Sopater of Beroea, Aristarchus and Secundus of Thessalonica, Tychicus and Trophimus from Asia, Gaius of Derbe and Timothy of Lystra, together with Luke who perhaps was the representative of Philippi. They held a midnight Eucharist at Troas, at which a young man named Eutychus fell unharmed from an upstairs window; had a farewell meeting with the elders of Ephesus at Miletus, stayed for a week at Caesarea with Philip the evangelist; and so came to Jerusalem.

9. Arrest and Imprisonment, Ac 21^{17}–28^{31} [A.D. 57–62].—On the advice of James, Paul attempted to allay Jewish suspicions by undertaking a vow in company with four Jerusalem Christians and paying their Temple expenses. But the advice turned out badly, for some Jewish pilgrims from Asia found him in the Temple, having previously seen him in the city accompanied by Trophimus of Ephesus, whom they had recognized as a Gentile; and they accused him of violating the sanctity of the Temple by bringing Gentiles into it. A riot followed from which Paul was rescued by soldiers of the Roman cohort from the barracks nearby, who took him into protective custody. After two unsuccessful attempts to free himself from the charges laid against him, first before the mob, then before the Sanhedrin, Paul learnt through his nephew of a plot against his life. He informed the tribune, Claudius Lysias, who promptly sent him to Caesarea to the governor, Felix. Felix heard the case, but was unwilling either to commit an injustice by condemning Paul or to antagonize the Jews by acquitting him; he therefore left Paul in prison. His successor, Festus, reopened the case, and Paul, fearing that he was to be sent to Jerusalem to stand trial, exercised his rights as a citizen by appealing to Caesar. Festus had no option but to send him to Rome, but first held an examination, attended by Agrippa and Bernice, to try to find a reasonable way of presenting the case to the Emperor. See JUSTICE, 3, ROMAN PUBLIC LAW, 2.

The journey to Rome was begun in late autumn, interrupted by a shipwreck which delayed the party for three months on the island of Malta, and completed in the spring of the following year. At Rome Paul was allowed to live under guard in his own rented house for the two-year period prescribed by Roman law as the limit within which the prosecutors must come to Rome to present their case after an appeal to the Emperor. At this point the story of Acts comes to an end with the implication that the Jewish plaintiffs allowed the case to go by default. There is, however, no positive evidence that Paul was ever released from prison. As long as the Pastoral Epistles were believed to be Pauline the historical references they contain provided the basis for a theory that Paul was twice imprisoned in Rome and that between his two imprisonments he carried on missionary work in Greece, Macedonia, Epirus, Asia Minor, and Crete. But this interpretation of the evidence has had to be abandoned along with the Pauline authorship of the Epistles. All we can say is that Paul almost certainly died a martyr's death in Rome during the reign of Nero (Clem. 1 *Cor.* 5; Tert. *Scorp.* 15; Eus. *HE* iii. 1), and that 2 Ti 4^{6-8} is probably a portion of his last letter.

From the genuine imprisonment epistles of Paul (Colossians, Philemon, Philippians, and ? Ephesians) we can fill in a few details of his sojourn in Rome. He had two contacts with the church of Colossae. The first was Onesimus, a slave who had run away from the household of Philemon, after helping himself to some of his master's property. He found his way to Rome, where he became a convert and a close friend of Paul. Not daring to take the risk of harbouring a runaway slave, Paul reluctantly sent him back to his master with the request that he receive him 'no longer as a slave but more than a slave, as a beloved brother' (Phn 16). The second visitor from Colossae was Epaphras, one of the leaders of the church, who came to consult Paul about an outbreak of heretical teaching. To deal with this heresy Paul wrote the Epistle to the Colossians and dispatched it and his letter to Philemon by the hand of Tychicus. At the same time he wrote a letter to Laodicea (Col 4^{16}) and (if it is his work) the Epistle to the Ephesians.

From the church of Philippi came Epaphroditus with a gift of money to relieve the hardships of Paul's imprisonment. While he was in Rome he suffered a serious illness from which he nearly died. Epaphroditus had intended to stay with Paul, but Paul, hearing that his friends in Philippi were anxious about him, sent him home and wrote the Epistle to the Philippians to send with him.

10. Appearance and Character.—The historical romance called *The Acts of Paul and Thecla* (see *The Apocryphal NT*, translated by M. R. James, 1924, 273 ff) contains a description of Paul which may well go back to a genuine 1st-cent. tradition: 'a man little of stature, thin-haired upon the head, crooked in the legs, of good state of body,

with eyebrows joining, and nose somewhat hooked, full of grace: for sometimes he appeared like a man, and sometimes he had the face of an angel.' His unprepossessing appearance is borne out by the contemptuous remarks of the opposition at Corinth (2 Co 10^{10} 11^{6}). His excellent physique could have been deduced from the story of his missionary journeys, which even as a physical achievement excites our admiration, especially when we remember that his health was under constant attack from his recurrent illness and from persecution, and that he could show on his body 'the marks of Jesus' (Gal 6^{17}). His grace is attested by his long lists of friends and by the willingness of many of them to risk their lives on his behalf (Ro 16^{3}, Ph 2^{30}, Gal 4^{15}).

He was a man of immense vitality and determination. At everything he must excel: as a Pharisee in zeal for the Law, as a Christian in zeal for his Lord, as a missionary in quest of new fields of endeavour, as a thinker in exploring the unsearchable riches of Christ (Gal 1^{14}, Ph 3^{8}, Ro 15^{20}, Ph 3^{12-14}). But what in the Pharisee had been an unlovely self-assertion became in the Christian a winsome whole-heartedness which others found infectious. The personal sections of his letters reveal a vast capacity for friendship, and not the least part of his secret was that he treated others as equals and expected from them something of the excellence he demanded from himself. He could also be a relentless opponent, and much of his teaching was hammered out in the heat of controversy. He had a keen, sensitive nature, and numbered among his spiritual endowments the gifts of tongues, vision, and prophecy (1 Co 14^{18}, 2 Co 12^{1-4}, Ac 13^{1}). But his most remarkable accomplishment was to combine enthusiasm with common sense, sanity with profundity. He was able to discuss practical problems in such a way as to elucidate the eternal principles that underlay them; he was able also on occasion to rise above argument and explanation to the region of poetry, content at the limits of human understanding to bow before the mysteries of God (Ro 11^{33-36}). G. B. C.

PAUL'S THEOLOGY.—The epistles of Paul are not systematic theology, nor can we assume that they contain the whole of his thinking on the themes of Christian faith and practice. They are genuine correspondence, written to deal with specific problems in particular churches. They presuppose the apostle's missionary preaching, but give no account of it except in sporadic references, as circumstances demanded (*e.g.* 1 Th 1^{9-10}, 1 Co 2^{2}). They allude in tantalizing fashion to other letters which have not survived (1 Co 5^{9}, 2 Co 7^{8}, Col 4^{16}) and to conversations which were never recorded (2 Th 2^{5}; cf 1 Co 4^{17}). If there had not been a singular lack of decorum in the worship of the Corinthian church, we might not have had a word from Paul about the meaning of the Lord's Supper (1 Co 11^{17-34}); and we cannot help asking whether there were other aspects of the life of the early church about which he was silent simply because they raised no problems. Besides omissions, there are contradictions; for Paul wrote often in the heat of controversy, always with the Semitic temperament which is at home in extremes and paradoxes, and never expecting that what he wrote would be subjected to the minute analysis of modern critical scholarship.

When all this has been said, however, the fact remains that the Paul who emerges so clearly from the pages of his writings was at all times a theologian. Everything he experienced, everything he taught, was measured against his fundamental belief in God. His own life, consciously or unconsciously, had been under the direction of God, who had set him apart before his birth (Gal 1^{15}), who had shone in his heart at his conversion (2 Co 4^{6}), who had made him by grace what he now was (1 Co 15^{10}). It was God who had called him to be an apostle (1 Co 1^{1}, Gal 1^{1}), who constantly directed his steps (Ro 1^{10}, 1 Th 3^{11}), who spoke to others through him (2 Co 5^{20}), who had even a hand in the humbling incapacity of his thorn in the flesh (2 Co 12^{7}). But what was true of Paul's individual life was true also of the life of mankind as a whole. Behind the whole of human history lay the hidden wisdom of God, the gracious mystery of the eternal purpose which had now been disclosed in Christ (1 Co 2^{7}, Ro 8^{29}, Col 1^{26-27}, Eph 3^{10}). For this disclosure God had prepared the way by promise (2 Co 1^{20}, Ro 1^{2}, Gal 3^{17-29}), discipline (Gal 3^{24}, 1 Co 10^{1-11}) and wrath (Ro 1^{18-32} 13^{4}, Col 3^{6}, 1 Th 2^{16}). In the fulness of time He had sent forth His Son (Gal 4^{4}), indeed He Himself had been in Christ working out man's redemption (2 Co 5^{19}, Col 2^{9}, Ro 8^{3}). It was God who had delivered Christ up to death for the sins of men (Ro 3^{25} 4^{25} 5^{8}) and had raised Him up to triumph and glory (Ro 6^{4}, 1 Co 15^{15}, 2 Co 4^{14}, Gal 1^{1}, Ph 2^{9}). It was God who had chosen and called men into the fellowship of His Son (1 Th 1^{4}), so that even the humble station of His people was the result of His choice (1 Co 1^{26-29}). It was God who shaped their lives to bring them into conformity with His purpose (Ro 8^{28}, 1 Co 3^{9} $12^{6, 28}$, Eph 2^{10}, Ph 2^{13}); and in the steadfastness of His mercy lay their sole confidence for the future (Ro 3^{4} $11^{1, 29}$). Paul's Christian experience began with the Christ who apprehended him (Ph 3^{12}), and there was a sense in which Christ remained the centre of his faith. But his thinking about his experience was theological: it began and ended with God. 'All this is from God, who through Christ reconciled us to himself' (2 Co 5^{18}).

1. Originality and Dependence.—Paul emphatically asserts that the gospel which he preached came to him, like his apostleship, from no human source and without the mediation of human teaching. It was a part of the revelation of Christ which he received at his conversion (Gal 1^{11-12}). This experience convinced him that Christ was alive, vindicated by God, and that His death must therefore be interpreted as an act of God's grace and a proof of God's love. It convinced him that he was accepted by God apart from any merit of his own and in spite of his hostility to Christ, so that the Law which had urged him to the pursuit of merit and had prompted him to persecute Christ through His disciples could no longer be regarded as the way of salvation. It convinced him that a salvation which depended not on man's will or effort but on God's mercy must be meant for all the world and that God had appointed him to carry it to the world. It convinced him that a world reconciled to God by God's own act of love was what the Creator had planned from the beginning.

His gospel was so thoroughly his own that he could refer to it as 'my gospel' (Ro 2^{16} 16^{25}). But he was well aware that his gospel was not radically different from that preached by the other apostles. Indeed, as there was but one Christ, so there could be but one gospel. Had it proved to be otherwise, he would have felt that he 'had run in vain' (Gal 2^{2}). He was glad, therefore, to be able to record that the other apostles had given full recognition both to his gospel and to his apostleship (Gal 2^{9}).

Paul's claim to originality, then, must not be pressed beyond its proper limits. It must be balanced by the clear evidence of his epistles that he owed much to those who were in Christ before him. He had at his disposal a collection, whether oral or written, of the sayings of Jesus (1 Co $7^{10, 25}$), and a detailed comparison of his epistles with the Synoptic Gospels shows that he used it to the full. He refers to kerygmatic traditions which he had received and handed on (1 Co 11^{23} 15^{3}; cf Ro 10^{8-9}). He mentions also a pattern of ethical teaching which he assumes to be the common possession of all churches, including the church of Rome which he has not yet visited (Ro 6^{17}); and it is a plausible conjecture that this pattern is the one which appears in his later letters (Col 3^{8ff}, Eph 4^{22ff}), with parallels in 1 Peter and James. His choice and interpretation of OT texts coincide at so many points with the general usage of the other NT writers that we may safely assume that he shared with them a common principle of scriptural exegesis. The two sacraments of baptism and the Lord's Supper were also part of his inheritance, and in the case of baptism he seems to have felt that not only the rite but the

interpretation of it was shared by the whole church (Ro 6[3]).

2. The Divine Plan.—'I did not shrink from declaring to you the whole counsel of God' (Ac 20[27]). The words are the words of Luke, but the thought is the thought of Paul. In a variety of terms Paul is constantly asserting that the ministry, death and resurrection of Jesus and the founding of the church are the revelation and realization of a secret and eternal, Divine purpose, that in Christ we have the clue to the whole intention of the Creator. We are told of 'the mystery which has been kept secret for long ages, but now is disclosed' (Ro 16[25]; cf 1 Co 2[7-8], Col 1[26-27], Eph 1[9] 3[3f, 9f]), a mystery which involves the overthrow of all evil and divisive forces and the reconciliation of all men to God and to one another in a new fellowship of which Christ is the head. We hear of the 'gracious pleasure' of God (Col 1[19], Gal 1[15], 1 Co 1[21], Ph 2[13], Eph 1[5, 9]), by which Paul means His free self-determination to act according to His essential character of love. We hear of His 'selective purpose' (Ro 9[11]; cf 8[28], Eph 1[11] 3[11]), whereby, with sovereign freedom and without regard to man's deserts or capacities, He chooses one rather than another to be the agent of His will.

As a Jew Paul had believed that he already possessed 'the whole counsel of God,' revealed in the Torah, which had lain on the knees of God before the creation of the world (Ro 2[17-20]). The whole world had been called into existence for the sole purpose that out of the rest of mankind God might fashion for Himself a holy people, dedicated to the observance of all the rules and institutions of the Mosaic Law. Paul the Christian, who had come to realize that his zeal for the Law had blinded him to the presence of God in the person of Christ (2 Co 3[14] 4[4]), discovered even in the Scriptures something more ultimate than the Mosaic code—the promise of blessing given to Abraham and through him to mankind (Gal 3[14-18], Ro 4[13-21]). The promise represented God's real and permanent disposition towards men and was not annulled by the Law, which came after it and represented only God's reaction against sin. The Law, in fact, was only a temporary and provisional dispensation to keep sin within restraint until the promise should be fulfilled by the coming of Christ.

The heart of God's plan was that men should 'be conformed to the image of his Son, that he might be the first-born among many brethren' (Ro 8[29]). Christ was the only Son of God, enjoying a unique relationship with the Father, but it was God's purpose to bring others into the same relationship, to teach them to regard Him as Father and to live as members of His family, at peace with Him and with one another. This new community was to have all the intimacy of the family circle but also the vast inclusiveness of a world-wide commonwealth (Ph 3[20], Ro 10[19]). Paul believed passionately in God's election of himself and his fellow-Christians to their place in this family and to citizenship in this commonwealth, because he was convinced that his conversion was all of God's doing and none of his own, and that the cause of it was therefore to be found entirely in the free choice and mercy of God. But at the same time he refused to set any limits to the Divine mercy. 'God has consigned all men to disobedience, that he may have mercy upon all' (Ro 11[32]). Indeed, the soaring vision of the apostle could not rest even with the hope of mankind redeemed. The sub-human creation, too, must be liberated from the bondage of decay to share in the glorious liberty of the sons of God (Ro 8[21]), and the spiritual powers of evil in the heavenly sphere must be reconciled to God by the Cross (Col 1[16-20], Eph 3[10]), in order that the whole of creation might be summed up in Christ (Eph 1[10]).

3. The Human Need.—The one barrier to the fulfilment of this magnificent, universal plan was sin. Paul took a thoroughly realistic view of the moral depravity of the world he lived in, and recognized that, for all his claims to superiority, the Jew was not exempt from its taint (Ro 1[18]–2[24]). But he did not identify breaches of the moral law with sin. These were the symptoms of a disease, the consequences of a tyranny to which God had abandoned those who refused to acknowledge Him. The basic sin was to 'suppress the truth' of God's claim on us and our dependence on Him, just as the basic virtue was faith, which means accepting God and allowing Him to shape our lives (Ro 14[23]: 'whatever does not proceed from faith is sin').

The archetypal sin was the sin of Adam, who wanted to be equal with God (Ph 2[6]). Paul thought of Adam in three distinguishable but closely related ways. He was the first man, the progenitor of the human race. He was the typical man whose story was re-enacted in the life of Everyman—'as sin came into the world through one man and death through sin, and so death spread to all men because all men sinned . . .' (Ro 5[12]). He was the head of the corporate unit we call mankind, so that to be 'in Adam' meant to share the common nature and therefore the common sinfulness of all mankind. Paul further indicates that there are two ways in which men are involved in the sin of Adam—imitation and implication (Ro 5[14]). Because to some extent every man is his own Adam, men commit sins which are 'like the transgression of Adam' *i.e.* deliberate and witting breaches of a known commandment. But because sin, once it has been introduced into human life, exercises an influence far wider than the transgression of individual men and invades both their habitual character and the fabric of their social institutions, all men, even against their will, become implicated in the general sinfulness. Thus by imitation of Adam all men add to the total sin of mankind and increase its power to dominate their common life, and by implication they come under the tyranny of sin and therefore of death, which is the wages of sin (Ro 6[23]).

To describe human nature in its unredeemed state Paul frequently uses the word 'flesh.' In one sense 'the flesh' means simply the natural, psycho-physical life of man, life in Adam; and, like Adam, it denotes the solidarity of mankind. But because in Adam all men sin, the flesh takes on a further, sinister significance. To set one's mind on the flesh or to live according to the flesh means to live only for worldly or selfish ends, to live under the control of sin. 'The works of the flesh are plain; immorality, impurity, licentiousness, idolatry, sorcery, enmity, strife, jealousy, anger, selfishness, dissension, party spirit, envy, drunkenness, carousing, and the like'(Gal 5[19-21]). In this condition all men are children of wrath (Eph 2[3]), for 'on account of these the wrath of God is coming upon the sons of disobedience, among whom you also once walked' (Col 3[6-7]). This wrath represents the recoil of God's holiness from all that is incompatible with it, and it is manifested partly in the abandonment of men to the consequences of their disobedience (Ro 1[24, 26, 28]), partly in the visitation of temporal punishments (1 Th 2[16]) which may be imposed by the authority of the state (Ro 13[4]), and partly in the running up of a long reckoning against the day of judgment (Ro 2[5]).

The Jewish Law was powerless to release men from the domination of sin and the threat of Divine wrath, and nobody had a better right to testify to this fact than the Pharisee who had devoted all his zeal to the way of the Law. Just because he took it with the utmost seriousness, he saw that to those who broke it the Law offered only condemnation and a sentence of death (2 Co 3[7-11]). Paul discovered that a legal religion actually exacerbated man's condition in three ways. Since God asks that man should live in the childlike dependence of faith, and since the independence of pride is the root of all sin any system which bids man achieve his own salvation by obedience to a code will only inflame his pride. It substitutes self-righteousness for the righteousness which comes from God (Ro 10[2]). Again, it is possible to sin unwittingly; but those who live under a code of law sin against the light, so that the law actually turns sin into trespass (Ro 5[20] 7[13]). And finally, by the power of suggestion, the Law actually induces men to break its own commandments (Ro 7[7]). Paul describes this last

process most forcefully in a passage in which he writes in the first person, as though it had been a part of his own spiritual biography, but identifying his own experience with that of Adam. Just as the serpent took God's commandment and turned it into a temptation which brought about Adam's fall from innocence into the dominion of sin and death, so in Paul's case sin took the commandment against covetousness and used it as a base of operations. Thus, without Christ, man lives under a triple tyranny in which sin, death and law all have their part. 'The sting of death is sin, and the power of sin is the law' (1 Co 15^{56}).

Elsewhere Paul speaks of the same tyranny as a reign of principalities and powers, elemental spirits of the universe, rulers of this age. These are angelic beings who have been given authority by God over various aspects of His creation, but who, because of the universally pervasive sin, exercise that authority in a distorted and despotic fashion. They include the angelic guardians of the pagan state and social order (1 Co 2^{7-8} 6^{3} 11^{10}), the angelic guardians of the Jewish Law (Gal 3^{19} $4^{3-4, 8-9, 21}$), and what we should call the powers of nature, including decay and death (Ro 8^{38-39}, 1 Co 15^{24-26}). These angelic beings shared in the paradox of the Law. For, like the Law, they had been created by God as the agents of His will and endowed by Him with a measure of His own authority; but men had exalted this partial and delegated authority into a position of supreme importance in their lives, and so had corrupted it and transformed it into a tyrannical power.

4. The Son of God.—God's remedy for universal sin was to send His Son. Paul believed in the full humanity of Christ, 'born of a woman' (Gal 4^{4}), 'descended from David according to the flesh' (Ro 1^{3}). He took 'the form of a slave, being born in the likeness of men' (Ph 2^{7}), *i.e.* in accepting the human form He accepted all its conditions, including the bondage to the angelic powers and involvement in the general sinfulness of men. Paul actually goes so far as to say that God sent 'his own Son in the likeness of sinful flesh and for sin' (Ro 8^{3}), and by this he means, not that there was anything incomplete or unreal about Christ's humanity, but that, without Himself actually committing sin, He shared the common nature that makes all men kin, and so was able, by His obedience to God, to break the tyranny of sin not only over His own life but over the lives of others as well.

In another sense it could be said that Christ was more fully human than any other man, even Adam. For Christ alone lived human life as God had meant it to be lived. God had made Adam in His own image and had intended him to be a constant reflexion of His own glory and the representative of His own authority over the whole creation (Gn 1^{27-28}, Ps 8^{5-8}). Adam and all others after him had 'sinned and fallen short of the glory of God' (Ro 3^{23}), and had also lost the divinely ordained dominion over creation and had fallen under the reign of tyrannical powers. But Paul had seen 'the glory of God in the face of Jesus Christ' (2 Co 4^{6}), and he believed that God had exalted Him to universal lordship (Ph 2^{9-11}) in a heavenly reign which would continue until all His enemies were put under His feet (1 Co 15^{25}). In this connexion he quotes from Ps 8 to show that Christ's lordship is nothing other than the fulfilment of God's destiny for man. Christ was thus 'the image of God' in a sense in which Adam never was (2 Co 4^{4}). 'The first man was from the earth, a man of dust; the second man is from heaven' (1 Co 15^{47}). He was the pattern of which Adam was only the copy, and in Him could be seen the purpose for which God made man in His own image. But because man was the centre and crown of God's whole purpose of creation. it followed that He who embodied the purpose of human life embodied also the purpose of all creation. 'He is the image of the invisible God, the first-born of all creation; for in him all things were created, in heaven and on earth, visible and invisible, whether thrones or dominions or principalities or authorities—all things were created through him and for him. He is before all things, and in him all things hold together' (Col 1^{15-17}).

Thus Paul arrived at a most elevated conception of Christ simply by taking seriously His true humanity, and for this reason he never had any problem over the relation of His two natures. God had created man for precisely that intimate communion with the Divine which was exemplified in Christ, so that Christ was more and not less truly human because 'in him dwells the whole fulness of deity bodily' (Col 2^{9}). This is not to deny the uniqueness of Christ, since it is only in union with Him that men can 'put on the new nature, which is being renewed in knowledge after the image of its creator' (Col 3^{10}). He is uniquely the Son of God, and other men become sons only by adoption (Gal 4^{4-7}, Ro 8^{14-17}). 'He was in the form of God . . . but emptied himself' (Ph 2^{6-7}); 'though he was rich, yet for your sake he became poor, so that by his poverty you might become rich' (2 Co 8^{9}). He was the Lord whom Paul served as a slave, to whom he prayed for help (2 Co 12^{8}; cf 1 Co 1^{2}, Ro 10^{13}), and on whom he bestowed every Divine honour except the name of God.

It is significant, however, that Paul never thinks of the pre-existent Christ or the incarnate Christ as an object of worship. This is a dignity to which He attains only by the resurrection (Ro 1^{4}, Ph 2^{9-11}). For in spite of His heavenly origin, Christ possesses no static divinity, but has a real and developing history. He is in the form of God; He assumes human form, not in any temporary or docetic sense, but permanently; and as man He passes through death and resurrection into new life. Then and only then does God bestow on Him the exalted title of Lord and make Him the recipient of all worship. Then and only then does He become 'a life-giving spirit' (1 Co 15^{45}), able to dwell in others as God has dwelt in Him (Ro 8^{9-10}, 2 Co 3^{17}). Nor is His history finished: for there remains the final crisis of His Parousia. See also CHRISTOLOGY, 3.

5. The Gospel of Salvation.—Paul nowhere gives us a systematic doctrine of the Atonement. Instead he uses a wide variety of metaphors, drawn from many fields of human activity—the lawcourt, the slave-market, the home, the Temple worship, the battlefield—to express the wealth of meaning and power which he found in the Cross of Christ. These terms have one thing in common, that they all have a threefold reference to the past, present, and future, so that it is difficult to select any words from Paul's own vocabulary to distinguish these three aspects of Christ's saving work.

The explanation of this is twofold. On the one hand, Paul, in common with the whole of the early church, believed that he was living in the very middle of the last act of God's drama of redemption. Upon them the ends of the ages had come (1 Co 10^{11}). God had promised to visit and redeem His people, and the day of salvation had arrived (2 Co 6^{2}). The resurrection and the gift of the Spirit both belonged, according to the OT prophets, to this dénouement of history, and both had begun to happen. For Paul regarded the Resurrection of Christ as inseparable from the general resurrection (1 Co 15^{12-19}). He was 'the first fruits of those who have fallen asleep,' and His followers were living in the period between the offering of the first sheaf and the ingathering of the whole harvest. The Spirit had been given them as a down-payment on the inheritance which would ultimately be theirs (2 Co 1^{22} 5^{5}; cf Ro 8^{23}). The whole period from the birth of Christ to the Parousia appeared to them to be a single great act of God, and because they stood in the midst of it, it was bound to present itself to them in a threefold guise. On the other hand, there was a sense in which God's act was already complete. For Christ was not merely the first of many brethren, but also their inclusive representative. As Messiah He had embodied in Himself the whole of Israel and in Him the nation had reached its appointed destiny. He was the last Adam in whom the whole of mankind had passed vicariously through death and resurrection. Paul even found it possible to say that

in the Cross the whole creation had already been reconciled to God (Col 1[20]). All that followed would simply be the appropriation of that which had already been accomplished in Christ. Thus from one point of view it is correct to describe Paul's conception of the new age as 'inaugurated eschatology,' from another point of view as 'realized eschatology.'

Salvation, then, is past, present, and future. Christians have been saved once for all, as an accomplished fact (Ro 8[24] 10[10] 11[11], Eph 2[8]); but they are also being saved (1 Co 1[18] 15[2], 2 Co 2[15] 6[2], Ph 2[12]), and look forward to a salvation which is yet to come (Ro 13[11]). They have been justified (Ro 5[1]), but justification is also the state within which they live (Gal 2[21]), and the hope of their calling (Gal 5[5]). They have been emancipated (Ro 6[7] 8[2], Gal 4[4], Col 1[13]), but must stand fast in their new freedom (Gal 5[1]), acting as free agents (Phm [14]), and waiting also for their final liberation (Ro 8[23]). They have been glorified (Ro 8[30]), are being transformed into the likeness of Christ's glory (2 Co 3[18]), and live in hope of a glory to be revealed (1 Co 15[43], Ph 3[21], Col 3[4]). God has reconciled them to Himself (Ro 5[10], 2 Co 5[18], Eph 2[16], Col 1[22]), but they must continue to seek reconciliation with Him (2 Co 5[20]), and expect to participate in the fuller reconciliation that is to come (Ro 11[15]). Christ has won a decisive victory over the powers of evil (Col 2[15]), but the battle goes on (Ro 8[37], 1 Co 15[57], Eph 6[12]) until the ultimate triumph is achieved (1 Co 15[24–28], 2 Th 2[8]). Christians are God's building, God's workmanship, and He who has begun a good work in them 'will bring it to completion at the day of Jesus Christ' (1 Co 3[9], Eph 2[10], Ph 1[6] 2[13]; cf Ro 5[1–2] 6[22]).

6. The Fact of Salvation.—In the first place, then, Paul believed that man's salvation was a fact, already accomplished in the life, death, and Resurrection of Christ, and already appropriated once for all by the believer at his baptism.

Christ was the bringer of salvation because He had revealed the love of God and His merciful ways of dealing with men (Ro 5[8]). Hitherto men had been blinded to the truth of God, either by their own passions or by the mistaken notion that the Law enshrined the whole character of God (Ro 1[21], 2 Co 4[4]). They were 'ignorant of the righteousness that comes from God' (Ro 10[3]). But in the gospel 'the righteousness of God is revealed' (Ro 1[17]). 'Righteous' and 'justify' are metaphors drawn from the lawcourt, where it is the duty of the judge to justify one of the two litigants, *i.e.* to declare him to be in the right (righteous). What then must a man do to be righteous in the eyes of God, to be justified or acquitted by the Judge of all the earth? Judaism answered that he must obey the commandments of the Law, and Paul points out with the help of Scripture that by this standard no one is righteous (Ro 3[20]). The answer of Paul's gospel, which he found already foreshadowed in the story of Abraham, is that the one thing God requires in man is faith and that He justifies the man who has it. God's righteousness is thus not the stern justice with which He metes out to each according to his deserts, but rather His saving power whereby He rescues from the slavery of evil powers those who trust Him to do so; and goodness is not something achieved by human merit but a free gift bestowed eagerly by God on all who are ready to receive it.

In revealing this righteousness of God Christ also revealed the true nature of the powers by which men were enslaved. For God's purposes had been misunderstood and misrepresented by 'the rulers of this age' who 'crucified the Lord of glory' (1 Co 2[6–8]), *i.e.* by the angelic guardians of pagan state and Jewish religion, the spiritual representatives of the established order. In bringing about the crucifixion these rulers thought that they were protecting the existing order of things and their own divinely ordained authority in particular. They did not know that God had sent Christ to make common cause with sinful men, even to the point of dying the death of a criminal, so that the guilty might be redeemed by the vicarious suffering of the innocent. The Cross showed that they were only partial and imperfect representatives of God's will, doomed to be reduced to impotence once Christ had revealed the agelong secret of God's saving grace.

Christ was the bringer of salvation also because He was willing to identify Himself with men in their humiliation, in order that they might be identified with Him in His glory. We have already seen how complete Paul believed this identification to be. Christ accepted all the conditions of the life men live, including 'the likeness of sinful flesh,' the curse which the Law pronounces on the evildoer, and the death which is the wages of sin (Ro 8[3], Gal 3[13], Ro 6[23]), in order that thenceforward nothing in all creation should separate men from the love of God which found its perfect expression in Him (Ro 8[38–39]). Because He did not have the mind of the flesh, did not earn the curse of the Law by His own misdoings, did not submit to the dominion of sin and death, humanity in Him took a new beginning. The powers of evil did their best to subjugate Him and in the end killed Him, not realizing that death would carry Him for ever beyond their clutches and so put the seal on His victorious life. He died 'to the elemental spirits of the universe' (Col 2[20] RSV; a more literal translation would be 'out from under the elemental spirits'). His Cross was a victory, and since He lived and died as the representative of men, it was a victory which could be shared by all. 'We are convinced that one has died for all: therefore all have died' (2 Co 5[14]). The same solidarity of mankind which in Adam made possible the universal spread of sin and death enabled men to find in Christ the universal conquest of sin and death; with this difference that in Adam all men are one by nature and without option, but in Christ all are one by grace and by the voluntary response of faith. For faith means accepting what God has done in Christ, saying: 'Christ has identified himself with me; I accept that identification: I am a man in Christ.' The sign and seal of this acceptance is baptism, which shares in the once-for-all character of the Cross. 'Do you not know that all of us who have been baptized into Christ Jesus were baptized into his death? We were buried with him by baptism into death, so that as Christ was raised from the dead by the glory of the Father, we too might walk in newness of life' (Ro 6[3–4]; cf Col 2[12]).

Christ was the bringer of salvation because He dealt effectively with sin. Paul is aware that the doctrine of justification by faith is open to misconstruction and finds it necessary to assert vehemently that it does not mean the overlooking of sin, as if sin did not matter (Ro 6[1, 15]). There had indeed been times in the past when God had passed over sins with patient forbearance, but there was no passing over of sin in the Cross of Christ, 'whom God put forward as an expiation by his blood' (Ro 3[25]). An expiation is a means of removing the taint of sin so that it does not bar men from entry into the Divine presence, and Paul is here saying that the barrier has been decisively removed by the act of God Himself. Similarly, when the barrier is described as enmity, it is removed by God who 'was in Christ reconciling the world to himself' (2 Co 5[18]; cf Ro 5[10], Eph 2[16], Col 1[22]). Christ took upon Himself the consequences of sin and so drew its sting, exhausted the curse of the Law, drew off on to Himself men's enmity and neutralized it by forgiving love (2 Co 5[21], Gal 3[13], Ro 5[10]).

Finally, Christ was the bringer of salvation because He lived a life of complete obedience (Ro 5[19], Ph 2[8]); and on this point the other three points all depend. For whatever Paul might say about the Law as an inadequate way of salvation, he believed that there was such a thing as 'the just requirement of the law' (Ro 8[4]). 'Christ is the end of the law' as a way of salvation (Ro 10[4]), but upholds it and fulfils it as a statement of God's demands (Ro 3[31] 13[10]). Holiness is not a condition of man's acceptance by God, but it is God's design for man (1 Co 6[9] 7[19]). Christ could not have revealed God to man unless He Himself had been fully attuned to God's

purpose. It would have availed nothing for Him to identify Himself with men, unless in Him men could find a new life, free from all the disabilities of the old life in Adam. His death was a victory only because sin had no dominion over Him. The Cross was an expiation and a reconciliation only because He had done nothing to deserve it.

7. The Experience of Salvation.—Man's salvation has been fully accomplished by the act of God in Christ, and into that salvation Christians have entered by the response of faith. They have been illuminated by the new revelation of God, acquitted before His judgment seat, emancipated from the tyranny of sin, admitted to a new life and fellowship, made partakers of the glory and victory of Christ. But the implications of all this have still to be worked out; and, as Paul is writing to Christians with a pastoral concern for their spiritual welfare, this is naturally the aspect of salvation which bulks largest in his letters. The Christian life must be a life of progress from religious infancy to maturity (1 Co 3^{1-3} 14^{20}). It must be a life consistent with the faith on which it rests (Col 2^{20} 3^{1}, Gal 5^{25}), and worthy of the God who is its source (1 Th 2^{12}, Ph 1^{27}).

Christians 'have obtained access to this grace in which we stand' (Ro 5^{2}; cf Eph 2^{8} 3^{12}). They may enter 'with unveiled face' into the presence of God (2 Co 3^{12-18}). And the God to whom they come is not the God of law but the God of love and mercy. Paul has much to say about the responsibility of the Christian for his own conduct under the new régime, so that it is well to establish clearly from the outset that he regards Christian progress as God's work, no less than conversion. 'Work out your own salvation with fear and trembling, for God is at work in you, both to will and to work for his good pleasure' (Ph 2^{12-13}, Ro 8^{28}). Grace is always freely given, never earned (Ro 11^{6}), and to come to God with any claim of merit or achievement is to fall away from grace (Gal 5^{4}; cf 1 Co 15^{1-2}).

By the grace of God Christians have been 'called into the fellowship of his Son' (1 Co 1^{9}). In their initial act of faith and in the symbolism of baptism they have accepted identification with Christ and union with Him in the new life which He represents. But this identification and union must be realized in experience: they must become in fact what they already are by faith. 'We know that our old self was crucified with him so that the sinful body might be destroyed, and we might no longer be enslaved to sin' (Ro 6^{6}; cf Gal 2^{20}, Col 2^{20} 3^{3}); but we must still put to death what is earthly in us, and reckon ourselves dead to sin and alive to God (Col 3^{5}, Ro 6^{11}). 'As many of you as were baptized into Christ have put on Christ' (Gal 3^{27}); 'you have put off the old nature with its practices, and have put on the new nature, which is being renewed in knowledge after the image of its creator. . . . Put on then . . . compassion, kindness, etc. . . .' (Col 3^{9-12}). Indicative and imperative go hand in hand. Paul speaks of his converts as 'children with whom I am again in travail until Christ be formed in you' (Gal 4^{19}). They are to be transformed by the renewing of their mind (Ro 12^{2}), to reflect the glory of Christ until stage by stage His image becomes permanently fixed upon their character (2 Co 3^{19}), to be fashioned anew by the hand of the Creator (2 Co 5^{17}, Gal 6^{15}), by whom they have been predestined to be conformed to the image of His Son (Ro 8^{30}). This process of transformation and renewal is a secret one and may be belied by outward appearances. Paul was aware that his own life appeared, to those of his critics who looked only to the things that are seen and temporal, to be burdened with an appalling load of affliction, but he was confident that to those who looked to the things that are unseen and eternal the burden would appear as an eternal weight of glory (2 Co 4^{7-18}). 'Your life is hid with Christ in God' (Col 3^{3}).

Life in Christ is also life in the Spirit, and Paul frequently declined to draw any distinction between the indwelling Christ and the indwelling Spirit (2 Co 3^{17}, Ro 8^{9-11}, 1 Co 15^{45}). As a sphere of life the Spirit is contrasted with the flesh, for the flesh is a source of weakness which lays men open to the attacks of sin, but the Spirit is the power of God which supplies the dynamic for the new life. The gifts and graces of the Christian life are produced as spontaneously by the Spirit as fruit grows on a tree (Gal 5^{22}). Some of these gifts are spectacular evidences of Divine power (1 Co 12^{8-10}), but the same power is active in a more permanently effective way in the development of Christian character, and above all in the gift of love (Ro 5^{5}, 1 Co 12^{31}). The Spirit is the fountain of all genuine conviction (1 Co 12^{3}), and in particular of the conviction that God is a Father who calls men to be His children and to live as members of His family (Gal 4^{6}, Ro 8^{14-17}). In this connexion Paul contrasts the Spirit of adoption with the spirit of slavery. Those who live under the Law are slaves, because the authority which governs their lives is the external authority of the written code which never succeeds in subduing the impulses of the flesh (2 Co 3^{6}, Ro 7^{22-23}). But those who live by the Spirit have their controlling authority within them, enabling them to act spontaneously in accordance with the will of God. It follows therefore that 'where the Spirit of the Lord is, there is freedom' (2 Co 3^{17}); for moral freedom consists in having one's ethical standards within oneself, and not dictated from without. Paul strenuously resisted any attempt to make the Mosaic code obligatory on Christians, because he saw that the ethics of law and the ethics of liberty are mutually incompatible. To live by rule is to silence the guiding voice of the inner Spirit. It is true that Paul recognized the validity of certain external guides to ethical decision: the words of the Lord (1 Co 7^{10}), the pattern of traditional teaching (Ro 6^{17}), the usage of the churches (1 Co 11^{16} 14^{33}); but none of these constituted a legal code or a substitute for the renewed mind. 'I give my opinion as one who by the Lord's mercy is trustworthy.' 'We have the mind of Christ' (1 Co 7^{25} 2^{16}).

The Christian life is, further, a life lived in the community of the church. God is the Father 'from whom every family in heaven and on earth is named' (Eph 3^{15}), and those who are led by the Spirit of God to call Him Abba must be members of the large family in which Christ is 'the first-born among many brethren' (Ro 8^{29}). Every fellow-Christian is therefore 'the brother for whom Christ died' (1 Co 8^{11}; cf Ro 14^{15}). Even when the Corinthians are behaving in a most unbrotherly manner Paul still addresses them as brethren (1 Co 1^{10}), and he appeals to Philemon to receive back the runaway Onesimus 'no longer as a slave but more than a slave, as a beloved brother' (Phn ^{16}).

The church was also the people of God, continuous with the old Israel, though transformed by Christ. The word *ecclesia* was a constant reminder of this continuity, for it had been used in the LXX to denote the congregation of Israel. To use this word was to claim that all the privileges and responsibilities of God's people have now devolved upon the church. The church is 'the Israel of God' (Gal 6^{16}), because Christ has fulfilled all the promises made to Abraham (Gal 3^{16}, 2 Co 1^{20}). Christians, therefore, whether they come of Jewish or of Gentile stock, are heirs of the promises made to Abraham, because they share the faith in God which had been counted to Abraham for righteousness (Gal 3^{29}, Ro 4^{16}). In Ro 9–11 Paul argues at some length to prove two points: that membership in the people of God has never been a matter of physical descent or historic transmission, but always of God's free and unconditioned calling, so that God is not being inconsistent when he excludes some Jews from the church and includes Gentiles instead; and that the Gentile Christians must nevertheless be aware that the people of God to which they now belong is rooted in Jewish history. They are wild olive branches, grafted on to the olive tree of Israel. 'So then you are no longer strangers and sojourners, but you are fellow citizens with the saints and members of the household of God' (Eph 2^{19}; cf 3^{6}, Ro 3^{29}, Gal $3^{9, 28}$, Col 1^{27}, 3^{11}).

Paul frequently calls Christians saints, but he never uses the word in the singular; they are holy only insofar as they belong to God's holy people.

The church is the body of Christ. This metaphor is peculiarly Pauline and he uses it for a variety of purposes: to show how a multiplicity of functions can be combined within the one organic unity of the church (1 Co 12[12-27]), to draw attention to the mutual interdependence of Christians (Ro 12[4-5]), and to indicate their common dependence on Christ who is their head (Col 1[18], Eph 1[22]). It is not at all clear from what source Paul drew this picture of the church. It is unlikely that he was merely adapting a pagan fable. More probably it was the result of the fusion in his own mind of two ideas: that Christians are in Christ in the same way as all men are in Adam, and that Christ had called the eucharistic bread 'my body.' Both of these ideas are prominent in the earliest epistle in which Paul uses the metaphor of the body. There are two occasions when he uses the word Christ where we should have expected him to speak of the church. When he is commenting on the division of the Corinthian church into rival factions, he asks, 'Is Christ divided?' (1 Co 1[13]). The church is so completely identified with Christ that it can no more be divided than He can. Because there is one Christ there is one church, and to be a Christian is to belong to this one, indivisible fellowship. Later in his letter we read, 'Just as the body is one and has many members, and all the members of the body, though many, are one body, so it is with Christ' (1 Co 12[12]). The argument proceeds from the idea that Christ, like the human body, exemplifies multiplicity in unity to the idea that the church is the body of Christ. But Paul certainly had in mind also the parallel between the body of Christ which is the church and the body which is the eucharistic bread: 'because there is one loaf, we who are many are one body, for we all partake of the same loaf' (1 Co 10[17]). When he comes to write of the disorders at the Lord's Supper, he accuses the Corinthians of 'not discerning the body,' because, in disregarding the poorer members of the church they have failed to see in the sacramental loaf the symbol of their unity in Christ (1 Co 11[29]).

The church is the fellowship of the Holy Spirit (2 Co 13[14]). What Paul means by this phrase he explains fully in Ph 2[1-11]. It is the unity of mind and soul which the Spirit creates in those who take Jesus for their pattern. Paul hardly mentions the organization of the church (there is one reference in Ph 1[1] to bishops and deacons without any indication of their function). He does not prescribe a structure for the local church nor a fixed order for its worship: an organism does not require to be organized. To him the striking fact about the Christian community was the spontaneous emergence of a common life in people of multifarious backgrounds and interests, transcending differences of race, class and sex but allowing for divergence of capacity and function (Gal 3[28], 1 Co 12[4, 11]).

The marks of this common life are brotherly affection (Ro 12[10]), mutual strengthening and forbearance (Ro 1[11], Eph 4[2]), the bearing of one another's burdens (Gal 6[2]), the care of the strong for the weak, even at the sacrifice of individual freedom (Ro 15[1-2], 1 Co 8[9-13]; cf Ro 12[16]), and above all 'love which binds everything together in perfect harmony' (Col 3[14]). Jealousy and strife destroy the temple of God which is the church: love alone builds it up (1 Co 3[16-17], Eph 4[16]). Love is the one gift of the Spirit without which all other gifts are of no avail (1 Co 13[1-3]). This one gift comprehends in itself the whole experience of salvation. For faith finds its active expression in love (Gal 5[6]), through love men come to the knowledge of God (Col 2[2], Eph 3[17]), and the love of Christ becomes in them an inner constraint (2 Co 5[14]) which takes the place of the outward constraint of the Law and perfectly fulfils all the Law's requirements (Ro 13[8-10]). It is in fact the whole duty of man, and a possible duty because it is the gift and fruit of the Spirit (Ro 5[5], Gal 5[22]).

8. The Hope of Salvation.—Paul shared the commonly accepted belief of the apostolic age that the Parousia of Christ would occur within a generation. Some of his friends would die before that day, but he himself hoped to be among those who would live to see it (1 Th 4[17], 1 Co 15[51]). Even when his own personal survival was a matter of doubt, he still retained the same expectation (Ph 2[20-23] 3[21]), which was nourished, no doubt, by the regular celebrations of the Lord's Supper, when the church, with the prayer Maranatha, kept the memory of the Lord's death until He should come (1 Co 16[22] 11[26]). Yet, firmly as he held this notion of the imminence of the End, there is only one place in his letters where it has influenced his teaching. In his teaching on marriage Paul, as a Jew who had no sympathy with asceticism, started from the assumption that marriage is the natural and normal state for men and women (1 Co 9[5]) but his instructions on this subject were dictated by the belief that 'the appointed time has grown very short' and that 'the form of this world is passing away' (1 Co 7[29, 31]). During this final period worldly ties and troubles were likely to interfere with a man's loyalty, so that 'in view of the present distress it is well for a person to remain as he is' (1 Co 7[26]). Elsewhere Paul found it necessary to dissociate Christian ethics from the expectation of an imminent Parousia. Preaching at Thessalonica, he had urged his converts 'to serve a living and true God, and to wait for his Son from heaven' (1 Th 1[9f]), and they had taken this injunction so literally that many of them had ceased to do anything else. Paul had to write two letters to persuade them that Christian conduct is governed not by the future but by the past, by the fact that in Christ they have already become 'sons of light and sons of the day' (1 Th 5[5]). He never abandoned his belief in an imminent Parousia, but as his work developed it came to bulk less and less in his thoughts, and its place was taken by a new and broader vision of the missionary task of the church. From the first he had held that the coming of the End would be determined not by the mere passage of time but by the maturing of the purposes of God (2 Th 2[3-12]), and before long he came to realize that those purposes involved the bringing of all men within the scope of God's mercy (Ro 11[32]).

For the Christian the Parousia was chiefly associated with the resurrection of the body. Paul believed that Christ had died and risen as the inclusive representative of all men, so that men by faith might be united with Him here and hereafter in His death and resurrection (1 Th 5[10]). This union, however, had one qualification: resurrection had been for Christ both a spiritual and bodily triumph; for His followers resurrection as a spiritual experience came with baptism, but the resurrection of the body was still in the future. Chronic illness, the rigour of his travels and the harsh treatment he received at the hands of religious and civil authorities made Paul profoundly sensitive to bodily weakness, and although he turned this weakness to good account (2 Co 4[11] 11[30] 12[9]), his faith would not have been complete without the assurance that salvation would culminate in the redemption of the body (Ro 8[23]). He seems also to have had a thoroughly Greek horror of the decay to which the whole natural order was subject, and to have felt that, because Adam was 'from the earth, a man of dust,' man's physical body was one with the sub-human creation in its bondage to decay, so that man's redemption must carry with it the liberation of nature as a whole (Ro 8[21]). The resurrection of the body was for Paul no naïve or materialistic hope. He states quite clearly that 'flesh and blood cannot inherit the kingdom of God, nor does the perishable inherit the imperishable' (1 Co 15[50]). The physical body has to be transformed into a body of spirit or glory (1 Co 15[44], Ph 3[21]) to make it fit for the heavenly life to which it goes. But this physical transformation is only the climax of an inner change which has been going on secretly in the life of the Christian all along: 'your life is hid with Christ in God. When Christ who is our life appears, then you also will appear with him in glory' (Col 3[3-4]). In one passage Paul actually seems to suggest that each Christian has waiting for him in heaven a body

which corresponds to the character which God has built up in him during his life of faith (2 Co 5^{1-11}).

For all men the Parousia means judgment. In the case of the Christian the verdict of this judgment is already known: 'there is therefore now no condemnation for those who are in Christ Jesus' (Ro 8^{1}). Whatever else the judgment may mean in terms of purgation and recompense, it does not affect the ultimate salvation of those who have believed in Christ (1 Co 3^{13-15} 5^{5}, 2 Co 5^{10}). With regard to the fate of others Paul's opinion changed during his ministry. At first he brought over into Christianity his Jewish particularism with only a slight modification. As a Jew he had believed that the judgment meant acquittal for the faithful Israelite and condemnation for all others, and in his early years as a Christian he simply substituted the word Christian for Israelite. The judgment would bring 'vengeance upon those who do not know God and upon those who do not obey the gospel of our Lord Jesus. They shall suffer the punishment of eternal destruction and exclusion from the presence of the Lord' (2 Th 1^{8-9}). His change of attitude was caused in part at least by his wrestling with the problem of unfaithful Israel (Ro 9–11). Israel had been God's chosen people upon whom He had lavished all the favours of the old covenant; and many of these, Paul's kinsmen by race, were among the unbelievers whom he had been ready to consign to perdition. But was this a fate for Israel with which God could rest content? Would God go back on His promises? 'For the gifts and call of God are irrevocable' (Ro 11^{29}). Moreover, God had saved Paul, the most intransigeant of all the enemies of the Cross of Christ, so that no limits could be set to the extent of His mercy. By such considerations as these Paul advanced to the mystery of universal salvation: 'A hardening has come upon part of Israel, until the full number of the Gentiles come in, and so all Israel will be saved. . . . For God has consigned all men to disobedience, that he may have mercy upon all' (Ro $11^{25f.\ 32}$).

Above all, the Parousia meant the final victory of Christ over His enemies, the principalities and authorities—those angelic beings who stood for worldly power, derived indeed from God but in revolt against Him. In this connexion also Paul's expectations were modified as he came to a larger conception of the scope of God's plan for salvation. In his earlier letters he was content that these powers should be defeated and destroyed. Writing in A.D. 50, only ten years after Caligula had given orders for his statue to be set up in the Temple at Jerusalem, he thought of Roman imperial authority as the embodiment of a mystery of lawlessness which would finally manifest itself in a man of lawlessness, whom Jesus would slay with the breath of His mouth and destroy by His appearing and His coming (2 Th 2^{3-12}). The rulers of this age who had been responsible for the crucifixion were being reduced to impotence and would in the end be destroyed, along with man's last enemy, death (1 Co 2^{6-8} 15^{24-26}). But with his growing experience of its administration in many parts of the world Paul came to have a deeper appreciation of the Roman Empire, so that when he wrote his letter to Rome he could speak of the Divine institution of its authority without any qualification (Ro 13^{1-7}). The Empire with its capital in Rome and its colonies and citizens dispersed throughout the provinces helped to evoke in his mind the picture of a Divine commonwealth with the Jerusalem above for its capital and with every church on earth a colony of heaven (Ph 3^{20}). Thus in his later letters when he had developed the cosmic implications of the Cross, and had come to see the salvation of man as the centre of a universal redemption, Paul was able to include even the heavenly powers within the redemptive purposes of God (Ph 2^{10}). In Christ was the source and purpose of their being, and therefore in Christ was the possibility of their restoration to the place which God had designed for them in His universal plan. 'In him all things were created, in heaven or on earth, visible and invisible, whether thrones or dominions or principalities or authorities—all things were created through him and for him . . . in him all the fulness of God was pleased to dwell, and through him to reconcile to himself all things, whether on earth or in heaven, making peace by the blood of his cross' (Col 1^{16-20}).

Paul's complete picture of the Parousia, then, is that with the appearing of Christ in glory the hidden life of Christians will be manifested in the glory of the resurrection body; the fulness of the Gentiles and all Israel will be brought by the inscrutable ways of God into the kingdom of His mercy; the physical creation will be liberated from the bondage of decay; the powers of heaven will be reconciled to their Creator; because God from the beginning has planned to sum up all things in Christ, things in heaven and things on earth (Eph 1^{10}). G. B. C.

PAULUS, SERGIUS.—Proconsul of Cyprus when Paul and Barnabas visited the island on the 'first missionary journey'; spoken of in Ac 13^{7} as 'a man of intelligence' (RSV). Cyprus, annexed to Rome in 58 B.C., was made an imperial province in 31 B.C. and a propraetor was appointed governor. In 22 B.C. because of more settled conditions it was transferred to the Senate and thereafter was administered by a proconsul (q.v.). This Sergius Paulus received his appointment in A.D. 46. The elder Pliny cites him twice as authority for matters concerning Cyprus. No coins have been discovered bearing his name, but it appears on an inscription. Of his alleged conversion (Ac 13^{12}) there is no supporting evidence. J. S. K.

PAVEMENT.—See GABBATHA, PEDIMENT.

PAVILION is formed (through Fr. *pavilion*) from Latin *papilio*, which meant a 'butterfly,' and also (from the resemblance to a butterfly's outspread wings) a 'tent.' 'Pavilion' is the translation in AV of *sōkh* in Ps 27^{5} (RSV 'shelter'), and of *sukkāh* in 2 S 22^{12} (RSV 'canopy'), 1 K $20^{12.\ 16}$ (RSV 'booths'), Ps 18^{11} (RSV 'canopy') 31^{20} (RSV 'shelter'), and to these RV adds Job 36^{29} and Is 4^{6} for AV 'tabernacle.' RSV has 'pavilion' in Job 36^{29} and Is 4^{6}, but nowhere else. *sukkāh* is of frequent occurrence, and is often rendered 'booth' or 'tabernacle,' once 'tent' (2 S 11^{11} AV). Besides these, *shaphrîr* is translated 'royal pavilion' (AV, RV; RVm 'glittering pavilion,' RSV 'royal canopy'). RV has also given 'pavilion' in Nu 25^{8}, with marginal **alcove** for AV 'tent' (RSV 'inner room'). It is possible that the Hebrew *ḳubbāh* in this passage is a mistake for *ḥuppāh*, 'nuptial tent.'

PE.—Seventeenth letter of Hebrew alphabet, and so used to introduce the seventeenth part of Ps 119, every verse of which begins with this letter.

PEACE.—1. The word 'peace,' as it is used in the OT, renders the Hebrew *shālôm* (Arab. *salām*), of which the fundamental sense is wholeness, health (*i.e.* hale-th), security (cf Gn 43^{27}, Ps 73^{3} etc.). The word has several uses: (1) it is the common formula of courteous well-wishing, employed both at meeting and at parting (cf Gn 43^{23}, 1 S 1^{17}, Ps $122^{7f.}$, Mt $10^{12f.}$); (2) it means 'peace' in the sense of freedom from war and conflict and the resultant social solidarity and political stability, all of which are secured in permanency only by the reconciliation of man with man and people with people; and (3) it can mean 'peace' in the religious sense of reconciliation of man with God and the experience of God's grace (cf Nu 6^{26}, Ps 29^{11} $85^{8ff.}$ 122^{6}, Jer 16^{5} etc.). The peace of the Messianic Kingdom of God (q.v.) comprehends (2) and (3) by its expectation, on the one hand, that swords will be beaten into ploughshares and spears into pruning-hooks, and, on the other, that the old, harmonious order of nature will be restored and hostilities will have an end (cf Ps $72^{3.\ 7}$, Is 2^{4} 9^{5-7} 11^{6-9}, Hag 2^{9}, Zec 9^{10}). Sometimes its use in the OT approximates to its subjective NT signification, implying tranquillity of heart, as in Ps 4^{8} 119^{165}, Is $48^{18.\ 22}$.

2. It is said in the NT (Mt 10^{34}) that, owing to the challenge which the Gospel of Christ offered to orthodox and deeply-rooted ways of religious thought and practice,

His own conception of the immediate effect of His own work was that it would bring not peace, but a sword; but His purpose is to bring the abiding peace which comes only when every cause of strife and barrier of division is removed. The Greek *eirēnē* has much the same range of meaning as the Hebrew *shālôm*, being found in its broadest sense conspicuously in the (Hebraistic) Benedictions (cf Mk 5^{34}, Lk 7^{50} 24^{36}, Jn 14^{27}, Ja 2^{16} etc.) and in the epistolary Salutations. In the latter formulas, 'peace' comprehends the sum of blessing experienced, as 'grace' the sum of blessing bestowed, from God in Christ. The Messianic peace (1 above) reappears in Lk 1^{79} 2^{14}, Mt 10^{34}; and the peace of harmony with God in Jn 16^{33}, Ac 10^{36}, Ro 8^{6} 15^{33}, Ph 4^{7} etc. These uses are gathered up into the specific NT doctrine of peace, of which Paul is the exponent and Ro 5^{1} the classical text (cf v.^{10} and 2 Co 5$^{18-21}$, Eph 2$^{13-18}$, Col 1^{20}; and see the article on JUSTIFICATION): 'peace with God through our Lord Jesus Christ' is the state and the experience of those who have been 'reconciled' to the Father through the sacrifice offered by His Son in love, whose 'trespasses' are forgiven and in whose heart 'the spirit of adoption' dwells. Reconciled to God, we are enabled to accept in faith the vexatious experiences of life and the hostilities of the world; by His cross Christ 'has slain' at a blow 'the hostility' between God and man, and between race and race (Eph 2^{16}). 'Peace on earth' is to flow from 'the peace of Christ' that 'rules in' Christian 'hearts' (Col 3^{15}). G. G. F.—J. Ma.

PEACE-OFFERING.—See SACRIFICE AND OFFERING, 12.

PEACOCKS.—**1.** Hebrew *tukkiyyîm*, 1 K 10^{22}, 2 Ch 9^{21}. The word may be from the Tamil *tokei* meaning 'peacock' but from the fact that the LXX has in 1 K 10^{22} 'carved stones' and that in 2 Ch 9^{21} the word is omitted, the translation is doubtful. Alternatively, it has been thought that it comes from a word meaning *guinea-hen*, while Albright (*ARI*, 212) holds that it means 'ape' and has an Egyptian derivation. **2.** *ʿnānîm* is translated 'peacock' in AV in Job 39^{13} (RV, RSV **ostrich**, q.v.).

PEARL.—References in OT are uncertain. In Job 28^{18} *gābhîsh* is translated 'pearls' in AV, but 'crystal' in RV and RSV, while *pᵉnînîm* in the same verse is translated 'rubies' in AV and RV, but 'pearls' in RVm and RSV. In Est 1^{6} *dar* should be rendered 'pearl' or 'mother of pearl' (so RSV). In NT pearls (Gr. *margaritai*) are mentioned in Mt 7^{6} 13^{45f}, 1 Ti 2^{9}, Rev 17^{4} 18$^{12, 16}$ 21^{21}. The last reference must be to mother-of-pearl. Pearls are a pathological production of the mollusc *Avicula margaritifera*. See also JEWELS AND PRECIOUS STONES. E. W. G. M.

PECULIAR PEOPLE.—This expression is found several times in AV to denote that Israel is the chosen people of God, 'peculiar' to Himself, *i.e.* belonging exclusively to Him. See ELECTION.

PEDAHEL.—The prince of Naphtali, Nu 34^{28}.

PEDAHZUR.—The father of the prince of the tribe of Manasseh, Nu 1^{10} 2^{20} 7$^{54, 59}$ 10^{23}.

PEDAIAH ('Y" has redeemed').—**1.** Father of Joel, ruler of Manasseh, W. of the Jordan, in the time of David, 1 Ch 27^{20}. **2.** 'Of Rumah,' father of Zebudah the mother of Jehoiakim, 2 K 23^{36}. **3.** Son of Jeconiah, 1 Ch 3^{18}; in 1 Ch 3^{19} called the father of Zerubbabel who, however, is otherwise represented as the son of Pedaiah's brother Shealtiel. **4.** A man of the family of Parosh, who repaired the wall of Jerusalem, Neh 3^{25}. **5.** One of those who stood by Ezra when he read the Law to the people, Neh 8^{4}, 1 Est 9^{44} (AV **Phaldaius**, RV **Phaldeus**). He is perhaps the same as **4.** **6.** A Levite, Neh 13^{13}. **7.** A Benjamite, Neh 11^{7}. W. F. B.

PEDIAS, 1 Est 9^{34} (RV).—see BEDEIAH.

PEDIMENT.—This word stands only in RSV in 2 K 16^{17}, where it renders Hebrew *marṣepheth* (AV, RV **pavement**). Here it is clearly the more appropriate translation. A kindred word, *riṣpāh*, is elsewhere rendered 'pavement' by RSV as well as the older versions (2 Ch 7^{3}, Ezk 40^{17f}).

PEEP.—To 'peep' (Is 8^{19} 10^{14}) is to 'cheep' as nestlings do. RV and RSV mistakenly have 'chirp.'

PEKAH was one of the last kings of Israel. The country was unsettled, and there was great discontent on account of the heavy tribute paid to Assyria. Pekah made himself the organ of the dissatisfaction, and murdered his king **Pekahiah** (2 K 15^{25}). He needed the help of only fifty soldiers or bravos to accomplish his purpose. Once on the throne he set on foot a movement against the Assyrians in which all the kingdoms of Syria were to unite. When the king of Judah held out against it, Pekah and Rezin invaded that country, as is set forth in the article AHAZ. The Assyrians were prompt in meeting the coalition, and the issue can hardly have been doubtful, except to those who were blinded by patriotism. The fall of Damascus was followed by the ravaging of the districts of Israel N. and E. of Samaria, and the transportation of their inhabitants to remote portions of the empire. The capital would no doubt have been besieged had not the party friendly to Assyria got the upper hand and removed Pekah by the usual method of assassination (v.^{30}). The leader in this movement, **Hoshea** by name, had an understanding with the Assyrian king, and was perhaps from the first a creature of his. Abject submission on his part saved Samaria for the time being. The length of Pekah's reign is given as twenty years which is difficult to reconcile with other data at our command. The true period cannot have been more than five years. H. P. S.

PEKAHIAH, son of Menahem, was king of Israel for a short time in the troubled period which preceded the fall of Samaria. The record tells us nothing about him except that he displeased Yahweh by walking in the sins of Jeroboam I., and that he was assassinated by **Pekah**, one of his officers (2 K 15$^{23-26}$). H. P. S.

PEKOD.—Mentioned in Ezk 23^{23}, Jer 50^{21}. It probably represents the Babylonian *Pukūdu*, a people settled in Lower Babylonia, possibly of Aramaean race. Their seat was near the mouth of the Uknu River.

PELAIAH.—**1.** A son of Elioenai, 1 Ch 3^{24}. **2.** A Levite who helped Ezra to expound the Law, Neh 8^{7}, 1 Est 9^{48} (AV **Biatas**, RV **Phalias**): he was one who sealed the covenant, Neh 10^{10}.

PELALIAH.—A priest, Neh 11^{12}.

PELATIAH.—**1.** A 'prince of the people,' Ezk 11^{1}; he died as the prophet delivered his message, v.^{13}. It is difficult to decide whether Pelatiah's death is to be understood as actual or merely symbolical. **2.** A grandson of Zerubbabel, 1 Ch 3^{21}. **3.** A Simeonite, 1 Ch 4^{42}. **4.** A signatory to the covenant, Neh 10^{22}.

PELEG.—A descendant of Shem in the fourth generation, according to the table of peoples given in Gn 10^{25}, 1 Ch 1^{19}. In Lk 3^{35} he stands a generation further off through the interpolation of Cainan from the LXX. The etymology of the name is uncertain. Its reference may be geographical, or racial, or, as the word means ordinarily 'a water-course,' it may denote a land cut up by streams. W. F. C.

PELET.—**1.** A son of Jahdai, 1 Ch 2^{47}. **2.** A Benjamite chief who joined David at Ziklag, 1 Ch 12^{3}.

PELETH.—**1.** See PALLU. **2.** A Jerahmeelite, 1 Ch 2^{33}.

PELETHITES.—See CHERETHITES AND PELETHITES.

PELIAS, 1 Est 9^{34} (AV).—See BEDEIAH.

PELICAN.—The Hebrew *ḳā'āth* has generally been thought to be the pelican, being explained from *ḳî'* 'to vomit'; for the pelican was thought to throw up its food to feed its young. Although, however, two species of this bird, the white pelican (*pelicanus onocrotalus*) and the Dalmatian pelican (*pelicanus crispus*), occur in Palestine, neither can be meant; for these birds always live close to water and feed on fishes, whereas the *ḳā'āth* is expressly said to haunt ruins (Zeph 2^{14}, where the AV has '**cormorant,**' which is impossible for the same reason)

and desert land (Ps 102[6]) and is regarded as a symbol of desolation (Is 34[11]); further, it is in no sense an unclean bird, as the *ḳā'āth* is said to be (Lv 11[18] Dt 14[17]). The name is best explained as an onomatopoeic attempt to represent the owl's hoot; for Symmachus' *nuktikorax* 'long-eared owl' suggests some such bird. It is perhaps rather the 'scops-owl,' which is very common about olive-groves and old ruins in Palestine. This bird's cry is given as 'kiu-kiu' monotonously repeated at regular intervals, and *ḳā'āth* may be easily taken as a participial formation from an otherwise unknown *ḳî'* 'to cry kiu-kiu.' Such a bird, being a *raptor*, will have been classified as unclean because of its habit of taking live prey; for eating the blood with the flesh was prohibited and what eats ritually unclean food may not itself be eaten for fear of conveying ceremonial contagion. See also VULTURE, **5**. G. R. D.

PELONITE.—A designation applied to Helez, one of David's thirty heroes, 1 Ch 11[27], where it is probably a scribal error for **Paltite** (cf 2 S 23[26]); also of Helez, David's officer for the seventh month, 1 Ch 27[10], an Ephraimite. In the latter case it is possibly a gentilic from an unknown locality Palon. See HELEZ, **2**. In 1 Ch 11[36] for 'Ahijah the Pelonite' we should probably read 'Eliam the Gilonite' (cf 2 S 23[34]).

PELUSIUM.—'The stronghold of Egypt,' Ezk 30[15f], must be Pelusium (so RSV; AV, RV Sin), the Egyptian name of which is not clearly known, or some fortress in its neighbourhood. In the list of governors appointed by Esarhaddon and Ashurbanipal, while native princes were retained elsewhere, Sin is the only city put in charge of an Assyrian; no doubt he was placed at Pelusium to keep the gate of Egypt open for the Assyrian king. F. Ll. G.

PEN.—**1.** Hebrew *ḥereṭ* in Is 8[1] (AV, RV) is a stylus for writing on a tablet. For 'with the pen of a man' RVm and RSV have 'in common characters,' but this is free interpretation. In Ex 32[4] the same word is rendered 'graving tool.' **2.** Hebrew *'ēṭ* Jer 8[8], Ps 45[1]) is probably a reed pen for writing on a scroll (cf Jer 36[2]). It also denotes an iron tool for use on stone (Job 19[24]), and sometimes it had a diamond point (Jer 17[1]). **3.** Hebrew *shēbheṭ* in Jg 5[14] (AV) is a rod or staff. Hence RV and RSV have 'marshal's staff' for 'pen of the writer.' It is more probable, however, that it denotes the symbol of office of the muster officer. **4.** Greek *kalamos* (3 Jn 13) is a reed pen. It is used in LXX to render 2 in Ps 45[1].

PENCIL.—See ARTS AND CRAFTS, **1**: LINE, **6**.

PENDANTS.—See AMULETS, ORNAMENTS, **2**.

PENIEL.—See PENUEL.

PENINNAH.—The second wife of Elkanah, 1 S 1[2, 4].

PENKNIFE.—Mentioned only in Jer 36[23]. Orientals use a reed pen in writing, and always carry a knife for the purpose of sharpening it.

PENNY.—See MONEY, **7**.

PENSION.—Only AV of 1 Es 4[56] (AVm 'portions of land,' RV 'lands'). This archaism is first found in the Geneva version, and is used in the original sense of 'payment' (Lat. *pensio*). RSV 'land and wages.'

PENTATEUCH.—The first five books in the OT, corresponding to 'The Law' (*tôrāh*), the first of the three divisions of the Hebrew Bible, commonly called by Jews 'the five-fifths of the Law.' Christian scholars as early as Tertullian and Origen adopted the name *Pentateuch* as a convenient title for these books. 'The Law' was regarded by the Jews as a unique and authoritative exposition of all individual and social morality; a wide gulf seemed to separate it from the book of Joshua, the first of the series of historical books known as 'The Former Prophets.' Such a division may be artificial and many scholars are of the opinion that the 'sources' apparent in the Pentateuch can be traced at least into Joshua. Hence the term *Hexateuch* for the books Genesis to Joshua, though the term is not in such common use as it was at the turn of the century. The Pentateuch contains not only 'The Law' proper but some account of the beginnings of the world and of civilization, and of the origins of Israel. But the giving of the Law at Sinai and its recapitulation (in Deuteronomy) by Moses, immediately prior to the entry into Canaan, were felt, with some justification, to be the climax of a long preparation of the chosen people.

I. THE PROBLEM OF AUTHORSHIP.—That Moses was the author of the Pentateuch was for long unquestioned. The basis of this belief was the Jewish tradition of its origin which the Church took over with the books themselves. Although it is nowhere said in the OT that Moses wrote *the whole of* the Pentateuch, there is little doubt that the words 'the book of the law of Moses' (Neh 8[1], and cf Chronicles, Ezra, Nehemiah, *passim*) were, by the beginning of the Christian era, understood to imply that he did. Similarly, the NT takes Moses' authorship for granted and it can hardly be denied that our Lord shared the common view.

When the first edition of this Dictionary was published, scholars trained in critical methods were well-nigh unanimous in denial of the Mosaic authorship, while the great majority of unacademic Christians still took the traditional view for granted. The situation to-day is somewhat different. Not all the learning is on one side. There are scholars who confidently affirm Mosaic authorship, notwithstanding that they have read all that is to be said to the contrary. For the 'fundamentalist'—to use the word without disparagement—the problem seems, in the last resort, to be largely one of conscience: to deny Mosaic authorship is to impugn the authority and plenary inspiration of Scripture, and even of our Lord himself. To this the 'critic,' in all good faith, replies that our Lord's 'knowledge' of questions of this kind was that of His contemporaries, and that the acceptance of such limitations was one condition of a true incarnation.

Such notes as 'At that time the Canaanites were in the land' (Gn 12[6]) and 'These are the kings who reigned in the land of Edom, before any king reigned over the Israelites' (Gn 36[31]), can hardly have been written by Moses. Nor is it probable that Moses wrote, 'Now the man Moses was very meek' (Nu 12[3]), and the account of his own death (Dt 34, especially vv.[10f]). But such occasional sentences or paragraphs are not proof that *the whole* Pentateuch is post-Mosaic. They could conceivably be later additions to a work which, *as a whole*, is by Moses. Indeed, this explanation of them is not uncommon among conservative scholars.

The Pentateuch nowhere claims to have been written by Moses, nor does it, on the whole, read as if it was. The bulk of Deuteronomy purports to be an address, or series of addresses, by Moses, and 31[9] says that 'Moses wrote this law.' But other references to Moses 'writing' certain sections (Ex 17[14] 24[4]) rather imply that he did not write the whole of the five books. The remainder of this article will attempt briefly to summarize: II. The Composition of the Pentateuch; III. The History of Criticism; IV. The Graf-Wellhausen Hypothesis; V. Characteristics of the Documents; VI. Recent Discussions.

II. COMPOSITION OF THE PENTATEUCH.—(*a*) There are in the Pentateuch—not including the Decalogue (Ex 20[1–17], Dt 5[1–21]), whose promulgation it is now very usual to assign to Moses—at least three collections of *laws*. They are (i) The Book of the Covenant (=C), Ex 21–23; (ii) 'The statutes and ordinances' of Dt 12–26 (=D); (iii) Laws relating to sacrifice, ritual 'cleanness' and 'uncleanness,' and the like, which occupy the bulk of Leviticus and large sections of Exodus and Numbers, and to which the name Priestly Code (=P) is often given.

(i) The laws of C are directed to the simple needs of an *agricultural* community. This is not in itself proof that they were not promulgated by Moses, since Moses is represented as giving to Israel laws which should be operative after the settlement in Canaan. In them three annual festivals are prescribed during which all male

Israelites must present themselves at a sanctuary. The preamble to the laws (Ex 20^{24f}) appears to say that a sanctuary, with an altar of earth or unhewn stones, might be built in any place where Yahweh had authentically revealed Himself.

(ii) Everything in D points to a more advanced civilization. There are seven festivals and their original agricultural character is subordinated to their religious significance. Many of the laws deal with the same matters as those of C and sometimes there is disagreement between them : *e.g.* in Ex 21^{1-11} only male slaves are to be released after six years, but in Dt 15^{12-18} female slaves are also to be manumitted. The most striking difference between C and D is that in the latter sacrifice may only be offered at one single sanctuary (Dt 12 *et passim*).

(iii) The laws in C and D deal largely with what we should call civil law ; those in P are mainly concerned with matters ritual and ecclesiastical and do not, in general, conflict with C and D. Except in one important particular : in D all Levites are priests (' the Levitical priests,' Dt 18^{1} *et passim*) ; in P a clear distinction is made between the ' priests,' who must be descended from Aaron (Nu 3^{1-4}), and the Levites, who are descended from Levi (Nu 3^{14-37}) but not through the Aaronite branch of the tribe. The Levites are acolytes to the priests (Nu 3^{5-10}), a kind of third order in the descending scale High Priest, Priests, and Levites.

(*b*) Not only are there three collections of laws in the Pentateuch, there are three types of *narratives*. These correspond roughly, both in style and vocabulary, and in theological outlook and background, to the three corpora of laws. There is no mistaking this in Deuteronomy, which is throughout homogeneous in style, a style of which there are few or no traces elsewhere in the Pentateuch.

(i) This leaves us with Genesis, and the narrative portions of Exodus and Numbers. (The few narrative parts of Leviticus are in the same style as the laws.) In Genesis there are two distinct accounts of creation. In the first (1^{1}–2^{4a}) God is called *Elohim* (God) and the order of creation is vegetation, aquatic creatures and birds, mammals, and finally mankind (male and female together). In the second (2^{4b-24}) God is called *YHWH* (Yahweh) and the order is a man, vegetation, animals, and finally a woman. In the story of the Flood (6^{5}–9^{19}) some sections have Elohim, others Yahweh. In the Elohim sections Noah is told to take into the ark a single pair of each species of animals, ' clean ' and ' not clean ' alike (7^{6-9}) ; in the Yahweh sections (7^{1-5}) he is told to take seven pairs of ' clean ' and one pair only of animals ' not clean.' The reason for this appears to be that the extra ' clean ' animals would be required for the sacrifice to Yahweh (8^{20f}) after the Flood. It looks as if two narratives have been woven together instead of being put side by side as in Gn 1–2.

(ii) There are three stories of the ' sister-wife ' (12^{10-20}, Yahweh ; 20, Elohim ; 26^{6-11}, no Divine name, and Isaac, not Abraham). In the story of Joseph as it now stands (Gn 37), Midianite traders take Joseph out of a pit and sell him to a caravan of Ishmaelites (v.^{28}). Yet the Midianites sell him to an Egyptian, Potiphar (v.^{36}). Notwithstanding, in 39^{1} Potiphar bought him from the Ishmaelites. The contradictions are resolved if one story told how, at the suggestion of Reuben, Joseph was cast into a pit from which he was stolen by the Midianites ($37^{22-24, 28a}$), while in the other ($37^{25-27, 28b}$) Judah persuaded his brothers to sell Joseph to the Ishmaelites. In v.^{28} the two narratives have crossed : originally the Midianites ' lifted ' and Joseph's brothers ' sold ' him. For the details of the passages mentioned above, and for examples of other dual narratives in Genesis, Exodus (*e.g.* the plagues), and Numbers (*e.g.* the spies, 13 f, and the rebellion of Korah, Dathan, and Abiram, 16 f), the reader is referred to the standard Introductions and Commentaries.

More often than not, the *Elohim* sections of Genesis agree in their catalogical style, in their fondness for dates and genealogies, and in their theological conceptions, with the ' P ' laws : *e.g.* the absence of any sacrifice and, by implication, of ' spare ' pairs of ' clean ' animals, from the Elohim account of the Flood, agrees with the theological standpoint of P, according to which there was no animal sacrifice until God gave to Moses the rubrics of sacrifice (Lv 1). (The name Yahweh in Leviticus occasions no difficulty, since after Ex 6^{2} ' P ' does not scruple to call God ' Yahweh.')

(iii) Almost invariably in Genesis any mention of a patriarch sacrificing is associated with *Yahweh*. But Gn 22^{1-13} tells of a sacrifice, presumably to *Elohim* (though note *Yahweh* in vv.$^{14-18}$). The story of Abraham's offering of Isaac has more in common with the Yahweh (generally denoted by the symbol J = Yahwistic) stratum of the Pentateuch, than it has with the Elohim story of creation and genealogical paragraphs like those in Gn 5. There thus appear to be two *Elohim* strata in Genesis, one related to P and the other more akin to J. J and the non-P (= E) narratives are sometimes called ' JE,' and after Ex 3^{13f} it is often difficult to separate J from E. There is no decisive evidence of any relation between the JE stories and the C laws ; but if the ' P ' materials in Genesis should go with the P laws, and the narrative portions in Deuteronomy with the D laws, it is probable that the JE stories were current in the milieu of the C laws. There are many indications of this : *e.g.* the altars of Ex 20^{24-26} were almost certainly to be found in places where the patriarchs were reputed to have sacrificed, such as Shechem (Gn 12^{7}), Bethel (Gn 12^{8} 28^{18} 35^{1}), and Beersheba (Gn 21^{33} 26^{23-25}).

III.—History of Criticism.—(*a*) The first writer to deal with the problem in a systematic way was Jean Astruc, physician to Louis XIV., who in 1753 published a short monograph of which the English title would be ' Conjectures on the memoirs which Moses appears to have used in composing the book of Genesis.' Astruc did not deny the Mosaic authorship. He noted the alternation of the Divine names Elohim and Yahweh, and conjectured that there were two main sources in Genesis. This became known as the **Documentary Hypothesis.** Next, Eichhorn observed that the variation of Divine names was regularly accompanied by characteristic differences of language and historical standpoint. Further investigation revealed the presence of two ' Elohim ' sources [see II. (*b*) (iii) above].

(*b*) It was only a question of time before the methods of critical analysis should be applied to the other books of the Pentateuch (and Hexateuch). But the absence of the criterion of the two Divine names (after Ex 6^{2}) made progress difficult. Added difficulty was presented by the bewildering variety of laws and stories associated with the transactions at Mount Sinai. Vater (1802), a German, held that the frequent repetitions and varying phraseology could only be explained on the assumption that we are dealing with an agglomeration of unconnected fragments, subsequently collected and not inharmoniously patched together by an industrious student of Israel's early literature and antiquities. He supposed that Deuteronomy originated in the time of David and that it formed the kernel round which the rest of the Pentateuch was gradually added. This was known as the **Fragment Hypothesis.**

(*c*) The weakness of the Fragment Hypothesis was that it ignored the indications of a unifying principle and definite plan which are revealed by the Pentateuch as a whole. This was made abundantly clear by de Wette, who sought to supplement purely literary by historical criticism. Accordingly, he made a comparison between the Pentateuchal laws and the materials in the historical books. This convinced him (1805) that Deuteronomy presented a picture of Israelite life and worship unknown before Josiah's reformation. It was only a short step from this to the identification of D with the lawbook discovered in the Temple in the reign of Josiah and adopted by that king as the basis for his reforms. But again there was reaction, this time from exclusively historical and back to literary methods of

investigation. This resulted in establishing the connexion between the first Elohist [='P' above, II. (*b*) (i)] of Genesis and the P legislation of Exodus, Leviticus, and Numbers. This corpus of materials was taken to be the *Grundschrift* or primary document, which was supposed to have been supplemented and revised by the Yahwist (J). This is known as the **Supplement Hypothesis.** The difficulty it had to encounter was that of placing the Yahwist in the category of a mere supplementer. The more his work is studied the more is he seen to have been a writer of outstanding originality and genius.

(*d*) This brings us back to some form of **Document Hypothesis.** The position as it stood about the middle of the 19th cent. may be summarized: (1) There are two 'Elohistic' sources in Genesis–Numbers, *viz.* P and E; (2) P, with its detailed chronology and genealogies, is the framework into which the other materials have been fitted; (3) The Yahwist, no less than P and E, must be regarded as an independent source; (4) D is to be dated 7th cent. B.C.; (5) It was assumed that P, which provided the framework and whose distinctive vocabulary and theological conceptions can be easily identified throughout Genesis to Numbers, is the earliest of the 'documents.' That would give a probable order in time of P, JE, D.

IV. The Graf-Wellhausen Hypothesis.—So far little had been done to inquire into the mutual relations of the documents. A provisional solution had been reached as to the extent of the several sources, but it had hardly occurred to anyone that P, JE, and D were the embodiments, so to speak, of historical processes through which Israel passed during a period of centuries. Graf (1866) made a comparison between the sources themselves, and, assuming the identity of D with Josiah's lawbook as a fixed point of departure, concluded that while D presupposes the laws in Ex 20–23 (C) and 34, the bulk of the P laws (and that would imply also the P *Grundschrift*) must have been unknown to D. Testing this result by the external evidence of books outside the Pentateuch, he concluded that P could not have been produced before the Exile, and that in all probability it was compiled by Ezra.

Graf's theory was adopted and worked out in detail by Wellhausen, whose *Prolegomena zur Geschichte Israels* (1883; English Translation, *History of Israel*, 1885) came to be widely regarded as a final solution of the problem. In Wellhausen's opinion a comparison of the laws with the evidence supplied by the prophetical and historical books shows that 'the three great strata of laws embodied in the so-called books of Moses are not all of one age, but correspond to three stages in the development of Israel's institutions.' He pointed out that there are no valid grounds for distinguishing between the legal and the historical sections: JE, which is mainly narrative, embodies the C legislation; D gives a full historical presentation; P supplies the framework of the whole. The chronological order of the documents is JE, D, P. Such was the regnant hypothesis when the first edition of this *Dictionary* was published. Full details of it may be found in S. R. Driver, *An Introduction to the Literature of the OT* (1891; 9th ed. 1913), which is still a standard work and easily accessible.

V. Characteristics of the Documents.—(*a*) D.—It is convenient to begin with Deuteronomy, since it is more self-contained than the other sources. It also exhibits, more immediately than they, evidence of independent thought and language, and its date, in the opinion of most scholars, can be determined with something approaching certainty.

From 2 K 22 f we learn that 'the book of the law' discovered in the Temple created consternation, and provided the basis for the reformation undertaken by King Josiah in 621 B.C. The theory that this book was the Pentateuch, composed centuries before, long fallen into oblivion, accidentally rediscovered, and now adopted as the rule of national conduct, is quite unrealistic. It is incredible that the whole Pentateuch should have been lost and forgotten, and the reason why the book made so great an impression was that to everyone concerned it brought an entirely *new* message. Nor is it possible that 'all the words of the book' could be read aloud in one day (23^2), if the book was the whole Pentateuch. And nothing in the story suggests that only selections from the book were read.

If negative evidence shows that the lawbook was only a part of the Pentateuch, positive reasons leave little room for doubt that it was some form of Deuteronomy, whether the whole book, or the central corpus of laws (12–26) plus, almost certainly, ch. 28, with its blessings and curses. Josiah's reformation followed the requirements of the lawbook. It consisted in an entire reform of Israelite religion, the abolition of local sanctuaries and the centralization of all sacrificial worship in the Jerusalem Temple. It closed with a celebration of the Passover, by the entire people (2 K 23^{21f}), in accordance with the ceremonies prescribed in the book (Dt 16).

The language and style of Deuteronomy are very marked. It contains comparatively few unusual words, but the repetitions of words, phrases, and even entire clauses, gives it a distinctive colouring, so that even the reader who knows no Hebrew can immediately recognize a passage of Deuteronomic authorship or written under Deuteronomic influence; *e.g.* much in the books of Kings.

Theologically, the distinctive feature of D is the law of the one sanctuary, which is repeatedly enforced with solemn warnings. (That the law of the one sanctuary was unknown in Elijah's time is clear from 1 K 18^{30} 19^{10}.) But the modern reader is more likely to be struck by the emphasis on Yahweh's love for and 'choice' of Israel, coupled with the demand for Israel's responsive love for Yahweh. With this there goes the frequent exhortation to humane treatment of the poor, of slaves, the widow and the orphan, and the 'sojourner.' This was a legacy from the teaching of the prophets. The influence of the prophets is also to be seen in the doctrine of moral retribution, so prominent in all the Deuteronomic writings.

(*b*) P.—If D is a prophetic reformulation of the laws of C, P shows how, in the period following the Exile, when theocracy was embodied in priestly ideals, the early history of Israel was once more reinterpreted. The law of the one sanctuary in D was a practical application of Isaiah's doctrine of the sanctity and inviolability of Zion; P's distinction between priests and Levites is really the outcome of Ezekiel's solution (Ezk 44) of the difficulty which arose when the high places were suppressed, and the priests who had served them were deprived of livelihood. It was Ezekiel's plea that the Levites should forfeit full priestly status because of their participation in the idolatry which had characterized worship at the high places, and be degraded to the performance of the menial duties of the Jerusalem Temple. (Ezekiel would have confined the priesthood to the Zadokite branch of the Aaronites—cf 1 Ch 6^8; P admitted all who claimed descent from Aaron.) A comparison of the theology and the historical situation presupposed by P shows that it originated later than Ezekiel: *e.g.* there is no mention anywhere in the historical books of the Day of Atonement (Lv 16), which in post-exilic times became the most important day in the calendar. This refers only to the literary formulation of P, not to all its contents, much of which (*e.g.* the 'Law of Holiness,' Lv 17–26, and the antique conception of quasi-physical 'holiness,' Lv 6^{27f}) is plainly derived from more ancient sources. But P is much more than rubrics dealing with ritual. It aims at giving, from the priestly standpoint, a systematic account of the 'origins,' both political and religious, of Israel. Accordingly, chronological lists, enumerations of names, and other statistics are a prominent feature of its narrative, and by these signs throughout the Pentateuch it is easy to distinguish it. As a rule, it is content to give a bare outline of the history, except where it is necessary to explain the origin of some ceremony or institution

(*e.g.* Gn 17). In representing God's dealings with men, P shrinks from the forcible language of earlier writers. Anthropomorphisms are rare, angels and dreams are not mentioned. On the other hand, P nowhere deals with those deeper spiritual problems—the origin of evil, the purpose of election, the universal mission of Israel—which were sympathetically, if not systematically, treated in other sources of the Pentateuch.

The style of P is scarcely less distinctive than that of D. It is 'stereotyped, measured, and prosaic,' with frequent repetitions of stated formulas. There is little doubt that it is the literary and historical framework of Genesis–Numbers; but the first assumption that it was therefore the earliest document has not been borne out by later investigation. It is incredible that in the early days of the monarchy sacrifices were offered at one single sanctuary served by High Priest, priests, and Levites—such was the organization in post-exilic and down to NT times—and that *later* (so we should have to conclude from JE) the single sanctuary principle was abandoned to permit a multiplicity of altars served by nondescript orders of priests. In that case, how did the Aaronite priests and the Jerusalem Temple regain the control they undoubtedly exercised in post-exilic times? In other words, the history is intelligible if the order is JE–D–P, but unintelligible if the order is P–JE–D, or P–D–JE. At the same time, although P 'assumed finally the shape in which we have it in the age subsequent to Ezekiel, it rests ultimately upon an ancient traditional basis. . . . The laws of P, even when they included later elements, were still referred to Moses—no doubt because in its basis and origin Hebrew legislation was actually derived from him, and was only modified gradually' (Driver, *op. cit.*, 154).

(*c*) **JE.**—We now come to the non-P (=JE) sections of Genesis–Numbers, to which should be added the closing chapters (32–34) of Deuteronomy. Critical analysis of this material has already suggested that it is composite, embodying two distinct traditions, J and E [see *supra*, II. (*b*) (iii)]. Both strands cover much the same ground and were probably composed at about much the same time. The whole is characterized by a superficial homogeneity and by the same general religious beliefs and hopes. Yet the original independence of the two strands is so manifest that it has become a generally accepted conclusion of criticism. J and E are distinguishable in three ways: they often tell a different story, they employ different language, and convey a different message.

It is in the stories of the patriarchs that we first become aware of different accounts, neither of which can be assigned to P, of the same incidents. The use of 'Yahweh' by J, and 'Elohim' by E, provides a simple criterion, though this is not always available, especially after Ex $3^{13f.}$. Other differences, not sufficient in themselves to prove diversity of authorship, are yet sufficiently numerous to lend support to the two-sources hypothesis. These differences are not due merely to literary artifices. E's interest in the northern sanctuaries points to North Israelitish origin; for a similar reason J is almost certainly of Judahite provenance. Along with this, in J Judah, in E Reuben, is the leader among the sons of Jacob.

J is a patriot who takes a pride in Israel's early history. But he does more than tell a story, he presents what may, with some justification, be called a theology of history. He embodies in his narrative reflections on the origin of sin and on its dire consequences. He realizes that Yahweh's call to Abraham is according to purpose, a purpose that embraces mankind; that Israel has a mission *in*, if not yet *to*, mankind. He is a creative artist who gave permanent shape to an interpretation of history which was only elaborated in the framework of P. His style is flowing and picturesque. His psychological verisimilitude and insight are unsurpassed in the epic- and saga-literature of the world. When he speaks of Yahweh he is uninhibited by theological scruples, and uses anthropomorphic and even anthropopathic language without reserve.

E is more restrained, more didactic, and more theological. That he wrote after the beginnings of the prophetical movement is obvious: Abraham is called a prophet, Miriam a prophetess. Moses is a prophet in all but name; the seventy elders receive prophetic inspiration (Nu 11). The importance of high moral standards is emphasized. God reveals Himself in dreams and the forceful language of J is toned down to the demands and fears of a more timorous reverence. E ignores Israel's mission in the world, has little or no interest in other peoples, or in the universal significance of Israel's history. His work may be said to draw from the early history of Israel's ancestors a much needed lesson for the age in which he wrote, a lesson of the importance of ethical standards and of the reverence due to Elohim.

There is general agreement that both J and E, in their present written forms, date from after the establishment of the monarchy, say the 9th cent. B.C. E, which is the more ethically sophisticated, may be somewhat later than J. It has long been recognized that the stories they tell are not their own free invention and that centuries of oral tradition lie behind them. Indeed, archaeology has demonstrated that some of the details in the patriarchal stories accord with the cultural milieu of the 2nd millennium B.C., in which the patriarchs are represented as living, rather than with that of the 1st millennium in which the older critics supposed they were 'written.'

VI. Recent Discussions.—Since the publication of the First Edition of this *Dictionary* the sources hypothesis as outlined in the foregoing paragraphs has been vigorously challenged. In outlining the position as it stands to-day it seems best to take the sources in the order in which they have been characterized in V. above, and finally to review the problem as a whole.

(*a*) **D.**—Attempts have been made to date D considerably earlier than the 7th cent. B.C. (A. C. Welch), or after the exile (G. Hölscher, R. H. Kennett). Neither of these suggestions has met with any widespread approval.

Another suggestion is that D was not originally a component part of a 'Pentateuch' but the first of a series of writings—'The Deuteronomic History'—which included the historical books Joshua to Kings (M. Noth). This would leave us with a *Tetrateuch* rather than a Pentateuch. It has already been noted that D, although it obviously takes up and revises the C laws, has hardly any literary affinity—except in chs. 32–34, which may once have stood at the end of Numbers—with Genesis–Numbers. On the other hand, Deuteronomic influence on Joshua–Kings (especially Judges and Kings) is unmistakable. There is much to be said for Noth's thesis, which does not negate the conclusion that the chronological order of the laws is C, D, P.

(*b*) **P.**—The early critics had to base their conclusions almost entirely upon the internal evidence of the OT. This was because external evidence of the kind furnished by archaeology (excavations in Bible lands) was, to say the least, meagre. But they were always ready to admit that although P, as a written 'document,' was post-exilic, it nevertheless contains much that has its roots in conceptions which are much older; in other words that not everything in P is the *ad hoc* invention of its author(s). This has been abundantly confirmed by archaeology. P is the product of a kind of counter-reformation, in which a good deal of what D would have stigmatized as heathenish had, with the final triumph of Yahwism over the Baal-principle, been rendered innocuous and could therefore be given a place in the Temple ritual without inviting a relapse into heathenism. Much in P is in line with Ezekiel, for whom ritual 'cleanness' and moral holiness were indivisible. At the same time it is probable that P's conception of the 'atoning' efficacy of *all* sacrifice (cf Lv 1^{4}), and his emphasis on sin- and guilt-offerings, was new; pre-exilic sacrifice was eucharistic, not penitentiary, and the staple sacrifices were the peace-offering and the burnt-offering.

(*c*) **JE.**—There are some evidences that J, at least in

the primeval history (Gn 1–11), is not homogeneous. Some passages (Gn 4^{16-24} 6^{1-4} 11^{1-9}) seem to know nothing of the Flood. Accordingly it has been common to distinguish two strands in it, J^1 and J^2. Otto Eissfeldt (1922) called the first of these L (=*Laienschrift* or 'Lay-document,' as being at the other extreme from the priestly source P) and he traced it throughout the Hexateuch. But the general tendency has been to reduce, rather than increase, the emphasis on 'documents.' Reference to any tabulation of the documents will show that E is more fragmentary than J. This may be either because the original E was briefer than J—there are no certain evidences of it in Gn 1–11—or because much of it was sacrificed when J and E were combined. However that may be, P. Volz and W. Rudolph (1933) proposed that 'E' is no more than so much supplement to J. Even if this were so, we should have to take account of the supplementary materials in writing a history of OT religion.

A more radical challenge to the documentary hypothesis has come from Scandinavia (J. Pedersen, 1931; Ivan Engnell 1945). According to Engnell it is in principle wrong to look for continuous parallel documents in the (for him) Tetrateuch. Such 'documents' never existed. Little of what we have, except legal sections like C, was deposited *in writing* until after the Exile. It received its present shape in *a traditionist circle* whose ideas were, by and large, those of the writer known to the critics as P. For the rest, the 'JE' of the critics must be taken as we have it, without attempting to separate it out into different strands. These non-P materials had long been current in oral tradition, and oral tradition can have all the fixity of written documents. Indeed, we can even speak of 'oral "literature."' No reliance, it is said, can be placed on the Divine names criterion, because 'the LXX shows inescapably that the variation in the divine names in the Hebrew text must be the result of a later process of unification; the variation is not original.' (Engnell, article 'Moseböckerna' in *Svenskt Bibliskt Uppslagsverk*, II, 1952, 329a.)

These contentions may be answered briefly: (1) Since, in its use of the Divine names, the Samaritan Pentateuch agrees with the Hebrew in over three hundred cases and differs from it in only eight or nine, the Hebrew text-tradition is obviously more reliable than the Greek; (2) If 'oral "literature"' can have all the fixity of 'written,' it is quite proper to apply source-critical methods to it. That means that we are more or less where we were.

To conclude, as matters now stand, there is less confidence than there was in assigning this or that word or half verse to Document X or Redactor Y. We are not to think of editors or redactors who sat at desks spread with manuscript documents, which they proceeded to dovetail together in the manner of Tatian composing his *Diatessaron*. Nevertheless, it would appear that the foundations of the sources-hypothesis were well and truly laid by Wellhausen and his predecessors. They may—inevitably in the circumstances, and working, as they did,with little help from archaeology—have been too much influenced by the then dominant theory of evolutionary progress; but the history of OT religion and institutions which they saw epitomized in the Pentateuch has a verisimilitude which is not to be easily gainsaid. It is often said that 'the Pentateuch is an epitome of the history of Israel's religion' (Peake's *Commentary on the Bible*, 1919, 130a). Christianity is committed to the faith that God has revealed Himself in history. Pentateuchal criticism is not an end in itself, or a pastime engaged in by scholars 'who like that sort of thing.' Its function is the ancillary but nevertheless important function of helping to clarify the history of the revelation which was mediated through history.

E. A. E.—C. R. N.

PENTECOST, FEAST OF.—1. The name for this feast in Israel was **the Feast of Weeks** (Ex 34^{22}, Dt 16^{10}) or the **Feast of Harvest** (Ex 23^{16}); it was also called the **Day of First-fruits** (Nu 28^{26}). It marked the end of the barley harvest and the beginning of the wheat harvest, and was, almost certainly, a midsummer feast taken over by the Israelites from the ancient Canaanites. Otherwise little is known about it in the early days. It became one of the three pilgrimage feasts (Dt 16^{16}), but, only once mentioned outside the Law (2 Ch 8^{13}), it clearly played a much smaller and less important part than Passover or Tabernacles. It was calculated, according to Dt 16^{9}, seven weeks after the sickle had been put to the standing grain. In the priestly law, it was calculated seven weeks or fifty days after the Sabbath that followed Passover (Lv 23^{15f}); it involved rest from work and was marked by the note of joy; it lasted one day (though the later Jews allowed two for it, because in the Dispersion, it was difficult to determine accurately the Palestinian month). Two leavened loaves of wheaten flour were waved before the Lord; two yearling lambs were also waved as a peace-offering; seven lambs, one bullock, and two rams were offered as a burnt-offering, and one kid of the goats as a sin-offering (Lv 23^{17-21}). In Nu 28^{27} the burnt-offerings are given as two bullocks, one ram, and seven lambs. These, perhaps, were supplementary to the offerings prescribed in Lv 23, where possibly only the sacrifices connected with the loaves are specified. Lv 23^{22} also prescribes freewill offerings for the poor and the stranger, while Dt 16^{10f} ordains a freewill offering for the sanctuary, and states that the festal joy is to be shared by all classes. Some scholars think that Dt 26^{2-11} refers to this feast (though others find obstacles to the identification). If they are right, then Dt 26 provides a form of confession and thanksgiving that had been in use probably for centuries before the promulgation of the law of Deuteronomy in 621 B.C., and shows, particularly in the *credo* of vv.^{5ff}, how far the Canaanite agricultural feasts had been historicized at a very early date.

2. In later Judaism, the Pharisees and Sadducees disagreed over the interpretation of Lv 23^{15}, the Pharisees reckoning always fifty days after 16th Nisan. For both, the feast of Weeks came to be regarded as 'the concluding feast of Passover.' It partially retained the character of a harvest festival, as is shown by the fact that the book of Ruth was among the appointed lections, and the firstfruits of the priests were offered with a reading of Dt 26^{3-10}. Yet the description 'concluding feast' and the Greek name 'Pentecost' (the fiftieth day) show that it largely lost its original meaning and importance. As a consequence of the destruction of the Jerusalem Temple in A.D. 70, this harvest festival was reinterpreted to commemorate the giving of the Law at Sinai. Passover and Tabernacles were already connected with the Exodus and Wilderness traditions respectively. The giving of the Law was thought, on the basis of Ex 19^{1} to have taken place fifty days after the Exodus. The first reliable witness to this interpretation is *c* A.D. 150 (it is not found in Philo or Josephus); and the fact that the reading of the law in the sabbatical year took place at the Feast of Tabernacles and not at Pentecost, points to the late origin of the interpretation.

3. In the Christian Church Pentecost was the occasion on which the outpouring of the Holy Spirit occurred (the fiftieth day after the Resurrection, Ac 2^{1}). The presence of multitudes at Jerusalem shows the generality of the observance which the Jews paid to this feast. It became one of the Church's great festivals, as the anniversary of the spiritual first-fruits procured through Jesus Christ's sacrifice. By the close of the 2nd cent. it was established as an occasion of Christian rejoicing. No fasting or kneeling in prayer was allowed during this feast, and it was especially a season for baptisms. It became known popularly as Whitsunday, and now ranks, after Easter, as the second of the festivals of the Christian Church.

PENUEL (once, Gn 32^{30}, **Peniel**).—A place E. of the Jordan at a ford of the Jabbok, at which Jacob wrestled

with the angel (Gn 32^{24ff}), and said to be called Peniel (or Penuel) *i.e.* 'Face of God,' because Jacob said, 'I have seen God *face to face . . .*' (The mention of the 'face of God' in Gn 33^{10} makes it possible that another explanation of the place-name is there alluded to.) If the name signifies 'Face of God' an analogy might be the headland known to Greek geographers as *Theou prosōpon* just S. of Tripoli in Phoenicia. It is probably mentioned in the list of the conquests of the Pharaoh Sheshonk, the contemporary of Jeroboam I., being there called Per-nu-al. Penuel is mentioned also in the history of Gideon, as a place with a strong tower, or fort, which Gideon destroyed (Jg $8^{8f, 17}$); it may be inferred from this passage that Penuel was a little E. of **Succoth** (q.v.) and on higher ground. Penuel was fortified by Jeroboam after the Disruption (1 K 12^{25}), doubtless to secure Gilead, which, incidentally, had remained loyal to David in Absalom's revolt. Merrill, followed by Albright and Glueck, has identified Penuel with *Tulûl edh-Dhahab* ('the mounds of gold'), so called from the yellow metaliferous sandstone of which they are composed, two conical hills, about 250 feet high, round which the Jabbok forms a loop about 5 miles E. of the Jordan. Glueck has located Penuel particularly at the eastern mound, where he found Early Iron Age potsherds, and there is no good reason to doubt this location.

S. R. D.—J. Gr.

PEOPLE.—This is the translation used in AV for a large number of Hebrew and Greek terms. In some cases ambiguity occurs, as the plural '**peoples**' is not used in AV except in Rev 10^{11} 17^{15}. Thus 'people' is used sometimes of the people of Israel and often of heathen nations. RV and RSV use 'peoples' freely, and this makes the meaning much clearer in such passages as Ps 67^{4}, Is 55^{4} 60^{2} etc. (see NATIONS, also preface to RV).

A special phrase '**the people of the land**' occurs frequently in the OT, especially in Jeremiah, Ezekiel, 2 Kings, and 2 Chronicles. In most of these cases it means the general body of the people, the common people as opposed to the courtiers or the ruling class. In Gn $23^{7, 12f}$, Nu 14^{9} the term is applied to non-Israelites. In the books of Ezra and Nehemiah the 'people of the land' are the half-heathen, half-Jewish population with whom the less scrupulous Jews intermarried, but who were avoided by the stricter party represented by Ezra and Nehemiah (Ezr $10^{2, 11}$, Neh 10^{30f}; cf Ezr 9^{1f}, Neh 9^{30}). The same phrase was used by the Rabbis to describe the common people who were lax in observing the Mosaic law (Jn 7^{49}; RSV 'this crowd'). W. F. B.

PEOR.—**1.** A mountain E. of the Jordan to which Balak led Balaam, Nu 23^{28}; its exact location is uncertain, but it was near Beth-peor (q.v.) in the neighbourhood of Mount Nebo. **2.** It stands for **Beth-peor** in Jos 22^{17} (so RSV; AV, RV 'the iniquity of Peor,' see **3**). **3.** It stands for **Baal-peor** (q.v.) in Nu 25^{18} 31^{16} (also in Jos 22^{17} in AV, RV). **4.** A place in Judah not far from Bethlehem, mentioned in LXX in Jos 15^{59} (absent from Hebrew); modern *Khirbet Faghûr*.

PERAEA.—The region called by Josephus 'the Peraea' is referred to in the NT as 'beyond the Jordan' (Mt 19^{1}, Mk 3^{8}) in obvious dependence on OT usage (Gn 50^{10} etc.). When Josephus says that it stretches from Machaerus to Pella, and from Philadelphia ('Ammân) to the Jordan, he probably gives political boundaries, excluding Decapolis (*BJ* III. iii. 3 [46]). The name seems to have covered the ancient 'Land of Gilead,' what is now known as *Jebel 'Ajlûn*. But Josephus also uses it in a broader sense when he calls Gadara its capital (*BJ* IV. vii. 3, 6 [413, 439]).

Transjordan had become strongly Hellenistic under the Seleucids. Judas Maccabaeus found it necessary to remove the Jews from the northern areas (1 Mac 5^{45}). Later the Jews sought to destroy the Hellenistic cities and make the area Jewish. Alexander Jannaeus held sway over most of Transjordan at the time of his death. But Pompey rehabilitated the Hellenistic cities. (See DECAPOLIS.) In 23 B.C. Augustus conferred Trachonitis, Batanaea and Auranitis on Herod, and several years later augmented this with the tetrarchy of Zenodorus, composed of Ulatha, Paneas, and the region adjacent to the Sea of Galilee. Herod was also permitted to name his brother Pheroras tetrarch of Peraea (*Ant.* XV. x. 3 [362] etc.). Later it came to Herod Antipas (XVII. viii. 1 [188]). From Peraea, Simon made his ill-starred raid upon Jericho (XVII. x. 6 [273ff]). It was part of the jurisdiction of Felix (*BJ* II. xii. 8 [247]). Manasseh was made governor after the disaster to Cestius (II. xx. 4 [566]). Placidus effected its final subjugation to the Romans (IV. vii. 3, 6 [413, 439]). It was attached by the Moslems to the province of Damascus. Subsequently it was under Kerak.

The Mishnah recognizes the land beyond the Jordan as a province of the land of Israel, ranking with Judaea and Galilee on the W. According to Mk 10^{1} and Mt 19^{1} (but not Luke) Jesus' final journey to Jerusalem was through Peraea, and according to Jn 10^{40} he retired 'across the Jordan to the place where John at first baptized'—*i.e.* in Peraea. It was probably on the border of Peraea that Jesus was baptized. W. E.—E. G. K.

PERAZIM.—A mountain mentioned in Is 28^{21}; see BAAL-PERAZIM.

PERDITION.—The word is used twice in the NT in the ordinary sense of 'destruction,' with special reference to the destruction of the soul (Rev $17^{8, 11}$). It is also found twice in the phrase **son of perdition**—a Hebrew expression denoting close connexion between product and producer (cf 'sons of thunder,' 'sons of light,' etc.). In Jn 17^{12} the phrase is applied to Judas Iscariot, while in 2 Th 2^{3} it is used of the 'man of sin,' or Antichrist. In the latter context a great deal of discussion has centred round the meaning of the reference (see article ANTICHRIST). It will suffice here to point out that the phrase in 2 Th 2^{3}, 'the son of perdition,' combined with certain passages in the Apocalypse (ch. 13), points to a constant tradition in the Christian Church of the Apostolic Age, which appears, from the passages alluded to, to have conceived not of a foreign potentate alien to the Church, but rather of a false Messiah who should be 'sent to them that are perishing' (namely, the Jews), and was expected to make his appearance at Jerusalem. The phrase 'son of perdition' suggests not so much the power of destruction exerted upon those coming under the sphere of the evil influence, as the effect of wickedness upon the soul of the individual to whom the phrase, in each case, is applied. T. A. M.—F. W. G.

PERES.—See MENE.

PERESH.—A 'son' of Machir, 1 Ch 7^{16}.

PEREZ ('breach').—Son of Judah and Tamar, and twin brother of Zerah, Gn 38^{29} (AV **Pharez**), 1 Es 5^{5} (**Phares**); patronymic **Perezites**, Nu 26^{20} (AV **Pharzites**). His importance consists in his being the ancestor of David through Boaz and Ruth, Ru 4^{18-22}, and then of Jesus Christ, Mt 1^{3} (AV **Phares**). His descendants were in all probability the most numerous among the families in Judah; hence the blessing of the elders on Boaz: 'May your house be like the house of Perez,' Ru 4^{12}. According to Gn 46^{12}, Perez had two sons, Hezron and Hamul. From Hezron, according to 1 Ch 2, came Jerahmeel and Ram and Caleb, and through Ram was traced the line of the royal house of David, Ru 4^{19}.

W. F. C.—H. H. R.

PEREZ-UZZA.—1 Ch 13^{11}; see PEREZ-UZZAH.

PEREZ-UZZAH ('breach of Uzzah').—Name given to the place where Uzzah (q.v.) died, when the Ark was being conveyed to Jerusalem, 2 S 6^{8}, 1 Ch 13^{11} (**Perez-uzza**).

PERFECTION.—1. The Unique Biblical Conception.—The kind of perfection which chiefly concerns the Biblical writers is, in the broadest sense, moral—the perfection of human character. In order to understand their use of

the term, one must first divest it of meanings imported from other kinds of perfection. One of its common, non-moral meanings, for example, is 'conformity to a prescribed pattern,' as when a dancer executes a 'perfect' pirouette, or a student answers a question 'perfectly.' Some moralists have attempted to conceive human perfection in the same way. In their view, human beings qualify for virtue like animals in a livestock show. The champion is the one that most nearly approximates the ideal model. Candidates for this kind of perfection are obliged to eliminate every mark which might differentiate them. Any residual, private characteristic constitutes a blemish. As all converge toward perfection, they become progressively indistinguishable from one another, like coins struck from the same die. Following its logic to the bitter end, advocates of this view have condemned individuality itself as an obstacle to perfection.

For the Bible, on the contrary, differentiation is a positive good (*e.g.* 1 Co 12, Eph $4^{7, 12-13}$). The Biblical writers complain that, instead of fulfilling their true destinies as unique, unrepeatable personalities, men yearn for stereotypes with which to mask themselves, from the totem of primitive tribe to the blue print of academic moralist. The stereotype thus usurps the rôle which belongs to God alone; it provides the frame of reference for the individual's whole life. According to the psalmist, men become as impersonal as the false gods they worship (*e.g.* Ps 115^{8} 135^{18}), whether the cycles and rhythms of nature, symbolized by the cult of Baal; the sophisticated abstractions of philosophy; or the leviathans of scientific technology.

The Biblical God, however, is Himself a Personality. Indeed, as has often been remarked, His is the most vivid of all the graphic portraits in OT. Bearing a proper name (see NAME), the sign of uniqueness, He likewise addresses each man by name: Samuel (1 S 3^{4-10}), Elijah (1 K 19^{9}), Amos (Am 7^{8}), Mary (Jn 20^{16}), Saul (Ac 9^{4}). To respond is to abandon the security of anonymity and venture, like Abraham, into unknown territory (Gn 12^{1}). One is promised, in partnership with God, a personality in one's own right; not a copy, but a 'new creation' (2 Co 5^{17}).

2. Relation to Rules.—Perfection of a non-moral kind can generally be achieved by following certain rules. Many thinkers have plausibly concluded that moral problems may be approached in the same way. Benjamin Franklin, for example, tells in his *Autobiography* how he hoped to arrive at moral perfection by adding one virtue to another, until the list was complete. Such a conception appears somewhat stultifying in comparison with that of the Biblical writers, who correlate perfection with *life*, in the fullest sense (*e.g.* Dt 30^{15}, Mt 19^{17}). Their answer to all such legalistic systems is: 'If a law had been given which could make alive, then righteousness would indeed be by the law' (Gal 3^{21}). Hence they carefully limit the rôle of moral laws as guides to perfection. Taken as ends in themselves, such rules are all lumped together as 'the letter that killeth' (AV 2 Co 3^{6}), and the actions issuing from them are branded 'dead works' (He 6^{1} 9^{14}). Although NT is more emphatic on this point than OT, the difference between them is often exaggerated. The NT polemic against 'works of law' (see LAW [NT]) is really against a contemporary Jewish legalism, which itself missed the spirit of OT. NT writers make their case by appealing to OT itself.

The Hebrew word *tôrāh*, generally translated 'law,' might better be rendered 'ways of the Lord' (see WAY). When the psalmist sings, 'Teach me thy ways,' he is not asking for legislative enactments, but for acquaintance with his Maker. The 'morals' of OT are really more like manners. They can be transposed into extended adverbial clauses with a two-fold function: first, to disclose what 'manner' of Person God is; and second, to infer what 'manner' of life is appropriate to a living relationship with such a God: 'What does the Lord require of you but to do justice, and to love kindness, and to walk humbly with your God?' (Mic 6^{8}). The 'good works' which the Bible enjoins have the same purpose as all manners. Negatively, they protect society from carelessness and ill will. Positively, they can become sacramental: a joyful participation in the life of God Himself.

Where Franklin's view of moral perfection was quantitative, the Bible's is qualitative—a style of life, rather than a sum of all the virtues. The most conclusive illustration is the Incarnation, which implies that God could put aside His infinite power and knowledge without altering His personality, and therefore without diminishing His perfection. A quantitative view of perfection, such as is implied by the Greek word *teleiōtes*, connotes a static condition, a finished, completed state. The surest axiom of Greek thought declares perfection to be incompatible with change. Once the goal is reached, further progress is impossible. Any change would be a change for the worse. A person imbued with these Greek presuppositions easily misses the whole point of the Biblical concept of 'walking in the ways of the Lord.' He assumes that the only persons who 'walk' are those who have not yet arrived. The need to walk is a sign of imperfection.

He might support his interpretation by citing St. Paul's statement: 'Not that I have already obtained this or am already perfect; but I press on . . . toward the goal' (Ph $3^{12, 14}$). Granted the element of 'straining forward to what lies ahead' (Ph 3^{13}) in the life of Jew and Christian, the crucial issue concerns the nature of 'the goal' itself. Is it a static, immutable state? The answer completely contradicts the Greek: God Himself is active. The words with which the Bible describes Him are nearly all verbs: create, love, promise, judge, redeem, forgive, speak. St. Paul's goal is to enter more fully into dynamic, living relationship with such a God. Indeed, as he explicitly says a few lines earlier, what impedes him is precisely the tendency to define perfection in quantitative terms. To attain the goal is to shed the last remnants of a static 'righteousness . . . based on law' (Ph 3^{9}).

3. Perfection attainable.—Some interpreters of Christianity have concluded that the Bible, in common with many pagan philosophies, regards perfection as unattainable on earth. The very conditions of finite existence—space, time, and matter—are impurities which adulterate even the highest human achievement. Just as the champion show dog always bears some telltale imperfection, so human beings are doomed for ever to strive, and for ever to fall short. Perfection, being an 'ideal,' repels the 'actual,' by its very definition.

Here again, the Bible differs. Perfection is not beyond man's reach, but is 'very near you, . . . so that you can do it' (Dt 30^{14}). St. Paul, often cited in support of the post-biblical notion of 'original sin,' quotes this passage with approval (Ro 10^{6-8}). His purpose is to show that heaven and earth are not disjunctive, that perfection is compatible with finite existence. To be sure, no man is without sin (q.v.). But sin is far more serious when perfection is a live option. That it is a live option for St. Paul is clear from his injunction, 'Be imitators of God' (Eph 5^{1}), which simply paraphrases Jesus' own words, 'You therefore, must be perfect, as your heavenly Father is perfect' (Mt 5^{48}). Since perfection is qualitative, a way rather than a state, a man can be progressively transformed 'from glory unto glory' (2 Co 3^{18} AV). A foretaste of the resurrected life is possible here and now (*e.g.* Ro 8^{23}, 2 Co 1^{22}).

4. Relation to Love.—If Biblical perfection has appeared to some as unattainable in this life, the explanation may lie in still another connotation imported from non-Biblical sources. Outside Biblical thought, it is nearly universally agreed that the highest perfection is completely sufficient unto itself. Since the Bible emphatically denies that a man can gain perfection by himself alone, it might seem to suggest an intrinsic weakness of human nature. The Bible's aim, however, is not to disparage human nature, but to redefine perfection. Biblical perfection is the opposite of self-sufficiency. It consists in a special kind of relationship between man and man, and between men and God, translated, for want of a better word, as 'love' (q.v.).

Love satisfies all the foregoing requirements of Biblical perfection. It is not an archetypal pattern, but the avenue to fulfilled, individual personality; not a quantitative accumulation of virtues, but an orientation of the heart; not attained by following rules, but rather the maker and judge of all rules; not static, but an active, living relationship; not self-sufficient, but mutual. To speak of attaining this kind of perfection by oneself alone is a contradiction in terms. It takes two to love. In fact, according to the Bible, it takes three. For when love is abandoned to purely human resources, without constant nurture and renewal by God, it disintegrates. The Bible therefore prefers to speak of perfection as something which happens to men, at the Divine initiative, rather than as a purely human achievement: 'God's love has been poured into our hearts by the Holy Spirit which has been given to us' (Ro 5^5). The perfection of man, though it requires his voluntary co-operation, is also the crowning handiwork of God. E. L. C.

PERFUMER.—The Oriental liking for odoriferous substances has always rendered the function of the perfumer an important one. The materials used in Bible times were gums, resins, roots, barks, leaves; and these were variously combined according to the skill and fancy of the perfumer. In Neh 3^8 we read of a guild of perfumers. In several passages we should read 'perfumer' for '**apothecary**' of AV and RV (see APOTHECARY) or for '**confectionary**' (see CONFECTION). Further references to perfumes are Is 3^{20} (AV 'tablets') ^{24} 57^9, Pr 7^{17} 27^9, Ca 3^6.

PERGA.—An inland city of Pamphylia, about 12 miles from Attalia on the coast, but possessing a river harbour of its own on the Cestrus 5 miles away. Its walls date from the 3rd cent. B.C. It was the chief native city of Pamphylia, and never seems to have come much under Greek influence, but it had a coinage of its own from the 2nd cent. B.C. to A.D. 276. 'Artemis of Perga' was the chief object of worship, and she resembled 'Artemis of the Ephesians' in her rites and images, being sometimes represented like the Greek Artemis as goddess of the chase, but more often by a pillar of stone, the top of which was rounded or roughly carved to represent a head. Her worship was more Asiatic than Greek. Her temple probably possessed the right of sanctuary. The 1955–1956 excavations revealed part of the central colonnaded street of the city and soundings were made in the near-by agora. North of the triumphal arch behind the city gate, statues to Divus Nerva and others were discovered.

St. Paul passed through Perga twice on his first missionary journey. See PAMPHYLIA. But Christianity did not take root there easily. Perga is not mentioned in early martyrologies. When the Empire became Christian, it was the seat of a metropolitan bishop, but after the blow suffered by the Byzantine Empire at the battle of Manzikert, A.D. 1071, Perga seems to have fallen into the hands of the Turks. In A.D. 1084 we find Attalia made a metropolitan bishopric. The modern name of the site of Perga is *Murtana*.

PERGAMOS, Rev 1^{11} 2^{12} (AV) = **Pergamum** (q.v.).

PERGAMUM, or **PERGAMUS** (Gr. *Pergamon*, or *Pergamos*), to-day *Bergama*, was an ancient city of Mysia, the seat of an independent kingdom from about 280 to 133 B.C., when the last of the Attalid rulers bequeathed it to Rome, and the capital of the Roman province of Asia from 133 B.C. until the 2nd cent. A.D. It lay in the Caicus valley about 15 miles from the sea, and its acropolis rose between two tributary streams 3 miles N. of the Caicus. As the capital of a kingdom, Pergamum had acquired a considerable importance. But it stood on no great trade route, and under the Romans it slowly lost all but the official pre-eminence in the province. Its kings had been champions of Greek civilization and arts, and it still remained a centre of conservative culture. But Ephesus was now the centre of trade, and it was at Ephesus that West and East met together, creating a medley of all philosophies and all religions. At Pergamum there were splendid temples of Zeus and Athene, where these gods were worshipped in the ordinary Greek way, but others also of Dionysus and Asklepios. Its library rivalled Alexandria's and was largely transferred to that city by the Romans (see ALEXANDRIA). **Parchment** made from sheepskin or goatskin gets its name from Pergamum, and was allegedly invented by King Eumenes, founder of the library.

The only allusion to Pergamum in the NT is in the Apocalypse, where (1^{11} 2^{12}) it is included among the seven churches of Asia. The message to it (2^{12-17}) speaks of Pergamum as the place 'where Satan's throne is.' While it is possible that this refers to it as the chief seat of heathen worship in general, it is more probable that it refers to the worship of Rome and Augustus, participation in which had become a test of loyalty, and therefore a frequent ground of Christian martyrdom. Christians would be brought to Pergamum for trial from any northern part of the province, and the mention of one martyr, **Antipas**, as having suffered there does not prove that he belonged to Pergamum. The Church at Pergamum is charged with having 'some there who hold the teaching of **Balaam**, who taught Balak to put a stumbling-block before the sons of Israel, that they might eat things sacrificed to idols and practice immorality'; and also 'some who hold the teaching of the Nicolaitans.' We must gather from this that a definite section of the church at Pergamum maintained that, inasmuch as heathen ceremonies meant nothing (cf 1 Co 8^4 10^{19}), they were at liberty to join in idolatrous feasts, and thus to maintain their social position and justify their loyalty in the sight of the law. Important excavations were conducted at Pergamum by a German expedition in 1879–1886 and again from 1901 on. The great acropolis with its temples and palaces was dug up. Marvellous works of art were recovered—notably a great altar with sculptures of the Gigantomachy. A. E. H.—E. G. K.

PERIDA.—A family of 'Solomon's servants,' Neh 7^{57}: called **Peruda** in Ezr 2^{55}, 1 Es 5^{33} (AV **Pharira**, RV **Pharida**).

PERIZZITES.—They occur in numerous lists as one of the (mostly six) pre-Israelitish nations of Palestine (Ex $3^{8,17}$ 23^{23} 33^2 34^{11}, Dt 20^{17}, Jos 3^{10} 24^{11} etc.). Sometimes the term 'Canaanites and Perizzites' (Gn 13^7 34^{30}, Jg 1^4) seems to be a standard expression to designate the whole population of early Canaan. The Perizzites, however, do not appear anywhere definitely in history. Because in Gn 15^{20} and Jos 17^{15} they are mentioned with the Rephaim, some have inferred that they were one of the pre-Semitic tribes of Palestine. On the other hand it has been suggested that they were Canaanite agriculturists, living in unwalled towns, and not a separate tribe, since the name 'Perizzite' (in AV and RV of 1 Es 8^{69}, 2 Es 1^{21}, and AV of Jth 5^{16} **Pherezite[s]**) is in Hebrew almost identical with a word meaning 'dweller in an unwalled village.' Others have pointed out that the name seems to be of Hurrian origin, since the name of a messenger of King Tushratta in an Amarna Letter was *Pirizzi*, hence the Perizzites may have constituted a Hurrian clan. G. A. B.—S. H. Hn.

PERJURY.—See CRIMES AND PUNISHMENTS, 5.

PERSECUTION.—According to the Gospels Jesus frequently warned His disciples that persecution would be the lot of all who followed Him (Jn $15^{18,20}$). So far from being dismayed at this, it should be a cause of rejoicing (Mt 5^{11f}). The early Church had not long to wait for the experience. Stephen's martyrdom (Ac 7^{58}) was followed by the scattering of the Hellenists (Ac 8^1). Saul of Tarsus was the moving spirit in this matter, until, on his way to Damascus to proceed against the disciples there. 'Christ's foe became His soldier.' The conversion of Saul seems to have ended the persecution. The attempt of Caligula to set up his statue in the Temple at Jerusalem (*c* A.D. 40) also diverted the attention of the Jews from all else. Hence 'the churches had rest' (Ac 9^{31}).

Another persecution was begun by Herod Agrippa I., who put to death the Apostle St. James, and would have done the same to St. Peter had he not been delivered. Herod's motive was probably to gain a cheap popularity, but the persecution was ended by his own sudden and terrible death (Ac 12[20-23]). For the most part the earliest persecutions were acts of mob violence.

At first Christianity was tolerated by the Roman magistrates as a Jewish sect, and what persecution there was came largely from Jewish authorities and from anti-Semitic pagan mobs (as mainly in the case of St. Paul's afflictions). The decision of Ac 15 brought the church out in the open. The persecution of Nero resulted in the martyrdoms of St. Peter (Jn 21[19], 2 P 1[14]) and St. Paul (2 Ti 4[6] and see 3[12] for prediction of general persecution). That of Domitian is probably reflected in Revelation; the church had now come into conflict with the cultus of Rome and the emperor (see EMPEROR WORSHIP). The dates and circumstances of He 10[32ff] and 1 P 2[19ff] are not certain. C. C. Ro.

PERSEPOLIS.—The chief capital of the ancient kings of Persia, chosen as such by Darius Hystaspis (521–486 B.C.). Imposing ruins still mark its site about 30 miles NE. of Shiraz. It is named in 2 Mac 9[2] in connexion with the unsuccessful attempt of Antiochus Epiphanes to plunder its temples and palaces.

PERSEUS.—'King of Kittim,' *i.e.* Macedonia (1 Mac 8[5]). His kingdom was brought to an end with his defeat by the Romans at Pydna (168 B.C.).

PERSIA, PERSIANS.—The Persians were the southern branch of the Iranian invaders who moved westwards and occupied the areas to the N. and E. of Mesopotamia during the 2nd millennium B.C. They were closely connected with the **Medes** (q.v.) who became dominant to the north and who are referred to in the 9th cent. B.C. The Persians are themselves not mentioned before the time of Cyrus. In the early 7th cent., Achaemenes established himself NE. of Susa and his son Teispes took Anshan from the Elamites. Phraortes of Media subdued him, and although subsequently he was able to gain control of the area called Persis, the Persians again came under Median control in the reign of Cyaxares in the latter half of the same century. In the 6th cent., however, their prince **Cyrus II.** (the Great, 559–529 B.C.), king of Anshan, threw off the Median yoke and deposed his overlord Astyages in *c* 549 B.C. Nabonidus of Babylon at first welcomed the weakening of the Medes, but soon the reality of Cyrus' threat to him became clear and an alliance of Babylon, Lydia, Egypt, and the Spartans faced Cyrus. In 546 B.C. he defeated Croesus of Lydia, and the Greek cities of the coastline of Asia Minor soon fell under Persian control. In 539 B.C. Nabonidus was defeated and Babylon surrendered to Cyrus' general Gobyras without fighting. Babylon thenceforth became one of the Persian capitals and the Babylonian empire was added to the already extensive Medo-Persian. Military superiority and skilled generalship combined to give these successes, and they were followed in the next years by further extensions of territorial control—to Egypt under Cambyses, and into the Greek mainland in the reign of Xerxes, where, however, he met with major defeat.

The Persian rulers styled themselves 'king of kings' and 'king of the lands'—rulers of the whole civilized world. They viewed their task as one of governing and unifying, and to this end pursued a policy much more humane and tolerant than that of earlier empires. Subject peoples occupied a tolerably independent position. Unification of the empire proceeded by provincial organization under satraps and by colonization, and throughout the west the Aramaic language was generally used (cf Elephantine papyri and Persian coinage). Persian readiness to adopt foreign customs (cf Herodotus i. 135) may be seen in their taking over of the Median culture, and in Cyrus' ascription of his rise to power to Marduk of Babylon—and, in other propaganda, to the deities of other nations (cf Ezr 1[2-4] 6[3-5], Is 41[1ff]). Later Persian rulers may be seen taking a similar interest in the religious affairs of their peoples. So Darius I. encouraged the native religion of Egypt and an inscription from Asia Minor shows him ordering scrupulous observance of the privileges of a sanctuary of Apollo. The OT provides evidence of similar generosity towards the Jews (cf Ezr 6[6-12] 7[11ff], Neh 2[1-10]. Cf also the Elephantine papyri [q.v.]). Persian religion, though strongly influenced by the reforming zeal of Zoroaster, remained tolerant and accommodating, and the old Persian gods were readily assimilated to the deities of the older near eastern civilizations.

The Jews, whose rebuilding of the Temple at Jerusalem and whose re-establishment as a community in Judah as part of the satrapy 'Beyond the River,' are attributed to the benevolence of Persian rulers, came into contact with various of the kings. Apart from Cyrus, the OT mentions Darius I. Hystaspis (522–486 B.C.), his son Xerxes (486–465 B.C., the 'Ahasuerus' of Esther), and Artaxerxes (I. Longimanus, 465–424 B.C.—so Neh 2[1], and possibly II. Mnemon, 404–358 B.C.—cf Ezr 7[1]). See these names in their alphabetic places. To these we may perhaps add Darius III. Codomannus (336–330 B.C., cf Neh 12[22]), the last ruler of Persia, who was overthrown by Alexander the Great. With this, the Persian empire came to an end, and much of its area subsequently came under the control first of the Seleucids and then of the Parthians. Other references to Persia in the OT are comparatively few, but it may well be that some allusions to Elam (cf Is 21[2] 22[6], Jer 25[25] 49[34-39], Ezk 32[24]) should be interpreted as referring to Persia, since Elam became a Persian province, its capital Susa being one of the Persian capitals. PESTILENCE.—See MEDICINE.

PESTLE.—See MORTAR.

PETER.—Simon, surnamed Peter, has been justly called the Prince of the Apostles. His father was named Jona or John (Mt 16[17], Jn 1[42] 21[15ff]). In the Fourth Gospel he is said to have come from Bethsaida (Jn 1[44]), probably a village of fishermen on the northern shore of the Lake of Galilee E. of the Jordan (cf Mk 6[45] 8[22]). According to the Synoptic Gospels he lived in Capernaum with his wife (cf 1 Co 9[5]), his mother-in-law, and his brother Andrew (Mk 1[29-31]=Mt 8[14f]=Lk 4[38f]). He and Andrew were fishermen on the Lake of Galilee (Mk 1[16]=Mt 4[18]) in partnership with Zebedee and his sons (Lk 5[7, 10], Mt 4[21]).

In the Johannine tradition Simon first met Jesus at Bethany beyond the Jordan (Jn 1[28]), the scene of the Baptist's ministry (Jn 1[35-42]). He had journeyed there with other Galileans to participate in the movement of religious reform then in progress. Jesus was there; and Andrew, one of the Baptist's disciples, having been directed by his master to Jesus as the Messiah, told Simon of his discovery and brought him to Jesus. Jesus 'looked at him,' and he became a disciple from that moment. Jesus seemed to know at once both what Peter was then and what with God's help he could become, and He gave him a surname prophetic of the moral and spiritual strength he would eventually demonstrate. 'So you are Simon the son of John? You shall be called Cephas' (Jn 1[42]). Cephas was the Aramaic equivalent of the Greek *petros* or *petra*, which means rock. It is thus given as a descriptive title and not as a proper name. He was not yet Peter but only Simon, impulsive and vacillating; and Jesus bestowed upon him the new name before he had earned it so that it might be an incentive to him to realize what Jesus had expected. The designation of Simon as the rock is assumed in the Synoptic Gospels (Mk 3[16]=Lk 6[14]), and once there is a pointed reference to this play on words (Mt 16[18]). In the Synoptic tradition, however, there is no agreement as to when Jesus gave this title to Simon.

Paul used the word Peter in only one passage (Gal 2^{7f}), preferring Cephas. In the Gospels we find Simon, Peter, or Simon Peter. On a number of occasions Jesus pointedly addressed him by the old name Simon, seemingly in order to prod him gently to greater endeavour (cf Mk 14^{37}, Lk 22^{31}, Jn 21^{15ff})

In the Synoptic Gospels Peter with Andrew was the first disciple to be called by Jesus after the beginning of the Galilean ministry (Mk 1^{16ff}=Mt 4^{18ff}, Lk 5^{1-11}). James and John, also fishermen, were called soon thereafter; and the apostolic band was begun. When Jesus commissioned and sent out the Twelve to preach and heal, he arranged them in pairs and coupled Simon Peter and Andrew (Mk 6^{7}, Mt 10^{2}).

The distinction of Peter lies less in the qualities of his mind than in those of his heart. He was impulsive, and often he spoke inadvisedly so that he incurred rebuke. This, however, was only the weakness of his strength, and it was the concomitant of an enthusiastic and generous affection. Peter's spontaneous love for his Master appeared on several remarkable occasions. (1) According to John, following the feeding of the five thousand at Bethsaida, Jesus delivered (at Capernaum) His discourse on the Bread of Life, full of hard sayings designed to test the faith of His disciples by shattering their dream of a worldly Messiah (Jn 6^{22-65}). Many were offended and 'drew back and no longer went about with him.' Even the Twelve were doubtful. 'Will you also go away?' he asked; and it was Simon Peter who, speaking in the name of the Twelve, assured Jesus of their loyalty (Jn 6^{66-69}). (2) In the Synoptic Gospels we find that during His retirement at Caesarea Philippi in the last year of His ministry, Jesus, anxious to ascertain whether they had recognized in Him the long-expected Messiah, asked the Twelve: 'Who do you say that I am?' Again it was Peter who answered, in the more primitive form of confession: 'You are the Christ' (Mk 8^{29}= Mt 16^{16}=Lk 9^{20}). Jesus then told them of His approaching suffering, and once more it was Peter who expressed the feeling of the Twelve: 'God forbid, Lord! This shall never happen to you' (Mt 16^{22}). Even here it was love that spoke. (3) A week later Jesus went up a mountain with Peter, James and John, and was 'transfigured before them,' communing with Moses and Elijah, who 'appeared in glory' (Mk 9^{2-8}=Mt 17^{1-8}=Lk 9^{28-36}). Though confused and fearful, Peter cried out: 'Lord, it is well that we are here; if you wish, I will make three booths here, one for you and one for Moses and one for Elijah' (Mt 17^{4}). It was a foolish and unconsidered remark (Mk 9^{6}=Lk 9^{33}), but it breathed a spirit of tender affection. His idea was: 'Why return to the ungrateful multitude and the malignant rulers? Why go to Jerusalem and die? Stay here in this holy fellowship.' (4) When Jesus washed the disciples' feet in the Upper Room, it was Peter who protested (Jn 13^{6-9}). He could not allow his Lord to perform that menial office for him. (5) At the arrest in Gethsemane it was Peter who, seeing Jesus in the grasp of the soldiers, drew his sword and cut off the ear of Malchus (Jn 18^{10}).

Peter (always first), James, and John constituted the inner circle of Jesus' closest friends (Mk 5^{37} 9^{2} 14^{33}, cf Mk 13^{3}). The name of Peter appears first in all four of the NT lists of the Twelve (Mk 3^{16-19}, Mt 10^{2-4}, Lk 6^{14-16}, Ac 1^{13}). Throughout the Gospel narrative Peter stands in the foreground and consistently serves as spokesman for the band (cf Mk 10^{28} 11^{21}, Mt 15^{15} 18^{21}, Lk 8^{45} 12^{41}). Following Peter's confession at Caesarea Philippi, Jesus said: 'You are Peter, and on this rock I will build my church, and the powers of death shall not prevail against it' (Mt 16^{18f}). In this much debated passage, which is found in Matthew alone but which may well be a genuine utterance of Jesus, Peter is promised leadership in the early Church and is given the Power of the Keys (q.v.). Whether the rock is the faith of Peter which has seen Jesus as Messiah or the person of Peter, he did in fact emerge as the first leader of the Church. It is impossible to discover here any reference to successors of Peter.

The blot on Peter's life-story is his three-fold denial of Jesus in the courtyard of the high priest's palace (Mk 14^{66-72}=Mt 26^{69-75}=Lk 22^{56-62}, Jn $18^{15-18, 25-27}$). It was a terrible disloyalty, yet not without extenuations. (1) The situation was a trying one. It was dangerous just then to be associated with Jesus, and Peter's excitable and impetuous nature was prone to panic. (2) It was his devotion to Jesus that exposed him to the temptation. He was the only one who rallied from the dismay in Gethsemane (Mt 26^{56b}) and followed his Lord to the trial (Mk 14^{54}=Mt 26^{58}=Lk 22^{54}). According to the Fourth Gospel 'another disciple' (John?) also followed with Peter (Jn 18^{15}). (3) If he sinned greatly, he sincerely repented (Mk 14^{72}=Mt 26^{75}=Lk 22^{62}). He could never forget the look of his Master (Lk 22^{61}). (4) He was completely forgiven. According to 1 Co 15^{5}, Peter is the first one to whom the Lord appeared after His resurrection. In a subsequent appearance by the Lake of Galilee, Peter played a prominent part (Jn 21). On discovering that the stranger on the beach was Jesus, Peter, impatient to reach his Master, sprang overboard from the boat and swam ashore (cf his action in Mt 14^{28-31}). When the disciples were gathered together, Jesus gave Peter a three-fold commission to care for the Christian flock which stands in deliberate contrast to Peter's earlier triple denial. The episode points not to a rebuke of Peter but to Jesus' forgiveness and confidence in him.

Peter figured conspicuously in the history of the Apostolic Church. The Book of Acts makes it clear that Peter assumed a unique position in the primitive Jerusalem Church and was recognized as the leader. It was on his motion that Matthias (q.v.) was appointed as successor to Judas, between the Ascension and Pentecost (Ac 1^{15-26}), and it was he who acted as preacher on the day of Pentecost (2^{14-36}). He worked miracles in the name of Jesus (3^{1-10} 5^{15} 9^{32-42}). He fearlessly proclaimed the Lord to the Jewish leaders in Jerusalem (4^{1-13}). As head of the Church he administered discipline to wrongdoers (5^{1-11} 8^{14-24}), his authority extending even into Samaria. For his boldness in the face of opposition he suffered imprisonment and scourging (5^{17f} 12^{1-5}).

The persecution which followed the martyrdom of Stephen scattered the believers and inaugurated a fresh development of Christianity, involving a bitter controversy. Since the refugees preached wherever they went, the question arose, on what terms the Gentiles should be received into the Church. Must they first become Jews and observe the details of the Mosaic Law? Being appointed with John to examine into the matter, Peter approved Philip's work among the hated Samaritans, invoked the Holy Spirit upon his converts, and before returning to Jerusalem made a missionary tour among the villages of Samaria (Ac 8^{14-25}). He overcame his Jewish prejudice and took a position of first importance as a missionary to the Gentiles by his vision at Joppa and the subsequent conversion of Cornelius and his company at Caesarea; and when taken to task by the Judaistic party at Jerusalem for associating with uncircumcised Gentiles, he vindicated his action and gained the approval of the Church (10^{1}–11^{18}).

The controversy became acute when the Judaizers, becoming alarmed at the missionary activity of Paul and Barnabas, went to Antioch and insisted that the converts there be circumcised. The question was referred to a council of the Church at Jerusalem. Peter's plea for Christian liberty was heeded when, at the suggestion of James the Lord's brother, it was agreed that the work of Paul and Barnabas should be approved and that nothing should be required of the Gentiles beyond abstinence from things sacrificed to idols, blood, things strangled, and fornication (Ac 15^{1-29}; cf Gal 2^{1-10}). Later, Peter visited Antioch, and, though adhering to the decision at the outset, was intimidated by certain Judaizers. Together with Barnabas he separated himself from the Gentiles and would not eat with them, incurring an indignant and apparently effective rebuke from Paul (Gal 2^{11-14}).

After his imprisonment in Jerusalem by Herod

Agrippa I., Peter 'departed and went to another place' (12[17]). The leadership of the Jerusalem Church apparently passed to James, the Lord's brother, and Peter is mentioned again in Acts only in connexion with the Jerusalem Conference. He may have become a missionary to the Jews of the Dispersion. The First Epistle of Peter (1[1]) may refer to his preaching activity in Asia Minor. He visited Antioch (Gal 2[11]) and may also have gone to Corinth (cf 1 Co 1[12] 3[22]).

There are copious traditions about Peter. It is highly improbable that he founded the Church at Rome, although it is most likely that he preached there (cf 1 P 5[13]). According to Papias of Hierapolis (*c* 130), as reported in Eusebius, our Second Gospel is based upon information derived by Mark from Peter's preaching, presumably in Rome. The First Epistle of Clement (*c* 96) provides indirect evidence of Peter's martyr death in Rome. Support for this tradition is also given by Gaius, a Roman presbyter (*c* 200) quoted in Eusebius, and by early Roman liturgical calendars which contain statements regarding the date and place of the martyrdom. According to Eusebius, Origen (*c* 225) wrote that Peter was at his own request nailed to a cross head downwards, since he deemed himself unworthy to be crucified in the same manner as his Lord.

Since 1938 systematic excavations have been carried on under St. Peter's Basilica in Rome, in an attempt to determine the site of Peter's martyrdom and burial. It now appears that some weighty consideration must have determined the precise location of Constantine's basilica on such a costly and troublesome building site in a pagan cemetery. Below the level of the Constantinian Church and directly under the present high altar have been found traces of a columnar monument (from *c* 150–170) which may have been erected to mark either the spot of Peter's martyrdom or his burial place. The finding of a large number of votive coins in the area suggests that it was from an early date an important object of pilgrimage. Present inconclusive archeological evidence tends to support the early tradition connecting Peter's death with the Vatican Hill. D. S.—H. M. S.

PETER, FIRST EPISTLE OF.—1 Peter attempts to make clear to a number of young congregations which have been oppressed by slander and persecution that precisely in such suffering lies 'the true grace of God.' A further concern of the letter is to show its readers what their duty in this situation is, namely, not to grow weary even in suffering, but to do good. For thus Christ also suffered and has thereby made available an imperishable hope.

1. Contents.—The epistle is addressed by Peter the apostle to the elect sojourners of Pontus, Galatia, Cappadocia, Asia, and Bithynia. (*a*) After this salutation the author offers up thanks and praise to God for his salvation (1[3–12]). He tells us that this salvation is (i) an imperishable inheritance through the Resurrection of Christ (vv.[3–5]) and (ii) the reason for joy even in suffering, for suffering purifies faith and directs it to its goal, the salvation of souls (vv.[6–9]); (iii) all this had only been dimly foreseen by prophets and angels while now it has been actually proclaimed to the readers (vv.[10–12]).

(*b*) This salvation contains within itself exhortations to the readers (1[13]–2[10]): (i) to separate themselves from the world as obedient children through holy living (vv.[13–16]); (ii) to walk in fear as those who have been redeemed through the precious blood of Christ (vv.[17–21]); (iii) to love each other as those who have been born again through God's Word (vv.[18–25]); (iv) to grow in faith by desiring like newborn children the pure milk of the word (2[1–3]); and (v) to build themselves up as a holy temple upon the living stone, Christ, who for unbelievers is a rock of offence, but who has called believers that He might possess them as His people (vv. [4–10]).

(*c*) Conduct within earthly institutions (2[11]–3[17]). The heading of this section is (i) an exhortation to the readers to keep themselves pure from fleshly lusts and to lead an exemplary life before the world (vv.[11–12]). Particular exhortations follow: (ii) free men, be subject to the government (vv.[13–17]); (ii) slaves, be obedient even to harsh masters, showing your possession of Divine grace and your discipleship to Jesus, being like Him whose unmerited death has brought us salvation (vv.[18–25]); (iii) women, exercise a quiet and gentle spirit like true mothers in Israel, submitting to your husbands in the hope that if they are heathen they may be won to the faith by your Christian way of life. Likewise, husbands, you must honour your wives, who equally with yourselves are heirs of life (3[1–7]); (iv) finally, you must all be at peace among yourselves, showing humility and love also to your enemies, as that brings with it the blessing of Ps 34[13–17] (vv.[8–12]).

(*d*) Conduct under oppression (3[13–4]6): (i) do not be afraid of suffering, be ready to defend yourselves with a good conscience (vv.[13–17]); (ii) you are like the small number saved with Noah when the whole world perished at the time of the Flood, but remember that Christ because of His suffering also preached to that godless generation (vv.[18–22]); (iii) prepare yourselves therefore for suffering which separates you from sin and this brings upon you the antagonism of your former friends (4[1–6]).

(*e*) Exhortations for the life of the congregation (4[7–5]5): (i) be sober, love one another, serve one another with the gifts that have been granted to each (vv.[8–11]). (ii) There follows a digression which again deals with oppression: be happy to share the suffering of Christ, do not suffer as evildoers. Your suffering is a sign of the coming judgment. Commend your souls to God by doing good (vv.[12–19]). (iii) Thereupon advice is given to the old and the young in the congregation (5[1–5]).

(*f*) Conclusion (5[6–14]): (i) Humble yourselves under God's hand, be sober, resist the devil. There follows a promise of blessing: God will strengthen you (vv.[6–11]). (ii) The epistle ends with a glance back over the letter and a greeting (vv.[12–14]).

2. Readers.—The epistle is directed to those who have only recently been converted (2[2, 10] 3[21] 4[2–4]). That they were formerly Gentiles may be deduced from 4[3] (idolatries) and 4[4], for 'to be surprised that you do not now join them in the same wild profligacy' could only be said of Gentile converts; for Jews, as everyone then knew, held themselves scrupulously aloof from Gentiles. That the readers in 1[1] are addressed as the elect who are sojourners in the Dispersion does not prove that they are Jewish Christians. This form of address is simply intended to make clear to Gentile Christians that they became strangers in the world when they became Christians and that they dwell as a scattered people among the heathen. Similarly the phrase 'sojourners and pilgrims' in 1 P 2[11] is used metaphorically.

The young congregations to which 1 Peter is directed live in the provinces of Pontus, Galatia, Cappadocia, Asia, and Bithynia (1[1]). As far as we know, Paul founded congregations only in Asia (*i.e.* the large province in the western part of Asia Minor) and Galatia. Concerning Pontus and Bithynia we learn from a letter of Pliny to the emperor Trajan, written in A.D. 111–112, that Christianity was so widely disseminated there by that time that the sale of animals for heathen sacrifices had appreciably fallen off. We are still a long way from this state of affairs at the time of 1 Peter. All that we learn from 1 Peter is that Christianity had a bad reputation. It is impossible to say whether this was already the case before these congregations arose or whether their renunciation of pagan ways was the cause. There is no agreement on the question, so important for the dating of the letter, as to whether proceedings had been initiated against the Christians by the state. The letter speaks at first only of slander (2[12] 3[16]), of reviling (3[16]), of ignorance (2[15]), of insults (4[4]), and reproach (4[14]). This does not suggest the interference of the state. Only 4[15f] is exceptional: 'to suffer as a murderer or thief' presupposes state or municipal justice, and since 'to suffer as a Christian' is contrasted

with it, that suggests official jurisdiction also in the latter case. Nowhere, however, does it become clear that capital punishment has been inflicted, but 4^{19}, 'commit your souls in well-doing unto him, as unto a faithful Creator,' indicates that the possibility of such a verdict is reckoned with. One must assume then that the suffering of the Christian congregations in 1 Peter consists of ill-will, slander and annoyances in everyday life: in addition there is danger that accusations will be made before the authorities or that such accusations have already been made. The Roman government, however, does not yet seem to have taken a hand in the affair.

3. The literary character and the unity of the letter.—The unity of the letter has been questioned because of the passage beginning at 4^{12} (*a*) since at that point the problem of persecutions is again taken up after it has already been dealt with in 3^{13ff} and (*b*) because the first part of the letter speaks of persecutions only in a hypothetical manner (1^{6}: 'if need be'; 3^{14}: 'if ye should suffer'; 3^{17}: 'if it should be the will of God') while 4^{12ff} speaks of actual oppression (4^{13}), of sharing in the passion of Christ (4^{19}) and of present suffering. Many therefore (Perdelwitz, Jülicher, Beare) have seen in 1 Peter a reworking of two letters which stem either from situations distinctly separated from one another in time or from two closely related circumstances, perhaps even from the same author. To this question is related another as to whether we have in 1 Peter instead of a real letter an address which only later was issued in the form of a letter. This address is then regarded as a baptismal homily (Perdelwitz, Bornemann, Beare, Preisker, Cross). This thesis has been worked out in the greatest detail by Preisker who sees in 1 Peter an early Christian liturgy: the first part (1^{3}–4^{11}) contains a baptismal homily which begins with a prayer in psalm form (1$^{3-12}$) and an informative address (1$^{13-21}$). It is assumed that the rite of baptism takes place between 1^{21} and 1^{22}. There follows a baptismal vow (1$^{22-25}$), a hymn (2$^{1-10}$), an exhortation (2^{11}–3^{12}), a revelation (3^{13}–4^{7a}), and a closing prayer (4^{7b-11}). In this part of the service it is only natural that the persecution and suffering which baptism may occasion should be spoken of in hypothetical form. But 4^{12ff} is to be viewed as a short conclusion to the service in which the whole congregation participates and in which reference is made to the suffering which the congregation as a whole has already experienced. After an eschatological revelation (4$^{12-19}$), this part closes with an exhortation (5$^{1-9}$), a blessing (5^{10}), and a doxology. The whole liturgy to which the address and final greeting were added was then sent to the congregations of Asia Minor by the Roman congregation in which it took place. The assumption that the letter contains a baptismal homily makes it possible to account for the striking lack of an exhortation addressed to masters of slaves (an exhortation which is not lacking in any other 'table of duties' in the NT) by supposing that by chance no masters were present at this baptism.

Now it must be granted that the addressees are likened to newborn children (2^{2}), that the author speaks of their conversion as having taken place 'now' (2^{25}) and of their baptism as possessing saving effect 'now' (3^{21}), that reference is made to their pagan way of life as a condition not far removed in time (most clearly 4^{3f}, but see also 1$^{14, 23}$ 2^{1} 4^{2}), and that baptism and the rebirth given with baptism are mentioned in various passages in the letter (1$^{3, 23}$ 3^{21}); yet that is not enough to give the letter or a part of it the character of a baptismal homily. In particular it is impossible to think that baptism took place between 1^{21} and 1^{22}; the active 'ye have purified your souls' (1^{22}) rules that out. In baptism one does not purify one's soul, rather the soul is purified. Every expression mentioned above is understandable if we keep in mind that the letter concerns itself with young congregations. For that reason it can speak of their conversion as having taken place 'now.'

The theory that the letter arose out of two originally separate parts certainly contains an element of truth in it. But that in itself does not make the theory acceptable. In substance, the part of the letter which begins at 4^{12} is closely related to the first part; 4^{13} is reminiscent of 1$^{6-8}$ and the term 'well doing' (AV) or 'doing right' (RSV) in 4^{19} is a frequent catchword in the preceding sections (2$^{12, 14f, 20}$ 3$^{6, 17}$). The main argument, however, against dividing 1 Peter is that the suffering mentioned in the first part is not spoken of in hypothetical terms because it has not yet come upon them, but because it has not affected all the congregations in the same way. That sufferings and persecutions have in many different ways also come upon those addressed in the first part of the letter is made clear by 2$^{12, 19f}$ 3^{16} 4^{4}. Note that the 'if' of 3^{1} is not hypothetical in the sense that something is possible though as yet unrealized, but in the sense that something has happened, not everywhere, but here and there. In the same way the persecutions mentioned in the first part of the letter have already taken place in many of the congregations and have become realities.

It is correct, however, that 4^{12ff} is a striking passage in that the theme of suffering is again taken up and we hear of persecutions that have affected all the congregations. To be sure the word 'if' also appears here (4^{16}); but the following verse (4^{17}) goes on to explain why the congregations must *all* suffer. Yet it is not by chance that even those who wish to divide 1 Peter into two parts are unwilling to separate these parts too far from one another. But the complete unity of the letter must be maintained against all such views, for 4$^{7-11}$ and 5$^{1-5}$ belong together: they are both concerned with the congregation and its government. Since the writing of letters in the ancient world was a matter which consumed not only hours, but days, it is a fair assumption that the author interrupted himself at 4^{12} perhaps because he received new information or perhaps because he himself felt the need once more to go into the matter of suffering, and with greater emphasis.

4. The goal and thought of the letter.—Thus 1 Peter is a real letter, a circular letter addressed to a number of newly formed congregations in Asia Minor. The situation in which these various congregations find themselves is different. They experience different degrees of contempt, of hate, of slander, of daily persecution at the hands of Gentiles, but all feel oppressed and reckon with the possibility of interference from municipal authorities, behind which stands the threat of the Roman army. In this situation Peter directs the minds of his readers to the 'living hope through the resurrection of Jesus Christ from the dead' (1^{3}), to the imperishable inheritance (1^{4}), to the 'outcome of faith, the salvation of souls' (1^{9}), to the grace which the revelation of Jesus Christ brings (1^{13}). The exhortations of the apostle to these congregations point in two directions: in the first place he sets forth the basic demand that they be holy even as He who calls them is holy (1^{15}), remembering that they were redeemed through the precious blood of Christ (1^{18f}), and that as newborn men and women they are to build themselves up into a living temple (2^{5ff}) and soberly to withstand the assaults of the devil (5^{8f}).

In the second place Peter wishes to give them practical direction as to how they are to behave in the midst of persecution. In this connexion two catchwords constantly recur in the letter: be subject and do good. Both are closely related to one another, for to be subject is in reality an essential part of doing good; it entails the subjection of everyone to the government, the obedience of slaves even to arbitrary (2^{18}: froward, overbearing) masters, the submission of wives even when their husbands are still pagans, and the humility of all before one another; it involves not cursing enemies, but blessing them; it demands gentleness, fear and good conscience (3^{15f}). Such subordination joined with the doing of good may convince the heathen of your 'good behaviour in Christ' (3^{16})—though it will not necessarily do so. In this connexion reference is twice made to the example of Christ: 2^{21ff} in the exhortation to slaves and 3$^{18-22}$ where it serves to underpin the sentence that it is better to suffer

for doing right than for doing wrong. This difficult passage has the following sense: at the time of the Flood only eight persons including Noah were rescued. All others died in their disobedience. Yet even they obtained Christ's mercy since after His suffering (and precisely because of His suffering) He descended into Hades and preached to them. Thus Christians who like Noah and his family are a small band in the midst of many unbelievers ought not to give up hope for their adversaries but to persist in doing good to them following the example of Christ. This missionary hope does not however prevent Peter from seeing in persecution the power of Satan who would destroy these congregations and their members, or from seeing the end of all things as near at hand (4^{7}) when the great judgment on unbelievers will take place (4^{17f}).

5. Literary Relationships.—(*a*) OT. In its frequent quotations from and in its allusions to the OT this letter consistently uses the LXX and betrays no knowledge of the Hebrew text. The (partial) relationship with Paul when there is a departure from the LXX is striking (cf 1 P 2^{6-8} with Ro 9^{32f}). It is important to note that there are frequent echoes of Is 52–53 (cf 1^{18-19} $2^{22, 24f}$; for other references to the book of Isaiah cf 1 P $2^{6\pi}$ with Is 28^{16} and Ps 118^{22}, 1 P 1^{24f} with Is 40^{6f}). In addition the book of Proverbs is frequently cited (cf 4^{8} with Pr 10^{12}; 4^{18} with Pr 11^{31}; 5^{5} with Pr 3^{34}). There are also frequent echoes of Ps 34 (cf v.^{9} with 1 P 2^{3}; v.^{6} with 1 P 2^{4}; vv.$^{13-17}$ with 1 P 3^{10-12}) though one is not to view the letter (with Bornemann) as a baptismal homily based on this psalm.

(*b*) Enoch. The book of Enoch often speaks of 'spirits in prison' ($10^{4f, 12f}$ 64^{2}) though this does not mean that Peter necessarily knew the book. In fact he understands the expression differently.

(*c*) NT. 1 Peter has points of contact with many NT passages. (i) Direct citations from the Gospels are certainly lacking, and the conclusion based on 1 P 5^{1} (a witness of the sufferings of Christ) that the author was an *eye*witness of the suffering of Christ cannot be drawn with certainty. The expression may also signify that the author has borne witness to the suffering of Christ before these congregations and continues to do so. Yet 1P 2^{12} contains an echo of Mt 5^{16}, 1 P 3^{14} and 4^{14} an echo of Mt 5^{11f} and 1 P 3^{9} an echo of Mt 5^{44}. 1 P 2^{4-8} has a connexion with the parable of the evil tenants (Mk 12^{1-12}, especially v.^{10}). The use of Is 53 in 1 P 2^{22-25} is reminiscent of Mt 9^{36} $12^{18\pi}$ and the speeches of Peter in the first part of Acts (God's servant: $3^{13, 26}$ $4^{27, 30}$). (ii) Some expressions are reminiscent of Romans: 'not to be conformed' to the world (Ro 12^{2}, 1P 1^{14}), 'sincere' in reference to love (Ro 12^{9}, 1 P 1^{22}), 'reasonable (spiritual)' sacrifices or worship (Ro 12^{1}, 1 P 2^{5}); Ro 12^{3-13} has many echoes in 1 P 4^{8-11}; Ro 12^{17a} reappears in 1 P 3^{9a}; the passages concerning the government (Ro $13^{1\pi}$, 1 P 2^{13-17}) are close not only in the exhortation to be subject to the government, but also in the reason given for such subjection, viz. that the function of the state is to punish the wrongdoer and to approve of that which is good (Ro 13^{4}, 1 P 2^{14}); the departure from the LXX in Ro 9^{33} is reflected in 1 P 2^{6}. There is a close relationship between the 'table of duties' in Colossians, Ephesians and 1 P $2^{18-3^{8}}$. 1 P 1^{12} is especially reminiscent of Eph $3^{5, 10}$, 1 P 2^{4-6} is reminiscent of Eph 2^{20-22}, both letters begin with praise to God and both show a particularly close relationship in joining together the concept of Christ's ascension with that of the destruction of the demonic powers (1 P 3^{22}, Eph 1^{20f}). (iii) 1 Peter is related to Hebrews in its emphasis on the estrangement of Christians in the world (1 P 1^{1} 2^{11}, He 11 13^{12f}), through its use of cultic symbols (1 P 1^{2}: sprinkling of the blood of Jesus Christ, He 9^{14} 10^{22}) and by its pointing to the example of the passion of Christ (1 P 2^{21-23} 4^{1}, He 11^{26} 12^{1-3} 13^{13}). (iv) 1 P 1^{1} is reminiscent of Ja 1^{1} (dispersion), 1 P 1^{6f} of Ja 1^{2f} (joy in suffering, suffering as a trial of faith), 1 P 1^{23} of Ja 1^{18} (new birth through the word). The same quotation from Pr 3^{34} is found in both 1 P 5^{5} and Ja 4^{6}.

All these relationships between 1 Peter and other books of the NT do not, however, prove that Peter was acquainted with them. In recent decades it has become increasingly clear that the major elements of the tradition concerning matters of faith and life were common property in the primitive church (Carrington, Selwyn, Lohse, Nauck). For example, the primitive Church had to settle the question of its relationship to the government in order to dissociate itself from the Zealot movement; but its solution of the problem also contained an evaluation of the Roman government which was distinguished from the view of the Pharisees who saw in the government only God's rod of affliction. The basic ideas which appear in Ro $13^{1\pi}$ and 1 P $2^{12\pi}$ therefore reach far back into the earliest Church. When the Law lost ground as an ethical norm, the question of the relationship to earthly institutions was immediately raised, and at least in the Gentile mission one may assume that a tradition arose as we find it preserved in the 'tables of duties'; yet this rejection of libertinism with its contempt for human institutions is to be traced back to the Palestinian scene (Mt $5^{17\pi}$) and may also lie behind the apostolic decree of Ac 15 (A. Schlatter). It is further true that since from its beginning the primitive Church had to reckon with opposition of all kinds, the evaluation of persecution and suffering as grounds for joy was common opinion among the early Christians (Ac 5^{41}). One must also reckon with a certain fund of OT passages which were understood in a peculiarly Christian manner, and so interpreted were common property in the primitive Church. And it is natural that the Greek-speaking part of the Church relied on the LXX in its use of the OT.

We cannot, therefore, conclude that Peter unquestionably knew other NT documents, since there are relationships between them and 1 Peter. We can only cautiously point out that we meet ideas and concepts in 1 Peter which we never or almost never find in Paul, but rather perhaps in the primitive Church: (i) 'soul' used for the 'self' (1 P $1^{9, 22}$ $2^{11, 25}$ 4^{19}, cf Mk 8^{35-37}; in Paul only in 2 Co 12^{15}); (ii) cultic concepts used to elucidate the work of Christ (1 P 1^{2}, cf He 9^{14}; the use of Is 53 also belongs in this category, especially the description of Christ as the lamb—this description appears only once in Paul, 1 Co 5^{7}; in fact Is 53 plays a remarkably small rôle in Paul, but appears frequently in Matthew (see **5** (*c*)); (iii) the emphasis on Christians as aliens in the world (we already hear an echo of this in Stephen's speech in Ac 7; the theme is stressed in Hebrews, a document which used Palestinian tradition); (iv) the metaphor of 'girding up the loins' is found in 1 P 1^{13} and Lk 12^{35} (in Eph 6^{14} the metaphor is used differently!); (v) the form of greeting (1 P 1^{2}: 'be multiplied') is Semitic. On the other hand there is no question that many distinctive Pauline concepts are missing (dying and rising with Christ, Paul's whole doctrine of justification, the concept 'in Christ' which is found only in 1 P 3^{16}); but there are also usages in 1 Peter which cannot be claimed without question as the teaching of the Palestinian Church: the pre-existence of Christ (1 P $1^{11, 20}$), the congregation as a spiritual house, a spiritual sacrifice (1 P 2^{5}, Ro 12^{1}, Eph 2^{21f}), the 'authorities and powers' (1 P 3^{22}, cf Eph 1^{20f}).

If Jewish-Christian tradition is strong in Matthew, James, and Hebrews, then 1 Peter stands for the most part in the same context. That also becomes clear in his description of the 'constitution' of the congregations addressed in his letter: 1 P 5^{1-5} distinguishes only 'elders' and those who are 'younger.' When we are told that the 'elders' are to exercise their office not by constraint but willingly, we may assume that they received their office not by being chosen for it, but because of their age; when they are exhorted not to exercise their office 'for shameful gain' (AV 'for filthy lucre'), that does not presuppose payment, but precisely the contrary, for all such ideas are thereby excluded. We have before us a clear and simple form of congregational life which can be understood on the basis of the Jewish evaluation of

old age and which is also clearly coming into being in Ac $5^{6, 10}$ and in Ja 5^{14}.

Add to all this that the expectation of a speedy end to the world is still alive in 1 Peter ($4^{7, 17}$), and it becomes clear that the Epistle leads us back into the first generation of the Church and has strong connexions with the Palestinian tradition.

6. Author, place and time of writing.—1 Peter claims to have been written by the apostle Peter 'through Silvanus' (5^{12}). If the letter is genuine, this can only mean that Silvanus was responsible for the wording of the letter; otherwise the addition 'a faithful brother as I regard him' would be unintelligible. The first certain quotation of 1 Peter is found in the letter of Polycarp of Smyrna to the Philippians (*c* A.D. 117) and according to Eusebius Papias is also supposed to have used it. From the end of the 2nd cent. the Church fathers universally regard it as a recognized part of the canon; it is only in the Muratorian Canon that it is missing. Surprising as this omission is, no objection can be raised against the letter's authenticity on that ground.

But the majority reject Petrine authorship. The reasons are as follows: (i) the author's language is simple yet easy Greek, (ii) he uses only the LXX, (iii) the persecution mentioned in the letter presupposes a situation that could only have arisen after the death of the apostle, (iv) Peter could not have written to Gentile congregations located in the area of Paul's missionary activity, (v) personal recollections of the words and the life of Jesus could not be so completely lacking if the letter had been composed by Peter, (vi) the letter contains theological ideas which can only be understood as resulting from Paul's work, and such dependence of Peter on Paul is out of the question, (vii) the letter shows literary dependence on Paul's letters, particularly Romans and Ephesians, and this sets it in the subapostolic age.

Those who assume that the letter is not genuine have come to no agreement concerning the date of composition (A.D. 80–110) or the way in which it was written. In particular they have not succeeded in making intelligible the mention of Silvanus in 5^{12}. A second consideration which weighs against this theory is the marked restraint with which the claim to apostolic authority is made; a forger can hardly avoid falling into the temptation of making his forgery quite apparent, as 2 Peter shows. Moreover the reasons brought forward against the genuineness of the letter are not particularly convincing: (i) and (ii) can be easily explained by taking seriously Silvanus' share in the composition of the letter; as far as (iii) is concerned see **2** above; (v) fails to recognize that it was Good Friday, Easter and Pentecost which made Peter an apostle; (vi) and (vii) overlook the fact that 1 Peter has stronger connexions with the tradition of the primitive Church than with Paul (see **5**). Furthermore, one must also reckon with the fact that Silvanus played a rôle in the writing of the letter.

But the decisive question is whether a unified and understandable picture of 1 Peter results if we assume that it is genuine.

To answer this we must begin with (iv). Paul finished his work in Asia Minor in the middle of the fifties of the 1st cent., travelled to Jerusalem and was arrested. He remained in prison for a long time in Caesarea. Then he was taken to Rome under guard on a dangerous journey which lasted over six months. There he stayed for a year and a half under a sort of house arrest. Whether he then went to Spain (Ro $15^{24, 28}$) we do not know with certainty, but it is possible. If the Pastorals are genuine, we later find him once more in the Eastern provinces of the Roman empire. It is not only completely understandable, but also almost certainly the case that during this long period Christianity spread from western Asia Minor and Galatia to Pontus, Cappadocia and Bithynia, and also that new congregations arose in Asia and Galatia. We do not know where Paul's most intimate colleague, Timothy, was during these years. In any event one must conclude from 1 Peter (assuming that it is genuine) that Silvanus felt himself responsible for these new congregations. As a member of the primitive Church and as a colleague of Paul on his second missionary journey he played a rôle in the Gentile mission and was at the same time in touch with Peter. He therefore requested Peter to send an apostolic message to the new congregations. Our letter, 1 Peter, is this message and in its composition Silvanus probably played a part that went beyond the mere translating of Peter's Aramaic speech into Greek. This message has a double goal: to tell the congregations that oppression and persecution are 'the true grace of God' and to exhort them to stand fast therein (5^{12}). On the other hand, however, the letter contains the exhortation to be subject and to do right. Thereby the danger was avoided which also arose in the Pauline congregations, namely, the danger of 'using your freedom as a pretext for evil' (2^{16}). It is in this connexion that the 'table of duties' plays its rôle. For it contains the first elements of instruction which for the most part were orally transmitted, but which appear in the letters directed to congregations not personally founded by Paul: Colossians and Ephesians and so also in 1 Peter. If Peter granted Silvanus' request to send such a message to the young Gentile congregations in central Asia Minor, that is no encroachment upon Paul's missionary territory when Paul (and perhaps Timothy as well) were not available.

Now it must be granted that this solution presupposes one thing that is almost universally rejected by scholars, namely, that the term 'Babylon' in 5^{13} does not refer to Rome. It is certain that Babylon could be used at that time as a pseudonym for Rome and was so used (? Rev 17–20). But this does not make it necessary to assume that such was the case here. Whether one accepts the genuineness of the letter or not, there was nothing to compel the writer to avoid the mention of Rome. If, on the other hand, Peter was in Rome when he wrote 1 Peter, then it is difficult to imagine where Paul is supposed to have been, for Silvanus would surely have done better to turn to him. So then if Babylon = Rome, the letter can only with difficulty be regarded as genuine (for this would mean that Paul had died before Peter, a theory which one can hardly accept). But it is not only possible that Peter went from Palestine to Babylonia to fulfil his mission to the circumcised (Gal 2^{9}), it ought to be confidently maintained—though the contacts of Silvanus with Babylon are difficult to make out. He could hardly feel justified in neglecting the large number of Aramaic speaking Jews in Mesopotamia. That we have no mention of it is not surprising when the state of the tradition is taken into account. It is understandable then that Silvanus turned to Peter who was not too far away in Babylonia when he wanted to have an apostolic message for the young congregations. Whether by Babylon is meant the city or the country cannot finally be settled. 1 Peter was written therefore about the year A.D. 60. The situation presupposed in 1 Peter is fully conceivable, clear and understandable, if the letter is assumed to be genuine.

W. F.

PETER, SECOND EPISTLE OF.—This Epistle cannot rank with 1 Peter as a Christian classic, but it nevertheless deserves our careful attention as a witness from about the turn of the 1st cent.

1. Contents.—(a) The greeting (1^{1f}). The apostle, who calls himself Symeon Peter in a formal Hebraizing manner, writes to those who 'have obtained a faith of equal standing with ours' and expresses the wish that they may share richly in grace and peace through the knowledge of God and of Jesus Christ. (*b*) The apostle and his readers (1^{3-21}). In the 'us' of verse three Peter includes himself along with the other apostles to whom everything has been given that leads to piety and spiritual life so that those to whom the letter is directed may share in the Divine nature while escaping the corruption that is in the world because of evil desires (vv.$^{3-4}$). Therefore the readers are counselled to let virtue, knowledge, self-control, steadfastness, godliness, brotherly affection and love flow from their faith (vv.$^{5-7}$). These things will prevent them from being unfruitful in the

knowledge of faith (vv.[8-9]). Thus they are to confirm their calling that they may be provided with an entrance into the Kingdom of God (vv.[10-11]). Peter constantly reminds them of these things in view of his coming death so that even after he has departed they may recall what he has told them (vv.[12-15]). Peter claims that he proclaimed the power and the coming of Christ to the readers as an eye-witness of the transfiguration (vv.[16-18]). Thus the apostles have firm possession of the prophetic word. The readers are to pay attention to it and to realize above all that no prophecy of Scripture is a matter of one's own interpretation. For men of God spoke as they were moved by the Holy Spirit (vv.[19-21]). (*c*) Future heretics (2[1-12]). (i) Just as false prophets arose among the Jewish people, so will they also arise among the readers. They will cause destructive divisions and deceive many (vv.[1-3a]). (ii) The judgment upon them will not fail to take place just as the judgment upon the angels of Gn 6[1ff], upon the generation at the time of the Flood and upon Sodom and Gomorrah did not fail to take place (vv.[3b-6]). (iii) The example of Lot shows that God can preserve the righteous even when they live among sinners and at the same time can punish the sinners (vv.[7-9]). (iv) The heretics are described in 2[10-22]. (*aa*) They are immoral; they despise 'lordship' (RSV 'authority'); they blaspheme 'glories' (RSV 'the glorious ones')—a thing which mighty angels did not dare to do; they are like animals and will be destroyed (vv.[10-14]). (*bb*) They are like Balaam who loved unrighteous gain, but was rebuked by his ass; they are like waterless springs (vv.[15-17]). (*cc*) They deceive many with their empty words; they proclaim freedom and are themselves slaves to their passions (vv.[18-19]). (*dd*) When they learned of Christ, they left evil behind, but now they have gone back to their evil ways; it would have been better for them had they never known the way of righteousness (vv.[20-22]). (*d*) Doubt concerning the second coming of Christ (3[1-16]). (i) Peter points out that he is writing this letter to remind his readers of the words of the prophets and of the word of Christ given them through the apostles (vv.[1-2]). (ii) For mockers will come who will say, 'Since the death of our fathers everything has remained the same; the promised coming has not taken place' (vv.[3-4]). (iii) As the world perished at the time of the Flood through water, so also the present heaven and earth will perish through fire (vv.[5-7]). (iv) A thousand years are with God as a day; the day of the Lord will come as a thief in the night; but God is delaying it out of mercy (vv.[8-11]). (v) Thus the reader must await the Second Coming in holy living; then the heavens will perish and a new heaven and a new earth will appear where righteousness will dwell (vv.[12-13]). (vi) Therefore the readers must strive to be found guiltless and count God's patience as salvation. The writer adds that such things were also written to them by Paul. Nevertheless, since his letters like all other Scriptures are hard to understand, they have been twisted by many to their own destruction (vv.[14-16]). (e) The close of the letter is made up of an exhortation to the readers not to let themselves be deceived, but to grow in the grace and knowledge of Christ. There follows a doxology (vv.[17-18]).

2. Literary affinities.—(*a*) 1 Peter. The differences between first and second Peter are numerous and striking. Already the author's name is different: the Hebraizing form, Symeon Peter, is found elsewhere only in Ac 15[14] and (for other bearers of the name than Peter the apostle) in Lk 2[25, 34] 3[30], Ac 13[1], Rev 7[7]. 1 Peter is written in fluent Hellenistic Greek while the style of 2 Peter is almost pseudo-literary, and its words are often quite uncommon. 1 Peter quotes largely from the LXX, the use of which can hardly be detected in 2 Peter. The Divine names are different. Whereas in 1 P 3[19f] Christ is said to have preached to the generation that had died at the time of the Flood, in 2 P 2[5] these people are only mentioned as objects of God's judgment. Naturally the changed situation can explain many of the differences. Thus it is understandable that Is 53 and the example of Christ's suffering should play a large rôle in a letter to congregations which are oppressed, while they do not appear in a letter directed against libertines and those who deny the Second Coming. But it cannot be denied that in 2 Peter knowledge takes the place of hope and piety that of holiness. (*b*) The difference in the use of the OT is also significant: in 1 Peter there are many quotations; such quotations are missing in 2 Peter and in their place the author strings together references to OT narratives for the sake of illustration. That there are echoes of the OT also in many passages of 2 Peter (Ps 90[4] in 3[8] and Pr 26[11] in 2[22]) is no peculiarity of the letters of Peter. (*c*) A peculiarity of 2 Peter is the direct reference to the synoptic account of the transfiguration (1[16-18]). Echoes of OT passages and the eschatology of the Synoptics are found in 2 P 3[10-13]. But the extent of direct influence cannot be established. (*d*) It is remarkable that 2 Peter knows of a collection of Pauline letters (3[15f]), but only indistinct echoes of them can be heard (2 P 1[13] = 2 Co 5[1]: the body as a tabernacle). 2 Peter shows astonishingly little evidence of their influence. (*e*) Jude. All the more striking are the points of contact between 2 Peter and Jude. They are to be found especially in the second chapter. In the whole NT it is only 2 Peter and Jude which use the method of drawing up a list of OT stories and figures to characterize their opponents. Moreover the majority of OT examples are common to both letters and are used in the same order. The numerous other points of contact between the two letters are also found in the same order: denying the Lord (2[1] = Jude [4]; the term *despotēs*, *i.e.* Lord, which is rarely used of Jesus, is found in both passages in this sense)—the fall of the angels, the destruction of Sodom and Gomorrah (2[4-6] = Jude [6f])—defilement of the flesh, contempt of 'lordship,' blasphemy of the 'glories' (2[10] = Jude [8]; the same order in both cases!)—the opposite behaviour of the angels which is worthy of emulation (2[11] = Jude [9])—the comparison with the animals (2[12] = Jude [10])—carousing together (2[13] = Jude [12])—Balaam (2[15] = Jude [11])—the comparison with the waterless clouds or springs and the reservation of the nether gloom for the heretics (2[17] = Jude [12f])—proud speech (2[18] = Jude [16]). At the same time it is only once that a whole sentence is word for word the same in each (2[17c] = Jude [13c]). On the whole the one is not a simple transcription of the other. Rather we find that one of the letters is a new edition or a complete reworking of the other. The echoes of 2 Peter in Jude go beyond the second chapter (1[12], 'though ye know' them = Jude [5], and Jude [17f] is very closely related to 2 P 3[2f]).

3. Authorship and date.—In view of the mutual relationship that exists between the two letters the question arises as to whether 2 Peter is an expanded revision of Jude or whether Jude is an abridged edition of 2 Peter. These are the only two possibilities. When the question is put in this way, there can be no doubt as to what the right answer is: there is no reason why a letter written by Peter should be reissued in a shortened form under the name of Jude whose authority was so much less significant than that of Peter. But it is immediately comprehensible that the letter of Jude should be expanded by entering in upon the question of the delay of the Second Coming and should be reissued under the name of Peter to assure it of greater influence. And it is also immediately clear that 2 Peter cannot stem from the apostle Peter. For he would not have been dependent on Jude in this way. This is irrefutably proven by 3[4] ('since the fathers fell asleep'). The 'fathers' are the first generation of Christians to which Peter belonged. Now Peter probably died in A.D. 64; in any event he did not, like John, outlive the first generation. Hence Peter was no longer alive when the letter was written. For 2 Peter was written at least after the year A.D. 70, a date which may be taken as representing roughly the time at which the first generation died out. The fact that 2 Peter already knows a collection of Pauline letters possessing almost canonical authority (3[16]) points to the same period of time after A.D. 70. Whether by the

term 'other Scriptures' the author means the Synoptics and Acts for example and not only the OT cannot be decided with confidence. In any event, in 2 Peter we find ourselves in the subapostolic age, an age in which the canon was beginning to take shape.

That 2 Peter is secondary to Jude may also be gathered from certain other observations: (*a*) the examples in 2^{4-6}, unlike the examples in Jude, have been put in chronological order; (*b*) the quotation from Enoch and the reference to the Ascension of Moses (Jd 14^{f} and 9) have been dropped; (*c*) the opponents in 2 Peter are more clearly described (they proclaim freedom, 2^{19}, and pose a grave danger for the congregations, $2^{2, 14, 18}$); (*d*) the judgment against them is sharper (2^{19-22}).

Some further observations show that 2 Peter is pseudonymous: (*a*) The future tense used in the description of the heretics in 2^{1ff} imperceptibly gives way to the present in v.[10] and to the past in v.[15]. This is an indication that the attempt of the author to speak from the point of view of Peter is only a fiction; (*b*) in 1^{15} the author himself says that the letter is intended for the time after his death; (*c*) 2 Peter consciously attempts to emphasize the assumed authorship of Peter (1^{13-19} 3^{15}). Borrowed authority must seek to give itself an air of genuineness. It is here (*d*) that the reference to 1 Peter in 3^{1f} also belongs. It does not really suit 1 Peter and the theory that the allusion is to a genuine letter of Peter which has not come down to us (Zahn) is simply a weak attempt to get around a difficulty. Rather the real author is here betraying himself. And nothing speaks for the idea that he was a disciple of Peter.

For the date of the letter we have no other clue than that it was written after Jude. Full-blown Gnostic systems cannot be recognized in it. One may date it roughly in the years A.D. 90–110.

4. Testimony of later Christian Literature.—Until the 3rd cent. the traces of 2 Peter are very few. Perhaps it was known to the author of the *Apocalypse of Peter* (*c* A.D. 150), but it is missing in the Muratorian Canon. The first certain quotation is found in Firmilian of Caesarea in Cappadocia (*c* 250); probably it was used by Clement of Alexandria; and Origen knew it, but doubted its genuineness. While Eusebius himself did not accept the Epistle, he placed it, in deference to general opinion, among the 'disputed' books. It is not referred to by the scholars of Antioch, nor is it in the Peshitta, the common version of the Syrian Church. The oldest Latin versions also seem not to have contained it; possibly it was absent from the original of Codex B, but it is found in the Egyptian versions. Jerome, and afterwards Erasmus and Calvin, harboured doubts about its genuineness.

5. **Readers and purpose.**—According to 1^{16} Peter (and his fellow apostles) are supposed to have gained for Christianity those to whom the letter is directed. But that belongs to the trappings of the letter and means nothing. The salutation mentions no definite congregation. Only from one passage does it appear probable that the readers are to be sought for among Gentile Christians (2^{20-22}: the opponents are said to have come from a heathen life of defilement and to have returned to it). Since in this passage it is a question of gross and notorious sins, one can hardly think that the readers of the letter had a Jewish past. Probably the fact that 2 Peter was addressed to Gentile Christians helps to explain the reason for the re-editing of Jude under the name of Peter, for while it is hardly likely that Jude had any particular authority among Gentile Christians, Peter doubtless had. Now since Jude was used by 2 Peter, it is to be expected that the readers of both letters did not live far apart, *i.e.* they are to be looked for in Syria or Asia Minor. The meagre witness to 2 Peter in the ancient Church speaks for a small circle of readers.

The first purpose of the author in reworking Jude was to put his readers on their guard against those who preached libertinism under the cloak of freedom. But to this was joined a new concern, namely, to oppose doubts about the Second Coming. Such doubts were probably brought forth by the same people who represented libertinism; we see also in 1 Co that doubt concerning the resurrection of Christ is joined with doubt concerning his return.

Jude exhorts his readers to fight for the faith handed on once and for all (v.[3]). 2 Peter develops this theme in the first chapter. Everything that belongs to piety and spiritual life has been given to the apostles and they have handed it on. He points out in particular that the power and the coming of Christ are not 'cunningly devised fables,' but that the proclamation of these things rests upon the revelation of the glory of Christ in the transfiguration. Thus the apostles are those who have firm possession of the prophetic word to which the readers are to pay attention (1^{16-19}). But the author has a wider purpose than that of simply upholding religious authoritarianism. Behaviour marked by self-control and patience, and the knowledge of Christ and the Second Coming belong indissolubly together for him: behaviour is fruitful for knowledge, *i.e.* for faith (1^{8}); one's calling and election is confirmed by one's behaviour (1^{10}); the Second Coming which will bring a new heaven and a new earth in which righteousness will dwell is to spur one on to be found guiltless (3^{14}); the delay of the Second Coming is to be regarded as God's holy forbearance which increases fruitful conduct. By the example of Lot the author shows that God can preserve the righteous even in the midst of sinners (2^{7-9})—a situation in which the readers found themselves. Even though 2 Peter borders on a certain moralism and has brought in Greek ideas strange to the NT (1^{4} 'partakers of the divine nature'; $3^{7, 12}$ the cosmic conflagration). Such thoughts deserve to be given a hearing. W. F.

PETHAHIAH.—1. The head of the nineteenth priestly course, 1 Ch 24^{16}. **2.** A priest who had married a foreign wife, Ezr 10^{23}, 1 Es 9^{23} (AV, RV **Patheus**). **3.** A Levite, Neh 9^{5}. **4.** A Judahite officer, Neh 11^{24}.

PETHOR.—Mentioned in Nu 22^{5} and Dt 23^{4} as the home of Balaam, in N. Mesopotamia, when he was called by Balak to curse Israel. With this indication agrees the repeated statement by king Shalmaneser II. of Assyria regarding a certain city which he calls *Pitru*, that it lay on the river *Sāgūr* (modern *Sājūr*) near its junction with the Euphrates. Thus Pethor would seem to have lain a little S. of Carchemish, on the W. of the Euphrates. J. F. McC.

PETHUEL.—The father of the prophet Joel, Jl 1^{1}.

PETRA.—See SELA.

PEULLETHAI.—The eighth son of Obed-edom, 1 Ch 26^{5} (AV **Peulthai**).

PEULTHAI, 1 Ch 26^{5} (AV).—See PEULLETHAI.

PHALTIEL.—1. 2 S 3^{15} (AV); see PALTI, **2.** **2.** The 'chief of the people,' 2 Es 5^{16} (AV **Salathiel**).

PHANUEL.—The mother of Anna (Lk 2^{36}).

PHARACIM, 1 Es 5^{31} (AV).—See PHARAKIM.

PHARAKIM.—A family of Nethinim, 1 Es 5^{31} (AV **Pharacim**).

PHARAOH.—The later Egyptian royal title, *pr-ʿ*. 'Great House,' adopted into Hebrew. Originally designating the royal establishment in Egypt, it gradually

became the appellative title of the king (like the Ottoman Turkish *Sublime Porte*), and from the 22nd Dynasty (*c* 940–730 B.C.) onwards was regularly attached to the king's name in popular speech. The Hebrew Pharaoh Neco (2 K 23[29], Jer 46[2]) and Pharaoh Hophra (Jer 44[30]) are thus precise renderings of Egyptian. Shishak also was so entitled in Egyptian, but apparently Hebrew had not yet adopted the novel fashion, and so gave his name without Pharaoh (1 K 11[40] 14[25]). Tirhakah is not entitled Pharaoh as in Egyptian documents, but is more accurately described as king of Cush (2 K 19[9]).

The following Pharaohs are referred to without their names being specified: **1.** Pharaoh of Abram (Gn 12[10–20]), impossible to identify. The title Pharaoh and the mention of camels appear to be anachronisms in the story. **2.** Pharaoh of Joseph (Gn 39 etc.). The proper names in the story, viz. Potiphar, Potiphera, Asenath, Zaphenath-paneah are at once recognizable (when the vocalization is discounted) as typical names (Petepre, Esneit, Zepnetefonkh) of the late period beginning with the 22nd Dynasty (*c* 940 B.C.), and ending in the reign of Darius I. (*c* 500 B.C.). It has been conjectured that the Pharaoh of Joseph was one of the Hyksos kings, but it is not advisable to press for historical identifications in this beautiful legend. **3.** and **4.** The Pharaohs of the Oppression and the Exodus. The name of **Raamses** (q.v.), given to a store-city built by the Hebrews (Ex 1[11]), points to one of the kings named Ramesses in the 19th–20th Dynasties as the pharaoh of the Oppression. The chief of these was Ramesses II. (*c* 1290–1223 B.C.), after whom several towns were named. He was perhaps the greatest builder in Egyptian history. His son Merenptah might be the Pharaoh of the Exodus: but from the fifth year of Merenptah there is an Egyptian record of the destruction of 'Israel,' who, it would seem, were already in Palestine. At present it is impossible to ascertain the proportion of historical truth contained in the traditions of the Exodus. **5.** 1 Ch 4[17], 'Bithiah, daughter of Pharaoh': no clue to identity. Bithiah is Hebrew, and not like an Egyptian name. **6.** 1 K 3[1] 9[16, 24] 11[1], Pharaoh, the father-in-law of Solomon, was possibly Sheshonk I. (see SHISHAK; *c* 940–919 B.C.) of the 22nd Dynasty, but more probably one of the feeble kings of the end of the 21st Dynasty, such as Siamun (*c* 990–974 B.C.) or his successor Psusennes II. (*c* 974–940 B.C.). **7.** 1 K 11[18–22], the Pharaoh who befriended Hadad the Edomite in the last days of Solomon, and gave him the sister of his queen Tahpenes. Though not identified, he was probably Siamun. (At this point in the narrative Shishak comes in: he is never called Pharaoh; see above.) **8.** Pharaoh, king of Egypt in 2 K 18[21], Is 36[6] etc., perhaps as a general term for the Egyptian king, not pointing to any individual. In the time of Sennacherib and Hezekiah, Tirhakah or some earlier king of the Ethiopian Dynasty would be on the throne. **9.** For Jer 37, Ezk 29, see HOPHRA. F. Ll. G.—R. J. W.

PHARATHON.—Named, with Timnath and Tephon, high walls and gates and bars,' 1 Mac 9[50] (AV **Pharathoni**). Some authorities read with LXX 'Timnath-pharathon,' as indicating one place. Conder suggested *Fer'ōn*, about 15 miles W. of Nāblus. This seems to be too far to the north, as the towns mentioned are all 'in Judaea.' It may possibly be *Far'ata*, 6 miles SW. of Nāblus, although the same difficulty exists in a modified degree. Cf PIRATHON. W. E.

PHARATHONI, 1 Mac 9[50] (AV).—See PHARATHON.

PHARES.—AV form of the name **Perez** (q.v.) in Mt 1[3], Lk 3[33], where RV, RSV have **Perez.** In 1 Es 5[5] AV, RV, RSV all have Phares.

PHAREZ.—**1.** AV form of the name **Perez** (q.v.) in Gn 38[29] 46[12], Nu 26[20f], Ru 4[12, 18], 1 Ch 2[41] 4[1] 9[4]; in 1 Ch 27[3], Neh 11[4, 6] AV has Perez, as RV and RSV in all cases. **2.** 1 Es 8[30] (AV); see PAROSH.

PHARIDA, 1 Es 5[33] (RV).—See PERIDA.

PHARIRA, 1 Es 5[33] (AV).—See PERIDA.

PHARMACIST.—Sir 38[8] (RSV); see APOTHECARY.

PHARISEES.—Hebrew *Pᵉrûshîm*, 'separatists.' From the Aramaic emphatic *Pᵉrûshāyâ* came the Greek *Pharisaioi*. A religious society, chiefly of laymen, frequently mentioned in the NT. The movement derived from the tendency toward religious puritanism, marked in the Priestly and Holiness codes and stimulated by the reformation of Ezra and Nehemiah. (Cf Sifra to Lv 19[2]; Mekilta to Ex 19[6].) *Pārûsh* is equivalent to *Nibhdāl* in Ezr 6[21] and Neh 10[29], where it characterizes one 'who separated himself from the ritual uncleanness of the gentiles of the land' and from the Jewish 'people of the land' (*'ammê hā-'āreṣ*) to follow the law of God.

Closely related to the Hasidim, the Pharisees branched out as a separate body after it became evident that mingling with the heathen and the secular trends of the Maccabaean state and of the priestly aristocracy, the **Sadducees** (q.v.), endangered the distinctive character of the Jewish people. Including **Scribes** (q.v.) in their ranks, they made the study of the Law and the scrupulous regard for its requirements the chief goal of their piety. Accordingly, they figure in Rabbinic literature as *Ḥakhmê Yiśrā'ēl.* In the account of their break with John Hyrcanus, Josephus names them Pharisees, while the Talmudic parallel of this incident, linked with Alexander Jannaeus, designates them *Ḥakhmê Yiśrā'ēl* (*Kidd.* 66a; Jos. *Ant.* XIII. x. 5–6 [288 ff]). Early Rabbinic literature knows them also as *Ḥᵃbhērîm.* The word *ḥābhēr*, originally a common expression for companion or associate, through its connexion with the Pharisaic associations for worship, for religious meals and for study of Torah, acquired the special meaning of Pharisee. Kohut traces this usage to Ps 119[63] (see *Aruch Completum*, *Ḥābhēr*). In the Mishnah *hābhēr* is used to distinguish a person from *'am hā'āreṣ* and is synonymous with *pārûsh* and *talmîdh ḥākhām.* It reflects the Pharisaic method of extending their teaching and practice. 'Form groups and engage in the study of Torah, for the Torah may not be acquired save through association' (*Ber.* 63b). 'Provide theyself with a teacher and acquire a companion (*ḥābhēr*)' (*Aboth* 1[6]).

The Pharisees drew their following from all sections of the people irrespective of economic, social, and hereditary distinctions. They included priests and even members of the high priestly families. Their influence radiated not from the market place, but from the synagogue as the centre of the threefold activity of study, worship, and works of charity.

Their chief distinction derived from their attitude toward the Law. As the word of God, the Torah, they believed, must be adequate for all times and circumstances. Accordingly, they devoted themselves to the interpretation of the scriptural text in such a way as to find with it light for all conditions of changing times. 'Turn it and turn it again, for everything is within it' (*Aboth* 5[22]). They linked useful popular customs and ancient traditions with the text of the Law, and by a subtle exegesis (often eisegesis), they were able to find within it grounds for needed institutions and reforms in Jewish life (*Ant.* XIII. x. 5 [288 ff]). They thus developed the doctrine of the dual character of the Torah, one Written and the other Oral, and maintained that the written Law must be understood in the light of the Oral tradition (*Aboth* 1[1]). The Sadducees, on the other hand, rejected the doctrine of the Oral Law as well as the obligatory character of the observances which were not expressly included in the written word. (Cf Dt 13[1].) While the exegesis of the Pharisees appears artificial, it served the purpose of keeping the spirit of the Law as a living force and made for progress in Judaism.

As the party of the people, the Pharisees did not set themselves against the priests, but rather insisted on paying the priests the tithes and offerings due to them in accordance with the Law. At the same time they insisted that the priests act as the servants of God and as ministers of the people rather than as their masters (*Yoma* 1[5]). They sought to democratize Judaism by

raising the people to the level of the priests in accordance with the Divine command: 'And ye shall be to me a kingdom of priests and a holy nation' (Ex 19^{6}). Thus they applied the laws of priestly purity to the people as a whole. They extended the requirements of priestly ablutions to all the people (Ex 30$^{17-21}$). The holiness of the Temple they would carry into the home of the Jew, turn his table into an altar, and render him an officiating priest in the domestic sanctuary. Thus they took over the mode of slaughtering of sacrificial animals at the Temple for private use, and adapted the washing of hands and grace at priestly meals to their own meals.

The Pharisees, continuing Ezra's reformation, evolved the rules of conduct that translated the general requirements of the Law into a specific way of life (Halakhah). As the interpreters and guardians of the Law, they set up 'hedges' for its preservation, and defined the minutiae of its application to everyday conduct. This tendency brought them into conflict with the those groups that refused to submit to their rigorous standards, such as strictness in tithing, ritual purity, Sabbath observance, etc. These are classed in rabbinic literature as *'ammê hā'āreṣ* (see above), a term covering various classes and stations. Among their chief opponents, as we noted, were the Sadducees, who rejected their claims of the democracy of all Jews and their doctrine of the Oral Law, maintaining that only the observances prescribed in the Law were binding upon people but not those which the Pharisees 'derived from the tradition of the forefathers' (*Ant.* XIII. x. 6 [293 ff]). The Pharisees also drew the antagonism of Jesus and His disciples and particularly of Paul whose messianic claims and antinomist teachings they rejected. In consequence they were branded as bigoted formalists, hair-splitting legalists, and crafty hypocrites, devoid of charity and spirituality (Mk 7$^{1-23}$, Mt 23, Lk 11$^{38-54}$ etc.). This view still colours many treatments of the Pharisees, but it is being corrected by scientific research, both Christian and Jewish. While unenviable characters were doubtless found in their ranks as among all bodies of men, they cannot be identified with these 'virtuosi of religion.'

The Pharisees are seen at their best when contrasted with the party of **Zealots** (q.v.) on the one side and the **Herodians** (q.v.) on the other. Unlike the latter, they were deeply in earnest with their ancestral religion. Again and again at critical times they showed the vigour and temper of fearless Puritanism. Unlike the former, they held back from the appeal to force, believing that the God of the nation was in control of history, that in His own good time He would grant the nation its desire; that, meanwhile, the duty of a true Israelite was wholehearted devotion to the Torah, joined to patient waiting on the Divine will. This nobler side of Pharisaism could find itself in Ps 119. The Pharisees were in a sense Churchmen rather than statesmen. And they emphasized spiritual methods. Their interests lay in the synagogue, in the schooling of children, in missionary extension amongst the heathen. Hence we are not surprised when we learn that, after the conflicts with Rome (A.D. 66–135), Pharisaism became practically synonymous with Judaism. One great war (the Maccabaean) had defined Pharisaism. Another war, even more terrible, gave it the final victory. The two wars together created the Judaism known to Europeans and Americans. And this, allowing for the inevitable changes which a long and varied experience bring to pass in the most tenacious race, is in substance the Pharisaism of the 2nd cent.

A wide historical study discovers moral dignity and greatness in Pharisaism. The Pharisees, as contrasted with the **Sadducees** (q.v.), represented the democratic tendency. As contrasted with the priesthood, they stood both for the democratic and for the spiritualizing tendency. The priesthood was a close corporation. No man who was unable to trace his descent from a priestly family could exercise any function in the Temple. But the Pharisees and the Scribes opened a great career to all the talents. Furthermore, the priesthood exhausted itself in the ritual of the Temple. But the Pharisees found their main function in teaching and preaching. So Pharisaism cleared the ground for Christianity. And when the reader goes through his NT with this point in mind, and when he notes the striking freedom of the NT from ritualistic and sacerdotal ideas, he should give credit to Pharisaism as one of the historical forces which made these supreme qualities possible.

We have not yet exhausted the claims of the Pharisees on our interest and gratitude. It was they who, for the most part, prepared the ground for Christianity by taking the Messianic idea and working it into the very texture of common consciousness. Pharisaism was inseparable from the popularization of monotheism, and the universal acceptance by the nation of its Divine election and calling. The Pharisees made idealized nationalism, based upon the monotheism of the prophets, the pith and marrow of Judaism. It was they who wrote the great Apocalypses (Daniel and Enoch). It was they who made the belief in immortality and resurrection part of the common consciousness. H. S. N.—S. S. C.

PHARPAR.—A river of Damascus mentioned with the **Abana** (2 K 5^{12}) by Naaman as contrasting favourably with the Jordan. Its identification is by no means so certain as that of Abana with the *Baradā*. The most probable is that suggested by Thomson, namely, the *Nahr el-A'waj*, a river rising E. of Hermon. A wady near, but not tributary to, one of its sources is called the *Wâdī Barbar*, which may possibly be a reminiscence of the ancient name. The principal obstacle to this identification is the distance of the river from the city; but Naaman was perhaps thinking as much of the fertile plain of Damascus as of the river itself. R. A. S. M.

PHARZITE.—See PEREZ.

PHASEAH, Neh 7^{51} (AV).—See PASEAH, 3.

PHASELIS is mentioned 1 Mac 15^{23} as a city to which the Romans in 139 B.C. sent letters on behalf of the Jews. It was at the E. extremity of the coast of Lycia, a Rhodian colony founded early in the 7th cent., which apparently endeavoured to maintain its independence of the rest of Lycia, though not immune to larger political changes. It was taken by Alexander the Great and ruled by the Ptolemies from 309 to 197 B.C., when it was captured by Antiochus III. Its early importance was due to its position in the trade between the Aegean and the Levant. Its alliance with Cilician pirates caused it to be captured by Servilius Isauricus in 78 B.C., and it seems never to have recovered its former importance. Under the Roman empire it was a member of the Lycian League. It was a bishopric in the Byzantine period. There was also a city named Phaselis in Palestine. It was built by Herod the Great in honour of his brother Phasael, and lay in the Jordan valley N. of Jericho.

A. E. H.—F. C. G.

PHASIRON.—A Nabataean tribe (1 Mac 9^{66}); unknown.

PHASSARON, I Es 5^{25} (AV).—See PASHHUR, 4.

PHASSURUS, I Es 5^{25} (RV).—See PASHHUR, 4.

PHENICE.—1. Ac 27^{12} (AV)=**Phoenix** (q.v.). 2. Ac 11^{19} 15^{3} (AV)=**Phoenicia** (q.v.).

PHENICIA, Ac 21^{2} (AV)=**Phoenicia** (q.v.).

PHEREZITE.—See PERIZZITES.

PHICHOL.—AV form of **Phicol** (q.v.).

PHICOL.—Abimelech's captain, Gn 21$^{22, 32}$ 26^{26} (AV **Phichol**).

PHILADELPHIA was a city in Lydia, *c* 30 miles from Sardis (q.v.), in the valley of the Cogamus, a tributary of the Hermus, and conveniently located for handling the trade between the great central plateau of Asia Minor and Smyrna (q.v.). The district known as *Katakekaumenē* (Burnt Region), because of its volcanic character, rises immediately to the NE. of the city; this was a great vine-growing district.

Philadelphia was founded and named by Attalus II.

Philadelphus of Pergamum (159–138 B.C.). It was liable to severe earthquakes (for some time after A.D. 17 it lay in ruins), but nevertheless remained an important centre of the Roman province of Asia, receiving the name of Neo-Caesarea from Tiberius, and later on, the honour of the Neocorate (*i.e.* the wardenship of the temple for emperor worship). There is no record of the beginning of the church at Philadelphia, but in the Apocalypse it is one of the seven churches to which, as heads of districts, special messages were sent. In its message (Rev 3^{8-13}) it is said to have 'but little power' (which perhaps refers to its recent origin), and to have before it 'an open door' (which seems to refer to the opportunity to spread the gospel in the centre of Asia Minor. In 3^{9} 'the synagogue of Satan who say they are Jews and are not' may perhaps mean that the Jews of Philadelphia had been lax, and had conceded too much to Gentile ways; on the other hand, as in 2^{9} (Smyrna) they were persecutors of the Christians, and their non-Judaism was perhaps not so much laxity as affiliation with the persecuting authorities (see W. Bousset, commentary). The passage contains no reproach against the Christians, though they are bidden to hold fast what they have, and the promise to him who conquers is that 'I will make him a pillar in the temple of my God [not the heathen imperial shrine] . . . and I will write on him the name of the city of my God, the new Jerusalem . . . and my own new name.' Perhaps there is a reference here, as in the message to Pergamum, to the new name taken at baptism and apparently sometimes kept secret.

A marble stele from the 1st cent. B.C. sets forth the rules of a private mystery cult (Dittenberger, *Sylloge* 985; translation in F. C. Grant, *Hellenistic Religions*, pp. 28 ff). It is one of the most impressive examples of real piety and of ethical idealism from the ancient pagan world.

Philadelphia was the seat of a bishop but was not a metropolis until about A.D. 1300 when the importance of Sardis had declined. In the 14th cent., when the Greek empire retained nothing on the mainland of Asia except a strip of territory opposite Constantinople, Philadelphia still continued to resist the Ottoman army, though far from the sea and almost forgotten by the emperors. The date of its final capture is uncertain—probably A.D. 1391. Its modern name is *Alashehir*, and a considerable portion of the population is Christian.

There was also a city named Philadelphia in Palestine, a member of the Decapolis (q.v.). A. E. H.—F. C. G.

PHILARCHES, 2 Mac 8^{32} (AV).—See PHYLARCH.

PHILEMON.—Known only as the person first addressed in the Epistle to Philemon (q.v.). This epistle of Paul's is concerned with the treatment to be accorded a returning Colossian slave, Onesimus, who has become a Christian under the Apostle's influence. It has usually been supposed that Philemon was the owner of the slave. That individual, however, may well have been Archippus, also addressed in the letter, in which case it would be most plausible to see in Philemon, whom Paul calls his 'fellow-worker,' one of the Apostle's coadjutors in the Laodicea-Colossae-Hierapolis area. But see PHILEMON, EPISTLE TO. J. K.

PHILEMON, EPISTLE TO.—A brief, skilfully written, warmly personal, and unquestionably authentic letter of Paul, now found as the final epistle in the Pauline corpus in our canon. It is addressed: 'To Philemon . . . , Apphia . . . , Archippus . . . and the church [that meets] in your house.' After the salutation to all of these, Paul speaks to one person only in the rest of the letter except for the final benediction, where the second personal pronoun again occurs in the plural. The letter, then, is concerned to convey a message to one person, but in the hearing, so to speak, of two others and even of the church to which presumably all three individuals belonged and which met in the house of the one principally involved.

1. Purpose.—The occasion of the letter is the return of a slave to his master. The slave, whose name is Onesimus, has in some way fallen in with Paul during one of the latter's imprisonments. Perhaps the meeting was accidental; perhaps Onesimus sought the Apostle out for help; perhaps (although this is less likely) he came on some errand from his master. It has usually been said that he was a runaway; but the letter gives no real support to such a view, unless a hint that the slave has not been very useful to his master (despite his name, which means 'useful' or 'profitable'), and may even have done his master some wrong, is taken to require such an inference. However this may be, it is clear that Onesimus has become a Christian under Paul's influence, has proved himself to be very 'useful' to the Apostle, and has also won a very warm place in his affections. Paul says that sending Onesimus back is like sending his very heart. It is obvious that he wants to keep him and that he had thought of doing so without more ado. Actually, however, he has decided not to keep him without the owner's full consent. He therefore sends him to his master (also a Christian) with this letter. We could not know from this letter (from which all of this story has been derived) where Onesimus and his master lived, but the Epistle to the Colossians, written at the same time, refers to Onesimus as 'one of yourselves.' The letter then was sent to Colossae. Where Paul himself was at the time we can only guess. We know only that he was in prison. Most scholars favour Rome, others Caesarea, and others still Ephesus. The time of writing is equally, and correspondingly, uncertain.

2. Philemon or Archippus?—It is to be assumed that the owner of the slave and of the house in which the church met was one of the three individuals named in the salutation of the letter. But it is not equally clear which of the three he was. The traditional view, obviously based on the order of the names, is that Philemon was this person. But this is not necessarily true, and a strong case can be made for the hypothesis that the owner was Archippus, who is mentioned in closest connexion with the church. If Archippus was the owner of both house and slave, and Paul's request was addressed to him, we have a clue to understanding Col 4^{17}: 'Say to Archippus, "See that you fulfill the ministry which you have received in the Lord".' The term here for 'ministry' is the same Greek term used in the Epistle to Philemon when Paul speaks of wanting to have Onesimus with him that 'he might serve me in your place.' The letter referred to in Col 4^{16} as 'from Laodicea' would, in that event, be our Philemon. Perhaps Philemon himself, to whom the letter would first come, belonged in that city.

3. Later History.—On the basis of the ordinary view that Onesimus was simply a returning runaway slave and that the letter to Philemon was primarily an appeal for clemency, it is hard to understand its preservation, its incorporation among the collected letters of Paul and its eventual canonization. But if the letter marks the moment when a very useful man became permanently associated with Paul's work, quite a different prospect appears. Onesimus may well have become an important figure among the Pauline churches in the generation after the Apostle's death. In Ignatius' letter to the Ephesians (*c* 110) some allusions to Onesimus, Bishop of Ephesus, and some reminiscences of the language of the Epistle to Philemon give good ground for the identification of Onesimus the one-time slave with Onesimus the later bishop. Since the letters of Paul were almost certainly first gathered together and published in Ephesus in this same period, the preservation of the Epistle to Philemon and its place in the corpus of the Pauline writings is fully explained. J. K.

PHILETUS.—Mentioned in Second Timothy (2 Ti 2^{17}) as one of those who were doing harm by their false teaching on the subject of the resurrection of the body. For them the resurrection was past. *I.e.* their view may have been that the resurrection was spiritual, from sin to holiness and hence there was no future resurrection of the body, no life to come. Cf HYMENAEUS.

PHILIP (Apocr.).—**1.** Father of Alexander the Great

(1 Mac 1[1] 6[2]). **2.** A friend or courtier (2 Mac 9[29]) of Antiochus Epiphanes, who received the charge (previously given to Lysias) of bringing up the young Antiochus Eupator (1 Mac 6[14–17]). On the death of Antiochus Epiphanes, Lysias took upon himself to proclaim young Eupator king (164 B.C.). The jealousy over this matter led to open hostilities between Lysias and Philip. Philip was overcome by Lysias at Antioch and put to death. He is by many regarded as identical with—**3.** A Phrygian who (in 168 B.C.), when left in charge of Jerusalem by Antiochus Epiphanes, was remarkable for the cruelty of his government (2 Mac 5[22] 6[11]). Little more is known of him unless the details of his life be filled up by assuming his identity with the former Philip. **4.** A king of Macedonia (220–179 B.C.) overthrown by the Romans (1 Mac 8[5]). T. A. M.

PHILIP (NT).—**1. The Apostle.**—The Synoptic Gospels and Acts have handed down only Philip's name in the lists of the twelve apostles (Mk 3[18], Mt 10[3], Lk 6[14], Ac 1[13]). John tells us 1[43ff] that Philip was called by Jesus after Andrew and Peter, that he, like them, was of Bethsaida, and that he found Nathanael. Philip is mentioned in 6[5, 7], then in 12[21] and 14[8f]. John does not sketch Philip's personal character; he is, rather, a representative well meaning but not yet illuminated disciple. Later legend related that he had laboured in Asia Minor and was buried at Hierapolis.

2. The Evangelist.—This Philip was one of the 'Seven' (Ac 6[5] 21[8]), the leaders of the Hellenistic, Greek-speaking group in the early Christian community at Jerusalem. He seems to have been an effective missionary in Samaria (Ac 8[5ff]) and on the Palestinian coast from Ashdod to Caesarea (Ac 8[40]). There he resided at last. When St. Paul visited Caesarea on his last journey to Jerusalem, he stayed with him. By converting the chamberlain of Candace, the queen of Ethiopia, Philip was the first to cross the frontiers of Jewish Christianity (Ac 8[26ff]). His four unmarried daughters 'prophesied' (21[9])—later on there were no prophetesses in the Christian Church.

3. Herod Philip.—See HEROD. D. S.—E. H.

PHILIPPI was a city situated E. of Mt. Pangaeus, on the E. border of Macedonia, about 10 miles from the coast. It was originally (under the name of Crenides) a settlement of Thasians, who mined the gold of Mt. Pangaeus; but one of the early acts of King Philip II. of Macedon was to assure himself of revenue by seizing these mines and strongly fortifying the city, to which he gave his own name (358 B.C.). The mines are said to have yielded him 1000 talents a year. Philippi passed with the rest of Macedonia to the Romans in 168 B.C. Until 146 B.C. Macedonia was divided into four regions (see TETRARCH), with separate governments, and so divided that a member of one could not marry or hold property in another. But in 146 it received the more regular organization of a province. In 42 B.C. Philippi was the scene of the great battle in which Antony defeated M. Brutus and Cassius. The great Eastern road of the Roman Empire, the Via Egnatia, after crossing the Strymon at Amphipolis, kept N. of Mt. Pangaeus to Philippi and then turned SE. to Neapolis, which was the port of Philippi. Philippi stood on the steep side of a hill, and immediately S. of it lay a large marshy lake.

The Church at Philippi was founded by St. Paul on his second missionary journey, the first Christian community in Europe, as far as our records show. With Silas, Timothy, and Luke he landed at Neapolis, and proceeded to Philippi, which the book of Acts describes as 'the leading city of the district of Macedonia, and a Roman colony.' Philippi was not the capital city of either of the regions into which Macedonia had been divided in 168 B.C., but the most natural explanation of the phrase 'first of the district' (if the text is correct; see Haenchen in the Meyer commentary) is that the province had at this time a division for official purposes of which we do not know. Other explanations are that it means 'the first city we arrived at' (which the Greek could scarcely mean), or that Philippi claimed a pre-eminence in much the same way that Pergamum, Smyrna, Ephesus all claimed to be the 'first city' of Asia. It had become a Roman colony after the battle of Philippi, 42 B.C., when Octavian and Antony, having vanquished Brutus and Cassius, settled a number of their veterans there. Another body of veterans was settled there after Actium, 31 B.C., when Octavian made it a colony (Ac 16[12]) for partisans of Antony evicted from Italy. As a colony its constitution was modelled on the ancient one of Rome, and its two chief magistrates had not only lictors (AV, RV **serjeants**, q.v.; RSV 'the police'), but also a jurisdiction independent of that of the governor of the province. It was the first essentially Roman town in which St. Paul preached. There was no synagogue, but on the Sabbath, says Ac 16[13], 'we went outside the gate to the riverside where we supposed there was a place of prayer.' At this place, therefore, St. Paul found a number of women assembled, Jewesses or proselytes, one of whom named **Lydia** (q.v.), a dealer in purple goods from Thyatira, was immediately converted and baptized. For the subsequent incidents see PAUL, PYTHON, MAGISTRATE, etc.

Some scholars believe that the Church at Philippi was left in charge of St. Luke, for at this point in the narrative of the Acts the first person is dropped until St. Paul passes through Macedonia on his return from the third missionary journey (*i.e.* between 16[17] and 20[5]). The Church flourished, and always remained on terms of peculiar affection with St. Paul, being allowed to minister to his needs more than once. See article PHILIPPIANS [EPISTLE TO], which was probably written during his imprisonment at Rome. From 1 Ti 1[3] it has been inferred that Paul paid a later visit to Philippi.

Before A.D. 117 Ignatius passed through Philippi on his journey from Antioch to his martyrdom in Rome, He was welcomed by the Church, and they wrote a letter of consolation to the Church of Antioch and another to Polycarp of Smyrna, asking for copies of any letters that Ignatius had written in Asia. Polycarp wrote his Epistle to the Philippians in answer. In the 4th and 5th cents. the bishop of Philippi was present at Councils, but apart from this the Church passes out of history.

A. E. H.—F. C. G.

PHILIPPIANS, EPISTLE TO.—1. The Church of Philippi.—St. Paul visited Philippi (q.v.) on his second missionary journey, and founded there his first Church in Europe. The names in Ph 4[2f], probably those of early converts, lead us to infer that the Gentile element continued strong from the days when the Church began in the households of Lydia and the jailor (Ac 16[12–40]). It is only by the exercise of much imagination that the character of the city—a Roman colony enjoying the *jus Italicum*, and therefore with a sense of its own importance—can be discerned in the letter, though probably the fact that St. Paul was a Roman citizen, and the virtual apology with which he was sent away by the praetors, may have had some effect on the subsequent treatment of the Christians. As one of the Churches of Macedonia referred to in 2 Co 8[2ff], it was doubtless in deep poverty, but is held forth along with them as a model of liberality. St. Paul seems to have treated the Philippians in an exceptional way, by accepting from them support which he ordinarily refused (2 Co 11[7ff], Ph 4[15]). He must have visited Philippi at least three times (Ac 16[12], 2 Co 2[13], Ac 20[6]), and he always found his own love reciprocated by the Church, and experienced a unique joy in their fellowship with him for the furtherance of the gospel (Ph 1[3–8]). The Apostle's ascendancy in the Church was never questioned, as in Corinth. There were, it is true, rivalries in the congregation, especially, it would seem, among some of the active women of the Church, and St. Paul does not hesitate to use the most powerful of Christian motives to give force and direction to the shaft that he aims at discord (2[1–11]). But, unlike the Churches of Galatia, Philippi had not been disturbed by a severe attack from the Judaizers, though the Apostle sees threatening indications of their approach (3[2, 18f]). The Church was organized with bishops (q.v.) and deacons

PHILIPPIANS, EPISTLE TO

(q.v.), from whom St. Paul seems to have received the people's gift (1^{1}), which they sent by Epaphroditus, probably with a letter. In no part of his missionary field, so far as we know, did he find such a pure Christian life. They were 'lights in the world' ($2^{15f.}$), and the Apostle's 'joy and crown' (4^{1}).

2. Situation of St. Paul.—The Apostle is a prisoner ($1^{7, 13f., 17}$). It appears that his imprisonment had become more rigorous since the Philippians received their first word concerning him; and it must have been of some duration, because there had been several communications between them (2^{25-30} 4^{10}). They are distressed by the fear that the gospel will suffer through his strict confinement and possible martyrdom. But this imprisonment, instead of hindering the gospel, has really led to a much more zealous preaching of Christ by the Christians of the city. The motive of this increased activity was sometimes an unworthy emulation of the Apostle, and there must have been those in the Church who refused to acknowledge his leadership, being aroused by the success with which 'his bonds became manifest throughout all the Praetorium and to all the rest' (1^{12-18}). He has come to be recognized as no mere disturber of the peace (Ac 24^{5} 25^{8}), but as a preacher of a religion different from that of the Jews, and one which had already reached Caesar's household (Ph 4^{22}). His defence has been partly made, and he is full of hope of a speedy acquittal ($1^{25ff.}$), though the possibility of martyrdom hangs like a cloud in his sky, bright to his own view, but casting a shadow upon his readers' joy (1^{19-30}).

It has usually been assumed that Philippians, together with the other so-called 'Imprisonment Letters,' was written during the apostle's imprisonment at Rome that is described in Ac $28^{16, 20, 30}$, and that it is to be grouped with the 'later letters' of St. Paul. The greetings in 4^{23} from 'those of Caesar's household' and the reference in 1^{13} to 'the whole praetorian guard' were believed to identify Rome, beyond any reasonable doubt, as the letter's place of writing. But it is now known that 'Praetorium' in the days of the Roman Empire could designate the residence of any provincial governor and that 'Caesar's household' could refer to the royal entourage at any provincial capital as well as at Rome.

According to the Book of the Acts, Paul was imprisoned for two years at Caesarea, and it is possible to argue that it was from this Palestinian city that Paul wrote the letter. However, the apostle's references in 1^{15-26} and 2^{20-24} to serious rifts in the church, to the disloyalty even of intimate friends, and to the danger of imminent death that beset him have no reflection in the narrative in Acts of his Caesarean imprisonment. Furthermore, Paul's hopes of shortly revisiting his congregation at Philippi would be difficult to understand in light of his belief while at Corinth that his work in Macedonia and in Achaia was finished and his plans at that time to go on to Spain by way of Rome (Ro 15^{23-29}).

In recent times the possibility has been raised that Paul had suffered an imprisonment at Ephesus of which there is no indication in Acts. 2 Co 1^{8-10}, written shortly after the apostle's departure from the capital of the Province of Asia, implies that he had undergone some nerve-racking experience late in his stay at Ephesus that seemed at one time to threaten his very life and from which he believed himself to have been delivered only by the direct intervention of God. Paul's remark in 1 Co 15^{32} that he had 'fought with beasts at Ephesus' can be interpreted as an oblique reference to an actual ordeal as a prisoner. On the hypothesis that Ro 16 was originally a letter addressed to the church at Ephesus, it can be argued that the Apostle's references to Prisca and Aquila in vv.$^{3-4}$ as having 'risked their necks' for his life and in v.^{7} to Andronicus and Junias as his 'fellow prisoners' lend further support to the hypothesis of an Ephesian imprisonment. An early 'Marcionite' prologue to Colossians attests that the belief was current in the church, perhaps as early as the 2nd cent., that Paul had been imprisoned at Ephesus and that Colossians (and therefore in all probability also Philippians) had been written from that city.

If an Ephesian imprisonment be assumed, the suggestion that Philippians was written at Ephesus certainly lies close at hand and is attractive. If the letter is to be dated before the second visit to Philippi about which we are told in the Book of the Acts, Paul had not yet concluded that his work in Macedonia and Achaia was finished and had not yet decided to turn westward to Italy and Spain, as was the case when he wrote the Epistle to the Romans (15^{23-29}), and the expression of his hope of revisiting his Philippian converts (Ph 1^{23-27} 2^{24}) raises no problems for the critical reader. If Paul was imprisoned at Ephesus when Epaphroditus visited him as an emissary of the Philippian church (2^{25-30} 4^{18}), we do not have to think of the long and difficult journey by land and sea from Philippi to Rome (almost 800 miles), but of the relatively short and easy one from Philippi to Ephesus.

Nevertheless, it must be kept in mind that the hypothesis of an Ephesian imprisonment remains a hypothesis, and to support it by arguments based on another, that of the Ephesian origin of the 'Imprisonment Letters,' is questionable critical procedure. Since the objections to Rome as the place in which Philippians was written are not insuperable, it appears to this writer that the older hypothesis of Roman origin is preferable to the other possibilities that have been raised.

If Philippians was written from Ephesus it would be earlier than 2 Corinthians and Romans, possibly earlier also than Galatians, and would have to be dated sometime before A.D. 54. If it is a letter from Rome it must be dated sometime after A.D. 57 and may possibly be the latest of the letters of Paul that has been preserved by the church. (For dates based on a different relative chronology, see article CHRONOLOGY OF THE NT.)

3. Contents of the Epistle.—

(i) *Greeting*, $1^{1f.}$ Paul and Timothy salute the saints of Philippi, together with their bishops and deacons.

(ii) *Introduction*, vv.$^{3-11}$. St. Paul is constantly moved to thanksgiving for their generous fellowship with him in the furtherance of the gospel from the beginning, and they are all ever on his heart where Christ dwells. His prayer for them is that their love may abound in knowledge and insight as to what befits the Christian life, that so they may live sincere and blameless lives until Christ comes.

(iii) *The present condition of St. Paul*, vv.$^{12-26}$. His imprisonment has, contrary to expectation, led to the spread of the gospel, partly by his being chained to the Praetorian guards, partly through a new courage among his friends and partly through envious rivalry. He, however, rejoices because he is assured that in answer to their prayers the Spirit of Christ will enable him to glorify his Lord whatever be the issue of his imprisonment; he does not know what to desire, though he believes that he will be acquitted and will work for their Christian welfare.

(iv) *Exhortations to the Philippians to walk worthily of the gospel*, 1^{27}–2^{18}. No hostility must deter them from maintaining the gospel in a spirit of unity, for ability to suffer for Christ is a sign of Divine grace to them and of ruin to their enemies. An appeal is also made to them, by all that they have experienced of Christian love, to complete his joy by living in fellowship, and to exhibit that unselfish mind which prompted Christ to come to earth and die for them. Wherefore He is now exalted to be worshipped by every creature. By reverent obedience let them work with God and effect His will of good towards them, so that at the last day the Apostle and his beloved Philippians may rejoice in what the gospel has done for them.

(v) *The promise to send Timothy, and the commendation of Epaphroditus to the Philippians* (2^{19-30}).

(vi) *Christian progress through the knowledge of Jesus Christ*, 3^{1}–4^{1}. To sum up his letter, the Apostle would say, 'Rejoice in the Lord.' But, as though suddenly reminded of a danger, he returns, even at the risk of wearying them,

to a warning against the Judaizers—dogs, evil workers, mutilators of the flesh. He who believes in Christ alone as a sufficient Saviour is the true Israelite. St. Paul, who had enjoyed every Jewish privilege, knows of how small value they were for attaining true righteousness, and now he boasts only in Christ. For personal knowledge of Him he will gladly lose all else, in order that he may get the righteousness which is from God by faith, and in close union with Him may realize the meaning of His sufferings, death, and resurrection. Christian perfection is still in the distance, but all who have been laid hold of by Christ must respond by striving eagerly for perfect fellowship with Him. The mature Christian must keep on in the path of progress, and not be misled by teaching which will end in an earthly goal and the rejection of the cross. St. Paul and his followers are to be their example, for their Commonwealth and its ideals are above, whence Christ will soon come to transfigure them into His likeness. Wherefore let this Church, which will be his crown at that day, stand fast in the Lord.

(vii) *Conclusion*, 4^{2-19}. (*a*) Exhortations to individuals to unity (vv.^{2f}). Possibly 'yoke-fellow' (v.^{3}) refers to Epaphroditus; possibly it should be translated 'Synzygus' (q.v.), a proper name. (*b*) St. Paul their example for Christian joy and conduct (vv.$^{4-9}$). (*c*) Thanks for their gifts and for their many past favours. Contented as he is with whatever God sends, he might have done without them, but they will add interest to the account of the Philippians, and he gives them a receipt in full which God will acknowledge (vv.$^{10-19}$).

(viii) *Doxology and final greetings* (vv.$^{20-23}$).

4. Purpose and Characteristics.—Epaphroditus had fallen sick at Rome before his work of love for St. Paul was done, and the news, having reached Philippi, cast the Church into anxiety; Epaphroditus in his turn having heard of their alarm has grown home-sick. St. Paul uses the occasion of his return to set their mind at rest about his own imprisonment for the gospel, and to deal with some affairs about which they had informed him. The letter is so thoroughly personal that it has no plan or any single aim. He thanks the Philippians for their gift, crowning many acts of generosity towards him, and yet, lest they should feel that he was too dependent upon them, he reminds them that it is their spirit that he values most. Again he warns them against a Judaistic gospel, and is urgent in seeking to compose personal jealousies of two of the women workers. His gospel is the only one, and it is the gospel of love. His union with Christ fills him with love and contentment, and thrills the lonely prisoner with *joy*, which may be called the note of the Epistle, and he hopes by this letter to impart some of this spirit to the Philippians also. Should the view that St. Paul was not acquitted be correct, this letter might be called 'his last testament to his beloved Church'; but there is good reason to believe that his hope of release was fulfilled.

Philippians is an excellent example of the Pauline method of sustaining Christian life by doctrinal truth which is the outcome of personal experience. Human thought has made few nobler flights into the mystery of redemption than Ph 2^{5-11}, but it is used to exalt the homely duty of sacrifice in the ministry of fellowship. Like 2 Co 8^{9}, the dynamic of the truth lies not in an intellectual interpretation of the mystery of Christ's personality, for little is told further than that He was in His nature essentially Divine, and enjoyed the prerogatives of Divinity; but it lies in the fact that St. Paul had learned from his own intercourse with the risen Christ His extraordinary power and grace as the eternal, Divine Son of God. Everything earthly becomes worthless in comparison with the excellency of the knowledge of Jesus Christ, his Lord. The contrast between His earthly life of suffering and death and the eternal, glorious existence involved in the vision of the risen Lord, has become the religious motive of supreme efficacy. Similarly in $3^{8-11, 20f}$ the doctrine is deduced from experience, and is to be wrought into character. The emphasis on the practice of virtue, especially in 4^{8-12}, is said to reflect the finest contemporary teaching of the pagan world, but the form is pervaded with the purest Christian spirit.

5. Authenticity and Integrity.—Objections once urged against the authenticity of this Epistle are not seriously regarded to-day, and have been abandoned by all but a few extremists. The recurrence of the motives, ideas, and language of the great Pauline Epistles, and the external evidence of its use from the early sub-Apostolic age, make it unnecessary to consider them in detail. More plausibility attaches to the theory that the Epistle, as we now have it, consists of two letters, which are joined at 3^{2}, the last two chapters being probably earlier and addressed to different readers. Much has been made of what are described as 'abrupt breaks' after 3^{1} 3^{16} 4^{3} and 4^{9}, and it is argued that 3^{1} originally marked the end of a letter and ought to be translated: 'Now, my brothers, goodbye, and the Lord be with you' (Goodspeed). In support of this hypothesis, appeal is made to Polycarp's letter to the Philippians (iii. 2), where the words 'who also wrote you letters' are held to prove that they had not then been united. But Polycarp, who knew apparently only our letter, may either have heard of others which St. Paul wrote to the Philippians or have employed the term loosely; or perhaps he was referring to a collection of St. Paul's Epistles used widely for edification by all the Churches. The abruptness noted above may be explained by the fact that St. Paul is expressing himself freely in an intimate letter to his friends, and perhaps it was partly due to something in their letter to him which he suddenly remembered. R. A. F.—S. M. G.

PHILISTIA.—See PHILISTINES and PALESTINE.

PHILISTIM, Gn 10^{14} (AV) = **Philistines** (q.v.).

PHILISTINES.—The inhabitants of the Maritime Plain of Palestine (cf article PALESTINE, 1) from the period of the Judges onward to the 6th cent. or later. They are said to have come from Caphtor (Am 9^{7}, Jer 47^{4}, Dt 2^{23}), which is with much probability identified with Crete. At all events they came from over the sea.

Rameses III. of the 20th Egyptian dynasty encountered a piratical sea-faring people on the borders of Syria, whom he called *Purusati* (=*Pulista* or 'Philistines'). They afterwards made incursions on the northern coast of Egypt as well as on the coast of Palestine. In the latter country they gained a permanent foothold, owing to its disorganized condition. When Wenamon made his expedition to Lebanon for a king of the 21st Dynasty (*c* 1100), a Philistine kingdom existed at Dor. (For these facts cf Breasted, *Ancient Records*, iv. 274 ff, and *History of Egypt*, p. 513.)

The Philistines first make their appearance in Biblical history late in the period of the Judges, when Samson, of the tribe of Dan, is said to have waged his curious single-handed combats with them (Jg 13–16). These conflicts were the natural result of the impact of the Philistines upon Israel's western border. The reference to the Philistines in Jg 3^{31} is a later insertion (cf ISRAEL, I, 11). During the time of Eli these invaders were trying to make their way into the central ridge of Palestine, and in one of the battles captured the Ark of Yahweh, which a pestilence (probably bubonic plague) induced them to return (1 S 4–6).

When Saul became king the Philistines tried to break his power, but were defeated through the bravery of Jonathan (1 S 13 f). Saul did not permanently check their progress, however, as by the end of his reign the whole of the rich plain of Jezreel was in their possession, including the city of Bethshean at its eastern end (1 S 31^{10}). David early in his reign inflicted upon them a severe defeat (2 S 5^{22ff}), afterwards reducing them to vassalage (2 S 8^{1}). Down to this time Philistine power was concentrated in the hands of the rulers of the five cities of Gaza, Ashkelon, Ashdod, Ekron, and Gath. The rulers of these cities are called by a peculiar title, which is translated 'lords of the Philistines' (q.v.).

After the reign of David, probably at the division

of the kingdom, the Philistines regained their independence, for we find the kings of Israel in the 9th cent. trying to wrest from them Gibbethon, a town on the border of the Maritime Plain (1 K 15^{27} 16^{15}). Late in the same century the Assyrian king Adad-nirari III. took tribute of Philistine kings (*KIB* i. 190), and began the long series of Assyrian interferences in Philistine affairs. Amos (1^{6-8}) denounces Philistine monarchies as among the independent kingdoms of his time.

The position of the Philistines exposed them to every approach of the Assyrians and Egyptians, and during the last third of the 8th cent. and the whole of the 7th their history is a series of conquests, conspiracies, and rebellions. It is possible to follow these with much fulness in the Assyrian inscriptions, but full details cannot be given here. Tiglath-pileser III. received tribute from Philistines (*KIB* ii. 20). They became Sargon's vassals the year that Samaria fell, 722 B.C. (*KIB* ii. 54), but ten years later a rebellion was led by Ashdod (Is 20^{1}; *KIB* ii. 64 ff). At the beginning of the reign of Sennacherib another effort was made to shake off the Assyrian yoke. In this Hezekiah of Judah took part by imprisoning Padi, the Philistine king of Ekron, who remained faithful to Sennacherib. The allies thus brought together were defeated at Eltekeh (*KIB* ii. 92 ff), and the siege of Jerusalem by Sennacherib was the result (2 K 18 f). Esarhaddon (*KIB* ii. 148), and Ashurbanipal (*KIB* ii. 240) marched across the Philistine territory and held it in subjection. With the decline of Assyria the Philistines began to suffer from the rise of Egypt under the 26th Dynasty. Psammetichus I. took Ashdod after a siege of 29 years (Herod. ii. 157). Neco II., a contemporary of Josiah of Judah, captured Gaza (Herod. ii. 159). It is probable that the Philistines suffered at the hands of Nebuchadnezzar, but no record of his doings among them has been preserved. The Assyrians call the Philistine rulers 'kings.' The older title, 'lords of the Philistines,' has disappeared.

When Cambyses made his expedition into Egypt (525 B.C.), Gaza opposed him (Polyb. xvi. 40). The Sidonian king Eshmunazar claims that Dor and Joppa were added to the dominions of Sidon. Gaza in 332 held out against Alexander the Great, and his siege of it is famous (Diod. Sic. XVII. xlviii. 7). The Ptolemies and Seleucids often fought over Philistine territory. It finally passed under Roman rule, and its cities had then an important history.

The Philistines cease to be mentioned by this name after the time of the Assyrians. Some infer from the fact that Herodotus (iii. 5) speaks of the Arabians as being in possession of the coast in the time of Cambyses, that the Philistines had even then been supplanted. It is probable that in the ebb and flow of the nations over this land they were gradually absorbed and lost their identity.

Probably the Philistines adopted in the main the religion and civilization of the Canaanites. Their chief god, Dagon (1 S 5^{2ff}), was a Semitic deity. He appears in the el-Amarna letters and also in Babylonia (cf Barton, *Semit. Or.*, 229 ff). There was also at Ashkelon a temple of Astarte (Herod. i. 105). If their religion was Semitic, so also were probably the other features of their civilization. If they brought other customs from beyond the sea, they are not described in our scanty records.

G. A. B.

PHILO OF ALEXANDRIA, often called Philo Judaeus to distinguish him from Philo of Larissa († 79 B.C.) who became the teacher of Cicero. He was born *c* 20 B.C. and died sometime after A.D. 40. His voluminous works, chiefly the allegorical or philosophical exegesis of the OT, are incomplete, as large sections have perished; those which remain were preserved by Christians, not Jews. Yet he is the first philosopher after Aristotle to be represented by a large quantity of writings. The chief questions relating to his place in history are these: (*a*) How representative was he of contemporary Judaism, especially of Hellenistic Judaism? (*b*) What was his influence upon Christianity and how early did it begin? His influence—or that of his 'school'—upon the Epistle to Hebrews is unquestionable; but upon Paul and John it is less certain. His influence upon the Alexandrian church fathers, especially Clement and Origen, was enormous, and through them upon early Christian theology.

1. Life.—Almost the only surviving data for the life of Philo are to be found in his two works, *Against Flaccus* and the *Embassy to Gaius*. These relate to the anti-Jewish outbreak in A.D. 38, when the Prefect of Egypt, A. Avillius Flaccus, had attempted to set up cult images of the mad emperor Gaius in the Jewish synagogues. (A similar attempt was made to set up a colossal statue of him in the Temple at Jerusalem in A.D. 40.) When the Jews resisted, Flaccus ordered troops to search Jewish homes and synagogues for arms, with the result that both homes and synagogues were sacked and rifled and all who resisted were cut down. Philo was sent to Rome as head of a delegation of protest. Though nothing came of the protest, the problem was solved within a few months by the death of Gaius.

Philo's prominence in the Jewish community is evident from this important commission. His brother Alexander was 'alabarch' or 'ethnarch' of the Jews in Alexandria, and he was said to be one of the richest men in the world. Philo had a thorough Greek education and wrote Greek fluently and effectively. He was familiar with Greek philosophy, and was especially influenced by Plato, Aristotle, and the Stoics. Modern historians of Greek philosophy (*e.g.* Zeller, Wolfson) have accorded him a prominent place in the record, not only as the transmitter of Platonic-Stoic doctrines (*e.g.* of the *Logos*) but as an independent thinker whose contributions influenced later generations all the way to mediaeval scholasticism and even beyond. But Philo was not primarily a philosopher; he was an exegete, and aimed to bring out the secret inner meaning of the Jewish Law (*Torah*=teaching) by showing its compatibility with Greek philosophy: if truth is one, and both are true, they must agree. He would not admit any disagreement between the external requirements of the Law and its inner meaning (contrast Paul's interpretation). Theosophical speculation about the Law's inner meaning was no excuse for lax observance of the religious rules, and both eclectics and dilettantists were discouraged from attendance upon his lectures. Many of his interpretations were in close agreement with the exegesis, *i.e.* the *halakhah*, of the Palestinian rabbis and their successors; but there also were wide divergences, which show that Philo (like Paul) was not a thorough and consistent disciple of the Tannaim. It has even been questioned whether, or to what extent, Philo was familiar with Hebrew. Like Paul, once more, he read the Jewish Scriptures in the LXX translation, not in Hebrew—though obviously, like any Diaspora Jew, then or now, he was familiar with certain technical words or 'tags.' Like Paul, moreover, and like many others since, Philo viewed the LXX as inspired, equally with the Hebrew original. The question of accuracy in text or translation seems never to have arisen for either interpreter.

2. Writings.—Philo's surviving works include apologetic as well as exegetical and philosophical writings. (*a*) The *Flaccus* and *Embassy to Gaius* were clearly meant for general reading, as was also his *Apology for the Jews*, fragments of which are preserved in Eusebius, *Praep. Evang.* viii. 11. His famous work *On the Contemplative Life* may belong to this treatise; it is especially important for its description of the 'Therapeutae,' an Egyptian Jewish group similar to the Essenes in Palestine (see DEAD SEA SCROLLS and ESSENES). Another apologetic work was his *Life of Moses*, which describes the lawgiver in terms designed to appeal to Gentiles, especially those who accepted the Stoic ideal of kingship.

(*b*) His works of exegesis include the *Exposition of the Law*, a series of studies *On the Creation of the World, On Abraham* [*On Isaac* and *On Jacob* are now lost], *On Joseph, On the Decalogue, On Special Laws, On Virtues*, and *On Rewards and Punishments*. This series is also,

apparently, addressed to Gentiles, and attempts to correlate the OT conceptions of religion with those of Greek philosophy, especially those of Plato. However, Philo goes far beyond Plato in his description of the **Logos** as the agent or power of God in creation and also as the underlying synthetic force of law and order in nature—a conception close to that of the early Stoics, *e.g.* Cleanthes (see his famous *Hymn to Zeus*), and also to the NT idea of Christ (Col 1^{17}). The conception of law set forth in these writings is also akin to the Greek (Platonic-Stoic), not as an agreed convention in human society, designed to do away with barbarism, or as the expressed will of the more powerful, or as the 'customs of the ancestors' (the Roman *mos maiorum*), but as the eternal harmony embedded in the very nature of the universe, prior to all codes and conventions. It is the inspired source of heroic virtue as seen in the lives of the noblest men, who have lived by conscience rather than mere precept or command. Obviously Philo (like Paul) was striving for a more satisfactory conception of law as based upon an inner principle or obligation and not mere external commandment. Philo viewed the Ten Commandments as the central and basic expression of this eternal and unchanging system of law.

(*c*) A third group of writings is the series since called the *Allegories of the Sacred Laws*. Of these works only eighteen survive. The views set forth in the earlier *Exposition* are here assumed, but the analysis of the text (chiefly of Genesis) is definitely addressed to more advanced (Jewish or Gentile) students. Like the writings of Aristotle these treatises may represent Philo's lectures to his school, who are addressed as 'initiates.' In content, however, the series is more a collection of meditations on the great themes which Philo found allegorically set forth in the narratives of the patriarchs.

(*d*) Another and similar series is the *Questions and Answers in Genesis and Exodus*, now extant in fragments, chiefly in the Armenian version (translated by Ralph Marcus in the Loeb Classical Library edition of Philo). Its form is a verse by verse midrashic commentary, giving both the literal and the allegorical (or 'spiritual') interpretation.

(*e*) Various philosophical writings survive, chiefly of the then popular essay type, including one *On the Indestructibility of the World* (an introduction to a much longer treatise); there are also essays entitled *That Every Virtuous Man is Free*, *On Providence*, and *Alexander*, or *On the Question Whether Dumb Animals Possess the Power of Reason*. The titles remind us of those of the 2nd-cent. eclectics, Plutarch, Dion of Prusa, Maximus of Tyre.

3. Teaching.—Philo may be studied either as a philosopher or an exegete, as a systematic metaphysical thinker or a religious teacher and homilist. Among modern expositors Wolfson takes the former view, Goodenough the latter. Philo's philosophy is really eclectic, based on Plato, Aristotle, and the Stoics—all as understood and interpreted in the 1st cent. He evidently made no attempt (at least in his surviving works) to set forth a system of philosophy. His interests were predominantly religious, not philosophical, and apologetic or expository rather than systematic. Moreover, his mystical type of thought enabled him to embrace views which, at least in origin, carried with them diverse and incompatible connotations.

The background of Philo's thought was the widespread Hellenistic tendency (or effort) to reinterpret and re-evaluate ancient myth, legend, and belief, in the direction of a more 'spiritual' understanding of religion, and especially of a recognition of the superior reality of the immaterial world (the world of pure thought) to the physical cosmos which is its copy (cf 2 Co 4^{18}). This tendency formed the background of several movements of religious thought in later Hellenism and under the early empire: Euhemerism, Stoic allegorization of the classical myths, Neo-Pythagoreanism, Gnosticism, Neo-platonism, and the 'Christian Platonism' of the Alexandrian church fathers, especially Clement and Origen. The source of all being is God, who creates the world by fiat (as in Gn 1), *i.e.* through His 'word.' But this 'word,' his *logos*, is more than a mere utterance (as in Ps 33^{6}); it is almost a part of His own being: so Goodenough, who uses the word 'Stream' for this divine effulgence. The language of He 1^{1-4} is close to Philo's thought, though the word Logos is not used. The Platonic source of this whole conception is obvious, especially in Plato's *Timaeus*; but Plato never adopted the view that the Ideas were independent forces or hypostases, or even 'thoughts in the mind of God'—though this step was taken by later Platonism, especially perhaps after Posidonius and the Middle Platonists. The divine effulgence was not only the source of creation and revelation, but also of divine grace, resulting in human reflection of the divine attributes. The noblest concepts of virtue include not only the four virtues of traditional classical ethics but also the Biblical values of purity, mercy, and compassion. As Hellenistic philosophers allegorized the pagan myths and idealized the heroes (*e.g.* Heracles) and gods (*e.g.* Mithras), so Philo allegorized the OT myths and legends, and idealized the characters of the patriarchs, describing both them and their wives as paragons of wisdom and virtue: pure reason or intelligence was attributed to the men—since *logos* is masculine—and wisdom to their wives, since *sophia* is feminine. Whether or not Philo viewed Judaism as 'a mystery cult,' it is clear that he (like Paul) used language derived from the mysteries, and that he found in his ancestral faith values equal to and indeed far superior to those discovered by many of his pagan contemporaries in the ancient cults. He could even describe one of the psalmists as an initiate of Moses (*thiasōtēs*, *De Plant.* 39=ch. 9, cf *De Cherub.*, 48 f= ch. 14, and Paul's phrase, 'baptized into Moses,' 1 Co 10^{2}).

Philo described the **Logos** as the mediator between God and the world, between God and mankind, and between God and Israel. His classic statement is in *Who is the Heir of Divine Things*, 206=ch. 42: 'I [the Logos] stand between the Lord and you [as Moses stood, Dt 5^{5}], I who am neither uncreated like God nor created like you, but midway between the two extremes, a hostage to both sides.' Whether Philo thought of the Logos as *personal*, or only as an aspect of the divine nature—the 'manward aspect of God'—and whether or not he viewed the Logos as a supernatural being, a divine *hypostasis*, is uncertain. Obviously Philo was so understood and interpreted by those Christian theologians who made use of his teaching. But his language was cautious, and he was a Jew as well as a philosopher, deeply concerned for monotheism and not required to explain and account for a second divine existence, being, or person. The point of view and angle of approach in early Christian theology is entirely different from that of Philo, whose real problem was the rational, philosophical, and religious interpretation of the OT, not to explain the Incarnation.

Whether or not Philo influenced the NT is another unanswered question. The contacts between Philo and Paul are clear, but their respective dates seem to rule out a direct influence; at most, both drank from a common spring of philosophical Diaspora Judaism, the 'school' presupposed by Philo and Alexandrian Judaism (see Zeller's *Philosophie der Griechen*, v, 242 ff, or *Grundriss=Outline*, § 77). But where is the evidence for Paul's dependence upon this 'school'? His exegesis of the story of man's creation (in Gn 1–2) is very different from that of Philo, who could not have maintained that 'the second man [rather than the first] is from heaven' (1 Co 15^{45-49}). Contacts with the Epistle to Hebrews are clearer and far more numerous: scores of words, phrases, turns of thought in Hebrew are like those in Philo (see Moffatt's commentary in *ICC*). Contacts with John and 1 John have been often pointed out; but the contrasts are even clearer. Though the Logos, according to Philo, was often manifested in human character and virtuous deeds, it was quite

impossible, indeed inconceivable, that the Logos should ever have become 'flesh' (Jn 1[14]). F. C. G.

PHILOLOGUS.—A Christian greeted in Ro 16[15].

PHILOSOPHY.—This word occurs in EV only in Col 2[8], where it refers to an unsound and pernicious form of teaching. The history of ancient philosophy falls outside the scope of the present work. Some points of contact between it and the Bible will be found in such articles as GNOSTICISM, LOGOS, ECCLESIASTES, WISDOM; cf also PHILO, PLATO, PLATONISM, EPICUREANS, STOICS.

PHINEAS.—1 Es 8[2, 29] (RSV) = **Phinehas, 1** (q.v.).

PHINEES.—**1.** 1 Es 5[5] 8[2, 29], 2 Es 1[2a] (AV, RV); see PHINEHAS, **1**. **2.** 2 Es 1[2b] (AV, RV); see PHINEHAS, **2**. **3.** 1 Es 8[63] (AV, RV); see PHINEHAS, **3**. **4.** 1 Es 5[31] (AV); see PASEAH, **3**.

PHINEHAS.—**1.** The son of Eleazar, who was the third son of Aaron. Both his name and that of his mother Putiel are perhaps of Egyptian origin. The only certain occurrence of the name in a pre-exilic writing is in Jos 24[33]; a hill in Ephraim was named after him, where his father and (LXX) he himself were buried. In P and the Chronicler he rises into great prominence. He succeeded Eleazar as chief priest (Ex 6[25], 1 Ch 6[4, 50], Ezr 7[5], 1 Es 8[2], 2 Es 1[2]), and was the superintendent of the Korahite Levites (1 Ch 9[20]). The succession of the priesthood in his line was assured to him when he showed his zeal at Shittim in Moab, when Israel 'joined themselves unto Baal-peor.' An Israelite brought into the camp a woman from the Midianites who had beguiled the people into foreign worship. Phinehas slew the man and the woman (Nu 25). This is referred to in Ps 106[30f], Sir 45[23–25], 1 Mac 2[26, 54]. As priest he accompanied the expedition to punish the Midianites (Nu 10[8f]). He was the spokesman of the western tribes concerning the altar which the eastern tribes had erected (Jos 22[13, 30–32]. See ED). The war between Benjamin and the other tribes occurred in his high priesthood (Jg 20[28]). After the Exile a clan of priests, 'the sons of Phinehas,' claimed descent from him (Ezr 8[2], 1 Es 5[5] 8[2, 29], 2 Es 1[2a] [AV. RV **Phinees**]). **2.** The younger son of Eli (1 S 1[3], 2 Es 1[2b] [AV, RV **Phinees**]). See HOPHNI AND PHINEHAS. **3.** The father of a priest named Eleazar (Ezr 8[33], 1 Es 8[63] [AV, RV **Phinees**]). **4.** The last High Priest of Jerusalem before the destruction of the city in A.D. 70 was Phineas ben Samuel, Jos. *BJ* IV. iii. 8 (155). **5.** The last Treasurer of the Temple, who at the fall of Jerusalem handed over some of the Temple treasures to the Romans, Jos. *BJ* VI. viii. 3 (390 f.).

A. H. McN.—A. S. H.

PHINOE, 1 Es 5[31] (RV).—See PASEAH, **3**.

PHLEGON.—The name of a Christian greeted by St. Paul in Ro 16[14].

PHOEBE.—The bearer, apparently of the Epistle to the Romans, Ro 16[1] (AV **Phebe**). She was 'deaconess' of the church at Cenchreae. See DEACONESS.

PHOENICIA, PHOENICIANS.—Greek designations for the country and the people on the coast of Syria. The term Phoenicia is sometimes used very broadly by the geographers, but generally the area W. of the Lebanon and of Galilee is meant. The name *Phoinikes* is to be explained from Greek *phoin* (os) plus the suffix *-ik*, used in ethnic names. As the word means 'dark red,' 'purple,' it described the Phoenicians as the 'purple-men' or vendors of the fine cloth dyed in this colour, made from the glands of the *murex* shell-fish of the Syrian Coast. The Phoenicians themselves seem to have called their region 'Canaan.' That name, which appears in the OT as a term for western Palestine, is found in the *Tell el-Amarna* letters as *Kinakhni* (with variants of spelling). Some scholars hold that the name obtained the *-ni* under Hurrian influence, and that the main element means 'purple,' in which sense *kinakhu* appears in the cuneiform texts from Nuzi. If that were true the name would, indeed, have applied to Phoenicia at first, and been secondarily extended inland, just as 'Palestine' was a millennium later. In the Amarna letters *Kinakhni* already has a broad use, including Palestine.

Phoenicia was a particularly desirable object for a great civilized country like Egypt to control, since the lumber of the Lebanon was a much desired product and could be transported by water. The city we hear of most is **Gebal** (q.v.) which the Greeks later called Byblos. Thither journeyed the Egyptian ambassador Wen Amon *c* 1100 B.C., at a time when Egyptian prestige was low. Gebal was still important in the days of King Ahiram, whose sarcophagus and inscription, dating from about the time of Solomon, were found by French excavators in 1923 at *Jebeil*.

The Phoenicians, having only a narrow hinterland were forced out on the sea by population pressure and commercial opportunity. They were able to step into the vacuum created by the downfall of Cretan sea-power about the middle of the 2nd millennium B.C. In the OT 'Sidonians' sometimes appears as name for the Phoenicians or at least for a portion of them that included Tyre (cf 1 K 16[31], Is 23[2, 4, 12]). Similarly in the Homeric poems, where Tyre is never mentioned, Sidonians is the name for Phoenicians, and their skill in producing finely decorated metal ware is especially noted. This terminology evidently reflects a period of Sidon's leadership either prior to Hiram of Tyre or at a later juncture. Both Homeric and Biblical criticism have to be heeded here. In Graeco-Roman times people of Sidon claimed for their city the original leadership in Phoenicia, and even the founding of Tyre. The truth of such claims cannot be taken for granted. Essentially Phoenician history becomes the history of **Tyre** (q.v.) and of **Sidon** (q.v.), which managed to have periods of hegemony when Tyre was in the dust.

The Phoenicians carried out a remarkable activity in colonizing places throughout the Mediterranean. Their 'Tarshish ships' sailed as far as Spain (see TARSHISH). Phoenician inscriptions have been found in many places, including the Nora stone of the 9th cent. from Sardinia and several inscriptions from Cyprus, one of equal age. Their most important and lasting colony was Carthage; the inscriptions from there are commonly called 'Punic.' A living descendant of the Phoenician language is Maltese, for Malta was colonized by them. The Phoenician control of the seas was, however, imperilled by the rise of Greek sea-power. The Phoenicians must have welcomed Persian backing, and indeed made possible Persia's attempt to subdue Greece. Their turning against Persia under Artaxerxes III. Ochus in 351 B.C. was premature, as Tyre's adherence to Persia at Alexander's coming in 331 B.C. was catastrophic.

The search for metal for the use of their metal-workers was a factor in Phoenician exploration and colonization. The word Tarshish means 'smelter.' Spain was especially rich in metals (see Strabo iii. 2, 8). The joint venture of Phoenicians and Hebrews in Red Sea commerce (1 K 9[26f]) involved among other things the quest of gold. It seems probable that Phoenician mariners got as far W. as the coasts of England in order to obtain tin. Pharaoh Neco employed Phoenicians to circumnavigate Africa (Herod. iv. 42). Strabo affirms that they had always been superior to all other peoples in seamanship (xvi. 2, 23).

The Greeks, probably in the 10th cent. B.C., received their alphabet from the Phoenicians (Herod. v. 58), but this author's words leave room for positing an earlier script. Cretan Linear B, deciphered by Ventris, has proved this an actuality. The Râs Shamra texts have shown that there was a cuneiform alphabet, written on clay tablets, in use at Ugarit in the 15th cent. But the alphabet of the Sinaitic inscriptions of which specimens have also been found in Palestinian excavations, was the predecessor of the Canaanitic alphabet, of which the Phoenician is an example. That the Sinaitic was developed from the hieroglyphs of Egypt seems certain. The Phoenicians wrote the alphabet more gracefully than did the Hebrews. Some very fine Phoenician inscriptions are extant, notably from Byblos and Sidon (cf Pritchard, *ANET*, p. 502). At Byblos early Phoenician 'Pseudo-

hieroglyphic' inscriptions of *c* 1800 B.C. were also found by Dunand in 1929, which Dhorme has attempted to decipher.

Among the fine products of Phoenicia which were in great demand in the world were the carved ivories, used for inlay purposes on furniture. Remarkable specimens of this have been found in Spain, Palestine (Megiddo and Samaria) and Mesopotamia (notably at Calah, modern *Nimrûd*). Of Phoenician metal work the finest specimens were found at Râs Shamra (q.v.), hence from a time antedating the classic Phoenician period. Phoenician glass ware was also famed in antiquity.

The Phoenicians were engulfed in the Hellenistic civilization after Alexander's conquest, and continued to thrive, especially after Rome took over the E. in 63 B.C. Philo of Byblos, a writer of about A.D. 100, undertook to relate Phoenician history to the Greeks, based for the older period on a writer called Sanchuniathon (whose existence some have doubted). The quotations preserved by Eusebius and Porphyry have been much discussed, but only become clear as texts like those from Râs Shamra lend aid, for Greek transcriptions of Semitic words are often difficult to analyse, especially when corrupted by copyists.

Phoenician religion was no uniform thing, but rather represents the diverse cults of the Phoenician cities. Underlying, of course, was a common Canaanite religious heritage. A triad of gods, father, spouse and son or daughter, seems to have been favoured in most cities. At early Ugarit the god El, the goddess Ashirat, and the virgin Anat were prominent. But there were further deities in considerable number. At Byblos the chief deities were the Ba'alat Gebal, or 'lady of Gebal,' El and Adonis, the latter the youthful god, whose dying and rising was the object of celebration; we can see from Egyptian inscriptions that El was once more important at Byblos than his spouse. Sidon had Astarte, Baal and Eshmun for its gods; the last named was a youthful figure and originally a god of healing. At Tyre the god Melkarth (' king of the city '), whom the Greeks identified with Heracles, was the ' Baal of Tyre,' but at the same time a dying and rising god, with Astarte for consort. The importation of this Tyrian Baal into Israel by Jezebel led to fanatical opposition by the Hebrew element in the country, but of course pleased the old Canaanite element, which formed a substantial part of the population of the chief Israelite cities (cf Jg 1^{27-33}). The religion of the Carthaginians was basically that of the Phoenicians, and the sources for the former shed light on the general picture. The invasion of basically Phoenician heathenism into Judah is vividly reflected in the references to the offerings of Molech (2 K 23^{10}, Jer 32^{35}), whether that word be taken as a title of god or understood as ' sacrificial vow ' in the light of Punic inscriptions (so Eissfeldt). The great popularity of Heracles in the Greek world in those times might suggest that his counter-part the god Melkarth of Tyre is meant. Phoenician and Punic personal names give many indications of the religious ideas of the people. The sacrificial cult of Israel and of the Phoenicians has much terminology in common. A Phoenician deity that was readily equated with Israel's God on the one hand and Zeus Olympios on the other hand was *Baal-shâmêm*, ' lord of the heavens,' *i.e.* god of the sky (but not sun-god). Antiochus IV. Epiphanes introduced his worship in Jerusalem (Dn 9^{27} 12^{11}, but with ' Baal ' corrupted or veiled by editors). E. G. K.

PHOENIX was a good harbour on the S. coast of Crete. It has been identified almost certainly with *Loutro*, which is said to be the only harbour W. of Fair Havens where a ship of such size as that by which St. Paul travelled (it was a cargo ship, but had crew and passengers on board numbering altogether 276—though B and Sah. read 76) could find shelter. Strabo (x. iv. 3) speaks of Phoenix as being on an isthmus (*i.e.* a narrow part of the island), and apparently as being in the territory of Lappa, which was not far from Loutro. Other authorities speak of it as if it were near Aradena, which is only a mile from Loutro. The identification would therefore be certain but for Luke's description of the harbour of Phoenix as looking ' towards the SW. and the NW.' (Ac 27^{12} RSV: ' NE. and SE.'; margin, ' SW. and NW.'), whereas the harbour of Loutro looks towards the East. Hence some identify Phoenix with a small harbour, Phineka, a little farther W., but we have no evidence that it could accommodate so large a ship. It is perhaps more probable that Luke makes a mistake in his description of a harbour which was never reached. The RV understands the Greek to mean ' in the direction in which the SW. and NW. winds blow,' and therefore translates ' looking NE. and SE.' This may have been a sailor's way of expressing it, but we have no authority for it. See Map 16. A. E. H.—F. C. G.

PHOROS, 1 Es 5^{9} (AV, RV) 8^{30} (RV) 9^{26} (AV, RV).—See PAROSH.

PHRURAI.—See PHURIM.

PHRYGIA.—The Phrygians were a European race who seem to have had their first home in Thrace, and to have crossed into Asia Minor, *c* 1100 B.C., through the same southward movement of tribes that had brought the Hellenes into Greece. In Asia Minor they occupied at one time the greater part of the country W. of the Halys, probably absorbing an earlier race from whom they may have learned the worship of Cybele. We must regard Homer's Trojans as part of the Phrygian race, and the Trojan War may have been a contest between them and Greek settlers from Thessaly (*Iliad* iii. 184–189). In more historical times the name Phrygia applies to an inland region varying in extent at different times, but bounded at its widest by the Sangarius on the N., the Halys on the E., the Taurus range on the S. It thus covered the W. part of the great plateau of Asia Minor and the upper valleys of the rivers Maeander and Hermus. It was a region fruitful in oil and wine, exporting also wool, gold, marble, and salt.

When the Romans inherited the kingdom of Pergamum (q.v.) in 133 B.C., a part of Phrygia was included in the province of Asia, but the southern portion towards Pamphylia was not included. This portion was in the hands of the dependent king of Galatia when Augustus constituted Galatia a province in 25 B.C., and was therefore included in the new province which extended from Lycia on the SW. almost to the mouth of the Halys on the NE. Hence this portion of Phrygia, with its cities of Antioch and Iconium, came to be known as Phrygia Galatica.

This country was included by St. Paul in the work of his first missionary journey (Ac 13^{14}–14^{24}). From Perga he and Barnabas made their way N. along the difficult mountain road to Antioch, here called ' Pisidian Antioch ' (see PISIDIA). On his second missionary journey Paul (now accompanied by Silas) began with the churches of Cilicia and then passed through Derbe and Lystra, where he took Timothy into his company. The narrative then proceeds (Ac 16^{6}): ' And they went through the region of Phrygia and Galatia [Gr. ' the Phrygian and Galatian region '], having been forbidden [AV ' and were forbidden '] by the Holy Spirit to speak the word in Asia [=the province of Asia]. And when they had come opposite Mysia they attempted to go into Bithynia, but the Spirit of Jesus did not allow them; so, passing by Mysia, they went down to Troas.' The natural interpretation of this is that from Lystra they traversed *Phrygia Galatica*, from Antioch took the road leading N. to Dorylaeum, where they would be near Bithynia, and from there were directed W. to Troas. Attempts have been made, however, to find here an evangelization of Galatia proper with its towns of Pessinus and Ancyra. But against this we must set (1) the form of the Greek phrase ' the Phrygian and Galatian region '; (2) the strange silence of St. Luke about a work that must have taken a considerable time; (3) the geographical consideration that the travellers could not have crossed the desert of the Axylon straight from S. to N. and must in any case have used the road to

Dorylaeum. See, further, articles GALATIA and GALATIANS [EPISTLE TO] for this and the further question whether the Epistle to the Galatians can have been written to the churches of Phrygia Galatica. If it was, we have an interesting glimpse of how in the churches first founded by St. Paul his authority was very soon (perhaps A.D. 50) assailed by Judaizers, who disputed his Apostolic credentials and declared his doctrine to be an imperfect form of Christianity, neglecting its Jewish basis and the necessity of full observance of the sacred Law.

The third missionary journey likewise began with 'the region of Galatia and Phrygia' (Ac 18^{23}), or 'the Galatian region and Phrygia.' Here the reference is probably to the same churches, but the order of words is doubtless meant to include the churches of Lycaonia first—these were in the province of Galatia, but were not in Phrygia. The order is in any case strongly against the inclusion of Galatia proper. The journey was continued 'through the upper country to Ephesus' (19^{1}), *i.e.* along the direct route which passed through the higher country from Metropolis to Ephesus, instead of the high road which followed the valley of the Lycus. See PAUL. A. E. H.—F. C. G.

PHURAH, Jg 7^{10f} (AV).—See PURAH.

PHURIM.—In Ad. Est 11^{1} (AV) the Book of Esther is called 'the epistle of Phurim' (*i.e.* 'Purim' [q.v.]). RV has **Phrurai**. RSV, Ad. Est, *ad fin.*, 'Letter of Purim.'

PHUT, Gn 10^{6}, Ezk 27^{10} (AV) = **Put** (q.v.).

PHUVAH, Gn 46^{13} (AV).—See PUAH, 2.

PHYGELLUS, 2 Ti 1^{15} (AV) = **Phygelus** (q.v.).

PHYGELUS.—Mentioned in company with Hermogenes in 2 Ti 1^{15}, as those in Asia who, among others, had turned away from the Apostle. See HERMOGENES.

PHYLACTERIES, FRONTLETS.—1. Among the charges brought against the Pharisees we read: 'They do all their deeds to be seen by men; for they make their phylacteries broad and their fringes long' (Mt 23^{5}). The word 'phylactery' (Gr. *phylactērion*) literally signifies a 'safe-guard,' as protecting the wearer against the attacks of harmful spirits and other malign influences such as the evil eye—in other words, an amulet.

2. This identification has been rejected by a small number of scholars, on two grounds. First, too little is known of tephillin in the days of Jesus to permit a firm identification, and what we do know suggests that 'broadening the phylacteries' is a senseless phrase. There is little about the tephillin to justify describing them as amulets. Secondly, the intention in Matthew is obviously a slur, and therefore hardly consistent with the expected attitude towards a revered custom. Accordingly, Goodspeed (*Problems of NT Translation*, pp. 35–36) translates: 'They wear wide Scripture Texts as charms.'

Though the identification is unlikely, the word 'phylacteries' has come into such frequent use for 'tephillin' that the latter merit description. Modern Jewish usage agrees in all essential points with allusions in the Mishnah. Then, as now, they consisted of two small square cases or capsules of leather, 'two finger-breadths' according to the Talmud, say 1½ inch, in the side, one of which was worn on the forehead, the other on the left upper arm. The leather had to be prepared from the skin of a ritually 'clean' animal, and was coloured a deep black.

The case for the forehead, which was termed the 'head-tephillah,' was distinguished from the 'arm-' or 'hand-tephillah' by its being shaped so as to give four small but distinct compartments, while its fellow consisted of a single compartment. In each of the four compartments of the former was placed a narrow strip of parchment, also from the skin of a 'clean' animal, having carefully written on it one of the Pentateuch passages, which were regarded as the Scripture warrant for the institution of the phylacteries (see **4**). These were Ex 13^{1-10} 13^{11-16}, Dt 6^{4-9} 11^{13-21}. The companion capsule, on the other hand, contained the same four passages written on a single strip of parchment. Each case was then closed by folding back the lower half of the square of stout leather from which it projected, space being left at the fold for the passing of a long strap, blackened on the upper side, by which each phylactery was kept in position when properly 'laid.' The strap of the head-phylactery was tied behind the head into a knot having the shape of the Hebrew letter *dāleth*. On the two sides of the capsule were impressed the letter *shin*, on one side with the usual three prongs, on the other with four prongs. The corresponding loop of the phylactery for the arm was supposed to form the letter *yōdh*, the three letters together giving the sacred name *Shaddai*, 'Almighty.'

3. From the Mishnah we learn further that women, slaves, and minors were exempted from the obligation of wearing, or in technical phrase 'laying,' the tephillin, a duty still incumbent on all male Israelites, from the age of thirteen years and a day, during the recital of morning prayer, on all days save Sabbaths and festivals. These, being themselves 'signs,' rendered the tephillin unnecessary for this purpose (Ex 13^{9}; cf **4** below.)

In putting on the tephillah, that of the hand is 'laid' first, to the accompaniment of a prescribed prayer, and must lie on the inner side of the left arm, which must be bare, a little above the elbow, so that the case with the Scripture passages may rest upon the heart (Dt 11^{18}). The strap is then drawn tight and wound round the arm and the middle finger of the left hand a prescribed number of times. (For details see Hastings' *DB* iii. 870.) The head tephillah is next laid, its position being the middle of the forehead, 'between the eyes' (Ex 13^{9} etc., see **4**), with the knot above described at the back of the head, and the two ends of the strap brought forward to hang down over the breast in front. The phylacteries are taken off in the reverse order. When not in use, they are kept in a bag, which is often made of superior material richly ornamental (see illustration in *Jewish Encyc.*, *s.v.* 'Phylacteries').

4. The Scripture warrant for this institution of Judaism is found in the four passages, Ex $13^{9, 16}$, Dt 6^{8} 11^{18}. Of these Dt 6^{3} may be quoted as the most explicit: 'And thou shalt bind them'—*i.e.* 'these words which I command thee this day,' v.^{6}—'for a *sign* upon thine hand, and they shall be for *frontlets* between thine eyes.' These words and their parallels in the other passages, it is maintained by Jewish and some Christian scholars, are intended by their authors to be taken literally.

Others have, however, concluded that the intent of Scripture was only figurative. If the literal interpretation is followed, we should have to recognize another of the numerous instances in the Hebrew legislation, in which a deeply rooted and ineradicable practice of heathen origin and superstitious associations was adopted and given a religious signification, precisely as was done with the kindred sign of the tassels on the corners of the mantle (see FRINGES, end).

5. The date at which this literal interpretation was first adopted and the wearing of the phylacteries introduced cannot be determined with certainty. The fact that the institution is unknown to the Samaritans shows that it must have arisen after the date of the Samaritan schism. A passage in Ecclesiasticus seems to imply that the figurative interpretation still held the field. On the other hand, the writer of the famous *Letter of Aristeas* (scarcely later than 90 B.C.) distinctly mentions (§ 159) the binding of 'the sign upon the hand' (see Thackeray's translation in *JQR* xv, 368 f). We may, therefore, with some confidence regard the broad use of tephillin as already established in the second pre-Christian century.

In the earlier Middle Ages there was no complete uniformity among Jews on the wearing of tephillin. Some influential Jewish exegetes maintained that the cardinal passages in the Pentateuch were to be taken figuratively. In the later Middle Ages uniformity increased. In more modern times, the practice of 'laying the tephillin,'

became standard and is now universally approved by Orthodox Jews, and practised by the Orthodox faithful. Reform Judaism has largely abandoned the custom.
A. R. S. K.—S. S.

PHYLARCH (2 Mac 8[32]).—A military title for either a cavalry officer or a commander of auxiliary troops. In AV taken as a proper name, Philarches.

PHYSICIAN.—See MEDICINE.

PI-BESETH.—Egyptian city mentioned in Ezk 30[17], known to the Greeks by the name Bubastis, one of the greatest cities in Lower Egypt. The name means 'House of Bast,' and the city was especially the residence of the 22nd Dynasty, which was founded by Shishak. The goddess Bast (or Bastet) was usually figured with a lion's head, but she was of a mild character, and her sacred animal in late times was the cat. The ruins of the city are now called *Tell Baṣṭah*, lying near Zagazig, in the E. of the Delta. The temple described by Herodotus was excavated by Naville, yielding monuments of every period from the 4th Dynasty to the 30th. F. Ll. G.

PICK.—See HARROW.

PIECE.—*Piece* is used in AV for (1) a measure equal to a firkin (1 Es 8[20] 'an hundred pieces of wine'; RV 'firkins'; RSV 'baths'); (2) an instrument of war (1 Mac 6[51] 'pieces to cast darts' [so RV]; RSV 'machines to shoot arrows').

PIETY.—See HOLINESS, PERFECTION, SANCTIFICATION.

PIGEON.—See DOVE.

PI-HAHIROTH.—Mentioned in connexion with the camping of the Israelites, Ex 14[2, 9], Nu 33[7]. It was 'between Migdol and the sea, in front of Baal-zephon' (Ex 14[2]). This definition does not enable us to fix its site, for these other places are themselves unknown. In Nu 33[8] the name is simply **Hahiroth** (so RV and RSV, following MT: AV Pi-hahiroh).

PILATE.—Pontius Pilatus, a Roman of no known family, succeeded Valerius Gratus as procurator of Judaea in A.D. 26. He possibly owed his appointment to Sejanus, and his administration, as described from the Jewish standpoint, shows either that he shared the anti-Jewish feelings of Sejanus or that he failed to understand the temper of the people with whom he had to deal. His first offence was, in contrast with his predecessors, in not allowing the soldiers to remove the images from their standards on entering Jerusalem. These images were worshipped by the soldiers, and were therefore symbols of idolatry. A deputation of Jews waited on Pilate for five days, and refused to desist though threatened with instant death. He was compelled to give way, but subsequently put up on the walls of Herod's palace (which was now the procurator's residence when in Jerusalem) certain golden shields bearing the name of the Emperor (Philo, *Legatio ad Gaium*, 38); this was taken to be an attempt to introduce the Caesar-worship already flourishing elsewhere in the Empire. Only an order from Tiberius, after a Jewish delegation had presented its appeal to him, compelled Pilate to yield a second time. He gave still further offence by a more justifiable action. The need of water in the city was much felt at the time of festivals, and Pilate proceeded to construct a new aqueduct at the expense of the Temple treasure. The Sanhedrin might have ordered such a work, but as Pilate's act it caused a riot which was not quelled without bloodshed. To these incidents we must add the massacre of some Galilaeans at the very altar of sacrifice, referred to in Lk 13[1], but not otherwise explained. The end of Pilate's rule was brought about by a disturbance in Samaria. Tradition said that the vessels of the Tabernacle had been buried on Mount Gerizim, and a band of armed men escorted thither an impostor who promised to reveal them. Pilate sent troops to the spot, who, after a massacre, dispersed the multitude. Complaint was made to Vitellius, the *legatus* of Syria, who seems at this time to have had authority over the governor of Judaea. Pilate was ordered to justify himself at Rome (A.D. 36), but before he arrived there Tiberius had died (March, A.D. 37), and he was not re-appointed (Jos. *Ant.* XVIII. iii. 1–iv. 2 [55–89]). Eusebius states that he committed suicide. The 'Acts of Pilate' and his letters to the Emperor are late forgeries. Their main interest lies in the fact that they usually represent an attempt to exonerate Pilate and even to Christianize him, thus incriminating the Jews still further.

Pilate would therefore be to us only one of a series of unsuccessful procurators, but for the fact that his years of office covered the period of Jesus' ministry. From the Passion Narratives in the Gospels we learn more of him than from any other source.

Except at the times of the great feasts the governors usually stayed at Caesarea; but Pilate was probably present with reinforcements to repress any disorder during the Passover, and had his headquarters in the fortress known as the Castle of Antonia, which adjoined the Temple on the N. side. The **praetorium** (q.v.) formed part of this fortress, and on this occasion, while the prisoner was led inside, the accusers remained below the steps which led into the hall, lest they should be rendered unclean for the feast by entering a building defiled by leaven (Jn 18[28]). Pilate examined Jesus inside the hall, and came outside each time he wished to speak to the accusers. Jesus had been brought to him to be condemned to death, this penalty being out of the power of the Sanhedrin; and at first—according to John—they expected Pilate to pass sentence on their simple statement that he was 'an evildoer' (Jn 18[28–32]). Pilate was too Roman for this—penalties in their power they might inflict, but if he was to add his authority he required a reason. Therefore (the charge of blasphemy, Mk 14[64], is not mentioned) they accused Jesus of 'forbidding tribute' and calling himself 'Christ, a king' (Lk 23[2]). Pilate returned inside, and by questions assured himself that the prisoner claimed only what he would have called a 'philosophical kingship'—an idea familiar to him, if only from the Stoics. Hardly believing that truth was attainable (as he showed by the scornful answer, 'What is truth?'), he was yet prepared, like many Romans of his day, to patronize one who thought he had attained to it (Jn 18[33–38]). From this time onwards (as the situation is reflected in the Gospels, if one may attempt to harmonize them) we must regard the trial as a series of attempts on Pilate's part to release Jesus without too great offence to the Jews. (1) Hearing that He came from Galilee—according to Luke—he sends Him to **Herod Antipas**, who was at Jerusalem for the feast. If Herod had claimed jurisdiction over the prisoner he might have released Him, but he had no more power to condemn a man to death in Jerusalem than the Jews had. The courtesy reconciled Herod and Pilate, their former enmity being due to the fact that Herod sent private reports to Rome and was regarded as the Emperor's spy. But when Herod failed to get either reply or miracle from Jesus, he sent Him back to Pilate (Lk 23[6–12]). (2) It was a custom (whether Jewish or Roman in origin) to release a prisoner in honour of the Passover. (We have no further information about this custom, beyond what is contained in the Gospels.) Pilate proposed to release Jesus, but, persuaded by the priests, the multitude clamoured for Barabbas (Mt 27[15–21], Mk 15[6–11], Lk 23[13–19], Jn 18[39f]). (3) After solemnly washing his hands, as if absolving himself of responsibility for condemning an innocent man (according to Mt 27[24f]), Pilate hoped to satisfy the rancour of the accusers by scourging the prisoner. 'I will chastise him and release him' (Lk 23[16, 22]). But when Jesus came forth from the scourging, the Jews for the first time brought forward the cry that He 'made himself the Son of God' (Jn 19[7]). To such as Pilate, Greek mythology would make it not incredible that 'the son of a god' should be on earth, and in the decadence of their own religion the Romans were lending a ready ear to the religions of the East. Moreover, according to Matthew, Pilate's superstitious fear had already been aroused by the report of his wife's dream (Mt 27[19]). Again, therefore,

he questioned Jesus. But at length the priests prevailed with the cry, 'If you release this man, you are not Caesar's friend' (Jn 19^{12}). The threat that the province would accuse him at Rome for treason overcame Pilate's scruples. An accusation for 'treason' might mean death, under Tiberius. Pilate gave way, caused his throne or tribunal to be brought on to the tessellated space in front of the praetorium (called 'Gabbatha' in Aramaic), and there pronounced final judgment. But in the taunting words, 'Here is your king!' and 'Shall I crucify your king?' as well as in the inscription on the cross, which he refused to alter in spite of protest, he again showed his contempt for his Jewish subjects, to whose clamours he had been forced to yield (Jn 19^{17-22}). In this powerfully dramatic account in the Fourth Gospel, one may note the tragic irony of Pilate's words and deeds. Like Caiaphas, the priestly head of the Jewish nation (cf Jn 11^{49-53} $18^{14, 28}$) he, Rome's highest representative, bears his unconscious witness to the Christ, the Saviour, the Man, the King. And so, in spite of a rough sense of justice tempering his arbitrary exercise of authority, and with angry reluctance and disdain, the procurator finally yields to the pressure of the Jerusalem hierarchy and consents to the carrying out of their plot.

In this unjust complaisance we have an illustration of one danger in the strict supervision which Augustus and Tiberius maintained over provincial government. In the main it was a great benefit, but it enabled the provincials to intimidate a weak governor. The weak points in Pilate's character stand out strongly. He seems to have been a sceptic in principle, but not free from superstition, in this resembling perhaps most of the upper class among the Romans in his day. He had probably not taken the trouble to understand the fierce passions of the people whom he was sent to govern, and when worsted by them in early encounters, the scorn which Romans felt for Jews became in him something like hatred, and a strong desire to be avenged on their leaders at all costs save one, namely, disgrace at Rome. For above everything else he seems to have considered his own personal position and career.

But it is very unlikely that Tiberius, who was jealous for good provincial government, would have allowed Pilate to remain procurator for ten years if his administration had been as bad as our knowledge of him based on the Passion Narratives would imply. It is easy to underestimate the difficulties of his post. The province of Judaea included not only Judaea proper, but Samaria and Idumaea; and in addition to its normal population there was at the time of great feasts, particularly the Passover, an influx of Jews from other provinces, which made the temporary population of Jerusalem (according to Jos. *War* vi. ix. 3 [423–425]) approximated 2,700,000. And this population was animated, as no other people was, by a religious fervour capable of passing on occasion into political excesses difficult to cope with, since in the eyes of a large minority submission to foreign rule was religious apostasy. But the province ranked only as a 'minor Imperial province'; its governor was a procurator, not a *legatus* or *praefectus,* and to control the difficult elements in the population he had only 3000 troops, quartered usually at Caesarea, besides small detachments used to garrison Jerusalem and Sebaste (see Schurer, *GJV*^{4}, i. 461). The governor usually went up to Jerusalem for the Passover time, but he must have felt that in face of a sudden national movement he would be powerless; and it is no small testimony to Roman skill in administration that for sixty years the series of procurators in Judaea managed to postpone more serious conflicts. The fault would seem to rest with the central authority, which did not realize that in administering the small province of Judaea it had to deal not with the province alone, but with all the millions of Jews scattered throughout the Empire, profoundly earnest in religious convictions, regarding Judaea as the holy centre of all they held dearest, and maintaining direct communication with the Sanhedrin, to which the Romans themselves had allowed a certain authority over all Jews throughout the Empire. Hence, mistaking the nature of the task, they sent as procurators second-rate men, who were often (like Pilate) nominees of Imperial favourites, and who were probably looking forward to their promotion from the moment that they landed in Caesarea. Had Judaea been definitely attached to the province of Syria, it would at any rate have been governed by men with a wider outlook. A. E. H.—H. Cl.

PILDASH.—One of the sons of Nahor, Gn 22^{22}.

PILEHA, Neh 10^{24} (AV).—See PILHA.

PILHA.—A signatory to the covenant, Neh 10^{24} (AV **Pileha**).

PILL.—In Gn 30^{37f} 'to pill' means 'to peel' (so RV, RSV), *i.e.* to remove the bark.

PILLAR.—**1.** The term 'pillar' in OT is usually the translation of two distinct Hebrew terms, *'ammûdh* and *maṣṣēbhāh.* The former denotes in most cases—for a conspicuous exception see JACHIN AND BOAZ—a pillar or column supporting the roof or top part of a building (Jg 16^{25f}, 1 K 7^{2f}), also the pillars from which the hangings of the Tabernacles were suspended (Ex 26^{32} and often). In this sense is probably to be understood the column of smoke (Jg 20^{40}), and the '**pillar of cloud**' and the '**pillar of fire**' of the Exodus and the Wanderings (Ex 13^{21} etc.). For the figurative use, which prevails in NT (Gal 2^9, 1 Ti 3^{15}, Rev 3^{12} 10^1), cf Job 9^6 26^{11}—passages which reflect an antique cosmogony in which the pillars of earth and heaven were actual supports.

2. The term *maṣṣēbhāh* is much more difficult. It is derived from a Semitic root *nṣb,* 'to stand.' The word thus refers to something 'set up' on end, in particular an upright stone, whether it be a megalithic monument such as the stones known to archaeologists as *menhirs,* or to a less imposing funerary stele.

(*a*) Some pillars were erected to mark a grave. The word *maṣṣēbhāh* is regularly used in Phoenician inscriptions to designate tomb-pillars. Jacob erected such a pillar over the grave of Rachel (Gn 35^{20}). Such a pillar was probably intended as a memorial to 'keep one's name alive,' as was the case of Absalom (2 S 18^{18}).

(*b*) Other pillars were erected to commemorate some important event. Jacob set up a stone as a 'pillar' to commemorate his pact of friendship with the Aramaeans at Galeed in Transjordan (Gn 31^{43-54}). Such commemorative stones are also mentioned in connexion with the establishment of the Shechem covenant (Jos 24^{27}), the 'stones for a memorial' of the crossing of the Jordan at Gilgal (Jos 4^7), as well as the 'stone of help' (Ebenezer) set up by Samuel (1 S 7^{12}), though in none of these cases is the actual word 'pillar' used.

(*c*) The most common use of the term is for the cultic pillar. When Jacob fled from the wrath of his brother Esau he slept one night at a holy place where God appeared to him in a dream (Gn 28^{16ff}). Since this was a numinous place Jacob took the stone which had been his pillow, set it up as a 'pillar,' **anointed** it with oil, and called it a Bethel, 'house of God' (cf also Gn 31^{13}). Apparently a 'pillar' was a monument of God's presence.

Actually this may well be the dominant significance of all such cultic pillars. Of interest is a passage describing Jacob's safe return to Palestine when he paid the vow made on the occasion of the Bethel theophany (Gn 35^{14}). It is expressly called 'the place where he (God) had spoken with him.' Jacob there 'poured out a drink offering on it, and poured oil on it.' It has now become a place of theophany and thus a legitimate place for sacrifice. See HIGH PLACE.

Such pillars were often built in proximity to an altar (Ex 24^4; cf Hos 10^{1f}). The worship of Baal involved 'pillars of Baal' (2 K 3^2 10^{26}), and the Israelites were commanded to tear down the altars and pillars of the indigenous peoples of Canaan (Ex 23^{24} 34^{13} and throughout the Deuteronomic legislation). Because of their Canaanite cultic connotations such pillars were condemned for the Israelites by the Deuteronomic Code (*e.g.* Dt 16^{22}) as well as by the Deuteronomic historians

(1 K 14[23], 2 K 17[10] 18[4] 23[14]). AV commonly renders by the misleading term 'image,' for which RV and RSV have substituted 'pillar,' with RVm 'obelisk' (cf Ex 23[24] 34[13], Dt 7[5] 16[22] etc.). In Ezk 26[11] AV renders by 'garrison' (q.v.).

In the early days of Palestinian archaeology, archaeologists confidently identified every large upended stone as such a pillar. For example, the so-called high place at Gezer contains ten large pillars varying from five and a half to ten and a half feet in height. These pillars were enthusiastically called *maṣṣēbhōth*. Comparison with such sites as the Dagon temple at Ugarit and the 'stele field' of Ashur has now resulted in the identification of this 'high place' as a mortuary shrine founded in the Early Bronze period (cf W. F. Albright, *The Arch. of Palestine*, 104; A. G. Barrois, *Man. d'Arch. Biblique* ii, 358 ff). In fact, many such stone pillars found in Israelite sites which were once identified as *maṣṣēbhōth* are now known to have been ordinary features of Iron Age house construction.

Actual *maṣṣēbhōth* have been found at Beth-shean, Megiddo, and especially at Byblos where about twenty columns or obelisks of unequal height were found. The earliest datable 'pillar' found thus far is at Mari (from the Old Akkadian period; *c* 2300 B.C.).

One can only guess at the purpose served by such 'pillars.' Apparently libations were offered on them and they were commonly associated with altars. In the patriarchal tales a 'pillar' might mark a place of theophany, but this can hardly have been its sole meaning in view of the Byblos pillars. They were condemned as marks of pagan worship throughout the Hebrew law codes since they were associated in people's minds with Canaanite worship. They are not, however, evil in themselves, since a 'pillar to Yahweh' is to be erected in Egypt as a sign of God's good presence in the day of Egypt's predicted confusion (Is 19[19]).

A. R. S. K.—J. W. W.

PILLAR, OAK OF THE.—In Jg 9[6] we read that the men of Shechem made Abimelech king 'by the oak (RV, RSV; AV 'plain') of the pillar.' The correct translation is undoubtedly 'the terebinth of the pillar' (so RVm), the meaning being the sanctuary of Shechem. The 'pillar' refers to the sacred stone, originally a fetish, which was often found in holy places along with the sacred tree (see preceding article).

PILLAR, PLAIN OF THE, Jg 9[6] (AV).—See PILLAR, OAK OF THE.

PILLOW.—The 'pillow' of Mk 4[38] (AV) is the **cushion** (so RV, RSV) used by rowers. See also BOLSTER and HOUSE, **8.**

PILOT.—**1.** Hebrew *ḥōbhēl*, in Ezk 27[8, 27ff], is the man who pulls the rope (*ḥebhel*). It denotes some category of sailor, but the rendering 'pilot' is doubtful. In Jn 1[6] *rabh ḥōbhēl* is rendered 'captain' (AV and RV 'shipmaster'). **2.** Greek *euthynōn*, in Ja 3[4] (RSV; AV 'governor,' RV 'steersman'), means 'the one who guides straight.'

PILTAI.—A priestly house, Neh 12[17].

PIM.—This word, occurring in 1 S 13[21], is now definitely known from inscriptions on weights from Palestinian excavations to be a term of standard weight, probably two-thirds of a shekel. The ancient Sumerian weight *šanabu*, amounting to two-thirds of a shekel, was apparently adopted in the Semitic North of Mesopotamia and was known also at Râs Shamra as *šinipu*. The knowledge that the weight was *two* third-units caused the misapprehension that the *šin* element was the Semitic root meaning 'two,' hence the dual form *payim* was assumed and came into common use, appearing unvocalized on the weights as *pym*. Long after the original significance of the word had been forgotten the Massoretes vocalized it as *pîm*.

J. Gr.

PIN.—**1.** The 'pins' used in the Tabernacle (AV and RV in Ex 27[19] 35[18] 38[10, 31, 40], Nu 3[37] 4[32]) were wooden 'pegs' (so RSV), and similarly the 'pin' of Ezk 15[3] (AV, RV; RSV 'peg'). **2.** The 'pin' of Jg 16[13f] (here in RSV also) is the stick used for beating up the woof in the loom. **3.** 'Crisping pins,' Is 3[22] (AV); see BAG.

PINE TREE.—**1.** *'ēṣ-shemen*, Neh 8[15] (AV; RV, RSV 'wild olive'); see OIL TREE. **2.** *tidhhār*, Is 41[19] 60[13] (AV, RV; RSV 'plane'); see PLANE TREE. **3.** *t'ashshûr*, Is 41[19] 60[13] (RSV; AV, RV 'box'), Ezk 27[6] (RSV; AV 'Ashurites'; RV 'boxwood'); see BOX TREE. **4.** *b'rôth*, Ca 1[17] (RSV; AV, RV 'fir'); probably the Aramaic form of *b'rôsh*; see CYPRESS, **1.**

PINNACLE.—This word has been adopted by our EV from the Vulgate of Mt 4[5] (*pinnaculum*) to indicate the spot within the Temple enclosure from which the devil tempted our Lord to cast Himself down. The precise nature and location of '*the* pinnacle of the temple' (Mt. *l.c.*, Lk 4[9] [both RV, RSV]), however, are nowhere indicated. The context and the use of the word usually employed for the whole complex of buildings as opposed to that which denotes the Temple proper (see plan in article TEMPLE, **12**) rather favour the view that the 'pinnacle' is to be sought in the neighbourhood of the SE. corner, where the royal 'porch' met that of Solomon. Here, as Josephus informs us—and the excavations corroborate his testimony—a spectator looking down into the valley of the Kidron 'would turn giddy, while his sight could not reach down to such an abyss' (*Ant.* xv. xi. 5 [412]). Many authorities, on the contrary, favour some part of the roof of the Temple building itself.

A. R. S. K.

PINON.—An Edomite 'duke,' Gn 36[41], 1 Ch 1[52]. The place **Punon** (q.v.) may bear the same name.

PIPE.—See MUSIC, etc., **4** (2) (*a*).

PIRAM.—The king of Jarmuth, defeated by Joshua at Beth-horon and afterwards put to death, Jos 10[3ff].

PIRATHON.—An Ephraimite city, and the home of Abdon, one of the judges, Jg 12[13, 15]; also of Benaiah, one of David's heroes, 2 S 23[30], 1 Ch 11[31] 27[14]. The gentilic **Pirathonite** occurs in Jg 12[13, 15]. In NT times it was called **Pharathon** (q.v.); it is possibly modern *Far'ata*, about 6 miles SW. of *Nāblus*.

PISGAH.—A mountain in the region of Moab, with a commanding view over both the desert (Nu 21[30]) and W. Palestine. Hither the Israelites journeyed from Bamoth and there took place the extraordinary episode of Balaam who on top of Pisgah built seven altars, Nu 23[14]. Its principal distinction, however, is its being the scene of Moses' vision of the Promised Land (Dt 3[27] 34[1]) and of his death. It lay within the territory of Reuben, Jos 13[20] (AV **Ashdoth-pisgah**; RV, RSV 'slopes of Pisgah'; cf Dt 3[17] 4[49], Jos 12[3]). It is probably modern *Râs es-Siâghah*.

An alternative name for Pisgah is **Nebo** (q.v.) referred to in Dt 32[49] as the scene of the death of Moses. The latter name is preserved by *Jebel Nebā*, a range whose summit reaches a height of 2643 ft. and commands a view of a large part of W. Palestine. It is 5 miles SW. of Heshbon, and runs westward from the Moabite plateau.

R. A. S. M.

PISHON.—See EDEN (GARDEN OF).

PISIDIA.—The name applied to a district about 120 miles long and 50 miles broad, immediately N. of the plains of Pamphylia. It is entirely occupied by the numerous ranges into which the Taurus here breaks, with the deep intersecting valleys. The name was not applied to a definite political division, and nothing is known of the race inhabiting Pisidia. Until the time of Augustus they were wild mountaineers and brigands. Augustus began their reduction about 25 B.C. by establishing a chain of Roman posts which included on the N. side Antioch and Lystra, reconstituted as colonies. The name 'Pisidian Antioch' (Ac 13[14] RSV, Antioch of Pisidia) would seem to record this fact, since Antioch (q.v.) was never included in Pisidia. The civilizing of the district seems to have been completed by about A.D. 74. Until then it was dealt with as part of the province of Galatia, but at that date Vespasian attached

a considerable portion of it to Pamphylia, in which province no great military force was maintained. During the 2nd cent. numerous small cities grew up and prospered.

Paul and Barnabas traversed the district twice in the first missionary journey (Ac 13^{13} 14^{24}). It was probably still a dangerous locality, and it is plausibly conjectured that St. Paul refers to it when he speaks of 'dangers from robbers' (2 Co 11^{26}). The route which they followed is uncertain, but the most likely theory is that of Prof. Ramsay (see *Church in the Roman Empire*, ch. ii. 2), that they went through Adada, the ruins of which bear the name Kara Bavlo (*i.e.* Paulo). The dedication of the church to St. Paul may have been due to some surviving tradition of his passing by that way, but we are not informed that he preached at all in Pisidia. There is no evidence that Christianity made any progress in Pisidia before the time of Constantine. From the time of Diocletian we find the name Pisidia applied differently, namely, to a Roman province including Phrygia Galatica, Lycaonia, and the part of Phrygia round Apamea. See PAUL. A. E. H.—F. C. G.

PISON.—AV form of **Pishon** (q.v.).

PISPA.—An Asherite, 1 Ch 7^{38} (AV, RV **Pispah**).

PISPAH, 1 Ch 7^{38} (AV, RV).—See PISPA.

PISTACHIO NUTS.—See NUTS.

PIT.—Of the dozen Hebrew words, besides two Greek words in NT, rendered 'pit' in EV, the following are the most important.

1. The term *bōr* is responsible for nearly half of all OT occurrences. It is the usual word for the cistern with which almost every house in the towns was supplied (see CISTERN). Disused cisterns in town and country are the 'pits' mentioned in Gn 37^{20ff} (that into which Joseph was cast [cf PRISON]), 1 S 13^{6} (RSV, RVm 'cisterns') etc. In some passages, indeed, the context shows that 'cistern' not 'pit' is the proper rendering, as in Lv 11^{36}, Ex 21^{33f} with reference to an uncovered and unprotected 'cistern' (so RSV), cf Lk 14^{5} (RSV, RV 'well' for AV 'pit'). The systematic exploration of Palestine has brought to light many series of underground caves which were used at various periods as catacombs (cf Ezk 32^{23}) and dwelling-places (cf 1 S 13^{6}); hence by a natural figure, 'pit' became a synonym of **Sheol**, the underworld (Is 14^{15}, Ps 28^{1}, Pr 1^{12}, etc.; cf Rev 9^{1ff} and SHEOL).

2. A second word rendered 'pit' (*shaḥath*) seems to have denoted originally a pit in which, after concealing the mouth by a covering of twigs and earth, hunters trapped their game (Ezk $19^{4, 8}$). Like the preceding, it is frequently used in a figurative sense of the underworld; so five times in Job 33 (AV four times).

3. A hunter's pit, denoted by *paḥath*, also supplied the figure of Is 24^{17f} and its parallels Jer 48^{43f} and La 3^{47} RV—note the association with 'snare.' Such a pit served as a place of concealment (2 S 17^{9}) and of burial (18^{17}).

4. In Mk 12^{1} RSV, RV rightly recognize 'a pit for the winepress,' where the reference is to what the Mishnah calls 'a cement-vat,' *i.e.* a pit dug in the soil for a winevat (cf Mt 25^{13}, where the same expression 'digged,' RSV 'dug,' is used), as contrasted with the usual rock-hewn vats (see WINE AND STRONG DRINK, **2**).

A. R. S. K.—D. R. Ap-T.

PITCH.—See BITUMEN.

PITCHER.—The earthenware jar (cf La 4^{2} AV and RV 'earthen pitchers') in which in all ages the women and maidens of Palestine have drawn and carried the water from the village well (Gn 21^{14ff}). In wealthy households this task was performed by a slave or other menial (Mk 14^{13}, Lk 22^{10}). RSV replaces 'pitcher' by 'pot' or 'jar' everywhere save in Ec 12^{6}, but introduces 'pitcher' in Jer 25^{5} for AV 'pot' and RSV 'bowl.'

PITHOM.—One of the two 'store-cities' said to have been built for the Pharaoh of the oppression by the Hebrews (Ex 1^{11}). The name occurs in the Papyrus Anastasi VI. in the reign of Seti II. (*c* 1205 B.C.). The site has been identified by Gardiner with *Tell er-Reṭâbeh*. A town called Pithom (Pi-Tum, *i.e.* 'the house of the god Tum'), existed in Ramesside times in the *Wâdī Ṭumilât*, a district which corresponds to the Biblical description of the land of Goshen. Naville's identification of Pithom with *Tell el-Maskhûṭeh* is no longer accepted. S. H. He.

PITHON.—A grandson of Merib-baal, 1 Ch 8^{35} 9^{41}.

PITY.—This word is entirely synonymous with **compassion** both in OT and NT, except, perhaps, in 1 P 3^{8}, where 'sympathetic' would better express the meaning of the original word (see RVm and RSV). Pity was regarded by OT writers as holding an essential place in the relations of God and His people (see Ps 78^{38} 86^{15} 103^{13} 111^{4} 112^{4} 145^{8}, Is 63^{9}; cf Ja 5^{11}). One of the ways in which this Divine feeling became active on their behalf reveals an incipient belief in the dealings of Yahweh with nations other than Israel; for He is often represented as infusing compassion for His chosen into the hearts of their enemies (cf 1 K 8^{50}, 2 Ch 30^{9}, Ps 106^{46}, Ezr 9^{9}, Neh 1^{11}, Jer 42^{12}). An objective manifestation of the feeling of pity in the heart of God was recognized in the preservation of His people from destruction (La 3^{22f}), and in the numerous instances which were regarded as the interventions of mercy on their behalf (cf Ex 15^{13}, Nu 14^{19}, Dt 13^{17} 30^{3}, 2 K 13^{23}, 2 Ch 36^{15}). The direct result of this belief was that Israelites were expected to display a similar disposition towards their brethren (cf Mic 6^{8}, Is 1^{17}, Jer 21^{12}, Pr 19^{17}). They were not required, however, to look beyond the limits of their own race (Dt 7^{16}, Zec 7^{9}) except in the case of individual aliens who might at any time be living within their borders (see Ex 22^{21} 23^{9}, Dt 10^{18f} etc.).

In the parable of the Unmerciful Servant, Jesus inculcates the exercise of pity in men's dealings with each other, and teaches the sacredness of its character by emphasizing its identity with God's compassion for sinners (Mt 18^{33}; cf Lk 6^{36}, Mt 5^{7} 9^{13}). The teaching of Jesus, moreover, broadened its conception in the human mind by insisting that henceforth it could never be confined to the members of the Jewish nation (cf the parable of the Good Samaritan, Lk 10^{25-37}). At the same time His own attitude to the thronging multitudes surrounding Him was characterized by profound pity for their weaknesses (Mt 15^{22}=Mk 8^{2}; cf Mt 9^{36} 14^{14}). Under His guidance, too, Divine pity for the world was perceived to spring from that Eternal Love which resulted in the Incarnation (Jn 3^{16}). Side by side with this development, and in exact correspondence with it, Jesus evolves out of human pity for frailty the more fundamental, because it is the more living, quality of love, which He insists will be active even in the face of enmity (Mt 5^{43f}, Lk 6^{27ff}). J. R. W.

PLACE OF TOLL.—See TAX OFFICE.

PLAGUE.—See MEDICINE.

PLAGUES OF EGYPT.—There are not many references in the Bible to the plagues outside the Book of Exodus. They are epitomized in Ps 78^{44-51} and 105^{28-36}. In Ro 9^{14-24} God's treatment of Pharaoh is dwelt upon, to show His absolute right to do what He will with the creatures of His own handiwork. In Rev 8, 9, 16 much of the imagery in the visions of the trumpets and the bowls is based upon the plagues—hail and fire (8^{7} 16^{17f}), water becoming blood, and the death of the creatures that were in it (8^{8f} 16^{3f}), darkness (8^{12} 16^{10}), locusts (9^{1-11}), boils (16^{2}), frogs (16^{13}).

The narratives of the plagues demand study from three points of view: (1) their literary history; (2) the relation of the several plagues to natural phenomena; (3) their religious significance.

1. The sources.—For a full discussion of the theories of documentary analysis reference must be made to commentaries. It is probable that the original account of JE contained *eight* and not ten plagues. The third and fourth are insect pests, the former *kinnîm*, *kinnām*, *i.e.* **gnats** or **mosquitoes** (P), the latter *ʿārōbh*, *i.e.* **swarms of flies** (J). These may with some probability be considered

duplicates. Similarly the fifth and sixth, **plague** (J) and **boils** (P).

2. Relation to natural phenomena.—The hostility which used to exist between religion and natural science is rapidly passing away, as it is becoming more clearly recognized that science is concerned solely with the observation of physical sequences, while religion embraces science as the greater includes the less. Nothing can lie outside the activity of a God who is both a transcendent Person and an immanent sustaining Power in the universe. Therefore to point out a connexion between some of the 'miracles' of Scripture and 'natural phenomena' does not eliminate from them the Divine element; it rather transfigures an unreasoning 'faith in the impossible' into a faith which recognizes the 'finger of God' in everything. Thus the following discussion of the plagues may claim to be entirely constructive; it seeks to destroy nothing, but aims at showing it to be probable that the providence of God worked in Egypt by means of a series of natural phenomena, upon which the religious instinct of the Hebrew writers unerringly seized as signs of God's favour to their forefathers, and of punishment to their oppressors. This religious conviction led in process of time to accretions and amplifications; as the stories were handed down, they acquired more and more of what is popularly called the miraculous.

1st Plague.—This consisted in the smiting of the river which was turned to blood, and the consequent death of the fish, causing the necessity of obtaining water by digging in the neighbourhood of the river. Two suggestions have been made as to the natural phenomena which might give rise to the story. When the Nile rises in June, its waters become discoloured from fragments of vegetable matter, which gradually turn to a dull red colour as the river rises to its height in August. This is confirmed by many travellers, who also speak of offensive odours emitted at the later stage. Others refer the reddening of the water to enormous quantities of minute organisms. The ease with which the belief could arise that the water was turned to blood is illustrated in 2 K 3^{23}. In P's final amplification, every drop of water in Egypt was turned to blood (7^{19}).

2nd Plague.—From whatever cause the river became fetid, a mass of organic matter and of animal life would be collected. These conditions would be suitable to the rapid multiplication of **frogs.** Plagues of frogs were not unknown in ancient times; and Haggard tells of a plague in the upper Nile valley in modern times (*Under Crescent and Star*, p. 279). Frogs are most plentiful in Egypt in September.

3rd and 4th Plagues.—The mass of dead frogs collected in heaps (8^{14}) would lead to the breeding of innumerable insects. In J, Yahweh Himself sends '**swarms of flies**'; in P, through the stretching out of Aaron's staff (as elsewhere in P), 'all the dust of Egypt became **gnats**' (AV, RV '**lice**'). The 'gnats' cannot have been, according to any natural sequence, distinct from the 'swarms'; P particularizes the general statement of J. Stinging gnats of various kinds are common in Egypt about October. The insects come to maturity after the waters of the Nile inundation have receded, and the pools in which the larvae have lived have dried up. Note that in Ps 105^{31} the 'swarm' and the 'gnats' are coupled in one sentence; Ps 78^{45} omits the 'gnats' altogether.

5th and 6th Plagues.—The decomposing bodies of the frogs would produce pestilential effects, and bacteriological research shows that some insects are a serious factor in the spread of disease. Thus the **plague** (AV, RV '**murrain**') (J) is amply accounted for. In the preceding narrative J relates that Goshen enjoyed complete immunity from the insects. It is not impossible that the direction of the wind or other natural causes, under God's guidance, prevented them from reaching the Israelite territory. If the insects, which spread disease, did not enter Goshen, the statement that the plague did not touch the cattle of the Israelites is also explained. P, on the other hand, departs from natural causes. Moses and Aaron flung soot into the air, which became **boils** on man and beast. Cattle plagues, causing enormous mortality, are reported in Egypt. One such in A.D. 1842 killed 40,000 oxen.

7th Plague.—Thus far the series of plagues have followed one another in a natural sequence. At this point a new series begins with a destructive thunderstorm, accompanied by **hail.** Such storms are rare in Egypt, but are not without example. Those which have been reported in modern times have occurred about January; and that is the point of time defined in 9^{31f}, 'the barley was in the ear, and the flax was in bud, but the wheat and the spelt . . . were late in coming up.' Thus the cattle plague had lasted about two months and a half (November to the middle of January) when the storm came; and the first five plagues (reckoning 3, 4 and 5, 6 as duplicates) occupied a period of about five months.

8th Plague.—The atmospheric conditions which resulted in the storm also led to other plagues. A strong east wind (the sirocco) brought a dense mass of **locusts.** The lightness and fragility of the locusts rendered them helpless before a wind (cf Ps 109^{23b}), so when the wind shifted to the west, they were completely swept away to the 'Sea of Reeds'; cf Jl 2^{20}.

9th Plague.—The **darkness** may have been a further consequence of the west wind. Dr. A. Macalister (article, 'Plagues of Egypt' in Hastings' *DB* iii) writes: 'The condition of darkness referred to is strikingly like that brought about by the severer form of the electrical wind *Khamsin.* This is a S. or SW. wind that is so named because it is liable to blow during the twenty-five days before and the twenty-five days after the vernal equinox (*Khamsin*=50). It is often not so much a storm or violent wind as an oppressive hot blast charged with so much sand and fine dust that the air is darkened. It causes a blackness equal to the worst of London fogs, while the air is so hot and full of dust that respiration is impeded. . . . Denon says that it sometimes travels as a narrow stream, so that one part of the land is light while the rest is dark.' He adds, that three days is not an uncommon duration for the *Khamsîn.*

10th Plague.—Malignant epidemics have at all times been the scourge of Bible lands; and it is worthy of note that many authorities state that pestilence is often worst at the time of the *Khamsîn* wind. In the Hebrew narratives, however, all thought of a 'natural' occurrence has passed away. Only the **firstborn** are smitten, as a just retribution for Pharaoh's attempt to destroy the firstborn of the Israelites.

3. Religious value.—This is manifold. Considered from the point of view of natural phenomena, the narratives teach the all-important truth that God's providential care of men is not confined to 'miracles' in the commonly accepted sense of the term, else were God's providential actions unknown to-day. The lifting of Moses' staff to bring the plagues, and his successive entreaties for their removal, teach that prayer is not out of place or unavailing in cases where natural laws can be co-ordinated and guided by God to bring about the wished-for result. From whatever point of view the plagues are regarded, the same great facts shine through the narratives—that Yahweh is supreme in power over the world which He made; that He has an absolute right, if He so wills, to punish Pharaoh in order to show forth in him His power; that He does so, however, only because Pharaoh is impenitent, and consequently 'made for destruction,' for Yahweh is a God who hates sin; that if a man hardens his heart, the result will be as inevitable as results in the natural world—so inevitable that it may truly be said that Yahweh hardens his heart; that the sin of Pharaoh, and so of any other man, may entail sufferings upon many innocent men and animals; and finally, that Yahweh is mindful of his own, and delivers them from the 'deadly pestilence,' 'the pestilence that stalks in darkness,' and 'the destruction that wastes at noonday,'

so that 'no scourge can come near their tent' (Ps 91).
A. H. McN.—R. J. W.

PLAIN.—This word is to be found in the Bible as a rendering of seven different terms, six Hebrew and one Greek; it is found more frequently in AV than in RSV.

(1) *biḳ'āh*, being from a verb meaning 'to split or cleave,' is commonly rendered as '**valley.**' But it often designates a broad, open valley between hill ranges, so that in RSV the translation is 'plain' in Gn 11[2], Neh 6[2], Is 40[4], Ezk 32[2f] 8[4], Dn 9[1]; and in the margin of Ezk 37[1f]. In Ps 26[12] 'level ground' is found. The word was used of certain notable localities, such as the plain of Megiddo (2 Ch 35[22], Zec 12[11]); but in Jos 11[17] and 12[7] the pass between Lebanon and Hermon is named the valley of Lebanon.

(2) *mîshôr* means an area with a flat, even surface, without indicating whether it is fertile or desert. It is variously translated: 'plain' in 1 K 20[23, 25], Zec 4[7]; 'a level path' in Ps 27[11] 143[10], and 'level' in Ps 26[12], Is 40[4]. But in such passages as Dt 3[10] 4[43], Jos 13[9] 20[8] 'table-land' is used and the reference is to the plateau E. of the Jordan between the Arnon and Heshbon.

(3) *'ᵃrābhāh* designates an arid area, a desert or steppe. The rendering 'plain' or 'plains' is given in Nu 22[1], Jos 4[13] 5[10], Zec 14[10] etc., particularly as designating specific localities such as the plains of Jericho or of Moab; at other times the translation is 'desert' (*e.g.* Is 33[9] 35[1, 6], Jer 17[6], Job 24[5]), or 'wilderness' (*e.g.* Jer 50[12]), or 'steppe' (*e.g.* Job 39[6]). But often the word is used as a proper noun to indicate the area W. of the lower Jordan and the Dead Sea, or, with wider reference, the whole Jordan valley, or the whole depression from the Jordan valley in the N. to the Gulf of 'Aqaba; in all such cases RSV uses the term Arabah.

(4) *kikkār*, 'a round,' should fundamentally signify an area around a specified centre. In Neh 3[22] and 12[28] it does mean the district around Jerusalem, and in the latter case RSV gives the rendering '**circuit.**' It is thus a word which characterizes, not the surface of the locality to which it is applied, but its shape. Most often it is used of the plain around the lower reaches of the Jordan and around the city of Jericho, but it is translated in this connexion by 'valley' (*e.g.* Gn 13[10, 12] 19[17, 25, 28f], Dt 34[3]) or 'plain' (*e.g.* 2 S 18[23], 1 K 7[46], Neh 3[22]). In Gn 13[10] RVm has 'circle.'

(5) *sh'phēlāh* is the name applied to the low foothills on the W. of the Judaean hill country, flanking the coastal plain, although Jos 11[2] implies that it could be applied to the lowland near the coast N. of Carmel. The translation 'plain' is not given in RSV, the usual terms in use being '**lowland**' (*e.g.* Dt 1[7], Jos 9[1], Zec 7[7]) or the transliterated form 'Shephelah' (*e.g.* Jer 17[26] 32[44] 33[13], 2 Ch 26[10]).

(6) *'ēmeḳ* (literally 'a deep place') is the word used in Jos 17[16], Jg 6[33], Hos 1[5] of the valley of Jezreel; but 1 K 20[28], when compared with 20[23, 25], shows that it had sometimes almost the value 'plain.' In Jg 1[19, 34] the translation 'plain' is actually given.

(7) The only place where the word 'plain' is used in the NT is Lk 6[17] (AV) in the account of one of our Lord's discourses, which the account in Matthew (5[1]) says was delivered on a mountain; but for the term 'plain' RSV uses 'level place.' J. Ma.

PLAIN, CITIES OF THE.—These were five in number, namely, Sodom, Gomorrah, Admah, Zeboiim, and Bela (or Zoar), situated in the plain ('circle') of Jordan. Their inhabitants being guilty of great wickedness, the first four of the above-named five were overthrown by fire. Lot, the nephew of Abraham, who had made his home in Sodom, was warned by the Lord to withdraw from the city before it was destroyed; and he accordingly escaped to Zoar, which, at his entreaty, was spared the fate of its neighbours (Gn 18, 19).

The situation of the five cities has been variously placed at the N. and the S. end of the Dead Sea. The Biblical statements seem generally to favour the former site, which is supported by the facts: (1) that the circle of the Jordan, which is also called the circle of the valley of Jericho (Dt 34[3]), is appropriate only to the broad basin of the Jordan, near its mouth; (2) that it was visible from near Bethel (Gn 13[3–10]); (3) that the cities were N. of Hazazon-tamar (usually identified with En-gedi), since this place was passed by Amraphel when he marched from Kadesh against the king of Sodom and his allies (Gn 14[7f]). For the most recent statement of the case for the northern location, see J. Simons, *The Geographical and Topographical Texts of the Old Testament* (1959), pp. 222–229. On the other hand, (1) it is implied in Ezk 16[46] that **Sodom** was on the right (*i.e.* south) of Jerusalem, whereas if it were at the N. end of the Dead Sea it would be almost due E.; (2) **Zoar,** which must have been near the other cities (Gn 19[20]), is placed by Josephus in Arabia (*BJ* IV. viii. 4 [482]), and by Eusebius at the opposite end of the Dead Sea to Jericho; (3) the same *Sodom* is generally identified with *Jebel Usdûm*, a cliff of rock-salt near the SW. corner of the Dead Sea; (4) Hazazon-tamur may be, not En-gedi, but the Tamar of Ezk 47[19], which has been identified with a locality 20 miles WSW. of the lake, and therefore on the road between Kadesh and Sodom if the latter were at its S. end. In addition, W. F. Albright has adduced impressive evidence in support of the southern hypothesis, on the basis of archaeological surveys in the area S. of the Dead Sea. He located the cities under water at the southern tip of the Dead Sea. Early occupation of sites in this area has been confirmed by exploration, while the thorough-going depopulation of the region early in the 2nd millennium suggests a date for the catastrophe described in Gn 18–19 (cf Albright, *The Archaeology of Palestine and the Bible*[3], 1935, ch. iii. 2; for a detailed presentation of the southern hypothesis, see J. P. Harland, *BA* v [1942], 17–32).

The nature of the catastrophe which destroyed the cities can only be conjectured. Harland plausibly suggests that a great earthquake, accompanied by an electrical storm, may have overthrown the cities, and at the same time ignited a terrible conflagration, which was partly fuelled by seepages of bitumen (cf *BA* vi [1943], 41–54). G. W. W.—D. N. F.

PLAISTER, PLASTER.—1. See ARTS AND CRAFTS, 4; HOUSE, 4. **2.** The 'plaister' (Is 38[21] AV, RV) which Isaiah prescribed for Hezekiah's boil was a fig-poultice, according to the text of 2 K 20[7], but the parallel passage above cited reads literally 'let them take a cake of figs and apply it to the boil' (so RSV).

PLANE.—Carpenter's tool, Is 44[13] only; see ARTS AND CRAFTS, 1.

PLANE TREE.—1. *'armôn*, Gn 30[37], Ezk 31[8] (RV, RSV; AV 'chesnut tree'). There is no doubt that RV and RSV are correct. The chestnut tree is only an exotic in Palestine, but the plane (Arab. *dilb*) is one of the finest trees of the land. It attains great development; a wonderful specimen, which has a small room or shop within its hollow trunk, is to be seen in one of the streets of Damascus. The plane (*Planus orientalis*) peels its outer layers of bark annually, leaving a white streaky surface. It flourishes specially by watercourses (Sir 24[14]). **2.** *tidhhār*, Is 41[19] (RVm, RSV; AV, RV 'pine') 60[13] (RSV; AV, RV 'pine'). This is an unidentified species of tree. From similarity to the Syriac *daddār* ('elm'), it has been supposed to be the **elm,** but this is improbable, and it is more likely that it was some kind of **pine.** Alternatively the **ash** has been proposed. E. W. G. M.

PLANETS, 2 K 23[5] (AV).—See STARS.

PLASTER.—See HOUSE, 4.

PLAT, 2 K 9[26] (AV, RV).—Obsolete for 'plot of ground' (so RSV).

PLATO, PLATONISM.—Although the philosophy of Plato, unlike Stoicism and Epicureanism, is not mentioned in the Bible, its influence upon the background of religious thought is clear from the Book of Wisdom,

from Paul, the Epistle to Hebrews, and the Gospel of John. Plato (427–347 B.C.) was a disciple of Socrates (469–399 B.C.), whose martyr death led to his veneration by all later schools of philosophy. From Socrates' teaching, Plato learned his method of dialectic, the questioning of common assumptions; from his character he gained the conviction of the indispensable primacy of ethical goodness in all the relations of life: there is no higher value than goodness or virtue, which must be pursued at whatever cost. Thus 'the good' is independent of all other considerations, political, economic, or even religious. In his earliest writings, the so-called Socratic Dialogues, Plato carried somewhat further the thought of his master, though presumably intending only to portray accurately what Socrates thought and said. But in his later writings he developed an independent set of convictions, though not a systematic philosophy. His greatest influence upon later religious thought was in his fundamental contrast between (*a*) the external world of passing sensation with its unreliable flux of 'opinion' based thereon and (*b*) the inner world of unchanging reason and harmony, the realm of the eternal 'ideas' of goodness, truth, and beauty (cf 2 Co 4^{18}). The soul, he held, is immortal by nature, and therefore pre-existent (see *Pre-existence of Souls*); the universe itself is eternal, without beginning or end, an outward and visible manifestation of divine harmony, if not of deity (cf Ro 1^{20}).

The tendency of Plato's thought as a whole was deeply religious. His influence upon later generations was not limited to the succession of teachers in the Academy, which he founded at Athens, but spread widely among kindred minds throughout the world. Many of the later Stoics were influenced by his teaching, as were Posidonius and the Eclectics, the Neopythagoreans, Philo Judaeus, and finally the Neoplatonists. A subterranean stream of modified Platonism nourished the soil of Hellenism for several centuries and was an important factor in the 'preparation for the gospel.' (See Logos, Philo, Hebrews, John [Theology of], Paul [Theology of].) Plato's influence upon early Christian theology, both in the East (especially Alexandria, *e.g.* Clement and Origen) and the West (*e.g.* Augustine), attests its reality and power during the preceding period, despite the lack of adequate literary evidence. He was 'the prophetic thinker, who pointed upward toward the supersensible world of the mind, the eternal home of the soul' (Eduard Zeller, *Grundriss der Gesch. der griech. Philosophie*, § 41). F. C. G.

PLATTER.—RSV has replaced 'platter' of AV and RV by 'plate' in Mt 23^{25f}, and by 'dish' in Lk 11^{39}, but in Mt $14^{8, 11}$, Mk $6^{25, 28}$ it has replaced the obsolete 'charger' of AV and RV by 'platter.'

PLAY.—See Games, Music.

PLEAD.—In AV 'plead' always means to 'argue for or against a cause' as in a court of justice, never to 'pray' or 'beseech.' The substantive 'pleading' is used in the same sense in Job 13^{6} 'Hearken to the pleadings of my lips.' In RSV 'plead' has the meaning 'beseech' in Jer 15^{11}; cf 'pleading' in Jer 3^{21}.

PLEASANT PLANTS.—See Adonis.

PLEDGE.—The taking of a pledge for the repayment of a loan was sanctioned by the Law, but a humanitarian provision was introduced to the effect that, when this pledge consisted of the large square outer garment or cloak called *śimlāh*, it must be returned before nightfall, since this garment often formed the only covering of the poor at night (Ex 22^{26f}, Dt 24^{12f}; cf Am 2^{8}, Job 22^{6} 24^{9}, Ezk $18^{7, 12, 16}$ 33^{15}). It was forbidden also to take the mill or the upper millstone as a pledge (Dt 24^{6}). In Is 36^{8} the reference is to a pledge to be forfeited if a wager is lost (cf RVm, RSV 'make a wager with'). In 1 S 17^{18} 'take their pledge' probably means 'bring back a token of their welfare' (cf RSV).

PLEIADES.—See Stars.

PLEROMA.—The transliteration of a Greek word which is generally rendered 'fulness' in the NT. *Plērōma* is derived from the verb *plēroun*, which means either (*a*) 'to fill' or (*b*) 'to fill up,' hence 'to fulfil.' The corresponding meanings of the noun are (*a*) 'fulness,' (*b*) 'fulfilment.'

1. Pleroma='that which fills' (corresponding to the verb *plēroun*=fill, *e.g.* Ro 15^{13}, Ac 13^{52}). It is used in this sense in 1 Co 10^{26} (=Ps 23^{1} LXX) 'The earth is the Lord's, and every thing in it'; Mk 6^{43}, 'twelve baskets full of broken pieces' (cf Mt 14^{20}); Mk 8^{20}. Perhaps this is also the meaning of Eph 1^{23}, where it is said of the Church, 'which is his (sc. Christ's) body, the fulness of him who fills all in all.' According to this interpretation the relation between Christ and the Church is considered as reciprocal: as the Church, the pleroma of Christ, builds up His body, so the Church in turn is built up by Him who fills all in all. In this case the verb is middle and is used to indicate that Christ will do this for Himself (but see below **2**).

2. Pleroma='that which is filled,' 'fulness.' In this sense Ro 15^{29}: 'And I know that when I come to you I shall come in the fulness of the blessing of Christ.' Also Jn 1^{16}: 'And from His fulness have we all received, grace upon grace'; cf v.^{14} where the incarnate Word is depicted as 'full of grace and truth.'

In the religious philosophy of the Hellenistic age many formations from the stem *pler-* ('fill') are used in a context of cosmological and theological speculation to characterize the plenitude of the world or the sphere of the divinity. Pleroma here often means the totality of reality rather than numerical completeness. This is the case, *e.g.*, in Philo of Alexandria, in the *Odes of Solomon*, in the Hermetic writings and the Neoplatonists. In Gnostic literature the term (in absolute usage) means the sphere of the Aeons, the upper pneumatic world to which the Gnostic is substantially related and into which he hopes to ascend after his death. Thus the concept pleroma changed from a merely formal conception of fulness to a material conception of divine essence.

Some passages in the NT show this modified usage. This applies perhaps to Jn 1^{16} (see above), but especially to some passages of Colossians and Ephesians. In Col 1^{19} pleroma is used absolutely: 'in him (sc. Christ) all the fulness was pleased to dwell.' The RSV adds '(fulness) of God,' as in Col 2^{9} we find: 'For in him dwells the fulness of deity bodily.' These statements are probably intended as a contradiction to gnostic speculations. We meet the same meaning of pleroma in Eph 3^{19}: 'that you may be filled with all the fulness of God.' Perhaps in Eph 1^{23} pleroma must also be understood in this sense (see above **1**). For Eph 4^{13} see below **4**.

The sense 'fulness' may also be applied to time (corresponding to the use of the verb 'fill' in the passive voice, *e.g.* Mk 1^{15}, Lk 21^{24}, Jn 7^{8}). This is the case in Gal 4^{4}: 'but when the time has fully come,' literally translated in AV: 'but when the fulness of the time was come.' Also Eph 1^{10}, where the purpose of God is described 'as a plan for the fulness of time' (literally 'of the times'). These expressions are not simply chronological statements, but they refer to the source of time as determined by God.

3. Pleroma='that which fills up,' *i.e.* that which makes complete (corresponding to the use of the verb 'fill,' *e.g.* Mt 23^{32}, Rev 6^{11}). Is this sense Mk 2^{21} where pleroma means 'patch': 'the patch tears away from it' (sc. the garment); cf Mt 9^{16}.

4. Pleroma='the completed whole,' 'totality.' It seems that this is the sense in Ro 11^{25}: 'A hardening has come upon part of Israel, until the full number of the Gentiles come in.' The sense in Ro 11^{12} cannot be explained with certainty; perhaps it is the same as 11^{25}: 'If their (sc. Israel's) failure means riches for the Gentiles, how much will their full inclusion (literally 'their fulness') mean.' Some interpreters think that pleroma here means 'fulfilment' (sc. of the Law; see below **5**), because 'pleroma' contrasts with '*hēttēma*' which may mean 'failure' (RSV) or 'diminishing' (AV). Doubtful is also the interpretation of Eph 4^{13}: 'until we attain . . .

to the measure of the stature of the fulness of Christ.' It seems that this phrase is intended to explain the preceding figure of speech: 'to a perfect man' (thus correctly in AV, while RSV says: 'to mature manhood'). In the given context (cf especially v.[15]) it would seem preferable to interpret according to AV: The perfect man is Christ in all His fulness; into Him the Christians shall grow up so that his body, *i.e.* the Church, shall be built (cf v.[12]).

5. Pleroma='fulfilling' (corresponding to the use of the verb 'fill' *e.g.* Ro 8^4, 13^8, Gal 5^{14}). In this sense Ro 13^{10}: 'Love is the fulfilling of the Law.' It is possible to understand Ro 11^{12} in this sense; see above **4**.

R. B.

PLOUGH.—See AGRICULTURE, **1**.

PLUMBLINE, PLUMMET.—The latter is a diminutive of 'plumb,' from Latin *plumbum*, 'lead,' and denotes the combined cord and weight, by suspending which against a wall it can be seen whether or not the latter is perpendicular. On the strength of Zec 4^{10} (literally 'the stone, the tin,' not 'lead'; cf AVm), it has been inferred that the Hebrew masons used a plumb-bob of lead, but the text of this passage is undoubtedly corrupt. The Hebrew plummet (2 K 21^{12}, Is 28^{17}) more probably consisted of a stone (Is 34^{11} AV; RV, RSV 'plummet') suspended by a cord, the 'plumbline' of Am 7^{7f}. Cf ARTS AND CRAFTS, **3**.

A. R. S. K.

POCHERETH-HAZZEBAIM.—Among the 'children of Solomon's servants' who returned with Zerubbabel, Ezr 2^{57}, Neh 7^{59} (AV '**Pochereth of Zebaim**'), 1 Es 5^{34} (AV 'the sons of Phacereth, the sons of Sabi'; RV 'the sons of Phacereth, the sons of Sabie').

POCHERETH OF ZEBAIM, Ezr 2^{57}, Neh 7^{59} (AV).—See POCHERETH-HAZZEBAIM.

PODS (*keratia*, Lk 15^{16}) are almost certainly the pods of the **carob** tree (*Ceratonia siliqua*), commonly called the **locust** tree. This common Palestine tree is distinguished by its beautiful dark glossy foliage. The long pods, which ripen from May to August according to the altitude, are even to-day used as food by the poor; a confection is made from them. But they are used chiefly for cattle. The name 'St. John's bread' is given to these pods, from a tradition that these and not locusts, composed the food of St. John the Baptist but see FOOD, **8**.

E. W. G. M.

POETRY.—1. The Nature of Poetry.—Poetry is the work of imagination, feeling, and reflection. As the Greek word *poiētēs* suggests, the poet is the maker: he employs his inventive and creative powers to order words in varied forms and patterns, to associate sounds in such a way as to produce a desired effect, and to stimulate the mind to range and explore beyond the barriers of literal fact. The origins of poetry lie deeply embedded in the elemental rhythms of life which find their expression in such activities as marching, singing, playing of musical instruments, and dancing. Perhaps at a very early period singing was antiphonal, the response of person to person, of words to words (Ex 15^{20-21}, 1 S 18^{6-7}, Is 6^3); there is much to suggest that some of the psalms were so rendered.

2. Poetry in the Bible.—The presence of poetry in the Bible has long been recognized. In an early and beautifully written fragment of Dt 32 among the Dead Sea Scrolls each stichos or colon appears on a separate line. Philo of Alexandria (*de vita Mosis*, i. 5=23) and Josephus (*Ant.* II. xvi. 4 [346]; IV. viii. 44 [303]; VII. xii. 3 [305 f]) comment on the metrical forms of Biblical poetry, and their views are perpetuated for the most part among the Fathers. Origen, in a scholion on Ps 118^1 (LXX), writes of the two stichoi in a metrical unit and of the measurement of meter by the number of accented syllables (G. B. Gray, *The Forms of Hebrew Poetry*, p. 12), while Eusebius, in the *Praeparatio evangelica* (XI. v. 5) follows in the main the views of Josephus. Jerome, too, turns to the subject on several occasions, especially in his *Prologue to Job*. Among the great medieval rabbis, Kimḥi and Ibn Ezra stand out as the most independent and discriminating interpreters of Hebrew metrical form. But it was not until 1753, when Bishop Richard Lowth published his epoch-making word *de sacra poesi Hebraeorum praelectionis academicae*, that the true character of Hebrew poetry was correctly grasped, and this work was followed in 1778 by a more detailed and discriminating treatment of the subject in his translation and notes on *Isaiah*. With the exception of Kimḥi and Ibn Ezra, all previous work lay too much under the domination of Greek critical norms and models, with the result that the form and structure of Hebrew poetry was greatly obscured.

While a substantial and impressive literature on the nature of Hebrew poetry has arisen since the time of Lowth, the greatest advance has come from the recovery of the literatures of the ancient Near East. It is now clear that behind our earliest Hebrew compositions there lay a long and established literary tradition among the peoples of Egypt, Mesopotamia, and Canaan in which we recognize the same literary phenomena as we encounter in the poetry of the OT. That Canaanite literary practice exercised a profound influence upon ancient Israel cannot be doubted. The Ugaritic inscriptions (see RÂS SHAMRA) often display the same syntactical phenomena, lexical usage, and literary structure. The rhetorical features are much the same, the formal patterns show similar affinities, and the basic modes of composition and construction are identical. The Ugaritic poems reveal the same rich and varied metrical structures as Hebrew poetry, and their epic style conforms to that of many Hebrew compositions.

Despite the strong feeling for cadence and rhythm among the King James translators, especially in the Psalter and Job, the presence of poetry is unrecognized in the printed text. In the RSV more than 35 per cent. of the literature is given in its proper poetic guise, and there are not a few other passages which should probably be printed as poetry, notably Jotham's fable (Jg 9^{8-15}), Malachi, and more of Ezekiel. The issue here is not merely theoretical. The poetic form makes it possible for us to gain a deeper appreciation of the aesthetic qualities of Hebrew literary compositions, but more than that it often provides us with an indispensable instrument for the proper interpretation of the text. Failure to recognize the formal patterns of Hebrew poetry has often been responsible for fanciful and mistaken exegesis. Poetry must be interpreted as poetry.

3. The poetry of the OT.—Many poetic pieces lie scattered throughout the Pentateuch and historical books. These were doubtless transmitted from generation to generation in oral tradition by the professional singers (*mōshᵉlîm*, Nu 21^{27}), and were later reduced to writing in such collections as the *Book of Jashar* (Jos 8^{12}, 2 S 1^{18}) and the *Book of the Wars of Yahweh* (Nu 21^{14}). Among the Cain traditions appears the Song of Lamech (Gn 4^{23-24}), breathing the nomad's unbridled passion for revenge. Like so many other early poems its rhythm and parallelism are flawless, and the assonance is accentuated by the rhyme of its pronominal suffixes. From this early time come also curses and blessings, both from the primordial period (*e.g.* Gn 9^{25-27}) and from the time of the patriarchs (Gn 12^{1-3} 27^{27b-29} 27^{39-40}). The crossing of the Sea of Reeds was celebrated in the triumphant Song of Miriam (Moses?) in Ex 15^{21}, which may be the *incipit* of the extensive version given in vv.[1b-18]. The Song of the Well (Nu 21^{17-18}), the taunt against Heshbon (Nu 21^{27-30}), and the marching song along the boundaries of Moab (Nu 21^{14-15}), as well as the cultic Ark songs (Nu 10^{35-36}), are ascribed to the wilderness period. From the age of the Conquest comes the superb Song of Deborah (Jg 5), unrivalled in poetic feeling, rhetorical power, and literary craftsmanship in the poetry of early Israel. From about the same time we have Jotham's fable, a literary type paralleled only once elsewhere in the OT, but common among the Sumerians and other ancient Near Eastern peoples. Here, too, we have the raucous riddles of Samson (Jg

POETRY

14[4, 18] 15[16]). The period of the United Monarchy produced an extensive literature, as rich and powerful as it is diverse. Among its supreme poetic monuments, David's Lament over Saul and Jonathan (2 S 1[19–27]) holds a secure place. To this time belong also the Blessing of Jacob (Gn 49), the oracles of Balaam (Nu 23–24), and possibly the Blessing of Moses (Dt 33), and Ps 18 (=2 S 22). The power that popular poetry could exert in Israel is illustrated by the little couplet sung about Saul and David (1 S 18[7] 21[11] (Heb 12) 29[5]).

The prophetic books of the OT are largely poetic. They contain a great variety of literary types and forms as well as great diversity in literary style. Here the well-known dictum of Buffon applies: *le style est l'homme même*, for the prophets reflect their own background, temper, and experience. Of the three so-called books of poetry, *Psalms*, *Proverbs*, and *Job*, the first is a product of the devotional and cultic life of ancient Israel, spanning many centuries, and containing precipitates from a wide diversity of cultic situations; the second belonging to the Wisdom literature has striking affinities with the sapiential literatures of other peoples, especially the Egyptian *Proverbs of Amenemope*; the third, an elaborate poetic dialogue, towers high among the great literary achievements of the Near East, and in certain sections, as in the Divine discourse from the whirlwind (chs. 38–41), rises to the height of sublimity.

4. The poetry of the Apocrypha and Pseudepigrapha.—*Ecclesiasticus* or *Ben Sirach*, belongs to the Wisdom literature; here proverbs and wise sayings are often expanded into miniature 'essays,' full of keen observation, shrewd insight, and fervent piety. The *Wisdom of Solomon* is of quite a different strain, reflecting the influence of Greek philosophy, especially Stoicism. The historical book of *I Maccabees* includes within it several laments (2[8–12] 3[45]) and eulogies (3[3–9] 14[6–15]). The didactic romance of *Tobit* concludes with a prayer of adoration (13[1–18]) and that of *Judith* with a hymn of thanksgiving (16[2–17]). In the pseudepigraphical literature, the narrative of *Jubilees* is broken here and there by poetical sections (*e.g.* 12[3–5, 18–20] 20[6–10] 22[11–23]), most of it belonging to the literature of *blessing*; similarly the *Testaments of the Twelve Patriarchs* (Test. of Simeon 2[1–4], Levi 4[1–6], Joseph 12–27), where the poetic portions usually appear at the beginning of the patriarch's instructions. The *Apocalypse of Enoch* contains large sections of poetry, as in the opening and closing chapters, much of the Parables (chs. 36–71), and the miscellaneous materials of 92[1]–100[9]. *Fourth Ezra* and the *Syriac Apocalypse of Baruch* also have substantial poetic material, some of it of a very high order. The *Psalms of Solomon* are poetic throughout. In this connexion mention may be made of the collection of psalms of thanksgiving, the *Hodayoth*, among the Dead Sea Scrolls, and the longer prayer at the close of the *Manual of Discipline*. Much of this poetry is very moving, though taken as a whole it does not rise to the level of the canonical psalms.

5. The poetry of the New Testament.—In striking contrast with the OT, there is relatively little poetry in the NT, and often where we do meet it the influence of the OT is apparent, as in the infancy hymns (Lk 1[47–55, 68–79] 2[14, 29–32, 34b–35]) and in the exultant heavenly adorations of the Apocalypse (Rev 5[9f] 7[15–17] 15[3b–4] 19[1b–3, 5b, 6b–8]) as well as in its great laments (18[2b–3, 4b–8, 21b–24]). In the Gospels especially we encounter many brief poetic effusions, and they reveal the same formal characteristics as the OT compositions. Synonymous parallelism is illustrated in Mt 7[6] 10[41], Lk 12[48], Jn 6[35], 13[16] antithetic in Mk 2[27] 8[35], Mt 7[17] 10[39] 15[11], Jn 3[6, 18]; stair-like or ascending in the manner of the Psalms of Ascent (Pss 120–135) in Mk 9[37] (cf Mt 10[40] 18[5], Lk 9[48] 10[16], Jn 13[20]). The Prologue to John's Gospel is a notable example of this style (1[1–18] with possible excision of prose elements). The tricola constructions are of special interest; as in the OT the third line constitutes the impressive climax (Mt 7[7–8], Lk 11[9–10], Mk 2[27–28], Mt 6[24], Lk 16[13], Jn 3[18] 4[22] 6[32–33]). Examples of rhythm are also evident as in the Lord's Prayer (Mt 6[9–13]); the admonitions of Lk 6[27–29] and vv.[36–38]. Blessings, too, are present in remarkably sententious form (Mt 5[3–11]; cf Lk 6[20–22]) as are also prophetic invectives (Mt 23[29–33], Lk 6[24–26]) and threats (Mt 23[34–36]). In certain sections of the Pauline letters the language rises to a great elevation approximating poetry as in 1 Co 13.

6. The characteristic features of Hebrew poetry.—How, then, shall we define the characteristic features of Hebrew poetry? It is to be observed, first of all, that the language was peculiarly suited as a vehicle for poetic utterance. Abstractions are relatively rare; the ancient Hebrew thinks and speaks concretely. Words appeal to the senses and evoke images. Nouns and verbs predominate, pronouns are generally attached to the verb and the pronominal modifiers to the noun, adjectives are used sparingly, the conjunction 'and' is used with great frequency where we should employ subordinate connectives. Sentences are short. The speech is concentrated, reduced it would seem to its minimal essentials. Modern translations often employ more than twice the number of words to render the Hebrew original. The verb plays a central rôle. Nouns are usually derived from the verbs. 'They are as it were living beings, extracted and moulded, while their radical source itself was in a state of living energy' (J. G. Herder, *The Spirit of Hebrew Poetry*, p. 29). The most characteristic features of Biblical poetry are action, imagery, passion, music, rhythm, simplicity, vigour, concreteness.

a. Parallelism. The basic element of Hebrew poetry is the line or colon. It has no independent status however; it exists only *in relation*, most frequently to a second line but sometimes also to a third. The bicola is then the characteristic unit of Hebrew poetic speech. The essential words of one line are parallel with the essential words of the other, words parallel words in at least three ways: (1) *Synonymous parallelism.* The second line restates the first, not merely by repetition, however, as in many of the Near Eastern liturgies, but by enriching, deepening, and even transforming it with new words, by adding fresh nuances, and by giving it a symmetry and balance, as in

> O Lord, who shall sojourn in thy tent?
> Who shall dwell on thy holy hill?—(Ps 15[1])

or

> The heavens are telling the glory of God;
> and the firmament proclaims his handiwork.
> —(Ps 19[1])

(2) *Antithetic parallelism.* The second line is contrasted with the first, as frequently in the Book of Proverbs:

> A son who gathers in summer is prudent,
> but a son who sleeps in harvest brings shame.
> —(Pr 10[5])

(3) *Climactic parallelism.* The lines are related to each other in an ascending climax, normally of three members. This form is familiar in the Ugaritic texts, and is illustrated in the OT by Ps 92[9] (Heb 10):

> For lo, thine enemies, O Lord,
> for lo, thine enemies shall perish;
> all evil-doers shall be scattered.

Akin to climactic parallelism is the so-called *stair-like* construction of the Psalms of Ascent (120–135).

Parallelism assumes many forms and modes, many of them complicated. Some scholars speak of complementary parallelism, but it is best to confine this form to comparisons, such as

> As a hart longs
> for flowing streams,
> So longs my soul
> for thee, O God.—(Ps 42[1])

b. Meter. A second formal feature of Hebrew poetry is meter. But unlike Western poetry generally the accent is determined not by the measured succession of syllables,

but by meaning. Therefore such terms as iambic, anapaestic, *etc.* are to be avoided. The number of unstressed syllables is irrelevant; it is only the stress of the thought that is important. Parallelism and meter are closely associated; the number of stressed syllables in one colon is related to the number in its parallel. The bicola is the true unit. Usually the cola are of equal length, *i.e.* they have the same number of stressed syllables. The meter can then be expressed as follows: 2′ 2′ or 3′ 3′ or upon occasions 4′ 4′. The first is to be found in many poems, as in the Song of Miriam (Ex 15[21]):

Sing to Yahweh
for he has triumphed mightily;
the horse and his rider,
he has hurled into the sea.

This meter is present in many Canaanite poems. The 3′ 3′ meter also appears frequently:

The glory of Lebanon shall be given to it,
the majesty of Carmel and Sharon.—(Is 35[2])

Often, however, the bicola are unequal in length, most frequently in the so-called 'lamentation' or *kînāh* meter, which is illustrated by much of *Lamentations*, Is 53[1-9], and many of the poems of the Psalter:

God looks down from heaven
upon the sons of men
to see if there are any who are wise,
who seek after God.—(Ps 53[2])

The metrical scheme is frequently very irregular, however, and different meters are employed in the same poem; indeed this variety prevents the poem from becoming monotonous.

c. Strophic structure. The poem is normally divided into strophes or stanzas. They may be of equal length, but more often they are not. In the acrostic poems such as Pss 9–10, 25, 34, 119, and La 1–4, the divisions are plainly marked by the Hebrew letters with which the lines open. Where refrains are present the division is also clear (Is 9[8]–10[4] and 5[24-25], Pss 99, 107). At other times the division can be detected by the climactic lines, or by the change of person, or by striking words such as *behold, therefore, and now*, or by the presence of key words in the opening or closing lines. Often the poems are composed of two strophes (Ps 1), more frequently of three (Pss 2, 46, Is 42[5-17]); sometimes of five (Is 52[13]–53[12]), or even seven (Ps 107), or nine (Jer 3[1]–4[4] with deletion of prose additions; 4[3-4] is the coda).

d. Literary genres or types. The recognition of literary forms in the OT is due primarily to the pioneering work of Hermann Gunkel. Before a poem can be understood, it is necessary to determine its genre. Unfortunately our nomenclature for the various types is still unsatisfactory, and the Hebrews, while employing a number of such terms, like *song, oracle, parable, proverb, lamentation,* and *prayer,* were imprecise in their designations. Among the numerous literary types the following may be mentioned: *blessings* (Gn 22[16-18] 27[27a-29] 49, Dt 33), *taunt songs* (Nu 21[27-30], Is 47); *love songs* (Ca 1[7-8, 9-17] 2[8ff]); *laments* (2 S 1[19-27], Am 5[2], Jer 9[17ff] (Heb 16ff), Ezk 19[2-14], Is 53[1-9]); *hymns* (Pss 19, 23, 103, 136, 146–150); *royal hymns* (Pss 2, 20, 21, 45, 72, 110); *pilgrim songs* (Pss 84, 122); *thanksgivings* (Pss 18, 30, 41, 118); *invectives* and *threats* (Am 1[3]–2[16], Is 5[8-23], Hab 2[9-20]). As in the case of parallelism, meter and strophic structure, the forms are often fluid and tend to coalesce. Many types have their own peculiar terminology, especially in their openings, words such as *blessed* (*bārûkh*), *cursed* (*'ārûr*), *woe* (*hôy*), *therefore* (*lākhēn*), *how* (*'ēkhāh*), *praise* (*hôdhû*), 'I will sing' (*'āshîr*).

e. Style. We have called attention to the major features of Hebrew literary style: simplicity, vigour, passion, rhythm, concreteness, variety and versatility of composition. The ancient Hebrew was sensitive to sound; he was fond of euphony and disliked cacophony. His choice of words was often determined by their assonance. The confessional lament of Is 53[1-9] is a superb example of the literary effects of constantly recurring words and sounds. Repetition, too, was a major feature of Hebrew poetic rhetoric, as almost any poem in the OT will show. But the most significant feature of Hebraic poetic style is imagery. Such books as Isaiah, Jeremiah, Hosea, Psalms, and Job are alive with vivid images and figures. They are drawn from a wide variety of sources: light and darkness, thunder, rain, cloud, snow, mountains, sea, fire, death, sowing, harvest, the life of the shepherd, ploughman, and vintner, the heavenly bodies, etc. Similes, metaphors, personifications, apostrophes, parables, allegories, and many other figures abound throughout the poetic portions of the OT. The poet's descriptive powers can at times attain the highest levels of literary power, as in Job's incomparable lines on the ostrich (39[13-18]), the horse (39[19-25]), the hawk (39[26-30]) and above all of Leviathan (ch. 41), or Jeremiah's lament about death coming through the windows (9[21]). Indeed, the Hebrew poet observed everything about him with all his senses attent, and then gave expression to his religious faith by laying hold on all the imaginative resources granted him in his created universe. J. Mu.

POLE (SACRED).—See ASHERAH, 3.

POLICE.—RSV translation in Ac 16[35, 38] (AV, RV 'serjeants') of Greek *rhabdouchoi* (='rod-bearers'), which represents the Latin *lictores* (RVm **lictors**), officials whose duty it was to attend the Roman magistrates, to execute their orders, and especially to administer the punishments of scourging or beheading. For this purpose they carried, as their mark of office, the *fasces*, a bundle of rods with an axe inserted. Cf PHILIPPI.

Temple police, under the charge of a captain (Ac 4[1] 5[24, 26]; cf Jos. *Ant.* XX. vi. 2 [131]; *BJ* VI. v. 3 [294]), were responsible for the maintenance of order in the Temple. They had to see that no one entered the part of the Temple to which he or she was not entitled to go and to close the gates at night. They consisted of priests and Levites, and the captain, himself a priest, ranked as second in dignity to the High Priest. Cf *SB* ii, 628 ff.

POLL.—'By the poll' (Nu 3[47] AV and RV; omitted in RSV as superfluous) is 'by the head.' Cf Shakespeare, *Hamlet*, IV. v. 196, 'All flaxen was his poll.' The idea in the Hebrew word is 'roundness,' and so to 'poll' the head is to give it the appearance of roundness by cutting off the hair. Cf More, *Utopia*, Arber's edition, p. 49, 'Their heads be not polled or shauen, but rounded a lytle about the eares.'

POLLUX.—See DIOSCURI.

POLYGAMY.—See FAMILY, MARRIAGE.

POMEGRANATE.—Hebrew *rimmôn* (Arab. *rummân*) tree and fruit, Ex 28[33f] 39[24ff], Nu 12[23] 20[5], Dt 8[8], 1 S 14[2], 1 K 7[18, 20, 42], 2 K 25[17], 2 Ch 3[16] 4[13], Ca 4[3, 13] 6[7, 11] 7[12] 8[2], Jer 52[22f], Jl 1[12], Hag 2[19]. The pomegranate (*Punica granatum*) is one of the familiar fruit trees of the OT; it is usually a shrub, but may attain the height of a tree (1 S 14[2]); it was much admired for its beauty (Ca 4[3] 6[11]), and its flower was copied in ornamentation (Ex 28[33], 1 K 7[18]). Its dark green leaves and brilliant scarlet blossom make it a peculiarly attractive object, especially when growing in orchards (Ca 4[13]), mixed with trees of other shades of green; its buds develop with the tender grapes (Ca 7[12]), and the round, reddish fruit, with its brilliant, crimson, juicy seeds, ripens at the time of the vintage. The fruit is a favourite food, and the bark a valued astringent medicine. E. W. G. M.

POMMEL.—See BOWL.

POND.—See POOL.

PONTUS.—In the earliest times of which we have any knowledge, this name, meaning 'sea' in Greek and Latin, was used by Greeks to indicate vaguely country bordering on or near the Black Sea. From its importance for the grain supply of Greece, the Black Sea and the land around it came to be known as 'the sea' *par excellence.* As time went on the term gradually became confined to the country to the *south* of the Black Sea.

It was not till about 302 B.C. that a kingdom was formed here. In that year consequent upon the troubles due to the early death of Alexander the Great, Mithridates II. was able to carve out for himself a kingdom beyond the river Halys in NE. Asia Minor, and about 281 B.C. he assumed the title of king. We cannot define the exact extent of the territory ruled by him and his descendants, but it is certain that it included part of the country previously called Cappadocia, some of the mountain tribes near the Black Sea coasts, and part of Paphlagonia; and also certain that its extent varied from time to time. Acting with Nicomedes of Bithynia he succeeded in settling down the Galatians (who were Gauls, *i.e.* Celts) in Phrygia. The Mithridatic dynasty lasted till 63 B.C., when Mithridates VI., 'the Great,' died, defeated by Pompey. In the preceding year the kingdom ceased to exist, and part of it was incorporated in the Roman Empire under the name Pontus, and this district henceforth constituted one-half of the combined province Bithynia-Pontus, which was put under one governor. The remaining portions of the old kingdom were distributed in other ways. The civil wars helped Pharnaces, a son of the last Mithridates, to acquire the whole of his father's kingdom, but his brief reign ended in his defeat by Julius Caesar (47 B.C.). The narrowed kingdom of Pontus was reconstituted by Mark Antony in 39 B.C., and given in 36 B.C. to Polemon, who founded a dynasty, which ruled over this kingdom till A.D. 63. The daughter of this Polemon, Queen Tryphaena, is mentioned in the apocryphal book, *The Acts of Paul and Thecla*, as having been present at a great imperial festival at Pisidian Antioch in the reign of the Emperor Claudius, whose blood-relation she was. This statement is no doubt founded on fact. These *Acts* relate that she protected the Christian maiden Thecla, and was converted, through her instrumentality, to Christianity. As tradition connects Bartholomew also with the Polemonian dynasty, it is probable that there were some Christians among them. In A.D. 63 the kingdom of Pontus had been brought to a sufficiently high pitch of civilization to be admitted into the Roman Empire; the western part was made a region of the province Galatia, and the eastern was added to Cappadocia. The dispossessed Polemon was given a Cilician kingdom, and it was as king of part of Cilicia that he (later than A.D. 63) married Berenice (q.v.).

In the 1st cent. A.D., therefore, the name Pontus had various significations, and a strict nomenclature was available for their distinction. The province was Pontus, Polemon's kingdom was Pontus Polemoniacus (incorporated into the province of Galatia A.D. 63), the part of Mithridates' old kingdom incorporated in the province Galatia (3–2 B.C.) was Pontus Galaticus, and the regions that lay E. of Pontus Polemoniacus, between the Black Sea and Armenia, were known as Pontus Cappadocicus. From about A.D. 78 to 106 Pontus Galaticus and Pontus Polemoniacus were included in the combined provinces Galatia and Cappadocia, and after A.D. 106 they constituted permanent parts of the province Cappadocia. In 1 P 1[1] Pontus means clearly the Roman province. There is little doubt that the adjective *Pontikos*, applied to **Aquila** in Ac 18[2], means that, though a Jew, he was a native of the Roman province, and it is interesting in connexion with this to mention that an inscription has been found which refers to one Aquila at Sinope, one of the principal cities of the Roman province of Pontus. The only remaining NT reference to Pontus (Ac 2[9]) cannot be so easily explained. It must be left uncertain whether the name Pontus there is used strictly of the province, or more loosely of the kingdom, or of the kingdom and the province together.

Christianity was not brought to Pontus by St. Paul, if we can trust the silence of Acts, and it is best to do so. From 1 Peter it is clear that by the date of the Epistle there were Christians in that country, and these converts from paganism to Christianity probably came there from the Asian coasts or from Rome. There is a well-known and valuable testimony to the prevalence of Christianity in the province, belonging to the period A.D. 111–113. At that time the younger Pliny was governor of the province Bithynia-Pontus, and addressed inquiries to the Emperor Trajan on the manner in which Christians ought to be treated by the administration. He reports that many men and women of all ages and of every rank in town and country were Christians, and that some had abandoned the faith twenty or twenty-five years before (see Pliny, *Epp.* x. 96 f). After Pliny's time Pontus continued to be a stronghold of Christianity. From here came the famous **Marcion** (born about 120 at Sinope), and of this province **Aquila**, a translator of the OT into Greek, was a native. A. So.—F. C. G.

POOL, POND.—Hebrew *'agham*, a collection of standing water, is distinguished from *miḳweh*, a place into which water flows, or is led (Ex 7[19]). The former may denote the water left in the hollows when the inundation of the Nile subsides, and the latter, reservoirs (cf Gn 1[10], Lv 11[36]). AV translates *'agham* 'pond' in Ex 7[19] 8[5]; RV and RSV uniformly 'pool' (Is 14[23] etc.), except Jer 51[32] (AV and RV 'reeds,' RSV 'bulwarks'; cf RVm). *b'rēkhāh* (2 S 2[13] 4[12] etc.) is = Arabic *birkeh*, an artificial pond or tank. It is applied to great reservoirs constructed to furnish water for cities, or for irrigation, like that at Gibeon, 2 S 2[13]), those at Hebron (2 S 4[12]), and at Jerusalem (2 K 18[17]), etc.; and also to large basins, such as lend freshness to the courts of the houses in Damascus. The usual LXX equivalent is *kolumbēthra*, the word used in NT for the pools of Bethesda and Siloam (Jn 5[2] 9[7]). In Is 19[10] read with RSV 'all who work for hire will be grieved' (cf RV). See also HESHBON. W. E.

POOR.—See POVERTY.

POPLAR.—Hebrew *libhneh* (from a root meaning 'white'), Gn 30[37] (RVm 'storax'), Hos 4[13]. In Hos 14[5] RSV conjecturally reads *libhneh* for MT *l'bhānôn*, 'Lebanon' (so AV, RV). The Hebrew is very similar to Arabic *lubna* meaning 'storax,' which is the LXX translation in Gn 30[37]; on the other hand, in Hos 4[13] the LXX has *leukē* ('white'), *i.e.* the 'poplar.' The poplar may easily have furnished Jacob with white rods. There are two kinds of poplar in Syria, *Populus alba* and *P. euphratica*; they both flourish round Damascus, where their trunks are much used in making supports for the mud roofs. E. W. G. M.

PORATHA.—Fourth son of Haman, put to death by the Jews, Est 9[8].

PORCH.—This word is a doublet of 'portico' (from Lat. *porticus*), both originally denoting a covered entrance to a building. When the front of this entrance is supported on pillars, the porch becomes a portico. *Porticus*, like the Greek *stoa*, was extended to signify a roofed colonnade running round a public building such as a temple, or enclosing an open space, like the cloisters of a mediaeval monastery. The most famous of these 'porches'—a sense in which the word is now obsolete—were the 'painted porch'—the Porch *par excellence*—at Athens, and Solomon's porch at Jerusalem (see below).

In the OT a porch is named chiefly in connexion with the Temple (see below), or with the **palace** (q.v.) of Solomon. The pillars of the temple of Dagon at Gaza which Samson pulled down, or rather slid from their stone bases, were probably two of those supporting the portico, as ingeniously explained by Macalister, *Bible Sidelights*, etc., ch. 7 (see HOUSE, 5). The word rendered 'porch' in AV and RV in Jg 3[23] (RSV 'vestibule') is of quite uncertain meaning and even of doubtful authenticity.

In the NT, in connexion with the trial of Jesus, mention is made in Mk 14[68] of a 'porch' or, as RVm, 'forecourt' (RSV 'gateway'), as distinguished from the 'court' (v.[66] RV; RSV 'courtyard') of the high priest's palace, for which Mt 26[71] (EV 'porch') has a word elsewhere rendered 'gate.' In both cases the covered gateway leading from the street to the court is probably meant.

Solomon's porch (Jn 10[23], Ac 3[11] 5[12]; RSV 'portico') was a covered colonnade or cloister running along the

east side of the Temple enclosure (for details see *Exp T*, November 1908, p. 68). A similar colonnade enclosed the pool of Bethesda (Jn 5[2]). A. R. S. K.

PORCUPINE.—Mentioned in Is 14[23] (RV) 34[11] (RV, RSV), Zeph 2[14] (RV); AV has 'bittern' in all cases, RSV 'hedgehog' in Is 14[23], Zeph 2[14]. See also BITTERN, JACKAL.

PORPHYRY.—Found only in AVm, RVm, RSV in Est 1[6], where AV and RV have 'red marble.' It renders Hebrew *bahaṭ*, the meaning of which is not certainly known. See JEWELS AND PRECIOUS STONES.

PORPOISE.—In RVm **porpoise skins** are mentioned in Ex 25[5] 26[14] etc., as used for the covering of the Tabernacle (AV 'badgers' skins,' RV 'sealskins,' RSV '**goatskins**'), and in Ezk 16[10] as used for making sandals (AV 'badgers' skin,' RV 'sealskin,' RSV '**leather**'). The Hebrew *tāḥāsh* may be connected etymologically with Arabic *tukhas*, 'dolphin' or 'porpoise,' but porpoise-skin is an improbable material for this use. Goatskin is a more likely material for the covering of the Tabernacle, and for this Delitzsch found an Assyrian etymology. But perhaps the word simply means 'leather,' as Egyptian *ṯḥś*.

PORT.—The port of Neh 2[13] AV is a 'gate' (so RV, RSV), the same Hebrew word being translated 'gate' in the same verse. Cf Pr.-Bk. version of Ps 9[14] 'Within the ports of the daughter of Sion.'

PORTER in AV and RV has always the sense of 'doorkeeper' (see HOUSE, 6) or 'gatekeeper' (see FORTIFICATION AND SIEGECRAFT, under **gates**), and RSV always substitutes one or other of these words. In Jn 10[3] the porter is the man left in charge of a sheepfold by the shepherd or shepherds whose sheep are there housed for the night. In private houses the doorkeeper might be a woman (2 S 4[6] as restored from LXX, Ac 12[13]). In OT, however, porters are most frequently named in the Books of Chronicles, Ezra, and Nehemiah in connexion with the Temple (1 Ch 9[17f] onwards), where they had charge of the various gates (see TEMPLE, 6, PRIESTS AND LEVITES, 2 (*c*)). The same word is rendered **doorkeepers** in AV 1 Ch 15[22f], and in several other places in RV (15[18], etc.). It is to be regretted that this term was not substituted throughout (RSV has 'gatekeepers' in these cases). In Ps 84[10], where AV, RV and RSV have 'doorkeepers,' the original is different, and should probably be rendered: 'I had rather be (standing or lying) at the threshold in the house of my God.' A. R. S. K.

POSIDONIUS.—An envoy sent by Nicanor to Judas (2 Mac 14[19]).

POSSESSION.—1. Meaning of the term.—The central idea in the word is the coercive seizing of the spirit of a man by another spirit, viewed as superhuman, with the result that the man's will is no longer free but is controlled, often against his wish, by this indwelling person or power. In Scripture the idea is associated with both phases of moral character; and a man may be possessed by Christ or the Holy Spirit, or by *a* or *the* devil. Later usage has confined the word mainly, though not exclusively, to possession by an evil spirit. Of the better possession there are several kinds of instances in both Testaments. It is sometimes represented, according to the more material psychology of early times, as the seizure of a man by an external power, though the internal occupation is implied, and the control is none the less complete (1 S 10[10], Is 61[1]; cf the frequent 'the hand of the Lord was upon' him, 1 K 18[46]: so of an evil spirit, 1 S 18[10]). The inspiration of the prophets is in some places described as effected by a supernatural agency occupying the seat of personality within the prophet, and controlling or moving him (Lk 1[70], 1 P 1[11], 2 P 1[21], 2 Es 14[22]). In personal religion not only is the transference of authority within to the indwelling Christ spoken of (Jn 17[23], Gal 2[20]), but the Holy Spirit also may seize and possess a man (Ac 2[4], Lk 1[15], Ro 8[9], Eph 5[18]), and should rule in him (Eph 4[30]). But this involves a welcome and glad submission to the sway of a spirit within, though personal wishes may be thwarted or crossed (Ac 16[7]). Demoniacal possession, on the other hand, is characterized by the reluctance of the sufferer, who is often conscious of the hateful tyranny under which he is held and against which his will rebels in vain.

2. Features of demoniacal possession.—In such possession two features may generally be traced. It is allied with and yet distinct from physical disease, and there is almost always something abnormal with respect to the physical development or defect of the sufferer. It is given as the explanation in cases of dumbness (Mt 9[32], Lk 11[14]), of deafness and dumbness (Mk 9[25]), of dumbness and blindness (Mt 12[22]), of curvature of the spine (Lk 13[11]), and of epilepsy (Mk 1[26]). Elsewhere such complaints are referred to as merely disease, and no suggestion is made that they were caused or complicated by the action of an evil spirit (Mt 15[30], Mk 7[32], Lk 18[35]). Sometimes possession and disease are even distinguished by different enumeration (Mt 10[8], Mk 1[32], Lk 6[17f] 7[21] 13[32]); and once at least epileptics (or lunatics) and palsied occupy a different category from demoniacs (Mt 4[24]). The right conclusion seems to be that the same disease was in some cases ascribed to ordinary causes and in others to possession, the distinguishing feature being possibly intractability due to the violence or permanence of the symptoms. Evidence that the disorder was at the same time of a psychical or nervous character is plentiful. According to Arab belief, something abnormal in the appearance, such as a strange look in the eyes or an unusual catching in the throat, was an invariable symptom, and both are indications of nervous excitement or alarm. The will was paralysed (Mk 9[18]), and the sufferer was under the influence of illusions (Jn 7[20]). He identified himself with the demons, and was averse to deliverance (Mk 1[24 57]). In such cases Jesus does not follow His usual course of exciting faith before He heals, but acts as though the sufferer were not in a fit state to believe or to trust, and must be dealt with forcibly first of all. Some confident and majestic word is spoken, of which the authority is immediately recognized; and only then, when the proper balance of the mind has been restored, is an attempt made to communicate religious blessing.

3. Our Lord's belief.—Two opinions have been held as to whether Jesus shared the views popular in His day, which views had been growing more common for two or three centuries as a result of the general 'demonizing' of religion in the Eastern Mediterranean world. That He did so is attested on almost every page of the Synoptic Gospels; but in the Fourth Gospel there is no mention of either demons or belief in them—save for the arch-demon and evil spirit Satan. Paul, although he represents Christ's death and resurrection as a victory over the evil powers, does not suggest that Jesus practised exorcism. (*a*) One view holds that our Lord merely accommodated Himself to the views common in Galilee in His day: but this seems to make unreal and untrue his strong pronouncements upon the fall of Satan, the casting out of demons by the Spirit of God, and the serious challenge He set before men to resist the power of the evil one (Lk 9[49f] 10[17-20] 11[14-26]). (*b*) The other view holds that in this respect He shared completely the outlook of His own time and place. Even the Pharisees were credited with practising exorcism (Mt 10[8] 12[27f], Lk 11[19f])—the popular modern idea that Jewish exorcism was a later development is untrue, as the oldest rabbinic sources make clear. The religion of the Incarnation certainly assumes the reality of Jesus' human nature, and His share in the mind of His times. Moreover, the phenomena described as demonic possession represent a widespread ancient popular diagnosis, which was all but universal at one time, and survived for many centuries, in fact down to the rise of modern scientific medicine and psychology. Homer held that a wasting sickness was caused by a demon, and the Greek dramatists generally attributed madness and religious frenzy to demonic (or divine) possession. The Egyptians located

a demon in each of the thirty-six members of the body; their presence was the cause of disease, which was healed by their expulsion. Seven evil spirits are grouped in Babylonian mythology (cf Mt 12^{45}, Mk 16^{9}, Lk 8^{2} 11^{26}), and these with their subordinate genii kept men in continual fear and were thought to be able to occupy the body and produce any kind of disease (see also *Testaments of the XII Patriarchs*, Reuben 2–3). In almost every civilization, ancient as those of the E. or rude as those of central Africa, a similar conception has prevailed; and this points toward a certain rudimentary truth about which even the most advanced modern researches have not yet reached an agreement. The exploration of man's inner world is still far from ended. Even to-day there are mental and physical states which can hardly be better described (not diagnosed) than as apparent possession by an evil spirit or spirits. By the same token, in areas where demonic possession is a common belief, the phenomena are likely to be more commonly found; the power of mass suggestion must be taken into account, especially in regions and at times of unusual tension, terror, oppression or persecution, or among peoples commonly given to superstition, or persons suffering from spiritual torpor and ennui. See also article, DEMONS AND DEMONOLOGY; SATAN, **4**.

R. W. M.—F. C. G.

POST.—Used in AV and RV for 'a bearer of despatches,' 'a runner,' in 2 Ch $30^{6, 10}$, Est $3^{13, 15}$ $8^{10, 14}$, Job 9^{25}, Jer 51^{31}; RSV has 'courier' save in Job 9^{25} and Jer 51^{31}, where it has 'runner.' The 'runners' were chosen from the king's bodyguard, and were noted for their swiftness, whence Job's simile in 9^{25}.

POST, DOORPOST.—See HOUSE, **6**.

POT.—See HOUSE, **9**.

POTIPHAR.—A high Egyptian official in the story of Joseph (Gn 37^{36} 39^{1}). The more correct form of the name is probably **Potiphera** (Joseph's father-in-law, Gn $41^{45, 50}$ 46^{20}) which means 'He whom Re' has given.' The name has not been found in Egyptian documents, but many names occur which are formed in a similar way, *e.g.* Pa-di-Amun 'He whom Amun has given.' They are first encountered in the 21st Dynasty and are very common in the 22nd Dynasty. The other two Egyptian names in the Joseph story, Asenath and Zaphenath-paneah, likewise belong to the later periods, and all three are specially frequent in the 22nd Dynasty (950–730 B.C.), *i.e.* about the time of the composition of the J and E documents and centuries after the events of the Joseph narrative could have taken place. Potiphar was entitled 'captain of the guard' and 'officer' of Pharoah, the office which he held under him has not been precisely identified. Joseph was sold to Potiphar, whose wife attempted to seduce him: she accused him falsely and he was cast into prison. A story with a similar motif, known as the 'Tale of the Two Brothers' was current in Egypt in later times and has often been compared with the story of Joseph and Potiphar's wife.

T. W. T.

POTIPHERA.—The father of Joseph's wife **Asenath** (q.v.) and priest of On, *i.e.* probably high priest of Re', the Sun-god, Gn $41^{40, 45}$ 46^{20}. He would thus be the head of the most learned sacerdotal college in the country, and of high rank. The consonants in the Hebrew are an almost exact transcript of the Egyptian *Peteprē'*, 'Given by Re',' a late name found from the 22nd Dynasty onwards; only the letter *w* (represented by English *o*) is puzzling.

F. Ll. G.

POTIPHERAH.—AV form of **Potiphera** (q.v.).

POTSHERD.—See POTTERY.

POTSHERD GATE.—The name of a gate in Jerusalem leading to the Valley of Hinnom, Jer 19^{2} (RV 'the gate **Harsith**,' RVm 'the gate of potsherds,' *i.e.* where they were thrown out. AV deriving the word from *ḥeres* 'sun,' has 'the east gate'; AVm 'the sun gate').

POTTAGE.—See FOOD, **3**.

POTTER, POTTERY.—The potter is mentioned frequently in Scripture. He is the 'former' or 'fashioner' (*yōṣēr*), cf Is 29^{16} 41^{25}, Jer $28^{2-4, 6}$, La 4^{2}, 1 Ch 4^{29}). The term thus arose when hand-moulding was still customary, and covered not only the making of pots but also the related activity of making clay figurines. Hence the deity is imagined as 'forming' man out of 'dust from the ground' (Gn 2, mention of clay, *ḥōmer*, *ṭīṭ*, *ḥeres*, being avoided because of the desired link with man's final returning to dust, Gn 3^{19}). In Zec 11^{13}, however, the potter is not meant, though it was so understood in Mt 27^{7}, but rather the smelter of metal. The occupation of the potter required skill and we hear of families or groups residing in several Judaean villages, who carried on this craft in the royal service (1 Ch 4^{23}).

The technique of pottery making was at first that of moulding over a form, or building up with coils of clay in a gradual process, leaving each coil time to harden. American Indians never got beyond this level. The discovery of the potter's **wheel** (Jer 18^{3}) greatly improved the product. Here a ball of clay is placed at the centre of the wheel, which is swiftly turned by the potter or a helper, and acts upon the clay. Models and portrayals of the potter at work at the wheel have been found in Egyptian tombs. Baking in a kiln followed the fashioning. The chief methods used for decorating pottery were the slip, burnishing, and painting; glazing was never achieved by Canaanites or Israelites. The slip is simply putting a veneer of finer grade clay over the visible part of the object made of coarse clay; this made possible the attainment of a different colour as well. The 'wash' is the veneer put on after the object has been baked and is the cheapest process. Burnishing is effected by pressure of a tool against the vessel, as it is turned on the wheel, for the purpose of sealing the pores; it does not remove substance as does the polishing of pottery. Painting of pottery was done before baking, and required considerable skill to prevent blotting.

Earthenware vessels were easily broken, and so the pieces or **potsherds** (Jer 18^{1} 19^{1f}; **sherds** for short), are found in great numbers in the ancient moulds of cities of the Near East. Little attention was paid to them until Sir Flinders Petrie in his 1890 excavations at *Tell el-Ḥesi*, a 'mound of many cities' (as his successor in the excavations there called it), recognized that each period had its distinct pottery. With the help of datable objects known from Egypt he was able to set up a rough pottery chronology. But it was not until after the First World War that this great archaeological key to the history of the occupation of ancient ruin mounds was properly exploited. The excavations carried on 1926–32 by Albright at *Tell Beit Mirsim*, a site occupied from late 3rd millennium to the Exile, first set up an accurate and elaborate chronology for Palestinian pottery. Numerous other Palestinian excavations have since then greatly enriched the picture, especially for the periods antedating this city. The excavations in other Near Eastern lands naturally created the question of the extent of territory over which certain styles of pottery ranged at the same periods. With this and all other matters of craft, art, and architecture, archaeology has become so intricate a study that it has emancipated itself from the control of theologian and philologist and become an independent speciality.

Pottery making, as revealed by the excavations, goes back to Chalcolithic times and earlier. In the Early Bronze Age (Period I) there was a different pottery style prevalent in northern Palestine (both E. and W.) from that in southern. The band-slip ware with criss-cross patterns prevailed in the north; the painted pottery (red and brown colours being used) with parallel or wavy lines in the south. About the time of the 1st Egyptian Dynasty Palestine was in the Period II of Early Bronze. At this time we find hardware, covered with burnished red slip, prevailing. The designs sometimes are quite intricate. Early Bronze III is synchronous with Egypt's 3rd-5th Dynasties. This is the time of the red and black burnished *Khirbet Kerak* ware, ornamented with geometrical designs and spirals, sometimes ribbed

and fluted. Toward the end of Early Bronze the 'envelope ledge-handle' provides a characteristic criterion. Middle Bronze I begins *c* 2000 B.C. At this period there prevailed the calciform pottery, which seems to have spread to Palestine from Syria. It gets its name from the chalice-type of vase. In Middle Bronze II red or cream slip was used and burnished to give a metallic lustre to pottery; shapes were very graceful and finely curved. The *Tell el-Yehūdîyeh* pear-shaped jug, burnished black and with geometric designs, has long been recognized as a characteristic product of the Hyksos Age. In the Late Bronze Age a great deal of **Mycenaean ware** was imported (*c* 1400–1250 B.C.). Cypriote ware with a base-ring and usually black, brown, or dark grey also occurs. Typical Philistine pottery dates from 1150–1000 B.C. It consists notably of **bowls** with two handles, buff in colour with a creamy grey wash. In the Iron Age I the large storage jar with a collared rim, which yielded to a different rim *c* 1000 B.C., is the characteristic ware. Pottery, with wheel-burnished red slip over light buff clay, such as was found at Samaria, dates from Iron II. In Iron III Greek influence becomes apparent, and Ionian and Attic black-figured pottery appears on the scene. In the 5th cent. Ionian black-figured ware yielded to Attic red-figured ware.

It is worthy of note that **jar handles** of the Persian period have been found in Judah that were stamped with a word and a circle (indicating royal Persian property). The word is most often *Yhd* (Judaea), sometimes *Jerusalem*. Uncertain is the meaning of *mṣh*, with a line under the second letter; some hold it to stand for *Mizpah*. Of great interest is the pottery of the Maccabaean and Roman periods found at the *Qumrân* settlement, notably the jars with covers in which the scrolls of Cave 1 were stored (cf Jer 32^{14}); the larger ones are 28¾ inches high and have a maximum diameter of about 10 inches. The smaller type has small looped handles. E. G. K.

POTTER'S FIELD.—See AKELDAMA.

POUND.—See MONEY, 7; WEIGHTS AND MEASURES, III.

POVERTY.—1. In the OT.—The character and degree of the poverty prevalent in a community varies with its social development. Poverty is more acutely felt, and its extremes are more marked, where city-life and commerce have grown up than where the conditions of life are purely nomadic or agricultural.

The *causes of poverty* referred to in the OT (apart from those due to individual folly) are especially (*a*) bad seasons, involving failure of crops, loss of cattle, etc. (cf 2 K 8^{1-7}, Neh 5^{3}); (*b*) raids and invasions; (*c*) land-grabbing (cf Is 5^{8}); (*d*) over-taxation and forced labour (cf Jer 22^{13f}); (*e*) extortionate usury, the opportunity for which was provided by the necessity for meeting high taxation, and the losses arising from bad harvests (cf Neh 5^{1-6}).

Amongst nomads, only the simplest forms of personal property existed; all else, particularly the cattle, belonged to the clan. Within the clan, the sense of kinship was powerful; all shared the same food, wore the same kind of clothes, and lived in tents. In the earlier period of Israel's history, when the tribal system flourished, there was, accordingly, little distinction between rich and poor. But as a settled society developed, this distinction became more pronounced. Nathan's parable (2 S 12^{1-6}) implies that in the time of David, there were rich men capable of oppressing the poor, though there was little permanent poverty. Matters were maintained in a state of equilibrium so long as the land system, under which all free Israelite families possessed a patrimony (cf Naboth and his vineyard) remained in working order. In the earlier legislation of JE (cf especially the Ten Commandments, Ex 20^{1-17}, and the 'Book of the Covenant,' Ex 20^{23}–23^{33}), the few references that do occur (*e.g.* Ex 22^{25} 23^{6}) do not suggest that poverty was very widespread or acutely felt. Neither riches nor poverty are a problem in the older literature of Israel. During the period of the later monarchy, however, commerce, city-life and luxury grew apace, and the greed and heartless oppression of the rich, the corruption and perversion of justice which this state of things brought in its train, were constantly denounced, especially by the great prophets of the 8th cent. (cf, *e.g.* Is 1^{23}, Am 4^{1} 6^{1ff}, Mic 2^{1ff}).

The Deuteronomic legislation (7th cent.) bears eloquent testimony to the prevalence of poverty under the later monarchy (cf Dt 10^{17-19} 14^{28-29} 15, 23^{19-20} 24^{10-21} 26^{12-15}), and in one famous sentence predicts its permanence ('the poor shall never cease out of the land,' 15^{11}; cf Mk 14^{7}).

The classes of poor more particularly mentioned are widows, orphans, and the sojourners, or resident strangers, who possessed no landed rights (*gērîm*). The Levites also are specially referred to in Deuteronomy as an impoverished class (cf 12^{12-19} 18)—a result of the centralization of worship in the one sanctuary at Jerusalem. All classes of the poor are the objects of special solicitude and consideration in the Mosaic legislation, particularly in the Priestly Code (cf, *e.g.* Lv $5^{7, 11}$ 19^{9-15} etc.).

For a long time after the Exile and the Return the Palestinian community remained in a state of miserable poverty. It was a purely agricultural society, and suffered much from contracted boundaries and agricultural depression. The 'day of small things' spoken of by the prophet Zechariah (4^{10}) was prolonged. A terrible picture of devastation (produced by a locust plague) is given by the prophet Joel (ch. 1), and matters were aggravated during the last years of Persian rule (down to 332), and by the conflict between the Seleucids and Ptolemies for the possession of Palestine, which raged for considerably more than a century (312–198). During the earlier part of the post-exilic period, the wealthy Jewish families for the most part remained behind in Babylon. In the later period, after the conquests of Alexander the Great (from 322), prosperous communities of Jews grew up in such centres as Antioch and Alexandria (the Greek 'Dispersion'). Slowly the Palestinian community grew in importance; for a time under the Maccabees there was a politically independent Jewish state. A certain amount of material prosperity ensued. Jerusalem, as being a centre of pilgrimage, received large revenues from the Jewish pilgrims who thronged to it: a Temple-tax swelled the revenues of the priesthood. The aristocratic priestly families were very wealthy. But the bulk of the priesthood still remained comparatively poor. The Jewish community of Palestine was still mainly agricultural, but more prosperous under settled government (the Herods and the Romans); while Galilee became a hive of industry, and sustained a large industrial population (an artisan class).

In dealing with poverty, the Jewish legislation displays a very humane spirit. Usury is forbidden: the poor are to have the produce of the land in Sabbatical years: and in Deuteronomy tithes are allotted to be given them (14^{28}, etc.); they are to have the right to **glean** ($24^{15, 21}$), and in the Priestly Code there is the unrealized ideal of the Jubilee Year (Lv 25; cf Dt 15^{12-15}). All these provisions were supplemented by **almsgiving**, which in later Judaism became one of the most important parts of religious duty. See ALMS, ALMSGIVING.

On the whole Israelite thinkers attach no intrinsic value to the economic state of poverty, though riches and injustice are often closely linked. As riches were a blessing, poverty was an evil (Pr 10^{15} 31^{7}); and it was therefore a problem of faith when poverty overtook the righteous. In later Judaism it is understood that both the rich and poor are tested, the rich as to whether they will open their hands to the poor, the poor as to whether they will accept their sufferings without murmuring.

The parallel terms *'ānî* and *'ānāw* (poor, humble), in the Psalms, are typical descriptions of the man who suffers from some form of social oppression, and who displays a proper humility before God in the time of his

need. These psalms, no doubt composed specially for the use of such people at the sanctuary, are the best indication of the religious understanding of poverty in the OT.

The voluntary and deliberate acceptance of poverty, practicable only in celibate, community life, was a characteristic of the Qumrân community. The (probably) earlier Damascus Covenanters made no such renunciation of property or marriage. But at Qumrân, according to the *Manual of Discipline*, those who 'dedicated themselves' brought all their property into 'the community of God,' in order that it might be regulated 'according to his righteous counsel' (vi. 20). The novice continued technically to own his property for the period of his novitiate, but in the second year renounced it. Josephus gives similar information about the Essenes (whom many scholars associate with the Qumrân sect).

2. In the NT.—In the NT period, conditions were not essentially altered. The exactions of tax-collectors seem to have been acutely felt (notice especially the collocation 'publicans and sinners'), but **almsgiving** (q.v.) was strongly inculcated as a religious duty, the early Christians following in this respect the example set by the synagogue (cf Ro 12^{13}); Jesus Himself reinforced the Jewish insistence on almsgiving (Lk 12^{33}), which presupposes private property. He nowhere taught the absolute renunciation of property, but frequently stressed the importance of indifference to possessions. The term 'poor' is found prominently in His teaching with the religious connotation characteristic of the Psalms. 'Blessed are you poor' (Lk 6^{20}) is correctly paraphrased in Mt 5^{3} as 'poor in spirit.' The experiment by which the Jerusalem Church pooled and shared its wealth (Ac 2^{44} 4^{34-37}) has little to do with 'communism.' It was rather an economic expression of the fellowship of the early believers who expected Christ's Second Coming at any moment. Some scholars have thought that the experiment involved a realizing of capital which was economically disastrous, and caused the impoverished church to be dependent on St. Paul's 'collections' for 'the poor saints at Jerusalem' (Ro 15^{26}, Gal 2^{10}). The early generations of Christians were drawn mostly from the poorer classes (slaves or freedmen), but the immediate disciples of our Lord belonged rather to what we should call the lower middle class—sturdy Galilaean fishermen, owning their boats, or tax-collectors. St. Paul said to the Corinthians: 'Not many of you were powerful, not many were of noble birth' (1 Co 1^{26}); on the other hand, it is plain from Acts that some Christians were well-to-do. Jesus Himself claimed to have nowhere to lay His head and seems to have been dependent on hospitality. St. Paul recognized that His whole life was, in a profounder sense, a voluntary acceptance of poverty for the enrichment of mankind (2 Co 8^{9}). See also WEALTH. G. H. B.—D. R. J.

POWER.—In general the word (Gr. *dynamis*) means ability for doing something, and includes the idea of adequate strength, might, skill, resources, energy, and efficiency, either material, mental, or spiritual, to effect intended results. Strictly speaking, there is no real power or authority in the universe, but that which is ultimately of God (Ps 62^{11}, Jn 19^{11}, Ro 13^{1}). But this Almighty One has originated innumerable subordinate powers, and some of these are possessed of ability to perform acts contrary to the will and commandments of the Creator. And so we may speak of the power of God, or of man, or of angel, or of demon, or of powers inherent in things inanimate. Inasmuch as in the highest and absolute sense 'power belongeth unto God,' it is fitting to ascribe unto Him such doxologies as appear in 1 Ch 29^{11}, Mt 6^{13}. In Mt 26^{64} the word 'power' is employed for God Himself, and it is accordingly very natural that it should be often used to denote the various forms of God's activity, especially in His works of creation and redemption. Christ is thus the power of God both in His Person and in His gospel of salvation (1 Co $1^{18, 24}$, Ro 1^{16}). The power of the Holy Spirit is also another mode of the Divine activity. By similar usage Simon the sorcerer was called 'that power of God which is called Great' (Ac 8^{10}), *i.e.* a supposed incarnation of the power of God. The plural **powers** is used in a variety of meanings. (1) In Mt 7^{22}, Lk 10^{13}, Ac 2^{22} 8^{13} (here 'miracles' RSV), 'powers,' or 'mighty works,' along with 'signs and wonders,' are to be understood as miracles, and were concrete manifestations of supernatural power. (2) 'The powers of the heavens' (Mt 24^{29}, Mk 13^{25}) are understood by some as the forces inherent in the sun, moon, stars, and other phenomena of the heavens, by virtue of which they 'rule over the day and over the night' (Gn 1^{18}); by others these heavenly powers are understood to be the starry hosts themselves conceived as the armies of the heavens, or the astral beings which control them. (3) Both good and evil angels are designated by the terms '**principalities and powers**' in such passages as Eph 1^{21} 3^{10} 6^{12}, Col 1^{16} $2^{10, 15}$, 1 P 3^{22}. The context of each passage must show whether the reference is to angels or demons. In Eph 2^{2} Satan is called '**the prince of the power of the air,**' and these powers are further defined in 6^{12} as 'world-rulers of this darkness, the spiritual hosts of wickedness in the heavenly places.' These are thought of as so many ranks of evil spirits who are ever at war with God's hosts, and seek to usurp the heavenly regions. (4) In Ro 13^{1} civil magistrates are called 'the higher powers' ('governing authorities' RSV) because of their superior rank, authority, and influence as officers ordained of God for the administration of justice among men (cf Lk 12^{11}, Tit 3^{1}). (5) 'The powers of the age to come' (He 6^{5}) are best understood of all supernatural gifts and spiritual forces which belong to the age or dispensation of the New Covenant, of which Jesus is the Mediator (cf He 9^{15}). The supernatural forces of the Age to Come, now conceived as near at hand, are already being manifested in the present age, which is approaching its end. They doubtless include the 'greater works' (Jn 14^{12}) which Jesus assured His disciples they should do after His going to the Father and sending them the Spirit of truth. See AUTHORITY, KINGDOM OF GOD.

M. S. T.—F. W. G.

POWER OF THE KEYS.—See KEYS [POWER OF THE] and PETER.

PRAETOR.—See MAGISTRATE, PROVINCE.

PRAETORIAN GUARD.—See next article and GUARD.

PRAETORIUM (Gr. *praitōrion*) occurs only once in AV (Mk 15^{16}). Elsewhere it is represented by 'common hall' (Mt 27^{27}, RV '**palace**'), 'judgment hall' (Jn $18^{28, 33}$ 19^{9}, Ac 23^{35}; RV in all '**palace**') and 'palace' (Ph 1^{13}, RV '**praetorian guard**'). But RSV consistently reads 'praetorium' (Mk 15^{16}, Mt 27^{27}, Jn $18^{28, 33}$ 19^{9}, Ac 23^{35}, Ph 1^{13}—praetorium or praetorian guard). The word at first denoted the officers' headquarters in a Roman camp, a space within which stood the general's tent, the camp altar, the *augurale*, and the *tribunal*; then it came to mean the military council meeting there. Thus the term praetorium has two aspects, a local and a military one. The meaning of the word depends on which aspect is emphasized. It may mean the praetorian cohorts or their barracks (Suet. *Tib.* 36, *Nero*, 9; Tac. *Hist.* ii. 11). There is, however, no example for these military meanings in Koine Greek, where the local aspect is stressed. Praetorium usually signifies the residence of the 'praetor' or of another provincial governor (Mt 27^{27}=Mk 15^{16}, Jn $18^{28, 33}$ 19^{9}) as the centre of his political and judicial authority (Ac 23^{35}). It can also refer to the official residence of provincial officials or to the villas of high officials in Italy, especially the Emperor's residence outside Rome. In the Gospels *praetorium* perhaps (but see PILATE) stands for the palace of Herod the Great, occupied by Pontius Pilate—a splendid building, probably in the western part of the city. Ph 1^{13} probably refers to the praetorium as the judicial court where Paul gives witness 'that his imprisonment is for Christ'; but a reference to the barracks of the praetorians, the Imperial bodyguard, is not impossible. Originally the *Cohors Praetoria* was a

company attached to the commander-in-chief in the field. Augustus retained the name, but raised the number to ten cohorts of 1000 each, quartering only three cohorts in the city at a time. Tiberius brought them all to Rome, and placed them in a fortified camp, at the northern extremity of the Viminal. Under Vitellius their number was raised to 16,000. W. E.—**J. C. B.**

PRAISE is the recognition and acknowledgment of merit. Two parties are involved: the one possessing at least supposed merit, the other being a person who acknowledges the merit.

Men may praise men. Forms of praise may be used without genuine feelings of praise, and extravagent praise may be rendered intentionally, because of the advantage that will be gained thereby. This is downright hypocrisy, and the whole burden of the moral teaching of the Bible, and especially of Christ, is against hypocrisy. Again, the estimate of values may be so completely false that praise may be felt and expressed genuinely in cases where it is undeserved. And Jesus' whole influence is directed towards the proper appreciation of values so that only the good shall appear to us good.

In its common Biblical use, however, *praise has God for its object.* This restriction does not involve an essential difference either in the praise or in the sense of moral values. The difference lies rather in the greater praiseworthiness of God. Praise of God is of course called forth only as He reveals Himself to men, only as men recognize His activity and His power in the event or condition which appears to them adequate to call out praise. Men praise God in proportion as they are religious, and so have conscious relations with God. The praise-worthiness of a god is involved in the very definition of a god. If men postulate a god at all, it is as a being worthy to be praised. Every thought and act by which men come into relation with God is a thought and an act of praise. Petition is justifiable only if behind it is the belief that God is worthy of such approach. If the act is confession of sin, the same is true, for confession is not made to a being who does not hold a place of honour and praise. If some active service is rendered to God, this subjugation of ourselves to Him can be explained only by the conviction that God is in every way entitled to service.

Moreover, as in the case of praise of men, there is a very clear distinction to be drawn between genuine and hypocritical ascription of praise to God. The temptation to the latter is extreme, because of the immense gain presumably to be secured by praise; but the hypocrisy and the sin of it are equally great. Indeed, the seriousness of the offence is evident when one reflects that he who praises God knows full well the praiseworthiness of God, so that if he praises while the genuine feeling is lacking and the sincere act of praise is unperformed, only moral perversity can account for the hypocrisy.

In order to genuineness, praise must be *spontaneous.* It may be commanded by another human being, and the praise commanded may be rendered, but the real impelling cause is the recognized merit of God. God may demand praise from His creature in commands transmitted to them through prophets and Apostles, but if man praises Him from the heart, it is because of the imperative inseparable from the very being and nature of God.

We are prepared, then, to find that in the Bible praise to God is *universal* on the part of all who acknowledge Him. It is the very atmosphere of both dispensations. It is futile to attempt to collate the passages that involve it, for its expression is not measured by special terms or confined to special occasions. The author of Gn 1, like every reader of the chapter, finds the work of creation an occasion for praising God. The chapter is a call to praise, though the word be not mentioned. We have but to turn to the Psalms (*e.g.* Ps 104) to find formal expression of the praise that the world inspires.

The legal requirements of the Law likewise depend for their authority with men upon the recognition of the merit of the Law-giver. 'Ye shall be holy, for I Yahweh your God am holy,' has no force except for him who acknowledges holiness in God who commands; and obedience is the creature's tribute of praise to the holy God.

The whole history of Israel, as Israel's historians picture it, has in it the constant element of praise to Israel's God: we turn to the Psalms (*e.g.* Ps 102) or to other songs (*e.g.* Ex 15), and find the praise of the heart rising to formal expression.

In the NT, praise of Christ and of God in Christ is the universal note. It is the song of those who are healed of their sicknesses, or forgiven their sins; of Apostles who meditate on the gospel message and salvation through Christ; of those who rehearse the glories of the New Jerusalem as seen in apocalyptic vision.

We are also prepared by this universality to find that praise cannot form a topic for independent treatment. There is no technical terminology to be examined in the hope that the etymology of the terms used will throw light upon the subject, for in this case etymologies may lead us away from the current meaning of the common words employed. The history of praise in the OT and the NT is the history of worship, Temple, synagogue, sacrifice, festivals. The literature of praise is the literature of religion, whether as the product of national consciousness or of personal religious experience.

It will suffice to mention one or two points of interest which the student may well bear in mind as he studies the Bible and consults the articles on related subjects.

The Hebrew word oftenest used for praise is *hillēl*, perhaps an onomatopoetic Semitic root meaning 'cry aloud.' An interesting feature is the use of the imperative in ascriptions of praise. Taken literally, these imperatives are commands to praise; but they are to be taken as real ascriptions of praise, with the added thought that praise from one person suggests praise from all. Cf the doxology 'Praise God from whom all blessings flow,' which consists solely of four imperative sentences.

The imperative of the Hebrew verb, followed by the Divine name, gives us **Hallelujah**, *i.e.* 'Praise ye Jah.' The word is used at the beginning and end of Psalms, apparently with liturgical value. Cf also the Hallel Psalms (113–118, 136). The noun from the same root appears as the title of Ps 145. See HALLEL.

The form which praise took as an element of worship in Israel varied with the general character of worship. It was called forth by the acts of Yahweh upon which the Israelites were especially wont to dwell in different periods. For personal and family favours they praised Him in early times with forms of their own choosing. When the national consciousness was aroused, they praised Him for His leading of the nation, in forms suitable to this service. As worship came more and more to conform to that elaborated for, and practised in, the royal sanctuary—the Temple at Jerusalem—the forms of praise could not fail to share the elaboration and to become gradually more uniform. To what extent these modifications took place is to be studied in the history of OT religion.

Praise was certainly a part of the varied service rendered by the Levites in the Temple ritual of later Judaism, and an examination of that ritual will show how far praise was given over to them, and how much was retained by the congregation. The Psalms are certainly adapted to antiphonal rendering. Did the people respond to the priests, or were there two choirs? [This word occurs in EV only in RVm of Neh 12^8, where RSV has 'songs of thanksgiving.'] The element of praise in the synagogue worship is an interesting and disputed question. Cf also ADORATION, HYMN.

O. H. G.

PRAYER.—Prayer in the Bible commonly means communion with God, and that implies the belief that God is a person who seeks such approach from man and has ordained it as the way by which man comes to know Him, and to know himself as a creature made by

Him and endowed with spiritual capacities. But prayer can be made by a man before he is aware of the possibility of such communion, or even has thought of the possibility of it. His prayer may be a cry of distress such as 'Oh, my God,' a cry, and nothing but a cry. Or it may be an outcry for help when 'human helpers fail and comfort flees' (*e.g.* Ps 130[1]).

If there are tokens that such prayer is answered, the man who makes it comes to believe in it and practise it. If he believes that he gets no answer, he may conclude there is no God and that such prayer is a wishful act that can bring no help for a man's need. But man cannot easily rest in unbelief. The rhythm of nature, for example, upon which his livelihood depends, appears to him to be ruled by a god or God, and he makes prayer or an offering that the beneficent rhythm of nature may continue unbroken. Even if he speaks no word, but simply makes his offering on an altar, such as an offering of the first fruits of his fields or of his flocks and herds, that is an acted prayer which expresses the petition of the worshipper who offers it.

It is said that the prayer of a wicked man is an abomination to the Lord (Pr 15[29] 28[9]), but that is not wholly true. When a wicked man offers a prayer formally or hypocritically, like those who, for a pretence, make long prayers (Mt 23[14], Mk 12[40]), it is true. But in the case of one like the publican who cried, 'God be merciful to me, a sinner' (Lk 17[13]), it is not true. The cry, 'O God, if there be a God, hear my cry' may arise out of unbelief and unhoping hope; but it may be a heart-cry from a wicked man who has found life empty, and may be the first step in his return to God and to repentance. But thereafter prayer to God arises from knowledge of God on the one hand and of human need on the other, and it may express itself in many forms.

1. Terminology.—(*a*) In the OT the most usual word (*t*ᵉ*phillāh*) and the related verb are possibly derived from a root meaning 'to cut,' which would have reference to a cultic act going back to the days when devotees cut their flesh in ecstatic frenzy (cf 1 K 18[28]). It has been conjectured by some that the Jewish *t*ᵉ*phillîn* (phylacteries) originated as substitutes for such marks of laceration, but *t*ᵉ*phillāh* may mean merely intervention. In the NT it is the classical Greek word (*proseuchomai*) which is commonly used. Unlike most OT words, this is used for prayer to God only. The simple form of the verb (*euchomai*) means by itself little more than 'wish' (*e.g.* Ro 9[3]), and needs supplementing to mean pray (*e.g.* 2 Co 13[7]). The corresponding noun (*euchē*) usually means 'vow' (*e.g.* Ac 18[18]), but 'prayer' in Ja 5[15].

(*b*) Several words are used which mean 'to call.' 'To call on the Name' is to call upon God, to worship Him (*e.g.* Gn 4[26]). Others mean to call for the redress of wrongs (*e.g.* Jg 3[9]), or for help in trouble (*e.g.* Ps 72[12]). Another means to utter a ringing cry of joy or of sorrow (*e.g.* Ps 17[1]). In the NT 'to call on the Name' is to invoke God in prayer (*e.g.* Ac 9[14]).

(*c*) It is natural in this connexion to find words which mean to 'seek' (*e.g.* Am 5[4]; a different verb is used in Hos 5[15] 'to seek God's face'), 'ask' (*e.g.* Ps 105[40]), although some of these verbs (for instance 'seek' as in Am 5[4]) are not used exclusively of seeking God.

In the NT the verbs meaning 'to seek' and 'to ask' may be used of requests or inquiries made to man (*e.g.* Ac 8[34]), and do not of themselves connote worship. One word denotes the request of the *will* (*e.g.* Mt 6[8]); another the request that arises out of the awareness of a *need* (*e.g.* Ac 8[22]); another denotes the *form* of the request (*e.g.* Jn 17[9]; cf RVm).

(*d*) Some verbs are notably anthropomorphic in meaning, *e.g.* 'to encounter' or 'fall upon' in order to supplicate or intercede (*e.g.* Jer 7[16]); 'to make the face of God soft or pleasant,' *i.e.* 'to smooth His face,' to appease Him or gain His favour (*e.g.* Ex 32[11]), or to seek God's favour (*e.g.* Dt 32[3], 1 K 8[33, 47], Ps 30[9] 142[2], etc.).

(*e*) Other verbs have reference to the suppliant's state of mind: prayer is an 'outpouring of the soul' (*e.g.* Ps 62[8]) or a 'meditation' (*e.g.* Job 15[4] RVm); or 'complaint' (*e.g.* Ps 142[2]); or the original connotation may be physical, 'to bow down,' 'to bow to the ground,' 'to whisper' (Ezr 6[10], cf Eph 3[14], Is 26[16] RVm).

It should be noted that symbolic action was often used as an act of prayer, or as a reinforcement of a said prayer. Water was poured upon an altar as an acted or representative prayer for rain. The first fruits of the field or the flock were offered as a prayer for the full increase of the fields or of the flocks. When Moses held his arms outstretched above him while the Israelites battled with Amalekites, it was at once a prayer for their victory and a posture that represented the communication of his great spirit to his people.

2. Place, time and circumstance.—(*a*) PLACE.—There were from early times in Israel's history certain sanctuaries which stood out prominently, and which must have been frequented by worshippers, *e.g.* Shiloh, where the Ark rested (1 S 1[9ff]), Mizpah (1 S 7[5], 1 Mac 3[46]), Gibeon (1 K 3[4ff]). At these sanctuaries the annual festivals were celebrated (cf Ex 23[14–17], etc.), and the great acts of communal worship took place. These festivals were related to the agricultural seasons, and at them the people made the prescribed offerings and the priest or king, representing the people, fulfilled the traditional ritual that the bounty of nature might be continued. But at a later period the festivals became associated with decisive periods or events in Israel's history, and so became commemorative of them. After the fall of the northern kingdom in 721 B.C. and, more especially, after the reformation of Josiah in 621 (cf 2 K 22–23), the Jerusalem sanctuary came to be a place of supreme importance in the religious life of the people. Thereafter the Temple was the place 'where' (Is 37[14ff] 56[7]) or (for the Jews of the diaspora) 'toward which' prayer was offered (1 K 8[29ff], etc., Ps 28[2], Dn 6[10], 1 Es 4[58]). The destruction of the Temple in 586 B.C. and the diaspora of the Jews in Babylon and Egypt caused the development of the synagogue as a place of prayer and instruction in the Law. Where there was no synagogue, a spot outside the town was chosen, near some stream, for hand-washing before prayer (Ac 16[13, 16]). In the NT we find Apostles going to the Temple (Ac 3[1]); and St. Paul attended the synagogue on his mission journeys (Ac 17[1f]). Distinctively Christian worship was held in ordinary buildings (Ac 1[13f] 4[23f] 12[12], Col 4[15])—a practice made natural by Jewish arrangements for private prayer (Dn 6[10], Jth 8[5] 10[2], Mt 6[6], Ac 10[9, 30]) or for Passover celebration (Mt 26[18]).

(*b*) TIME.—The occasions of the great festivals have already been mentioned. Private prayer at a sanctuary or in a home could be made at any time in the choice of the worshipper, but it became a custom to pray thrice daily, *i.e.* at the 3rd, 6th and 9th hours (cf Dn 6[10], Ac 3[1] 10[9, 30]; cf 2[15]). For instances of grace before meat cf 1 S 9[13], Mt 15[36], Ac 27[35], and the Paschal meal.

(*c*) CIRCUMSTANCE.—(i) *Attitude*: standing (*e.g.* Gn 18[22], 1 S 1[26], Neh 9[5], Mk 11[25], Lk 18[11, 13] [the usual Jewish mode, not followed by the early Christian Church save on Sundays and the days between Easter and Whitsun]); kneeling (Ps 95[6], Is 45[23], 1 K 8[54], Ezr 9[5], Dn 6[10], Lk 22[41], Ac 7[60] 9[40] 20[36] 21[5], Eph 3[14]); prostrate, face to the ground (Ex 34[8], Neh 8[6], 1 Es 8[91], Jth 9[1], 2 Mac 13[12], Mt 26[39]); face between knees (1 K 18[42]); sitting (? 2 S 7[18]); hands uplifted (Ps 28[2] 63[4] 134[2], La 2[19] 3[41], 2 Mac 3[20], 1 Ti 2[8]); or extended [symbol of entreaty to God or reception by God ?] (Ex 9[29], 1 K 8[22], Is 1[15], Ezr 9[5], Ps 77[2]).

(ii) *Forms of Prayer*: Set forms of prayer are mentioned (Dt 21[7f] 26[5–15]) and, of course, there is the Lord's Prayer in the NT (Mt 6[9–13], Lk 11[2–4]); there is allusion to John the Baptist's instructions to his disciples on prayer (Lk 11[1]) which is given as the reason why Christ's disciples likewise asked for instruction; there is reference to Christ's repeated prayer (Mt 26[44]); and such words as 'ask and ye shall receive, seek and ye shall find, knock and it shall be opened unto you' (Lk 11[9]) emphasize the need for persistent prayer. But there is a condemnation of vain repetitions (cf Mt 6[7], Sir 7[14]).

3. Prayer in the OT.—(*a*) There are many references

to the prayers of ordinary people, but they are incidental references, and little information is given about the nature of such prayers. But there are many passages in the OT which describe leaders of the community at prayer. In these the belief is often exemplified that the prayer of a righteous man is energized with his own spiritual power and therefore may avail for others; and inasmuch as the righteous man knows God and is known of God, his prayer comes before Him with acceptance. Abraham pleads for the cities of the plain, that the righteous in them might not be destroyed with the wicked (Gn 18^{23ff}). Moses, at the burning bush, when engaged in an act of worship at an ancient sanctuary received his Divine command to be the leader and deliverer of his enslaved people in Egypt (Ex 3), and thereafter he is represented in the Pentateuchal narrative in communion with God (Ex 4, 5^{22} $6^{1, 10, 12, 28-30}$, Dt 3^{23-26}), making appeal to God in crises (Ex 5^{22}, Nu 11^{11}), and interceding time after time for his people in their need or in their rebelliousness (*e.g.* Ex $8^{12, 30}$ $32^{11, 13, 32}$, Nu 14^{13-19}; cf Jer 15^{1}), and in the prophetic blessing (Dt 33^{6-11}). Joshua prays after the defeat at Ai (Jos 7^{7-9}) and in battle (10^{14}); there is reference to Gideon's colloquy with God (Jg 6^{11-24}); and there are references in the Book of Judges to the Israelites' frequent cry for help (Jg $3^{9, 15}$ 6^{6}, etc.).

Samuel, like Moses, was a leader and prophet to his people, and time after time interceded on their behalf (1 S $7^{5, 8f}$ $8^{6, 10, 21}$ 12^{23} 15^{11}).

(*b*) David (leaving out the evidence from the Book of Psalms) makes prayer for guidance (1 S $23^{2, 4}$ 30^{8}), of confession (2 S 24^{17}) of adoration (2 S 7^{18-29}), although probably his most memorable prayer is that which he offers after the death of Bathsheba's child, which he interprets as an act of punishment inflicted on him because of the circumstances of his marriage with Bathsheba, a prayer which ends with the words 'I shall go to him but he shall not return to me' (2 S 12^{23}).

Solomon's great prayer for wisdom is recorded (1 K 3^{5ff}) and his intercession at the dedication of the Temple (1 K 8^{22-53}, 2 Ch 6^{12-42}).

(*c*) In the period of the divided kingdom, the prophets come into prominence as men of prayer. There is the record of Elijah's great intercessory act on Mount Carmel (1 K 18^{36f}), and, subsequently, of his communion with God on Mount Horeb (19^{9-11}); so also Elisha (2 K 4^{33} 6^{17}). Intercession in attitude, action, and word characterizes the canonical prophets. The reason lay in the prophet's Divine call, his vision of the Divine. will, and his proclamation of the Divine message, so that he was not only a prophet for God to the people, but an intercessor before God on behalf of the people. Hence a prophet can intercede to avert national disaster (*e.g.* Am $7^{2f, 5f}$, Is 63^{9-17}, and vividly, Jer 14, 15, in which there is persistent intercession by the prophet despite Divine discouragement). But such intercession for the people is shown particularly in the Book of Jeremiah in those passages which are commonly called the confessions of that prophet. And it is in the Book of Jeremiah that the prophet is bidden not to make intercession for his people because they are now wicked beyond salvation (Jer 7^{16} 11^{14} 14^{11}), and in the same book there occur the words 'If Moses and Samuel stood before me as intercessors, my mind could not be towards this people' (15^{1}).

(*d*) During the Exile prayer had a large place among the Jews owing to the cessation of sacrificial worship and the recognition that the judgment of God foretold by the prophets had come upon them. Consequently confession and a humble sense of dependence are prominent. The following passages are of particular importance in this respect: Is 63^{7} 64^{12}, Ezr 9^{5-15}, Neh 1^{4-11} 9^{5-38}, Dn 9^{4-19}. In the post-exilic period, especially with the development of the worship of the synagogue, prayer comes to have a very much greater place, and in the restored Temple the sin offering, which is an acted prayer, comes to great prominence; and morning and evening prayers are a regular practice in the Temple.

(*e*) The Book of Psalms might be properly called also the Book of Prayers (five only are so described specifically in title: 17, 86, 90, 102, 142, but cf 72^{20}, Hab 3^{1}). Throughout the Psalms, prayer—whether of the Psalmist as an individual or as representing the people—is specially an outpouring of the varied experiences, needs, desires, and aspirations of the human heart, and the Psalms often exhibit quite sudden transitions of thought and alterations of mood (*e.g.* 6^{7-10} 42, $69^{20, 27, 30}$ 77^{9-11} 109^{23-30}). The blessing sought is sometimes material or external, like deliverance from trouble or punishment; but often there is some spiritual aim, Ps 51 being an outstanding example, and Ps 119 being notable for repeated requests for inward enlightenment and quickening. The suitability of many of the Psalms as vehicles of prayer is indicated by the use of them made in the Christian Church to-day. In estimating Psalms which express vindictive and imprecatory sentiments, we should note that they express abhorrence of evil, and are not the utterance of private malice. But even if that interpretation could not be given in some instances of this element in the Psalms, it could be regarded as an illustration of human desire breaking into the act of prayer and throwing into sharp relief the gospel temper and teaching.

(*f*) In the Book of Job, Job himself often appears expostulating with God, and crying out for an opportunity to plead his cause and state his case before God; and his spiritual conflict culminates in the colloquy between God and Job, after which Job expresses his reverent submission of faith (42^{1-6}). And when thereafter the others are told to prepare a sacrifice that God's anger against them may be turned away, 'My servant Job will pray for you; for him I will accept' (42^{8}).

(*g*) The examples so far quoted of intercession describe intercessory prayer, but there are passages in the OT which speak of an intercessor, or interposer, who is willing to pay the price of the reconciliation to God of those for whom he prays, to bear the penalty and, by his own suffering—by his own death, if need be—to bring forgiveness and peace to others, removing their guilt and bearing their punishment. In some passages it is said that no ransom at all is possible (*e.g.* Ps 49^{7f}); and in the Book of Ezekiel it is said repeatedly that 'though these three men, Noah, Daniel, and Job, were in the land, they should deliver only their own soul by their righteousness, they could not save the land' (Ezk $14^{14, 16, 18, 20}$). But Dt 1^{37} leaves it to be inferred that Moses, by his exclusion from the promised land, interposed for his people and bore the penalty of their disobedience (Ex 32^{32}, Dt 3^{36} 4^{31ff}); and in Ezk 22^{30} (cf 13^{5}) 'And I sought for a man among them, that should make up the hedge, and stand in the gap before me for the land, that I should not destroy it; but I found none,' *i.e.* none was found to interpose, to be a saviour, who, by his righteousness could turn away the punishment, or by his labour and self-sacrifice could bear the burden and pay the price (cf Is 59^{16}).

(*h*) The greatest intercessor of the OT is, of course, the Suffering Servant, as described in Is 53. Moses and David, for instance, aware of their own sin, offered to bear the penalty due to their people. The Servant was without sin, and gave Himself willingly that his sacrifice might avail for others. He suffers for the community, and the community suffers in him.

4. Prayer in the Apocrypha.—The Apocryphal books—of fiction, fable, history, and apocalyptic and sapiental writings—are of unequal value, but contain many examples of prayers. Various kinds are represented, sometimes even an unworthy kind such as prayer for utterly selfish or evil ends (Jth 9, 11^{17f} 13^{4f}); prayers in time of national peril (1 Mac 3^{46-53} $4^{10, 24, 30-33, 40, 55}$ $7^{36-38, 41, 42}$, 2 Mac 1^{24-29} $10^{16, 25, 38}$ $13^{10-12, 14}$ etc.); confession (cf 2 Es 3^{4-36} and Bar 1^{15-38}); and supplication (cf Jth 4^{9-15}); and thanksgiving (cf 1 Es 4^{58-60}, To 8^{15-17} 11^{14-17} 13). In Bar 1^{11} there is a notable

example of prayer on behalf of heathen rulers. 2 Mac 12[44f] speaks of the efficacy of the prayers of the living on behalf of the dead, a practice not mentioned in the canonical Scriptures; and 15[12-14] speaks of the prayer of the dead on behalf of the living. Particular note should be taken of the Apocryphal book entitled 'The Prayer of Manasseh,' which expresses deep and genuine religious feeling, and is arranged in fine liturgical form. In the Book of Sirach also, prayer reaches notable heights of devotion; true prayer is heard of God (35[13-17]); prayer is made in time of sickness (38[9, 14]); for deliverance from sin (23[1-5]). For prayer and alms, see 7[10]; for prayer and revenge, 28[1-4]; for national prayer against a foe, 36[1-17]; for thanksgiving, 50[21-24]; and for the closing prayer of the book, 51[1-12].

Reference has sometimes been made to two passages in 4 Maccabees which speak of the work of an intercessor: (*a*) The passage in 6[28f]: 'Be merciful to Thy people, accepting our punishment on their behalf. Make my blood a purification for them, and take my life as a substitute for their life.' These are the words of a Maccabaean martyr as he delivered himself to the fire for the sake of the Law. (*b*) 17[21f] speaks thus of the blood of the Jewish martyrs: 'They have become, as it were, a substitute for the sin of the nation, and through the blood of these pious ones and their propitiatory death, divine providence preserved Israel, which formerly had been evenly entreated.'

5. Prayer in the NT.—I. Example and Teaching of Jesus Christ.—Of the Synoptics, Luke is especially instructive as to prayer (cf Acts also), and the special character of the Fourth Gospel should be kept in mind. For the Lord's Prayer, see separate article.

(i) Christ's example.—Christ lived His life in communion with God, so that the attitude of prayer was for Him a permanent attitude. His meat was to do the will of Him who sent Him. Reference is made on several occasions to His departure into a desert place for refreshing and solace of spirit (cf Mt 14[13], Mk 6[32], Lk 4[42]). But there is mention especially of His prayers at great junctures in His life and ministry: baptism (Lk 3[21]), the call of His disciples (Lk 6[12f]), on the occasion of many of His miracles (Lk 9[16]; cf Jn 6[23], Mk 7[34] 9[29], Jn 9[30-33] 11[41f]), transfiguration (Lk 9[29]), and especially Gethsemane (Lk 22[39-46]), crucifixion (Mt 27[46], Lk 23[46]); in Jn 17 there is the great prayer for unity; Lk 22[32] records His prayer for Peter, and 23[34] for the soldiers; for His intercession in glory, see below II (i).

(ii) Christ's Teaching.—The range of prayer is chiefly for spiritual blessing (cf Lord's Prayer and especially Mt 6[33]), but not exclusively so ('daily bread' in Lord's Prayer and Mt 24[20]). The conditions and requisites of prayer are numerous: (*a*) *Earnestness* (Lk 11[5-13]); and His attitude to the Syro-phoenician seems to teach urgency of petition (Mk 7[27]). (*b*) *Humility* (Lk 18[9-14]); the juxtaposition with the preceding parable is suggestive. (*c*) *A forgiving spirit*, as in Sirach (see above **4**). (*d*) *Privacy*: it is recommended that prayer should not be made in a public place lest the element of ostentation enter in, but in a private room (cf Christ's own example of solitary prayer; Lk 6[12]). (*e*) *Without vain repetition*; see above **2** (*c*) (ii), where the references show that the repetition discouraged is that of mere mechanical prayer or of pretence (Mk 12[40]). (*f*) *With faith*; Mk 11[23] contains such hyperbole as would appeal to an eastern mind and would enforce the value of prayer; while the seeming paradox of v.[24] must be taken along with this and understood in the light of Christ's general teaching. The need of faith is further illustrated by Christ's attitude to those seeking aid (*e.g.* Mt 8[13] 9[28], Mk 5[36] 9[23], Lk 8[48]). (*g*) *Agreement*. Where two or three are gathered together for prayer, there is awareness of human community, and selfish prayer does not easily enter in (Mt 18[19f]). (*h*) *In His Name* (Jn 14[13] 15[16] 16[23f, 26]). This phrase, which is characteristic of the Fourth Gospel, implies that men should ask in prayer only those things which they can ask in the spirit of Jesus Christ.

II. Customs and Ideas in Apostolic Times.—Evidence is given by Acts (where the prominence given to prayer is natural if Luke wrote it, see above I), and by the Epistles, whose writers had inherited the best traditions of Jewish piety and had assimilated their Master's teaching (even if they did not always grasp all of it fully) and had followed His example. A glimpse of availing prayer may be afforded by such passages as Ac 3[16] 4[31] 9[40] 10[4] 12[5, 12] 16[25] 28[8]. One or two detailed points have already been considered, but it may be well now to collect, from Acts to the Book of the Revelation, some passages showing the practice and teaching as to prayer in the Apostolic Church.

(i) Prayer is found in connexion with: (1) *Laying on of hands*: (*a*) in healing (Ac 28[8]; cf 9[17] (see below (3)); (*b*) after baptism (Ac 8[14-17]; cf 19[6]); (*c*) on appointment to office (Ac 6[6] 13[3]), with which also prayerful lot-casting is associated (Ac 1[24, 26]; cf Pr 16[33]). (2) *Public worship* (1 Ti 2): (*a*) prayer and gift of tongues (1 Co 14[14f], where it is suggested that the head as well as the heart is concerned with prayer); (*b*) prayers for the community in the Apostolic Church (1 Ti 2[1f]; cf **4**). (3) *Sickness* (Ja 5[13-16], where notice conjunction of prayer and outward means [for unction cf Mk 6[13]] with confession; physical and spiritual healing are associated, and both with prayer; see above, **4**).

(ii) (1) A distinctive idea in NT prayer is *the work of the Holy Spirit*. He aids us in prayer (Ro 8[14-16], Eph 6[18], Jude [20]); and when words fail us and we cannot pray for ourselves, He intercedes for us with groanings that cannot be uttered (Ro 8[26]). Christ also, who, in His own life and death has interposed for us, intercedes on our behalf (Ro 8[34], He 7[25]; cf presentation of prayer to God in Rev 5[8] 8[4]). By Christ we enjoy free access to God (Gal 4[4-7], Eph 2[18] 3[12], He 4[15f] 10[19-22]; see above, 5 I (ii) (*h*); prayer is offered to Christ direct (Ac 7[59f] 9[14] (?), 1 Co 1[2] (?). (2) *Prayer needs faith* (Ja 1[6-8], 1 Ti 2[8] RVm, He 10[22]), must have right aims (Ja 4[3]), and be backed by conduct (1 Jn 3[22]). Such prayer succeeds (Ja 5[16-18], 1 Jn 3[22] 5[14f]). Prayer for temporal gifts is not very conspicuous in NT, but see Ro 1[10], 2 Co 12[8], Ph 4[6]. (3) *Exhortations to prayer* (Ro 12[12], Col 4[2], 1 Th 5[16], 1 P 4[7], Jude [20]). (4) *Reminiscences of OT* occur in prayer as colloquy (Ac 9[13-16] 22[17-21]; cf **3**), as struggle (Ro 15[30], Col 2[1] 4[12]; cf Gn 32[24]), as cry for vengeance (Rev 6[9f]; cf 1 Ti 2[8]). (5) *Intercession*, which in OT is specially characteristic of the prophetic office, is here a general duty, and is very prominent: Apostles for converts (Ro 10[1] 15[5], 2 Co 13[7], Eph 1[16] 3[14], Ph 1[4, 9], Col 1[9] 2[1], 1 Th 1[2] 2 Th 1[11], Phn [4], 3 Jn [2]); converts for Apostles (Ac 12[5], Ro 15[30], 2 Co 1[11] 9[14], Col 4[3], 2 Th 3[1], Phn [22]); for one another (Ja 5[16], 1 Jn 5[16] [within limit]). (6) *Thanksgiving* abounds (Ro 1[8], 1 Co 1[4], 2 Co 2[14] 8[16], Ph 1[3], Col 1[3], 1 Th 1[2] 2[13], 2 Th 1[3] 2[13], 1 Ti 1[12], 2 Ti 1[3]). (7) Note also the *salutation and blessing* at the beginning and close of Epistles. The NT closes with a threefold prayer for Christ's coming (Rev 22[17, 20]).

PRAYER OF MANASSEH.—See Apocrypha, **13**.

PREACHING.—1. In Judaism.—In the OT the verb 'preach' occurs merely as an occasional variant to the more common 'prophesy,' and consequently does not designate a distinct activity. Preaching as a regular part of the service of public worship was a comparatively late development. Its real beginning can be traced back to the custom attributed to Ezra of reading a part of the 'Law' or 'Torah' at the Sabbath-day assemblages of the people, and on other holy days. On these occasions the lesson from the Law was read in the original Hebrew, and explained in the form of a paraphrase in the Aramaic vernacular by a *m^{e}thûrg^{e}mān* (dragoman) or interpreter. Such translations were called Targums. It was from this practice that preaching in the synagogue developed.

The title 'preacher' (*darshān*) occurs from the 1st cent. B.C. on. He was supposed to prepare his sermon (*d^{e}rāshāh*) carefully in advance, and present it in an appealing way. He usually reproduced the Scripture lesson or parts of it, interspersing exhortations, warnings

and comfort, as suggested by the text. The gist of such a sermon preached by Rabbi Eleazar ben Azarja around A.D. 100 was as follows: 'From all your sins you shall be clean before the Lord' (on the Day of Atonement, Lev 16^{30}). What has taken place between you and God is forgiven (by God) to you (on the Day of Atonement); but what has taken place between you and your neighbour is forgiven to you only when you have reconciled yourself with your neighbour (*Siphra Lev.* 16^{30}; 324a). Philo reports concerning the synagogue service: 'The people sit decorously, keeping silence and listening with the utmost attention out of a thirst for refreshing discourse, while one of the best qualified stands up and instructs them in what is best and most conducive to welfare, things by which their whole life may be made better' (*de spec. Legg.* ii. 62). An indication of special skill was the ability to construct a chain of abstrusely related scriptural texts.

2. In the NT.—Thus by NT times preaching had become an integral part of the ordinary synagogue service (Ac 15^{21}), and provided the occasion for much of the preaching of Jesus and Paul. The practice of opening the exposition of the Torah with an appropriate passage from the prophets had led to the introduction of a second lesson, taken from the prophets, prior to the sermon. It is this second reading which is given by Jesus according to Lk 4^{16ff}, where, as in Ac 13^{14ff}, the sermon comes immediately 'after the reading of the law and the prophets.' However, the synagogue sermon is not constitutive of the NT concept of 'preaching.' Rather Jesus is often spoken of as 'teaching' in the synagogue, and Paul as 'arguing' there, while their 'preaching' frequently takes place outside the context of the synagogue service, as at the seaside or in the marketplace. Nor can the worship service discussed in 1 Co 14 be derived from the synagogue, but rather has its nearest analogies in the practices of certain Hellenistic cults.

The NT term for 'preaching' is *kērygma*. It referred originally to the proclaiming done by a herald or announcer, and to the content of his message. The latter meaning is rare in the NT (1 Co 1^{21}), and consequently *kērygma* did not become a technical term as did 'gospel.' Only in modern theology has it come to be so used. Hence the nature of the NT 'kerygma' cannot be derived from the term, but only from an analysis of preaching in the primitive church.

Jesus preached the imminence of the eschatological Kingdom of God (Mt 4^{17}), calling upon His hearers to repent of their way of life built upon the 'present evil aeon,' and offering them a life to be lived out of the reality of the future Kingdom. This preaching was itself the last and decisive sign of the Kingdom's imminent coming (Lk 11^{29-32}). Hence one's response to Jesus' preaching determined one's ultimate destiny (Mk 8^{38}). Thus Jesus' preaching is prominent among the actions comprising His eschatological rôle (Mt 11^{4-6}), and to this extent implies a Christology. This implied Christology became still more evident when His death completed the radical break with the power of evil which he preached, and when on Easter the reality of the life of transcendence which He offered was revealed to His disciples in His own person. Thus the one who had originally been the preacher of an eschatological message became Himself the content of the Christian sermon, without any basic disjunction in underlying meaning. Herein resides the validity of the primitive church's procedure of interpreting Jesus' sayings in terms of their Easter faith, and even of placing their kerygma on His lips.

3. The early church.—The gist of the preaching in the primitive church can be detected in various ways: The material in the Synoptic Gospels reflects the setting in the life of the church in which it was transmitted, and this setting of the oral tradition may often have been the sermon. Luke made use of various early fragments of tradition in composing his sermons in Acts, so that fragments of primitive preaching may have been preserved in Ac $2^{22-24, 32-36}$ $3^{13-15, 19-21}$ 4 10 5^{30-32} 10^{36-43} (13^{23-33}). Paul quotes early hymns (Ph 2^{6-11}; cf also Col 1^{15-20}), confessions (1 Co 12^{3}, Ro 10^{9}), credal formulae (Ro 1^{3f}, 1 Co 8^{6}), and other traditions, both explicitly (1 Co 11^{23ff} 15^{3ff}) and tacitly (Ro 3^{24f} 4^{24f} 8^{32ff}). Such material can be identified and disengaged from the Pauline text by establishing its non-Pauline nature and its stylized liturgical form. In content though not in form this material doubtless reflects the evangelistic preaching of the primitive church. The content of Paul's own preaching may be inferred from specific allusions on his part, such as Gal 3^{1}, 1 Co 1^{23} 2^{2}, 2 Co 5^{11-21}, 1 Th 1^{9f}. His homiletical style may be inferred from his letters, which in various respects recall the informal give-and-take of the 'diatribes' delivered by the wandering Cynic and Stoic street preachers.

4. The sermons in Acts.—The relative stability of the primitive Christian message centering in Jesus' death and resurrection, His humiliation and exaltation, His suffering and glory, provides considerable justification for the modern custom of speaking of *the* kerygma. Yet it would probably be historically inaccurate to extend this insight into the hypothesis of a universally accepted outline of the primitive Christian sermon dating from the very beginning. Such a fixed outline only becomes visible toward the end of the 1st cent., in the sermons Luke composed to illuminate the narrative of Acts. For, in spite of occasional omissions, repetitions, and transpositions, the pattern used for the first sermon is followed fairly consistently throughout:

(*a*) Address to the audience appropriate to the situation: Ac 2^{14b} 3^{12b} 4^{8b} 13^{16b} 14^{15a} 17^{22b}; it is sometimes repeated: 2^{22a} 3^{17} $13^{26a, 38a}$.

(*b*) A call upon them to hearken, sometimes expressed only indirectly: Ac 2^{14c} 4^{10a} (10^{36a}) 13^{16b} (14^{15c} 17^{23c}); it is sometimes repeated: 2^{22a} 13^{38a}.

(*c*) A misunderstanding on the part of the audience: Ac 2^{15} 3^{12c} 4^{9} (5^{29} $10^{25f, 34b-35}$) 14^{15a} $17^{22b-23ab}$.

(*d*) Scriptural quotation: Ac 2^{16-21} 3^{13a} 5^{30b} $10^{38a, 39b}$ (13^{17-25}) 14^{15d} 17^{24a}.

(*e*) Christological kerygma: Ac 2^{22b-24} 3^{13b-15} 4^{10b} 5^{30-31a} 10^{37-42} 13^{27-31}; it is sometimes repeated: 2^{32f} $3^{19b-21a}$. It has its centre in the theme: you crucified Jesus ($2^{23, 36}$ $3^{13, 15}$ 4^{10} 5^{30} 10^{39}), but God raised Him from the dead ($2^{24, 32}$ 3^{15} 4^{10} 5^{30} 10^{40}).

(*f*) Proof text: Ac 2^{25-31} 3^{18} 4^{11} 10^{43a} 13^{32-37} (17^{28}); it is sometimes repeated: 2^{34f} 3^{21b-24}.

(*g*) Apostolic witness to the resurrection: Ac 2^{32} 3^{15} 5^{32} $10^{(39a), 41}$ $13^{31, (32)}$ (14^{15c} 17^{23c}).

(*h*) Solution of the misunderstanding: Ac $2^{33b, 36}$ 3^{16} 4^{10c} 14^{15b} 17^{29}.

(*i*) Call for repentance and proclamation of salvation: Ac 2^{38} 3^{19a} 4^{12} 5^{31b} 10^{43b}.

(*j*) Specific application to the audience: Ac 2^{39} 3^{25f} ($10^{36, 44}$) $13^{26b, 40f}$ 17^{30f}.

In the sermons in Acts one can detect older traditions, especially the christological statements and the use of the proof texts. Yet the sermons do not seem to depend upon a specific preacher or occasion. For the preacher's individuality is in terms of Luke's understanding, as is most apparent in the one case where Luke's presentation can be compared with the preacher's own presentation: Paul. In Ac 13^{31f} 'Paul' presents Luke's view of the apostolic office, which excludes Paul (cf 1 Co 9^{2}); in 13^{38f} Luke succeeds only in presenting a garbled version of Pauline theology, while the sermon on the Areopagus (17^{22ff}) is simply Luke's theology. Hence it is Luke who has given each sermon its distinctiveness, in terms of the rôle it plays in his narrative. This is most apparent in the programmatic sermons at the founding of the church (2^{14ff}), the admission of the first Gentiles (10^{34ff}), the opening of the Pauline mission (13^{16ff}), and the encounter with Greek culture (17^{22ff}). Consequently the major divergences between the sermons derive not from the preachers, but rather from the way the audience is envisaged. Luke seems to think that the Jerusalemites are consistently involved in misunderstanding and the need for repentance, while both traits disappear in

sermons to 'God-fearers' (10[2] 13[16, 26f]). To audiences which are purely pagan one preaches the doctrine of God (14[16f] 17[24-27]) rather than the christological kerygma, which is either omitted or relegated to the position of an appendix (17[31]).

5. Ethical exhortation.—The evangelistic preaching of the primitive church was of course supplemented with catechetical instruction at baptism, and continuing ethical exhortation in the life of the church. The nature of this exhortation can be deduced from the ethical sections of the NT epistles, especially where they incorporate traditional patterns current in the life of the church: lists of virtues and vices (Gal 5[19-23], Col 3[5-8, 12] etc.), and tables of household regulations (Col 3[18-4]1, 1 P 2[13-37], Tit 2), taken over from the Hellenistic world; the Ten Commandments, and the description of the 'two ways' (*Barnabas* 18–20, *Didache* 1–6), taken over from Judaism; and collections of Jesus' teaching (the Sermon on the Mount). This material tended to become 'kerygmatized': Jesus' teachings were readdressed to the present situation by the heavenly Lord (1 Th 4[15], 1 Co 7[10], Ac 20[35], and the Gospels); household relationships were 'in the Lord,' *e.g.* the conduct of the slave was that of the Suffering Servant (1 P 2[21-25]); the contrast between one's way of life then and now corresponded to the shift in aeons proclaimed by the kerygma (Gal 4[4], Tit 3[3-7], Ro 6[17f], 1 Co 6[9-11]). Actually the survival of kerygmatic fragments in the NT is largely due to their incorporation in ethical exhortation.

Primitive Christian preaching made considerable use of the Jewish and Hellenistic thought forms of the day, just as preaching to-day makes use of modern patterns of thought. Hence if modern preaching is to convey to the world of to-day the message of primitive Christian preaching, it must do so by means of a translation of thought forms as well as of words. This process of translation is currently designated 'demythologizing,' since it often consists in stating in modern terms a theological meaning which was originally stated in terms dependent upon a mythological world view.

PRECINCTS.—See PARBAR.

PRECIOUS STONES.—See JEWELS AND PRECIOUS STONES.

PREDESTINATION.—The English word 'predestinate' in the AV is, in the few cases in which it occurs (Ro 8[29, 30], Eph 1[5, 12]), exchanged in the RV for '**foreordain,**' a return to the usage of the older Versions (cf RSV). The Greek word (*proorizō*) conveys the simple idea of defining or determining beforehand (thus, in addition to above, in Ac 4[28], 1 Co 2[7]). The change in rendering brings the word into closer relation with a number of others expressing the same, or related, meanings, as 'foreknow' (in pregnant sense, Ac 2[23], Ro 8[29] 11[2], 1 P 1[2, 20]), 'determine' (Ac 17[26]), 'appoint' (1 P 2[8]), 'purpose' (Eph 1[9]), in the case of believers, 'choose' or 'elect' (Eph 1[4] etc.). In the OT the idea is expressed by the various words denoting to *purpose, determine, choose* (*e.g.* Is 14[24-27] 46[10f]), with the abundance of phrases extolling the sovereignty and immutability of God's counsel in all the spheres of His operation (see below; so in NT). The best clue to the Scripture conception will be found in tracing it as it appears in these different spheres of the Divine action.

1. In its most general aspect, **foreordination** is coextensive with the sphere of God's universal providence, is, in fact, only another name for the eternal plan, design, purpose, counsel of God, which executes itself in providence. The **election** (q.v.) of believers, to which 'predestination' is sometimes narrowed, is but a specific case of the 'purpose' of Him 'who accomplishes *all things* according to the counsel of his will' (Eph 1[11]). It is in this wider regard, accordingly, that foreordination must be studied first. It cannot be reasonably doubted that all Scripture—OT and NT—represents God as exercising in and over the world a providence that is absolutely universal. Nothing, great or small—operations of nature or actions of men—is left outside its scope. This does not happen blindly, but in accordance with a plan or purpose, equally all-embracing, which has existed from eternity. As Plato says in his *Parmenides* that nothing, not even the meanest object, is unpenetrated by the idea, so even the minutest details, and seemingly most casual happenings, of life (the numbering of hairs, the fall of a sparrow, Mt 10[29f]) are included in the Divine providence. Free agency is not annulled; on the contrary, human freedom and responsibility are everywhere insisted on. But even free volitions, otherwise mere possibilities, are taken up in their place into this plan of God, and are made subservient to the accomplishment of His purposes. The Bible does not trouble itself with solving difficulties as to the relation of the Divine purpose to **human freedom,** but, in accordance with its fundamental doctrine of God as the free personal Creator of the world and absolutely sovereign Ruler in the realms both of matter and of mind, working through all causes, and directing everything to the wisest and holiest ends, it unhesitatingly sees His 'hand' and His 'counsel' in whatever is permitted to happen, good or bad (Ac 2[23]). It need not be said that there is nothing arbitrary or unjust in this 'counsel' of God; it can be conceived of only as the eternal expression of His wisdom, righteousness, and love.

Texts are almost superfluous in the case of a doctrine pervading the whole of Scripture—history, prophecy, psalm, epistle—but an instance or two may be given. The history is a continual demonstration of a Divine teleology (*e.g.* Gn 45[8] 50[20]). God's counsel stands, and cannot be defeated (Ps 33[11] 46[10f]); all that God wills He does (Ps 115[3] 135[6], Dn 4[35]); it is because God purposed it, that it comes to pass (Is 14[24, 27] 37[26]); God is the disposer of all events (2 S 17[11f], Job 12[21], Pr 16[33]); man may devise his way, but it is the Lord who directs his steps (16[9]); even the hearts of men are under His control (21[1]); God sends to man good and evil alike (Am 3[6], Is 45[7]). It has already been pointed out that the same doctrine is implied in the NT (*e.g.* Ac 4[28] 15[18] 28 [story of Paul's shipwreck], Eph 1[11], Rev 4[11] etc.).

2. A universal, all-pervading purpose of God in creation, providence, and human life, is thus everywhere assumed. The end of God's **purpose,** as regards humanity, may be thought of as the establishing of a moral and spiritual kingdom, or Kingdom of God, in which God's will should be done on earth, as it is done in heaven (cf Mt 6[10]). But this end, now that sin has entered, can be attained only through a *redemption.* The centre of God's purpose in our world, therefore—that which gives its meaning and direction to the whole Biblical history, and constitutes almost its sole concern—is the fact of redemption through Jesus Christ, and the salvation of men by Him. To this everything preceding—the call of Abraham, the Covenant with Israel, the discipline and growing revelation of Law and Prophets—leads up (on predestination here, cf Gn 18[18f], Lv 20[24, 26], Is 43[1, 7] etc.); with this begins (or, more strictly, continues) the ingathering of a people to God from all nations and races of mankind, who in their completeness, constitute the true Church of God, redeemed from among men (Eph 5[25-27], 1 P 2[9f], Rev 1[5f] 14[1-5] etc.). The peculiar interest of the doctrine of foreordination, accordingly, in the NT, concentrates itself in the calling and salvation of those described as the 'chosen' or 'elect' of God to this great destiny (Eph 1[4] etc.). The doctrine of foreordination (predestination) here coalesces practically with that of election (q.v.). Yet certain distinctions arise from a difference in the point of view from which the subject is contemplated.

Election, in the NT, as seen in the article referred to, relates to the eternal choice of the individual to salvation. As little as any other fact or event in life is the salvation of the believer regarded as lying outside the purpose or pre-determination of God; rather, an eternal thought of love on God's part is seen coming

to light in the saved one being brought into the Kingdom (2 Th 2[13, 15]). There is the yet deeper reason for seeing in the believer's calling and salvation the manifestation of a Divine purpose, that, as lost in sin, he is totally incapable of effecting this saving change in himself. He owes his renewal, his quickening from spiritual death, to the gratuitous mercy of God (Eph 2[1–8]; see REGENERATION). Every soul born into the Kingdom is conscious in its deepest moments that it is only of God's grace it is there, and is ready to ascribe the whole glory of its salvation to God (Rev 7[10]), and to trace back that salvation to its fountainhead in the everlasting counsel of God. Thus regarded, 'election' and 'fore-ordination' to salvation seem to have much the same meaning. Yet in usage a certain distinction is made. It may perhaps be stated thus, that 'election' denotes the Divine choice simply, while 'foreordain' has generally (in sense of 'predestine') a reference to the end which the foreordination has in view. Thus in Eph 1[4f] 'Even as he chose us in him before the foundation of the world . . . having destined us in love to be his sons' (where 'destined,' as Meyer rightly says, is not to be taken as prior to, but as coincident in point of time with, 'he chose'); and in v.[11] 'destined and appointed to live for the praise of his glory' (v.[12]). In Ro 8[29], again, where 'foreknew'—which seems to take the place of 'chose' (it can hardly be foreknowledge of the faith which is the result of the later 'calling')—comes before 'predestined' the latter has the end defined: 'to be conformed to the image of his Son.' Those 'foreknown' are afterwards described as God's 'elect' (v.[33]). This striking passage further shows how, in foreordaining the end, God likewise foreordains all the steps that lead to it ('foreknew'—'predestined'—'called'—'justified'—'glorified').

3. Predestination is always a mystery. This is because it is an act of God, and if there were no mystery about God's action, there would be nothing to adore. But it is not all mystery; much has been unveiled in Christ, through whom we know that God's purpose is 'to unite all things in him, things in heaven and things on earth' (Eph 1[9f]). Yet though the end is clear, we cannot discern all the workings of God on the way. Because we are creatures in time and He is eternal, and because our justice is at best ineffective and imperfect while His is effective and perfect, we cannot without blasphemous presumption pretend to know who are predestined to glory and who not. But what we already know of the forgiving love of God in Christ assures us that the end will not deny the central act of mercy and redemption, any more than it will deny the judgment of it. Somehow in the end justice and love, mercy and judgment will be seen to have been brought together.

The language of predestination is essentially religious; it is also temporal. When the Christian yields to Christ he does a voluntary act. But he knows, or comes to know, that such voluntary action is fundamentally an act of God in him. But we cannot relate God's action with metaphysical accuracy by using temporal prefixes. To say that God *pre*-destined us to salvation is an accurate enough transcript of a religious experience that we do not save ourselves, and that somehow God works before we act. But the words are not an accurate transcript of the temporal relationship of God's act and our own, because we are in time while God transcends it. It is always wrong therefore to erect hard metaphysical doctrines on the believer's religious language. If we do, blemishes are unavoidable: for we must say either that God will save all and so make nonsense of our conceptions of justice, or that some will be damned and God's universal purpose thus frustrated. Against this it must be said that what we know of God's purpose and love in Christ sufficiently assures us that at the end we shall find both mercy and justice perfectly fulfilled and satisfied.

Some difficulties can be cleared away by observing, *e.g.*, that in Ro 9–11 Paul is dealing with God's election of men in history, and not with their eternal salvation. In history it appears arbitary that God should choose Jacob rather than Esau until we know that such arbitary choices appear reasonable in the light of the final inclusion of all men in both condemnation and mercy: 'God has consigned all men to disobedience, that he may have mercy upon all' (Ro 11[32]). If Calvin, and even more his disciples, had grasped this distinction between the intra-historical and the extra-historical election of God, we might have achieved long since a doctrine of predestination in which, with a due sense of mystery, the mercy and judgment of God were seen as equal partners in His love at the end. **J. O.—J. Mar.**

PRE-EXISTENCE OF SOULS.—The idea is common in many religions, especially Indian (but not in Buddhism or Islam), and in the Greek tradition it is prominent in Pythagoreanism and Platonism. In Biblical documents it appears only in the Hellenized Wisdom of Solomon (8[19–20]). The fact that it did not otherwise find its way into canonical books does not mean that it was unknown in Judaism, as is evident from Philo, from Josephus' account of the Essenes, and from allusions in Talmud and Midrash. In the NT the notion is presupposed in the question of Jn 9[1] whether the man was born blind because of his sin, Jesus' reply to which takes the form of a critique of the question. The doctrine was maintained by Gnostics such as Basilides with a special interest in theodicy, and by Origen who, however, denied the idea often associated with pre-existence, namely transmigration of souls. It is this Platonic association of the two related ideas which no doubt explains much of the resistance of Christian orthodoxy to the doctrine of pre-existence, apart from the negligible support given in Scripture, and the difficulty of reconciling it with the doctrines of Divine creation and bodily resurrection. H. C.

PREFECT.—Found only in RSV in Dn 2[48] 3[2f, 27] 6[7] where it renders Aramaic *s*ᵉ*ghan*. AV has 'governors,' while RV has the same except in 6[7], where it has 'deputies.' See PROCURATOR, PROVINCE, ROMAN PUBLIC LAW.

PREPARATION (Gr. *paraskeuē*).—A term applied by the Jews to the day preceding the Sabbath, or any of the sacred festivals, especially the Passover (cf Mt 27[62] ||, Jn 19[14, 31, 42]).

PRESBYTER (Gr. *presbyteros*, 'elder').—The word occurs as a RV marginal alternative for '**elders**' in Ac 20[17]; the Greek *presbyteros*, which is of frequent occurrence, being otherwise invariably rendered 'elder.' For treatment of the subject of the presbyter, see BISHOP and also next article.

PRESBYTERY (Gr. *presbyterion*).—In AV of NT the word occurs only in 1 Ti 4[14], where it denotes the body of *Christian* presbyters or elders (possibly those belonging to the church at Lystra; cf Ac 16[1–4]) who laid their hands upon Timothy before he set out on his labours as St. Paul's missionary companion. In the Greek text, however, the word *presbyterion* is found in two other passages, viz. Lk 22[66] (AV 'elders,' RV 'assembly of the elders') and Ac 22[5] (AV and RV 'estate of the elders,' RSV 'council of elders'), as an expression for the body of *Jewish* elders who with the 'chief priests' and the scribes composed the Sanhedrin. This twofold use of the word (like the corresponding twofold use of 'elder' q.v.) affords a strong confirmation of the view, which is otherwise most probable, that the presbytery of the Christian Church finds its roots in the eldership of the Jewish *ecclesia*.

The presbytery was at first a purely local body (cf the *Letters* of Ignatius, *passim*), which may have included those persons whose functions are also described as 'overseers,' 'guardians,' or 'bishops' (Ac 20[28]). But early in the post-Apostolic age the bishop was clearly distinguished from the presbyters in office. (Cf 1 Ti 5[17], 'Let the elders who rule well be considered worthy of double honour, especially those who labor in preaching and teaching'). The bishop as we meet him in the *Letters* of Ignatius (*e.g.* Eph 4) is a congregational

bishop, the president of a body of congregational presbyters. See BISHOP.

What was involved in the **laying on of the hands of the presbytery** in the case of Timothy it is impossible to say with certainty. Probably it was an act corresponding to ordination to office (see LAYING ON OF HANDS), St. Paul himself being associated with the presbytery in the action (cf 2 Ti 1[6]). On the other hand, it may have been no more than a commendation of Timothy to the grace of God for strength and guidance in his new work as a missionary, analogous thus to the action of the prophets and teachers of Antioch in the case of Barnabas and Saul (Ac 13[1-3]). The laying on of St. Paul's hands (2 Ti 1[6]) may really have been a separate incident, comparable again to the laying on of the hands of Ananias on himself (Ac 9[17])—not an official act but a gracious benediction (cf Lindsay, *Church and Ministry*, p. 143n.). St. Paul without doubt received a consecrating grace from the hands both of Ananias and of those prophets and teachers of the Church at Antioch, but he claimed to be an Apostle 'not from men, nor through man, but through Jesus Christ and God the Father, who raised him from the dead' (Gal 1[1]). J. C. L.—M. H. S.

PRESENCE OF GOD.—See SHEKINAH.

PRESENCE-BREAD.—See SHOWBREAD.

PRESIDENTS.—Aramaic *sārᵉkhîn*, in Dn 6[2ff], denotes officials of the Persian empire. It is probable that it is a loan-word from Persian.

PRESS, PRESSFAT.—The former occurs in AV for the usual **winepress** in Pr 3[10] (RV 'fats,' RSV 'vats'), Is 16[10] (where alone it is retained in RV, RSV), and Jl 3[13] (RV, RSV 'winepress'). 'Pressfat' is found only in Hag 2[16] AV (RV 'winefat,' RSV 'winevat'). For the ancient winepresses, see WINE AND STRONG DRINK, 2.

A. R. S. K.

PREVENT.—To 'prevent' in the English of AV is to 'be before,' 'anticipate,' 'forestall,' as Ps 119[147] 'I prevented (so RV; RSV 'rise before') the dawning of the morning.' Sometimes it is to forestall for one's good, as Ps 59[10] 'The God of my mercy shall prevent me' (so RV; ASV, RSV 'My God . . . will meet me'); and sometimes for one's hurt, as Ps 18[5] 'The snares of death prevented me' (RV 'came upon me,' RSV 'confronted me'), but the modern idea of merely 'hindering' never occurs in AV.

PRICK.—**1.** Hebrew *śēkh*, Nu 33[55], means a 'thorn.' **2.** Ac 26[14] (AV; RV, RSV 'goad'); see AGRICULTURE, 1.

PRIDE.—As humility (q.v.) is commended in the Bible, pride is condemned (Jer 13[15]). The wicked are frequently denounced for their self-confident pride (Ps 10[2ff] 73[6], Job 35[12]), and humiliation is promised them (Pr 11[2] 16[18], Is 2[11, 17] 14[11], Ob 4) or recorded as experienced by them (2 Ch 26[16] 32[25], Dn 4[30ff]). In the NT the Pharisees are condemned for their pride and ostentation (Mt 6[5] 23[5], Lk 18[9ff]), and all social pride is castigated by Christ (Mt 23[6f], Lk 14[7ff]), who rebukes His disciples for place seeking and makes service the criterion of honour (Mk 10[35-45]). So, too, Paul rebukes the Corinthians for spiritual pride (1 Co 4[6ff]).

There is, nevertheless, a commendable pride, but it is in God (Ps 34[2], Jer 9[23f]) or in the gospel (Ro 1[16]), or in the privilege of serving God (Ro 15[17], 2 Co 11[10ff]).

PRIDE OF JORDAN.—See JORDAN, 5.

PRIESTS AND LEVITES.—Every ancient society has produced a class of persons whose task is to guard the sanctuary and preserve the sacred traditions, thereby constituting the most conservative and stabilizing element in the community. Such was the priesthood in Israel, averse to change, yet itself developing in the course of its history, and capable of longer survival than either kingship or prophecy.

Little is known of the priesthood in Palestine before the Settlement. The existence of sanctuaries in the time of the patriarchs implies priests, though, with the exception of the enigmatic figure of Melchizedek in Jebusite Salem (Gn 14), they receive no mention in the OT. The Krt and Aqht texts from Râs Shamra, reveal that in Canaan the priesthood was bound up with kingship, and the king performed priestly functions. The administrative texts show that, in the 2nd millennium, there had grown up, in connexion with the sanctuaries in Ugarit, hereditary guilds of priests (*khnm*—cf Heb. *kōhᵃnîm*) and sacred persons (*qdšm*) in a hierarchy comparable in principle with that of later Israel.

1. The Levitical Priesthood.—The origins of Israel's priesthood are obscure, and involved in the uncertainties of the early history of the tribe of Levi.

(*a*) Probably the earliest evidence of the tribe is the so-called Blessing of Jacob in Gn 49[5-7], where there is no allusion to priestly functions. Levi is regarded on the same level as vanished Simeon, and its scattered life a punishment for violence against the Canaanites. On the basis of the discovery of Minaean inscriptions, in which the term *l(a)w(i)* seems to indicate a cultic official, some scholars have disregarded the evidence of Gn 49, and concluded that Levites were priests from the first. But if this is so, Gn 49 becomes unintelligible, and no one has yet offered an adequate explanation how such a tradition could have arisen about a group *ex hypothesi* priestly. Levi must therefore be regarded as originally a secular tribe. Whatever may have been the reason for Levi's loss of tribal territory, the OT tradition suggests that its possession of the priestly office was ultimately due to a specially strong zeal for Yahweh worship.

(*b*) There follows a period of wandering, in the period of the Judges, corresponding perhaps to the more general change from nomadism to a sedentary way of life. The transition period is illustrated by the story of Micah's Levite in Jg 17–18. The point of the story is to account for the origin of the sanctuary of Dan. It shows that, at this time, the head of a household might offer sacrifices. There is, on the other hand, a preference for a young man, so that Micah installed one of his sons as priest of his shrine. But when a Levite can be obtained, there is special blessing. 'Now I know that the Lord will prosper me, because I have a Levite as priest.' Micah's Levite had previously been a sojourner (*gēr*) in Bethlehem. Thus a homeless Levite became a private priest when required. Later the Danites took him to their new territory, and he founded a new line of priests at the northern sanctuary of Dan. No doubt this represents at least one way in which Levite communities arose in tribes and families.

(*c*) In the same period, which sees the growth and organization of the Israelite confederation of Twelve Tribes, the Levites seem to have become key figures in the practice of war. The guardianship of the Ark was assigned to them, and they would accompany it into battle. Examples of their exhortations to Israelite forces preparing for battle, are probably preserved in the Book of Deuteronomy, and it is highly likely that Levitical circles were responsible for the transmission of much of the older amphictyonic material contained in that book. It is clear that, at a very early date, the Levites developed that care for sacred learning which has been one of the distinguishing marks of priesthood in all ages.

It may well be that the **Levitical cities** of Nu 35[1-8], usually interpreted as a late unhistorical institution, belong originally to this period, when the Levites were scattered about the land, often in need, and not necessarily attached to recognized sanctuaries. But precisely how this provision was made, it is impossible to deduce from the late account, which may owe its present form to arrangements of the period of the Second Temple.

(*d*) The so-called Blessing of Moses (Dt 33[8-11]) describes the character and rôle of the tribe of Levi probably in the period of the early monarchy. Levi is now a priestly group, chiefly noted for the possession of the sacred oracle Urim and Thummim, and charged with responsibility for teaching the law. The offering of sacrifice is mentioned last, and is a consequence of

PRIESTS AND LEVITES

Levi's primary concern with the law. Clearly, the principal function of the Levites was the giving of oracular direction, and this was done in these two ways. The sacred lot required a question to be posed in a form demanding a simple negative or affirmative answer. The law (*tôrāh*) implied a legal code, comprehending both civil and religious law and custom. The priestly office was understood to be a *teaching* office (cf Mic 3^{9-12}, Hos 4^{1-4}, Zeph 3^{4}, Jer 18^{18}, Ezk 22^{26}, Hag 2^{10ff}), and the priest as much a medium of revelation as the prophet. He differed from the prophet mainly in the *way* he he secured oracular direction. When the sacrificial function had become predominant, still the priest was expected to be an assiduous teacher, as is shown in Mal 2^{7}

> The lips of a priest should guard knowledge
> And men should seek instruction from his mouth,
> For he is the messenger of the Lord of hosts.

The Chronicler (2 Ch 15^{3}) regarded a teaching priest and the knowledge of the law as indispensable if Israel was to know 'the true God.'

The story of the infant Samuel shows how a man might become a priest. The technical expression for ordination was 'to fill the hand,' and is either a term meaning simply 'to appoint,' like the parallel Assyrian expression which was no longer understood in its literal sense; or else it alludes to the portions assigned to the priests for their maintenance. A priest might be called 'father' (Jg 17^{10} 18^{19}), was marked outwardly by wearing the **linen ephod** (1 S 2^{18}, etc.), and usually lived, like Eli and Samuel, at the sanctuary. It is noteworthy that Samuel was not a Levite, and Levitical monopoly was only gradually achieved. The ancient stories about the priestly progenitors and families suggest that the growth of the priesthood was attended by deep jealousies and rivalries.

2. The Zadokite Priesthood.—The inception of the Davidic monarchy was momentous for the development of Israel's priesthood. This was inevitable, by reason of the close connexion between priesthood and kingship everywhere in the ancient, near-eastern world. Royal temples and the royal cult meant that priests were, in some sense, the king's assistants.

(*a*) Two leading priests appear in the time of David. Abiathar apparently belonged to the already existing, privileged priesthood of the Israelites (1 K 2^{27}). Zadok, on the other hand, the newcomer who continued in the possession of the Jerusalem priesthood after the expulsion of Abiathar by Solomon, seems to have boasted no such pedigree. Indeed, the balance of probability is that Zadok was the pre-Davidic priest of the ancient Jebusite shrine in Jerusalem. Some scholars have supposed that he was priest-king, and that David, after the capture of Jerusalem, took over the kingship with its attendant cultus, leaving to Zadok something of his priestly status. But how this could have happened defies the imagination. Neither David nor a defeated king would behave in this way. It is better to suppose that Zadok was priest of the 'Most High,' 'of the order of Melchizedek' (cf Ps 110^{4}, which is probably a royal acknowledgment of Zadok's status), and that he was willing to assist David in adapting the ritual and mythology to Israel's purposes. The resultant royal cult is reflected in certain psalms, which may be conveniently studied in this connexion in A. R. Johnson's *Sacral Kingship in Ancient Israel*. At first, Abiathar and Zadok were joint custodians of the Ark. After David's death, Zadok won sole possession, and the prophecy of 'the faithful priest,' who 'shall go in and out before my anointed for ever' (1 S 2^{35}) was understood to refer to him and his line. This new priesthood was bound to become the more important. Later the house of Zadok was understood to be a family within the house of Levi, and the genealogies adapted accordingly. A connexion was thus created between the priesthood of Jerusalem and the earlier Israelite priesthood.

There thus emerged in the time of David a royal establishment of king and priest, which took its place alongside the Levitical priesthood, and was destined to increase in power and influence. In the beginning it owed its prestige to the king who retained a priestly character (2 S 6^{17f}, 1 K $8^{5,62ff}$, 2 K 16^{12f}), even as the importance of the priests in the royal temples of the north was also dependent upon their connexion with the king. Yet, although the disaster of 586 B.C. was interpreted as a spurning of 'king and priest' (La 2^{6}), the priesthood steadily gained in independent power and authority, so that, unlike the monarchy, it was strong enough to survive the Exile.

It was the head of the Jerusalem priesthood who, before the Exile, might be described as 'chief priest' or 'high priest' or simply 'the priest.' Although his authority does not seem to have extended beyond the sphere of the Jerusalem Temple, he is plainly the precursor of the **'high priest'** of the post-exilic theocracy.

(*b*) Towards the close of the monarchical period the inevitable tension between the Jerusalem priesthood and the Levitical priesthood generally, seems to have been resolved temporarily by the ascendancy of the Levites. Thus, although the historical difference between the Jerusalem priesthood and the country Levites is perhaps reflected in the use of the term 'Levite(s)' alone of the latter (rather than 'the priests the Levites') in the Book of Deuteronomy, yet in 10^{8} (cf 21^{5} 33^{8-10}) it is the tribe of Levi as a whole who are specifically designated as bearers of the highest sacerdotal dignity. 'The Lord set apart the tribe of Levi to carry the ark of the Covenant of the Lord, to stand before the Lord to minister to him and to bless in his name, to this day.' That is to say, while the older strata in the book of Deuteronomy betray the historical division between the Jerusalem priesthood and the country Levites, undoubtedly the work as it stands in its final form, intends to teach that all Levites are priests in the fullest sense. On the other hand Josiah's reform had the undesigned effect of hardening the division. The 'priests of the high places' in Samaria were slaughtered (2 K 23^{20}) and the priests of the cities of Judah did not come up to the altar of the Lord at Jerusalem, thus frustrating the unifying provision of Dt 18^{6-8}. It is plain that Deuteronomy attempted to limit the exclusiveness of the Jerusalem priests and failed.

The prophets, by their comments on the priesthood, direct and indirect, give a picture of overwhelming influence and vested interest at this time. Theoretically the priests were to be without inheritance in the land (Dt 18^{1ff}), although personal ownership was not excluded (18^{8}, cf Abiathar, 1 K 2^{26}, Jer 32^{16ff}). And that there were rich and poor among the priests is shown by the fact that they were among the usurers in the time of Nehemiah (5^{12}). But in fact great numbers of the were unpropertied and reckoned among the *gērîm* (Dt 18^{6}). They were dependent upon the dues and offerings of the people. To them belonged, for example, the shoulder, cheek and maw of all offerings in cattle and sheep (18^{3}), together with the first-fruits of corn, must, oil, and sheepwool (18^{4}). Under them in the Temple were attendants or slaves who might be foreigners (cf Jos 9^{23}).

(*c*) Ezekiel, in his blue-print for the post-exilic theocracy (chs. 40–48), wished to strengthen the division between the Zadokite priests and the Levites, which growing Levitical power had tended to obliterate. He stipulated that none but the Levitical priests, the sons of Zadok (44^{15f} 43^{19}) should perform the priestly office in the Temple, on the ground that the Zadokites had kept the service of Yahweh pure when the Levites were guilty of apostasy. The latter were to take the place of foreigners (now to be banished from the Temple), to perform the menial tasks of the Temple, such as keeping the gates, slaughtering the victims, and cooking the sacrifices for the people. This represents the aggravation of an ancient division. The Levites had always enjoyed full priestly dignity and prerogatives outside Jerusalem. Now their former sanctuaries were denied to them and they were to be permitted no corresponding status in Jerusalem. Moreover, their inferior status was now

written into a dogma. Henceforth, even if the limits were to be differently prescribed in P, there were to be exclusive grades within the priesthood. A strict hierarchy had come into being.

The disappearance of the king was of critical importance. The high priest had not yet succeeded to the priestly functions of the monarchy. But tradition required that the king should have place in the cultus. Ezekiel therefore speaks of a 'prince' (*nāśî'*) who is to stand in the inner gate and prostrate himself while the offerings are made by the priests. The priestly privilege is now inalienable, and the royal person merely has the right to be present.

(*d*) The achievement of the Jerusalem priesthood is often underestimated. After the fall of Samaria, it is probable that many of the traditions of the north came into their hands. Ultimately the whole Pentateuch and the historical narratives were preserved and taught by them. Ezra is described as a Zadokite (7[1]), and if the law brought to Jerusalem by him and promulgated (Neh 8) may be identified with the legal part of the Priestly Code, we have a clue to the unremitting activity of these priests in Exile.

3. The Aaronite Priesthood.—The return from Exile affected the priesthood, as it affected every Israelite institution. At first there remained a hope of re-establishing the pre-exilic situation. The prophets Haggai and Zechariah thought of Zerubbabel and Joshua as succeeding to the royal and priestly prerogatives, although in fact Zerubbabel seems to have occupied a place more like Ezekiel's 'prince.' They are the two 'sons of oil' of Zec 4[14]. In the reconstructed text of Zec 6[9–14] they sit on thrones together, and there is 'peaceful understanding between them both.' History did not confirm this dream, and the present text of Zec 6 reflects the disappearance of the royal figure, and the inheriting by the high priest of all the priestly functions of the king. A succession of foreign regents made it impossible to allow the *de facto* ruler of the country to occupy the traditional position of the king in the Temple. Nehemiah thought it improper to enter the sanctuary (6[11]).

Despite struggles for power, reflected in the priestly genealogies and legends (*e.g.* the story of Korah in Nu 16 etc.), the distinction between priests and Levites was made absolute, though not in the way that Ezekiel expected. The hardly won equilibrium is reflected in the Priestly Writing of the Pentateuch, which presents the highly organized, hierarchical system of the Second Temple, in terms of a comprehensive theory of its origin.

(*a*) The Jerusalem priesthood became exclusively Aaronic. That is, other families were co-ordinated with the Zadokites, although the main body of Levites remained subordinate. The new emphasis on Aaronic lineage was inevitable both theoretically and practically, and far-reaching in its implications. *Theoretically*, it meant that the priesthood could be regarded as Mosaic. It was Moses who installed Aaron and his sons (Ex 28[41] 29[44] 40[12ff]), Eleazar and Ithamar who perpetuated the family. It was Moses who ordained their vestments, functions, and rules in detail. This does not rule out the possibility that Aaron was, by long tradition, an early Israelite progenitor of priests, and there are a few signs that he may have belonged to Ephraim. The figure of Aaron also provided the type of the **high priest**, second only to Moses. *Practically*, it meant an adjustment to the contemporary situation. The theory fitted the facts. It is not improbable that when the Zadokite priesthood of Jerusalem had been exiled, the priests of Bethel took advantage of this situation to entrench themselves in Jerusalem. Bethel escaped the disaster of 586 B.C. It has been suggested with great plausibility that these priests traced their descent to Aaron, who was, in the tradition, responsible for making the golden calf, and thereby connected with the worship of Bethel and Dan. The Aaronites must have come into favour after 586 B.C., and it is probable that the underlying text of Zec 7[1–3] 8[18f] reflects this change. At the rebuilding of the Temple, men *sent to Bethel* to inquire whether the fast commemorating its destruction should be discontinued. Plainly the priesthood of Aaron had prestige. When the Zadokites returned to Jerusalem, all they could do was to secure a place alongside the entrenched Aaronites. The glorification of Aaron was tolerable because the theoretical advantages were protected by the criticism of the northern cultus implied in the story of the golden calf. This explains the careful preservation of so injurious a story about so important a figure. Aaron was received, but on stringent terms.

Now finally the priests became cultic specialists, whose primary task was the carrying out of sacrificial duties. Their teaching office, never wholly forgotten, was taken over more and more by the Scribes. It was the function of the Aaronite priests to perform the exclusively priestly tasks, as, for example, the sprinkling of blood in the sanctuary (Lv 1[5, 11, 15]), and to pronounce the priestly blessing (Nu 6[22f]). They were installed in office by a solemn rite of consecration. Anointing came to be restricted to the consecration of the high priest, a sign of high priestly succession (Ex 29[7]). They were to be free from all bodily defects, and in a state of perfect ritual purity. Neh 12[1–7] mentions twenty-two '**courses**' of priests for the time of Zerubbabel and Joshua. 1 Ch 24 has twenty-four divisions. The *War of the Sons of Light with the Sons of Darkness* has twenty-six divisions. The difference between the two latter is probably due to a difference in the calendar. The intention is the same, viz. that a priest would serve twice a year in the Temple for a period of one week. For the rest of the year he might live where he pleased. Supremely the priests existed to make atonement for sin, and, in the service of the cult, to maintain communion between the holy God and His people.

(*b*) Aaron at once became the type of the high priest, who was the characteristic expression of the power and significance of the priesthood in the post-exilic period. He was a phenomenon of Judaism. It was the **high priest** 'who secures through the cultus the strength for the people which it had previously been the duty of the king to create' (Pedersen). He had special vestments and exclusive duties. He alone was entitled to carry Urim and Thummim. He alone entered the Holy of Holies on the Day of Atonement, and made atonement for his own guilt, that of his house and of the people. His role of mediator was symbolized by the names of the children of Israel, which he bore upon his breastplate (Ex 28[29]). As 'the priest who is greater than his brethren,' he was subject to stricter laws of purity. Later history shows that the narrower Zadokite family succeeded in claiming the high priesthood to itself. The Hebrew of Sir 51[12c(9)] may reflect this *c* 200 B.C. The disturbances which preceded the Maccabaean Revolt broke this hold, and the Hasmonaean kings arrogated the high priesthood to themselves. If the Sadducees of NT times are Zadokites, it seems that the traditional Jerusalem priesthood regained control until they disappeared with the priesthood for ever in A.D. 70.

(*c*) The non-Aaronite Levites were now servants of the priests, on the theory that they had been given (*nᵉthûnîm*) to Aaron and his sons. They were divided into the three families of Gershon, Kohath, and Merari. That the **Kohathites** had charge of carrying the Tabernacle and its vessels when on the march (Nu 4[5ff]) probably means that they were entrusted with the honourable task of fetching and carrying in the sanctuary. When Levites are described as 'guardians' of the dwelling-place of Yahweh (Nu 3[28, 32] 31[30–47]), this is probably the application of ancient terminology to door-keeping. We are not told plainly what the Levites have to do *when* the permanent sanctuary is set up. But it seems clear that their function was intermediate between the congregation and the priests. They were exempt from military service, installed by a solemn rite of laying on of hands (Nu 8[5ff]), and eligible for office, presumably at different times, from their thirtieth, twenty-fifth, and twentieth year (Nu 4[3] 8[24], 1 Ch 23[3, 24, 27]) to their

fiftieth year. They, like the priests, were supported by the carefully graded dues of the people.

The Chronicler emphasized the importance of **Singers and Doorkeepers** among the Levites. The three families of singers, Heman, Asaph, and Ethan (Jeduthun) were distributed among the Levite families Gershon, Kohath, and Merari (1 Ch 6^{18ff}). Among them were the last remnants of the cultic prophets. From the period of the early monarchy, prophets had been closely associated with the priests at the sanctuaries, with similar functions. Both were experts in giving oracular direction; they differed in their *method* of seeking it. The greater mass of prophets, consistently denounced by the great canonical prophets for prophesying peace when there was no peace, had fatally lost prestige, when Jerusalem fell and the exile followed. The people were disillusioned. But the priesthood suffered no such embarrassment. All the conditions of the post-exilic period favoured their rise to complete power. It is probable that the remaining cultic prophets were absorbed into the minor orders of the priesthood, and are, at any rate in part, to be identified with the personnel of the Temple choirs. And if in the time of Jeremiah, prophets and priests seem to share an equal dignity under the superintendent priest in the Temple (Jer 29^{24-28}), in the time of the Chronicler (*c* 300 B.C.) the prophet has become completely subordinate to the priest. On the other hand these guilds of singers will not be underestimated when it is realized that in these circles the psalms were preserved, collected, arranged and compiled, used in the Temple worship, and perhaps a few of them, composed. Some of the more menial work of the Levites was, by the time of the Chronicler, devolved upon a group known as **Nethinim** (q.v.). These are always distinguished from the Levites and are said, in a note of the Chronicler's, to have been given by David to the Levites, just as in P the Levites are said to have been given (*n^{e}thûnîm*) to the priests (Ezr 2^{54ff} 8^{20}).

4. The Priesthood in the Intertestamental Period.—Within the last two centuries B.C., the power of the priests diminished, as the leadership of the people passed into the hands of the Scribes and Pharisees, now the effective teachers of the people. As late as *c* 200 B.C. it was natural for Ben Sira to glorify Aaron as the founder of the priestly line (45^{6ff}), and to sing a panegyric on Simon II., the son of Onias 'the great priest' who died in 195 B.C. This family, down to the murdered Onias III., was Zadokite. The passing of the reality of power from the priests is connected with the events that follow. The hellenizing designs of the Antiochene kings found a response in a succession of scheming claimants to the high priesthood, and finally in 152 B.C. Jonathan, the Hasmonaean king, assumed the high priesthood for himself and his successors.

Here the *Damascus Document* and the sectarian texts found at Qumrân are likely to throw new light on this part of the history of the Jewish priesthood. Where reconstruction must be tentative, and confidence is premature, it is possible only to suggest an interpretation which commands substantial agreement. Both the *Damascus Document* and the *Manual of Discipline* exhibit a strong Zadokite stamp, referring repeatedly to 'the sons of Zadok, the priests, the keepers of the Covenant,' and it is highly probable that the Teacher of Righteousness belonged to this family. It may be claimed that the following account does justice to a maximum amount of the evidence. The community which produced this literature first came into existence as a result of the menace of Hellenism and the resultant threat to the Jewish faith and institutions between 200 and 170 B.C., and the Teacher of Righteousness came into prominence probably at the time of the revolt against Antiochus Epiphanes. All the literature suggests that this was mainly a group of priests, loyal to the house of Zadok, organized to preserve their sacred traditions and privileges, distinguished from the Hasidaeans precisely by their Zadokite loyalty and character. The *War of the Sons of Light with the Sons of Darkness* suggests that they began by supporting the Maccabees. But they finally severed all connexion with them when, in 152 B.C., Jonathan seized the high priesthood. It was this event which transformed the community into a dissident sect. The Teacher of Righteousness with his followers went into exile, and later settled in Damascus, in the conviction that they were the 'community of the New Covenant in the land of Damascus.' To those years of exile belong some of the *Hymns*, the *Damascus Document*, and perhaps the *Habakkuk Commentary*. When the Hasmonaean dynasty came to an end, and they returned to Jerusalem, they found that the possessors of real influence were the lay Pharisees, while the Jerusalem priests were those priests who had been prepared to compromise, and for some reason not altogether clear, were now known as Sadducees. Their own future lay primarily at Qumrân where they established their centre. The Sadducees successfully retained control of the Jerusalem priesthood, together with the outward but unsubstantial trappings of power. See also DEAD SEA SCROLLS.

5. The Theological Contribution of the Priests.—(*a*) In the post-exilic period, the priesthood was responsible for a profound change of emphasis in the religion of Israel, with a corresponding change in the function of the priest himself. Judaism has been defined as 'a state constituted by the close alliance of race and religion, of civil and religious legislation under the same law, by the exercise of single authority in the hands of the high priest' (Lagrange). What the priests did was to mould the institutions and traditions of Israel into an impressive whole, designed for the maintenance of holiness in the community. This was understood to be given and directed by God, in every part, through his servant Moses (P), and again through David (the Chronicler), and therefore binding every detail upon every faithful Israelite. The principle of legitimacy was fundamental. Schism was abhorrent. Hence the Samaritans, who built their temple on Gerizim probably towards the end of the 4th cent., were regarded as outside the covenant community, and their priesthood illegitimate. Fundamental to the thought of the priests was the conception of sin everywhere implicit in the law and the cult, and the atonement which was dependent upon the hierarchy and its service. Ancient conceptions of holiness and sin, and the sacrificial ritual appropriate to them (ultimately Canaanite and indeed common to the near-east), were adjusted to more characteristically Israelite (Mosaic) principles of the moral law and of the character of the Living God, without a satisfactory unity ever being achieved. Nevertheless, the priests made sure that holiness and sin would be taken seriously. They understood that atonement must always be costly. They penetrated in the heart of their ritual to the mystery of vicarious sacrifice. Thus they understood man's need and the *principles* of the Divine method of meeting it, providing the terms, thought-forms and images with which to describe the more excellent way of the NT.

(*b*) The mediatorial rôle of the priest was also a principle of permanent importance, applied already within the OT to the place of Israel as a whole in the purpose of God. As a priest is to Israel, released from ordinary toil to concentrate on priestly ministry, so shall Israel be to the nations, which shall release her from manual toil for her ministry to the whole world (Is 56^{6f}, cf Ex 19^6, 1 P 2^4).

(*c*) The high priest especially was regarded as a mediator and intercessor on behalf of the people. And just as the expectation of a perfect kingly rule was projected into the future in the form of a messianic hope, so later Judaism became familiar with the figure of a priestly advocate, who performed the high priestly function of intercession and mediation in heaven (*e.g.* Michael, Enoch, Elijah, Metatron). Whereas it might be expected that the demise of the monarchy and the dominant position of the high priest might influence the form of the messianic hope, in fact there was persistent resistance to the confusion of the royal and sacerdotal rôles. As it has been said, 'Judaism almost consistently

refuses to portray a priest-messiah.' Test. Levi 18 is the main exception, and even this is not free of difficulties, since it may have come down to us in a Christian form, which understands both the priest of Levi and the king of Judah to be realized in the single figure of Jesus. Elsewhere and far more frequent in the Testaments is the double picture of an eschatological high priest from Levi and a Messiah from Judah, and the eschatological high priest takes precedence (Test. Jud. $21^{2,4}$). It is undoubtedly this circle of ideas which provided the key-conception of the heavenly intercession of Jesus for the author of the Epistle to the Hebrews.

The Zadokites of Damascus abandoned the idea of a Messiah of Judah altogether. They speak of a Messiah 'from Aaron and Israel,' a phrase which sums up their own identity as the true Israel, mainly but not exclusively composed of priests. Messiah would be a priest of their own number. D. R. J.

PRIESTS (in NT).—'Priest' (Gr. *hiereus*) is employed in the NT to denote anyone whose office it is to minister in sacred rites, including sacrifice. **1.** It is used of a *Gentile* priesthood in Ac 14^{13} ('the priest of Zeus'), and also in Hebrews, in a transferred sense, as applied to the 'order of Melchizedek' ($5^{6,10}$ 6^{20} 7^{1ff}), for Melchizedek, it is evident, was not merely a pre-Aaronic but a Gentile priest.

2. It is constantly employed to denote the members of the *Jewish* priesthood in their various ranks and functions. The ordinary officiating priests of the Temple come before us discharging the same offices of which we read in the OT. They burn incense (Lk $1^{5,8}$), present the sacrificial offerings (Mt 12^{5}, cf Nu 28^{9f}), effect the ceremonial cleansing of the leper (Mt 8^{4}=Mk 1^{44}=Lk 5^{14}, cf 17^{14}). As in the OT, the priests are still the teachers of religion, though in the NT period this function has been largely taken over by the scribes (q.v.). The high priest (*archiereus*) appears as president of the Sanhedrin (Mt 26^{57} ||, Ac 5^{27} 7^{1} 23^{2} etc.) and as entering every year on the Day of Atonement into the Holy Place (the Holy of Holies; see TEMPLE) with his offering of blood (He 9^{25}). Most frequently of all the word occurs in the plural form 'chief priests' (*archiereis*), an expression that probably designates a high-priestly party consisting of the high priest proper, the ex-high priests, and the members of those privileged families from which the high priests were drawn (see *e.g.* Mk 15^{1}).

3. In the Epistle to the Hebrews *Christ* is described as both priest and high priest, but the fact that **Melchizedek** (q.v.), the chosen type of His eternal priesthood, is also described by the same two terms (cf 5^{6} with v.^{10}, 6^{20} with 7^{1}) shows that no distinction in principle is to be thought of, and that Christ is called a high priest simply to bring out the dignity of His priesthood—he is superior to angels, to Moses, and to Aaron. This conception of Christ as a priest is clearly stated in no other book of the NT, though suggestions of it appear elsewhere. In Hebrews it is the regulating idea in the contrast that the author works out with such elaboration between the Old and the New Covenants. He thinks of a mediating priest as essential to a religion, and his purpose is to show the immense superiority in this respect of the new religion over the old. He finds certain points of contact between the priesthood of **Aaron** and that of Christ. This, indeed, was essential to his whole conception of the Law as having a shadow of the good things to come (10^{1}), and of the priests who offer gifts according to the Law as serving 'a copy and shadow of the heavenly sanctuary' (8^{5}). Christ, *e.g.*, was Divinely called and commissioned, even as Aaron was (5^{4f}). He too was taken from among men, was tempted like His fellows, learned obedience through suffering, and so was qualified by His own human sympathies to be the High Priest of the human race (4^{15ff} 5^{1ff}). But it is pre-eminently by way of antithesis and not of likeness that the Aaronic priesthood is used to illustrate the priesthood of Christ. The priests of the Jewish faith were sinful men (5^{3}), while Jesus was absolutely sinless (4^{15}). They were mortal creatures, 'many in number, because they were prevented by death from continuing in office' (7^{23}), while Jesus 'holds his priesthood permanently, because he continues for ever' (v.^{24}). The sacrifices of the Jewish Law were imperfect (10^{1ff}); but Christ 'by a single offering . . . has perfected for all time those who are sanctified' (10^{14}). The sanctuary of the old religion was a worldly structure (9^{1}), and so liable to destruction or decay; but Christ enters 'into heaven itself, now to appear before the face of God for us' (9^{24}).

And this contrast between the priesthood of Aaron and the priesthood of Christ is brought to a head when Jesus is declared to be a priest—not after the order of Aaron at all, but after the order of Melchizedek (7^{11ff}). 'Order,' it must be kept in mind, does not here refer to ministry, but to the person of the high priest—a fact which, when clearly perceived, saves us from much confusion in the interpretation of this Epistle. The distinctive *order* of Christ's priesthood is found in His own nature, above all in the fact that He is 'a priest for ever.' Christ as high priest is conceived as performing the same kind of priestly function as was discharged by the high priests of the house of Aaron, *i.e.* mediation, intercession, cleansing, the removal of sin and guilt—in brief, a ministry of atonement and reconciliation with God; but both His nature and the quality of His Person are quite different, and this completely alters the character of His acts, raising them from the realm of copies and shadows to that of absolute reality and eternal validity.

It is a mistake, therefore, to distinguish between an Aaronic priesthood exercised by Christ on earth and an eternal Melchizedekian priesthood exercised by Him in heaven; it is equally a mistake to attempt to confine His priestly ministry to a work of mediation and intercession that begins only after His exaltation. No doubt it is true that His priestly work is not consummated until He enters God's presence in the heavenly places, but all that the writer has previously set forth about His priesthood must be borne in mind. It was by His life on earth, by the obedience He learned and the human sympathy He gained, that Christ was qualified to be the high priest of men. Moreover, every high priest 'is appointed to offer gifts and sacrifices; hence it is necessary for this priest also to have something to offer' (8^{3}); this 'something' was Himself, yielded up on earth in a life of perfect obedience (5^{8f}) and an atoning death of spotless self-sacrifice ($9^{11-15,28}$). It was with this priestly offering of His life and death, and in virtue of it, that Jesus entered into the presence of God (9^{24}) as the 'mediator of a new covenant' (v.^{15}) and the ever-living intercessor (7^{25}), and so secured for us our access with boldness to the throne of grace (4^{16} 10^{19-22}).

4. According to Hebrews, Revelation and 1 Peter, *the Church* is a priestly institution, and Christians are themselves priests. The OT idea that Israel was 'a kingdom of priests and a holy nation' (Ex 19^{6}) is transferred in precise terms to God's people under the New Dispensation. They are 'a royal priesthood' (1 P 2^{9}); Christ has made them to be 'a kingdom, priests to his God and Father' (Rev 1^{6} 5^{10}). Again, they are referred to by these same two writers as 'a holy priesthood' (1 P 2^{5}), 'priests of God and of Christ' (Rev 20^{6}). And though the author of Hebrews does not so describe them in set language, it follows from his way of speaking that he regards all Christ's people as priests. When he says in the passage last cited (10^{19-22}) that they have boldness to enter into the sanctuary by a new and living way through the curtain, it seems evident that he is thinking of those who draw near to God, by the blood of Jesus and in fulness of faith, as a company of worshipping priests; for under the old dispensation, which serves him at so many points as a type of the new, it was priests alone who could pass through the curtain into the Holy Place. It is the same idea, probably, that meets us in St. Paul when he speaks of our 'access' (Ro 5^{2}), our 'access in one Spirit to the Father' (Eph 2^{18}), our 'access in confidence through our faith' in Christ (3^{12}). And it

is nothing more than a carrying out of this same conception that all believers belong to a holy priesthood, when the author of 1 Peter writes of the 'spiritual sacrifices' which they are called to offer up (1 P 2[5]); and Paul bids his readers to present their bodies a living sacrifice (Ro 12[1]); and the author of Hebrews bids his hearers offer to God the sacrifice of praise (13[15]), or declares that God is well pleased with such sacrifices as kindly deeds and gifts of Christian liberality (v.[16]); and the seer of the Apocalypse speaks of the prayers of all the saints as rising up like incense from the golden altar before the throne (Rev 8[3]).

5. It is a noteworthy fact that the NT never describes *the Christian ministry* as a priesthood, or the individual minister as a priest; there is no trace in the NT of the later idea that in the Lord's Supper a sacrifice of propitiation is offered to God, much less that this sacrifice is presented through the mediation of an official priesthood. The two terms 'presbyter' (*presbyteros*) and 'priest' (*hiereus*), which came in time to be identified, were at first kept absolutely distinct. Thus, as far as the NT is concerned, it is only in an etymological sense that it can be said that 'New presbyter is old priest writ large.' J. C. L.—**F. C. G.**

PRINCE.—This is the translation of a considerable number of Hebrew, Aramaic and Greek words, expressing different shades of meaning, *e.g.* 'chieftain,' 'ruler,' 'king,' 'governor,' 'noble,' 'deputy.' The rendering of these as 'prince' is to be found more frequently in AV than in RV and RSV. The main terms are: **1.** *śar* (cf Akk. *šarru*=king, in plural=viceroys). It is used for foreigners, *e.g.* representatives of a king (Gn 12[15], of Pharaoh), chieftains (Nu 22[8], of Moab), as leaders (1 K 20[14], RSV 'district governors'), and also of the chief butler and baker (Gn 40[2]), the keeper of the prison (Gn 39[23]), taskmasters (Ex 1[11]), chief eunuch (Dn 1[7]). With reference to Israelites, it is used of notables and chiefs (*e.g.* 2 S 3[38]), of officials of a town (Jg 8[6], of Succoth, RSV 'officials'). Later it is used of angelic beings (Dn 10[13, 20f] of the guardian angels of the nations; 12[1], of Michael). The feminine form *śārāh* is used of the wives of Solomon (1 K 11[3]), of Jerusalem 'princess among the cities' (La 1[1]), and is translated 'ladies' in Jg 5[29], Est 1[18] (in the latter RV has 'princesses'), and 'queens' in Is 49[23].

2. *naśî'*, 'one lifted up,' perhaps originally of tribal representatives (*e.g.* Gn 17[20] 25[16] and frequently in Numbers). It is applied to Abraham (Gn 23[6]), Shechem (34[2]), Sheshbazzar (Ezr 1[8]), and in Ezekiel to the rulers of Judah and other nations, and to the future head of the ideal state (34[24] of David, and cf 45, 46, 48). RSV sometimes uses 'leader'; AV, RV 'ruler.'

3. *nāghîdh*, 'one who is high, conspicuous,' is used frequently of a divinely appointed leader of Israel, *e.g.* David (1 S 9[16]), Jeroboam I. (1 K 14[7]). It is also used of the ruler of Tyre (Ezk 28[2]), the 'crown prince' (2 Ch 11[22]), the high priest (Dn 9[25]), the palace governor (2 Ch 28[7]), the keeper of the treasury (1 Ch 26[24]), the chief officer of the Temple (1 Ch 9[11], 2 Ch 31[13]). AV sometimes 'captain' or 'ruler,' once 'noble.'

4. *nādhîbh*=willing, hence 'a noble,' often used in the plural (*e.g.* 1 S 2[8], Ps 47[9] 107[40], etc.), and sometimes translated 'nobles.'

5. Other less frequent terms are *nāsîkh* 'anointed' or 'installed' (AV wrongly in Dn 11[8] for 'molten images'); *rāzôn* (Pr 14[28], cf the proper name Rezon, 1 K 11[23]) and the plural form *rōzᵉnîm* (from 'be weighty'); *rabh* meaning 'chief,' as in 'chief officers' (Jer 39[13]), and in titles *Rabshakeh, Rabsaris, Rabmag*; *rabhrᵉbhān* 'lords' (Dn 52[f]); *shālîsh*, either Hittite *šalliš*=great, or 'third man in chariot,' often=adjutant (2 K 9[25]); *kāṣîn*, (cf Cadi), 'judge' or 'leader' (Jephthah); *sᵉghānîm*, of Assyrian or Babylonian officials, and of the heads of the Jewish community (Ezr 9[2], Neh 2[16]); *partᵉmîm* (Persian *fratama*), 'nobility.'

In Dn 3[2f, 27] 6[2, 4, 7] *'aḥashdarpᵉnayyā'* (Persian *kshathrapān*)=satraps (so RSV, RV; AV 'princes'); Ps 68[31] *ḥashmannîm*=bronze (so RSV; AV, RV 'princes'); Job 12[19] *kōhēn*=priest (so RSV, RV; AV 'prince').

The NT terms are **1.** *archēgos*, applied to Christ, Ac 3[15] (RSV 'author'), 5[31] (RSV 'Leader'), He 2[10] 12[2] (RSV 'pioneer'). **2.** *archōn*, used of Beelzebub (Mt 9[34] 12[24], Mk 3[22]), the princes of the Gentiles (Mt 20[25]; RV, RSV 'rulers'), the princes of this world (1 Co 2[6, 8]; RV, RSV 'rulers'), the prince of the power of the air (Eph 2[2]), and of Christ, prince of the kings of the earth (Rev 1[5]; RV, RSV 'ruler'). **3.** *hēgemōn*, used of Bethlehem (Mt 2[6]; AV, RV 'princes,' RSV 'ruler,' cf Mic 5[2] 'clans'; AV, RV 'thousands'). W. F. B.—**P. R. A.**

PRINCIPALITY.—This word is found in OT once only, in AV of Jer 13[18], where this meaning is improbable. AVm and RV have 'headtires' and RSV revocalizes the Hebrew and renders 'from your heads.' In NT 'principalities' is used in AV in Tit 3[1] of human authorities (RV and RSV 'rulers') and in AV, RV, and RSV in Ro 8[38], Eph 3[10] 6[12], Col 1[16] 2[15] of supramundane powers. The former use is found in AV in 2 Mac 4[27] (RV and RSV 'office') 5[7] (RV 'office,' RSV 'control of the government') and the latter also in AV in Eph 1[21] (RV and RSV 'rule') and in AV and RV in Col 2[10] (RSV 'rule'). In Jd [6] AVm and RV have 'principality' where AV has 'first estate' and RSV 'position,' in an allusion to the myth of the fallen angels.

PRISCA, PRISCILLA.—See AQUILA AND PRISCILLA.

PRISON.—Imprisonment, in the modern sense of strict confinement under guard, had no recognized place as a punishment for criminals under the older Hebrew legislation (see CRIMES AND PUNISHMENTS, **9**). The first mention of such, with apparently legal sanction, is in the post-exilic passage Ezr 7[26]. A prison, however, figures at an early period in the story of Joseph's fortunes in Egypt, and is denoted by an obscure expression, found only in this connexion, which means 'the Round House' (Gn 39[20, 23] 40[3, 5]). Some take the expression to signify a round tower used as a prison, others consider it 'the Hebraized form of an Egyptian word,' but it may be from the Akkadian '*sa'ru*' (ring). Joseph had already found that a disused cistern was a convenient place of detention (Gn 37[24]; see PIT). The same word (*bôr*) is found in Ex 12[29] and Jer 37[16] in the expression rendered 'dungeon' and 'dungeon cells' respectively; also alone in 38[6] where it is rendered 'cistern' (RV 'dungeon'), Zec 9[11] 'pit.'

The story of Jeremiah introduces us to a variety of other places of detention, four being named in 37[15-16], all of which imply rigorous imprisonment. The first used denotes literally 'house of fetters' and is rendered as a verb in RSV 'imprisoned,' whereas AV, RV render 'in prison'; cf also Jg 16[21, 25], where Samson is bound with 'bronze fetters.' The second word is literally 'house of restraint' rendered 'prison,' as also in vv.[4, 18] 52[31]. The third is literally 'house of the pit,' or 'cistern' and is rendered 'dungeon,' qualifying the fourth word rendered 'cells' (AV 'cabins') probably 'vaulted room' (so *KB*). Some textual students treat the first and the fourth as glosses.

Jeremiah had already had an experience of an irksome form of detention, when placed in the stocks (20[2]; cf Ac 16[24]), an instrument which, as the etymology shows, compelled the prisoner to sit in a crooked posture. 2 Ch 16[10] 'in the stocks, in prison' is literally 'a house of the stocks' (so RVm; AV 'prison house'), while Jer 29[26] associates with the stocks (so RSV and RV for AV 'prison') an obscure instrument of punishment, variously rendered 'shackles' (RV), 'pillory' (*Oxf. Heb. Lex.*), 'collar' (RSV), and 'iron-collar, pillory' (*KB*).

In NT times Jewish prisons doubtless followed the Greek and Roman models. The prison into which John the Baptist was thrown (Mt 14[3, 10]) is said by Josephus to have been in the castle of Machaerus. The prison in which Peter and John were put by the Jewish

authorities (Ac 4[3] 'in custody'; RV 'in ward'; AV 'in hold') was doubtless the same as the 'common prison' of 5[18] (AV, RSV; RV 'the public ward'). St. Paul's experience of prisons was even more extensive than Jeremiah's (2 Co 6[5]), varying from the mild form of restraint implied in Ac 28[30], at Rome, to the severity of 'the inner prison' at Philippi (16[24]), and the final horrors of the Mamertine dungeon.

For the *crux interpretum*, 1 P 3[19], see DESCENT INTO HADES. A. R. S. K.—R. A. B.

PRISON GATE, Neh 12[39] (AV).—See GUARD, GATE OF THE.

PRIZE.—See GAMES.

PROCHORUS.—One of the 'Seven' appointed by the Apostles (Ac 6[5]). Nothing more is known of him.

PROCONSUL.—The governor of a senatorial *province* (q.v.); the title usually means 'ex-consul.' It was originally two words—*pro consule*, meaning a magistrate with the insignia and powers of a consul. When the kingship was abolished in Rome it gave place to a rule of two men, not called by the now detested name, but named *praetores* ('generals') or *consules* ('colleagues'). As the Roman territory increased, men of praetorian or consular rank were required to govern the **provinces** (q.v.). During the Empire all governors of senatorial provinces were called proconsuls, whether they were ex-consuls and governed important provinces like Asia and Africa, or merely ex-praetors, like Gallio (Ac 18[12] AV **deputy**), who governed a less important province, Achaia. Except for the important provinces of Africa and Asia, it was only a title of courtesy. A. So.—J. S. K.

PROCURATOR.—Meaning originally a steward of private property, a procurator had become the man to whom the Emperor assigned some special task. The task could vary from administering an important province to collecting a single tax. Whether the responsibility was great or small, he served as the personal representative of his master. And because procuring, whether of taxes or other property, was the chief function of this class of imperial servants, they were chosen from the *equites*, the knighthood of Rome, who in the early days of the Empire still retained a monopoly of skill as bankers and entrepreneurs. Until the days of Claudius (A.D. 41–54), when freedmen began to replace knights as functionaries, this class formed the mainstay of the principate.

Extreme differences of calibre were found among the procurators. Notably the governor of Egypt had to be a man of rich experience and sensitive to the diversified folkways of the people whom he governed. Egypt was the only imperial province administered by a procurator. Choice of an equestrian rather than a member of the senatorial class, as for all the other provinces, was due to exploitation of Egypt as the ruler's private estate much as in the days of the pharaohs and Ptolemies. Because of the importance of his office, the procurator commissioned to Egypt bore the distinctive title 'prefect.'

Ability to handle money was often the sole requirement of a procurator. Thus if he were assigned to collecting the tribute in an imperial province such as Syria he would not even need experience as a military commander; such a man could always ask help from the governor. With the title of *legatus*, 'legate,' the governor of such a province was of senatorial rank and had a strong force of legionaries under his command (see PROVINCE). But there were situations in which the procurator himself might be in command of an army contingent—if not of legionaries, at least of auxiliaries. That would likely be the case when the governor was a native whose loyalty could not be wholly trusted.

This was precisely the situation in Palestine during the period before the debacle of A.D. 70, except during intervals and in areas where Herodian princes performed the duties both of governor and procurator. Despite the tense situation, the Emperor's agents were often men with little sympathy for Jewish customs. Their choice and tenure seems to have been largely determined by the hope of curbing the rapacity for which their equestrian class was notorious. Of procurators mentioned in the NT, Pontius Pilate showed his contempt for Jewish custom by bringing the imperial standards with their images of Caesar into the Holy City and by minting coins with offensive symbols. Moreover, as a creature of Sejanus, commander of the praetorian guard and traitor to the Emperor, the matter of rapacity does not seem to have entered into his appointment. This factor should be considered in assessing the likelihood that Joseph of Arimathaea paid him a substantial bribe to obtain illegal custody of the body of Jesus. Felix and Festus, who figure in the narrative of the Apostle Paul, are among the officials cited by Josephus as responsible for stirring the Jews to revolt.

The misleading title 'governor' is given these procurators by the NT writers. It occurs also in Josephus and in the Hebrew of the Mishnah. The term is correct after A.D. 70 when procurators did indeed have these enlarged powers; thus its use in these writings is a hint as to the date when they were compiled. But during the earlier period the actual governor was not the procurator but the high priest. The relation between the two was much like that formerly in India between British 'resident' and maharajah. The high priest outranked the procurator even when, as with Caiaphas and his two predecessors, he himself was an appointee of the procurator. When in Rome the procurator remained a mere knight, but the high priest received the courtesy honours of a Roman senator. Therein the status of Judaea was comparable to that of other Roman provinces.

The procurator of Judaea had in addition to his duties as chief tax collector the curbing of sedition, for which he was given the *jus gladii*, 'power of the sword.' To make this power effective he was given command of one or more cohorts of auxiliaries. The high priest was in no way thereby deprived of his former rights to execute those who offended against Jewish law. Indeed the appointment of procurators carried with it an enlargement of the powers of the high priest. What is meant by bestowing *jus gladii* on the procurator is that transference of the governorship of the province from Herodian princes to the Jewish high priest did not include also the task of repressing sedition that they had possessed. Thus the handing over of Jesus to the procurator for execution signified that his offence was not covered by Jewish religious law but concerned imperial security. See ROMAN PUBLIC LAW. J. S. K.

PROFANE.—'To profane' is 'to make ceremonially unclean,' 'to make unholy.' And so a 'profane person' (He 12[16]) is an 'ungodly person,' a person of common, coarse life, not merely of speech. RSV "irreligious."

PROGNOSTICATOR.—See MAGIC, DIVINATION AND SORCERY, and STARS.

PROMISE.—1. Despite the lack in Biblical Hebrew of a word specifically denoting 'promise,' the idea is strongly present in the OT with its reiterated emphasis upon Yahweh's devotion (*ḥesedh*) and faithfulness (*ʾᵉmûnāh*) and upon the fulfilling of the covenant (*bᵉrîth*) obligations. The verbs 'to say' (*ʾāmar*) and 'to speak' (*dibber*) together with their nouns 'speech' (*ʾōmer*) and 'word' (*dābhār*) were in themselves sufficient to convey the force, in such theocentric and ethically focussed literature, of a solemn promise, cf 2 S 7[28], '. . . thou art God, and thy words are true, and thou hast promised (literally 'spoken') this good thing.' Of special significance in this connexion is the use of the verbs 'to keep' (*shāmar*) and 'to do' (*ʿāśāh*), cf Dt 23[23], 'You shall be careful to perform (literally 'you shall keep and do') . . . what you have promised (literally 'spoken') with your mouth.' The adequacy of what is thus solemnly uttered is further supported in Mt 5[37] (cf Ja 5[12] and T. W. Manson, *The Sayings of Jesus*, 1949, 159), and is noteworthy in view of the tendency in Hellenism and Rabbinic Judaism to use a stronger form of expression, cf the

employment of 'to trust' (*bāṭaḥ*) in the sense of 'to promise,' which also has been taken over into modern Hebrew.

2. Whilst instances thus occur of man's promises to man (*e.g.* Neh 5^{12}^{f}, Est 4^{7}) and of man's promises to God (*e.g.* Dt 23^{23} and cf Dt 26^{17}^{f}, where the assurance is reciprocal), of paramount interest are God's promises to man. These are especially to be noted in the instances of the words spoken respectively to Abraham, to Israel, and to David. In the case of Abraham the Divine promise has a threefold reference—to a numberless posterity, to the gift of Canaan as the 'promised land' and to the blessing of his descendants (Gn 12^{2}^{f}$^{, 7}$ 13$^{14-17}$ 15^{18} 17$^{4-8}$ 22^{17}^{f}, cf its reiteration to Isaac and Jacob in Gn 26$^{3-5}$ and 28$^{13-15}$). Under the terms of the Sinaitic covenant with the tribal brotherhood of Israel at the mountain of God (Sinai according to J and P; Horeb according to E and D) Yahweh promises that they shall be his 'own possession' if they will obey His voice and keep His covenant (Ex 19^{5}). To this Old Covenant also the prophets refer (*e.g.* Jer 7^{23}, Ezk 16^{8}, Am 3^{1}^{f}), and Yahweh's faithfulness to His promise is frequently affirmed (*e.g.* Dt 4^{31}, cf Ex 34^{6}) as well as His power to fulfil His promises (*e.g.* Ps 93^{5}, where for 'testimonies' or 'promises' RSV renders 'decrees'). The promise to David relates to an '*everlasting* covenant' with Yahweh, whereby His throne was to be established for ever, a promise eventually to be fulfilled in the coming of the true Messiah of the House of David, His descendant and ideal successor, cf *e.g.* 2 S 7$^{12, 16}$ 23^{5}, Ps 89^{3}^{f}$^{, 19-29}$ 132^{11} and note the important discussion of these and related passages in A. R. Johnson, *Sacral Kingship in Ancient Israel*, 1955, 14–27, 58 (where 'testimonies' (*'ēdhôth*) is shown to be synonymous with 'promises'), 97 f, 118 f. Elsewhere in the OT the promises to Abraham and to David are echoed and occasionally connected (*e.g.* Jer 23^{5}^{f}, Ezk 37$^{24-28}$). The Prophetic writings are of their very nature shot through with the promises of God, and two others of them which call for mention here concern the New Covenant (Jer 31$^{31-34}$) and the pouring out of God's spirit on all flesh (Jl 2$^{28-32}$).

3. The principal term in the NT for 'promise' (verb *epangellesthai*—there used only in the middle voice, noun *epangelia*) in classical Greek means 'announce,' often in the sense of giving prior notice of intention, which in the setting of public life may have reference, *e.g.* to the proclamation of authority, to the threat of legal proceedings, or to the promise by a magistrate on taking office of a distribution of food. Almost invariably it there appears to have been limited to human declarations, whereas, apart from a few instances (*e.g.* Mk 14^{11}, 2 P 2^{19}), in NT usage it has to do with the assurances of God, an emphasis which may well have come about through the kind of phraseology current amongst the rabbis in their discussions concerning the Divine promises. cf G. Dalman, *The Words of Jesus,* translated by D. M. Kay, 1909, 103.

4. The OT promises outlined above, and thus far not realized (*e.g.* He 11^{13}, cf 1 P 1^{10}^{ff}), are in the NT regarded as being fulfilled in Jesus Christ (2 Co 1^{20}, cf Ro 15^{8}), an emphasis which informs the primitive preaching (*i.e.* the *kērygma*, cf C. H. Dodd, *The Apostolic Preaching and Its Developments*,^{2} 1944, 7–35), being indeed central in NT apologetic (*e.g.* Ac 2^{39} 13^{32}^{f}, Ro 1^{1}^{f}). A distinctive note of the First Gospel is that Jesus is the Messiah of prophecy, the events in the life of Christ being regarded as having taken place 'to fulfil what the Lord had spoken by the prophet' (Mt 1^{22} 2^{15}, cf 2$^{17, 23}$ 8^{17} 12^{17} etc.). Of special importance here is the promise made to David (Ac 2^{30}, cf Ps 132^{11}), Peter arguing on the basis of Ps 16^{10} that David 'foresaw and spoke of the resurrection of the Christ' (Ac 2^{31}), and Paul declaring that of David's 'posterity God has brought to Israel a Saviour, Jesus, as he promised' (Ac 13^{23}, cf Ro 1^{3}). Earlier in his speech at Pentecost (Ac 2$^{16-21}$) Peter accounts for what has just taken place as the fulfilment of Jl 2$^{28-32}$, and in conclusion of his speech makes it clear that 'this gift of the Holy Spirit' is the 'promise' (cf Eph 1^{13}, 'the promised Holy Spirit') made available for such as repent and are baptized in the name of Jesus Christ (Ac 2^{38}^{f}). The promise made to Abraham occupies a prominent place in Paul's consideration of faith. Abraham was 'fully convinced that God was able to do what he had promised' (Ro 4^{21}), in the matter both of a multitudinous posterity (Ro 4^{17}^{f}) and of the gift of Canaan (Ro 4^{13}, where 'the world' in current Rabbinic thought was but an extension of 'the promised land'), and 'his faith was "reckoned to him as righteousness"'—so 'It will be reckoned to us who believe in him that raised from the dead Jesus our Lord' (Ro 4^{22}^{ff}). Likewise regarding the third constituent of this promise (Gal 3^{8}), the condition for receiving the blessing of Abraham is faith (Gal 3^{9}), a blessing which is extended in Christ Jesus to the Gentiles and equated as it were with 'the promise of the Spirit' (Gal 3^{14}), the argument being clinched in Gal 3^{29}. In He 8$^{8-12}$ the author quotes *in extenso* Jer 31$^{31-34}$ as the 'better promises' on which is enacted the better covenant which Christ mediates (He 8^{6}), surpassing the promises underlying the Old Covenant of Sinai, cf He 8$^{7, 13}$. Special attention also is in this epistle given to the promise as having an eschatological reference under the aspects of entering God's rest (He 4$^{1-11}$, arguing from Ps 95$^{7-11}$), of the heavenly city (He 11$^{8-10}$, on the basis of Gn 12$^{1-8}$), and of the 'kingdom that cannot be shaken' (He 12^{26}^{ff}, citing Hag 2^{6}). Eschatological expectation similarly underlies the 'precious and very great promises' of 2 P 1^{4}, relating to 'new heavens and a new earth in which righteousness dwells' (2 P 3^{13}, cf Is 65^{17} 66^{22}).

E. T. R.

PROPHECY, PROPHETS.—The more scholars learn about OT prophecy—and their knowledge has grown immensely during the last fifty years—the more they feel its unique power. Psychology, anthropology, sociology, archaeology, the history of religions, and other relevant disciplines have helped us to understand various aspects of prophecy, but they have not solved the riddle of prophecy itself. The theologian who knows how to use the resources of history and linguistics is still the best interpreter of prophecy. Our aim here is to summarize what is known about (1) the history of OT prophecy, (2) the prophet as a religious functionary, (3) prophetic inspiration, (4) the distinctive beliefs and attitudes expressed in the prophetical literature, and (5) the transition from OT prophecy to NT prophecy.

1. History.—The four books of 'canonical' prophecy—Isaiah, Jeremiah, Ezekiel, and the Minor Prophets—are a definitive collection recognized as Scripture early in the 2nd cent. B.C. and not subject to structural alteration after that time. Presumably the terminal editing was accomplished about 200 B.C. The material appears to have been produced between the 8th and the 3rd cents. B.C. Thus, on the one hand, G. E. Wright's confident assertion that the Latter Prophets 'were completed in their present form at least by the fourth century B.C.' cannot command unqualified assent, and, on the other hand, extensive insertions in the 2nd cent. or later are precluded.

The finest declarations of the OT prophets belong, on the whole, to the earlier half of the five-century period we have indicated, and in the latter half apocalyptic, a derivative form of prophecy, comes increasingly to the fore. Both individually and collectively the canonical prophets were creative in the highest degree, and much that they taught has lasting value and admits of universal application; yet they are not, save in the broadest way, comparable with modern thinkers, critics, and reformers. They did not invent prophecy, nor did prophecy cease with them. Hence its history consists of three parts: (1) the pre-canonical, (2) the canonical, and (3) the post-canonical.

(1) What we are told about **pre-canonical prophecy** is rarely history in the strict sense. In the historical books the prophet is doubtless often a stock figure who speaks at the narrator's bidding and in the narrator's words. We need not question the historicity of the more sharply

defined pre-canonical prophets, such as Samuel, Nathan, Elijah, and Micaiah, but the complete authenticity of the utterances ascribed to them is not assured. Despite these difficulties, it is evident that prophecy is an ancient institution in Israel. Amos' words (2^{11-12}) imply that there were legitimate prophets before him; and, in fact, something like a continuous line may have extended as far back as to Moses (Dt 34^{10}), though scarcely still farther to Abraham (Gn 20^{7}). Probably the Israelites, like the peoples around them, made no absolute distinction between the prophet on the one hand and the priest, the diviner, the poet, and the charismatic political leader on the other. Such prophets as Miriam, Aaron, Deborah, Samuel, Nathan, Elijah, and Elisha illustrate the combination of several gifts or functions in one person. The cultic connexions of prophecy have been emphasized in many modern studies and the division of primitive Semitic prophets into two classes, the interpreters of signs and the ecstatics, has met with some favour. It has been suggested that the more obviously ecstatic practices were learned from the Canaanites. Exercises of this type are particularly conspicuous in the Samuel-Saul complex of traditions, and there may be some significance in the simultaneous appearance of prophetic communities known as '**sons of the prophets**,' for a more suitable means of promoting ecstatic prophecy cannot readily be imagined. Pre-canonical group prophecy is one of the enigmas of the OT. If it preserved Yahwistic traditions and effected a synthesis of ecstatic and non-ecstatic prophecy, it was also in a position to foster an infatuated nationalism and to sponsor a perilous syncretism. In the absence of positive information one suspects that it had a multiple influence, with both good and bad results.

(2) The exact number of prophets represented in the **canonical** collection cannot be determined. Most of the books contain considerable material of unknown authorship, but this supplementary matter is now handled less cavalierly than was formerly the custom. Whereas it was once thought that the application of critical axioms could separate the genuine nucleus from the accretions that had obscured it, less confidence is felt to-day in a documentary criticism based on Western presuppositions. Form criticism and traditio-historical method have established new objectives for research in the prophetical writings; the compilation of the books is viewed more as an organic process than as a series of accidents; and the present interest in theology has helped to stop undue fragmentation. The OT cares more about content than about authorship, and we are slowly learning to follow its lead. Even when the author of a prophecy can be named with almost complete certainty, we know relatively little about him.

Malachi sounds like a fictitious name formed by the simple capitalization of *mal'ākhî* 'my messenger' in Mal 3^{1}. The book itself may be assigned to the first half of the 5th cent. There was a prophet Jonah in the days of Jeroboam II. (?782/81–753 B.C.), but he did not write the Book of Jonah, which is a late polemical tract (4th cent.), aimed at the rigidities of prophecy in its decadence. Save for these, the names attached to the prophetical books presumably represent historical persons, each of whom is likely to have had some part in the production of the book with which he is credited. Amos, a Judaean, prophesied in the Kingdom of Israel, and for all we know, elsewhere as well, close to the middle of the 8th cent. At the same time or shortly thereafter Hosea's voice was heard. Isaiah's career covers roughly the latter half of the 8th cent., and the most suitable setting for Micah's prophecies is the crisis of 701 B.C. The dangers and calamities of 627–586 B.C. bred a diversity of prophets: Zephaniah, Nahum, and Habakkuk, all of whom prophesied before the close of the 7th cent.; Jeremiah, whose work spans the whole unsettled era; and Ezekiel, who, according to the dates given in his book, was active from 593–571 B.C. Cyrus' conquest of Babylon in 539 B.C. is the key to the dating of the Second Isaiah's oracles, which survive in Is 40–55. Haggai's prophecies were uttered in 520 B.C. and Zechariah's (Zec 1–8) in 520–518 B.C. About 400 B.C. will serve as an approximate date for the Third Isaiah (Is 56–66). Obadiah's book was written in the 5th cent., Joel's in the 4th, and Zechariah 9–14 in the 3rd. Insofar as the prophets and their annotators have supplied the material with dates, the information given appears to be substantially correct. Where definite chronological intelligence is lacking, only an inferential date is possible, and therefore further debate may be expected.

The difference between canonical prophecy and 'false' prophecy cannot be defined with precision. The notion of '**false**' **prophets** originates in the conflict between 'true' prophets and their opponents. The record was written by the 'true' prophets and their sympathizers. Are the 'false' prophets misrepresented? Judged by the disasters they assisted in precipitating, they deserved all that the canonical prophets said of them. They had, nevertheless, their own kind of sincerity and their own way of being loyal to the covenant. They simply mistook the clamour of their own desires for the promptings of the Divine Spirit. Jeremiah and Ezekiel acutely brought to light the nature and source of the self-deception that characterized false prophecy. The evil may have been aggravated by reckless reliance on drugs, strong drink, and auto-suggestion for the simulation of ecstasy. In any event, the externals of behaviour were not decisive. It was the prophet's dedication that counted, and when we try to measure it, the OT rules of thumb (Dt 13^{1-5} 18^{21-22}) are of limited assistance.

(3) In 1 Maccabees (4^{46} 9^{27} 14^{41}) prophecy is dormant, if not extinct. This was perhaps the general belief regarding it in the 2nd cent. Eventually the true date of its supposed termination was forgotten. Josephus (*Against Apion*, I. 7 [40, 41]) recognizes no prophets, and indeed no Scripture, after Artaxerxes I. (464–424 B.C.). Subsequent opinion is vague, but at least some authorities (*Baba Bathra* 12ab) conclude the prophetic age with the destruction of the First Temple (586 B.C.). The effect of these artificial views was that **prophecy no longer appeared under its own name.** He who would formerly have assumed the character of a prophet was now an apocalyptist, a psalmist, or a sage. To be sure, we read of an occasional prophet (Josephus, *The Jewish War*, II. xiii. 5 [261–263], VI. v. 2 [285–288]), but such figures were never taken seriously by the nation as a whole. The Book of Daniel, written some decades after the adoption of the prophetical canon, illustrates the real interests of those who still practised some semblance of prophecy. Eschatology had become their main concern. Preoccupation with its intricacies had a regrettable influence on the study of prophecy. For example, the interpretation given the canonical prophets in the Dead Sea commentaries is dictated by the convictions and expectations of a sect, to the total disregard of what the oracles might have meant when they were delivered. Nevertheless, even eschatological interpreters are prophets in a manner of speaking. Thus, attenuated rather than extinguished, OT prophecy closed its career.

2. The prophet as a religious functionary.—The priest is inescapably attached to the cult, apart from which, no matter what the origin or theory of his office, he cannot act as a priest. In contrast, despite the resourceful arguments of many very competent writers in the present century, the prophet's dependence on the cult is still somewhat less than self-evident. If the respective vocations and interests of priests and prophets are no longer represented as totally incompatible, scholarship should be grateful for the more correct view that now prevails, but OT theologians cannot be altogether comfortable when some of their colleagues seem bent on assimilating prophecy completely to priesthood or, if they do not go quite so far, converting prophecy into an almost purely cultic activity.

There are, admittedly, many passages that appear to indicate a more than casual relation between prophets and the cult. Indeed, the information we have is so copious and so various that it rules out at the start a

radical simplification of the question. Reserving the pentateuchal references to prophecy for later consideration, we shall limit ourselves here to the post-Mosaic history. Joshua, as the successor of Moses, has direct communication with Y". The absence of prophets from the traditions about Joshua is not difficult to explain, for he exercises the essential faculties of prophecy and is in fact what we have learned to call a 'sacral king.' The word 'prophet' as applied to Deborah (Jg 4^4) and the anonymous prophet of Jg 6^8 is more an adjective than a noun and in any case indicates no link with the cult. The record is remarkably silent regarding prophecy in the age of settlement and consolidation. At the end of this time, however, the volume of data abruptly increases.

The traditions assembled in 1 Samuel present a composite portrait of Samuel, some features of which seem at first sight more historical than others. Efforts to separate the historical from the legendary and tendentious have had little success, in the absence of really reliable criteria. The narrative as a whole is credible, consistent, and intelligible if we regard it as a reflection of the period in which Samuel led the nation. It is not impossible that he actually was everything from an obscure village seer to an omnicompetent 'sacral king.' At any rate, much of the OT vocabulary of prophecy is applied to him: various traditions describe him as a 'man of God' (1 S 9^6), an apprentice priest who experiences an audition (1 S 3), a *rō'ēh* 'seer' (1 S 9^{11}), an intercessor (1 S 7^8 12^{19-25}), and finally a *nābhî'* 'prophet' (1 S 3^{20}) familiar with groups of ecstatic prophets (1 S 10^5) and on one occasion conducting or supervising a session of 'prophesying' (1 S 19^{20}). This diversity suggests that in Samuel's time two kinds of prophecy were coalescing. On the one hand, there was traditional Hebrew prophecy, divisible into (*a*) cult-bound and cult-controlled divination, for example inquiry by means of the 'ephod' (1 S 23^{9-12}), and (*b*) 'psychic' forms of prophecy—second sight, nocturnal visions and auditions, and the like—which could be, and probably often were, practised independently of the cult. On the other hand, the impact of a more manifestly ecstatic prophecy, foreign to the old Yahwism, was being felt; and while this variety of prophecy may long have had an assured place in the Canaanite cults, its association with the Yahwistic cult was new, incomplete, and tentative. The conflict between the old prophecy and the new was to continue until the end of the monarchy. Thus the editorial observation in 1 S 9^9, notwithstanding the sceptical view that some scholars take of it, may accurately represent the truth. It is true, as the note states, that in popular usage the term 'prophet' eventually supplanted the term 'seer,' but we must add that the meaning of 'prophet' was altered in the process.

With the introduction of the monarchy the structure of the state assumes a more recognizable form, in which a place should have been assigned to the prophets if they were cultic functionaries. Prophets are absent from the lists of the court officials of David (2 S 8^{15-18} 20^{23-26}) and Solomon (1 K 4^{2-19}); priests, on the contrary, are included. The frequent Deuteronomistic phrase 'the priests and the prophets' (2 K 23^2, Jer $26^{7f., 11, 16}$ 29^1), so far from proving that the position of the prophets was comparable throughout with that of the priests, could with equal justice be held to demonstrate the opposite. 'Prophets' and 'priests' balance each other in Hebrew verse or are coupled for rhetorical purposes (Is 28^7, Jer 4^9 5^{31} 6^{13} 23^{11}, Hos 4^{4-5}, Mic 3^{11}, La 4^{13}), but this means no more than that the two groups belong to the same society. The prophets constituted a class or order in the commonwealth without, for that reason, possessing a more cultic character than the people, the princes, the elders, or the wise men (Is 3^2, Jer 18^{18} 26^{12} 29^1). The use of the Temple for prophecy is well attested. There the least sacerdotal of the prophets could count on an atmosphere and an audience, and that is doubtless, in the main, why the Temple—or some local sanctuary—is so often the scene of prophecy. So far as we can determine, the prophets did not normally live in the Temple or any other sanctuary: if 'the sons of Hanan the son of Igdaliah, the man of God'—apparently a prophetic group—had a chamber in the Temple (Jer 35^4), so had Tobiah the Ammonite (Neh 13^{4-9}), and both cases were exceptional. If our sources are trustworthy, the prophets who frequented the holy places were, at least in certain instances, under the supervision of the priests (Jer 20^{1-6} 29^{24-28}, Am 7^{10-17}), who manifest a professional hostility to them. To be sure, a priest or a member of a priestly family could also be a prophet, witness Jeremiah, Ezekiel, and probably Zechariah. After the Exile canonical prophecy is much more friendly towards the cult than before. For all that, the existence of a stylized cultic prophecy (reflected, it is alleged, in some of the Psalms) and the eventual absorption of prophecy into the Temple music are to be viewed as interesting matters of speculation rather than certainties of science. In short, if prophecy has a cultic setting much of the time, there are also occasions on which the cultic background cannot be discerned (2 S 12^{1-15}, 1 K 21^{17-29} 22^{5-28}, 2 K 22^{14-20}), and therefore while, for quite patent reasons, prophecy utilizes cultic facilities, it remains an essentially autonomous force, never wholly explicable in cultic terms.

Coming as it does from different periods and sources, the evidence scattered through the Pentateuch is of varied character. In the complex figure of Balaam (Nu 22–24) several prophetic techniques are combined, the most fundamental and original of which is perhaps the art of the poet and the orator, the masters of cursing and blessing. Possibly Miriam was a prophetess (Ex 15^{20}) primarily in the sense that she possessed the power to curse Israel's enemies. However, it is much more likely that the details of such narratives do not rest wholly on a factual acquaintance with the methods of early prophecy, but conform in part to later patterns. The most interesting example of the blend of old and new is, of course, Moses. It is quite credible that the historical Moses had all the recognized charismata, including that of prophecy. At all events, a wide range of powers is attributed to him. Moses' peculiar intimacy with God is emphasized even in one of the most primitive pentateuchal traditions (Ex 33^{7-11}); hence there may be some historical basis for the claims made in Ex 7^{1-2}, Nu 12^{6-8}, Dt 34^{10}, as well as in a fourth passage, Nu 11^{24-30}, which differs from the others in being deeply coloured by a late conception of the manner in which prophets were inspired. Private divination and like practices are vehemently condemned (Ex 22^{18}, Lv $19^{26, 31}$ $20^{6, 27}$, Dt 18^{10-14}) in the pentateuchal codes, which significantly ignore prophecy proper save in Dt 13^{1-5} 18^{15-22}. If prophecy was mainly a cultic affair, one is at a loss to find a reason for this curious silence, which contrasts strikingly with the numerous instructions given to the priests.

Semantic analysis affords a second approach to prophecy. The basic word for 'prophet' in the OT as a whole is *nābhî'*, and its normal Greek equivalent is *prophētēs*, which means essentially 'one who tells forth, announces, proclaims.' *Nābhî'* has precisely this sense in Ex 7^1, where Aaron's task is to utter the words that Moses has given him. Here the term is purely functional and implies neither the existence nor the non-existence of special endowments in Aaron. It is not improbable that this is the oldest sense of the word, which accordingly is best viewed as an active ('crier,' 'announcer,' 'messenger'), not a passive ('a person who is called,' 'recipient of a vocation'), noun derived from the Akkadian *nabû*, 'call.' From the noun a Hebrew verb has arisen. Two stems of the verb occur, the niph'al and the hithpa'el, and it is impossible to detect any radical difference of meaning between them. Each of these stems has the double sense of 'to act like a prophet' and 'to act as a prophet.' One can act like a prophet by exhibiting or simulating the curious behaviour that is regarded as evidence of the possession of the Spirit. This aspect of prophecy is, however, not always prominent, and the verb can mean merely 'to do the

work of a prophet,' 'to prophesy.' The niph'al is transitive in Jer 14[14] and other passages in the same book, the hithpa'el in Jer 14[14] and 1 K 22[8, 18].

While there is really no synonym for 'prophet,' parallel terms have a limited currency. Examined singly they give us little insight into prophecy, but in the aggregate they prove to be surprisingly instructive. For example, Elijah is directed to anoint his successor Elisha (1 K 19[16]), and a later prophet commends himself to his audience on the ground that Yahweh has anointed him for the work he is doing (Is 61[1]). For this reason or in consequence of some specific call or commission, the prophet is the deity's confidential 'servant' (1 K 14[18] 15[29], 2 K 9[36] 10[10] 14[25], Is 20[3] 42[1] 49[3, 5f] 52[13] 53[11]), and in the plural the title repeatedly designates the prophets as a class (2 K 9[7] 17[13, 23] 21[10] 24[2] Jer 7[25] 25[4] 26[5] 29[19] 35[15] 44[4], Ezk 38[17], Am 3[7], Zec 1[6], Ezr 9[11], Dn 9[6, 10]). The word 'messenger' (2 Ch 36[15f] Hag 1[13]) characterizes the prophet a little more sharply. In Jer 23[18–22] it is asserted, if only indirectly, that the true prophets have access to Yahweh's presence and hear His decisions; they are the first to learn of His secret intentions (Am 3[7]). They have even more exalted status in terrestrial courts, where as mentors and critics of the king and his subordinates they are at times among the most powerful of public figures. Seeing what is hidden from other men, they can be called 'seers' (*ḥôzîm, rô'îm*) as well as 'prophets' (Is 29[10] 30[10]), and occasionally a prophet of considerable eminence is styled 'the Seer' (2 S 24[11], 2 Ch 16[7, 10] 19[2]). The phrase 'man of God' is commonly applied to prophets: Samuel (1 S 9[10]), Shemaiah (1 K 12[22]), Elijah (1 K 17, 2 K 1), Elisha (2 K 4, 5, 6, 7, 8, 13), and unnamed prophets. The sense 'prophet' probably still clings to this expression when it is used of an angel (Jg 13[6, 8]), Hanan (Jer 35[4]), Moses (1 Ch 23[14], 2 Ch 30[16], Ezr 3[2], Ps 90[1]), and David (2 Ch 8[14], Neh 12[24, 36]). 'Man of (? the) Spirit' is employed as a parallel to 'prophet' in Hos 9[7].

One way of getting help in a crisis was to approach or summon a prophet and address a question to him (Jer 38[14]) or inquire of him (1 K 22[7]). The folk-prophets may normally have prophesied in response to a particular inquiry. We have no means of ascertaining what proportion of canonical prophecy originated in this manner. In any case, for the canonical prophets and their aggressive predecessors the delivery of 'words,' 'burdens,' and 'oracles' was rather a response to God than a reply to His people, and therefore, more often than not, the prophet takes the initiative and transmits the message, regardless of the mood of the recipients (Ezk 2[5, 7] 3[11]).

Another form of aid rendered by the prophets in time of difficulty was their expert **intercession**. The prophet's familiarity with God and His concerns gave him a special competence in the delicate business of restoring Israel's 'rightness' (*ṣᵉdhāḳāh, ṣedheḳ*), which could be impaired by disloyalty on the part of the people. The procedure of the law courts furnished a model for prophetic mediation, which was directed towards the vindication of the just party by his own demonstration of his 'justness' and not by the mere verdict of a judge acting as an administrator of objective law. Yahweh is, to be sure, the ultimate judge in all tribunals, but He may also be the plaintiff, the injured party, whose interests the prophet, as judge, is bound to protect. In accordance with this conception of justice, the prophet, while still in some fashion the judge who brings the litigants together, is free either to double as the voice of the prosecution and state Yahweh's case (*rîbh*) against His people (Hos 4[1–6] Mic 6[1–5], Is 5[1–4]) or to take the part of the defendant in an effort to obtain for him the clemency that will remit or mitigate the penalty (Gn 18[22–33] 20[7, 17], Ex 32[11–14, 31–34], Dt 9[25–29], 1 S 12[19–25], Jer 7[16] 11[14] 14[11–12]). Many immaterial variations of the prophet's rôle are possible; for example, in Hab 1[2–4, 12–13] 2[1–4] he pleads for the deliverance of the righteous from the injustice they suffer at the hands of the ungodly, in Jl 2[12–17] he urges the people to contrition, and in Hos 11[8–9] he is the spokesman of Yahweh's compassion. So strong was the belief in the efficacy of the prophets' intercession that reliance on the advocacy of the prophets Moses and Samuel (Jer 15[1]) and the quasi-prophetic mediators Noah, Daniel, and Job (Ezk 14[14]) could go too far. If at times people leaned too heavily on the prophets, the excess was understandable. Save perhaps for the king, nobody in the community was comparable with the prophet. It meant a great deal that he knew, or could find out by some means or other, what was going to happen; but his service was not complete when he had done a thing that, after all, the least remarkable diviner or necromancer was credited with the power to do: besides being a man whose vision triumphed over the restrictions of time and space, he was capable of interpreting the future that God had shown him and so guiding the people back to 'the ancient paths, where the good way is' (Jer 6[16]) and can always be found by penitents who seek it resolutely. He was the custodian of the national conscience and the guardian of those virtues by which the covenant was maintained.

One cannot help perceiving the intimate tie that exists between the office of prophet and the office of king. They may at one time have been identical, that is to say they may have originated, as separate offices, in a division of functions formerly combined in the same person, the charismatic head of the community, whatever the name by which he was known. The king's sacerdotal functions, delegated to full-time priests for the ordinary operation of the cult, were exercised by the king himself in extraordinary circumstances (2 S 6[12–15], 1 K 8). By an analogous differentiation, the actual practice of prophecy may have fallen increasingly into the hands of qualified functionaries until the bond between king and prophet became purely vestigial. Hence Saul's association with the prophets (1 S 10[11–12] 19[24]) and David's prophetic endowments (2 S 23[1–2]) are conceivably relics of an earlier time, when prophecy was concentrated in the king's person. If the king was in theory the chief of prophets as well as the chief of priests, we need no longer be puzzled by the royal habit of overruling and disregarding the prophets. Notwithstanding the hypothetical character of these observations, they are in general agreement with views that are held widely to-day, and there are at least some grounds for postulating the emergence of prophecy from a primitive organic totality that embraced kingship, priesthood, and prophecy.

In a survey of the entire range of prophetical functions, with their ideological concomitants, a touch of the Hebrews' unaffected realism is helpful. The prophet was a person who possessed certain powers and skills that enabled him to serve as an intermediary between God and the people. No ancient society could have done without him. Some of the OT prophet's traits, habits, and methods were common to prophets, diviners, soothsayers, and magicians the world over. His gifts were an accepted reality, and his fellow Israelites found them useful, dangerous, or merely distasteful, according to the requirements and interests of the moment. At its ordinary level, prophecy was a distinct, but not tightly organized, profession, into which men were drawn, as they were into other occupations, by aptitude, association, opportunity, and training. It had points of contact with, if not a recognized position in, the national cult, and it is extremely unlikely, despite the relative silence and obscurity of the OT on this point, that prophecy lacked forms of initiation, admission, and consecration. The prophetical art was a combination of technique and inspiration, either of which might eclipse the other in a given prophet. Yet technique was never wholly uninspired, and inspiration of a sort could be induced by means of technical devices. Thus, the importance attached to a personal vocation cannot easily be estimated. The most eminent of the canonical prophets appear to have been called to the prophetic life as individuals, but a specific vocation may not have been

considered indispensable. In any event a man proved that he was a prophet by doing what was expected of a prophet, and if he played the part convincingly, he was probably not often asked how he had come to assume it. The prophet, in brief, was an acknowledged organ of society, and prophecy was an established institution. The traditional conception of prophecy both aided and hindered the canonical prophets.

3. Prophetic inspiration.—Prophetic inspiration received a certain amount of critical attention while the OT was still being written. Almost from the very start, the representatives of the movement that has given us the prophetical books of the OT were challenged by practitioners of a different sort of prophecy. The former found theological and ethical reasons for condemning the latter: intemperance (Is 28^{7}), venality (Mic $3^{5, 11}$), irresponsibility (Zeph 3^{4}), untruthfulness (Jer 5^{31}), and plagiarism (Jer 23^{30}) are among the offences of which the unfaithful prophets are said to be guilty; and on the theological side it will suffice to mention the severe denunciations attributed to Jeremiah and Ezekiel, according to which the prophets in question are devoid of authority (Jer 5^{13} 23^{21} 27^{15}) and, so far from being Yahweh's accredited agents, have been misguided by Him (Ezk 14^{9}, cf Jer 23^{15}). There is also a psychological verdict: false prophecy is self-deception, and the word that is passed off as Yahweh's is really the product of the prophet's own psyche (Jer 14^{14} $23^{26, 31}$, Ezk $13^{2f, 17}$). In its own way, the OT has anticipated the main drifts of subsequent discussion, which has pursued either the inspired word or the inspired person, but rarely both. Patristic, mediaeval, and reformation writers were content to trace the design implicit in the prophetic word. Criticism, textual, literary, and historical, and psychology, experimental and analytical, have taught us the importance of the minds and personalities that operate in prophecy. We have much to gain from a synthesis of the two ways of thinking about prophetic inspiration.

On prophetic premisses, **inspiration** presupposes an inspirer. A simple and immovable certitude with regard to the covenant underlies all the utterances of prophecy. They came from Y", and the mark of their authenticity was their agreement with the faith long since defined by what God had done to and for the nation. The originality of the most gifted and devoted prophets, and of the 'true' prophets generally, consists in the conclusions they drew from axioms that neither they nor their hearers questioned. The covenant, with its boundless implications for the dedicated and obedient, was not the only criterion by which inspiration could be tested. The prophetic mind was capable of unsparing self-criticism and exercised a vigilant censorship over the ideas and impulses that came to it. It is to a prophet's credit that he is cautious and hesitant in his response to Yahweh's approach (Ex 3^{11} $4^{1, 10, 13}$, 1 S 3^{2-9}) and shrinks from his vocation (Is 6^{5}, Jer $1^{6, 17}$). Jeremiah denies himself the gratification of an immediate retort to Hananiah and does not reply until Yahweh has unmistakably spoken (Jer 28^{11-12}). Here we have an arresting contrast between the 'false' prophet's precipitate opportunism and the 'true' prophet's patient submission to the discipline Yahweh imposes on those whom He inspires. A second proof of inspiration was therefore to be found in the prophet's sincerity, his self-denying identification of himself, on the one hand, with Yahweh and, on the other, with the people; his personal suffering and the violence done to his private inclinations were a guarantee against the aberrations of desire and pride. With the corroboration he received from the covenant and from his own commitment, the prophet had all the confirmation his oracles required. The only language that will adequately convey what has happened to the prophet is the language he habitually employs: 'thus saith Yahweh,' 'Yahweh made it known to me' (Jer 11^{18}), 'the word of Yahweh came to me' (Jer 1^{4}, Ezk 3^{16}, Zec 4^{8}), 'Yahweh said to me' (Hos 3^{1}), 'Yahweh spoke thus with me' (Is 8^{11}), 'I saw Yahweh' (Am 9^{1}), 'Yahweh showed me' (Am $7^{1, 4, 7}$ 8^{1}, Zec 3^{1}), 'Yahweh took me' (Am 7^{15}), 'the Spirit entered into me' (Ezk 2^{2}), 'lifted me up' (Ezk 3^{12}), 'fell upon me' (Ezk 11^{5}). In speaking of his inspiration he may trace it to the Word or to the Spirit; but these are not necessarily antithetical terms, whatever the preference of the prophet or the period. How intricate the problem of prophetic inspiration is on its purely historical side anyone can discover by turning to Mic 3^{5-8}, where the prophet lumps together prophet, seer, and diviner in a comprehensive denunciation and then describes himself as 'filled with strength (? that is), the Spirit of Yahweh, and judgment, and power, to tell Jacob his transgression and Israel his sin.' Whether or not the words meaning 'that is *or* with the Spirit of Yahweh' are original, Micah has his own equations, his own locutions, and his own antipathies. It would be rash to generalize concerning any term from the use that is made of it in this passage. In Mic 3^{5} probably three voices are represented: Yahweh speaks to the prophet, the prophet speaks for Yahweh, and the editor speaks for the prophet. To indicate, here and in scores of other places, the limits and degrees of inspiration is a task of surpassing delicacy, and we have no mind to attempt it. It seems sufficient to say that the prophetical books, like the OT generally, spring from a prophetic community, in which men who are widely separated by history may yet do a common work.

The entire psyche apprehends the word, which is spoken of as seen (Am 1^{1}, Is 2^{1}, Jer 38^{21}, Hab 1^{1}), felt (Jer 20^{9}), and even tasted (Jer 1^{9} 15^{16}, Ezk 3^{1-3}). So far as the subject matter is an index to the appositeness of technical terms, the word *ḥāzôn* 'vision' could often be exchanged, without perceptible loss, for a word having primary reference to the sense of hearing (Is 1^{1}, Jer 23^{16}, Hos 12^{10}, Ob 1^{1}, Hab 2^{2f}). *Rā'āh* 'see' tolerates as its object 'what [Yahweh] will speak' (Hab 2^{1}). The niceties of sense are not important to the prophet, who is indifferent to Yahweh's mode of approach and welcomes the 'word,' the 'vision,' or any other communication as a rational imperative.

The **psychological study of prophecy** might teach us something about the human aspect of inspiration were it not for the severe handicaps under which all such effort labours. The prophets are too remote from us to be studied with modern devices. The qualified psychologist normally has no training in the Biblical disciplines. Thus far we have had nothing but fragmentary suggestions that for the most part leave prophetic inspiration where they found it and make us feel that the enigmas of the prophet's inner life still await clarification: Allwohn's psychoanalytical explanation of Hosea in terms of repressed sexuality, displacement, ecstatic identification with Yahweh, and, in the end, sublimation; Broome's verdict that Ezekiel, 'a true psychotic (unrecognized in his day and looked upon as an ecstatic) capable of great religious insight,' was afflicted with 'paranoid schizophrenia'; Jung's characterization of the prophets as intuitive introverts; Hölscher's Wundtian treatment of prophetic phenomena; Povah's discoveries in the depth psychology of the prophets; and odd bits of scholarship in which it is argued that the prophets were psychotics, geniuses, mystics, poets, or something else.

A candid inquirer cannot dismiss cavalierly the possibility that some of the prophets—indeed perhaps all of them—had psychic gifts. The question arises very forcibly with respect to Samuel (1 S 9^{20}), Jeremiah (Jer 28^{16-17}), and Ezekiel (Ezk 11^{13}), and they are only three of the many who are reported to have exercised what the relatively new science of parapsychology calls the 'psi capacities.' Regrettably, the usefulness of parapsychology in the exploration of the prophetic psyche is not as yet very evident. The fulfilment of the parapsychologist's most enthusiastic dreams of scientific achievement would simply open the vast question of the relation between the prophet's extrasensory knowledge and other factors in the complex phenomenon of prophecy. Prediction is not the whole of prophecy, and although the prophets may have been favoured

with a natural aptitude for penetrating the future, they do not stand or fall by this alone, nor do they permit us to doubt that the future they see is the moral consequence of a present and a past that have been put to unworthy uses. The OT forecasts could be proved inferior, as regards accuracy, to modern prognostications made under parapsychological observation, and the prophets would still be the prophets. Prophecy offers an interpretation, not a photograph, of things to come.

It can easily be shown that the prophets do not exhibit psychotic symptoms. The psychopath is a person who has repudiated the world that the rest of us recognize and has devised a way of living and thinking in defiance of facts. So far from being indifferent to what is happening about them, the prophets respond promptly and appropriately to changes in their surroundings. They deal with life on the widest scale and yet are never betrayed by the immensity of their commissions into regarding themselves as the centre of all things. Their personalities do not deteriorate, their utterances do not become fantastic, and their reactions to adversity are balanced and constructive. Genuine disorders of the mind—schizophrenia, paranoia, involutional melancholia, and manic-depressive insanity—simply do not appear in any convincing fashion. Ezekiel, the prophet who comes closest to being demonstrably a psychotic, is vindicated by the conventions of prophecy, which are not violated in his wildest flights. The prophet's fellow-Israelites expected him to be queer, unpredictable, and histrionic, and there were times when, in order to teach his lesson, he had to meet this expectation in a very extravagant manner. Unlike the psychotic, he always knew how far he was permitted to go and where dramatics ended and madness began. In the context of their faith, their vocation, and their culture, the prophets were as normal as a man can be without ceasing to be creative, and this may be taken to mean that if they were measured by our standards of psychic health, which are of debatable relevance here, substantially the same judgment would follow.

Two terms now current among psychologists are possibly of considerable relevance: *autism* (in the good sense) and *eidetic imagery*. The former enables us to visualize the prophet as a man who is preoccupied, at a certain time, with certain specific interests, and, much like a modern scientific or artistic observer, but with different presuppositions, is apt to find a pertinent communication in any object or incident, that is, to see what he is looking for in what comes his way. Sometimes the prophet will experience, at the slightest sensory stimulus or even without an external stimulus, a vision of some duration and intensity, and we can say that one of the reasons why this has happened to him is that he needed it, wanted it, and expected it. To make such a statement is not to preclude inspiration, but merely to indicate what we should probably observe in an inspired prophet if we knew him well enough and had been with him long enough. A closely related phenomenon has been discovered in the eidetic images that some people have the ability to produce. These images are, save for the use they make of sensory memories, independent of the senses. A prophet who had a talent for eidetic imagery could construct a vision that for him would be as lifelike as an actual spectacle and would therefore be as truly seen. The two phenomena here discussed go far to explain a third phenomenon, **ecstasy.**

Enthusiastic prophecy, in the literal sense of the adjective, has already come to our notice. In extreme instances, it appears to be a profound psychophysical disturbance, in which the prophet's volition is completely suspended and he becomes the helpless organ of the deity that has taken hold of him. Ordinarily this is what we mean by 'ecstasy.' The scholars who maintain that it is indigenous to Syria and Asia Minor are probably right in their interpretation of the scanty evidence we possess, much of which (*e.g.* the contributions of Justin, Celsus, Lucian, and Apuleius) is from the first few centuries of the Christian Era and therefore can serve only indirectly to fix the locality in which ecstasy was an original part of religious practice. A little information can be garnered from more ancient sources, but for the most part we must rely on our sense of what is primary and what is secondary in OT religion. Wen-amon, writing in the 11th cent. B.C., relates that while he was at Byblos a member of the king's entourage—apparently not a professional prophet—remained a whole night (?) under the influence of the god and delivered a message that opened the way to the completion of Wen-amon's business. The hieroglyphic determinative employed in the text represents a man in an attitude that an ecstatic prophet might well assume. The Mari specimens of prophetic utterance may belong to the same species of prophecy. *Maḫḫu* priests, who seem to have been ecstatics of a sort, are mentioned in Akkadian documents; of the content and style of their oracles we are totally ignorant. The Ugaritic literature contains no undisputed evidence of prophecy. The OT is far more informative than any of the extrabiblical sources. When Ahab's prophets (1 K 22^{5-28}), approximately 400 in number, are set side by side with the 450 prophets of Baal (1 K 18^{17-40}), it requires no great acumen to perceive that both bands are ecstatic. These, of course, are not the only passages in which the ecstatic state can plainly be discerned. The Hebrews can scarcely have been acquainted with it before their migration to Canaan, where they adopted it, to a considerable extent, out of deference to Canaanite culture. This, at any rate, is a tenable opinion as to the genesis and growth of ecstatic prophecy. In the absence of a better hypothesis, we shall have to be content with it.

The earliest examples of ecstatic prophecy among the Israelites long antedate the first of the canonical prophets; hence, insofar as ecstasy became normal in Hebrew prophecy, its assimilation was completed by the time canonical prophecy arose. There were doubtless many folk-prophets who regarded it as indispensable and carefully cultivated it. So close an attachment to it is not the rule with the canonical prophets. Their stand, if they had one, must be inferred partly from their oracles, partly from their beliefs regarding their respective vocations, and partly from their controversies with the folk-prophets. Some oracles reflect violent emotion (Is 21^{1-10}, Jer 4^{19-29}) or frenetic activity (Ezk 21^{14-22}); they compel us to grant that canonical prophecy may occasionally be ecstatic prophecy. At the same time, no canonical prophet adduces his ecstasies as such in confirmation of his claim to be accepted for what he believes himself to be, nor does he taunt his adversaries with their possession or lack of any psychic gift, but only with its misuse. The truth is that modern scholarly interest in ecstasy would have been puzzling to any prophet, true or false.

If we are to retain the word at all, the utmost semantic latitude is desirable. Achelis' comprehensive definition of ecstasy as 'the peculiar intensification of our psychic powers above the normal level' accommodates all the forms that occur in normative OT prophecy. The most characteristic form in canonical prophecy is a devout preoccupation with the affairs of the covenant, a concentration of the prophet's psychic forces that gives him a rare receptivity and unifies his scattered and conflicting human capacities. Ecstasy is any psychophysical condition that is compatible with inspiration. The two terms must not be used loosely to mean the same thing. Ecstasy is something man feels. Inspiration is something God does.

4. The distinctive beliefs and attitudes expressed in the prophetical literature.—All prophetic teaching is occasional or existential teaching. It is given under the stimulus of a situation and is meant primarily to show how the corporate righteousness is to be maintained in face of the unfamiliar difficulties of the situation. Hence the total teaching of the prophets does not appear in any single place, and prophetic doctrine is never presented as a carefully articulated whole.

There is only one God in prophecy. The Second

PROPHECY, PROPHETS

Isaiah's vigorous assertions of Yahweh's uniqueness make it plain that this prophet was a monotheist of the most uncompromising sort. The monotheistic language interpolated in the writings of the pre-exilic prophets may have been influenced by his lively satire. His predecessors were perhaps not his equals as theologians, but their rejection of other gods was as vehement as his. The man-made character of the idols is emphasized in Am 5^{26}, Hos 8^{5} 13^{2} 14^{3}, Is $2^{8,20}$ 31^{7}, Hab 2^{18-19}, Jer 1^{16} 16^{19-20}, and in these and like passages we are told again and again that the idols are things of wood and stone or gold and silver; the prayers offered to them are futile; they have no life; they are worthless; they are helpless; and they can neither supply man's common needs nor succour him in distress. The only conclusion we can draw from the evidence before us is that the prophets, despising idols as impotent and allowing the divinities they represented no existence save insofar as a name was thought to give a semblance of reality, utterly repudiated the common ancient belief in a multiplicity of gods. The prophets concede nothing to idols (Is $41^{24,29}$): they exhaust the resources of the Hebrew tongue in support of their conviction that all gods but Yahweh are false, illusory, and altogether less real than the vain devotion of their worshippers.

God is depicted—necessarily and therefore without apology and without explanation—as a Person whose behaviour is broadly similar to man's. This does not mean that He is merely a magnified human being. Quite as little does it mean that man is an incomplete god. There is a generic difference between God and man, and we are confronted with a forcible statement of it in Is 31^{3}:

> The Egyptians are men, and not God;
> And their horses are flesh, and not spirit.

The Divine spirit withers defenceless flesh as a hot wind withers grass (Is 40^{7}). It is precisely this spirit that is absent from the idols (Jer 10^{14}, Hab 2^{19}). Man is not master of his own affairs, but must appeal to God to rectify his blunders (Jer 10^{23-24}). God is familiar with the operations of man's mind and conscience, as man is not (Jer 17^{9-10}). His thoughts and ways are higher than mortal thoughts and ways (Is 55^{8-9}). His presence embraces the most distant parts of the universe (Jer 23^{23-24}). Like the Hound of Heaven He pursues man to the bounds of the created world (Am 9^{2-4}). Rare are the gifts of the Prince of Tyre, but he is still 'a man and no god' (Ezk $28^{2,9}$).

The presupposition underlying all the rich diversity of prophetic speaking and writing is that Yahweh, the only God, possesses unique power, goodness, and devotion. The prophets cast no light on the origin or signification of His personal name. Its linguistic history did not interest them. Far more were they concerned with the God who had long ago revealed Himself under this name, and the individuality of the name blocked any tendency they may have had to convert Him into a Prime Mover or an impersonal cosmic Law. They had, in fact, no such inclination. Nowhere do they resolve Him into an abstraction. The Second Isaiah's sublime poems are perhaps the best example of the essential concreteness of prophetic thought. No matter how deep his awareness of what we should call God's transcendence, God remains for him the paramount Person (Is 40^{21-23}). Antinomies were reconciled by a stubborn insistence on God's wholeness.

Yahweh has demonstrated His power by making the world, and He continues to demonstrate it by governing the world. The prophetic teaching with regard to creation will occupy us presently. What must now be stressed is the complete absence of recognized limits, physical or moral, to God's power as the prophets know it (Is 40^{12-17}). Nations are judged, but it is God who judges them, and He Himself is never measured by any standard. He can do anything, He may do anything, and He has the right to do anything. The problems arising out of the Divine omnipotence, unpredictability, and unanswerability go for the most part unnoticed in the prophetical literature. At times a modern conscience is gravely disquieted by the apparently unreflecting and unblushing vigour of the language the prophets employ when they want unresponsive Israel to understand that God can be terrifying in His fury and irresistible in the defence and vindication of His honour, majesty, and glory. The prophets acknowledge Yahweh as the wielder of supreme and universal power. They do not question the ethics of His self-glorification. He is free to choose His own means of making the nations realize that He is Yahweh (Ezk *passim*). The Assyrian, the rod of Yahweh's anger, will suffer punishment in his turn (Is 10^{5-19}). Babylon is utilized for a certain end and then cast aside. God is accountable to nobody but Himself for conduct that in a human being would be called ruthless; but God is God, and the prophets see no reason why He should not exercise the prerogatives of the universal King (Is 6^{5} 33^{22} 43^{15} 44^{6}, Zeph 3^{15}, Jer 10^{10}, Ob ^{21}, Mal 1^{14}, Zec $14^{9,16f}$). They are not very fond of the title *King*, perhaps because they were too familiar with kings and had often been disappointed in them; yet there was no better way to designate Yahweh if one wanted to emphasize His sovereign authority. When sheer power was the primary consideration, the prophets found a vehicle for their meaning in the image of the potter and the clay. The clay does not talk back to the potter; it owes everything to him and may not presume to question his creative will (Is 29^{16} 45^{9-13}, Jer 18^{6}). The language of Jer 27^{5} may not be Jeremiah's, but the idea belongs to him and to the prophets in general: '*I* have made the earth—more particularly, the men and the beasts that are on the face of the earth—by My great strength and by My outstretched arm, and I will give it to whom I see fit.'

It is no denial of this absolute power, nor even a qualification of it, to testify that goodness always accompanies it. Here again God and man are far apart:

> Man is bowed down, and men are brought low,
> And the eyes of the haughty are humbled.
> But Yahweh of hosts is exalted in justice,
> And the holy God shows Himself holy in holiness.
> —(Is 5^{15-16})

There can be only one reason for God's unfailing goodness: '. . . let him who glories glory in this, that he understands and knows Me, that I, Yahweh, practise devotion, justice, and righteousness in the earth; for in these things I delight, says Yahweh' (Jer 9^{24}).

As Yahweh's righteousness, in a manner of speaking, softens His power, so His devotion softens His righteousness. He is not strictly, unbendingly just with His people. This is not a weakness, but rather a loyalty that looks in vain for a comparable steadfastness on the part of Israel. The reason for Israel's election lies concealed in the inscrutability of a God who does not have to justify Himself in the eyes of humanity. There may have been in Israel some recollection of covenants offered to other nations and rejected by them. Amos (9^{7}) may have something of the sort in mind when he holds all the nations of his narrow world to one basic law of justice (1^{3}–2^{16}). Yet even Amos knows, so far as we can see, of no enduring historical covenant save the one linked with the exodus from Egypt (2^{9-10}). Election is, in any case, the distinguishing mark of Israel, and the prophets perpetually exhort God's people to be worthy of God's favours. God's anger springs from frustrated love, a love that can be likened to a father's attachment to his son (Hos 11^{1}, Jer 31^{20}; Yahweh's love is like a mother's [Is 49^{15}]) or a husband's to his wife (Hos 1–4, Ezk 16^{23}). It is 'an everlasting love' (Jer 31^{3}) that can never be wholly extinguished (Hos 11^{8-9}), even when Israel wantonly forgets it and exploits it. The prophets, in their frank anthropomorphism, do not shrink from portraying God as an almost doting Lover who, in the very act of enumerating His kindnesses and Israel's offences, pleads for the gratitude and the fidelity that are His due. If the tie is

weakened or dissolved, it is not God who is at fault (Mic 6^3). There is an organic relation between the Divine love and the Divine power. Only a God who can do as He wills can will to love in this fashion (Hos 11^9). At the moment we need not inquire into the ultimate implications of Yahweh's love for creation as a whole. The special position of Israel is candidly accepted by the prophets for what it is. What is it but the least explicable of mysteries, a gift bestowed with unbelievable generosity on a people who must forever be reminded that they have never deserved it?

A brief way of putting what we have said in the last few paragraphs is to confess that Yahweh is 'the Living God.' He has imparted, and is continually imparting, His life to all things:

> . . . the spirit takes its departure from Me,
> And I am the Maker of the breath each creature breathes.
> —(Is 57^{16})

Rarely and then only in passages that may be secondary (Hos 1^{10}, Is $37^{4,17}$, Jer 10^{10} 23^{36}), do the prophets characterize Him as 'the Living God,' but, whether or not they used the phrase, they were enthusiastic exponents of the idea. They have a mature doctrine of creation in which Yahweh as the Giver of life is central and exclusive. The Second Isaiah, with his technical term for 'create' (*bārā'*) and his repeated claim for Yahweh's recognition as the sole creator, is introducing no novelties. Centuries before, if not at the very beginning, Israel had learned to worship Yahweh as Creator. Many indeed had confused Him with the forces of nature. Among the capital achievements of the prophets was their correction of this pantheistic tendency. They declared that Yahweh was not merely the producer and dispenser of nourishment for living things: He was also a God of justice and devotion. Life was not simply survival. For human beings it was participation in the ethical (Am 5^{14}), affective, and purposive aspects of creation (Is 40^{28-31}). Yahweh had made the world primarily to be the seat of human life and culture (Is 45^{18-19}) and the scene of guided events. The Canaanites, and innumerable Israelites with them, imagined that the created world was a gigantic womb made fruitful by the recurrent, unvarying exertions of the gods, unless the gods by some accident were negligent. According to the prophets it was the sphere of Divine action directed towards an end that man could understand (Is 40^{27-28}) and obediently seek. Life in its fulness, therefore, is lost by alienation from the unique absolute Possessor of life (Jer 2^{13}), and there is but one way to renew it: seek Him and live (Am 5^4). Estrangement from God, even though it may not issue immediately in physical death, is an aimlessness that is worse than death. Creation has a goal, and the proper rôle of man is to contribute to the attainment of the goal. God is the author of the evil as well as the good of creation (Is 45^7). How evil can exist without malice on the part of the Creator the prophets are at no pains to inform us. Their realism is satisfied to deal with the world as it is and to derive all things from God. Things happen as they do because God causes them to happen that way. If we look closely enough, we can see what He is about. We can discern Him behind everything. The prophets must have realized that God sometimes acts indirectly. It remains true that they habitually skipped the multitude of intermediate causes and traced each new impulse in creation to Yahweh.

In a universe completely subject to Yahweh man cannot occupy an independent position. The prophets have no distinctive creation myth, notwithstanding the glimpses of such myths we get in Ezekiel (28^{12-15}) and the Second Isaiah (Is $45^{12,18}$ 48^{13} $51^{3,9,13,16}$). The traditional anthropology is part of the prophetic heritage. The origin of sin is a speculative problem about which the prophets show no curiosity. Ignoring it, they concentrate on man's corruptibility in small things and large. Again and again, on the petty scale and on the grand scale, man is exposed as a creature gifted with a fatal ability to foul the world that God has given him. His boundless perversity supplies the prophets with inexhaustible material for their denunciations. It is a theme from which man's actual conduct and condition never allow them to turn. Isaiah handles it with brilliant eloquence. Among the prophets he has no peer in the art of contrast, as anyone can discover by reading his skilful description of degenerate Jerusalem (1^{21-23}) and his punning Song of the Vineyard (5^{1-7}). The latter rises to a superb climax, the force and compactness of which are merely suggested by this feeble rendering:

> And he expected honesty, but behold homicide
> And righteousness, but behold wretchedness.
> —(Is 57)

Isaiah's authorship of Is 2^{22} is debatable:

> Have done with man,
> In whose nose is breath,
> For what does he amount to?

He may have used this extreme language in a moment of bitterness, but despair of man is not really characteristic of the prophets. Any such abandonment of man would have been a betrayal of the God who had sent them, not only to rebuke the sinner, but also to recall him to a forgotten allegiance. God desired the repentance of the offenders, not their death (Ezk 18^{32}). He would not relinquish the ideal for the sake of which He had created them. No matter what they were actually, they were always potentially what He had at the beginning designed them to be. He would betroth them to Himself in righteousness, justice, devotion, mercy, and faithfulness (Hos 2^{19-20}). They might eventually comprehend that He cared more for them than for anything they possessed (Hos 6^6). Man as such is neither perfect nor perfectible. Man as the servant and son of God has incalculable possibilities. The prophets are not pessimistic about him.

Surely these considerations have some bearing on the mystery of **election**, and here we can go completely astray if we are not extremely wary. The canonical prophets were not shallow nationalists to whom the service of the national deity was a crass matter of *quid pro quo*. We are unjust to them if we make no distinction between prophetic Yahwism and popular Yahwism, but we do them a greater injustice when we confuse them with the internationalists and humanitarians of our own day and underrate their loyalty to nation, land, state, and cult. All four were organs of the covenant. Israel rightly cherished them as assurances that Yahweh was implementing election and giving it concrete effect. Yahweh's preference for Israel is taken for granted by all the prophets, even by Amos (3^2), who in this question as in most others seems, of all the prophets, the least prone to sentiment. It was not for them to determine whether or not Yahweh had chosen Israel. The service they could and did render was to confront Israel with the inexhaustible commitment to which the nation was obligated by Yahweh's choice. Israel was not a party to a contract; the covenant was a personal relation between Yahweh and Israel, due allowance being made for the disparity of their respective positions, Yahweh the master and Israel the servant. The covenant was unilateral in the sense that it originated with Yahweh and was subject to His will. Yahweh had forged the bond, was free to break it, and in Hos 1^6 seemed to declare it broken, whether or not He regarded the breach as permanent. Howbeit, Hosea himself tells us that Yahweh is reluctant to take this extreme step, which, as human language had to put it, would cause Him pain (11^{8-9}). Did the prophets then resign themselves to the dissolution of the covenant as a practical possibility? If an unqualified reply is demanded, it must assume a negative form. If we have to choose between complete, unmitigated doom and an overthrow that still did not preclude renewal and restoration, we must grant that the latter was the expectation of the prophets from Amos to Jeremiah. They might be

prepared to abandon the bulk of the nation as irrevocably lost, but they could not surrender the hope that some small part of Israel would survive the worst disaster. Only the Israel that had, by misuse, forfeited the security of the covenant and therefore did not really belong to Yahweh would perish. This could not happen to the whole of Israel, and no prophet envisaged the possibility, save that a few may have done so in an occasional moment of unrelieved dejection. Likewise, the land, though polluted by Israel's infidelities, was Yahweh's inheritance (Jer 2^7 3^2), and to be removed from it was a bitter punishment (Am 7^{10-17}, Jer $22^{10, 28}$); the state, with Yahweh's anointed at its head, offended the prophets only when it failed in its appointed duties; and the cardinal objection to the cult was not that it was superfluous, but that it substituted the forms of devotion for devotion itself (Am 2^{7-8} 4^{4-5} 5^{21-27}, Is 1^{10-17} 58, 66^3, Jer 6^{20} 7). What the prophets believed is at least partially to be seen in their influence on the devout of later generations. Post-exilic Israel, revering the prophets as they had never been revered when they were alive, nevertheless restored nation, land, state, and cult in the fullest practicable measure. Thus, for historical as well as for psychological reasons, it is very unlikely that the prophets contemplated the irremediable extinction of these things.

What Yahweh proposes to do with a co-operative Israel in relation to all mankind does not come to the surface in a prophet of the type of Amos. The future is too obscure and present problems are too pressing. The first task of prophecy is to break the people's faith in the ritual stereotype of destiny (conquest, prosperity, and honour under Yahweh) and to declare that the nation fulfils its destiny by being faithful to the character Yahweh has impressed upon Israel alone. Its place in the world is its supreme destiny, to which all programmes and missions are secondary and on which the issue of the nation's life depends. Amos takes Yahweh's world-wide dominion out of the realm of ceremonial illusion—at best a dignified, socialized kind of magic—and sets it firmly on a groundwork of ethical fact (5^{18-20}). The universalism of the prophets expresses itself here generously and there narrowly, its emphasis determined by the man and the moment. Not all can climb to the sublimities of the Second Isaiah, nor do all sink to the fury of Nahum, which is only a step from the coarsest passion for revenge. Beneath the variety of individual attitudes, the prophets' confidence in Israel's unique historical office abides unshaken. To them more than to its other teachers the nation owes its tough, enduring sense of destiny.

The destiny of the individual is not a fundamental theme of prophecy. Threats and promises affecting individuals are invariably confined to this world (Am $7^{11, 17}$, Is 7^{3-17} 22^{15-25}, Jer 20^{3-6} 21^7 $22^{10-12, 24-27, 30}$ 28^{16} $29^{21, 32}$ 35^{18-19} 39^{16-18}). The one hint of a resurrection appears in the Isaiah Apocalypse (Is 26^{19}) and scarcely belongs to prophecy in the proper sense. Whatever beatitude the individual is to enjoy is awarded to him through, and because of, his participation in the destiny of his people. The faithful proselyte will have a happy life in the beloved community, but the best that the prophets can offer him thereafter is 'an everlasting name' (Is 56^5). What happens to the individual after death is beyond the horizon of the prophets. This apparent omission was in reality the providential postponement of a question that might have been mishandled if it had arisen prematurely. Only after Jeremiah and Ezekiel had diligently explored the individual conscience was it safe to consider the matter of man's deliverance from death. It could then be examined on solidly ethical premisses.

The prophets are beyond compare in their grasp of human motivation. They transferred sin from its traditional place in nature and events to its real seat, which is man's conscience. They investigated the heart and found the malice that is the essence of all sin. No longer could sin be dismissed as the result of mischance and error. They coined a multitude of terms for it and in each name they gave it exhibited some facet of man's blameworthy misuse of a precious personal relation. Sin is rebellion (Am $1^{3, 6, 9, 11, 13}$ $2^{1, 4, 6}$, Is 1^2, Ezk $2^{3, 5, 6, 7}$ $3^{9, 26, 27}$ $12^{2, 3, 9}$ 17^{12} 24^3 44^6), obstinacy (Jer 3^{22}), wilfulness (Hos 8^4), arrogance (Is 9^9), pride (Is 5^{24}), self-reliance (Am 6^{13}, Is 5^{21}). It is desertion (Jer 2^{17}), deviation (Hos 7^{13}), forgetfulness (Jer 18^{15}), stupidity (Jer 4^{22}), and indifference (Is 5^{20}). It is infidelity (Hos 4^1), adultery (Hos 1^2 2^2), and a breach of confidence (Hos 5^7). It is anything that impairs righteousness, the visible assurance of Israel's stability and acceptability. Before the days of the prophets, *righteousness* meant, at bottom, correctness or normality. It was the state of the man or nation that was 'all right,' but not necessarily all right because completely good. Goodness was included without any objective analysis of its motivation and basic direction. It was still conceived of in part as an external thing, compatible with self-interest. When the prophets had finished with sin, the primitive, naïve idea that man was only vaguely responsible for it had been demolished forever. Righteousness could not be righteousness unless it proceeded from a whole and submissive heart. These concepts must be learned and made operative before religion can become a field in which the individual freely commits himself to the pursuit of transcendent ends.

The range of sin is broad, and so is the range of punishment. Here again the prophets inherit a concept and transform it. They do not work out a nicely adjusted scale of penalties. If there is collective sin, there is also collective punishment, from which the righteous are not necessarily exempt (Ezk 21^3). Ultimately, of course, the relation between sin and punishment is clarified with a wonderfully delicate logic (Jer 31^{29-30}, Ezk 3^{16-21} 14^{12-20} 18). Prophecy can then make two affirmations that are more true when they are combined than when each stands alone: 'The person who sins shall die' (Ezk 18^4) and 'The righteous shall live by his faithfulness' (Hab 2^4).

Prophecy would have stultified itself if it had not been from the start a summons to repentance. The prophets continually exhort the people to 'return' (Hos 7^{10} $14^{1, 2}$, Is 9^{13} 10^{21} 31^6, Zec 1^3) to God. Amos' recollection of calamities that have failed to convert the people does not wholly discourage him (4^{6-12}): he can still extend the invitation 'Seek me and live' (5^4). Appropriate comparisons underline the renewing effect of repentance. There are no more powerful recommendations of repentance than Isaiah's 'Wash yourselves; make yourselves clean' (1^{16}) and Jeremiah's 'Circumcise yourselves to the Lord, remove the foreskin of your hearts' (4^4).

Forgiveness is not granted grudgingly. It is liberally offered and earnestly pressed upon the iniquitous nation. 'I will speak compassionately' (Hos 2^{14}) to Israel, says Yahweh, who has no 'pleasure in the death of the wicked' (Ezk 18^{23}). He welcomes contrition (Is 57^{15}) and brings punishment to an end when it has done its work (Is 40^2). The prophets speak of repentance in different accents, but none of them would have denied that the 'wicked man' who 'turns away from all his sins' (Ezk 18^{21}) receives forgiveness.

Punishment and forgiveness, which can and do take place in the world as it is, are assimilated in the long run to judgment, redemption, and recreation, which appertain rather to the world as it will be. Judgment exhibits a curious duality, with Yahweh sometimes in the character of judge (Is 2^4 31^{3-15} 33^{22} 51^5, Jer 11^{20}, Ezk 11^{10-11} 34^{20} 35^{11}, Jl 3^{12}) and at other times in the rôle of litigant (Hos 2^2 4^1, Is 5^3, Mic 6^{1-5}). Redemption is Yahweh's complete repossession of a nation alienated from Him by its own failure. He has never surrendered it; hence redemption is not His success in a contest with some rival power. Redemption belongs to the same circle of ideas as righteousness, salvation, and sanctification. They are all aspects of a reconstituted nation in a re-energized universe. The new heavens and

the new earth are not radically different from the old. The hope that is typical of prophecy in the period of its greatest courage and originality is centred in the present world, which Yahweh's touch can convert into a habitation of peace and holiness. The old universe need not be discarded for a fresh one. God will not suddenly return to a creation that He has long since abandoned to evil forces. He has never left that creation and has conceded nothing to those evil forces.

In one sense it would be correct to say that prophecy has no **eschatology** at all; in another, that it has two eschatologies. The pre-exilic prophets, surfeited as they are with the excesses of a degenerate cult, have little liking for the eschatological features of the 'ritual pattern.' Beyond the catastrophes they foretell they can merely see a nebulous remnant (Am 3^{12} 4^{11} $5^{3, 14-15}$, Is 7^{3}, Zeph $2^{7, 9}$ 3^{13}, Zec $8^{6, 11, 12}$) surviving to play an as yet undetermined part in some sort of reconstruction. This eschatology, if it deserves the name, could doubtless from time to time develop considerable enthusiasm for a concrete cause, such as national unity or the Davidic monarchy, but we shall never be certain that it did in fact lend its voice to the projected revival of Israel's shattered institutions, which for the moment must have seemed discredited and incapable of being salvaged. Subsequently other prophets, less daring than their forebears, sponsored the re-establishment of the cult and reintroduced into eschatology the remains of the ancient cultic mythology, and these fragments were the primary material of apocalyptic. Prophetic eschatology was first demythologized and then remythologized, neither process terminating in thorough alteration. Both trends were phenomena of the sort nobody is disposed to push to a rigid conclusion. See also MESSIAH.

The universal and the particular in prophecy are inseparable. Neither is intelligible by itself. We cannot distil any colourless eternal verities from the utterances of prophecy. It has nothing to say to a merely curious humanity. Its particularities must be accepted, and when they are, it is discovered that they are susceptible of infinite enlargement. The reason for this is that prophetic truth, in all possible extensions and applications, radiates from the central reality of a Living God. We know about God more than the prophets knew, but we should know nothing at all if we had not first learned what they had to teach us. They are the masters who initiated us into the mysteries of life under God, and we have progressed by remembering their instruction and following the direction they indicated.

5. The transition from OT prophecy to NT prophecy.—In the NT and in the oldest patristic literature there are three varieties of prophecy: glossolalia, charismatic prophecy, and the prophetic interpretation of the Scriptures. We shall confine ourselves here to an evaluation of Justin Martyr's claim that the Christians have taken over the Jewish 'gifts of prophecy' (*Dialogue with Trypho*, 82). We are all prepared to grant that this is true theologically. What we have to determine is how true it is historically.

Glossolalia, 'speaking with tongues,' which is either spontaneous or of pagan origin, presents itself to St. Paul as a new phenomenon, and his attitude towards it shows that he has not referred it to any OT prototype. In his masterly discussion of glossolalia and prophecy (1 Co 13–14) he frankly attaches greater value to the latter than to the former, but he appears to have no scriptural reason for his opinion. In the only place where he cites Scripture (1 Co 14^{21-25}), he handles it very freely, and his argument is obscure. Nothing clearly identifiable with glossolalia occurs in the OT. The sounds to which Isaiah refers in his warning against 'the mediums and the wizards who chirp and mutter' (8^{19}) may have been glossolalic, but it is equally possible that they were only artistic preliminaries to intelligible utterance. The entire question would, of course, be much less baffling if we had a few authentic specimens of primitive Christian glossolalia. See TONGUES, SPEAKING WITH.

So far as we can judge, the charismatic prophecy practised among Christians bore little resemblance to the best of canonical prophecy. The former was normally concerned with prediction (Ac 11^{27-28} 21^{10-11}), though many of the 'revelations' must have been similar to the 'guidance' of the First Century Christian Fellowship (Ac 13^{1-2}, 1 Ti 1^{18} 4^{14}, cf St. Ignatius, *To the Philadelphians* 7). The Judaism in which Christianity arose had long since forgotten the true nature of OT prophecy. The existence of a prophetical canon implied that prophecy had run its course. In theory all Jews looked for Elijah (Mal 4^{5}) and 'that prophet' (Dt 18^{15}); nevertheless 'until a faithful prophet should arise' meant 'forever' (1 Mac 14^{41}). John Hyrcanus, uniting in his person the king, the priest, and the prophet (Josephus, *The Jewish War* I. ii. 8 [68], Test. Levi 8^{15}), was in no sense the successor of Isaiah or Jeremiah. The interests of apocalyptic, for all its cosmic sweep, are narrower and more intense than those of OT prophecy, which, moreover, is subjected to a diversity of treatment in the numerous Jewish schools and parties of the time. In this by no means simple situation Christianity could, and did, borrow whatever suited its purpose. Its prophets were probably not governed by any discerning admiration for the OT prophets. They were obliged to recognize, when they considered the matter, that the Spirit now inspiring them had formerly inspired the prophets of Israel, but there was no deliberate, formal imitation of OT prophecy.

Prophecy lingered on in its interpreters, and when they claimed a peculiar gift of interpretation they came close to declaring that they themselves were prophets. T. H. Gaster holds that this was the case with the Qumrânites (see DEAD SEA SCROLLS), whose succession of authoritative interpreters (Gaster prefers 'right-teacher' to 'Teacher of Righteousness') quite possibly begins soon after the concluding redaction of the Latter Prophets and their canonization. About the same time a teacher whose devotion to the Law has none of the Qumrânite sectarianism associates himself in some degree with the prophets when he writes, 'Yet will I pour forth doctrine as prophecy' (Sir 24^{33}). For the NT treatment of OT prophecy precedents of a sort were not lacking, and in tracing the prophetic testimony that pointed to Christ inspired writers who believed that Christianity had inherited the promises of prophecy were doing what Jewish exegetes, each in accordance with his leanings, had done before them.

PROPHET (in NT).—Among Jewish teachers in NT times it was commonly believed that prophecy had come to an end, though apocalyptic writers continued to prophesy, using pseudonyms taken from the OT. At Qumrân, *e.g.*, the coming of a prophet like Moses was expected on the basis of Dt $18^{15, 18}$. In the NT this prediction is found fulfilled in Jesus (Ac 7^{37}, probably Jn 6^{14}; Ac 3^{21-24} is different). The coming of Jesus is attested by Zechariah, a priest who prophesies (Lk $1^{5, 67ff}$), by the prophetically inspired Simeon (2^{25ff}), by the prophetess Anna (2^{36}), and by John the Baptist, generally regarded as a prophet (Mk 11^{32}=Mt 21^{26}=Lk 20^{6}, Mt 14^{5}), though Jesus calls him 'more than a prophet' (Mt 11^{9}=Lk 7^{26}). If Jesus referred to Himself as a

prophet, He did so only rarely (Mk 6^4=Mt 13^{57}= Lk 4^{24}, Lk 13^{33}), though there is an obvious continuity between His gospel and that of the major OT prophets, in form as well as in content. He was regarded as a prophet by the people (Mk 6^{15}, Lk 7^{16}; cf Mk 8^{28}). It is in Luke-Acts that the prophetic ministry of Jesus and of the Church is most strongly emphasized, and in Ac 2^{16ff} the prediction of prophecy as a gift to all (Jl 2^{28f}) is depicted as fulfilled at Pentecost in Christians' ability to speak 'in other tongues,' by some regarded as speaking in foreign dialects (Ac 2^{5ff}), by others as talking incoherently (2^{13-15}). Apparently prophecy took two forms, one incoherent and ecstatic, the other coherent and rational. In Acts we seem to encounter only the coherent prophets (Agabus in 11^{28} 21^{10}; others at Antioch, 13^{1ff}; Judas and Silas, 15^{32}; the daughters of Philip, 21^9; note that Paul too can prophesy, 20^{29f} 27^{22ff}), though an absolute distinction cannot be drawn. Different problems engaged Paul's attention in regard to prophets. Writing to the Thessalonians (1 Th 5^{19ff}) he tells them not to quench the Spirit or despise prophesying but to test everything. Writing to the Corinthians (1 Co 12, 14), on the other hand, he has to insist on the diversities of Spirit-given functions (12^{10}) and on the subordination of prophets to apostles (12^{28ff}). He also draws a distinction between prophecy, which is rational and builds up the community, and ecstatic speech, which is addressed only to God (14^{2f}). Ideally, all are to prophesy ($14^{24, 39}$), but actually it is more likely that there will be two or three prophets in the Church; their spirits are to be subject to themselves (14^{32}) and prophetesses are not to speak (14^{34}; a self-styled prophetess is mentioned in Rev 2^{20}). Paul does not deny the significance of prophets; in 1 Corinthians as in Ephesians (2^{20} 3^5 4^{11}) they rank second only to apostles. But their utterances need to be tested (1 Th 5^{21}, 1 Co 14^{29}; cf 1 Jn 4^1; false prophets in Mt 7^{15} $24^{11, 24}$), in spite of the *Didache's* command not to test them (11^7). The *Didache*, probably written well before the end of the 1st cent., reflects Jewish-Christian enthusiasm for prophecy; the prophets of the community are its high priests (13^3). Somewhat later, the problem presented by false prophets is clearly stated in the *Shepherd* of Hermas (*Mand.* 11), also Jewish-Christian. Although prophecy was revived later in the 2nd cent., in Gnosticism and Montanism, in the Church as a whole the function of the prophet was assumed by the bishop (Ignatius of Antioch spoke 'with God's voice' and said what the Spirit told him, *Philad.* 7^1), partly by the martyr. The dangers presented by tendencies toward heresy and schism resulted in a certain 'institutionalizing' of the work of the prophet. R. M. G.

PROPHETESS.—1. The courtesy title of a prophet's wife, Is 8^2. **2.** The OT title of women in whom the promise was fulfilled: 'your daughters shall prophesy' (Jl 2^{28}). 'The term is of course not to be misunderstood, as if it referred merely to predictions relating to the future; the reference is in general to inspired instruction in moral and religious truth' (Driver, *Camb. Bible, in loc.*). The title is given to Miriam (Ex 15^{20}), Deborah (Jg 4^4), Huldah (2 K 22^{14}, 2 Ch 34^{22}), and Noadiah (Neh 6^{14}). **3.** The NT gift of prophecy was bestowed on women (Ac 21^9, 1 Co 11^5). Anna (Lk 2^{36}) is the only 'prophetess' mentioned by name, except Jezebel (Rev 2^{20}), who was probably not the wife of the angel of the church (RVm), but a temptress of the Christians at Thyatira to whom was given the name of Israel's wicked queen. J. G. T.

PROPITIATION.—In English usage the difference between propitiation and expiation is as follows: one propitiates or appeases an angry or offended person, god or man, but one expiates sin or guilt. The difference is then in the directing of the verbal action towards a person or an offence.

Certain Greek words were translated as 'propitiation' by AV in a few places, *e.g.* Ro 3^{25}, 1 Jn 2^2 4^{10}. Since the direction of the action in these cases seems to be toward sins rather than toward God, the RSV has translated 'expiation,' and the passages are so treated here (see EXPIATION). There remain, however, for our consideration some passages where the fact of propitiation seems to appear although the word itself is not used.

Propitiation of one man by another appears clearly in Gn 32^{20}, where Jacob plans to placate his offended brother with a gift (literally, 'I will wipe his face,' using the verb *kippēr*, commonly='expiate'). The same verb appears in Pr 16^{14}, where the deadliness of a king's anger is noticed, and 'a wise man will appease it.'

The passages where an appeasement of God is intended are mostly concerned with the smelling of sacrifice by God. So 1 S 26^{19}, 'If it is the Lord who has incited you against me, let him accept an offering' (literally, smell a gift). The impression given is not that a sin is thought of, to be expiated, but that the incitement is the act of a God irritated without evident reason. This case is a rather isolated one, and the smelling of sacrifice appears much more frequently in the phrase *rēaḥ nīḥōaḥ*, in the sense 'smell of appeasement' or 'soothing smell' (RSV 'pleasing odour'), frequent in the priestly sacrificial codes.

In view of the frequent appearance of this formula, almost by routine, in sacrificial laws, it is remarkable that precisely in the codes for those sacrifices which concern especially the expiation of sin, the so-called sin and guilt offerings, the formula occurs only once (Lv 4^{31}), and it is reasonable to suppose its occurrence there to be accidental or at any rate secondary. The frequent cases of the formula in sacrifices other than the expiatory makes it likely that, although the origin may probably lie in the appeasement of an angry, offended, or arbitrary deity, its present sense in the codes as they are is the pleasure of God in being worshipped rightly. It was thus understood by the LXX ('a smell of pleasant odour'), and so RSV. It occurs in narrative in Gn 8^{21}, where the sense is not the appeasement of the Divine anger by the sacrifice (for the Flood has already abated), but the Divine pleasure at the resumption of right worship.

It seems, then, that the technical sacrificial terminology refers rather to expiation of sin than to propitiation of an angry God. But in a number of cases it is also clear that the anger of God falls on Israel when the sin is not expiated, so that expiation has a certain apotropaic aspect; it alone turns away the anger of God (Nu 16^{41-50} 25^{6-13}). In a number of stories it is therefore difficult to carry out the clear distinction of expiation and propitiation, *e.g.* the related stories of 2 S 21^{1-14} 24^{1-25}.

We conclude that the propitiation or appeasement of an angry or fickle deity appears at an early stage in Israelite religion, but that in the developed sacrificial terminology expiation is more important; but that even expiation can be understood as necessary for turning away the anger of God. For the question how far this fits into the general Biblical understanding of atonement, see ATONEMENT. J. Ba.

PROSELYTE.—1. The character and the history of the proselyte.—The character and the history of the proselyte are somewhat obscured by the fact that the name 'proselyte' occurs only in the NT, and there in the final meaning of a convert to Judaism, as if he were a product of NT times alone. But the same Greek word that stands for 'proselyte' in the NT is very largely used in the LXX, where EV has 'stranger.' Even the Hebrews themselves are described by the LXX as 'proselytes' in Egypt (Ex 22^{21} 23^9, Lv 19^{34}, Dt 10^{19}). The 'stranger' of the OT becomes the 'proselyte' of the NT. For the history that lies behind the use of the word, see STRANGER. By the 4th cent. B.C. the 'stranger' had become a member of the Jewish community—a proselyte in the technical sense.

Other expressions are used in the NT to indicate a more or less close sympathy with Jewish religious thought and life without implying absolute identity with and inclusion in Judaism. These are 'fearers of God' (*phoboumenoi ton Theon*, Ac $10^{2, 22}$ $13^{16, 26}$ etc.) and

'worshippers of God' (*sebomenoi ton Theon*, Ac 16[14] 17[4, 17] etc.). They had been drawn from heathenism by the higher ideals and purer life of Judaism. Dissatisfied with the traditional religious beliefs of paganism, they had found in Judaism an intellectual home and a religious power which they had sought in vain elsewhere. But a study of Ac 10, 11, especially 11[3], shows that these were not proselytes; they refused to take the final step that would have carried them into Judaism—*viz.* circumcision (see A. Harnack, *Expansion of Christianity*, i, p. 11). They lived on the fringe of Judaism and were, it seems (Lk 7[5], Ac 10[2]), often generous benefactors to the cause that had lifted them nearer to God and truth.

The view that the 'proselytes of the gate' were half-Jews, and formed a group neither pagan nor Jewish, is completely mistaken. One was either a Jew or he was not.

2. Proselytizing activity of the Jews.—Up to the time of the Exile and for some time after, the attitude of the Hebrews towards 'strangers' was passive: they did not invite their presence in their community, and did not encourage them to be sharers of their beliefs and practices. But by the 3rd cent. B.C. a change of outlook and national purpose had taken place, which had converted them into active propagandists. There appear to have been three reasons for this change. (1) The Hebrews were no longer concentrated in one narrow land where a homogeneous life was followed, but were now scattered over all parts of the civilized world, and found themselves in contact with peoples who were religiously far inferior to themselves, and who excited both their disdain and their pity. (2) Many of those in the Gentile world who were dissatisfied with the intellectual results and the religious conditions of their time saw in Judaism, as lived and taught before their eyes, something finer and nobler than they had found elsewhere; and they were drawn to its practical teaching and life without committing themselves to the rites and practices that offended their sense of fitness and even of decency. (3) The Hebrews themselves seem to have responded to their opportunity with a quickened enthusiasm for humanity and a higher ideal of their national existence, in the providence of God, among the nations of the earth. It does not appear that the Hebrews have ever been so powerfully moved towards the peoples lying in darkness as in this time subsequent to the Exile. They were convinced of the claim of God to the homage of men everywhere, the universalism of their revelation of truth and duty, and their own calling to bring the world to God. The needs of the world moved them powerfully, and the thoughts that found expression in such passages as Ps 33[8] ('Let all the earth fear the Lord, let all the inhabitants of the world stand in awe of him'), 36[7-9] 64[10] 65[8] etc. filled them with a burning zeal to make the world their offering to God. Perhaps we may not be wholly wrong in regarding the Septuagint as a product of, as it certainly was an aid to, this missionary effort.

This spiritual enthusiasm for God's honour and man's salvation continued till about the time of the Maccabees, when as a consequence of pagan persecution the tenderer springs of missionary zeal were dried up, and the sword became the instrument of national idealism, and whole cities and tribes were given the option of circumcision or exile, if not slaughter (1 Mac 2[46] 13[48] 14[14, 36]; Jos. *Ant.* XIII. ix. 1 [254 ff], xi. 3 [318], xv. 4 [395–97]). Of course, this was a means not available outside their hereditary home. This zealous propaganda, attested by Jesus (Mt 23[15]), went on till the 1st cent. of our era, when the unrest of the Palestinian Jews with the Roman occupation culminated in insurrection. In their conflict with Rome their numbers were greatly reduced by slaughter, and their power of religious expansion was checked by the decree of Hadrian, modified later by Antoninus in forbidding circumcision. By this time, however, Judaism had won a large following in every town of size and importance (cf Ac 2[9-11], Jos. *BJ* VII. iii. 3 [43 ff], *c. Apion.* ii. 11, 40 [125 ff, 287 ff]; Seneca, *ap.* August. *de Civitate Dei* vi. 11; cf 'victi victoribus leges dederunt'; Schürer, *HJP* II. ii. 304 ff). But now bloodshed and persecution produced the twofold result of closing and steeling the heart of Judaism to the outside world, so that proselytes were no longer sought by the Jews, and the tenets and the practices of Judaism became crystallized and less amenable to Hellenistic influences, and so less fitted to win Gentile converts.

3. Admission of the Proselyte.—The ritual conditions imposed on the proselyte on entering Judaism were three: (1) circumcision, (2) cleansing or baptism, (3) sacrifice. Baptism took place after the healing of the wound caused by circumcision. The requirement of cleansing or baptism lay in the very nature of Judaism: the heathen was unclean, through his lifelong contact with idolatry, and had to be cleansed by washing in water before admission into Judaism. Sacrifice was both an expression of thanksgiving and the convert's own participation in Jewish worship. With the fall of the Temple, sacrifice lapsed, though at first the proselyte was required to lay aside enough to pay for the sacrifice, should the Temple again be restored; but even this demand was in course of time allowed to lapse, as the prospect of restoration faded. These three conditions seem to have been of early origin, though we may not have specific reference to them till the 2nd cent. A.D. By his initiation the proselyte became a full member of the Jewish community (except for some few rights), and was bound to keep the whole Mosaic Law.

Among individual Jewish teachers there was for a time a difference of opinion as to the necessity of circumcision and baptism, but all early usage seems to confirm their actual observance. It is true that Izates, king of Adiabene, for a time refrained from circumcision under the guidance of his first Jewish teacher, Ananias; but this counsel had been given not because it was at the time deemed unnecessary for a proselyte to be circumcised, but because circumcision might alienate the sympathies of his people from Izates and endanger his throne. And Ananias wisely laid greater stress upon the moral than upon the ritual side of conversion. (Jos. *Ant.* XX. ii. [17 ff].) The 'God-fearers' were allowed to continue for some time in that state; but according to the rabbis they had to make a final decision for or against admission to Judaism by the end of twelve months. A 'lapsed' God-fearer was viewed as a pagan. It does not appear that conversion enhanced the popular reputation of the proselytes; for although they could not but gain esteem by their higher moral life, they seemed to many to display a type of daily life lacking in domestic reverence and in civic and national patriotism (Tac. *Hist.* v. 5, 8; Juv. xiv. 103–4).

4. Place of the proselyte in the growth of the Christian Church.—Proselytes upon embracing Judaism seem also to have accepted the attitude of the Jews generally towards Christianity. Most of them opposed it. If the experience of Justin is an indication of the general attitude of the proselytes to the Church, they must have deemed it a duty to their adopted faith to manifest a violence of speech and an aggressiveness of action unsurpassed by the Jews themselves; for he says, 'The proselytes not only do not believe, but twofold more than yourselves blaspheme [Christ's] name, and wish to torture and put to death us who believe in Him' (*Dial.* 122, 2). The idea, popular a generation ago, *viz.* that Christianity spread widely and rapidly throughout the Roman world chiefly because multitudes of proselytes and God-fearers swept into it, is not borne out by the facts. As Justin said, a century later, reviewing the whole story of the relations of Jews and Christians, the great majority of converts to Christianity were Gentiles (*First Apology*, 53, 5). At most, the God-fearers had responded in some degree to the moral and religious teaching of the synagogue, and had thus become acquainted with the Hebrew Scriptures in the Greek translation.

The proselytes must always have formed a small minority of those among the Gentiles who had lent an

ear to Jewish teaching. There were many who were attracted to the synagogue by the inspiration of its worship and the purity of its teaching, but who could not meet the requirements for admission, especially circumcision, which to anyone reared in the world of Graeco-Roman culture meant a mutilation of the human body—like the barbarities practised in the jungle. Among these the gospel had a different reception; it was rapidly accepted and eagerly followed. They found in it all that drew them to the synagogue, and more. With historical Judaism they had little to do, and loyalty and nationality did not appeal to them as motives to maintain it against Christianity. It is easy to understand how quickly the gospel would be adopted by these adherents of Judaism. Every synagogue would thus become the seed-plot of a Christian church. And so it was specially to these that St. Paul addressed himself on his missionary journeys, and from them he formed the beginnings of many of his churches (Ac 13[16, 43] 16[14f]). One can easily understand with what feelings of combined jealousy and resentment the Jews would see these worshippers detached from the synagogue and formed into a church (Ac 18[12–17]). But Judaism had nothing to offer the Gentile that was not now provided by the Christian Church. In consequence the Jews, especially after the terrible Second Revolt, under Hadrian (A.D. 132–135), restricted their vision to their own people and abandoned their interest in the conversion of the rest of the world. J. Gi.—W. C. v. U.

PROSTITUTION.—See CRIMES AND PUNISHMENTS, 3.

PROVENDER.—1. Hebrew *mispô*, Gn 24[25, 32] 42[27] 43[24], Jg 19[19], a general name for cattle food. **2.** *bᵉlîl.* Job 6[5] (EV **fodder**); *bᵉlîl ḥāmîṣ*, Is 30[24], 'salted (RVm, RSV; AV 'clean,' AVm, RV 'savoury') provender,' *i.e.* fodder mixed with salt or aromatic herbs. The ordinary food of cattle in Palestine—besides pasturage—is *tibn* (broken straw), *kursenneh* (the vetch, *Vicia ervilia*), bran (for fattening especially), and sometimes hay made from the flowering herbs of spring.

PROVERB.—1. Meaning.—In the Bible there is no essential difference between the proverb and the **parable** (q.v.). The Hebrew *māshāl* and the Greek *parabolē*, meaning 'resemblance,' were applied indiscriminately to both. The value arising from this likeness was twofold. In the first place, as the moral truth seemed to emerge from the observed habits of animals, objects in nature, familiar utensils, or occurrences in daily life, such juxtaposition gave to the ethical precept or fact of conduct the surprise and challenge of a discovery. Thus the whole influence of example and environment is compressed into the proverb, 'Like mother, like daughter' (Ezk 16[44]). The surprise was intensified when the parable product contradicted ordinary experience, as in the statement, 'One sows and another reaps' (Jn 4[37]). Definite labour deserves a definite reward, yet the unexpected happens, and, while man proposes, there remains an area in which God disposes. Out of such corroboration grew the second value of the proverb, namely, authority. The truth became a rule entitled to general acceptance. The proverb usually has the advantage of putting the concrete for the abstract. Among the modern inhabitants of Palestine, when a letter of recommendation is asked, it is customary to quote the proverb, 'You cannot clap with one hand.' Of a dull workman without interest or resource in his work it is said, 'He is like a sieve, he can do only one thing.'

2. Literary form.—(1) Next to the fact of resemblance was the essential curreney to the unpremeditated exclamation, 'Is Saul also among the prophets?' (1 S 10[11f]). When the proverb consisted of two parts, rhetorical emphasis was secured either by repeating the same thought in different words (Pr 3[17]) or by the introduction of contrasting particulars (3[33]). (2) *Rhythmic measure* was also studied, and there was often an untranslatable felicity of balance and repeated sound. The final mark of literary publicity was conferred by a rhetorical touch of picturesque hyperbole, as in the reference to a camel passing through the eye of a needle (Mt 19[24]). (3) The fact that a wise saying was meant for the wise encouraged the use of *elliptical form.* This carried the complimentary suggestion that the hearer was able to understand a reference that was confessedly obscure. On this account proverbs were called 'the words of the wise' (Pr 22[17]). Hence the note of surprise and unexpectedness in Christ's words, when He said that the mysteries of the Kingdom had been hidden from the wise and understanding and revealed unto babes (Mt 11[25], Lk 10[21]). (4) The *obscurity* referred to was sometimes made the leading feature and motive of the proverb, and it was then called an 'enigma' or '**dark saying**' (Ps 49[4], Pr 1[6] 30[15–31]). Its solution then became a challenge to the ingenuity of the interpreter. Both the prophets and Christ Himself were charged with speaking in this problematical manner (Ezk 20[49], Jn 16[29]). **Riddles** (q.v.) were introduced at festive gatherings as contributing an element of competitive acuteness and facetious exhilaration. Instances resembling Pr 30[15–31] are common among the modern Arabs and Jews in Syria, as when it is said: 'There are three chief voices in the world, that of running water, of the Torah, and of money.' An enigma for the study of books is: 'Black seeds on white ground, and he who eats of the fruit becomes wise.'

3. Subject-matter.—This is summarized in Pr 1[1–6]. The reference is generally to types of character, the emotions and the desires of the heart, and the joys and sorrows, the losses and gains, the duties and the relationships of human life. Amid these the proverb casts a searching light upon different classes of men, and points out the path of wisdom. Hence the name 'words of truth' (Pr 22[21]).

4. Authority.—Proverbial literature is more highly esteemed in the East than in the West. While the popularity of proverbs is partly due to literary charm and intellectual force, and the distinction conferred by the power of quoting and understanding them, the principal cause of their acceptance lies in their harmony with Oriental life. The proverb is patriarchal government in the region of ethics. It is an order from the governing class that admits of no discussion. The proverb is not the pleading of the lawyer in favour of a certain view and claim, but the decision of a judge who has heard both sides and adjudicates on behalf of general citizenship. Such authority is at its maximum when it not only is generally current but has been handed down from previous generations. It is then 'a parable of the ancients' (1 S 24[13]). The quotation of an appropriate proverb in a controversy always carries weight, unless the opponent can quote another in support of his claims. Thus, to the careless and inattentive man in business who says 'Prosperity is from God,' it may be retorted 'He that seeketh findeth.' Beneath some commendable social qualities belonging to this attitude there is a mental passivity that seeks to attain to results without the trouble of personal inquiry, and prefers the benefits conferred by truth to any sacrifice or service that might be rendered to it. G. M. M.

PROVERBS, BOOK OF.—The title of the book which stands second in the 'Writings' is *Mishᵉlê Shᵉlōmôh ben-Dāwîdh melekh Yiśrā'ēl.* It is the most characteristic example of the Wisdom Literature in the OT. The word *Māshāl* rendered here by proverb has a somewhat extended meaning. It is applied to the oracles of Balaam (Nu 24[15]) and is rendered by the RSV as 'discourse,' while in Is 14[4] it refers to the taunt-song against the king of Babylon and is rendered by RSV as 'taunt.' It is also used of parables and allegories and of the short, pungent, pithy saying (see PROVERB). Accordingly the contents of this book are as varied as the meaning of the title-word *Mishᵉlê* (Gr. *paroimia*, Lat. *Proverbia*). The book is ascribed to Solomon in accordance with the Hebrew custom which derived all Law from Moses, all sacred songs from David, and all Wisdom from Israel's wisest king. But that the book

consists of separate collections from different authors and various periods is clearly indicated by the fact that several different authors and sources are mentioned throughout the book (24[23] 30[1] 31[1]).

1. We may adopt the division of the book made by the headings in the Hebrew text as follows:

I. 1[1]–9[18]. The Proverbs of Solomon, son of David, king of Israel.
II. 10[1]–22[16], The Proverbs of Solomon.
III. 22[17]–24[22], The Words of the Wise.
IV. 24[23-34], These also are the Sayings of the Wise.
V. 25[1]–29[27], These also are proverbs of Solomon which the men of Hezekiah king of Judah copied.
VI. 30[1-33], The Words of Agur.
VII. 31[1-9], The Words of king Lemuel.
VIII. 31[10-31], Praise of the Virtuous Woman.

Section I. is probably the latest part of the book and may not be dated before the 4th cent. B.C. The first six verses seem to be an introduction to the whole book: the material here consists mainly of short essays interspersed with an occasional briefer wisdom saying. In 8[1ff] occurs the remarkable personalisation of Wisdom which may be one of the main sources of the Johannine thought of the Word made flesh. Section II. is the oldest part of the book and here may be found much pre-literary material. Here are 375 single proverbs, generally discrete and separate, but frequently connected by a common viewpoint or formal likeness (10[2f], 4[f], 6[f] 16[10-15] 11[9-12], where four verses begin with the letter 'B'). These proverbs are concerned mainly with the efforts of the sages to increase the number of the wise and reduce the number of the fools of whom there seems to have been quite an overplus. Some Aramaisms occur in this section (14[34] 17[10] 18[24] 19[20] etc.) and though the section contains ancient material the collection may not be dated before the Exile. The third section may be subdivided into 22[17]–23[14] and 23[15]–24[22]. The former of these sections is clearly connected with *the Wisdom of Amenemope*, the text of which dates from about the 8th cent. B.C. The 'excellent things' of Pr 22[20] (AV) is properly rendered in RSV by 'thirty sayings.' The writer has treated his source somewhat independently, but about one third of this material is taken directly from the Egyptian source. 23[13f] is from Ahikar. The date of this collection is not earlier than 700 B.C. and may be considerably later. Section IV. consists of five brief sayings warning against partiality and laziness: Oesterley holds it to be closely connected with III. but the section gives no hint as to date. The fifth collection is assigned to the period of Hezekiah and, while later than section II., it seems to be from the pre-exilic period. It contains 139 verses of which 128 are single verse sayings. The sixth section is attributed to the unknown Agur: it contains some thoughts that are reminiscent of the book of Job (Job 40[5] 42[6]). Some editors allow no more than vv.[1-6] to Agur and judge the remainder to be added. Section VII. belongs to another Massaite, Lemuel, and contains salutary sayings regarding wine and women. To this is appended (31[10-31]) an acrostic poem in praise of the virtuous woman. These last four sections occupy a different position in the LXX and this would indicate that they were added at a period subsequent to the completion of the book. The date of the compilation must be later than the date of its latest main source, and in Proverbs the latest section is the first. Thus we have here a post-exilic work but a work which includes authentic ancient material.

The Wise Men do not claim revealed wisdom. They are the Hebrew Humanists. They stand on the *terra firma* of everyday life and seek to articulate the lofty prophetic ideals in the common workaday life of men. They count nothing human alien to their interest and sympathy: the whole world is their parish. The book of Proverbs may be regarded as a Manual of Conduct or, as Bruch called it, 'an anthology of gnomes.'

J. Pn.

PROVIDENCE.—The word is not found in the OT. In the NT it is used only once; in the introduction of his address to Felix, the orator Tertullus says: '. . . by your *Provision* (AV and RV 'providence') . . . reforms are introduced on behalf of this nation . . .' (Ac 24[2]). Here providence (or provision) simply means foresight, as in 2 Mac 4[6], 'the King's providence' (RV; RSV 'attention').

The first appearance of the word 'providence' (Gr. *pronoia*) in Jewish literature is in Wis 14[3], where God is represented as making for a ship 'a way even in the sea'; the author, borrowing the expression from the Stoic philosophers, says: 'Your providence, Father, pilots it' (Goodspeed). In another passage, recognizing the sterner aspect of the truth to which the OT also bears witness, he contrasts the destinies of the Hebrews and Egyptians and describes the latter, when they were 'prisoners of darkness,' as 'exiled from the eternal providence' (17[2]).

Although the OT does not contain the word 'providence,' the idea of God's guidance of His people runs like a thread in each type of Biblical literature. Legal materials and the traditions of the conquest of Palestine reflect the constant impression that through social experience God's guidance of the Hebrews is made known. Narrators picture the gradual accomplishment of His purpose concerning the chosen people and the world at large (Gn 50[20], Ex 8[22], Dt 32[8ff]; cf Ps 74[12ff]); poets delight to extol Him whose 'compassion is over all that he has made' (Ps 145[9]; cf 29[3ff] 104 136); prophets point to the proofs of God's guidance in the past in order that the people may gain wisdom for the present and courage for the future (Dt 32[7ff], Hag 2[9], Is 51[2], Mal 4[4ff]). Job, sometimes called the 'book of providence,' offers several solutions for the problems of God's dealings with men and emphasizes the necessity of unyielding faith in His guidance.

Belief in Providence presupposes the conviction that God speaks and moves through history and nature. The ancient problems which perplexed Greek philosophers and Hebrew sages still challenge the modern mind to reconcile its trust in Divine providence with the reign of law in the universe and with the existence of pain and evil. The Gospels picture Jesus as teaching that the laws of nature are the established methods of His heavenly Father's working and that they fulfil as well as reveal His will (Mt 6[25ff] 10[29ff], Jn 5[17]). Christian belief in providence suggests trust in God who clearly revealed His will in Jesus Christ in order that men should know that history and nature serve moral and spiritual ends in this life and that God's eternal purposes extend beyond it (Ro 8[28], 2 Co 4[11ff], 1 P 1[6ff]).

J. G. T.—H. H. H.

PROVINCE.—The Persian Empire included the '127 provinces from India to Ethiopia' (Ad. Est 13[1]), or, better, the twenty satrapies, each of which was governed by a satrap under the Great King. This principle of political organization was inherited by the Romans. In Latin, the word *provincia*, of unknown derivation, originally meant simply 'a sphere of (magisterial) duty,' and was applied, for example, to the duty of the *praetor urbanus*, who was never permitted to leave Rome. With the extension of the Roman Empire, and the consequently much increased number of spheres of duty outside Rome and Italy, the word came gradually to have a territorial application also. It is in this derived sense that the word is taken here. It was part of the Roman policy throughout to be in no unnecessary hurry to acquire territory and the responsibility connected with it, and it was not till the year 227 B.C.—hundreds of years after the foundation of the Roman State—that the first province was taken over. In that year Sardinia and Corsica became one province, Western Sicily another, and each, after the details of government had been settled by special commissioners, was put under an additional **praetor** elected for the purpose. Behind this step, as behind the annexation of most

Roman provinces, there lay long years of warfare. Province after province was annexed, until in the time of Christ the Romans were in possession of the whole of Europe (except the British Isles, Norway, Sweden, Denmark, most of Germany, and Russia), all Asia Minor, Syria, Egypt, and the north-west of Africa. Most of this vast territory had been acquired during the Republic, but certain portions had not been annexed till the time of the first Emperor Augustus. During the Republic the governors of these provinces were appointed by the Roman senate from among their own number, generally after a period of service as praetor or consul, as the case might be. They were unpaid, and had heavy expenses to bear. Few resisted the temptation to recoup themselves at the expense of the long-suffering provincials, and the vast sums required by an extortionate governor in his one year's governorship may be estimated from the fact that Cicero, a just and honest man, acquired £18,000 during his tenure of the province Cilicia. The trial of Verres, the infamous governor of Sicily, and Cicero's orations against him, illustrate one of the worst examples of tyranny, embezzlement, and plunder by governors during the later years of the Republic. Under the Empire conditions considerably improved, though Tiberius found it necessary to order at least one official to return to his province and live among those he had robbed; another was told to 'shear my sheep, not flay them.'

During the Empire the provinces were treated according to a notable settlement made between the Senate and the Emperor Augustus on January 1, 27 B.C. On that date it was arranged that those provinces which were peaceful and did not require the presence of an army should be under the control of the senate, who would appoint their governors; while the disturbed provinces that did require the presence of an army were to be under the Emperor himself, who was generalissimo of all the forces of the State. At the same time the Emperor retained financial interests even in senatorial provinces. The following thus became senatorial (or public) provinces: Asia (*i.e.* roughly the western third of Asia Minor), Africa (*i.e.* practically Tunis), Gallia Narbonensis, Hispania Baetica, Achaia, Cyprus, Creta et Cyrenaica, Macedonia, Sicilia, Bithynia, Illyricum, Sardinia et Corsica. The first two were senatorial provinces of the first rank, and were governed each by an ex-consul with the title of proconsul, and three *legati* under him. The others were senatorial provinces of the second rank, and were governed each by an ex-praetor, also with the title **proconsul.** All the rest of the Roman world outside Italy, namely, three-fourths of the whole, was made up of imperial provinces, including the following: Egypt (where the Emperors, as successors of the Ptolemies, ruled as kings), Judaea, Syria-Cilicia-Phoenicia, Galatia (established 25 B.C.), Thracia, Pamphylia (established 25 B.C.), Galliae tres (Aquitania, Lugudunensis, Belgica), Britannia (established A.D. 43). Every new province naturally came under the Emperor's authority. He governed his more important provinces (*e.g.* Syria, Galatia) through a *legatus pro praetore* in each—a man of consular or praetorian rank, who was paid a fixed salary in and after the time of Tiberius—and his less important provinces through a **procurator** (*e.g.* Judaea) or *praefectus* (*e.g.* Egypt). The period of senatorial governorships was one year, that of imperial indefinite. Each province was governed according to a definite statute, which determined the administrative procedure and defined the privileges of individual cities in it. The inhabitants were disarmed and taxed. Judaea became a province in A.D. 6, when procurators were appointed to rule it. The Roman soldiers in Palestine, under the procurators, were auxiliary troops, *i.e.* native, though non-Jewish, recruited from the neighbouring peoples who were enemies of the Jews. This no doubt goes far to explain the constant friction and finally the unbearable burden of Roman occupation of the country, which led to the two revolts of A.D. 66 and 132. But speaking of the Roman imperial administration in general, the oppressive and unjust rule of the Republic was exchanged for a much better during the Empire; and the provinces, at least during the first three centuries of our era, were prosperous and contented.

Accordingly, in NT times there were two kinds of provinces, senatorial and imperial. Senatorial provinces in the East were Asia (comprising the western third of Asia Minor), Bithynia, Cyprus, and Crete-Cyrene. Imperial provinces in the East consisted of Egypt, Syria, Judaea, Galatia, and Moesia (into which were now merged Achaea and Macedonia). The distinction rested on the gesture made by Octavian in 27 B.C. whereby he restored the authority of the Senate except in areas which because of unsettled conditions or exposed frontiers required large bodies of soldiers. But the gesture was illusory. In addition to the three-fourths of the Roman world outside of Italy that he retained under his immediate control, within the senatorial provinces the Emperor controlled tax collection, employed armies as they were needed, and issued advice that had the force of law—as in the famous Cyrene inscriptions (7–4 B.C.).

Governors of senatorial provinces were chosen by lot and served for a single year with the title of *proconsul.* They were indeed ex-consuls in the important provinces of Asia and Africa; elsewhere, being only ex-praetors, they were 'proconsul' only by courtesy. Imperial provinces were administered by the Emperor's personal representatives: a *legatus* of senatorial rank for important areas such as Syria and Galatia; elsewhere by a *procurator* (q.v.) of equestrian rank.

Within the province, authority rested primarily in the *polis,* the traditional city organization of the Hellenistic world. To each city was given the maximum of autonomy compatible with Roman rule. Tribal centres and assimilated temple states were transformed into *poleis,* and new cities were founded in rural areas. Thus fragmented provinces were powerless for joint political action. What semblance of unity they achieved was in relation to the person of the Emperor. Each province had its assembly of notables (*synedrion*) and at its head a provincial high priest. The supreme responsibility of this body was to promote loyalty. As symbol of that loyalty it offered sacrifices—in Jerusalem *for* and elsewhere *to*—Rome and Augustus. Through this body the Emperor communicated his wishes to the aristocracy of each province, and from it received regular reports concerning internal affairs and the conduct of his agents. See ROMAN PUBLIC LAW, and Map 16. A. So.—J. S. K.

PROVOKE.—'To provoke' is now 'to try to call forth evil passions,' but in AV it is used in the sense of inciting to any action, good or evil, as 2 Co 9^2 'Your zeal hath provoked very many'; RV and RSV 'your zeal has stirred up most of them.' 'Provocation,' however, always occurs in a bad sense. It is used in AV in Ps 95^8 (RV, RSV 'Meribah'), He 3^{15} (so RV; RSV 'rebellion') of the conduct of the children of Israel towards God in the wilderness.

PSALMS.—1. Title and place in Canon.—The Book of Psalms is a collection of sacred poems, in large part liturgical in character and intended to be sung. The book belongs to the *Kethubim* or 'Writings,' *i.e.* the third and last group of the Jewish Scriptures. The order of the Writings was much less fixed than the order of the Law and the Prophets, the other two groups of Scriptures; but the Psalms in all cases come near the beginning of this group, and in the modern Hebrew printed Bibles, which follow the great majority of German MSS, they stand first. In placing the Psalms, together with the rest of the Writings, before the ('Latter') Prophets, the EV have followed the Greek version; but in the internal arrangement of the writings the English and Greek versions differ from one another.

The title of this collection of poems is derived from the Greek version, in which the book is entitled in some MSS *Psalmoi,* in others *Psaltērion* (in NT 'Psalms,' and 'Book of Psalms,' Lk 20^{42} 24^{44}, Ac 1^{20}). *Psalmos* in classical Greek signified the twanging of strings, and

especially the musical sound produced by plucking the strings of a stringed instrument; as used here it means poems sung to the music of (stringed) instruments. The Greek word thus corresponds closely to the Hebrew *mizmōr*, of which it is the translation in the titles of individual Psalms (*e.g.* 3[1]). The Hebrew title for the whole book is 'Praises,' which refers to the subject-matter of the poems rather than their musical character, although not all of them consist of praise.

The Psalter contains, according to the division of the Hebrew text followed by EV, 150 poems; the Greek version contains 151, but the last of these is described as 'outside the number.' This number does not exactly correspond with the number of different poems. On the one hand, there are one or two clear cases of a single Psalm having been wrongly divided into two; thus Psalms 9 and 10 are shown by the continuance of the acrostic scheme through the latter Psalm (cf ACROSTIC) to have once formed, as they still do in the Greek version, a single poem. So Pss 42, 43 are shown by the recurrence of the same refrain ($42^{5,11}$ 43^{5}) to be one poem. But the Greek version is scarcely true to the original in making two distinct Psalms out of each of the Psalms numbered 116 and 147 respectively in the Hebrew text and EV. Probably in a larger number of cases, owing to an opposite fortune, two poems originally distinct have been joined together under a single number. A clear instance of this kind is Ps 108, which consists of two Psalms or fragments of Psalms (viz. 57^{7-11} 60^{5-12}). Among the more generally suspected instances of the same kind are Pss 19 (=vv.$^{1-6}$+$^{7-14}$) 24 (=vv.$^{1-6}$+$^{7-10}$) 27 (=vv.$^{1-6}$+$^{7-14}$) and 36 (=$^{1-4}$+$^{5-12}$); but caution is necessary here, for changes in metre and thought may be due to the liturgical setting of the Psalm (see below).

The Psalter does not contain quite the whole of what survives of Hebrew literature of this type. A few psalms not included in the Psalter are found in other books: see, *e.g.* Ex 15^{1-18}, 1 S 2^{1-10}, Is 12, 38^{10-20}, Hab 3. And we have other smaller collections in the 'Psalms of Solomon' written about 63 B.C. and the more or less contemporary hymns of the Dead Sea Scrolls. These, with such NT psalms as Lk $1^{46-55, 68-79}$, are important as showing that the period of psalm composition extended to the beginning of the Christian era.

2. Origin and history.—(1) *Reception into the Canon.*—The history of the Psalms and the Psalter is obscure; and many conclusions with regard to it rest, and for lack of other independent evidence must rest, on previous conclusions as to the origin and literary history of other Hebrew and Jewish literature. Conclusive external evidence for the existence of the Psalter *in its present extent* does not carry us very far back beyond the close of the Jewish Canon (see CANON OF OT); but the mode of allusion to the Psalms in the NT renders it very unlikely that the book was still open to additions in the 1st cent. A.D.; and the fact that none of the 'Psalms of Solomon' (see **1**, end) gained admission, and that this collection by its title perhaps presupposes the canonical 'Psalms of David,' renders it probable that the Psalter was complete, and not open to further additions, some time before 63 B.C. Other evidence (cf Hastings' *DB* iv, 147), such as that derived from the substantial agreement of the Greek version with the Hebrew text, does not carry the proof for the existence of the Psalter in its present extent much further. The net result is that, if not impossible, it is unsafe, to place the completion of the Psalter much below 100 B.C.

(2) *Previous history.*—Behind that date lies a long history; for the Psalter represents the conclusion of a complex literary growth or development. We may note, first, two things that prove this general fact, that the Psalter is neither a simple edition of the poems of a single man or a single age, nor the first collection of its kind. (1) At the close of Ps 72 stand the words: 'The prayers of David, the son of Jesse, are ended.' This is intelligible if the remark once closed an independent collection, and was taken over with the collection by the compiler of a larger work. But apart from some such hypothesis as this it is not intelligible; for the remark is not true of the Psalter as we have it; the prayers of David are not ended, other Psalms actually entitled 'prayers' and described as 'of David' are Pss 86 and 142; and several subsequent Psalms assigned to David are, without being so entitled, actually prayers. (2) The same Psalm is repeated in different parts of the Psalter with slight textual or editorial variations: thus Ps 14 = Ps 53; 40^{13-17} = 70; 108 = 57^{7-11} + 60^{5-12}. The Psalter, then, was composed by drawing on, and in some cases incorporating, earlier collections of Psalms.

Our next questions are: How many collections earlier than the Psalter can be traced? How far can the methods of the editor who drew on or combined these earlier collections be discerned? The first clue to the first question may be found in the titles referring to persons and their distribution; the more significant features of this distribution may be shown thus—

1. Pss 1, 2 are without title.
2. Pss 3–41 are all entitled 'of David,' except Ps 10, which is a continuation of Ps 9 (see above), and Ps 33.
3. Pss 42–49 are all entitled 'of the sons of Korah,' except Ps 43, which is a continuation of Ps 42 (see above).
4. Ps 50 is entitled 'of Asaph.'
5. Pss 51–72 are all entitled 'of David,' except Pss 66, 67, 71, 72.
6. Pss 73–83 are all entitled 'of Asaph.'
7. Of Pss 84–89, four (Pss 84, 85, 87, 88) are entitled 'of the sons of Korah,' one (Ps 86) 'of David,' and one (Ps 89) 'of Ethan.'
8. Pss 120–134 are all entitled (according to RSV), 'A Song of Ascents.'

The remaining forty-six Psalms (90–119, 135–150) are either without title, or the titles are not the same in any considerable number of consecutive Psalms (but note 108–110 and 138–145 entitled 'of David').

Now, if it stood by itself, the statement at the close of Ps 72 could be explained by a single process—the incorporation of a previous collection consisting of Pss 1–72 by an editor who added these to Pss 73–150 derived from other sources. But within Pss 1–72 we have two occurrences of the same Psalm (Ps 14 = Ps 53), which in itself indicates that in Pss 1–72 at least two hymn-books are combined. Again, Ps 53 differs from Ps 14 by the entire absence from it of the name 'Yahweh' and the use in four places of the name 'God,' where Ps 14 uses 'Yahweh' (EV 'the LORD'). So also in Ps 70 = Ps 40^{13-17} 'Yahweh' is twice retained, but twice, if not thrice, it is replaced by 'God.' But the editorial activity thus implied proves on examination to have affected the entire group of Pss 42–83; for the difference in the use of the names 'Yahweh' and 'God' between Pss 1–41, and Pss 42–83 is remarkable: in Pss 1–41 'Yahweh' occurs 272 times, 'God' (absolutely) 15 times; in Pss 42–83 'Yahweh' 43 times, but 'God' 200 times (see Driver, *LOT*[9], 371). Now this Elohistic Psalter, as Pss 42–83 are termed on account of the marked preference which is shown in them for the term *Elohim* = 'God,' is one of the earlier collections embodied in our Psalter; but it is itself in turn derived from different sources; for it includes the group of David's Psalms which closes with the statement that the prayers of David are ended—a statement which, though not true of the whole Psalter, is true of this earlier Psalter, for between Pss 73–83 no prayer of David occurs. It also includes Psalms 'of the sons of Korah' and 'of Asaph.' Very possibly this Elohistic Psalter has not reached us in its original condition; for (1) the untitled Psalms may have been subsequently inserted; and (2) the Psalms entitled 'of Asaph' may have once stood all together: at present Ps 50 stands isolated from the rest (Pss 73–83).

In addition to the occurrences of Psalms in two recensions and the occurrence of similar titles or groups, another feature points to earlier independent books of Psalms: this is the occurrence of a doxology or suitable concluding formula at certain points in the Psalter, viz. 41^{13} at the end of the first group of Psalms entitled 'of David'; 72^{18f} immediately before the statement

that the prayers of David are ended; and 89[52]. See also 106[48] and 150, which last Psalm in its entirety may be taken as an enlarged doxology at the close of the completed Psalter. The doxologies at the end of Pss 41 and 72 occur at points which we have already found reason for regarding as the close of collections; that at 89[52], however, occurs not at the close of the Elohistic Psalms, but six Psalms later. Now five of these six Psalms are drawn from the same sources as supplied the Elohistic editor, viz. from the 'prayers of David' (Ps 86) and the book 'of the sons of Korah.' In Pss 42–89 we not improbably have the original Elohistic Psalter (Pss 42–83), enlarged by the addition of an appendix (Pss 84–89), in which the name 'Yahweh' was left unchanged, and consequently the form 'Elohim' ceases to predominate.

From the evidence thus far considered or suggested (it cannot here be given in greater detail), we may infer some such stages as these in the history of the Psalms before the completion of the Psalter:—

1. Compilation of a book entitled 'of David' and including Pss 3–41 (except the untitled Ps 33).
2. Compilation of a second hymn-book entitled 'of David' (Pss 51–72, with exceptions).
3. Compilation of a book entitled 'of Asaph' (Asaph being the name of a guild of singers, Ezr 2[41]).
4. Compilation of a book entitled 'of the sons of Korah' (also probably a guild of singers; cf 2 Ch 20[19]).
5. Compilation of 'the Elohistic Psalter' out of Psalms derived from 2, 3, 4, by an editor who generally substituted 'Elohim' ('God') for 'Yahweh' (EV 'the LORD').
6. Enlargement of 5 by the addition of Pss 84–89.
7. Compilation of a book with some such title as 'Songs of the Ascents.'

Can we detect the existence of other earlier Psalters? So far we have taken account mainly of titles of one type only and of titles which occur in groups. C. A. Briggs (*ICC*, 1906–7) carried the argument from titles to the existence of collections of Psalms further. He inferred that there was a collection of **Miktams** (a Heb. term of uncertain meaning), whence Pss 16, 56–60, and Is 38[9–20] were drawn; a collection of **Maskils** (another Heb. term of uncertain meaning), whence Pss 32, 42–45, 52–55, 74, 78, 88, 89, 142 were derived; another collection of Psalms proper, of poems set to music, whence the fifty-seven Psalms described in the titles as **Mizmor** (EV 'psalm') were derived: and yet another collection which bore the name of the musical director or choir master (AV, RV '**the chief musician**'; RSV '**the choirmaster**'), whence the fifty-five Psalms so entitled were derived. If this be the case, then the composite titles enable us to see that many Psalms stood successively in two or three collections before they obtained their place in the completed Psalter; *e.g.* Ps 19—entitled 'of (or belonging to) the chief musician, a Psalm, of (or belonging to) David'—had previously been included in three distinct collections; and so also Ps 44—entitled 'of the chief musician, of the sons of Korah, Maskil.' Perhaps the strongest case for these further collections is that of the chief musician's Psalter; in any case, the English reader must be warned that the preposition prefixed to 'the chief musician' is the same as that prefixed to 'David' or 'Asaph' or 'the sons of Korah,' though in the first case RV renders 'for' (RSV 'to') and in the latter cases 'of' (RSV *id.*). Consequently, since in many cases it is impossible, owing to intervening words (*e.g.* in Pss 12, 45), to interpret such a combination as 'of the chief musician, of David,' 'of the chief musician, of the sons of Korah' of *joint* authorship, we must see in them either conflicting ascriptions of authorship placed side by side, or, far more probably, as just suggested, the titles of collections of Psalms or hymn-books to which they had previously belonged. It is then highly probable that in the first instance such titles as '**of David,**' '**of Asaph,**' '**of the sons of Korah,**' were neither intended nor understood to name the *author* of the Psalm in question. But if this was so, we can also see that before the final stage in the growth of the Psalter they were misunderstood; for the title 'of David' clearly implied authorship to the author(s) of the longer titles in Pss 7 and 18: it is scarcely less clear that the title implied authorship to the authors of other titles that suggest an historical setting (see, *e.g.* Pss 3, 57).

Titles of the Psalms.—Inasmuch as the terms occurring in the titles to the Psalms are not explained elsewhere in this Dictionary, it will be convenient to give here brief notes on those which have not already been discussed. It may be said in general that great obscurity enshrouds the subject, and that, in spite of the many ingenious speculations to which the terms in question have given rise, it is hazardous to base, on any particular theories of interpretation, far-reaching conclusions. With few exceptions the titles of the latter part of the Psalter (Pss 90–150) are free from these terms.

Apparently we have in the titles not only notes indicating the source whence the Psalm was derived (see above), but also in some cases notes defining the character of the Psalm (see below 12 and 13 and [?] 19), or some circumstances of its use. Thus Ps 92 was to be used on the Sabbath, Ps 30 at the Feast of the Dedication (1 Mac 4[56], Jn 10[22]), celebrated from the time of the Maccabees onward; and Ps 100 on the occasion of offering thank-offering; so also 'to bring to remembrance' (AV, RV) in Pss 38 and 70 may rather mean 'at the time of making the offering called *'azkārāh* (RV 'memorial,' *e.g.* Nu 5[26]) as RSV 'for the memorial offering'; see also 5 (below). This type of note is more frequent in the LXX, which assigns Ps 24 for the use of the first day of the week, Ps 48 for the second, Ps 94 for the third, Ps 93 for the day before the Sabbath. Other titles, it is supposed, name, by the opening words of songs sung to it or otherwise, the tune to which the Psalm was to be sung (on *'Ayyeleth hash-shaḥar*, *'Al-tashḥēth*, *Yônath-ēlem-rᵉḥōḳîm*, *Shōshannîm*; see below), or the instruments which were to accompany the singing of the Psalm (? *Nᵉḥîlôth*, *Nᵉghînôth*).

For ease of reference we give these and other relevant terms of a like kind in alphabetic order.

1. **'Ayyeleth hash-shaḥar** (Ps 22) is a transliteration of Hebrew words which mean 'the hind of the dawn' (cf RSV; AV **Aijeleth Shahar**, RV **Aijeleth hash-Shahar**); the Hebrew consonants might equally well mean 'the help of the dawn.' These words are preceded by the Hebrew preposition *'al*, which, among many others, has the meaning 'in accordance with,' and here and in other similar titles not improbably means 'set to' (RV). The whole note, then, may mean that the Psalm was to be sung to the tune to which the song beginning 'the hind (or 'the help') of the dawn' had been accustomed to be sung. With this title cf below 3, 7, 9, 10, 14, 20 (not all equally probable instances).

2. **Alamoth** (Heb. *ʿᵃlāmôth*) (Ps 46). This term and **Sheminith** (Heb. *Shᵉmînîth*) (Pss 6, 12) must be treated together. They are preceded by the same preposition *'al* discussed under 1, and accordingly RV renders 'set to the Sheminith,' etc. But it is hardly likely in view of 1 Ch 15[19–21], that these terms are names of tunes, though they obviously have some reference to the music. The usual meaning of *shᵉmînîth* in Hebrew is 'eighth,' of *ʿᵃlāmôth* 'young women'; so that the titles run 'upon' or 'according to' or 'set to the eighth' or 'the maidens.' 'The maidens,' it is conjectured, means 'the voices of maidens,' and that, it is further conjectured, stands for 'the falsetto voice of males'; so that the whole phrase 'set to the maidens' would mean 'to be sung with soprano voices,' Thence, it is inferred, 'set to the eighth' means 'sung with the bass voice.' All this, though it has found considerable acceptance and has sometimes been stated with little or no qualification, possesses no more than the value of an unverified and perhaps unverifiable guess.

3. **Al-tashheth** (Heb. *'al-tashḥēth*) (Pss 57, 58, 59, 75 RV; AV **Al-taschith**). The words mean 'destroy not' (cf RSV), and may be the beginning of a vintage song cited in Is 65[8] 'Destroy it not, for a blessing is in it.' Then the note presumably directs that the

Psalms shall be sung to the tune of this song (cf 1). But the omission of the preposition *'al* used in similar cases is suspicious.

4. **The Chief Musician** (or Choirmaster). See preceding page.

5. **'Ascents'** (RV, RSV; **'degrees'** AV), **a song of** (Pss 120–134). The Hebrew may also be the plural of a compound expression, and mean 'Songs of Ascent.' In the latter case the title of the whole collection has been prefixed to each Psalm (see above). 'Songs of Ascent' *might* mean 'Songs of the Ascent' (cf Ezr 7^9) from Babylon, but more probably 'Songs of the Ascent' to Jerusalem on the occasion of the great yearly festivals. On the supposition that the meaning is 'A song of Ascents' (plural), the phrase has been explained with reference to the 15 'ascents' or 'steps' (such is the meaning of the Hebrew word in Ex 20^{26}, 1 K 10^{19f}), that led from the Women's Court to that of the men in the Temple area; it has been inferred that one of each of these 15 Psalms was sung on each of the 15 steps. (Cf the Mishnah tractate *Middoth*, ii. 5.)

6. **Dedication of the House** (or Temple) (Ps 30). See above and DEDICATION [FEAST OF THE].

7. **Gittith** (Pss 8, 81, 84). The word is the feminine of the adjective derived from *Gath*. In the three titles it is preceded by the preposition *'al* (see under 1, and the phrase has been supposed to mean that the Psalm was to be sung to the accompaniment of the Gittite instrument (cf 15 and ? 16), whatever that may have been, or to the Gittite tune (cf 1). If the word was originally pronounced 'Gittôth' (plural of *gath*, 'a wine-press'), the note may direct that the Psalms were to be sung to some vintage melody (cf 3).

8. **Higgaion** (Heb. *Higgāyôn*).—The word thus transliterated in 9^{16} (EV) is *translated* in 92^3 'a solemn sound' (AV, RV), 'melody' (RSV), and in 19^{14} 'meditation' (EV). In 9^{16} it seems to be a musical note.

9. **Jeduthun** (Heb. *Y^edhûthûn*).—On the analogy of 'of David,' etc. (see above), the title in Ps 39 should run 'of Jeduthun.' In Pss 62, 77 the preposition prefixed to the term is *'al* (cf 1), and by analogy Jeduthun might be the name of a tune or an instrument. But this is very uncertain; see JEDUTHUN.

10. **Jonath-elem-rehokim** (Heb. *yônath 'ēlem r^eḥōḳīm*) (Ps 56 RV; AV **Jonath-elem-rechokim**). The Hebrew consonants are most naturally translated 'the dove of the distant terebinths' (cf RSV); less probably, but as the tradition embodied in the vocalized Hebrew text suggests, 'the dove of the silence of them that are distant.' The note is to be explained as 1.

11. **Mahalath** (Heb. *maḥ^alath*) (Ps 53), **Mahalath Leannoth** (Heb. *maḥ^alath l^e'annôth*) (Ps 88). The words are very ambiguous and obscure, but the fact that in both Psalms the preposition *'al* precedes, relates these notes to the group which of 1 is typical.

12. **Maskil** (Pss 32, 42–45, 52–55, 74, 78, 88, 89, 142). The term is usually thought to describe the character of the Psalm, for etymologically it may be held to denote a carefully composed, didactic or meditative poem; but its precise meaning remains uncertain.

13. **Miktam** (Pss 16, 56–60, also perhaps in the original text of Is 38^9) is a term like the last, but of still more uncertain meaning. S. Mowinckel (*Psalmenstudien IV* [1923], 4 f, *Offersang og Sangoffer* [1951], 492 f) suggests on etymological grounds that it may indicate a Psalm composed with an expiatory purpose. The Rabbinical interpretation—a *golden* (*poem*)—is quite unconvincing.

14. **Muth-labben** (Ps 9). The Hebrew consonants may mean 'Death whitens' or 'Death of a son,' and this may have been the commencement of a song which gave a name to a tune; cf 1. But it is not unreasonable to suspect the text, as many have done.

15. **Neginoth** (Heb. *n^eghînôth*) (AV in Pss 4, 6, 54, 55, 67, 76) and **Neginah** (Heb. *n^eghînāh*) (Ps 61). The words thus, in excess of caution, transliterated by AV are correctly *translated* by RV, RSV 'stringed instruments' (RV singular in Ps 61), and so even by AV in Hab 3^{19}.

16. **Nehiloth** (Heb. *N^eḥîlôth*) (Ps 5, AV, RV), often supposed to mean 'wind instruments,' *e.g.* 'flutes' (RSV) (cf 15). But this is quite doubtful. Uncertain, too, is the view that the word indicates a tune; the preposition (*'el*) that precedes is not the same as that which generally introduces what appear to be names of tunes elsewhere (cf 1); but cf 20.

17. **Selah.** See SELAH.

18. **Sheminith.** See 2.

19. **Shiggaion** (Heb. *Shiggāyôn*) (Ps 7). The plural of this word occurs in Hab 3^1, **Shigionoth** (Heb. *Shigyônôth*). The root from which the word is derived means 'to go astray' or 'to reel' (as *e.g.* from drunkenness). Hence, since Ewald, many have conjectured that *Shiggaion* means a 'wild, passionate song, with rapid changes of rhythm' (*BDB*); but better, perhaps, a wildly emotional 'lament' or 'dirge' (cf *KB*).

20. **Shoshannim** (Pss 45, 69), **Shushan Eduth** (Heb. *Shûshan-'ēdhûth*) (Ps 60), and **Shoshannim Eduth** (Heb. *Shôshannîm 'ēdhûth*) (Ps 80) appear to be different ways of citing the same song to the tune of which these Psalms were to be sung. The preposition used before these words is *'al* (cf 1), except in Ps 30, where it is *'el*, which in some cases is used interchangeably with *'al*. It is curious that Psalms so different as 45 and 69 should be set to the same tune. It has been thought that Ps 80 cites the first two words of the poem, '(Like) lilies (or rather anemones) is the Testimony (or Law)'; Pss 45, 69 the first word only, while Ps 60 was variant, '(Like) a lily' (singular for plural), etc.. but this is by no means certain.

Is it possible to determine the dates at which any of these collections of Psalms were made? Obviously they are earlier than the completion of the Psalter, *i.e.* than about 100 B.C. (see above); obviously also the *collections* were later than the *latest* Psalm which they originally contained. One or more Psalms in all the collections show more or less generally admitted signs of being post-exilic. The various collections therefore which we have in the Psalter were compiled between the 6th and the 2nd cent. B.C.; and this, apart from the dates of individual Psalms, is significant for the part which continued to be played by the Psalms in the religious life of the post-exilic community.

3. Character of the contents.—This is not to say that all the Psalms in the foregoing collections were themselves a product of the post-exilic age. Indeed a more sympathetic understanding of the forms of worship in ancient Israel and a growing recognition that the canonical prophets need to be studied against a background of worship which can be reconstructed, in part at least, from the Psalter are amongst the most important developments in recent study of the OT. The credit for this must go, in the first place, to Hermann Gunkel, who at the turn of the century began to stress the importance of studying the Psalms according to (*a*) their literary types or 'classes' (*Gattungen*), and (*b*) the particular 'situation in life' (*Sitz im Leben*) which had brought each Psalm into being. At the same time he rightly insisted upon the importance of doing so in the light of the similar material from the religious literature of early Egypt and Mesopotamia; and to this we must now add the mythological texts from Râs Shamra (Ugarit). (See especially *Die Psalmen* [1926] and, with the co-operation of J. Begrich, *Einleitung in die Psalmen* [1933]; also, for the Ugaritic material, J. H. Patton, *Canaanite Parallels in the Book of Psalms* [1944].) Gunkel admitted that, for the most part, the different types of Psalm had their origin in cultic circles; but he maintained that most of the Psalms themselves, although showing the influence of the corresponding cultic types, were composed independently of such an association and, as such, were more spiritual in character. It is to the credit of Sigmund Mowinckel, who widened the field of comparative study so as to include the religious rites of the so-called 'primitive' peoples of our own day, that it is now increasingly recognized that the majority of the Psalms were designed from the first for use in worship and, in some respects, worship of no

mean spiritual order, and that their authors are to be sought, for the most part, among the temple personnel, specifically the cultic prophets and their associates in the so-called musical guilds (such as that of Asaph: cf 2 (2), *ad init.*), which figure so prominently in the post-exilic records, *e.g.* 1 Ch 25[1ff]. (See, *e.g. Psalmenstudien I-VI* (1921–24), *Offersang og sangoffer* (1951).)

A few of the Psalms, of course, defy any such classification, unless one is prepared to admit a very broad definition for the different types; but the following groups may easily be distinguished.

A. *Hymns*, some of a processional character, which in many cases extol Yahweh for the assurance of His power and majesty in the realm of nature and, above all, the tokens of His providential care for Israel in the great events of the nation's history. *E.g.* 24, 29, 46–48, 68, 76, 78, 81, 82, 84, 87, 93, 95–100, 103–106, 113–115, 145–150. Of these, Pss 93 and 95–99, which celebrate in a very special way the universal Kingship of Yahweh, must be singled out as indicative of the changing climate of opinion concerning the history of Israel's faith and worship. Under Mowinckel's influence more and more students of the OT are refusing to see in these Psalms evidence of dependence upon Is 40–55; instead, stress is laid on the greater degree of probability attaching to the view that these and other, seemingly related, Psalms have as their original 'setting in life' the celebration of Yahweh's Kingship at the autumnal festival of the Jerusalem Temple in the pre-exilic period, and that the Psalms in question have themselves had a marked effect upon the message of this prophet.

B. *Communal Laments*, which were composed under the constraint of some calamity, *e.g.* famine or war, which threatened the well-being of society as a whole. *E.g.* 44, 74, 79, 80.

C. *Communal Songs of Thanksgiving*, which express the gratitude of the worshippers for some mark of the Divine favour such as a successful harvest or victory in battle. *E.g.* 67, 124.

D. *Individual Laments*, which reveal the worshipper as suffering from sickness or other ills and, in some cases, subject to slander, false accusation or, indeed, active persecution. *E.g.* 3, 5–7, 13, 17, 22, 25, 26, 28, 31, 35, 38, 39, 42 and 43, 51, 54–57, 59, 61, 63, 64, 69–71, 86, 88, 102, 109, 120, 130, 140–143. Occasionally these Psalms are marked by a sudden change of tone which indicates the worshipper's assurance of answered prayer, and it has been suggested that this corresponds to some element in the ritual, for example a prophetic oracle or sign, which would be indicative of Yahweh's favourable response. *E.g.* 6, 22, 28, 31, 51, 55, 57, 63, 69, 71. The recognition of this type of Psalm, like that of the next group, is indicative of the strong reaction which has set in against the theory that the 'I' who speaks in so many of the Psalms is not an individual in the strict sense of the term but a personification of the community (cf Pss 124, 129).

E. *Individual Songs of Thanksgiving*, which correspond in principle to the second part of those Individual Laments which end with an assurance of answered prayer. *E.g.* 18, 30, 32, 34, 41, 66, 92, 116, 118, 138 (cf Is 38[10–20], Jon 2[2–9]). In some cases from each of these two groups it is clear that the words of thanksgiving are linked with an act of sacrifice which marks the fulfilment of a vow. *E.g.* 22, 54, 56, 66, 116 (cf Jon 2[2–9]). In others, however, no such reference occurs; and indeed in more than one case the normal ritual of sacrifice is evidently regarded with some misgiving, although it is equally clear that the worshipper is offering thanks in public and thus bearing due witness within a cultic setting to Yahweh's power and willingness to save those who call upon Him (see below, 6 (5)).

While it is of value to distinguish Psalms of the foregoing types, it is possible and indeed helpful to use different criteria for distinguishing other types which may cut across this classification and, indeed, may do so in the case of one another. The most important of these are:

F. *Royal Psalms, i.e.*, obviously pre-exilic Hymns, Laments or Songs of Thanksgiving, which find their focus in the person of a king either as the leader of his people and, therefore, with special responsibility towards Yahweh or in a more individual capacity as one who is about to enjoy marriage or is obviously subject to ordinary human ills. *E.g.* 2, 18, 20, 21, 28, 45, 61, 72, 101, 110, 118, 132, 145 (see below, 4, 6 (3)). In fact it is conceivable that far more of the Psalms in the two immediately preceding groups should also be classified in this way; but one cannot be certain of this.

G. *Oracular Psalms, i.e.* compositions which wholly or in part communicate to the congregation or to an individual worshipper, especially the king, what is Yahweh's will and pleasure in a given connexion. *E.g.* 2, 12, 50, 60, 75, 81, 82, 85, 91, 95, 110 (cf 121).

H. *Wisdom Psalms, i.e.* reflective or didactic poems which may be of a simple, proverbial kind or may represent the more personal struggle of one who is haunted by life's cruelty, suffering and injustice. *E.g.* 1, 37, 49, 73, 112, 127, 128, 133. The possible connexion between the Psalms of this class and those of a more obviously cultic type (*e.g.* 78) remains to be determined in the light of our increasing knowledge of the comparatively early appearance of Wisdom literature in the ancient Near East and the relationship which evidently existed between scribal school and temple.

4. Dates of individual Psalms.—This is a difficult question which allows scope for considerable divergence of opinion; and the only comparatively straightforward arguments in favour of (*a*) a pre-exilic, and (*b*) an exilic or post-exilic date are (*a*) the obvious existence of royal Psalms which cannot satisfactorily be explained in terms of the post-exilic period, *e.g.* a foreign monarch or one of the Hasmonaean rulers, and (*b*) allusions to the Exile or the desolation of Zion. It is now generally conceded that clear examples of (*a*) are those which celebrate the founding of the Davidic dynasty and its royal sanctuary on Mount Zion (132), a king's enthronement (2, 101, 110) or some similar anniversary (21, 72), a royal wedding (45), a king's departure on a military campaign (20) and his victorious return (18). In the case of (*b*) an obvious example is Ps 137, and other likely examples are Pss 102 and 147. On the other hand Ps 50, for instance, serves to show that apparently an earlier Psalm could be adapted to an exilic or post-exilic situation by the incorporation or addition of new lines. Moreover, special caution is required on the part of the English reader, for it is now quite clear that the expression which is traditionally rendered by some such words as 'turn (*or* restore) the captivity' really means 'restore the fortunes (*or* well-being),' and thus, while not inapplicable to the conditions of the Exile, is not in itself sufficient evidence for an exilic or post-exilic date. Compare, *e.g.* AV and RV with RSV in the case of Pss 85 and 126; and, for the significance of the above expression, see Job 42[10]. For the rest, grave doubts attach to arguments for an exilic or post-exilic date which are based upon (i) literary style and language; (ii) imagined allusions to social and political conditions, such as the frequent division of the Jews into religious parties, with the use of terms like 'the poor,' 'the pious' (*ḥᵃsîdhîm*) as party names; and (iii) supposed dependence upon exilic and post-exilic writings (cf 3 A, above).

If, as the previous remarks should have suggested, it is in many cases only possible to determine whether a Psalm is pre-exilic or post-exilic on evidence which is, at best, somewhat widely applicable, it should be clear that the attempt to fix the authorship or dates of Psalms very precisely must generally prove fruitless. Are there *any* that can be referred, even with great probability, to a particular occasion as that of their origin, or to a particular writer? The mere fact that a Psalm may appear to be suitable to a particular occasion, as, *e.g.* Ps 46 to the deliverance from Sennacherib in 701, does not necessarily prove that it even refers to it, still less that it was written at the time; the question arises, is the occasion in question the *only* one to which the terms of

the Psalm are applicable, or are those terms sufficiently specific to render it improbable that the Psalm might have fitted other occasions unknown to us, or but partially known? Thus Pss 44, 74, 79 presuppose conditions which resemble what is known of the period of the Maccabaean revolt (cf 1 Maccabees) more closely than what is known of any other period, and on that ground they were once commonly assigned to the Maccabaean period: the question is, are the descriptions so specific that they might not also correspond to the conditions of, say, the Persian period, the Babylonian period, or even the Assyrian period (to which other scholars have referred one or another of these Psalms), if we were equally well informed with regard to these? The position is further aggravated by the possibility that in some cases, *e.g.* Pss 18, 46, 48, 89 and 118, the absence of any specific historical allusions may be due to the Psalm's having its original setting in a form of ritual drama, and that we should think in terms of what Mowinckel would describe as cultic reality rather than simple historicity.

5. The question of Davidic Psalms.—On the whole the question of authorship retains an interest only with reference to David. The theory that David was the author of Psalms can be traced back as far as the time (not to be dated precisely, but centuries at least after David's time) when the historical notes were added in certain Psalms to the title 'of David' (see above). Whether it goes back further to the time of the origin of the collection entitled 'of David' is less clear, for it is by no means certain that the similar title 'of the chief musician (*or* choirmaster)' referred to authorship (see above); and, indeed, as we shall see, the same is true of the expression 'of David.' Still, we may consider the argument which, based on the assumption that 'of David' implies authorship, is to the effect that, if so many Psalms (as seventy-three in the Hebrew text, more in the Greek text, and all in later Jewish tradition) were attributed to David, some must actually be his, though many so entitled are demonstrably and admittedly not. In a word, where there is much smoke, there must have been some fire. The argument at best does not seem to justify more than a strong probability that David wrote psalms; and possibly the fact that David was a famous poet, even though all his poems more nearly resembled 2 S 1^{19-27} than the Psalms, coupled with his fame as a zealous worshipper of Yahweh, may be the extent of the historical fact underlying the late traditions. But even granted that the evidence were strong enough to justify the statement that some Psalms of David are preserved in the Psalter, the most important problem still remains to be solved, viz. which Psalms in particular are David's? No doubt there are some Psalms which in whole or in part may not be incompatible with what we know of David's life, but the allusions are too general to enable us to deny that they are equally applicable to many other lives. In fact it will be found on examination that the positive reasons assigned for regarding any particular Psalm as David's are inconclusive; they often amount to nothing more than an argument that there is nothing in such and such Psalms which *forbids* us to ascribe them to David, the simplest and, perhaps, most obvious example being Ps 23.

Moreover it must be borne in mind that, while it remains uncertain that the name 'David' is derived from a god 'Dod,' it was almost certainly the regnal name assumed by Elhanan (cf A. M. Honeyman, *JBL*, lxvii (1948), 23 f), and, as such, it was to prove of developing significance in its application to the founder of the Davidic dynasty; for in Israelite thinking the house of David would be as much 'David' as, say, the nation 'Israel' was the continuing embodiment of the patriarch whose name it bore. This being the case, it may well be that the expression 'of David' sometimes had the meaning 'Davidic' in the sense that the Psalms in question were in general use in connexion with the royal ritual and mythology of Solomon's Temple, for this was undeniably a royal sanctuary intimately associated with the Davidic dynasty. The likelihood of this is reinforced by the fact that in the mythological texts of the 14th cent. B.C. from Râs Shamra (Ugarit) the heading 'of Baal,' for example, is used to indicate that the tablet in question belongs to the cycle of texts which have the adventures of Baal as their leading motif.

6. Religious value and influence of the Psalter.—Probably no book of the OT has exercised a more profound and extensive influence over succeeding ages than the Psalms. Among the Jews, indeed, the Law has received a more persistent and greater attention; but the place of the Psalms in the history of the Christian Church and in Christian experience is typified by the frequency with which they are quoted in the NT. To trace this influence or to illustrate it as R. E. Prothero did so excellently in *The Psalms in Human Life* (1904), falls outside the scope of this article. All that can be attempted, and even that but very inadequately, is to indicate some of the leading ideas, some of the striking religious qualities of the Psalms. And in doing this it is necessary to emphasize clearly the fact that such ideas and qualities are by no means common to all the 150 or more poems which were written by an indefinite number of writers, and were gathered together in our Psalter. What alone is aimed at here is to draw attention to some of the qualities that are at least frequently present, and some of the ideas which frequently or strikingly appear—to the ideas and qualities which have in large measure been the cause of the great and persistent influence which the Psalms have exercised.

(1) We turn first to the Psalmists' *belief in God*: and here it must suffice to draw attention to two features —the breadth of the conception, and the intensity of the consciousness, of God. The early belief of Israel that other gods besides Yahweh existed has left vivid traces in the Psalter (*e.g.* 29, 82, 89, 97), and there can be no reasonable doubt that originally, so far as some of the Psalms are concerned, this reflects the standpoint of the pre-exilic period. Even so it is equally clear from these Psalms that Yahweh was regarded as the supreme God, in fact the Divine King, to whom all other gods were subservient. As such He was not only the Creator and Sustainer of man's habitable world but the Lord of History. In short, the recognition of His control in the realm of nature could not be divorced from that of His interest in the realm of man's behaviour. Indeed, as King of the gods, Yahweh's authority was such that the gods themselves were ultimately answerable to Him for their failure to establish justice upon earth (82); for the standpoint is obviously that of Dt 32^{8f} (LXX), which tells us that the gods of the nations were granted jurisdiction over their particular territories by Yahweh Himself, who, in virtue of His supremacy, was able not only to do this but to adopt the Hebrews as His own chosen people (see below (2)). In Israel the monotheistic idea sprang, not from an abstraction of what was common to many gods previously or still worshipped, but from the expansion of the thought of the same one God whom alone Israel had previously worshipped. While Israel believed the gods of the other nations to be real beings set over against Yahweh, it was natural for them to feel a peculiarly close relation to Yahweh, to look upon Him as their possession just as they felt themselves to belong closely to Him; the belief in other gods perished, the sense of Yahweh as a close and intimate Personality survived; and not a little of the enduring power of the Psalms is due to the vivid apprehension of God that resulted. Yahweh was the 'Living God' as opposed to the comparative nonentities worshipped by other peoples (cf 42, 84: and see A. R. Johnson, *The Vitality of the Individual in the Thought of Ancient Israel* (1949), 88–107); and an important factor in this development was, no doubt, the contrast which was drawn from the first between the imageless worship of Yahweh and the image worship which was characteristic of other nations. (Cf H. H. Rowley, *The Faith of Israel* [1956], 76 ff.)

(2) This thought of the peculiarly intimate relationship

which existed between Yahweh and Israel finds familiar expression in terms of *the covenant at Sinai-Horeb*; but it must be emphasized that the way in which this idea dominates the Psalter as something vital to the well-being of the nation—king and commoner alike—can only be appreciated in full by the Hebraist, who is made aware of its presence in language which goes far beyond the comparatively rare use of the simple Hebrew term which is commonly rendered as 'covenant.' (Cf N. H. Snaith, *The Distinctive Ideas of the Old Testament* [1944], 94 ff). Time and again, by the use of certain Psalms in the regular worship of the festivals or, it may be, in some form of service designed to secure Divine aid in meeting the more serious challenges of life, the worshipper is reminded or, as sometimes happens, seeks to remind Yahweh of the momentous occasion at Sinai-Horeb, when God and people entered into a mutual pledge of loyalty to one another and to the common good. Lessons may be drawn for all and sundry from the chequered history of the intervening years with their eloquent testimony to that which happens to a faithful or an apostate people (*e.g.* 77, 78, 81, 95, 105, 106, 136); or the individual, faced with his own more personal problems, may plead with Yahweh for the help which he is led to expect as a member of this covenant people whose ties are so close with Him who is not merely the God of Israel but the 'Living God' with supreme power over all the issues of life and death (*e.g.* 6, 13, 16, 25, 26, 30–32; and so on).

(3) This brings us to another feature of the Psalms which has contributed to the influence exercised by them—the hope that is in them, *their Messianic outlook*. While it may be true that the original sense of many passages has been obscured by specific applications to the life of Christ, applications which in some instances have been built on a very questionable Hebrew text or an illegitimate translation, closer examination of the so-called Royal Psalms has brought into proper perspective, not only the lofty ideal which was associated with the Davidic dynasty at its best, but also the fact that this ideal had its roots in a covenant between Yahweh as the national God and David as the founder of the dynasty, and that this covenant was to be the means of realizing the ideal already enshrined in the covenant which had been mediated through Moses at Sinai-Horeb (89, 132; cf 2 S 23^{1-7}). In short, there is reason to believe that some of these Royal Psalms, like those which celebrate the Kingship of Yahweh (see above, 3 A), look forward to a future when this ideal of righteousness will be realized not only within the boundaries of Israel but also amongst the other peoples of the earth; and this will be brought about by a scion of the House of David who, as the true Messiah in virtue of his proven loyalty to the Davidic covenant and *ipso facto* to the purpose of the covenant at Sinai-Horeb, will enable Israel to fulfil its mission to the world. (Cf A. R. Johnson, *Sacral Kingship in Ancient Israel* (1955).) Even so it remains true that Israel occupies a central position, and Zion is to become for the whole world what it comes to be for Israel—the centre of religion, the place where Yahweh will be worshipped. No Psalmist has attained to the standpoint of our Lord's teaching in Jn 4^{21ff}.

(4) From the thought of the Psalmists about God and their hope in Him, we may turn to their thought of men, which is for the most part primarily of Israel, and in particular to their *sense of sin*. Judged by their attitude towards sin, the Psalms fall into two great groups: the extreme representatives of each group are very different in thought, tone, and temper; the less extreme (and they are in the majority) approximate more or less closely to one another. In the one group the writers claim for themselves, and, so far as they identify themselves with Israel, for their nation, that they are righteous, and in consequence have a claim on God's righteousness to deliver them from their present afflictions (so *e.g.* Pss 7, 17, 26, 28, 44, 86). In the other group, confession is made of great iniquity; the appeal for help, if made, can be made to God's compassion and willingness to forgive (see Pss 25, 32, 40, 51, etc.). The view taken of sin in both groups of Psalms is best appreciated by noticing how, with all their differences, they are yet related. Some sense of sin is perhaps never altogether absent from the Psalms that lay claim to righteousness, and a strong sense of relative righteousness generally accompanies the most fervent confession of sin. Even in such Psalms as the 32nd and the 51st, where the difference is most clearly felt between God's standard and man's performance, the sense is also present of a sharp difference between those who, in spite of sin, yet pursue after righteousness, and those who constitute the class of 'the wicked' or 'the transgressors.' This attitude towards sin might doubtless without much difficulty become that of the Pharisee in the parable; but it is also closely akin to the highest Christian consciousness, in which the shadow of sin shows darkest in the light of the righteousness and love of God as revealed in Christ, and which leads the truest followers of Christ, with all honesty, to account themselves the chief of sinners. And it is because the 'penitential' Psalms are confessions, not so much of grosser sins open to the rebuke of man, but of the subtler sins which are committed in the sight of and against God only, of the sins which stand in the way of the nation called of God fulfilling its missionary destiny, that these Psalms have played so conspicuous a part in forming the habit and moulding the form of the confession of the Christian man and the Christian Church.

(5) Allied to this is the more spiritual attitude to *sacrifice* which is discernible in the Psalter. It comes to the fore in one of the most spectacular of the Oracular Psalms (50), where emphasis is laid upon the fact that, if sacrifice is to be acceptable to Yahweh, it must be a genuine expression of gratitude on the part of those who are in covenant with Him. If figures even more prominently, however, in the Individual Laments and Songs of Thanksgiving with their stress on the need to bear witness in public to Yahweh's willingness and power to help those who put their trust in Him. Several of these Psalms make it clear that the offering of sacrifice was a recognized means of thanksgiving for answer to prayer (*e.g.* 22, 54, 56, 66, 116); but in other Psalms from these groups the thought of ordinary animal sacrifice as a suitable mode of expressing such thanks to Yahweh is definitely rejected; in fact, man's proper sacrifice is that of 'a broken spirit' or 'a broken and a contrite heart' (51; cf 69). Thus the Psalter offers evidence to show that something like a purist movement appears to have arisen within the cultus itself, and, while it lies outside the scope of this article to discuss the degree to which one or another of the canonical prophets may have contributed to this movement, it is clear that there is here a line of thought which is akin to that of Jeremiah's vision of a new covenant which would be written upon the heart (Jer 31^{31ff}); so that, here again, we see something of that long spiritual travail which ultimately gave birth to the new Israel of the Christian Church.

PSALMS OF SOLOMON.—See PSEUDEPIGRAPHA, 3.

PSALTERY.—See MUSIC, etc., 4.

PSEUDEPIGRAPHA.—The word *pseudepigrapha* means 'false or spurious writings,' especially those which purport to be written by Biblical characters or in Biblical times. In accordance with conventional usage of the word, the present article will deal with certain pseudepigraphic works of Jewish or Jewish-Christian origin, dating from the centuries just before and just after the beginning of the Christian era. Besides those mentioned here, scores of other pseudepigrapha are known to have been circulated among various early Jewish and Christian sects.

One of the literary forms which is characteristic of the pseudepigrapha is the *apocalypse* (a work which purports to reveal what is hidden). Its ultimate origins have been disputed by scholars, but among the Hebrews its

forerunner was the description of the **Day of Yahweh**. On that day, the prophets taught, Yahweh was to punish the enemies of Israel and to establish His people as a world power. In the course of time this conception was supplemented by the further expectation of a judgment for Jews as well as for heathen (Am 2^{6-8} 3^{9-15} 5^{10-13}, Zec 1^{12-18} 2^{4-15}, Jl 2^{18-28}, Ezk 30^{2f}). The first approach to the apocalyptic method is probably to be seen in Zec 9–14. It was in the same period that the tendencies towards the aesthetic conceptions which had been inherited from the Babylonian exile were beginning to be realized under the influence of Hellenistic culture. Because of their religion, literature was the only form of aesthetic expression (except music) which was open to the art impulses of the Jews. In the apocalypse we thus can see a union of the symbolism and myths of Babylonia with the religious faith of the Jews, under the influence of Hellenistic culture. By its very origin it was the literary means of setting forth by the use of symbols the certainty of Divine judgment and the equal certainty of Divine deliverance. The symbols are usually animals of various sorts, and frequently involve composite creatures whose various parts represented certain qualities of the animals from which they were derived.

Apocalyptic is akin to prophecy. Its purpose was fundamentally to encourage faith in Yahweh on the part of those who were in distress, by 'revealing' the future. Between genuine prophetism and apocalyptic there existed, however, certain differences not always easy to formulate, but appreciable to students of the two types of religious instruction. (*a*) The prophet, taking a stand in the present, so interprets current history as to disclose Divine forces at work therein, and the inevitable outcome of a certain course of conduct. The writers of the apocalypse, however, seem to have had little spiritual insight into the providential ordering of existing conditions, and could see only present misery and miraculous deliverance. (*b*) Assuming the name of some worthy long since dead, the apocalyptist re-wrote the past in terms of prophecy in the name of some hero or seer of Hebrew history. On the strength of the fulfilment of this alleged prophecy, he forecast, though in very general terms, the future. (*c*) Prophecy made use of symbol in literature as a means of enforcing or making intelligible its Divinely inspired message. The apocalyptists employed allegorically an elaborate machinery of symbol, chief among which were sheep, bulls, birds, as well as mythological beings like Beliar and the Antichrist.

The parent of apocalyptic is the book of Daniel, which, by the almost unanimous consensus of scholars, appeared in the Maccabaean period (see DANIEL [BOOK OF]). From the time of this book until the end of the 1st cent. A.D., and indeed even later, we find a continuous stream of apocalypses, each marked by a characteristic combination of pessimism as to the present and hope as to the future yet to be miraculously established. These works are the output of one phase of Pharisaism, which, while elevating both Torah and the Oral Law, was not content with bald legalism, but dared trust in the realization of its religious hopes. The authors of the various works are utterly unknown. In this, as in other respects, the apocalypses constitute a unique national literature.

1. The Enoch Literature.—The Enoch literature has reached us in three forms: (*a*) The Book of Enoch (sometimes called Ethiopic Enoch or 1 Enoch); (*b*) The Slavonic Book of the Secrets of Enoch; and (*c*) Third Enoch. The three works indicate the widespread tendency to utilize the story of the patriarch in apocalyptic discourse.

(*a*) *The Book of Enoch* is a collection of apocalypses and other material written during the last two centuries before Christ. It was written in Hebrew or Aramaic, and then translated into Greek, and from that into Ethiopic and Latin. As it now exists, the collection is a survival of a widespread Enoch literature, and its constituent sections have been to a considerable extent edited by both Jews and Christians. Critics, while varying as to details, are fairly well agreed as to the main component sources, each probably representing a different author or school.

(i) The original ground-work of the present book is to be found in chs. 1–36 and 72–104, in the midst of which are, however, numerous interpolations (see iv below). These chapters were probably written before 100 B.C. Chs. 1–36 deal chiefly with the portrayal of the punishment to be awarded the enemies of the Jews and sinners generally on the Day of Judgment. The eschatology of these chapters is somewhat sensuous as regards both the resurrection and rewards and punishments. In them we have probably the oldest piece of Jewish literature touching the general resurrection of Israel and representing Gehenna as a place of final punishment (see GEHENNA).

The dream visions (chs. 83–90) were probably written in the time of Judas Maccabaeus or John Hyrcanus. By the use of symbolic animals—sheep, rams, wild beasts—Hebrew history is traced to the days of the Hasmonaean revolt. The years of misery are represented by a flock under seventy shepherds, who, in the new age about to dawn, are to be cast with the evil men and angels into an abyss of fire. The Messiah is then to appear, although His function is not definitely described. In ch. 91 the future is somewhat more transcendentally described.

In the later chapters of this oldest section the new eschatology is more apparent. In them are to be found representations of the sleep of the righteous, the resurrection of the spirit of the Messiah, though human, as God's Son (105^{2}), the Day of Judgment, and the punishment of the wicked in hell.

(ii) Whether or not the second group of chapters (37–71), or the *Similitudes*, is post- or pre-Christian has been thoroughly discussed. The general consensus of scholars is that the *Similitudes* were probably written sometime before the reign of Herod. The most remarkable characteristic of these *Similitudes* is the use of the term 'Son of Man' for the Messiah. But it is not possible to see in the use of this term any reference to the historical Jesus. More likely it marks a stage in the development of the term from the general symbolic usage of Dn 7^{13} to the strictly Messianic content of the NT. In the *Similitudes* we find described the judgment of all men, both alive and dead, as well as of angels. Yet the future is still to some extent sensuous, although transcendental influences are very evident in the section. The Messiah pre-exists and is more than a man. The share which he has in the reorganization of the world is more prominent than in the older sections.

(iii) Interspersed throughout the book are sections which Charles calls 'the book of celestial physics.' These sections are one of the curiosities of scientific literature, and may be taken as a fair representative of the astronomical and meteorological beliefs of the Palestinian Jews about the time of Christ.

(iv) Interpolations from the so-called *Book of Noah*, which are very largely the work of the last part of the pre-Christian era, although it is not possible to state accurately the date of their composition.

The importance of Enoch is great for the understanding of the eschatology of the NT and the methods of apocalyptic.

Except for occasional references in the Church Fathers to the existence of a book of Enoch, full knowledge of the work was first brought to Europe in 1773 when James Bruce, the great Abyssinian traveller, returned to Britain with an Ethiopic Manuscript of 1 Enoch. Portions of the text have been preserved also in a Latin manuscript. At Qumrân by the Dead Sea eight manuscripts of part of 1 Enoch in Aramaic have come to light.

(*b*) The (Slavonic) *Secrets of Enoch*, which presupposes the existence of 1 Enoch, first came to the attention of Western scholars in the late 19th cent. Originally written in Greek, which is no longer extant, the work is preserved in two Slavonic recensions of unequal length. The longer text is the product of the fantasy of Slavonic redactors of

the 15th and 16th cent. The shorter text appears to be an epitome of the original and may have been made in the 10th cent. When the original Greek work was composed has been vigorously debated by scholars, who have argued for dates as widely separated as the 1st and the 7th Christian centuries. The author gives a detailed account (chs. xxv–xxx) of the six days of Creation. As the world was made in six days, so its history is to be accomplished in six thousand years (cf Ps 90^4). At the close of the six thousand years, the new day, or Sabbath of the thousand years, is to begin. The *Secrets of Enoch* is a highly developed picture of the coming age and of the structure of the heaven, which, it holds, is seven-fold. Here, too, are the Judgment, though of individuals rather than of nations, the two aeons, the complete renovation or destruction of the earth. There is no mention of a resurrection, and the righteous are upon death to go immediately to Paradise.

(*c*) *Third Enoch*, a heterogeneous work extant in several Hebrew manuscripts, was first edited in its entirety in 1928. Its contents represent a direct continuation in development from the earlier Enochic literature, with influences on the one hand from Gnosticism and on the other from Rabbinic traditions developed during the Tannaitic period. To a central core of the book there were added at later times various sections akin to the mysticism which is also reflected in the Cabbala. The author describes many angels and their activities. He also supplies an account of the divine Chariot (cf Ezk 1^{14}) and the destinies of Metatron, *i.e.* the Divine servant who in I Enoch is identified with the Elect One and the Son of Man.

2. The Book of Jubilees is a Haggadist commentary on Genesis, and was probably written in the Maccabaean period. At Qumrân by the Dead Sea five manuscripts of Jubilees were discovered preserving parts of chs. i–ii, xxi–xxiii, xxv, xxxii–xl, written in a good style of Hebrew. From these it can now be shown that the Latin and Ethiopic versions faithfully translate the original.

In this writing angelology and demonology are well developed. While there is no mention of the Messiah, the members of the Messianic age are to live a thousand years, and are to be free from the influence or control of Satan. The book contains no doctrine of the resurrection; but spirits are immortal. While there is punishment of the wicked, and particularly of evil spirits and the enemies of Israel, the Judgment is not thoroughly correlated with a general eschatological scheme. The chief object of the book is to incite the Jews to a greater devotion to the Law, and the book is legalistic—rather than idealistic.

The 'new age' was to be inaugurated by wide-spread study of the Law, to which the Jews would be forced by terrible suffering. Certain passages would seem to imply a resurrection of the dead and a renewing of all creation along with the endless punishment of the wicked.

3. The Psalms of Solomon—a group of noble songs, written by a Pharisee (or Pharisees) probably between 70 and 40 B.C., the dates being fixed by reference to the Roman conquest of Jerusalem and the death of Pompey (Ps-Sol ii. 30, 31). The collection is primarily a justification of the downfall of the Maccabaean house because of its sins. Its author (or authors) was opposed to monarchy as such, and looked forward to the time when the Messiah would really be king of Judaea. The picture of this king as set forth in Pss 17–18 is one of the noblest in Jewish literature. He is to be neither sufferer nor teacher, pre-existent nor miraculously born. He is not to be a priest, or warrior. He is to be sinless, strong through the Holy Spirit, gaining his wisdom from God, conquering the entire heathen world without war, 'by the word of his mouth,' and to establish the capital of the world at Jerusalem. All the members of the new kingdom, which, like the Messiah, is miraculous, are to be 'sons of God.'

4. The Assumption of Moses was probably written in the opening years of the 1st cent. A.D., and narrates in terms of prophecy the history of the world from the time of Moses until the time of its composition, ending in an eschatological picture of the future. As it now stands, the writing is hardly more than a fragment of a much larger work, and it exists only in an old Latin translation. The most striking characteristic is the importance given to Satan as the opponent of God, as well as the rather elaborate portrayal of the end of the age it narrates. The Judgment is to be extended to the Gentiles, but no Messiah is mentioned, the Messianic kingdom rather than He being central. Further, the writer, evidently in fear of revolutionary tendencies among his people, says distinctly that God alone is to be judge of the Gentiles.

5. The Testaments of the Twelve Patriarchs is a composite work purporting to preserve the last words of the twelve sons of Jacob. Because of the presence of many passages that are obviously Christian in outlook, the book in its present form seems to date from the 1st or 2nd cent. of our era. Much of the material, however, reflects Jewish traditions of a pre-Christian period. Several Aramaic fragments of the Testament of Levi were discovered in the Cairo Genizah and at Qumrân. In literary character the Testaments resemble homilies illustrated with much legendary material, including descriptions of demons and Beliar their leader. The new age is not distinctly described but apparently involves only earthly relationships. God's judgment on wicked men and demons is, however, elaborately pictured, sometimes in terms hard to reconcile with the less transcendental accounts of the blessings assured to the Jewish nation. Each of the patriarchs is represented as dealing with that particular virtue or vice with which the Biblical account associates him, and also as foretelling appropriate blessings or curses. The work is preserved in Greek and Armenian translations.

6. The Ascension of Isaiah is a composite book which circulated largely among the Christian heretics of the 3rd cent. At its basis lies a group of legends of uncertain origin dealing with the Antichrist and Beliar. These in turn are identified with the expectation that Nero would return after death. The book, therefore, in its present shape is probably of Christian origin, and is not older than the 2nd cent., or possibly the latter part of the 1st. The Isaiah literature, however, was common in the 1st cent., and the book is a valuable monument of the eschatological tendencies and beliefs of at least certain groups of the early Christians. Particularly important is it as throwing light upon the development of the Antichrist doctrines. It exists to-day in four recensions—Greek, Ethiopic, Latin, and Slavonic.

7. The Apocalypse of Ezra (Second Esdras, chs. 3–14; see APOCRYPHA, THE, 2), written about the time of the destruction of Jerusalem. It is the most complete expression of Pharisaic pessimism. Written in the midst of national misery, it is not able to see any relief except in the creation of a new world. The age was coming to an end, and the new age which was to belong to Israel would presently come. The judgment of Israel's enemies was presently to be established, but not until the number of the righteous was complete. The book is no doubt closely related to the *Apocalypse of Baruch*, and both apparently reproduce the same originally Jewish material. It has been considerably affected by Christian hopes. Both for this reason and because of its emphasis on generic human misery and sin, with the consequent need of something more than a merely national deliverance, it gives a prominent position to the Messiah, who is represented as dying. As Second Esdras the book has become part of the Apocrypha of the OT, and has had considerable influence in the formation of Christian eschatology. In vii. 30–98 is an elaborate account of the general Resurrection, Judgment, and the condition of souls after death; and it is this material quite as much as the Messianic prediction of chs. xii–xiv that make it of particular interest to the student. It is possessed, however, of no complete unity in point of view, and passes repeatedly from the national

to the ethical (individual) need and deliverance. The separation of these two views is, however, more than a critical matter. As in Mk 13, the two illustrate each other.

8. The Apocalypse of Baruch is a composite work which embodies in itself a ground-work which is distinctly Jewish, and certain sections of which were probably written before the destruction of Jerusalem. Criticism, however, has not arrived at any complete consensus of opinion as regards its composition, but there can be little doubt that it represents the same apocalyptic tendencies and much of the material which are to be seen in 2 Es. Just what the relations are between the two writings, however, has not yet been clearly shown. The probability is that the Apocalypse of Baruch, as it now stands, was written in the second half of the 1st cent. A.D., and has come under the influence of Christianity (see especially chs. xlix–li). Like 2 Esdras, it is marked by a despair of the existing age, and looks forward to a transcendental reign of the Messiah, in which the Jews are to be supremely fortunate. It exists to-day in Greek and Syriac versions, with a strong probability that both are derived from original Hebrew writing. This apocalypse, both from its probable origin and general characteristic, is of particular value as a document for understanding the NT literature. In both the Apocalypse of Baruch and 2 Esdras we have the most systematized eschatological picture that has come down to us from Judaism of the early Christian centuries.

9. The Sibylline Oracles are the most important illustration of the extra-Palestinian-Hellenistic apocalyptic hope. As the work now exists, it is a collection of various writings dealing with the historical and future conditions of the Jewish people. The most important apocalyptic section is in Book iii. 97–828, written in Maccabaean times. In it the punishment of the enemies of the Jews is elaborately foretold, as are also the future and the Messianic Judgment. This third book was probably edited in the middle of the 2nd cent. by a Christian. In general, however, this Sibylline literature, although of great extent, gives us no such distinct pictures of the future as those found in the Ezra-Baruch apocalypses.

10. Third Maccabees is a religious novel written in Greek by an Alexandrian Jew sometime between 100 B.C. and A.D. 100. Its title is misleading, for the book has nothing to do with the Maccabees. The subject matter deals with the triumph of the Jews over their enemies through Divine intervention during the reign of Ptolemy Philopator (222–204 B.C.). The book contains incredible yarns characterized by grotesquely fabulous details, and the style of the author is rhetorical and bombastic. It is included in most manuscripts of the Septuagint, including the two uncials A and V.

11. Fourth Maccabees is a composition resembling an extended sermon on the theme of the supremacy of pious reason over the passions. This Stoic doctrine is reinforced by recounting with exaggerated and gruesome details the horrible persecutions experienced by the Maccabean martyrs (2 Mac 6^{18}–7^{42}). The author was probably an Alexandrian Jew who lived sometime shortly before or shortly after the beginning of the Christian era. As regards literary style and rhetorical power, the work is superior to 2 Maccabees, on which it depends. The personal earnestness and zeal of the writer are obvious at every point. He is an ardent and orthodox Jew who is thoroughly acquainted with the Hebrew Scriptures. Under the influence of Is 53, the author teaches that in their death the martyrs 'became as it were a ransom for our nation's sin' (xvii. 21 f). In xviii. 6 ff we have very interesting glimpses of Jewish family life of the writer's own day.

12. The Lives of the Prophets is a collection of extra-biblical traditions concerning the history, activities, manner of death, and place of burial of these famous men. Probably written in Hebrew sometime during the first Christian century, the work has been preserved in five Greek recensions, as well as in Syriac, Latin, and Ethiopic versions. The list, which varies in the several sources, includes the biographies of the four major and the twelve minor prophets, followed by those of Nathan, Ahijah, Joed, Azariah, Zechariah the son of Jehoiada, Elijah, and Elisha. Except for the briefest allusions, no attempt is made to repeat what is recorded in the canonical Scriptures. The amount of new material varies from two or three sentences in some cases to more than two or three pages. Some of the legendary details include the following. Jonah was a son of the widow of Zarephath (1 K 17^{8-24}). Ezekiel was killed in Babylonia by one of the Jewish exiles, 'for they had opposed him all the days of his life.' Daniel interceded for Nebuchadnezzar, who had been changed into an animal having the fore parts of a bull and the hind parts of a lion. When Elisha was born at Gilgal, a seat of idol worship, 'the golden calf bellowed so loudly that the shrill sound was heard at Jerusalem.' Isaiah met his death by being sawn in two (see He 11^{37}). Among Christian additions is the prophecy of Jeremiah to the Egyptian priests that 'their idols would be shaken and their gods made with hands would all collapse, when a virgin bearing a child of divine appearance [Jesus] should arrive in Egypt.'

13. The Testament of Solomon is a Christianized reworking of a kernel of Jewish legends pertaining to Solomon's super-human powers in curing diseases and exorcizing demons which plagued his favourite workman during the building of the Temple. The book contains a great amount of magical, astrological, and demonological matter drawn from a wide variety of sources—pagan, Jewish, and Christian. It is extant to-day in several recensions, the oldest of which may date from about the fourth Christian century, and the latest of which betrays late Mediaeval additions.

S. M.—B. M. M.

PSYCHOLOGY.—The Bible does not contain a science of psychology in the modern sense; but it abounds in examples of shrewd psychological insight, and there is a definite and consistent view of man's nature from the religious standpoint. This being recognized, the old dispute, whether it teaches the bipartite or the tripartite nature of man, loses its meaning, for the distinction of **soul** and **spirit** is not a division of man into soul and spirit along with his body or **flesh**, but a difference of point of view—the one emphasizing man's individual existence, the other his dependence on God. The account in Gn 2^{7} makes this clear. The breath or spirit of God breathed into the dust of the ground makes the living soul. The living soul ceases when 'the dust returns to the earth as it was, and the spirit returns to God who gave it' (Ec 12^{7}). The soul is not, as in Greek philosophy, a separate substance which takes up its abode in the body at birth, and is released from its bondage at death, but is matter animated by God's breath. Hence no pre-existence of the soul is taught (except in Wis 8^{19f}), nor is the future life conceived as that of a disembodied soul. Man is the unity of spirit and matter; hence the hope of immortality involves the belief in the resurrection of the body, even though in St. Paul's statement of the belief the body raised is described as *spiritual* (1 Co 15^{44}). The OT has not, in fact, a term for the body as a whole; the matter to which the spirit gives life is often referred to as 'flesh.' This term may be used for a man as *finite earthly creature* in contrast with God and His Spirit. Man is 'flesh,' or 'soul,' or 'spirit,' according to the aspect of his personality it is desired to emphasize. The varied senses in which these terms are used are discussed in the separate articles upon them; here only their relation to one another is dealt with. These are the three principal psychological terms; but there are a few others which claim mention.

Heart is used for the inner life, the principles, motives, purposes (Gn 6^{5}, Ps 51^{10}, Ezk 36^{26}, Mt 15^{19}, 2 Co 3^{3}), without precise distinction of the intellectual, emotional, or volitional functions; but it can never, as the preceding terms, be used for the whole man. Nevertheless, according to the vivid Hebrew notion of such things,

any organ may become, for the moment, the seat, instrument or symbol of man's energy or personality, whether the underlying idea be called 'diffusion of consciousness' (Robinson) or synecdoche (Johnson). St. Paul, influenced probably by Greek philosophy, uses *nous* for **mind** as man's intellectual activity (Ro 7^{23-25}), and even contrasts it with the ecstatic state (1 Co 14^{14f}), and adopts other terms used in the Greek schools. Another Greek term, *syneidēsis*, rendered '**conscience**,' is used in the NT consistently for what Kant called the practical reason, man's moral consciousness (Ac 23^{1} 24^{16}, Ro 2^{15} 9^{1} 13^{5}, 1 Co $8^{7, 10, 12}$ $10^{25, 27ff}$, 2 Co 1^{12} 4^{2}, 1 Ti $1^{5, 19}$ 3^{9} 4^{2}, 2 Ti 1^{3}, Tit 1^{15}, He $9^{9, 14}$ 10^{22} 13^{18}, 1 P 2^{19} $3^{16, 21}$), and is an instance of the influence of the Stoic ethics on 'the moral vocabulary of the civilized world at the time of the Christian era.' This distinction of the intellectual and the moral functions of personality anticipates some types of modern psychological thinking, and other parallels to scientific psychology could easily be found; but the NT really knows nothing of these subtleties. Its psychology is principally of OT origin, and what is not Hebrew is derived from the popular thought and speech of the Greek world.

A. E. G.—W. C. K.

PTOLEMAIS (Ac 21^{7}).—The same as **Acco** (Jg 1^{31}), now the port *'Akkā*, called in the West, since Crusading times, *Acre* or *St. Jean d'Acre*. The city of early times lay at *Tell el-Fukhkhâr*, E. of the present port; sherds of 2200–900 B.C. are found there. Acco received the name Ptolemais some time in the 3rd cent. B.C., probably in honour of Ptolemy II., but although this name was in common use for many centuries, it reverted to its Semitic name after the decline of Greek influence. Although so very casually mentioned in OT and NT, this place has had as varied and tragic a history as almost any spot in Palestine. On a coast peculiarly unfriendly to the mariner, the Bay of *'Akkā* is one of the few spots where nature has lent its encouragement to the building of a harbour; its importance in history has always been as the port of Galilee and Damascus, of the Hauran and Gilead, while in the days of Western domination the Roman Ptolemais and the Crusading St. Jean d'Acre served as the landing-place of governors, of armies, and of pilgrims. So strong a fortress, guarding so fertile a plain, and a port on the highroad to such rich lands to north, east, and south, could never have been overlooked by hostile armies, and so we find the Egyptian Thothmes III., Seti I., and Rameses II., the Assyrian Sennacherib, Esarhaddon, and Ashurbanipal, and several of the Ptolemies engaged in its conquest or defence. It is much in evidence in the history of the Maccabees—a queen Cleopatra of Egypt holds it for a time, and here some decades later Herod the Great entertains Caesar. During the Jewish revolt it is an important base for the Romans, and both Vespasian and Titus visit it. In later times, such warriors as Baldwin I. and Guy de Lusignan, Richard Coeur de Lion and Saladin, Napoleon I. and Ibrahim Pasha are associated with its history.

In the OT Acco is mentioned only as one of the cities of Asher (Jg 1^{31}), while in Ac 21^{7} Ptolemais occurs as the port where St. Paul landed, 'greeted the brethren and stayed with them for one day,' on his way to the new and powerful rival port, Caesarea which a few decades previously had sprung up to the south.

The modern *'Akkā* (16,000 inhabitants) is a city, much reduced from its former days of greatness, situated on a rocky promontory of land at the N. extremity of the bay to which it gives its name. The sea lies on the W. and S. and somewhat to the E. The ancient harbour lay on the S., and was protected by a mole running E. from the S. extremity, and one running S. from the SE. corner of the city. Ships of moderate dimensions can approach near the city, and the water is fairly deep. The walls, partially Crusading work, which still surround the city, are in the ruined state to which they were reduced in 1840 by the bombardment by the English fleet under Sir Sidney Smith. Extending from Carmel in the S. to the 'Ladder of Tyre' in the N., and eastward to the foothills of Galilee, is the great and well-watered 'Plain of Acre,' a region which, though sandy and sterile close to the sea, is of rich fertility elsewhere and is dotted with ancient tells. The two main streams of this plain are the *Nahr Na'mān* (R. Belus), just S. of *'Akkā*, and the Kishon near Carmel.

Under modern conditions, *Ḥaifā*, with its better anchorage for modern steamships, and its railway to Damascus, has usurped the place of *'Akkā*.

E. W. G. M.—E. G. K.

PTOLEMY V. (Epiphanes).—'Ptolemy' was the dynastic name of the Macedonian kings who ruled over Egypt 305–31 B.C.; during the whole of this period Egypt was an independent country; it was not until the great victory of Augustus at Actium (31 B.C.) that Egypt again lost her independence and became a province, this time under Roman rule. Ptolemy V. reigned 205–182 B.C. He married Cleopatra, the daughter of Antiochus III. the Great; this matrimonial alliance between the Ptolemies and the Seleucids is alluded to in Dn 2^{43}. During his reign Palestine and Coele-Syria were lost to Egypt, and were incorporated into the kingdom of Syria under Antiochus III.; this is probably what is alluded to in Dn 11^{12-16}; see Jos. *Ant.* XII. iii. 3 [131].

W. O. E. O.

PTOLEMY VI. (VII.) (Philometor).—Son of the foregoing, who reigned 182–146 B.C.; in 170 the kingdom was divided between him and his brother Ptolemy VII. (Physcon); peace was made between them by the Romans and they continued as joint kings. In the year 170, while Ptolemy VI. was still sole king, he attempted to reconquer the Syrian provinces which had been lost during his father's reign; the attempt was, however, abortive, and he was defeated by Antiochus IV. It was only through the intervention of the Romans that Antiochus was prevented from following up this victory by further conquests. References to Philometor are to be found in 1 Mac 1^{18} 10^{51ff} 11^{1-18} 15^{16-24}, Dn 11^{25-30}; and see Jos. *Ant.* XIII. iv. 5–9 [103 ff].

W. O. E .O.

PUA, Nu 26^{23} (AV).—See PUAH, **2.**

PUAH.—1. One of the Hebrew midwives, Ex 1^{15}. **2.** Father of Tola, Jg 10^{1}. In 1 Ch 7^{1} he is Tola's brother. He is called **Puvah** in Gn 46^{13} (AV **Phuvah**), Nu 26^{23} (AV **Pua**). The gentilic **Punites** occurs in Nu 26^{23}.

PUBLICAN.—This term is a transliteration of a Latin word (used in the Vulgate) which meant a member of one of the great Roman financial companies, which farmed the taxes of the provinces of the Roman Empire. Under the Republic, the Roman State relieved itself of the trouble and expense of collecting the taxes of the provinces by putting up the taxes of each in a lump to auction. The auctioneer was the *censor*, and the buyer was one of the above companies, composed mainly of members of the equestrian order, who made the best they could out of the bargain. The abuses to which this system gave rise were terrible, especially as the governors could sometimes be bribed to wink at extortion; and in one particular year the provincials of Asia had to pay the taxes three times over. These companies required officials of their own to do the business of collection. The publicans of the Gospels appear to have been agents of the Imperial procurator of Judaea, with similar duties. Under the Empire, the system of tax-farming by *publicani* was abolished and the Emperor had a procurator (q.v.) in each province whose business it was to supervise the collection of revenue. They were also employed in collecting the customs dues on exports. Some Jews found it profitable to serve the Roman State in this way, and became objects of detestation to such of their fellow-countrymen as showed an impotent hatred of the Roman supremacy. The Gospels show clearly that they were coupled habitually with 'sinners,' a word of the deepest contempt.

A. So.—J. C. B.

PUBLIUS (Gr. *Poplios*).—The 'chief man' of Malta, whose father was cured by St. Paul of fever and dysentery

by laying on of hands (Ac 28[7f]). The title *Prōtos* ('first man') at Malta is attested by inscriptions; it occurs also at Pisidian Antioch (Ac 13[50], cf 25[2]).

A. J. M.

PUDENS.—Mentioned in 2 Timothy as sending greetings from Rome to Timothy (2 Ti 4[21]; 'Pudens and Linus and Claudia'). For the suggested relationship of these persons and identification of the first and of the last, see CLAUDIA. Pudens is a common Roman name.

A. J. M.

PUHITES, 1 Ch 2[53] (AV).—See PUTHITES.

PUL.—1. See TIGLATH-PILESER. **2.** In Is 66[19] **Pul** (so AV and RV following MT) is probably a slip for **Put** (q.v.); so RSV.

PULSE.—Hebrew *zērô'îm*, Dn 1[12]; *zēr'ônîm*, v.[16]. AV and RV render 'pulse' (RVm 'herbs') and RSV 'vegetables.' The food may have been garden produce. The English word 'pulse' belongs to leguminous grains specially, but it is doubtful whether the meaning of the Hebrew can be so restricted. In 2 S 17[28] RV 'pulse' is supplied after 'parched,' but 'corn' (AV) or 'grain' (RSV) is better. See also FOOD, **3.**

E. W. G. M.

PUNISHMENTS.—See CRIMES AND PUNISHMENTS, **8–11,** REWARD.

PUNITES.—See PUAH, **2.**

PUNON.—A stopping-place on the wanderings, Nu 33[42f]; it is modern *Kh. Feinân.* See also PINON.

PUR.—See PURIM.

PURAH.—Gideon's servant or armour-bearer, Jg 7[10f] (AV **Phurah**).

PURGE.—To 'purge' in AV is simply to 'cleanse *or* purify,' as Ps 51[7] 'Purge (so also RV, RSV) me with hyssop and I shall be clean'; Mk 7[19] 'purging all meats,' *i.e.* making all food ceremonially clean (cf RV, RSV).

PURIFICATION.—See CLEAN AND UNCLEAN.

PURIM.—1. In the OT.—On the 14th and 15th of the month Adar (March) fell the celebration of the Feast of *Purim* or Lots. This commemorated the deliverance of the Jews from Haman, who in 473 B.C. had plotted their extermination throughout the Persian empire (Est 3[7] 9[15–32]). In 2 Mac 15[36] it is called '**Mordecai's day.**' The observance of this festival was probably not at first universal, but Josephus mentions the annual festival after telling the story of Esther (*Ant.* XI. vi. 13 [295]). At first no special religious services were enjoined to mark it, nor was there any prohibition of labour. It was a time of feasting and joy, of the giving of presents and alms. In later times it was celebrated by a synagogue meeting on the evening of the 13th and the morning of the 14th, when the Book of Esther was read through, special prayers and thanks were offered, and the congregation recited curses on Haman and blessings on Esther and Mordecai. The rest of the feast was given up to good cheer and boisterous enjoyment of an almost Bacchanalian character. In 1 Mac 7[49] and 2 Mac 15[36], as also in Josephus, the 13th of Adar is recorded as a feast-day in commemoration of the defeat of the Syrian general Nicanor in 161 B.C. But later ages observed it as the Fast of Esther (cf Est 9[31] 4[3]), the celebration taking place on the 11th, if the 13th happened to be a Sabbath.

The origin of the Purim feast is a matter of dispute. It is difficult to identify any known Persian word with **pur** (Est 3[7] 9[26]), which gave the festival its name; it may be a word of Akkadian origin. Various theories have been put forward, of which the most noteworthy are: (*a*) that which derives it from a Persian spring festival; (*b*) that which regards it as a transformation of an old Zoroastrian festival of the dead; (*c*) that which traces its origin to a Babylonian New Year's festival.

2. In the NT.—Some have supposed that the nameless feast mentioned in Jn 5[1] was Purim. But this is not convincing, for (*a*) Purim was never one of the great national solemnities which called for attendance at Jerusalem: it was observed locally and not only at the capital; (*b*) Christ would naturally go up for the Passover in the next month. And it is more probable that the Passover is the feast here intended.

A. W. F. B.—L. H. B.

PURITY.—In Israelite thinking, and especially in priestly thinking, persons and things can be arranged as holy or common, pure (clean) or unclean. Things common can be clean or unclean, but nothing unclean can be holy or can approach the holy. Impurity is conveyed like a contagion (and is indeed more contagious than holiness, Hag 2[11ff]) and especially comes from contact with the mysterious sources of life and death—*e.g.* childbirth (Lv 12), sexual and other discharges from the body (Lv 15), dead bodies (Nu 19); also certain animals (Lv 11). After contraction of impurity a period of waiting is normal, and often sacrifices and other rituals of purification are required (*e.g.* Lv 12, cf Jesus' parents in Lk 2[22ff]). Purity is specially important for ritual and sacral occasions, and impure persons are excluded from such; warfare was a sacral occasion in early times (cf 1 S 21[4–5] for early times) and Dt 23[9ff] has laws for the purity of the war-camp. For priests as holy persons constantly in touch with the holy it was specially important to observe rigorous rules of purity (Lv 21[1]–22[16] etc.). Washing was one of the main elements in maintaining purity, and the washing of priests for Temple service, and their donning of new clothes, is prescribed.

In late Judaism we find the Pharisees observing strict purity among lay people, and their ablutions are frequently mentioned in the NT. The interest in purity was also very great in the Qumrân community. Discussion of purity of foods and purification by water is carried on in the *Zadokite Documents*, and the community is spoken of as 'camps' in the fashion of Dt 23. In the *Manual of Discipline* we hear of purification by water frequently; in v. 13 'he shall not enter the water to touch the purity of the holy men'; in vi. 16–7 'he shall not touch the purity of the masters (or, of the many) until he has been examined.' It has quite often been held that this 'purity' is a sacred meal, though this is perhaps being too precise; but various degrees of purity are involved, and are especially important in matters of food.

In the Gospels we find Jesus criticising the Pharisaic interest in purity as external, hypocritical, and based on human tradition rather than Divine law (*e.g.* Mk 7[1–23]). With the beginning of Gentile entry into the Church, the problem of purity created difficulties at first (Ac 10, Gal 2[12]), but only minimal demands were made by the council of Ac 15. The tradition of purity and purification from defilement continued in the Church, however, but is used with a deepened ethical meaning, of an inward cleansing. It applies to the sacrificial purification of Temple and people by Christ, and to baptism, which sprinkles the heart from an evil conscience and washes the body in pure water (He 10[19–22], 1 P 3[21], etc.). We also have renewed images of the Church as a royal priesthood (1 P 2[9]) and as a pure virgin, cleansed by water and word. With this goes purity of heart in the individual Christian, 1 Ti 1[5], etc.

J. Ba.

PURPLE.—See COLOURS, **5.**

PURSE.—See BAG.

PURSLAIN.—See PURSLANE.

PURSLANE.—RSV in Job 6[6] renders '(is there any taste in) the slime of purslane' (cf RVm 'in the juice of purslain'), where AV and RV have 'in the white of an egg.' The meaning of the Hebrew word is uncertain, and while many scholars take the view of RSV, E. Dhorme (Comm. on Job, *ad loc.*) thinks AV and RV more appropriate.

PUT, PHUT.—A people counted amongst the sons of Ham (Gn 10[6], 1 Ch 1[8]), and frequently mentioned in the prophets as an ally of Egypt (Jer 46[9], Ezk 27[10] 30[5] 38[5], Nah 3[9]). It has been suggested that it represents: (1) the people of Punt (rather *Pwēnet* in Egyptian), *i.e.* the African coast of the Red Sea with Somaliland,

etc.; warriors may perhaps have been obtained thence for Egypt; or (2) Libya, whose people were called in Coptic *Phaiat* (certainly not to be identified with Put): Put is rendered by 'Libyans' in the LXX version of Jer 46[9], Ezk 27[10] 30[5] 38[5]; however, the Libyans are mentioned along with Put in Nah 3[9]; or (3) the bow-bearing allies called in Egyptian *pdtyw* (from which Put cannot be derived); or (4) the Carians or other pre-Hellenic peoples of Asia Minor or the Aegean islands, since Put is generally associated with Lud=Lydians (in Nah 3[9] Lubim). F. Ll. G.—**R. J. W.**

PUTEOLI (modern *Pozzuoli*).—In ancient times an important harbour and emporium, especially for Eastern trade, on the W. coast of Italy near Naples. It was founded by Greeks at a very early period. Such cities were specially sought by Jews and other foreigners, and Christians would early be living there, as St. Paul and his party found them on reaching this port at the end of their voyage from the East (Ac 28[13]). A. So.

PUTHITES.—A family of Kiriath-jearim, 1 Ch 2[53] (AV **Puhites**).

PUTIEL.—A father-in-law of Eleazar, Ex 6[25].

PUVAH.—See PUAH, 2.

PYGARG.—The Hebrew *dishôn* is an otherwise unknown word which appears as the name of a clean animal listed amongst the deer (Dt 14[5]); it is variously translated *pygargos* (LXX) or *pygargus* (Vulgate), 'wild goat' (unknown Greek translator), 'aurochs' (Targum), and '**ibex**' (Sa'adya; so RSV). It is perhaps the 'pygarg' (AV, RV), *i.e.* 'white-rumped' or 'white-tailed **antelope**' (*antilope addax*, Tristram), which has long backwards twisting horns (hence called *strepsiceros* by Pliny) and a white tail; it is well-known to the Arabs and approaches the E. and S. frontiers of Palestine. The 'bubale' (*antilope bubalis*, Tristram) or 'wild cow' of the Arabs, which resembles the South African *hartebeest*, is perhaps included under the same name; it roams the Arabian wilderness, certainly has been seen till the last century on the E. borders of Gilead and Moab and has been reported drinking at the head-waters of the streams flowing into the Dead Sea. Whether the Akkadian *didānu, ditānu* 'bison' (?) is the same word is doubtful. G. R. D.

PYRE.—This word is found only in RSV in Is 30[33], where it renders Hebrew *m^{e}dhûrāh*, which means 'a pile of wood.' In Ezk 24[9] RSV renders the same word by 'pile.'

PYRRHUS.—A man of Beroea, father of Sopater, according to the best text (Ac 20[4] RSV). For the unusual insertion of the patronymic, see article SOPATER. A. J. M.

PYTHON.—In Ac 16[16] we read of a young girl at Philippi who had 'a spirit, a Python' (this is the reading of all the best MSS); RSV, 'a spirit of divination.' Pytho was a district close to Delphi; and Python was the serpent at that place slain by Apollo (Strabo ix. 3–12), who therefore was called 'the Pythian.' Hence the priestess at Delphi was called 'the Pythia.' This seems to be the connexion of the name with divination. Plutarch says (*de def. Orac.* ix. 414 E) that ventriloquists in his day (2nd cent. A.D.) were called 'Pythons.' Their powers were considered to be due to spiritual influence, and to include prediction. The girl at Philippi, then, was probably a ventriloquist, who brought her masters gain by soothsaying. She proclaimed aloud for many days that Paul and his companions were slaves of the Most High God; and the Apostle at last drove out the spirit 'in the name of Jesus Christ.' Her masters thereupon, having lost their source of profit, denounced Paul and Silas to the magistrates. See the article in Bauer's *Lexicon*, and Haenchen, *ad loc.* A. J. M.—**F. C. G.**

Q

QERÊ or KERÊ.—See TEXT OF OT, 5.

QESITA.—Given in RSVm in Gn 33[19], Jos 24[32] as the Hebrew word rendered '**piece of money**'; in RSVm in Job 42[11] spelt **Kesitah**, and so in RVm in all three passages. No clue has yet been found to the weight, and therefore the value, of the *kesitah*; but that it was an ingot of precious metal of a recognized value is more probable than the tradition represented by several ancient versions, which render it by '**lamb**' (so AVm at Gn 33[19], Jos 24[32].)

QUAIL.—The Hebrew *s^{e}lāw*, which is composed of a sibilant *s* followed by a liquid *l* and a weak letter, is the 'quail' (*coturnix communis*), which is said to emit a 'very liquid' sound. This bird migrates annually in vast numbers from SE. Europe by way of Sinai to the N. African coastal countries and back again. In the course of their migration the quails reach the wilderness of Sinai, carried with the wind, flying very low and indeed often just skimming the surface of the ground (never towering like the sand-grouse, with which the *s^{e}lāw* has sometimes been wrongly identified) and so exhausted that they can be taken by hand in any number (Nu 11[31–32], where the relevant words must be translated 'they fluttered over the camp . . . all round the camp and about two cubits above the ground'). The birds were brought to the Israelite camp in spring, during their migration northwards, *i.e.* back to Europe, when they followed the coast of the Red Sea until they reached its bifurcation by the Sinaitic peninsula; then, helped by a favouring wind, they crossed the water at its narrowest part, resting near the shore before continuing their journey (Ex 16[13], Ps 105[40]). Thus what was a miracle to the Israelites was in fact exactly in harmony with the quail's migratory habits. The flesh is fatty and considered a delicacy (unlike that of the sand-grouse, which is dry), though apt to disagree if taken in excess, especially if inefficiently preserved. E. W. G. M.—**G. R. D.**

QUARREL.—The original meaning of this English word (from Lat. *querela*) is a 'complaint.' This is its meaning in Col 3[13] AV 'if any man have a quarrel (RV, RSV 'complaint') against any.' Then it came to mean any cause of complaint, or any case that had to be stated or defended, as Mk 6[19] 'Herodias had a quarrel (RSV 'grudge') against him'; so Lv 26[25] (RSV 'vengeance'), 2 K 5[7] (RSV 'quarrel').

QUARRY.—In the story of the slaughter of Eglon by Ehud (Jg 3) we are told (v.[19]) in AV and RV that Ehud turned back from the 'quarries that were by Gilgal,' while after the assassination he 'escaped while they tarried, and passed beyond the quarries' (v.[26]). An alternative translation 'graven images' is given in AVm and RVm, while other versions, *e.g.* LXX and Vulgate, read 'idols.' The Hebrew word *p^{e}sîlîm* is applied to images of gods in wood, stone or metal (Dt 7[5, 25] 12[3], Is 21[9] 30[22], 2 Ch 34[4]). Moore suggests the translation 'sculptured stones (probably rude images).' RSV renders by 'sculptured stones.' Probably they were the stones set up by Joshua to commemorate the crossing of the Jordan (Jos 4).

'Quarry' occurs also in RV and RSV of 1 K 6[7]. The stones used for the Temple building are said to have been prepared 'at the quarry.' AV reads 'before it was

brought thither,' RVm ' when it was brought away.' The translation ' quarry ' is probably correct. RSV has ' quarry ' in Is 51[1] for AV and RV ' hole of the pit,' and uses the verb ' quarry ' in 2 Ch 2[2, 18], Ec 10[9].

QUART.—This measure figures only in RSV in Rev 6[6] (AV, RV ' a measure ') for Greek *choinix*, which renders Hebrew *bath* in Ezk 45[10f.]. See WEIGHTS AND MEASURES.

QUARTUS.—Mentioned as joining in St. Paul's greeting to the Church of Rome (Ro 16[23]).

QUARTERMASTER.—A word found only in RVm and RSV in Jer 51[59] (RV ' chief chamberlain '). The Hebrew is *śar mᵉnûḥāh*, which means ' prince of rest ' or ' of resting place. In 1 Ch 22[11] *'îsh mᵉnûḥāh* is rendered ' man of peace,' and AV renders ' a quiet prince ' in Jer 51[59].

QUATERNION.—A guard of four soldiers (Ac 12[4]), one for each quarter (or ' watch ') of the night. RSV ' squad.'

QUEEN.—The functions of a queen reigning in her own right would be identical with those of a king (q.v.). The queen as the wife of a monarch in Israel held a position of comparatively little importance, whereas that of a dowager queen (' queen-mother ') commanded great influence (cf the cases of Bathsheba, Jezebel, Athaliah).

QUEEN OF HEAVEN (Heb. *mᵉlekheth hash-shāmayim*).—An object of worship to the people of Jerusalem (Jer 7[16–20]) and the Jewish exiles in Egypt (44[15–30]). The Massoretes evidently took the first word as *mᵉle'kheth* (' work,' ' creation ')—supposing that the silent 'aleph (') had been omitted—and considered the expression a synonym for ' Host of Heaven ' (*ṣᵉbhā' hash-shāmayim*, Jer 8[2] 19[13], Zeph 1[5], Dt 4[19] 17[3], etc.). The correct reading is almost certainly *malkath* (' queen ') and is to be understood as referring to the worship of the mother goddess. In Assyrian inscriptions Ishtar is called *Bēlit Shamē* (' lady of heaven ') and *Sharrat Shamē* (' queen of heaven '). In Ugaritic texts the mother goddess is referred to as *rbt aṯrt ym* (' Lady Asherat of the Sea '). The worship of the mother goddess had particular appeal to the women, who had little place in the official worship of Israel. In Jer 44[19] we learn that the cakes made for the queen of heaven were fashioned in her likeness, perhaps in the form of a woman like the clay figurines of earlier times, perhaps in the form of a star (Venus). The worship of the queen of heaven was probably a borrowing from the Assyrians during the reign of Manasseh. Stamped out in connexion with Josiah's reform (2 K 23), it appears to have returned to prominence after his death. The worshippers of the queen of heaven persist in their practice, against the warnings of Jeremiah, because they believe that the fall of Jerusalem has come about as a result of their having ceased to honour the mother goddess (Jer 44[15–19]). In the Jewish-Aramaean community at Elephantine in Upper Egypt, the goddess *Anat-bethel*, also called *Anat-Yaho*, appears as the consort of Yaho (=Yahweh) and is perhaps to be identified with the Queen of Heaven.

W. M. N.—W. J. Ha.

QUICK, QUICKEN.—In AV ' quick ' frequently means ' living,' and ' quicken ' means ' bring to life.' The phrase ' the quick and the dead ' occurs in Ac 10[42] 2 Ti 4[1], 1 P 4[5].

QUICKSANDS.—See SYRTIS.

QUIRINIUS (AV **Cyrenius**).—In Lk 2[1–3] we are first met by a grammatical difficulty. V.[2] may be translated either: ' this was the first enrolment that took place (and it took place) while Quirinius was governing Syria ' (so RSV); or: ' this was the first of two (or more) enrolments that took place while Quirinius was governing Syria.' The first statement is probably true, but it may be that the second is what the author meant, because it is certain that a census took place during the governorship of Syria by Quirinius (A.D. 6–9), when Judaea was incorporated in the province Syria (Jos. *War*, II. viii. 1 [117]; VII. viii. 1 [253]). This latter census was a basis of taxation, and was made according to the Roman method: it thus aroused the rebellion of Judas (Ac 5[37]). The fact that enrolments took place every fourteen years in Egypt has been absolutely proved by the discovery of numerous papyri there, containing returns made by householders to the government. One of the dates thus recovered is A.D. 20. There is also evidence in the ancient historians of enrolments held in certain other provinces. The truth of Luke's statement in 2[2] need not therefore be doubted. The real difficulty lies in the statement that Quirinius was governing Syria at the time the first census of all was made. It is quite certain that he could not have been governing Syria, in the strict sense of the term governing, both at the time of the birth of Christ and in A.D. 6–9. This is contrary to all ancient procedure, and the rules as to such appointments were rigid. Further, we have ancient authority that the governor of Syria from 9–7 B.C. was Sentius Saturninus, and from 6–4 B.C. was Quinctilius Varus. After 4 B.C. we know nothing till the succession of P. Sulpicius Quirinius in A.D. 6, but it is possible that an inscribed stone may yet turn up to enable us to fill the gap. Yet an inscription exists, which all authorities agree refers to P. Sulpicius Quirinius, stating that he governed Syria twice. Theodor Mommsen considered that the most probable period for his earlier governorship was 3–1 B.C., but admitted serious doubts. Sir Wm. Ramsay discussed the whole problem afresh, following out the clues offered by the ancient historians, and adopted as most probable the conclusion that Quirinius was given command of the foreign relations of Syria during the critical period of the war with the Cilician hill tribe the Homonadenses. Roman history provides analogies for such a dual control of a province at a time of crisis. The date at which this position would have been held by Quirinius was about 6 B.C. The Greek word used (*hēgemoneuontos*) is a general term applied to the Emperor, a proconsul, a procurator, etc., and is quite consistent with this view. The mention of Quirinius by Luke is merely intended to give a date. The enrolment itself, as it took place in Herod's kingdom, would be superintended by him at the orders of Augustus, who had suzerainty over the kingdom of Herod, which constituted part of the *Imperium Romanum* in the full sense of the term. The census, however, was not carried out by the Roman method, but by tribes, a method less alien to Jewish feeling than the Roman method by households. Cf also LUKE-ACTS, 9, and CHRONOLOGY OF THE NT.

A. So.—J. C. B.

QUIT.—The adjective ' quit ' (from Lat. *quietus*) means ' free from obligation,' as Ex 21[19] ' Then shall he that smote him be quit.' The verb ' to quit ' (from Lat. *quietare*) is used in AV reflexively—quit oneself, *i.e.* discharge one's obligations, as 1 Co 16[13] ' Quit you like men.' RSV, ' be courageous.'

QUIVER.—See ARMOUR, 1 (*d*).

QUMRAN.—See DEAD SEA SCROLLS.

QUOTATIONS (IN NT).—The NT contains quotations from at least five sources: (1) the OT; (2) non-canonical Jewish writings; (3) non-Jewish sources; (4) letters to which a writer is replying; (5) earlier Christian documents or traditions. Those in class 1, far outnumbering the sum of all the others, are the main concern of this article; see below. The single explicit reference under class 2 is Jd [14] to 1 Enoch 1[9]; otherwise there are some twenty-five more or less probable allusions (see Ryle, article ' Apocrypha ' in Smith's *DB*[2]; Woods, article ' Quotations ' in Hastings' *DB*; index of Charles' *Apocrypha and Pseudepigrapha*). In the absence of any OT source for Mt 5[43b] some propose an influence (perhaps indirect) from the Dead Sea ' Manual of Discipline ' i. 4, 10. Only three definite quotations from pagan literature (class 3) are known: Ac 17[28], 1 Co 15[33], Tit 1[12] (see Nestle's margin *in locc.*). Hellenistic models, but not specific sources, probably lie behind Luke's two prologues, Paul's frequent diatribe-style (cf Bultmann:

Der Stil der paulinischen Predigt und die stoisch-kynische Diatribe), the vice and virtue catalogues in the epistles (cf Dibelius' commentaries in Lietzmann's *Handbuch*) and the household codes in Colossians, Ephesians, and the pastorals (cf Weidinger, *Die Haustafeln*). As to class 4, 1 Corinthians contains quotations from the lost letter of the Corinthians to Paul; 6[12] and 8[1] are the most likely. 2 Co 10[1f, 10] probably contain (ironical) quotations. Matthew and Luke, separately or together, 'quote' (class 5) almost all of Mark; Ephesians seems to quote much of Colossians, as 2 Peter does Jude. Hymnic inlays are alleged or more or less convincingly demonstrated to lie behind 1 Co 13 (Paul quoting himself from a more formal context?), Ph 2, Col 1, Eph 5[14] 1 Ti 3[16], 1 P 3, while the portions of the heavenly liturgy in Revelation are probably adaptations of earthly (Christian) liturgies. At least twice (1 Co 11[23] 15[3]) Paul quotes formed tradition; the Gospels and Acts directly or indirectly do so constantly.

The NT writers bear eloquent witness to the fundamental importance of the OT by the frequency and the way in which they quote it. Swete counted a hundred and sixty passages, with or without formulas of quotation, as directly quoted from the OT. Westcott and Hort reckoned the total number of quotations and allusions to the OT at 1279. Nestle, with some subtractions and additions to their list, exhibits about the same number by his bold-face type. The great majority of these are derived directly from the LXX even in the frequent cases where some liberty is taken in the quoting. Among NT books Hebrews shows the strongest LXX influence and Matthew the least. According to Westcott (Com. p. 479), fifteen quotations in Hebrews agree with both LXX and MT, eight with LXX against MT, three with neither, and three are free renderings. Westcott recognized that 'the writer . . . nowhere shows any immediate knowledge of the Hebrew text.' Matthew at the other extreme certainly shows other knowledge of the OT text than is supplied by the LXX. Not that its author neglects the LXX! Where Mark or Q underlies Matthew, he usually leaves the embedded OT quotations (about fifty-seven in number) in their predominantly LXX-form. Indeed, he alters eighteen of these into even closer conformity with LXX. (The reverse tendency, though less prominent, also occurs [six times]: Mt 4[6] 10[35] 15[4] 21[13] 22[32, 37]; Mark has in these cases altered away from LXX but not uniformly toward the Heb.) Even of the quotations peculiar to Matthew (numbering about forty-three), eleven agree word for word with some LXX MSS cited by Swete. The remaining thirty-two quotations differ from all known Greek versions, nearly always in the direction of closer conformity to MT. The 'author' used either both the LXX and the MT directly or the LXX and a lost Greek translation closer to the MT than the LXX. It is possible that the 'author' was not an individual but a Christian rabbinic school operating with the MT. The quotations in John and Paul are derived in the main from LXX and show surprisingly little clear acquaintance with the MT. (On the singular fact that LXX quotations show a special similarity to the type of LXX text found in Codex A, see Swete, *Introduction to OT in Greek*, p. 395.) Revelation shows constant literary influence from the OT but contains no explicit or argumentative quotation from it.

As to the nature and extent of the influence exerted by the OT in passages which may be called quotations in the broad sense indicated above, there are several distinguishable classes, though it is sometimes difficult to draw the line sharply. We may recognize: (1) *Argumentative quotations.* The OT passage is quoted, with recognition of its source, and with intention to employ the fact or teaching or prophecy for an argumentative purpose. Passages so quoted may be: (*a*) historical statements which are supposed to contain in themselves an enunciation of a principle or precept, or to involve a prediction, or to tend to prove a general rule of some kind: cf Mk 2[25f], Mt 2[18], Jn 19[24], Mt 15[7–9], He 7[1–10]; (*b*) predictions; cf *e.g.* Ac 2[17ff]; (*c*) imperative precepts, quoted to enforce a teaching; Mk 12[29ff], 1 Co 9[9]; or (*d*) affirmations interpreted as involving a general principle of Divine action or a general characteristic of human nature; Mk 12[26], Mt 9[13], Lk 4[11], Ac 7[48f], Ro 3[4, 10–13], Ja 1[10f], 1 P 1[24f]. (2) *Quotations made the basis of comment.* In this case the language of the OT is not cited as supporting the statement of the speaker or writer, but is itself made the basis of exposition or comment, sometimes with disapproval of its teaching or of the teaching commonly based on it; Mt 5[21, 27, 31] etc., Ro 4[9f], Ac 8[32]. (3) *Quotations of comparison or of transferred application.* The OT language is employed, with recognition of it as coming from the OT and with the intention of connecting the OT event or teaching with the NT matter, but for purposes of comparison rather than argument. The language itself may refer directly and solely to the OT event, being introduced for the sake of comparing with this event some NT fact (simile); or the OT language may be applied directly to a NT fact, yet so as to imply comparison or likeness of the two events (metaphor); Mt 12[40f], Lk 11[29f], Ac 28[26f], Mt 21[42f], 1 Co 10[7f]. Closely allied to these, yet perhaps properly belonging to the class of argumentative quotations, are cases of quotation accompanied by allegorical interpretation: cf *e.g.* Gal 4[21–31]. (4) *Literary influence.* In the cases which fall under this head the language is employed because of its familiarity and its applicability to the matter in hand, but without intention of affirming any other connexion than this between the OT thought and the NT fact or teaching. The writer may be conscious of this influence of the OT language or not, and the interpreter often cannot determine with certainty which is the case; Mt 5[5] 10[35], Gal 6[16], Eph 1[20], Rev 5[1] 7[1] 9[14] 14[8] 21[11].

As to their method of interpretation and their attitude toward the OT, there is wide difference among the speakers and writers in the NT. Within the Synoptic Gospels there is a distinct difference, which must rest upon reliable tradition, between the method of OT interpretation which they almost uniformly ascribe to Jesus and the method which they themselves employ. Jesus is represented as quoting the OT almost exclusively for its ethical and religious teaching (exceptions: Mk 12[35–37] ||, Mt 12[40] ||), rather than for any predictive element in it, and interprets what he quotes with insight and sobriety. The author of Matthew, however, quotes the OT mainly for specific predictions which he (or the tradition behind him) conceives it to contain, and allows his interpretation to be controlled by the proposition which he wishes to sustain rather than by the actual sense of the original—much as in the *pesher*-comments of the Habakkuk Commentary among the Dead Sea Scrolls. The one quotation not within the words of Jesus but common to all three Synoptics has the same general character (Mk 1[3] ||). In general the other writers of the NT stand in this respect somewhere between these two methods, showing less sobriety and discernment toward the OT than the Synoptics ascribe to Jesus, yet often showing more than Matthew commonly does.

E. de W. B.—K. G.

R

RAAMA.—See RAAMAH.

RAAMAH.—Son of Cush and father of Sheba and Dedan, Gn 10^{7}; called **Raama** in 1 Ch 1^{9} (AV **Raamah**). In Ezk 27^{22} Raamah is associated with Sheba as trading with Tyre. The locality of this Arabian tribe is not yet ascertained. Opinion is divided between the *Regma* of Ptolemy, on the W. of the Persian Gulf, and the *Rammanitae* of Strabo in S. Arabia, NW. of Ḥadramaut (see HAZARMAVETH) and E. of the ancient Sheba. The latter is the more probable identification. J. F. McC.

RAAMIAH.—One of the twelve chiefs who returned with Zerubbabel, Neh 7; called **Reelaiah** in Ezr 2^{2}, and **Resaiah** in 1 Es 5^{8} (AV **Reesaias**, RV **Resaias**).

RAAMSES, RAMESES.—One of the store-cities built by the Israelites in Egypt, and the starting-point of the Exodus (Ex 1^{11} 12^{37}, Nu $33^{3, 5}$). The site is not quite certain, but it was probably the city called in Egyptian, *Pi-Raʿmesse*, 'House of Ramesses,' the Delta capital of Ramesses II. and his successors. In Gn 47^{11} Joseph, by Pharaoh's command, gives to Jacob's family 'a possession in the land of Egypt, in the best of the land, in the land of Rameses.' It thus lay in the Land of Goshen (q.v.), and is probably to be identified either with *Qanṭir*, or more probably Tanis. See Sir A. H. Gardiner, *Ancient Egyptian Onomastica* (1947), II. 171*–175*, 278*–279*. F. Ll. G.—R. J. W.

RABBAH.—The capital city of the Ammonites (q.v.), and the name of a town in Judah.

1. The name is derived from the Semitic word meaning 'great.' In Hebrew it appears as 'Rabbah' (Jos 13^{25}) but more frequently as 'Rabbah (AV, **Rabbath**, Dt 3^{11}, Ezk 21^{20}) of the Ammonites' (2 S 16^{26}, Jer 49^{2} etc.), *i.e.* the chief city or capital of the Ammonites. Rabbah was situated on the upper sources of the River Jabbok on the site of the modern *ʿAmmân*, a name which preserves the ancient name of the country of Ammon. The city was located about 25 miles E. of the River Jordan and on the main caravan route which extended from Damascus to Medeba, Dibon, Kir and other cities to the S. The Ammonite city was situated on the hill-top to the N. of the river now called *Wâdī ʿAmmân*. From its position it commanded a wide view in all directions, but especially extensive to the NW. Rabbah is mentioned in Dt 3^{11} as the place where Og's 'bedstead' might still be seen. This is thought by some to be a reference to a large dolmen still visible not far from *ʿAmmân*. In Jos 13^{25} Rabbah is mentioned in defining the boundaries of the tribe of Gad. The chief event connected with Rabbah which the OT relates is its siege by Joab, in connexion with which Uriah the Hittite, by the express direction of King David, lost his life (see 2 S 11^{1} $12^{26, 27, 29}$, 1 Ch 20^{1}). The city was at this time confined apparently to the hill mentioned above; since the sides of the hill are precipitous, the task of capturing it was difficult, and the siege was stubborn and prolonged. These conditions gave Joab his opportunity to carry out David's perfidious order (2 S 11^{14ff}).

From 2 S 12^{26-29} it appears that the city consisted of two parts, one of which was called the 'royal city' (v.26) or the 'city of waters' (v.27). This Joab captured, after which David came and captured Rabbah itself. What relation this 'royal city' bore to Rabbah proper, it is difficult now to conjecture. On the supposition that the Hebrew of vv.26–27 is in error and that Joab captured only one district of the city which was 'the city of waters,' it has been proposed that David's general, like Antiochus III., and Herod in later centuries, captured the covered passage by which the people went to a cistern for water, or the fort which defended it, and so compelled a surrender to David. A large cistern was discovered by Conder (see *Survey of Eastern Palestine*, pp. 34 ff). Then David's accomplishment was that of conquering the citadel or 'royal city.' It is equally possible that the Hebrew of vv.26–27 is correct and that Joab captured two districts, one of which was the 'royal city' or the citadel, and the other the 'city of waters,' *i.e.* the region adjacent to the river, leaving the slopes of the hills and the rest of the valley to be captured by David. The conquest of the upper and lower sections of a city recalls Abimelech's victory at Shechem (Jg $9^{45, 49}$), although in this case it was the Tower or citadel which was the last to be taken, a situation which can be explained by a difference in terrain at Shechem and Rabbah.

The Israelites did not occupy Rabbah, but left it in the possession of the Ammonite king, who became David's vassal. When David later fled to Mahanaim, E. of the Jordan, because of Absalom's rebellion, the Ammonite king was residing in Rabbah (2 S 17^{27}).

Later the Ammonites regained full possession of their city, and in the time of Amos (*c* 750 B.C.), judgment was pronounced upon the city because of the transgressions of the Ammonites (Am 1^{13-14}). Although the dates of the prophecies of Jeremiah and Ezekiel against the Ammonites and Rabbah are uncertain, it has been proposed that they refer to Nebuchadnezzar's punishment of the city for a rebellion by the Ammonites. Whether or not this monarch besieged and captured Rabbah we do not know, but it is possible; only cities situated like Tyre, which was partly surrounded by water, could withstand the might of that monarch.

For a time the city (one of the Decapolis group) bore the name *Philadelphia*, given to it by Ptolemy Philadelphus 285–247 B.C.), but finally it received its modern name, *ʿAmmân*. The Greek name is still preserved in the name of the modern Hotel Philadelphia located in the city near the impressive remains of a Roman theatre. Although no large-scale excavations have been conducted in the city, many tombs and the remains of numerous buildings have been uncovered in the course of the erection of many modern buildings. These ruins, some of which were uncovered during the construction of the modern Museum on the Citadel, opened in 1951, are evidence of occupation since early OT times. After existing for centuries as a small caravan town, *ʿAmmân*, following World War I, became the capital of Transjordan. At the partition of Palestine in 1948, the city became the capital of the Hashemite Kingdom of the Jordan which included territory W. of the Jordan River. From this region came an increased population, and new financial resources which resulted in the rapid transformation of *ʿAmmân* into a thriving metropolis joined by paved highways and an airline with the other cities of the Near East. The *Ḥaj* railway, completed from Damascus as far as Maʿân in the direction of Mecca, passes near ʿAmmân, which has a station on the line.

2. Rabbah, a city in Judah, named in Jos 15^{60} with Kiriath-jearim (q.v.), was apparently in the same region near Jerusalem, and important enough to have dependent villages. It has been suggested that the city corresponds to the Rabbah of Egyptian historical texts and the Rubutu of the Tell el-Amarna tablets; the exact location is unknown. G. A. B.—W. L. R.

RABBATH.—See RABBAH.

RABBI.—The transliteration of a Hebrew word meaning 'my master.' This term of respectful address with which the learned were greeted came to be used as

a title, the pronominal suffix 'I' losing its significance. As a title it was not known before the 1st cent. (A.D.), and was first applied as a token of ordination to the disciples of Hillel and Shammai, attesting their fitness to participate in the Sanhedrin, which had come under Pharisaic control (thus eliminating the *'Ammê Hā-'āreṣ*). The rabbi held no office in the synagogue and received neither stipend nor perquisite. His presence was required in the local courts and especially in the Sanhedrin as an expert in the law. In the conduct of the synagogue he enjoyed no special prerogatives beyond those accruing to him by virtue of his knowledge and character.

The head of the Sanhedrin or *Nasi*, 'Prince,' was distinguished by the title *Rabban* (an Aramaic form of *Rab* with suffix in the first person plural), corresponding to *Patriarch*. Gamaliel the Elder was the first bearer of this title. Judah Hanasi was called simply *Rabbi* and *Rabbenu*, 'our master.' The term was applied affectionately to Moses ('Mosheh Rabbenu,' in *Sifre Dt* 305; cf Assumption of Moses).

The Gospels use the term as an honorary designation of Jesus. He is so addressed by His disciples (Mt 26$^{25, 49}$; Mk 9$^{5, 25}$ 11^{21} 14^{45}, Jn 1$^{38, 49}$ 4^{31} 9^{2} 11^{8}) and by others (Jn 3^{2} 6^{25}). **Rabboni** in Jn 20^{16} and Mk 10^{51} is a Palestinian Aramaic form of the word. Jn 3^{26} applies the title also to John the Baptist. Mt 23$^{8-10}$ limits the use of the title to Jesus, as the 'one teacher,' but his disciples were 'not to be called rabbi.' Inasmuch as the title did not exist in the time of Jesus, its use in the Gospels may be anachronistic (so H. Graetz, *Geschichte*, IV, 431), and probably represents a later addition to the evangelic tradition. S. S. C.

RABBITH.—A town of Issachar, Jos 19^{20}; perhaps we should read **Daberath** (q.v.).

RABBONI.—See RABBI.

RAB-MAG.—The title of Nergal-sharezer (q.v.), a Babylonian official present at the taking of Jerusalem, Jer 39$^{3, 13}$. For various conjectures as to the origin of the title, see Hastings' *DB*, *s.v.* The view that it means 'chief magus' is unlikely, and it is more probable that it was a military official title. It occurs in an Aramaic-Greek bilingual text as the equivalent of *stratēgos*, 'general.'

RAB-SARIS.—1. The title of an Assyrian official who was sent by Sennacherib to Hezekiah to demand the surrender of Jerusalem, 2 K 18^{17}. **2.** The title borne by two Babylonian officials, one of whom is recorded to have been present at the capture of Jerusalem by Nebuchadnezzar, while the other is mentioned among the officials who ordered the release of Jeremiah after the capture of the city, Jer 39$^{3, 13}$. *Rab-sārîs* is the transcription, both in Hebrew and Aramaic, of the Assyrian and Babylonian title *rabû* (or *rubû*)-*sha-rēshu*, borne by a high court-official, who may perhaps have been the 'chief eunuch,' though this office cannot be determined with absolute certainty. L. W. K.

RAB-SHAKEH.—The title of an Assyrian officer, who with the **Tartan** (q.v.) and the **Rab-saris** (q.v.) was sent by Sennacherib to Hezekiah to demand the surrender of Jerusalem, 2 K 18 f, Is 36 f. The word is the Hebrew transcription of the Assyrian *rab-shaḳû*—a title borne by a military officer of high rank, subordinate to the Tartan. L. W. K.

RACA, which occurs only in Mt 5^{22} (AV, RV), is a word of uncertain origin and meaning. The MSS vary in spelling between *racha* and *raka*. Should the former be the correct form, the word would seem to occur in a Zenon papyrus from Egypt dated 257 B.C. where it is used in much the same sense as in the Gospel. Thus both *racha*, a shortened form of *rachistēs* 'empty braggart,' and the following *mōre* 'thou fool,' would be Greek words used colloquially as abusive epithets. If, however, *raka* is the correct form, it is most simply explained as a Galilean Aramaic word cognate with the Jewish *rēqā* used as a term of contempt for empty-headed, frivolous people of uncertain morals. In this case the following *mōre* would probably be another local Aramaic word of abuse. In either case it is apparent that both words meant something much worse that our 'empty-headed braggart' and 'fool' suggest. Thus Jesus is saying that those who use to their brothers such foul words of abuse are in danger not only of punishment by the authorities in this world, but of more serious punishment in the world to come. Chrysostom, Augustine, and Jerome all had information that *Raca* was a word of abuse in the colloquial Levantine speech, though by their times it may, as in Edessene Syriac, have come into the language from the NT. A. J.

RACAL in 1 S 30^{29} (AV **Rachal**) is probably a mistake for 'Carmel' (**1**).

RACE.—See GAMES.

RACES.—In Gn 10 we have a list of the names of mankind known to the writer, divided into the descendants of the three sons of Noah. Complex, and in some cases still unresolved, problems arise in classifying the races mentioned in the Bible, and while race and language do not necessarily belong together, we are often mainly guided by language in our classification. The following classification shows the groupings of the main races of the Bible:

I. ARYANS.—**1. Greeks. 2. Javan** (Ionian Greeks). **3. Hittites. 4. Philistines. 5. Persians. 6. Medes** (Madai). **7. Parthians. 8. Romans.**

II. HAMITES.—**1. Egyptians. 2. Cushites** (Nubians, Ethiopians). **3. Libyans** (Put).

III. SEMITES.—A. **North Semites:** (*a*) *Eastern Branch*—**1. Babylonians. 2. Assyrians. 3. Amorites.** (*b*) *Western branch.*—**1. Ugaritians. 2. Phoenicians. 3. Israelites. 4. Ammonites. 5. Moabites. 6. Edomites. 7. Jebusites. 8. Aramaeans.** B. **South Semites:** (*a*) *Northern branch.*—**1. Amalekites. 2. Ishmaelites. 3. Midianites.** (*b*) *Southern branch.*—**Sabaeans** (Sheba).

IV. RACES WHICH DO NOT FIT INTO THESE GROUPS.—**1. Cimmerians** (Gomer). **2. Elamites. 3. Hurrians** (Horites). G. A. B.—H. H. R.

RACHAL, 1 S 20^{39} (AV).—See RACAL.

RACHEL.—Gn 29$^{6, 10}$ *et al.* The younger daughter of Laban, and Jacob's second wife, mother of Joseph and Benjamin. She died on the way back from Paddan-aram at Ephrath and was buried there. Her grave is mentioned as a landmark in 1 S 10^{2}. There are two divergent traditions in the OT with regard to the site of the grave. (*a*) According to Gn 35^{16}, 1 S 10^{2}, and Jer 31^{15}, Ephrath lay on the N. border of Benjamin, about 10 miles N. of Jerusalem. (*b*) According to later Christian tradition, resting on the gloss in Gn 35^{19}, it was a mile N. of Bethlehem. The gloss rests on a confusion between Ephrath, and the clan-name Ephratah, which is always connected with Bethlehem. The former is undoubtedly the true site. The name in Hebrew means 'ewe,' and like the name Caleb ('dog'), has been used to support the now rejected view that totemism formed an element in the early religion of the Hebrews. The early history of the Rachel tribes is obscure. The group was probably first known as 'the house of Joseph,' then, in the process of settlement, Ephraim, Manasseh (Machir), and Benjamin, filled the gap in central Palestine left by the dispersal and disappearance of Reuben, Simeon, and Levi; then, with the rise to power of Judah, Benjamin was absorbed into Judah, and Ephraim confronted Judah as a successful rival for the hegemony of Palestine. See also RAMAH, **3.** S. H. He.

RADDAI.—The fifth son of Jesse, 1 Ch 2^{14}.

RAFTS.—See SHIPS AND BOATS.

RAGAE.—See RAGES.

RAGAU.—1. Jth 1$^{5, 15}$ (AV, RV); see RAGES. **2.** Lk 3^{35} (AV); see REU.

RAGES.—*Ragā* in the Old Persian inscriptions. The modern *Rei*, 6 miles SE. of Teheran, one of the seats of the ancient Iranian civilization, but now a mass of fallen walls and stupendous ruins covered with mounds

of *débris*. Its position near the Caspian Gates gave it great strategic importance. It was the capital of Media before Ecbatana, and has the distinction of having been the home of the mother of Zoroaster. Alexander visited it in his pursuit of Darius III. Seleucus I. rebuilt it and called it Europos. It is mentioned in the Apocrypha. In Tobit (1^{14} 4$^{1, 20}$ 5^{5} 6^{12} 9^{2}) it was visited by the angel Raphael, and there he recovered for Tobias the deposit of silver which his father had placed there. In Judith (1$^{5, 15}$) it is said that in **Ragae** (AV, RV **Ragau**)—evidently the same place—Nebuchadnezzar slew in battle 'Arphaxad' prince of the Medes. In To 6^{9} read *Ecbatana* for *Rages* (so RSV). The Parthians called it Arsacia and made it the residence of their kings in the spring. Under the Sassanians it was the seat of a Christian bishop. It was destroyed by an earthquake in A.D. 863, but again played a rôle in the 15th century.

J. F. McC.—E. G. K.

RAGUEL.—1. See REUEL, **2.** **2.** The father of Sarah, the wife of Tobias (To 3$^{7, 17}$ 14^{12}).

RAHAB.—1. The story of this woman, called a harlot, of Jericho is given in Jos 2. The two spies sent out by Joshua to view the land of Canaan come first to the house of Rahab, in Jericho. The king hears of it, and bids Rahab bring them forth; but she asserts that they have left her house, and that she does not know where they have gone; she had, however, previously hidden them among stalks of flax upon the roof. After their pursuers have left, Rahab comes to them, professes her belief in Yahweh, and adjures them to spare her and her kinsfolk when the attack on Jericho is made; this they promise shall be done; and after arranging that a scarlet thread is to be hung from her window, in order to denote which house is to be spared when the sack of the city took place, the two spies escape from her house by a rope. The promise is duly kept, and Joshua spares her when the city is burned (6$^{22-25}$). The whole story has a clear aetiological atmosphere. In Mt 1^{5} Rahab is mentioned in the genealogy of our Lord.

2. The term Rahab (Heb. *Rahabh*, to be distinguished from Rahab considered above, which is *Rāḥābh* in Heb.) is used for a mythological monster, the **Dragon**, and applied also to Egypt. In most passages where the term Rahab occurs, there is an allusion to the myth of Creation, the battle with the Dragon of Chaos, Leviathan, or Rahab. In the Biblical literature, this myth has been transferred to Yahweh, and the purpose is to affirm that the God who has performed such a wonder will strengthen and help His people in their distress, cf Ps 74$^{12-14}$ 87^{4} 89^{10}, Job 9^{13} 26^{12}. The myth was also historicized and used metaphorically to describe Yahweh's great victories in history, especially over Pharaoh's army at the time of the Exodus. Hence the term Rahab is applied to Egypt; cf Is 30^{7} 51^{9}. Then it was developed in an eschatological way to describe God's victories over his enemies in the great Day to come, cf Is 27^{1}, and in the NT, Rev 21^{1}.

W. O. E. O.—E. R. R.

RAHAM.—A descendant of Caleb, 1 Ch 2^{44}.

RAHEL, Jer 31^{15} (AV) = **Rachel** (q.v.).

RAIMENT.—See DRESS.

RAIN.—The Palestine year is divided into two parts—the rainy and the dry. Of these the dry summer is the more regular, and lasts from May 15 to September 15. At either end is a six-week transitional period, marked by the *sirocco*, and possibly a light shower. A heavy storm of rain during October, which would permit early planting, or in early April, when it helps to swell the grain, is particularly valuable. Hence the importance in the Bible of the **former** and **latter rains** (Dt 11^{14}, Jer 5^{24}, Hos 6^{3}, Jl 2^{23}). The true rainy season usually lasts from early November to the end of March, and in a very good year rain falls regularly about once a week. In other years it is more intermittent, and may be interrupted for as long as a month or more. If this happens when the grain is still young the result may be disastrous. Equally bad is a late start to the season, which in Jerusalem may be delayed until Christmas, and E. of the Jordan until mid-January. The first rainfall, upon which the beginning of ploughing is absolutely dependent, is often in the form of thunderstorms and sometimes very limited in area. One village may have rain, and another, 5 miles away, have none (Am 4$^{7-8}$).

Rainfall decreases from north to south, and also from west to east, that is with increasing distance from the sea, though this may be modified by the presence of higher land. The lee slopes of hills are usually in a marked rain-shadow. This is very clearly seen in the Rift Valley (Tiberias 16 inches, Beisan 12, Jericho 4, Dead Sea 2). The rainfall of the Coast Plain and the Western Plateau does not differ greatly in amount (Haifa and Jerusalem both have 24 inches), but that of the Coast Plain is usually less variable, and the rainy season starts earlier. On the Eastern Plateau the season usually starts late, though the plateau edge may have surprisingly heavy rain (*Es-Salṭ* 31 inches), but this dies away rapidly to the east (*'Ammân* 13 inches, and *Zerqā*, 10 miles away, only 5 inches). The total rainfall in most parts of Palestine is very variable from year to year, and unfortunately this is especially true of the marginal areas between the Desert and the Sown.

A. D. B.

RAINBOW.—This word never occurs in OT; even where it is obviously implied (Gn 9$^{13, 16}$, Ezk 1^{28}), EV translate Hebrew *ḳesheth* literally with '**bow**' (cf LXX *toxon*). In NT it renders *iris* (Rev 4^{3} 10^{1}). The latter passages clearly presuppose the former, combining the rainbow as a symbol of (divine) glory and splendour (Ezk 1^{28}, cf Sir 43^{11} 50^{7}) with its use as a symbol of merciful forbearance (Gn 9^{13}), a promise of the old dispensation now realized and assured in the new, in Christ and His gospel. There is no trace here of the personified *Iris*, messenger of the gods in Greek mythology.

In the sequel (Gn 9$^{8-17}$) to the story of the universal flood the bow of Yahweh is set in the clouds as a proof to the people and a reminder to Yahweh that no deluge shall again destroy the earth. The writer seems to have used an ancient nature myth which explained the rainbow as God hanging up his 'rain-bow,' and made it a token of the Noachic covenant, as was circumcision of the Abrahamic (Gn 17^{10}). No parallel to this symbolic interpretation of the rainbow has yet been discovered in ancient Near Eastern literature, but the bow is of course a common weapon of the warrior gods (*e.g.* Marduk, in the Bab. Creation Epic IV. 35); and in the Ugaritic literature the breaking of Aqhat's bow seems to be followed by a drought (*Aqhat* I. i. 1 ff). Ps 7^{12} 21^{12} mention Yahweh's war bow; Ps 77^{18}, Hab 3$^{9, 11}$, Zec 9^{14} show that his arrows were the lightning; Job 38^{25}, Ps 135^{7} attribute rain to the effect of lightning ('puncturing' the rain-clouds). These passages together may help to elucidate both the point of the rainbow as a 'sign' in Gn 9, and the 9th cent. picture of an Assyrian god (Ashur?) drawing a bow at heavy rainclouds (see *ANEP*, fig. 536). The Noachic covenant, with the rainbow as the sign of God's magnanimity towards mankind as a whole, seems to be overshadowed in Biblical theology by the Abrahamic covenant with the Hebrew race, and the Mosaic one with the Twelve Tribes; but in popular religion it may have played a larger rôle owing to the phenomenological character of its sign, which has assured the rainbow of attention in the mythologies of most races (see *e.g.* J. Skinner, *Genesis* [I.C.C.], p. 173).

C. W. E.—D. R. Ap-T.

RAISINS.—Hebrew *ṣimmûḳîm* (from root meaning 'to dry up'), 1 S 25^{18} 30^{12}, 2 S 16^{1}, 1 Ch 12^{40}; Hebrew *'ᵃshîshāh*, 2 S 6^{19}, 1 Ch 16^{3}, Ca 2^{5}, Is 16^{7}, Hos 3^{1} (RV and RSV; AV '**flagon**' [q.v.] in all cases, save Is 16^{7}, where it has 'foundations'); Hebrew *'ᵃnābhîm yᵉbhēshîm*, Nu 6^{3}, literally 'dried grapes' (so EV). Raisins are now, as of old, prepared in great quantities in the Holy Land; the bunches are dipped in a strong solution of potash before being dried. *Es-Salṭ*, across the Jordan, has long been famous for its stoneless raisins.

E. W. G. M.

RAKEM.—See REKEM, **3.**

RAKKATH.—A 'fortified city' of Naphtali, Jos 19[35]; possibly modern, *Tell Eqlāṭîyeh.*

RAKKON.—A town of Dan, Jos 19[46]; possibly modern, *Tell er-Reqqeit.*

RAM.—**1.** An ancestor of David, Ru 4[19], 1 Ch 2[9f], and so of Jesus, Mt 1[3f] (RV, RSV; AV **Aram**); in Lk 3[33] he is called **Arni** (RV, RSV; AV **Aram**). In 1 Ch 2[9] he is called the *brother* of Jerahmeel, but in vv.[25, 27] his *son.* **2.** The family to which Elihu belonged, Job 32[2]. Some have thought *Ram* is a contraction of **Aram.**

RAM.—See SHEEP, and (for battering-ram) FORTIFICATION AND SIEGECRAFT.

RAMAH.—The name of several places in Palestine, so called from their 'loftiness,' that being the radical meaning of the word. These are as follows:

1. A city of Naphtali (Jos 19[36]) not otherwise known, perhaps *er-Râmeh*, Acco and Damascus, WSW. of *Ṣafed.* **2.** A city of Asher (Jos 19[29]) not elsewhere mentioned, and identified not improbably with *er-Râmiah*, near Tyre. **3.** A city of Benjamin (Jos 18[25]) between which and Bethel was the palm of Deborah (Jg 4[5]); one of the alternatives which the Levite of Bethlehem had to choose for a lodging on his fatal journey (Jg 19[13]); yielded with Geba 621 men to the post-exilic census of Ezra (Ezr 2[26], 1 Es 5[20] [AV **Cirama**, RV **Kirama**]); re-settled by Benjamites (Neh 11[33]). Its place is indicated between Geba and Gibeah in Isaiah's picture of the Assyrian advance (10[29]). A tradition placed here the site of **Rachel's tomb**; this explains the allusions in 1 S 10[2], Jer 31[15] (quoted in Mt 2[18]). Here Jeremiah was loosed from his chains (40[1]). The name, and not improbably the site, of this place is preserved by a little village on a hillside N. of Jerusalem known as *er-Râm*, which answers the geographical requirements of these incidents. Near it are some remarkable ancient monuments, known locally as 'The Graves of the Children of Israel,' which possibly are the 'tomb of Rachel' of the ancient tradition. This town was probably the home of Shimei, the **Ramathite**, David's vine-dresser (1 Ch 27[27]). **4.** A place in the district called **Ramathaim-zophim** (1 S 1[1]), a (corrupt) name probably = 'the two heights of the Zuphites.' The latter ethnic can hardly be dissociated from the name of the great high place of **Mizpah** (*Nebi Samwîl*). Its chief distinction is its connexion with Samuel. It was in 'the hill country of Ephraim,' but might have been over the S. border of the tribe. Here Elkanah lived, and here was the headquarters of Samuel throughout his life (1 S 1[19] 2[11] 7[17] 8[4] 15[34] 16[13] 19[18-23] 20[1] 25[1] 28[3]). This is probably the Ramah fortified by Baasha against the Judahite kingdom (1 K 15[17], 2 Ch 16[1]), rather than the Benjamite Ramah: the latter being actually within Judahite territory would not have been accessible to him. This Ramah appears also in 1 Mac 11[34] as **Ramathaim.** It is perhaps modern, *Rentîs.* **5.** By the name *Ramah* allusion is made to **Ramoth-gilead** (q.v.) in 2 K 8[29] and the parallel passage 2 Ch 22[6]. **6. Ramath-lehi**, the scene of Samson's victory over the Philistines with the jawbone (Jg 15[17]) is unknown. See LEHI. Ramath here is probably a common noun, and we ought to render it 'the height of Lehi.' **7. Ramath-mizpeh** (Jos 13[26]). See MIZPAH, **1, 4.** **8. Ramah** (AV **Ramath**) **of the Negeb** (AV, RV **of the South**), Jos 19[8]. A town in the tribe of Judah, given to Simeon, to which David sent the spoil of Ziklag, 1 S 30[27] (**Ramoth**). It is quite unknown. R. A. S. M.

RAMAH OF THE NEGEB.—See RAMAH, **8.**

RAMAH OF THE SOUTH, Jos 19[8] (RV).—See RAMAH, **8.**

RAMATH OF THE SOUTH, Jos 19[8] (AV).—See RAMAH, **8.**

RAMATHAIM, RAMATHAIM - ZOPHIM. — See RAMAH, **4.**

RAMATHITE.—See RAMAH, **3.**

RAMATH-LEHI.—See RAMAH, **6.**

RAMATH-MIZPEH.—See MIZPAH, **4.**

RAMESES.—See RAAMSES.

RAMIAH.—One of the sons of Parosh who had married a foreign wife, Ezr 10[25], 1 Es 9[26] (AV, RV **Hiermas**).

RAMOTH.—**1.** A Gershonite Levitical city in Issachar, 1 Ch 6[73], apparently = **Remeth** of Jos 19[21] and **Jarmuth** of Jos 21[29] (see JARMUTH, **2**). **2.** For **Ramoth of the Negeb,** 1 S 30[27], see RAMAH, **8.** **3.** For **Ramoth in Gilead,** Dt 4[43] etc., see RAMOTH-GILEAD. **4.** Ezr 10[29] (AV); see JEREMOTH, **8.**

RAMOTH-GILEAD, or **'Ramoth in Gilead,'** was the centre of one of Solomon's administrative districts which extended N. of the Yarmuk (1 K 4[13]), and was one of the cities of refuge (Dt 4[43], Jos 20[8]) assigned to the Merarite Levites of Gad (Jos 21[38], 1 Ch 6[80]). It was a key fortress in the wars between Israel and Aram, and Ahab was killed there (1 K 22[3-24], 2 Ch 18). There Jehu was anointed (2 K 8[28] 9[1-14], 2 Ch 22[5]). The *Onomasticon* sites it near the Jabbok 15 miles W. of Philadelphia (*'Ammân*), visualizing either *Es-Salṭ* or *Khirbet Jil'âd.* The narrative of the Aramaean wars, however, and the fiscal list of Solomon indicate a site further N. The dominating site of *Ḥuṣn 'Ajlûn* is suggested by Albright and Dalman, and the period of occupation of this site as ascertained by Glueck certainly indicates the feasibility of this suggestion. An alternative suggestion is *Er-Remtheh* (Aramatha of Jos. *Ant.* VIII. xv. 3 [398]; IX. vi. 1 [105]), but the open situation of this place hardly suggests the obviously commanding situation of Ramoth-Gilead in the wars between Israel and Aram.

RAMOTH OF THE SOUTH, 1 S 30[27] (RV).—See RAMAH, **8.**

RAMOTH, SOUTH, 1 S 30[27] (AV).—See RAMAH, **8.**

RAMPART.—See BULWARK, CITADEL.

RANGES in AV of 2 K 11[8, 15], 2 Ch 23[14] = 'ranks' (RV, RSV).

RANSOM.—See REDEEMER, REDEMPTION.

RAPE.—See CRIMES AND PUNISHMENTS, **3.**

RAPHA.—**1.** A Benjamite, 1 Ch 8[2]. **2.** 1 Ch 8[37] (AV); see REPHAIAH, **4.**

RAPHAEL ('God has healed').—Does not appear in the Bible except for Tobit in the Apocrypha. (In 1 Ch 26[7] EV have the form Rephael as a personal name.) He is a prominent figure in Enoch as well as in the post-biblical literature. In To 3[17] he is sent to *heal* Tobit, by restoring his sight; to give Sarah, daughter of his kinsman Raguel, to his son Tobias for wife; and to prevent the demon Asmodaeus from adding him to the seven husbands he has already killed. In 5[4ff] he appears as 'brother **Azarias**' to accompany Tobias on his journey to Media. Tobit despatches them with the parting 'May [God's] angel go with you' (v.[16], cf v.[21]), and they start with their dog (a favourite subject with the great painters). In 6[3ff] he directs Tobias to take the heart, liver, and gall of a fish, manages the marriage, binds the demon, fetches money from Rages, and heals Tobit. 12[12-20] gives his description of himself, a passage which probably became the groundwork of later speculations. (1) He is one of the seven 'angels of the presence' (Lk 1[19], Rev 8[2] [14?], 1 Enoch 90). So in Enoch 20[3] he is one of the 'watchers,' the 'angel of the spirits of men.' The conception is usually traced to Persian influence; cf the seven 'princes of light' of Zoroastrianism. (2) He is an intermediary, bringing the memorial of prayers before God (Rev 8[3]). The doctrine of the Divine aloofness made it hard to conceive that man could have direct access to the ear of God, any more than a subject could enter into the presence of an Oriental monarch, or that He could interfere directly in the petty affairs of men. See ANGELS. (3) He is also a guardian angel, being present at Tobit's good deeds, and the companion of Tobias. The long-maintained disguise is a unique feature; the 'eating and drinking' is explained as an illusion (12[19]). (4) He is true to his name, 'the healer'; cf 1 Enoch 10[7], where he is ordered

to bind Azazel (so 54), and *heal* the earth which the angels have defiled; and 40[5], where he is 'set over the diseases and wounds of the children of men.' (5) In 1 Enoch 22 he is a guide in Sheol; in 32, in Paradise.

C. W. E.—C. C. Ro.

RAPHAH.—See REPHAIAH, 4, REPHAIM.

RAPHAIM.—An ancestor of Judith (Jth 8[1]).

RAPHON.—A city of Bashan (1 Mac 5[37]), the *Raphana* of Pliny (*HN*, v. 16); possibly *er-Râfeh*, 33 miles E. of the Lake of Galilee.

RAPHU.—The father of the Benjamite spy, Nu 13[9].

RAS SHAMRA TABLETS.—The excavation of *Râs Shamra*, ancient Ugarit, which was occupied from the Neolithic Age (before *c* 3500 B.C.) to the end of the Bronze Age (*c* 1200 B.C.), certainly inaugurated a new epoch in OT research. This nexus of trade routes near the North Syrian coast about 12 miles N. of *Latakia* abounded in texts in several scripts, including Egyptian hieroglyphic inscriptions, business documents and political and legal texts in Akkadian syllabic cuneiform, alphabetic texts in the language of the non-Semitic Hurrians (possibly Biblical Horites) of the Anatolian foothills, Sumerian-Akkadian and Sumerian-Akkadian-Hurrian vocabularies, and texts in the linear Cypriot script, and also Hittite elements even in Semitic texts. More directly relevant to the OT are a large number of official documents from the palace archives and myths and sagas in alphabetic cuneiform from the Late Bronze Age stratum (*c* 1400 B.C.) of the library of the temple of Baal. The former are vital for the study of Canaanite society and institutions; the latter, of epic style and often of epic proportions, comprise a substantial torso of the literature of Canaan on the eve of the Hebrew settlement.

The administrative and legal documents indicate that the subjects were listed for military service or for provision of arms, and that taxes were levied in silver, produce, or labour, recalling Solomon's levies in Israel (1 K 5[13ff] 9[15ff] 11[25]). A fact that further suggests Solomon's administration (1 K 4[7–19]) is that, though there are traces of a social order based on families, the population was organized by districts, guilds, and classes, the chief class being the *mariannu*, known already from contemporary Egyptian records as equestrian feudatories, who specialized in chariot warfare. The conception of a professional military class owing their status and property solely to the king was adopted by Israel in the early monarchy (1 S 14[52] 18[13] 22[7]).

The themes of the myths are:

1. Baal's triumph over Chaos.
2. Baal's struggle with Death.
3. The Birth of Dawn and Evening (star).
4. The Marriage of Nikal (moon-goddess).

Three fragmentary texts describe how Order in Nature is menaced by the insolence of 'Prince Sea, yea Judge River,' against whom the 'divine assembly' is apparently impotent. Baal, however, undertakes to engage the unruly waters, and eventually prevails, and so gains 'his eternal kingship.' This is obviously the local variant of the myth of the conflict of Cosmos and Chaos, best known in the Babylonian New Year myth *enuma elish*, the leading motifs of which it exhibits. The theme and the imagery recur in the OT in passages in the Prophets relating to God's kingship and judgment, and in the 'Enthronement' Psalms, notably Ps 93. In the Râs Shamra texts, however, there is no extension, as in the OT, of the Reign of God into the field of history or the moral order. The various indications of the association of such passages in the OT with the autumnal new year suggest a similar association of the Canaanite myth, though of this there is no conclusive proof.

The rest of the Baal-mythology reflects the tension between fertility and sterility in the Canaanite peasant's year. The chief themes are the death of **Baal**, the vengeance of his sister **Anath**, his resurrection, the building of his 'house,' his final victory over death. Baal here is the vegetation-god, the local variation of Mesopotamian Tammuz, Egyptian Osiris, and the Greek Dionysus, and there are certain features in the myth which suggests its relation to seasonal rituals. Anath's mourning for the dead Baal suggests the weeping for Tammuz by the women of Jerusalem, presumably in the sixth month (Ezk 8[14]); her vengeance on Death, cutting him with a sickle, winnowing him, parching him with fire, grinding him, etc., obviously suggests the Hebrew rite of the first sheaf (Lv 2[14]); the building of the 'house' of Baal in the season of heavy rains suggests an analogy with the dedication of Solomon's Temple in the seventh month, *Ethanim*, the 'Regular Rains' (1 K 8[2]). This was also the season of the Feast of Tabernacles, and the 'house' of Baal may well be the prototype of the booths, or bivouacs, which the Hebrews seem to have taken over from the Canaanites. Though we do not doubt that these myths were related to rites of imitative magic, which they were designed to make doubly effective, they have undergone a long process of elaboration and have an intrinsic literary value.

The sagas or legends concern two ancient kings **Keret** and **Dan'el**, and they also have a direct bearing on OT study. Both kings are without prospect of heir, and both probably and certainly Dan'el, go into ritual incubation (cf Solomon at Gibeon, 1 K 3[5]), and in dreams receive assurance of issue. In the case of Dan'el the son is described with relation to his social and religious duties—an invaluable passage for the study of Canaanite society—and Keret is given instructions and assurance in his task of finding a new wife—again an important text for sociological study. The Keret text continues in mutilated form, describing domestic history. The text, on three tablets, is but the torso of a much fuller text, and its undoubted value is to be realized by detailed study. The Dan'el text suffered also, but the story is much more intelligible. Dan'el's son **Aqhat** receives a bow from the divine craftsman, which, intended for gods, not men, incites the desire of the goddess Anath, who uses her allurements to procure it. Aqhat repulses her with scorn, and is in consequence struck down. Blood violently shed and uncovered by the earth occasions sterility (cf Gn 4[11–12], Nu 35[33]), so, to maintain congruity with this disaster, Dan'el puts a ban upon the winter and later summer rain-clouds, the summer dew, and the subterranean water (cf David's curse on the mountains of Gilboa, 2 S 1[21]). We note the close association of the primitive king with the fertility of nature, of which we find indications also in the Keret text. Dan'el then performs rites designed to transmit fertility through the season of drought and dearth to a new phase of fertility, when he anticipates his son Aqhat performing the rite of the ingathering, an instance of dramatic irony. Subsequently Dan'el learns that the slain man is his own son. He recovers his remains, and mourns and buries him. The coincidence of Aqhat's death with harvest is noteworthy, and it is suggested that in Aqhat we have the personification of the genius of the corn, which was symbolically killed to make the new crop available for public use; cf the death and dismemberment of Death in the Baal-myth. Thus the Dan'el text, in spite of its human protagonists, was probably a composite work, where an originally historical theme had already passed into a myth, incorporating a variety of seasonal themes.

The study of these texts in detail in the original reveals many more points of contact with the OT, the language of which they largely employ. Their value for the study of the OT is manifold. They document very fully the Canaanite fertility-cult, by which the Hebrews were influenced and against the grosser aspects of which their leaders reacted. The legends directly document the institution of kingship. These texts and the many anthropomorphisms in the myths give insight into social practices and values in the Canaanite environment of Israel, and the administrative and legal texts from the palace give a clue to the structure of society. The

language and imagery of the texts enhances the appreciation of many nuances in the OT, notably in Prophets, Psalms, and the Book of Job, and indicates the extent to which the Hebrews knew and used the mythology of Canaan. The Râs Shamra texts are of great value for textual criticism of the OT. Many a word in the OT, suspect and rejected as a *hapax legomenon*, has been found in several contexts in the Râs Shamra texts, the rather rigid parallelism fixing the meaning of the word beyond all doubt, so that the Massoretic Text is often supported. The Canaanite prototype of certain passages in the OT, however, occasionally suggests emendation. Such cases are notably fewer than those where the standard Hebrew text is corroborated. J. Gr.

RASSES, Jth 2[23] (AV, RV).—See RASSIS.

RASSIS.—A people subdued by Holofernes, Jth 2[23] (AV, RV Rasses).

RATHUMUS, 1 Es 2[16] (AV, RV).—See REHUM, **2.**

RAVEN.—The Hebrew *ʿôrēbh* and the Greek *korax* seem to be names based on the cry of the bird which they represent, *i.e.* the 'cruck-cruck' or 'pruck-pruck' or 'whurk-whurk' attributed to the raven. The *ʿôrēbh* designates *omne corvinum genus* (Jerome) including crow, raven, and rook. It is black (Ca 5[11]) and haunts ravines (1 K 17[4, 6]), and it or its young plucks out the eyes of its victim (Pr 30[17]), a habit to which Aristophanes (*Birds* 582, *Acharnians* 92) refers. Both crow and raven are black, both commonly build their nests on rocks or cliffs overhanging wadis, both attack and kill sickly beasts as large as lambs, while the Mediterranean hooded crow begins the destruction of its victim by picking out eyes and tongue while it is still alive. Both feed on carrion and refuse, which explains why they are counted unclean (Lv 11[15], Dt 14[14]). The raven also haunts the wilderness (Is 34[11]), and its habit of storing food in hiding places for future consumption perhaps lies behind the story of those that fed Elijah by the brook Cherith (1 K 17[4-6]). Why the raven, as also the dove, is connected with the Flood is not clear; but that 'it went to and fro until the waters were dried up from the earth' (Gn 8[7]) may be based on some recollection of scavenger birds searching for carrion left by the receding waters of a flood. In Job 38[41] (where the young ravens are said to croak for lack of food), Ps 147[9], Lk 12[24] God is said to feed the raven. G. R. D.

RAVEN, RAVIN.—The verb 'to raven,' *i.e.* prey upon, and the substantive 'raven' or 'ravin,' *i.e.* prey, both occur in AV. We find also the adjective 'ravening' (Ps 22[13], Mt 7[15]) as well as the form 'ravenous' (Is 35[9] 46[11], Ezk 39[4]). 'Ravening' is used as a substantive in Lk 11[39], 'Your inward part is full of ravening and wickedness' (RV 'extortion'). RSV retains 'ravening' in Ps 22[13] and introduces it at Jer 2[30] (AV, RV 'destroying'), but has 'ravenous' in Mt 7[15].

RAZIS.—The hero of a narrative in 2 Mac 14[37-46].

RAZOR.—A razor for removing the hair (q.v.) of the head or beard is referred to in Nu 6[5] 8[7], Jg 13[5] 16[17], 1 S 1[11], Is 7[20], Ezk 5[1], especially in connexion with the Nazirite (q.v.). In Ps 52[2] it is used as a simile for the tongue.

REAIA, 1 Ch 5[5] (AV).—See REAIAH, **2.**

REAIAH.—1. A Calebite family, 1 Ch 4[2]; called **Haroeh** (q.v.) in 2[52]. **2.** A Reubenite family, 1 Ch 5[5] (AV **Reaia**). **3.** A Nethinim family name, Ezr 2[47], Neh 7[50], 1 Es 5[31] (AV **Airus**, RV **Jairus**).

REAPING.—See AGRICULTURE, **3.**

REBA.—One of the five kinglets of Midian slain by Moses, Nu 31[8], Jos 13[21].

REBECCA.—Form of the name Rebekah (q.v.), found in Ro 9[10].

REBEKAH.—The wife of Isaac (Gn 24), daughter of Bethuel the son of Nahor (Gn 24[15]), Abraham's brother. There is a divergence in the sources about the original home of Rebekah. According to the Yahwist's narrative in Gn 24, Eliezer, Abraham's steward, whom he sends to find a wife for Isaac, finds Rebekah and her family living in Haran, in Aram-naharaim (*i.e.* Mesopotamia); but in Gn 29[1] Jacob finds Laban and Rebekah's father Bethuel living in 'the land of the children of the east.' Now, in OT usage, this expression always denotes the inhabitants of the NW. part of the Arabian desert, and in the genealogical list in Gn 22[20-24] the names of Nahor's children are place-names or tribal names belonging either to the Syro-Arabian desert, or to the settled regions in North Syria. Hence, behind the beautiful story of the finding of Rebekah, and the story of Jacob's adventures in his search for a wife, there lies the historical fact that an important part of what was to become the people of Israel consisted of Aramaean stock which had originally lived both in NW. Mesopotamia and in North Syria.

The only feature of the Isaac saga which concerns Rebekah is the account of how Isaac went down to Gerar and Rebekah was taken into Abimelech's house, which is clearly a duplicate version of the story of Abraham in Gerar and Sarah's being taken by Abimelech (Gn 20[1-18]). The rest of the Rebekah story forms part of the Jacob-Esau cycle of sagas. She plays a part in two of the episodes in this cycle. Before the birth of Esau and Jacob she goes to 'enquire' (*bḳsh*) of Yahweh, which, under the conditions of that time, means that she sought an oracular response from the Canaanite shrine at Hebron. She receives a poetic oracle which reflects the traditional enmity between Edom and Israel, and the fact that Edom (Esau) was a nation before the birth of national consciousness in Israel (cf Gn 36[31]). In the other episode Rebekah secures the fulfilment of the oracle by a stratagem, making Jacob impersonate Esau and so deceiving Isaac into giving Jacob the blessing of the firstborn. No account is given of Rebekah's death, but in Gn 49[31] Jacob tells Joseph that Isaac and Rebekah were buried in the cave of Machpelah. S. H. He.

RECAH.—An unknown place name, 1 Ch 4[12] (AV **Rechah**).

RECEIPT OF CUSTOM.—See TAX OFFICE.

RECHAB, RECHABITES.—1. Jehonadab, the son of Rechab, appears in 2 K 10[15-28] as a fervent supporter of Jehu's attack on the house of Ahab and his endeavour to root out the idolatrous worship which that dynasty had allowed. That his influence was a matter of some importance is clear from the prominent place which the new ruler gave him (2 K 10[16, 23]). The principles which actuated him are to be gathered from Jer 35, according to which Jehonadab's descendants refused to drink wine because he had told them to abstain from it, build no houses, sow no seed, plant no vineyard, but live in tents all their lives. He evidently held that civilization and settled life inevitably led to apostasy from Yahweh, the ancestral Deity of his tribe. And the peril was a very real one because of the inveterate popular belief that the local *baals* were the dispensers of all blessings pertaining to field and vineyard (Hos 2[5, 10-12]). Hence it seemed to more than one of the prophets that the early, simple period of the nation's life, before it became immersed in the Canaanite civilization, was preferable to all later developments. Again, the self-restraint of the Rechabites reminds us of the Nazirite vow (see NAZIRITE). But the latter did not include so many taboos. It permitted the cultivation of land and the building of houses. It was also not binding on an entire clan. A genuine tradition is probably embodied in the Chronicler's statement (1 Ch 2[55]) that the clan of the Rechabites was connected with the **Kenites.** Subsequently to Jeremiah we do not find more than two Biblical allusions to the Rechabites, and one of these is doubtful. Neh 3[14] reports that Malchijah, the son of Rechab, the ruler of part of Beth-haccherem, assisted in refortifying Jerusalem. But if he was a Rechabite by descent, he must have abandoned the principles of the clan. The men whom Jeremiah approached were but temporary sojourners, driven into the city through dread of the invader. This Malchijah was doubly a townsman, living in a country town and interested in the metropolis.

The title of Ps 71 in the LXX is: 'Belonging to David. Of the sons of Jehonadab and of the earliest captives,' as though the exiles and the Rechabites agreed in appropriating this poem of sorrow and hope. Finally, it may be noted that later Rabbis found the fulfilment of Jer 35[19] in those marriages of Rechabite maidens into priestly families from which later priests sprang. Hegesippus relates that one of the Rechabite priests interceded in vain for the life of James the Just (Eusebius, *HE* ii. 23).

2. Rechab and his brother Baanah, two guerilla captains, treacherously murdered Ishbosheth, their king, and met with the due reward of their deed at David's hands (2 S 4). J. T.—**T. J. M.**

RECHAH, 1 Ch 4[12] (AV).—See RECAH.

RECOMPENSE.—See REWARD.

RECONCILIATION.—The word 'reconciliation,' with its cognates, is a Pauline one, and is not found in the NT outside St. Paul. The chief passages in which it and related terms are employed are Ro 5[10, 11] (RV), 2 Co 5[18–20], Eph 2[16], Col 1[20–21]. In He 2[17], where the AV has 'to make reconciliation for the sins of the people,' the RSV reads, more correctly, 'to make expiation.' OT usage, where the word occasionally translated 'reconcile' (Lv 6[30] etc.) is again more correctly rendered in RSV 'make atonement,' throws little light on the NT term. The *effect* of expiation is to remove the variance between God and man, and so bring about 'reconciliation.' The means by which this result is accomplished in the NT is the reconciling death of Christ (Col 1[20–22]). On the special questions involved, see ATONEMENT, EXPIATION, and REDEMPTION.

Perhaps better than any other, this term brings out in vivid form St. Paul's conception of the gospel. As proclaimed to men, the gospel is a message of 'reconciliation' (2 Co 5[18–20]). It is a misunderstanding of the Apostle's meaning in such passages to suppose that the need of reconciliation is on man's side only, and not also on God's. Man, indeed, does need to be reconciled to God, from whom he is naturally alienated in his mind in evil works (Col 1[21]). 'The mind of the flesh is enmity against God' (Ro 8[7]), and this enmity of the carnal heart needs to be overcome. On this side, the 'ministry of reconciliation' is a beseeching of men to be reconciled to God (2 Co 5[20]). But the very ground on which this appeal is based is that 'God was in Christ reconciling the world to himself, not counting their trespasses against them' (v.[19]). It is an essential part of the Apostle's teaching that sinners are the objects of a Divine judicial wrath (Ro 1[18]). They lie under a condemnation that needs to be removed (3[19ff]). They are described as 'enemies' in two passages (5[10] 11[28]) where the word is plainly to be taken in the passive sense of *objects* of wrath (cf, in Ro 11[28], the contrast with 'beloved'). It is this barrier to God's reconciliation with men that, in the Apostle's doctrine, Christ removes by his expiatory death (Ro 3[25], Col 1[20]). The ground on which men are called to be reconciled to God is: 'Him who knew no sin he made to be sin on our behalf; that we might become the righteousness of God in him' (2 Co 5[21] RV). Believers 'receive' a reconciliation already made (Ro 5[11] RSV). The gospel reconciliation, in other words, has a twofold aspect—a Godward and a manward; and peace is made by the removal of the variance on both sides. See articles above referred to. J. O.—**A. R.**

RECORDER.—See ASAPH, **1**, and KING, **2** (7).

RED.—See COLOURS, **3**.

RED HEIFER.—The ashes of a 'red heifer'—more correctly a red *cow*—added to 'running water,' formed the most powerful means known to the Hebrews of removing the defilement produced by contact with a dead body. The method of preparing the ashes and the regulations for the application of the 'water of impurity' (see below) are the subject of a special section of the Priests' Code (Nu 19). It will be advisable to summarize the contents of the chapter, in the first place, and thereafter to inquire into the significance of the rite in the light of recent anthropological research.

1. The chapter above cited consists of two parts; the first part, vv.[1–13], gives instructions for the preparation of the ashes, and (vv.[11–13]) for the removal by their means of the defilement contracted by actual contact with the dead body. The second part, vv.[14–22], is an expansion of vv.[12f], extending the application of 'the water of impurity' to uncleanness arising from a variety of sources connected with death.

The animal whose ashes acquired this special virtue had to be of the female sex, of a red, or rather reddish-brown, colour, physically without blemish, and one that had never borne the yoke. The duty of superintending the burning, which took place 'without the camp,' was entrusted to a deputy of the high priest. The actual burning, however, was carried through by a lay assistant, which fact, taken along with the detail (v.[5]) that every particle of the animal, *including the blood*, was burned, shows that we have not to do here with a ritual sacrifice, as might be inferred from the EV of v.[9]. The word there rendered 'sin-offering' properly denotes in this connexion (cf 8[7]) 'a purification for sin' (*Oxf. Heb. Lex.* 310[a]; cf SACRIFICE, **14**). The priest's share in the ceremony was confined to the sprinkling of some of the blood 'toward the front of the tent of meeting' (v.[4] RV and RSV), in token of the dedication of the animal to Y", and to the casting into the burning mass of a piece of cedar wood and a bunch of hyssop bound with a piece of scarlet cloth (such, at least, is the regulation of the Mishnah treatise dealing with this subject).

A third person—the priest and his assistant having themselves become 'unclean' through contact with these sacred things (see below)—now gathered the ashes and laid them up 'without the camp in a clean place,' to be used as occasion required. The special name given to the mixture of 'running water' (v.[17], literally 'living water,' *i.e.* water from a spring, not a cistern) and the ashes is properly 'water of impurity' v.[9, 13, 20f]—so RVm; ASV and RSV 'water for impurity'; AV and RV **water of separation**), *i.e.* water for the removal of impurity or uncleanness. This powerful cathartic was applied to the person or thing to be cleansed, either by being thrown over them (see Gray, *Com.* on v.[13]), or by being sprinkled with a sprinkler of hyssop (v.[18]). This was done on the third and seventh days, after which the defiled person washed his person and garments, and was then restored to the privileges of the cult and the community. The only other reference to 'the water of impurity' is in the late passage, Nu 31[23].

2. The clue to the significance of the rite above described is found in the primitive conception of uncleanness, as this has been disclosed by modern anthropological research (see CLEAN AND UNCLEAN). In all primitive societies a dead body in particular is regarded as not only unclean in itself, but as capable of infecting with uncleanness all who come in contact with it or are even in proximity to it. The Semites shared these ideas with primitive communities in every part of the world. Hence, although the literary formulation of the rite of the Red Heifer in Nu 19 may be late, the ideas and practices thereof are certainly older than the Hebrews themselves.

While the central idea of the rite—the efficacy of ashes as a cathartic, due probably to their connexion with fire (cf Nu 31[23], and Farnell, *The Evolution of Religion*, 101 n.)—has its parallels elsewhere, the original significance of several of the details is still very obscure. This applies, for example, to the red colour of the cow, and to the addition to her ashes of the 'cedar wood and hyssop and scarlet' (for various suggestions see, in addition to Gray, *op. cit.*, Hastings' *DB* iv, 208 ff; Bewer in *JBL* xxiv (1905) 42 ff, who suggests that the cow may have been originally a sacrifice to the dead).

The value of the chapter for the student of Hebrew ritual lies in the illustration it affords of the primitive conceptions of uncleanness, especially of the uncleanness of the dead, and of the 'contagiousness of holiness,'

the nature of which has been so clearly expounded by Robertson Smith (see *RS*[2] 446 ff 'Holiness, Uncleanness, and Taboo'). The ashes of the red heifer and the water of impurity here appear, in virtue of their intense 'holiness,' as 'a conducting vehicle of a dangerous spiritual electricity' (Farnell, *op. cit.* 95), and have the same power as the dead body of rendering unclean all who come in contact with them (see vv.[7f, 21f] and CLEAN AND UNCLEAN).

There are no inventions in ritual, it has been said, only survivals, and in the rite under review we have one of the most interesting of these survivals. The remarks made in a previous article (ATONEMENT [DAY OF]) are equally applicable to the present case. As reinterpreted by the compilers of the Priests' Code, the rite conveys, in striking symbolism, the eternal truth that purity and holiness are the essential characteristics of the people of God. A. R. S. K.

RED SEA.—The body of water, over 1200 miles in length, which divides Africa from Arabia, and whose two northern projections or arms, the Gulf of Suez and the Gulf of 'Aqaba, embrace the Sinai Peninsula. Its width varies from about 250 miles in the S. half to 130 miles at the N. where it divides. The mean depth of the Red Sea is about 1600 feet, varying from the shallow depth of the Gulf of Suez to a maximum of 7200 feet in the main basin. This is formed structurally by a system of rift valleys, the best known of which represents the Gulf of 'Aqaba in the great depression extending from the Lebanon mountains, through the Jordan Valley, the Dead Sea, the Wâdī 'Arabah, and into Africa.

The origin of the Hebrew name, *Yam Sûph*, 'sea of reeds' (Ex 10[19] 15[4] etc.) which is usually rendered in English as 'Red Sea' is uncertain. Some scholars have thought that *Yam Sûph* was originally a designation of the region of lakes where reeds thrive at the N. of the Gulf of Suez, through which the Hebrews passed in their flight from Egypt (*see* Wright and Filson, *The Westminister Historical Atlas to the Bible* [1956] pp. 38 f). On this supposition, the designation later came to be applied to the present Gulf of 'Aqaba (Nu 21[4]), and possibly also to the entire body of water now known as the Red Sea, stretching from the *Râs Muḥammad* southward to the straits, and perhaps even to the Persian Gulf (Ex 23[31]). *Yam Sûph* was translated into Greek by *erythra thalassa*, literally Red Sea (LXX, Ex 15[4, 22]; Herodotus, Josephus, He 11[29]; Lat. *Rubrum*). No satisfactory explanation of the term 'red' (*erythra*) has been found. Two proposals have been made: (1) the name came from the red or copper-skinned people such as the Edomites and others who lived near the Red Sea; (2) it was descriptive of the reddish colour of the corals and weathered limestone along its shores and may have suggested to early voyagers the name Red Sea.

The Gulf of Suez, or some part or ancient projection of it at the N. figures in the accounts of the Exodus which refer to *Yam Sûph*. It was formerly thought that the Gulf extended further N. in Moses' time, but with the discovery of an Egyptian settlement on the shore of the Sinai Peninsula near *Abū Zeneimeh*, and the excavation of Ezion-geber (q.v.), modern *Tell el-Kheleifeh*, near modern 'Aqaba, near the shore of the Gulf of 'Aqaba, it became certain that the water level has not receded appreciably in the last 3000 years. However, since the construction of the Suez Canal, one lake in the region has disappeared, and it is possible that the *Yam Sûph* crossed by the Israelites was a lake near the present Lake Menzaleh. In such a case, the 'exodus' would not involve the present Red Sea except as the stations on the early part of the journey to Mount Sinai may have been located near its shore (see EXODUS, SINAI).

The Gulf of 'Aqaba, about 100 miles in length and about 15 miles in width, must have been known to the Hebrews both before and after the conquest of Canaan. According to Nu 33[35-36], Dt 2[8] the Hebrews under the leadership of Moses encamped at Ezion-geber which, with Elath, was located near the northern shore of the Gulf of 'Aqaba. The former has been excavated by the American Schools of Oriental Research (see Nelson Glueck, *The Other Side of the Jordan* [1940], pp. 89–113) and proved to be not only an important seaport, but also a thriving copper-smelting centre in the time of Solomon. The latter operated a fleet of ships at Ezion-geber (1 K 9[26]) with the help of Phoenician seamen, and it is thought that his navy may have made it possible for him to carry on commercial relations with India. Jehoshaphat attempted to revive this use of the Red Sea, but the ships were wrecked at Ezion-geber (1 K 22[48]), doubtless by the periodic violent winds which blow down the Arabah from the N. creating insufferable sand-storms in the vicinity of the ancient Hebrew seaport.

Later references to the Red Sea, without designating any specific region of it, make mention of it in connexion with a denunciation of Edom (Jer 49[21], literally 'Reed Sea'), and in recalling the marvellous deliverance at the time of the Exodus (Neh 9[9], Ps 106[7, 9, 22] 136[13, 15], Ac 7[36], He 11[29]). H. L. W.—W. L. R.

REDEEMER, REDEMPTION. — 'Redemption' means deliverance, properly by payment of a *price* or *ransom*. In the OT, besides the passages in the Law where it is used in the strict sense, it is often used of deliverance simply, either of Israel or of the individual. Occasionally it is stated or implied to be deliverance from *sins* (Ps 130[8], Is 44[22]; but it may be deliverance from the consequences of sins that is meant); elsewhere it is from physical calamity, including captivity, sickness, and death. The typical OT redemption was the exodus from Egypt, when the Lord redeemed Israel 'to be his people' (1 Ch 17[21]). The fact of redemption is stressed, rather than the price. Deutero-Isaiah, proclaiming a similar deliverance from Babylon, states (Is 45[13]) that Cyrus will receive no recompense; elsewhere (43[3-4]) he states that other nations are given in exchange.

Two words, with their derivatives, are used in the OT to express the idea. The one, *gā'al* (from which *gō'ēl*, 'redeemer'), is used technically of redemption of an inheritance, of tithes, and of brethren from slavery; in a wider sense it is a favourite term in the later Psalms and Deutero-Isaiah. The other, *pādhāh*, is used technically of redeeming the first-born of men or beasts by sacrifice, or of compounding for certain offences by a payment in money; in the more general sense it is frequent in Deuteronomy and the earlier Psalms. The *gō'ēl* is the kinsman who has the right to redeem; the term is used also for the 'avenger' of blood (Nu 35[12], etc.); elsewhere (Job 19[25], Ps 19[14], etc. and especially Deutero-Isaiah) it denotes Yahweh as the vindicator, deliverer, and avenger of His people (cf Is 41[14] 43[14]). The LXX properly renders these verbs by *lutroomai* (from *lutron*, 'ransom'), but sometimes is content to use general words meaning 'deliver,' without any hint of ransom or payment; the most common of these is *ruomai* ('rescue') used *e.g.* for 'the Redeemer' (*gō'ēl*) in Deutero-Isaiah.

Two further points must be noticed before the NT teaching can be fully understood. First, Judaism in the time of Christ had a strong hope of God's intervention to deliver His people not only from Gentile oppressors, but from Satan's bondage; this hope was general among the Jews, and is characteristic of apocalyptic (see PSEUDEPIGRAPHA). Neither the Jews nor Jesus' disciples made a clear distinction between the political and the religious aspects of the Messianic hope, and this uncertainty is reflected in the use of the word 'redemption.' (Cf Lk 1[68-75] and also 24[21], read in the light of Ac 1[6]). Secondly, slavery was widespread in the ancient world, and the longing for freedom familiar. The word for 'ransom' (*lutron*, usually in the plural) was used in this connexion, particularly in the so-called 'sacral manumission,' whereby it was arranged that the slave should be purchased by some temple, regarded as the property of the god, and thus set free from human owners. St. Paul's word for 'redemption' (*apolutrōsis*) is used in an inscription at Cos to denote such a manumission.

Christ plainly teaches that by His work the power of Satan was broken, and the day of release was dawning (cf Lk 4^{18} 10^{18} 11^{17-20} 13^{16}). His salvation is no longer political, but wholly religious. He connects it with His coming and person and in certain well-known passages with His death (Jn 3^{14-16} 6^{51-56}, Mt 26^{26-28} ||, etc.); in one of these (Mt 20^{28} || Mk 10^{45}) He states that He came 'to give his life as a ransom (*lutron*) for many.' These words seem to echo Is 53^{11-12}, and the word 'many' denotes the whole body of those who benefit by His work; it should not be pressed either to give, or to exclude, the meaning 'all' (in 1 Ti 2^{6} the phrase is echoed in the words 'as a ransom, *antilutron*, for all').

In the apostolic teaching, besides the derivatives of *lutron, agorazō* ('buy,' 'purchase') is used, and these words are commonly rendered 'redeem,' 'redemption,' in the EV. But to be understood they must be seen in the light of what has been said above about God's deliverance and the prevalence of bondage and must be set alongside other words that render the general ideas of God's deliverance (*e.g.* 'deliver,' 'set free,' 'loose,' 'escape') and God's 'purchase' of His people.

1. The NT writers constantly stress the bondage from which deliverance is needed, and the release now made possible. Through Christ deliverance is given 'from the present evil age' (Gal 1^{4}), 'from the dominion of darkness' (Col 1^{13}), from the hopeless impotence and slavery to the passions which was men's lot under the law (Ro 7^{6} 8^{2}, Gal 4^{5}), and from the bondage to the devil which results from the fear of death (He 2^{14-15}). Ultimately death itself will be destroyed (1 Co 15^{26}), and the created world set free from its bondage to decay (Ro 8^{23}).

The Hellenistic world saw the material as inherently evil, and looked for deliverance from the finite. The NT, while agreeing that decay and transitoriness are a consequence and sign of evil and at times all but reflecting the Hellenistic outlook (*e.g.* 2 P 1^{4} 2^{20}), nevertheless sees *sin*, not finitude, as the ultimate evil. The word 'redemption' is explicitly connected with the forgiveness of past sins (Col 1^{14} Eph 1^{7}, He 9^{15}; cf also Ro 3^{21-26}) and the break with the old sinful life and all iniquity (1 P 1^{18}, Tit 2^{14}). Sometimes the reference is to the redemption already achieved through Christ's completed work (Ro 3^{24}, Col 1^{14}, Eph 1^{7}), sometimes to the deliverance still to come when death is finally conquered (Ro 8^{23}, Eph 4^{30}). Deliverance from God's 'wrath' or final judgment is certainly part of the NT teaching (Ro 5^{9}, 1 Th 1^{10}), but it would be hazardous to claim it as the key to the concept of redemption, since it is never explicitly connected with that word. (In Gal 3^{13}, which comes closest, redemption is from the curse of the Law.)

2. Parallel to the idea of deliverance *from* sin, etc., is the positive assurance that God has purchased or acquired a people *for* Himself. Echoes of the OT are clear and important (1 P 2^{9-10}). Here too the 'redemption' language is used alongside other words. Christ has 'ransomed men *for God*' (Rev 5^{9} 14^{3f}). St. Paul twice reminds the Corinthians that they were 'bought with a price' (1 Co 6^{20} 7^{23}), and his point, reminiscent of some of the pagan manumission inscriptions, is that they now belong to the Lord, not to men, nor yet to themselves. (Cf also 2 P 2^{1}.)

3. Deliverance or redemption is through Christ and His death; and in a few passages the death is stated (1 P 1^{18}) or implied (1 Co 6^{20} 7^{23}, 1 Ti 2^{6}) to be the ransom-price. This glances back to Christ's own saying that He came 'to give his life as a ransom for many.' But although the NT brings out the many aspects of man's bondage, it does not explain *how* Christ's death is a ransom. Attempts to explain it by postulating that some price was due either to the devil or to the demands of God's justice go beyond the explicit words of the NT, and it seems preferable not to press the analogy of ransom to the point of asking *to whom* the money is paid. Better insight into the efficacy of Christ's death is achieved by turning to other lines of explanation, especially the language of sacrifice (q.v.); the language of ransom and sacrifice are linked in the OT Law (Ex 13^{13}, etc.), in Christ's saying (Mk 10^{45} || Mt 26^{28}), and in the NT generally (Ro 3^{24-25}, 1 P 1^{18}, Rev 5^{9}). Some expositors have linked the price language with the law-court language (condemn, justify), and have held that by dying Christ endured men's *punishment*. But the NT never says exactly this, although it is clearly held that Christ stepped between men and the *consequences* (which for them would be punishment) of their sins (Gal 3^{13}). The NT teaching is the product of the OT and Jewish preparation, of Christ's own words and work, and of the apostles' experience. Other religions have contributed something to the expression, but little to the substance. Some have claimed the NT doctrine of a redeemer to be indebted to a postulated pre-Christian Gnosticism; but its character and even its existence remain speculative.

4. A fuller picture of the *positive* blessings implied in redemption may be found in other words, such as 'eternal life,' 'sonship,' 'fellowship,' 'joy,' 'peace,' etc. (q.v.).

G. M. S.

REED.—**1.** *ḳāneh*, translated 'reed,' 1 K 14^{15}, 2 K 18^{21}, Is 36^{6} 42^{3}; 'stalk,' Gn $41^{5, 22}$; 'sweet cane' (RVm '*calamus*'), Is 43^{24}, Jer 6^{20}; 'calamus,' Ca 4^{14}, Ezk 27^{19}; 'reeds,' Ps 68^{30} (so RV, but AV 'spearmen'); also metaphorically used as 'socket' of the arm, Job 31^{22} (probably bone of the upper arm); 'scales' (the arm of 'a balance' AV, RV), Is 46^{6}; and 'shaft' of a candlestick, Ex 25^{31}, and 'branches,' Ex 25^{32}. The *ḳāneh* is probably the familiar *qasāb* (*Arundo donax*), which flourishes on the banks of all the streams and lakes of the Jordan Valley. Miles of it are to be seen at the *'Ain Feshkhā* oasis on the Dead Sea shore, and at the Huleh marshes. It is a lofty reed, often 20 feet high, brilliantly green in the late summer, when all around is dry and bare; but dead-looking, from a distance, in the spring, when it stands in full flower and the lofty stems are crowned by beautiful silken pannicles. In the district mentioned the reeds are cleared from time to time by fire, that the young and tender shoots may grow up to afford fodder for cattle. The covert of the reeds is often the only possible shade (Job 40^{21}). The bruised reed, Is 42^{3}, which, though standing, a touch will cause to fall and lie bedraggled on the ground, is a familiar sight (2 K 18^{21}, Is 36^{6}, Ezk 29^{6-7}). A reed forms a most convenient **measuring-rod**, being straight and light (Ezk $40^{3, 5}$, Rev 11^{1} etc.). In certain passages where *kāneh* is translated '**calamus,**' or '**sweet cane,**' some imported aromatic cane or bark is meant. For the use of reeds as pens, see PEN, **4**, WRITING, **6**.

2. *'ārôth*, Is 19^{7} translated 'bare places' (AV '**paper reeds,**' RV 'meadows'). See MEADOW.

3. *'agammîm*, literally 'pools' (see POOL), is in Jer 51^{32} translated 'bulwarks' (AV, RV 'reeds'). For bulrushes see RUSH.

4. *'āḥū*, Gn $41^{2, 18}$ 'reed grass'; Job 8^{11} 'reeds'; Hos 13^{15} 'the reed plant' (emendation of Heb. 'among brethren,' so AV, RV). See MEADOW.

5. *'ēbheh*, Job 9^{26} 'reed' (boat). The reference is to light skiffs of papyrus.

E. W. G. M.—**R. A. B.**

REELAIAH.—See RAAMIAH.

REELIAH, 1 Es 5^{8} (AV **Reelius,** RV **Reelias**), corresponds in position to **Bigvai** in Ezr 2^{2}, Neh 7^{7}; the form of the name may be due to a duplication of **Reelaiah** in the same verse of Ezra.

REELIAS, 1 Es 5^{8} (RV).—See REELIAH.

REELIUS, 1 Es 5^{8} (AV).—See REELIAH.

REESAIAS, 1 Es 5^{8} (AV).—See RAAMIAH.

REFINER, REFINING.—The ancient Egyptians purified gold by putting it into earthen crucibles with lead, salt, a little tin, and barley bran, sealing the crucibles with clay, and then exposing them to the heat of a furnace for five days and nights. Refining silver by cupellation is a very old process. The silver mixed with lead is put into a crucible made of bone earth, and placed in a reverberatory furnace. As the oxide of lead forms, it is blown off by bellows, and

towards the end of the process the thin covering of oxide becomes iridescent and soon disappears, and the pure bright surface of the silver flashes out. This process of refining silver is referred to in Jer 6[29]. The reference in Mal 3[2f] is to the purifying influence of affliction on the people of God; their sinful impurities gradually disappear, and at last the Divine image is reflected from the soul, as the face of the refiner from the surface of the purified silver.

REFUGE, CITIES OF.—1. Origin of the right of asylum.—The story of Cain and Abel illustrates the fact that the man who shed blood committed an offence against God (cf Gn 4[10]). That was because of the ancient idea that the life was in the blood and God is the giver of the mysterious life-force. Having no city of refuge to which he could resort, Cain saw that his fate was inescapable. Therefore, the man who had shed blood, whether the deed had been done accidentally or intentionally, was under penalty; he had done a wrong that could be atoned for only by blood; he had done violence to the community of blood that existed between a god and his people. On the other hand, the god chose certain places where he manifested himself and there it was customary for his people to meet and worship him. Within the precincts claimed by his presence all life was sacred, and so it came about that even a **murderer,** if he escaped to such a sacred place, could be safe from those to whom he had forfeited his life and remained safe so long as he remained there. The murderer thus escaped the penalty of his crime, but in the process he became socially ineffective and separated from his tribe or people; if ever he left the asylum he had found, he was at the mercy of the **avenger of blood,** so that by this practice both the tribe or people and the offender himself were punished. This primitive usage still prevails in certain communities, but, while it guards against the possibility of savage, reckless revenge on the part of the offended community, it enables a murderer to escape the full penalty of his offence.

2. Development of asylum in OT.—According to the OT, asylum could be found only by the man who had shed blood unintentionally, the man into whose hand 'God let the victim fall' (Ex 21[13]). A man who wilfully attacked another and treacherously stained his hands with blood, could not find refuge at God's altar; he could be taken from it to his death (Ex 21[14]) or he could be put to death at the altar, as happened to Joab (1 K 2[30f, 34]). The community, as a whole or through accredited representatives, came between the fugitive and the avenger of blood, and decided whether he should be handed over to death. In other words, what we would term a proper administration of justice came into being and every case was duly heard and tried. It is possible to trace three stages of development of this right of asylum in the OT.

(1) In the first stage any **altar** or **sanctuary** could provide a place of refuge and give protection to the man who had unintentionally taken the life of another; but he had to justify his claim to protection by showing to the authorities of the sanctuary, or to the leaders of the community which the sanctuary served, that his deed had been unintentional. If he succeeded in doing that, he was allowed to remain within the sacred precincts. Thus he could not return home and, presumably, had to earn his living where he was, in a condition of virtual confinement. Whether his family could join him in his place of asylum and whether there were circumstances or conditions in which he could regain freedom of movement, cannot be answered. This stage of development is represented in the OT in Ex 21[13f], 1 K 1[50] 2[28, 34]. The story of Joab shows that he was aware that he could be put to death even at the altar (1 K 2[30]), and it is not likely that this could be done only in virtue of the king's authority.

(2) When the local altars outside Jerusalem were suppressed in terms of Josiah's reformation in 621 B.C., the question of asylum for the **manslayer** had to be urgently considered. Dt 19[1-9] states that three cities were to be set apart for the purpose on the west side of the Jordan, and, if the people prospered and their territory was expanded, three more cities were to be set apart. These cities were conveniently situated, so that each served a district; Dt 19[3] seems to imply that the roads to them were kept in good condition to facilitate escape to them. The fugitive had still to justify his claim to protection by establishing before the elders of the city his plea that he had not wilfully taken life. Any one who failed to sustain such a plea was handed over to the elders of his own city. The fact that they in turn surrendered him to the avenger of blood for the execution of the sentence of death shows that this concession at least continued to be made to primitive practice; but the administration of justice was in the hands of properly constituted and recognized authorities (Dt 19[12f]).

(3) The passages which may be presumed to give evidence concerning post-exilic usage are Nu 35[9-25] and Jos 20[1-9]. The six cities of asylum remained in use and the judicial procedure continued to follow the same pattern as formerly, except that the congregation, presumably the Jerusalem community, had the responsibility of determining the innocence or guilt of the fugitive; this may have become possible owing to the contraction of the territory occupied by the Jews at this time. It is interesting that Nu 35[16-21] sets forth, for the guidance of the congregation, circumstantial evidence which may be taken as establishing murderous intent; and Jos 20[4] states that the fugitive has to establish his claim for asylum at the gate before the elders to qualify for permission to enter the city; this may have been a provisional inquiry before the official trial of the case at Jerusalem. One important development is to be noted: the man who had been granted asylum had not to spend all his days in confinement within the area of asylum, but was free to return home upon the death of the high priest of the time (Nu 35[25, 28], Jos 20[6]). The high priest in the post-exilic period was the only constituted authority that Jewish law could recognize.

3. Number of the cities of refuge.—The relevant evidence is contained in Nu 35[11, 13-15], Dt 4[41-43] 19[7-10], Jos 20[2, 7f]. Dt 4[41-43] states that the first to be established were three on the E. side of Jordan; Dt 19[2, 7] speaks of three in Palestine, W. of Jordan, with v.[9] allowing for the later addition of three more cities. Does that mean that a total of nine was at least contemplated (so G. Ernest Wright, *Interpreter's Bible*, ii, 452) or are we to assume that there has arisen a certain confusion in the evidence as it is now extant, and that the full number was six? The latter is generally accepted. The common view is that these cities came into use for the purposes of asylum in the time of king Josiah and that in his days, with Judah but of small extent, the three on the W. side of the Jordan sufficed; but when in post-exilic times the Jews covered a wider area, there naturally arose the need for more cities and that was the occasion for the coming into use of the full number of six cities stated in Nu 35 and Jos 20. According to this interpretation additions made to the text in Dt 4[41-43] and 19[8] suggest that the six had been envisaged from the beginning. These six were Kedesh, Shechem, and Hebron W. of the Jordan, places which were known to have possessed ancient sanctuaries from early times, and Golan, Ramoth, and Bezer E. of it.

This interpretation is not without difficulty, apart from possible textual confusion, for at least two reasons: Ex 21[12-14], part of the ancient Book of the Covenant, speaks of the intention to establish places of asylum for the manslayer, so that their use may have gone back to much earlier times than those of Josiah, although they may have had little prominence so long as the provincial sanctuaries remained available; W. F. Albright puts their institution in the time of David or Solomon (*ARI*, p. 121). And, secondly, it is not easy to maintain that the Jewish territorial expansion in post-exilic times was such as to warrant the provision of three additional cities of refuge, especially in the area E. of the Jordan. It seems more probable that these cities

of refuge were designated at an early period of Israel's history in order to control the practice of unrestrained blood revenge and that they came prominently into use in the conditions which obtained subsequent to the reformation of Josiah. J. Gi.—J. Ma.

REFUSE.—The verb 'to refuse' has lost much of its vigour. In AV it often means 'to reject.' Thus Ps 118[22] 'The stone which the builders refused' (RV, RSV 'rejected'). Cf Tyndale's translation of Mt 24[40] 'Then two shalbe in the feldes, the one shalbe receaved, and the other shalbe refused.'

REGEM.—The eponym of a Calebite family, 1 Ch 2[47].

REGEM-MELECH.—One of the deputation sent to the prophet Zechariah, Zec 7[2].

REGENERATION.—In the language of theology 'regeneration' denotes that decisive spiritual change, effected by God's Holy Spirit, in which a man, naturally estranged from God and ruled by evil powers, is renewed in character, becomes the subject of holy affections and desires, and enters upon a life of progressive sanctification, the issue of which is complete likeness to Christ. The actual term, however, to which this word corresponds (Gr. *palingenesia*), occurs only twice in the NT (Mt 19[28], Tit 3[5]). In the former instance it is translated 'the new world' in RSV, because it concerns, not the renewal of the individual, but the eschatological restoration of all things to their original perfection at the Parousia (cf Ac 3[21], 2 P 3[13]; see RESTORATION). In the other passage (Tit 3[5]), the expression 'the washing of regeneration' connects 'renewal in the Holy Spirit' with the action of baptism, which is its outward sign and seal (see below). The doctrine, nevertheless, is a thoroughly Scriptural one and the change in question is expressed by a great variety of terms and phrases: 'born,' 'born anew,' 'new creation,' 'renewed,' 'quickened,' etc., to which attention is directed below. The basic need of regeneration is recognized in the OT as well as in the NT (*e.g.* Ps 51[10f], though of course the prophets speak more frequently of national or eschatological renewal rather than of individual (*e.g.* Is 65[17–25] 66[22], Jer 31[31ff] 32[38–40], Ezk 36[25–28], Hos 6[1–3], etc.).

The classical passage on the *need* of regeneration is Jn 3[3–7]. Men born of the flesh do not have by nature the life of the Spirit (v.[6]). Hence the declarations: 'Unless one is born anew (*or* from above), he cannot see the kingdom of God'; 'Unless one is born of water and the Spirit, he cannot enter the kingdom of God . . . Do not marvel that I said to you, you must be born anew' (vv. [3, 5, 7]). The miracle is wrought by the Spirit of God, whose action is sovereign (v.[8]). Many do marvel, like Nicodemus, at the strangeness and universality of this demand of Christ; yet the strangeness will disappear, and the need of a supernatural agent to effect the change will be felt, if due consideration is given (1) to the vastness of the change, and (2) to the actual condition of our human nature in which the change is to be made.

(1) It is sufficient, to show the vastness of this change, to reflect that here, and elsewhere, regeneration—which, after all, is only the Latin for 'being born again'—means nothing less than a revolution of such a kind as results in bringing the whole man round from his ordinary worldly way of thinking, feeling, and willing, into harmony with God's mind and will; truly being brought round to God's point of view, so that now he sees things as God sees them, feels about things as God would have him feel, judges matters as God judges them, loves what God loves, hates what God hates, sets God's purposes before him as his own. Who can doubt, if this is the nature of the change, that it does not lie in man's own powers to produce it; that it can be effected only through a higher power entering his being and working the change?

(2) The need of a supernatural agency in the change is further evident from the condition of the human nature in which the change is wrought. The testimony of Scripture is uniform that man has turned aside from God (Ps 14[1–3], Ro 3[9ff]), and that his nature has undergone a terrible depravation (Gn 6[5] 8[21], Ps 51[5], Is 1[2–4], Ro 7[14ff], Eph 2[1–3] 4[17f] etc.); that the bent of the will is away from God (Ro 8[7f]); that the love of God has been replaced by love of the world and the self-seeking principles connected therewith (1 Jn 2[15–16], cf Jn 5[42, 44]); that the better nature is in bondage to a law of sin which works lawlessness in thought, feeling and desire (Ro 7[22f], 1 Jn 3[4]). Is it not obvious, leaving out of account altogether the darker forms in which evil manifests itself, that this is a condition of the soul which only a Divine power can rectify?

Nothing, therefore, is more plainly taught in Scripture than that this spiritual change, which we call regeneration, is one which nothing short of Divine power can effect. It is spoken of as being born of God (Jn 1[12f] 3[5], 1 Jn 3[9] etc.); as a new creation (2 Co 5[21]); as a being raised from the dead (Eph 2[5f]). It is likened to the miraculous work of God in raising Christ from the dead (Eph 1[19, 22], 2[1, 6]). It is a complete transfiguration or renewal of the inner man (Ro 12[2], Eph 4[23], Col 3[10], Tit 3[5], 1 P 1[22f]). It is the counterpart or anticipation within the individual of the cosmic restoration or renewal of all things, which shall take place at the End; and it is the result of the pouring out of the Holy Spirit in the latter days (Joel 2[28f] etc.) which has now taken place (Ac 2[16f]). Though it is visible only to faith, it is the earnest of the great change that will transform us from glory to glory in the likeness of Christ at his Parousia (2 Co 3[18]). Thus, regeneration, whether we consider it from the cosmic or from the individual aspect, is an eschatological event, not a natural evolutionary development within the historical order; it happens to us now, because the Last Things are already here, made present in us even now by the operation of the outpoured Spirit. Though regeneration is not a natural work, it is nevertheless not a *magical* work; it is not effected *ipso facto* by the recitation of formulas and the performance of ceremonies. Despite this unquestionable truth, regeneration in the NT is closely connected with *baptism* (*e.g.* Ro 6[4], 1 Co 6[11], Col 2[11f], Tit 3[5], 1 P 3[21]). What indeed is being 'born of water and the Spirit' (Jn 3[5]) except a characteristically Johannine allusion to Christian baptism and an implicit assertion of its necessity? The receiving of the Spirit, which is the regenerating power of God within us, was from apostolic times connected with the baptismal action (Ac 2[38] 19[2–6], etc.); and it is probably more correct to say that baptism, the 'seal' of the Spirit (see BAPTISM, 3), was the efficacious sign of regeneration, than to say that it is only a symbol of it. At the same time one should hesitate to say that baptism is the absolutely necessary precondition of regeneration (see, *e.g.* Ac 10[44–48]); what can be said without risk of contradiction is that baptism in NT times was the *normal* means of entry into the sphere of regeneration, the Church, the eschatological community of the new creation in Christ.

The instrument by which, according to the NT, the work of regeneration is begun in us is the *word*, which is 'quickened' or brought to life in our hearts by the life-giving Spirit. The preaching of the word, that is, the declaration of God's saving action in Christ on behalf of each one of us, is made to bear fruit within us by the inner witness of God's Holy Spirit; the work of conversion, leading to regeneration, is always a Divine work, even though human sowers of the word have been co-workers with God in his quest for man's salvation (1 Co 3[6f]). This is part at least of what is meant when it is said that regeneration is effected not magically but by rational means, for words are functions of rational beings; although it must not be implied that infants, or others whom rational address cannot touch, are beyond the outreach of God's grace. What is affirmed is, as regards whose who have come to years of discretion, that God's normal dealing with them is through the word. The OT equally with the NT extols the saving, converting, quickening, cleansing, sanctifying power of the word of God (*e.g.* Pss 19[7ff] 119). Jesus declares the word to be the seed of the Kingdom of God (Lk 8[11]). He prays,

'Sanctify them in the truth; thy word is truth' (Jn 17[17]). Conversion, regeneration, sanctification, are connected with the word (Ac 11[19-21], Eph 1[13], Col 1[5], 1 Th 2[13], 2 Th 2[13], Ja 1[18], etc.). In this connexion 1 P 1[23-25] is particularly relevant: 'You have been born anew . . . through the living and abiding word of God . . . That word is the good news which was preached to you.'

If this, then, is the nature of regeneration, there is a definite process which is experienced by those who undergo it. The Spirit of God doubtless has innumerable ways of dealing with men's souls; still, if we look closely, it will be found that there are certain elements which *do* in some degree enter into all experience of regeneration, and furnish to this extent a test of the reality of the change. There is first, of necessity, the awakening of the self out of its customary spiritual torpor—out of that deep insensibility to spiritual things in which ordinarily the natural man is held (Eph 1[18] 5[14], cf Ro 14[11f]). Especially there comes into view here the peculiar awakening of the soul through the conscience, which takes the form of what is called *conviction of sin* towards God (Lk 5[8], Jn 16[8f]). Probably no one can undergo regeneration without in some degree being brought inwardly to the realization of his sinful condition before God and to the sincere confession of it (Ps 51[4]). The law of God has its place in producing this conviction of sin, but law alone will not produce genuine contrition. (See REPENTANCE.) For this there is needed the exhibition of mercy. Hence the next stage in this spiritual process is that described as *enlightenment*—growing enlightenment in the knowledge of Christ. This also, like the preceding stages, is a Divine work (Jn 16[13-15], 2 Co 4[4]). Even with this, however, the work of regeneration is not complete. The will of God for man's salvation has not only to be understood; it has also to be obeyed. There is the *will* to be laid hold of—the centre and citadel of our being. So the work of the Holy Spirit is directed, finally, to the renewing of the will. To this end the Spirit works first of all by *persuasion*, for He does nothing by violence or coercion. Everything that God does is accomplished in accordance with the nature He has given us; but God most graciously, most lovingly, brings His persuasions to bear upon our wills, and by the power of appropriate motives draws us to the acceptance of Christ (Jn 6[44]). With this there goes, in the next place, what may be called the *enabling* of the will—the imparting to it of the power to lay hold on Christ with full and firm faith (Eph 4[16]). Last of all, this work of regeneration is completed when the self is brought to the point of absolute *surrender* to Christ—when, drawn and persuaded, and at length enabled by the Spirit, it yields itself up entirely to Christ as Saviour, and lays hold on Christ for a complete salvation. There is now union with Christ by faith and by baptism into his Body, and, with that, entrance into the life of the new-created people of God as a new-born child of God. 'If any one is in Christ, he is a new creation; the old has passed away, behold, the new has come' (2 Co 5[17]).

J. O.—A. R.

REGISTER (*i.e.* genealogical record).—See GENEALOGY, **2.**

REHABIAH.—A Levitical family, 1 Ch 23[17] 24[21] 26[25].

REHOB.—1. A town or district at the northern end of the valley of the Jordan, marking the limit of the journey of the spies, Nu 13[21]. It is named also in 2 S 10[8] where it must be the same as **Beth-rehob** of v.[6]. It is therefore probably to be identified with Beth-rehob, near Laish, Jg 18[28]. Its site is unknown. **2. 3.** Two Asherite towns, Jos 19[28, 30]. One of these was a Levitical city, Jos 21[31], 1 Ch 6[75]. The latter is perhaps to be located at *Tell el-Gharbī* or *Tell Berweh*. **4.** The father of Hadadezer, 2 S 8[3, 12]. **5.** A signatory to the covenant, Neh 10[11].

REHOBOAM, son of Solomon, is said to have reigned seventeen years. The statement that his mother was Naamah, the Ammonitess (1 K 14[21]) has nothing improbable about it. The LXX (1 [3] K 12[24a]) calls her a daughter of Hanun, the son of Nahash, the Ammonite king. In the history of Rehoboam the chief point is his indiscreet treatment of the tribes at his accession—treatment which resulted in the revolt of the best part of the nation and the establishment of a rival kingdom in the North (1 K 12). The coherence of the tribes was evidently imperfect under Solomon. Ephraim, which had always been conscious of its own strength, was not minded to recognize the young king without some concessions on his part. Shechem, a traditional place of meeting, was the town chosen by 'all Israel' for the formal recognition of Rehoboam as Solomon's successor. Here the hereditary chiefs demanded that he should lighten the yoke. In this they had reference particularly to the forced labour exacted by Solomon. Rehoboam's arrogant answer is well known, and as a result the kingdom was split.

It was natural that an effort should be made to reduce the rebel tribes to subjection. But Rehoboam seems not to have had either adequate resources or military capacity. The brief notice that there was war between Rehoboam and Jeroboam continually is all that we are told. Besides this, the Biblical author describes the religious condition of the people in this reign in dark colours. A disastrous event in the history of the time was the invasion of the country by Shishak (Sheshenk, Sheshonk), the first pharaoh of the 22nd Dynasty of Egypt. This monarch claims to have reduced the whole country to subjection, probably reviving ancient claims to suzerainty. The editor of our Books of Kings is chiefly concerned at the Egyptian's plundering the Temple (1 K 14[26]), while the Chronicler (2 Ch 12) makes an edifying story out of the incident.

H. P. S.—H. S. G.

REHOBOTH.—1. A well dug by the servants of Isaac and finally conceded to him, after two others, dug also by them, had become a subject of quarrel with Abimelech, king of Gerar, Gn 26[22]. It is possibly modern *Ruheibeh*, about 20 miles S. of Beersheba. **2.** An Edomite king is called Shaul 'of Rehoboth by the River' Gn 36[37], 1 Ch 1[48]. 'The River,' which usually stands for the Euphrates (so RSV here) is more probably here the 'River of Egypt' (see EGYPT [RIVER OF]), as an Edomite site is indicated. Its location is unknown.

J. F. McC.—H. H. R.

REHOBOTH-IR ('broad places of the city').—One of the four cities of Assyria built by Nimrod, Gn 10[11] (AV 'the city Rehoboth'). It immediately follows Nineveh, and might mean a suburb of that city, originally separate from it, but later annexed and containing some of its most spacious streets or market-places. It is unidentified.

REHUM.—1. One of the twelve heads of the Jewish community, Ezr 2[2], 1 Es 5[8] (AV, RV **Roimus**); in Neh 7[7] called **Nehum,** perhaps by a copyist's error. **2.** The 'commander' (AV, RV 'chancellor') in the time of Artaxerxes, Ezr 4[8f, 17, 23], 1 Es 2[16, 25] (AV, RV **Rathumus**). See BELTETHMUS. **3.** A Levite who helped to repair the wall, Neh 3[17]. **4.** One of those who sealed the covenant, Neh 10[25] (Heb. 26). **5.** The eponym of a priestly family, Neh 12[3], where it is perhaps a miswriting of **Harim** (q.v.).

REI ('Y" is a friend').—This name is given to one of the supporters of Solomon at the time of Adonijah's attempt to secure the throne, 1 K 1[8]. He is mentioned along with Shimei, and was probably an officer in the royal guard. These troops seem to have had an enormous influence in determining the succession to the throne. The reading, however, is not above suspicion, and Josephus (*Ant.* VII. xiv. 4 [346]) reads 'Shimei, the friend of David,' and thus gets rid of Rei as a personal name (so, differently, Lucian).

W. F. B.

REINS.—See KIDNEYS.

REKEM.—1. One of the five kinglets of Midian slain by Moses, Nu 31[8], Jos 13[21]. **2.** A Calebite family, 1 Ch 2[43]. **3.** A clan of Machir, 1 Ch 7[16] (EV **Rakem,** but this is simply the pausal form of the Hebrew name). **4.** An unidentified city of Benjamin, Jos 18[27].

RELIGION.—The word 'religion,' wherever it occurs in AV, signifies not the inner spirit of the religious life, but its outward expression. It is thus used of one form of religion as distinguished from another; as in 2 Mac 14[38], where the same word is translated in the middle of the verse 'Judaism,' and in the end of it 'the religion of the Jews' (RSV has simply 'Judaism'). It is also used by St. James (1[26f]) to contrast religious acts with ritual forms.

REMALIAH.—The father of Pekah, 2 K 15[25]ff 16[1, 5], 2 Ch 28[6], Is 7[1]ff 8[6].

REMEMBRANCE.—Sons were regarded as of great importance in Israel to keep alive the memory of a man's name, and hatred of enemies might be expressed in the desire that their name should be blotted out and forgotten (Ex 17[14], Dt 25[19], Ps 109[13]). In the absence of sons a man might erect a pillar to preserve his name (2 S 18[18]). Great events might be kept in remembrance by the erection of a cairn (Gn 31[46f]) or stone (Gn 35[14], 1 S 7[12]), or of an altar (Jos 22[10]).

Remembrance is not always preserved by visible things or persons. The righteous are to be remembered for honour (Pr 10[7]), just as the anointing of Jesus was to be (Mt 26[13]). The names of those who feared the Lord are said to be recorded in a book of remembrance (Mal 3[16]), but this, like the book of life (Rev 3[5] 20[12, 15] 21[27]), is not thought of as on earth.

Remembrance of the mighty works of God is an abiding duty (Dt 5[15] 8[2] 16[3], Ps 105[5]), not merely as a private memory, but as something to be expressed in religious rites (Dt 26[1]ff, Lv 2[2, 9]). Such remembrance is a summons to renewed loyalty and obedience, just as the remembrance of the Sabbath (Ex 20[8]), of God's commandments (Nu 15[39f], Ps 103[18]), or of the law of Moses (Mal 4[4]), is a call to observe them. Similarly in the NT Christians are exhorted to remember the words of Jesus (Ac 20[35]), or the resurrection (2 Ti 2[8]), not merely as an exercise in memory, but for response to their meaning. The reconciling ministry of Christ is to be remembered (Eph 2[12]ff), that the heart may be stirred to gratitude and devotion. The death of Jesus is remembered in the Eucharist (1 Co 11[23]f), in order that its power might be renewed in the heart of the believer. The poor are to be remembered (Gal 2[10]), that their need might be met. In all these cases, therefore, remembrance has a practical purpose.

Frequently God's remembrance is spoken of in the Bible. In mercy He remembered Rachel (Gn 30[22]) and Hannah (1 S 1[19]). Jeremiah cries to be remembered and helped (Jer 15[15]), and so also Israel (La 3[19]). God is ever mindful of His Covenant and faithful to His promise (Gn 9[15]f, Ex 2[24], Lv 26[42], Ps 105[8] 106[45]). He remembers His love for Israel (Ps 98[3]; cf 25[6]), or His promise (Ps 105[42]). He is besought to remember David (2 Ch 6[42]), those who bring offerings (Ps 20[3]), those who intercede (Jer 18[20]), and His remembrance is always thought of in terms of grace and help. In sadness He remembers the devotion of Israel in her youth (Jer 2[2]), when she has wantonly turned from Him. He remembers sin to visit it upon the sinner (Ho 7[2], Jer 14[10]). Sometimes the psalmists cry to Him not to remember their sins (Ps 25[7]) or those of their fathers (Ps 79[8]), though man should ever remember his own sin (Ps 51[3]) that he may be stirred to penitence. Jeremiah looked forward to the New Covenant, when the sins of the past would be remembered no more (Jer 31[34]) in the loyalty of the present.

REMETH.—See RAMOTH, 1.

REMMON, Jos 19[7] (AV).—See RIMMON, 3.

REMMON-METHOAR, Jos 19[13] (AV).—See RIMMON, 4.

REMNANT.—This thought is found throughout Scripture and the Remnant is always presented as a token of the Divine mercy. The idea undergoes development in the prophetic writings and it gives rise to a definite coherent doctrine, closely allied with the doctrine of Election (q.v.). 'It is the bridge binding the threat of punishment to the hope of restoration' (De Vaux, *RB* xlii, 538). It is a direct derivative from Israel's thought of God who is righteous altogether and whose mercy endureth for ever. 'The gifts and call of God are irrevocable' (Ro 11[29]). The doctrine reconciles the righteousness of God with His faithfulness and truth.

The terms used to express the idea are *sh'r* and its derivatives (220 times in OT), *plṭ* (escape away) and its derivatives (80 times in OT) and *śrd* (panic flight) and its derivatives (29 times in OT). *Ythr* with its derivatives appear 103 times but is slightly less fitted to express the idea. These terms are frequently combined or used in parallelism to give the thought of an 'escaped remnant' while in Jer 44[14] a threefold combination heightens the effect. In the majority of instances these terms have their natural meaning of something left over or surviving from a scattering or general destruction (E. W. Heaton, *JThSt*, 1952, 27–39). But it may not be denied that there remain many instances where a special meaning is attached to the term and it refers to a group—not necessarily righteous (Am 3[12])—spared by the mercy of God. Through this group the privileges and promises of the Election are conveyed to later generations. Israel had failed in its response to Election and God reacts in righteousness against this failure. But the redemptive purpose of God will not be finally thwarted. Through a remnant of His own choosing the inheritance will be preserved. This thought of God's selective action may be seen in the case of Noah (Gn 7[1]f), the sons of Isaac (Gn 27[1]), Joseph in Egypt (Gn 45[7]), the remnant of 7000 in Elijah's time (1 K 19[18]). The idea and the terms used were commonly known and understood by all. 'The remnant of Joseph' (Am 5[15]) or 'Shear-jashub' (Is 7[3]) were intelligible to the hearers and needed no explanation. The idea may have been embedded in the cult (Mowinckel) and the 'Day of the Lord' may have signified Israel's V-day when all her foes would be overthrown and Israel left as a remnant. But to the prophets 'the Day of the Lord' signified judgment day, the day when the God of all good order would hold assize and sift His people (Am 9[9]) and only a remnant would survive (Am 3[12]). There is threat here: 'only a remnant' (Is 6[13] 10[22] 17[5]f), and there is promise: 'a remnant shall survive' (Ob 17, Mic 4[6]f 7[18]). In the divine Epiphany judgment and mercy are joined and mercy finally triumphs over judgment.

The development of this idea is due mainly to Isaiah. Despite textual difficulties the thought is seen in Is 6[13] and it is further developed in 7[3]f where the remnant is seen to be a faithful remnant (cf Am 5[15], Is 8[16] 10[20–22], Zeph 2[3], 1 K 19[18]). As set apart for God it is a 'holy remnant' (Is 4[3] 6[13] 62[12]). The idea of 'Israel after the Spirit' begins to appear and through this remnant God's purpose will be achieved (Is 4[3] 27[5] 37[31], Mic 5[5–7] (Heb. 6–8), Ezk 36[22–25]). The formation of Isaiah's group of disciples (8[16]) is the foundation stone of the Church (W. R. Smith, *Prophets of Israel*, p. 275). In Jeremiah the emphasis may seem to be on total destruction (5[1]f 6[27–30] 4[23–25]), but Jer 31[31]f 23[3]f, showed that he shared this hope.

As to the *locus* of the Remnant the earlier prophets centre on Jerusalem (Is 17[5]f 37[31]f). To Jeremiah and Ezekiel the hope of Israel lay with the Exiles (Jer 24, Ezk 5[1]f 22[30]), and while they viewed the remnant there, not yet clean and unsullied but requiring purgation and sanctification, as the nucleus of the new Israel, both prophets looked for a return to Zion (Jer 29[10]f, Ezk 11[13]f). The remnant is not the débris of the inglorious and unfaithful past but the germ of a new and glorious Israel (Ezk 37[12]). To the post-exilic prophets the Remnant is the community of Ezra and the New Covenant and the Messianic age is about to dawn (Ezr 9[8, 13–15]).

New Testament.—Whether Jesus thought of the Church as the Remnant may be open to question; it may be that in the selection of the twelve disciples He signifies His intention of creating a new People of God (cf Is 8[16]).

In the thought of Paul the Church fulfils the function of the faithful Remnant and he contrasts 'Israel after the flesh' with the 'Israel of God' which is the Church (Ro 9^{27}, Gal 6^{16}) and his interpretation follows the doctrine of OT. In Ja 1^{1} the scattered Christian Church is identified with the true Israel, while in 1 P 2^{9} the Church is called 'God's own people.' In He 8^{8-12} the Church is identified with the people of the New Covenant (Jer 31^{31f}) and in Eph 2^{4-10} it is regarded as Ezekiel's new and true Israel risen from the dead. In Ro 3^{24} it represents the 'ransomed' of Deutero-Isaiah while in 1 Co 1^{2f} it appears as Daniel's 'people of the saints of the Most High' (Dn 7^{27}). All this is not mere rhetoric but the purposed interpretation of prophetic doctrine.

REMPHAN.—See REPHAN.

REPENTANCE.—Two words are used commonly in the OT for repent, *nāḥam*, literally 'pant' or 'groan,' and *shûbh*, 'turn, return' (in particular, to God). The NT equivalents are *metanoia*, 'change of mind,' and *epistrephein*, 'turn.' The OT usage is often morally neutral, meaning a change of purpose or attitude. In this sense it can be used of God (Gn 6^{6}, Ex 32^{14}, etc.) although a number of passages deny 'repentance' to Him (Nu 23^{19}, 1 S 15^{29} but cf v.^{35}, Ezk 24^{14}). The prophets command the people to repent and turn from evil, with the implication that man can do this of himself (Is 1^{16f} 55^{6}, Jer 3^{12}, Ezk 18^{30}, Hos 6^{1}, Jl 2^{12}, Am 5^{4}). In the later literature it is God Himself, however, who must create the new heart (Ps 51^{10}, Ezk 36^{25}; but cf 18^{31}) and initiate the whole process of man's repentance.

We find this same contrast in the NT. Both John the Baptist and Jesus begin their ministry with the call to repent (Mt 3^{2} 4^{17} etc.). This is also the apostolic message (Ac 2^{38} 3^{19} 17^{30}). Yet repentance is regarded as the gift of God rather than the act of man (Ac 5^{31} 11^{18}, Ro 2^{4}, 2 Ti 2^{25}). The solution is to be found in the work of Christ who came to call sinners (Mk 2^{17}, Lk 4^{18} and see the parables in Lk 15). Repentance is to be preached in His name (Lk 24^{47}, 2 Ti $1^{9\text{ff}}$). Hence repentance goes hand in hand with faith (Mk 1^{15}, Ac 20^{21}, He 6^{1}). It is the product of godly sorrow (2 Co 7^{10} where St. Paul contrasts a worldly sorrow that produces death; cf Mt $27^{3\text{ff}}$) and leads to forgiveness of sins (Mk 1^{14}, Ac 2^{38} 3^{19} etc.). It brings forth worthy fruits (Mt 3^{8} ‖ Lk 3^{8}, Ac 26^{20}). Yet Christian repentance is more than grief for the past and resolution for the future. It involves a change of the whole person. It is creative, a positive, affirmative act rather than a mere negative turning away from sin. Accordingly St. Paul thinks in terms of death and resurrection with Christ into the new life of the Spirit (Ro 6^{2}, Col 2^{12}), and the Johannine literature completely replaces the terminology of repentance with that of the new birth (Jn 3^{3}).

C. C. Ro.

REPHAEL.—A family of gatekeepers, 1 Ch 26^{7}.

REPHAH.—An Ephraimite family, 1 Ch 7^{25}.

REPHAIAH.—**1.** A Judahite, 1 Ch 3^{21}. **2.** A Simeonite chief, 1 Ch 4^{42}. **3.** A descendant of Issachar, 1 Ch 7^{2}. **4.** A descendant of Saul, 1 Ch 9^{43}; called **Raphah** in 8^{37} (AV Rapha). **5.** One of those who helped to repair the wall, Neh 3^{9}.

REPHAIM.—A name given in several Biblical passages to some pre-Israelitish people. In Gn 14^{5} they are said to have dwelt in Ashteroth-karnaim. Gn 15^{20} classes them with Hittites and Perizzites (similarly Jos 17^{15}). Dt $2^{11,20}$ calls certain peoples 'Rephaim' whom the Moabites and Ammonites called respectively '**Emim**' and '**Zamzummin.**' Dt 3^{11} says that Og, king of Bashan, alone remained of the Rephaim (so also Jos 12^{4} 13^{12}), while Dt 3^{13} says that Argob was a land of Rephaim. A valley near Jerusalem was also called the '**Vale of Rephaim**' (see 2 S $5^{18,22}$ 23^{13}, 1 Ch 11^{15} 14^{9}, Is 17^{5}). Because Dt 2^{11} counts them with the **Anakim**, who were giants, and 2 S 21^{16-22} says that the sons of a certain **Raphah** (AV, RV 'giant'; RSV 'giants') were giants, it has been supposed by some that *Rephaim* means 'giants,' and was given to a race as their name by their neighbours because of their stature. Cf GIANT.

The word *rᵉphā'îm* in the OT and in Phoenician inscriptions means also 'shades' in the insubstantial Semitic afterlife. At least it used to describe the dead, as in Ps 88^{10}. Schwally is probably right, therefore (*Leben nach dem Tode*, 64 ff and *ZAW*, xviii, 127 ff), in holding that the word means 'shades,' and that it was applied by the Israelites to people who were dead and gone, and of whom they knew little.

In the Râs Shamra texts the Rephaim almost certainly denote a high-caste guild associated with fertility-ritual, which was anciently a royal office, two ancient kings, Dan'el and Keret, having apparently this significance.

The connexion between the dead and fertility is not unfamiliar in antiquity, *e.g.* Osiris, with whom the dead Pharaohs were identified, was also the giver of fertility; cf the connexion between the chthonic cult and fertility at Eleusis. In Hebrew tradition, however, it is the chthonic aspect of the Rephaim which has survived, though for the Hebrews these have become a departed race. There are two cases in administrative texts from Râs Shamra where the root appears as apparently a gentilic, but in the longer texts above mentioned, they are not a race, but a guild.

G. A. B.—J. Gr.

REPHAN (AV **Remphan**).—A word which replaces **Chiun** of the Hebrew text of Am 5^{26}, both in the LXX and in the quotation in Ac 7^{43}. The generally accepted explanation of this word is that *Rephan* (the preferable form) is a corruption and transliteration of *Kaiwan* (q.v.) —*r* having somehow mistakenly replaced *k*, and *w* (the Heb. *waw* or *vav*) having been transliterated *ph* (the Gr. *phi*).

W. M. N.

REPHIDIM.—A stage in the Wanderings, between the wilderness of Sin and the wilderness of Sinai (Ex $17^{1,8}$ 19^{2}; cf Nu 33^{14f}). Here water was miraculously supplied, and Israel fought with Amalek. The site has not been identified. Those who accept the traditional Sinai generally place Elim in *Wâdī Gharandel*, and Rephidim in *Wâdī Feirān*, about four miles N. of Mount Serbal. Scholars who place Sinai E. of the Gulf of 'Aqaba look for Rephidim in that area, while those who identify Horeb with one of the mountains near Kadesh-barnea find Rephidim in one of the oases in that district. See for a discussion of the various locations Kraeling, *Bible Atlas*, pp. 107–113.

W. E.—S. H. Hn.

REPROBATE.—The Hebrew word so rendered in Jer 6^{30} (AV; RSV 'refuse') has its meaning explained by the context. 'Refuse silver they are called, for the Lord has rejected them.' Like metal proved to be worthless by the refiner's fire (v.^{29}), they are thrown away (cf Is 1^{22}). In the NT, in accordance with the meaning of the Greek word (*adokimos*), 'reprobate' is used of that which cannot abide the proof, which, on being tested, is found to be worthless, bad, counterfeit, and is therefore rejected. 'A reprobate (RSV 'base') mind' in Ro 1^{28} (with tacit reference to the previous clause, 'they did not see fit to acknowledge God') is, as the context shows, a mind depraved and perverted by vile passions. To such a mind God abandoned those who wilfully exchanged His truth for a lie (v.^{25}). In 1 Co 9^{27}, St. Paul declares that he 'pommels' and 'subdues' his body lest, having preached to others, he himself should be rejected ('disqualified' RSV). The figure is that of an athlete who, through remissness in training fails in the race or fight (for the opposite figure, cf 2 Ti 2^{15}). In 2 Co 13^{5-7} the word occurs three times, in each case as opposed to genuine, true ('failing to meet the test' RSV). Christ is in them, except they be reprobates, *i.e.* false to their profession, hence rejected by God. Let them 'examine' themselves by this test (v.^{5}). St. Paul trusts that they will find out that he has not failed in it; let them think of him what they will, if only they themselves do what is right (v.^{7}). 'Reprobate' here is contrasted with what is 'approved,' 'honourable'; it is identified with 'doing evil.' In 2 Ti 3^{8}, certain are described as 'corrupted in mind, reprobate

concerning the faith '(' rejected as regards the faith' RSV 1946 ; ' men of corrupt mind and counterfeit faith', RSV 1955), where both moral corruption and false speculation as the result of this corruption seem intended. They fail, brought to the rest of ' sound ' or ' healthful ' doctrine (1^{13f} 4^{3}). Similarly Tit 1^{16} speaks of those who, denying God by their works, are ' unto every good work reprobate ' (' unfit for any good deed,' RSV). Their hypocrisy is brought home to them by their wicked lives. ' Professing that they know God,' they are proved by their works to be counterfeits, impostors. The word occurs, finally, in He 6^{8}, where those whom it is impossible ' to renew again to repentance ' are compared to ground which, receiving the rain oft upon it, and being tilled, brings forth only thorns and thistles, and is ' rejected ' (' worthless ' RSV). From all this we may conclude that ' reprobate,' generally denotes a moral state so bad that recovery from it is no longer possible ; there remains only judgment (cf He 6^{8}). It is only to be added that the term has no relation in Scripture to an eternal decree of reprobation ; at least, to none which has not respect to a thoroughly bad and irrecoverable condition of its objects. ' Reprobate ' is not used in the NT of the RSV ; in the OT, only Ps 15^{4}. Cf PREDESTINATION. J. O.—F. W. G.

RESAIAH.—See RAAMIAH.

RESAIAS, 1 Es 5^{8} (RV).—See RAAMIAH.

RESEN.—The last of the four cities built by Asshur, or, according to the RV, by Nimrod, and described as lying between Nineveh and Calah (*i.e. Quyunjiq* and *Nimrûd*), on the E. bank of the Tigris, Gn 10^{12}. Its site is unknown. That the words ' that is the great city ' should refer to Resen alone seems unlikely—more probably Nineveh, Rehoboth-ir and Calah are included, the two latter forming, with Resen, suburbs of the first.

RESH.—Twentieth letter of Hebrew alphabet, and so used to introduce the twentieth part of Ps 119, every verse of which begins with this letter.

RESHEPH.—An Ephraimite family, 1 Ch 7^{25}.

REST.—The conception of rest as a gift of God runs through the Bible, the underlying idea being not idleness, but the freedom from anxiety which is the condition of effective work. It is promised to Israel in Canaan (Ex 33^{14}, Dt 3^{20}), and Zion is the resting-place of Y$^{\prime\prime}$ (Ps 132$^{8, 14}$) ; the Temple is built by ' a man of rest ' (1 Ch 22^{9} AV and RV [RSV ' a man of peace '] ; a contrast is implied with the desert wanderings in Nu 10$^{33-36}$). At the same time no earthly temple can be the real resting-place of Y$^{\prime\prime}$ (Is 66^{1}, Ac 7^{49}). The rest of the Sabbath and the Sabbatical year are connected with the rest of God after creation (Gn 2^{2}, Ex 20^{11}, Lv 25^{4} ; see SABBATH). The individual desires rest, as did the nation (Ps 55^{6}) ; it is not to be found in ignoble ease (Gn 49^{15} Issachar), but in the ways of God (Ps 37^{7}, Jer 6^{16}) ; it is the gift of Christ (Mt 11^{28}). Sinners fail to find it (Is 28^{12} 57^{20}), as Israel failed (Ps 95^{11}). He 4 develops the meaning of this failure, and points to the ' sabbath rest ' still to come. This heavenly rest includes not only freedom from labour, as in OT (Job 3$^{13, 17}$ [in Ps 16^{9}, see RV]), but also the opportunity of continued work (Rev 14^{13}). C. W. E.

RESTITUTION.—See CRIMES AND PUNISHMENTS, 8.

RESTORATION.—Although the term *apokatastasis* connotes the eschatological idea of a final restoration of all things to their primal perfection (Gn 1^{31}), the real starting point for the NT conception of restoration is the realization of *newness in Christ* : we walk in newness of life (Ro 6^{4}), we serve in the new life of the Spirit (Ro 7^{6}). Christ has become the ' new man ' in us (Ro 5$^{12-21}$) to transform us into a new creation (Eph 2^{15}) which begins here (2 Co 5^{17}) and will end in the *eschaton*. There will be a new heaven and a new earth (Rev 21^{6}, 2 P 3^{13}, Ro 8$^{18-25}$), a new Jerusalem (Rev 21^{2} 3^{12}), a new song (Rev 5^{9} 14^{3}), a new name (Rev 2^{17} 3^{12}). This new aeon, already begun with Christ, will come to fulfilment with the eschatological meal (Mk 14^{25}), when God will ' make everything new ' (Rev 21^{5}), after the final separation of good and evil (Mt 13^{40} 25^{32}), when heaven and earth will have passed away (Mk 13^{31}, Rev 21^{1}). Jesus did not expect the *parousia*, the coming of the Lord (Mt 24$^{3, 27}$) to take place during His lifetime ; but it began with His resurrection and will be fulfilled in His second coming (2 Th 2^{19}), when each in his order will receive a new life (1 Co 15^{23}). Ac 3^{21} uses the term *apokatastasis*, which is used elsewhere in ancient literature in various connexions, *e.g.* for the return of the stars to their original constellations after their great cycles. Here it refers to the establishing of ' all things that God spoke by the mouth of his holy prophets ' (RSV) ; the text can also be translated, ' until the times of the establishing [or re-establishing] of all things, of which [times] God spoke . . .' God has promised from of old that He will re-establish the cosmos both physically and spiritually in its pristine state, when ' he saw everything that he had made, and behold, it was very good.' But this does not represent a universalist doctrine of the final salvation of all, whether good or evil, sinner or faithful. The very definite Pauline stress on the total aspect of salvation in Christ (Ro 5^{18} 11^{32}, 1 Co 15^{22}, Col 1^{20}) must be understood in terms of the kerygmatic preaching of the apostle, as spoken by a *homo sub gratia* proclaiming salvation to Corinth and Rome, and not as an expression of a theological speculation—like that of Origen, *e.g.*, though Origen was more careful in stating this conception than is generally realized. Paul's outlook is bright : the salvation to come will include nature (Ro 8^{21}) as well as men ; but the NT still keeps men under the tension of a final judgment in which the sheep will be separated from the goats (Mt 25$^{31-45}$). S. L.

RESURRECTION.—1. In the OT.—On the doctrine of the resurrection the NT presents a striking development as compared with the OT. Clear and explicit references to the resurrection are rare in the OT ; the NT gives the resurrection a central place. We have here a particularly impressive example of the way God gradually led His people to grasp certain important truths.

Two ancient alternatives to a real doctrine of resurrection receive no support in the OT. Its writers are not content with the cyclical pattern of an annual resurrection, or the seasonal rising of a vegetation god from the dead. This is in part the significance of the bitter, continual prophetic attack on Baal worship. This type of worship was linked with nature. It was a fertility cult, practised to ensure fertility in crops, in flocks and herds, and even in human family life. Annual observance was inherent in such a cult. Wherever vegetation and fertility were linked with a god or goddess, the idea of the dying and rising of the god easily entered the picture. This entire pattern, prevalent throughout the Near East, was denounced by the prophets and finally rejected by Israel. The faith in resurrection did not arise by simple application of a resurrection pattern derived from annual fertility and renewal rites.

The other possible alternative to a true resurrection faith was the idea of the immortality of the soul. On this view, the body is at best a transient unworthy instrument of the pure and eternal soul. Death sets the soul free to enjoy without hindrance its true life. This road to blessedness seems not to have confronted Israel at an early date, and with rare exceptions it was rejected as soon as it was faced. What prevented such an idea from taking root in Israel was the firm faith, which reached far back into the early history of that people, that their God, the Giver of life, was the Creator and so the Lord of the whole earth. He had made the world, and saw that ' it was very good ' (Gn 1^{31}). The body of man therefore was not a negligible or an evil part of his life ; it was an integral part of the man ; man was a living body. Israel could accept no conception of future blessedness which ignored the material world and rejected the goodness of God's work as Creator.

The usual early OT view did not teach the complete extinction of the person at physical death. It thought rather that after death came a shadowy and unsatisfying

existence in Sheol, where king and subject, rich and poor, might still be aware of their former class distinctions but none had a really happy or complete life. This idea reflected the importance attached to the body in the life of man; without the body life could not be normal, full, or satisfying. From that state there is no return; 'he who goes down to Sheol does not come up' (Job 7^9). In this prevailing early view there was no real tie with God; 'in death there is no remembrance of thee; in Sheol who can give thee praise?' (Ps 6^5). 'For Sheol cannot thank thee, death cannot praise thee; those who go down into the pit cannot hope for thy faithfulness' (Is 38^{18}).

Yet two ideas already led Israel to the verge of the idea that God could bring His people back even from Sheol. One was the grateful testimony of those who in sickness or danger had come dangerously near to death; they had gone to the very gates of Sheol, but had been saved and brought back by God; 'my life draws near to Sheol' but 'thou dost not give me up to Sheol' (Ps 88^3 16^{10}). The other ray of hope is the conviction that even in Sheol God is not absent; 'If I make my bed in Sheol, thou art there!' (Ps 139^8). The presence and so the power of God are there; perhaps, then, the dead are not beyond the reach of His saving work.

It is not possible to trace clearly the factors that led Israel to affirm faith in resurrection. Figurative statements, such as those which speak of God's miraculous snatching of individual people from death, may have had their influence. It may have been felt that God is not helpless before Sheol; He can save not only from the very gateway of Sheol but from the actual domain of the dead. Figurative expressions which described the bringing back of Israel from the death of captivity may have had their influence (cf Ezk 37). Increased interest in God's dealings with individuals may have led men to ask whether God's goodness could maintain the life of His loyal saints beyond death. Sheol was just what the wicked deserved (Ps 49^{14}), but could not God give His faithful people a better lot? And God's own rôle was restudied. Since the lot which the good and the wicked receive in this life is often not in accord with what they deserve, men might feel the need of a future situation in which God's justice finds full expression, and so might be led to think that there must be a resurrection.

The OT passages which express clear faith in a resurrection are amazingly few. The taking up of Enoch and Elijah to fellowship with God (Gn 5^{24}, 2 K 2^{11}) does not express it, but these stories could stimulate men to think that God's people will have a permanent privileged position in living touch with Him. The raising of a child by Elijah and by Elisha (1 K 17^{17-23}, 2 K 4^{32-36}) created an atmosphere congenial to the idea of a permanent resurrection of the body. Is 53^{10-12} is not clear; some, who interpret the Servant to be an individual, find here a hint that he will have some form of satisfying life after death. Job 14^{14f} raises the question, but is rather despairing; Job 19^{25-27} is an obscure text whose original wording is difficult to determine, but it is more hopeful. The two most explicit passages are (1) Is 26^{19}, where Israel is promised a resurrection which seems not expected for their oppressors (v.^{14}); and (2) Dn 12^2, where no universal resurrection is expected, but the loyal righteous who have suffered from the oppressor ($11^{32\text{ff}}$) and the apostate Jews who have collaborated with him will rise to receive their respective rewards, 'everlasting life' and 'shame and everlasting contempt.' Thus there is in the OT no clear statement that all men will rise in a general resurrection. But the basis is provided for such a more developed view.

2. In the Apocrypha.—In the period between the writing of the Book of Daniel (fourth decade of the 2nd cent. B.C.) and the ministry of Jesus, a development of thought occurred, but it was not uniform or shared by all Jews. This may be seen first in the Apocrypha and other Jewish writings of the period, and then in the position taken on this subject by the Jewish sects.

Three chief positions are represented in the Apocrypha. (1) The composite work Ecclesiasticus reflects for the most part the lack of any expectation that there will be a resurrection or even a rich future existence. 'A son of man is not immortal' (according to the probable text of 17^{30}), but it can be said that a man's 'name will live for ever' (37^{26}). It is not certain what 46^{12} and 49^{10} mean; the former verse may mean that a man receives new life in his sons; in any event, Ecclesiasticus as a whole has no expectation of a resurrection, and if these passages express such an expectation, they differ from 17^{30} and from the general tenor of the book. (2) The Wisdom of Solomon, in 2^{23} and $3^{1\text{ff}}$, expresses a clear expectation of a future life, but probably in the form of immortality apart from the body, in a manner akin to Greek thought. (3) 2 Maccabees repeatedly expresses confident faith in the bodily resurrection of those who suffer under the oppressor of God's people (7^9 12^{43-45} 14^{46}).

3. In other late Jewish writings.—It is difficult to state what the Book of Enoch teaches; it is a composite work, its present form is late, and it may contain Christian interpolations or Christian passages. In an early portion, 22^{9-13}, there are divisions in Sheol between the righteous and the wicked, and some of the wicked will not rise. In the later Similitudes (chs. 37–71), there appears to be a clear expectation of a general resurrection (51^1). In 90^{33} 91^{10} the resurrection of the righteous is expected; 103^4 raises a question whether this means a bodily resurrection or only a revival of the surviving spirit of the righteous dead. This question is not clearly answered in the Psalms of Solomon; 3^{16} says that 'they that fear the Lord shall rise to life eternal,' and this sounds like definite resurrection teaching, but the exact nature of the resurrection state is not indicated.

Both the Apocalypse of Baruch and IV Ezra are decades later than the time of Jesus. They express a clear expectation of bodily resurrection. In *Apoc. Bar.* 30^2 only the rising of the righteous is mentioned, but it is clear from 50^{2-4} and 51^{1-6} that all will be raised just as they were before death, and the wicked will then be given a worse form of existence and the righteous a more glorious form. A new idea appears when the reign of the Messiah for 400 years (?; the text varies as to the number) is followed by his death and by a general resurrection (2 Es 7^{28-30}). This thought of an intermediate kingdom or period appears in the Book of Revelation, ch. 20.

The Jewish sects of the time of Jesus—if we accept the report of Josephus (*BJ* II. viii. 2–14 [119–166]; *Ant.* XVIII. i. 3–5 [12–22])—reflect the same three positions which we found in the Apocrypha. (1) The Sadducees denied the resurrection (Ac 23^8) and tried to trap Jesus into conceding their contention (Mk 12^{18-27} and parallels). Josephus declares that they held the soul to die with the body. (2) The Pharisees expected a resurrection (cf Ac 23^{6-8}) and so on grounds of principle could not deny the possibility of Jesus' resurrection. Josephus says they expected the resurrection only of the righteous. (3) The Essenes, according to Josephus, believed in the immortality of the soul. However, Hippolytus (*Refutatio*, IX. 27) says they believed in the resurrection; if he is right, they agreed essentially on this matter with the Pharisees. The Dead Sea Scrolls of the Qumrân sect do not settle this question; they clearly expect a final judgment and a blessed life for the righteous, but it is not clear whether they imply a resurrection of the body or simply the immortality of the soul. The careful burial of the dead by this sect may imply that a resurrection was expected. If so, this is significant, for the Qumrân sect was an Essene type of religious fellowship.

4. The Teaching of Jesus.—(*a*) *The Synoptic Gospels.*—Since Jesus taught by act as well as by word, it is noteworthy that He is said to have restored to life certain individuals who had just died (Mk 5^{35-43}, Mt 9^{23-26}, Lk 7^{11-17} 8^{49-56}), and that He instructed His disciples to raise the dead (Mt 10^8). This means restoration to life in the present conditions of physical existence; it does

not describe a resurrection that gives man a form of life fit for the eternal Kingdom of God. But it does show that Divine saving power can reach even into the realm of the dead.

Jesus almost never refers to the resurrection of all men; Mt 25[31-46], however, clearly describes a general resurrection. Jesus usually emphasizes God's gift of life and blessedness to His faithful people at the resurrection; attention centres on the 'resurrection of the just,' in which the 'sons of God' or 'sons of the resurrection' enter into eternal and full fellowship with God (Lk 14[14] 20[36]). The one detailed discussion of the resurrection is in Mk 12[18-27], Mt 22[23-33], Lk 20[27-40]. Here Jesus explicitly opposes the Sadducees' denial of resurrection; He argues that the Scripture, *i.e.* the OT, teaches that there will be a resurrection, and He asserts that the power of God is adequate to effect this. He argues from Ex 3[6]; God spoke to Moses of Abraham, Isaac, and Jacob as in living relation to him, though they had died long before the time of Moses. This does not in itself establish the certainty of resurrection. It affirms that the patriarchs, though they have experienced physical death, still live and are in living fellowship with God; Jesus apparently infers that at the last day the Divine power on which this survival and continued privilege rests will raise the patriarchs and give them eternal blessedness.

That He expected an actual resurrection becomes clearer from His predictions of His own resurrection. This thrice repeated prediction (Mk 8[31] || Mt 16[21] || Lk 9[22]; Mk 9[31] || Mt 17[23]; Mk 10[34] || Mt 20[19] || Lk 18[33]) is often described as a prediction of His passion, but these predictions end (Lk 9[44] does not) with the explicit though brief promise of the resurrection. The mention of 'after three days' or 'on the third day' shows that more is meant than the soul's survival of death; the phrase implies a definite act of resurrection, giving a new form and power of life. The gathering of the elect 'from the four winds' seems to anticipate that they will first be raised in the places where they had lived and died (cf Mk 13[27] || Mt 24[31]). That the form of the resurrection life will be fully personal appears in the expectation that God's people will share fellowship with one another and with God, and will enjoy the Messianic banquet (Mt 8[11], Lk 13[29]), which was a traditional Jewish picture of final privilege and blessing.

(*b*) *The Fourth Gospel.*—The Gospel of John rarely speaks about the resurrection of the wicked, but 5[29] shows that it was expected. As in the Synoptic Gospels, attention centres almost entirely on the resurrection of believers to a privileged life with God and Christ. Jesus as the Son of God is the active agent in raising the dead (5[25, 28f] 6[39f, 44, 54]); He is 'the resurrection and the life' (11[25]), which means not only that 'in him was life' (1[4]) but also that He gives life now (3[36]) and through the resurrection of the dead at the last day. The climactic miracle and sign of the Fourth Gospel, the raising of Lazarus from the dead (ch. 11), is an acted parable of this resurrection power which the Father has given to Jesus to exercise during His ministry and at the final day. This Gospel emphasizes strongly the present gift of life to all who believe, but it does not discard the common early Christian theme of the gift of true, perfect, and endless life by the resurrection at the end of history.

5. The Resurrection of Jesus.—The NT teaching concerning the resurrection centres in the key event of the entire NT history, the resurrection of Jesus Himself. For every NT preacher and writer resurrection is not merely an inherited doctrine, an intellectual inference, or a wistful hope; it is an assured fact, placed beyond doubt by the resurrection of Jesus Christ from the dead by the power of God. Both the OT message and the teaching and cross of Jesus are understood in the light of this central act of God. The present life of the believer and the future work of God are likewise understood in the light of the solid fact that Christ is risen and is the living Lord of His Church.

This confident affirmation of the resurrection of Jesus was a key item in the original apostolic message. The disciples rallied after the crucifixion because they became convinced that God had raised Jesus from the dead. The rise, growth, and courage of the Church finds its one adequate explanation in the fact of the resurrection. It thus is no surprise that the apostolic preaching centred in this fact. The apostle chosen to succeed Judas was to 'become with us a witness to his resurrection' (Ac 1[22]). The key affirmation of the Pentecost message was: 'This Jesus God raised up, and of that we all are witnesses' (Ac 2[32]). This preaching aroused the opposition of the priestly leaders of the Jews, and motivated the persecution of the apostles (Ac 3[26] 4[2]). The Apostolic Church was not built upon Jesus as a prophet or martyr; from the beginning the Church was the Church of the risen Christ, the living Lord of His followers and the destined Lord of all.

When therefore the Gospels tell that Jesus rose from the dead they share the common theme of all NT preachers and writers. Paul illustrates this fact; in 1 Co 15[4-8] he tells of the appearances of the risen Christ, and he indicates that except for his own encounter with the risen Christ these appearances were basic Christian tradition delivered to him within a very few years after the event.

The Gospels raise questions by their narratives. (1) Where did the risen Christ first appear to His disciples? In Galilee (Matthew, Mark by implication) or in Jerusalem (Luke, Jn 20)? Appearances no doubt occurred in both places, but it may be that the Eleven first saw the risen Christ in Galilee and then returned to Jerusalem. (2) In what form did the risen Christ appear to the disciples? In the same physical body He had during His earthly ministry or in a transformed body? The somewhat baffling details of the resurrection narratives suggest a real identity of person with a decisive transformation of mode of existence. (3) Is the finding of the empty tomb part of the original resurrection story? All four Gospels tell of finding the tomb empty; the phrase 'after three days' or 'on the third day' clearly describe an event which left the tomb empty; the Jews never produced the dead body of Jesus because they could not do so; the tomb was empty. God's resurrection act had transformed the body of Jesus. This is what the Gospels mean; it is what Paul teaches in 1 Co 15; it is implied throughout the NT (*e.g.* 1 P 1[21]), where the resurrection of Jesus is followed by an exalted state of glory.

The NT never presents the resurrection of Jesus as merely the subjective recovery of faith and courage by the disciples, or as merely the survival of death by Jesus, so that His soul proved immortal while His dead body was discarded. The resurrection meant first of all the bringing back of Jesus to renewed and higher life, in a form continuous with but no longer identical with His earthly physical life. He came back to personal contact and relationships with His closest followers. Yet it was not mere restoration to former relations; the disciples in every case sensed an exaltation, a higher form of life, and their meetings with the risen Christ were limited in number and in duration. The new status of Christ transcended the physical and spatial limitations of His earthly ministry. After the resurrection He possessed the same body or form of personal presence and activity that He will have for all time to come.

6. The Resurrection of Mankind.—The expectation of a general resurrection was not new in first-century Judaism; probably by that time most Jews held such a view. But the Apostolic Church held the expectation in a special form, and could not be frightened or shamed by either Sadducean opposition (Ac 4[2]) or Hellenistic scepticism (Ac 17[32] 25[19] 26[8, 23f]). The risen Christ is to be the 'judge of the living and the dead' (Ac 10[42], 2 Co 5[10]). This involves the resurrection of all the dead in order that they may be judged. The focus of attention in the NT is on the resurrection of believers in Christ, but some passages specifically refer to the resurrection of both wicked and righteous or by mention of a general

judgment make it clear that a general resurrection is expected (Mt 8^{11f} 25^{31-46}, Jn 5^{28f}, Ac 10^{42} 24^{15}, Ro 2^{6-10}, Rev 20^{11-15}).

But on the whole the resurrection of the wicked receives scant attention in the NT and little light is thrown on how they are to be raised. Emphasis rests rather on the promise—a certainty in the light of the resurrection of Christ—that faithful believers will be raised. The close link between Christ and His followers will not be broken by death; it will hold fast and lead to their resurrection (Ro 6^{5}, 1 Co 15^{22}, 1 Th 4^{14-18}).

This hope of resurrection at the last day was never abandoned; it was a constant and integral part of the Christian hope. The assertion that 'the resurrection is past already' (2 Ti 2^{18}) was roundly condemned as an attack on an essential Christian conviction. Nevertheless, for Christians the resurrection doctrine no longer had a purely future reference. For one thing, Christ had been raised and was the living Lord of the Church; He was henceforth 'the first fruits of those who have fallen asleep' (1 Co 15^{20}); the new age had begun to dawn. Now, through faith, those who believed in Him knew the transforming Divine power which effected a changed life. This 'newness of life' was a present fact; Christians were already 'raised with Christ' (Ro $6^{4,11}$, Co 3^{1}). It is not clear how widely the present Christian life was definitely described as a risen life, but the sense of thrilling newness, the awareness of the Spirit's inspiring and transforming presence, and the references to rebirth (Jn 3^{3-6}, Ti 3^{5}, Ja 1^{18}, 1 P 1^{3}) show that the Church knew the power of the new age to be already active in a preliminary way. The eschatological sequence pictured by the Apostolic Church was not limited to purely future events; it began in the work and resurrection of Christ, continued in the lives of loyal believers, and would reach dramatic and full expression at the last day, when the resurrection, judgment, and final establishment of the eternal Kingdom would mark the completion of the purpose of God.

There are rare suggestions that the resurrection of mankind will be realized in two stages, with the righteous dead rising first and the wicked later. Some have seen this pattern in 1 Co 15^{23f}; on this view 'the end' in v.^{24} is the time for the resurrection of the wicked. Rev 20^{4-6} is sometimes interpreted along this line, but while it speaks of two resurrections, the first does not include all the righteous, but only the martyrs for Christ; they will be raised and given a special privilege of unhindered fellowship with Christ before the final defeat of Satan and the resurrection of the rest of mankind. Some of those raised in the second resurrection will be saved, but since they were not martyrs they will not be included in the first resurrection. As a general rule, however, the NT makes no such distinction; it almost always speaks simply of the resurrection, with no indication that it will occur in two stages.

The form of life after the final resurrection is discussed in detail only in 1 Co 15. Paul's views in this chapter probably represent the usual Christian view of the Apostolic Age. In response to those at Corinth who, probably in the interest of a doctrine of the immortality of the soul, disowned the common Christian idea of the resurrection of the body, Paul insisted that just as Christ had really been raised and given a spiritual body, so His followers would be raised and given a new and perfect form of existence. There would be a real continuity with the former physical body, yet 'flesh and blood cannot inherit the kingdom of God' (v.^{50}), and so the new body will be a spiritual body, fit for the perfect life of the eternal Kingdom. He thus asserts continuity of personal life, perfect form of existence in the future life, free fellowship with God and Christ (as 1 Th 4^{17} says, 'we shall always be with the Lord') and with other redeemed people. This social fellowship is probably part of the meaning of the table fellowship expected (Mt 8^{11}); this figurative language need not imply a literal physical body and physical eating in the final Kingdom. As in 1 Co 15, so also in Ph 3^{21} Paul expects Christ to 'change our lowly body to be like his glorious body.' No doubt some believers thought of the resurrection in literally physical terms, but the common conviction that the body of Jesus had been transformed and made glorious would imply what Paul specifically asserts, that the Christians also are to be given a higher form of existence, a new body, a perfect instrument of full spiritual life and fellowship.

For the resurrection of Jesus see further JESUS CHRIST 17.

F. V. F.

REU.—Son of Peleg, Gn 11^{18-21}, 1 Ch 1^{25}, Lk 3^{35} (AV Ragau).

REUBEN.—The eldest son of Jacob, by his wife Leah (Gn 29^{32} JE, or L). The etymology of the name is obscure. From the forms of the name in Josephus and the Peshitta it has been inferred that the original form of the name was Rubil or Rubel. This might be either an animal name, from the Arabic word for a lion, or a theophorous name compounded with Baal. The Hebrew derivation is an artificial one, intended to connect the name with the circumstances of Reuben's birth.

The incidents recorded in Genesis of Reuben's personal history are (*a*) he finds mandrakes in the field (Gn 30^{14}); this provides the occasion for a barter transaction between Leah and Rachel, and an explanation for the name of Issachar; (*b*) he lay with Jacob's concubine, Bilhah (Gn 35^{22}), an incident which is said to have brought upon him his father's curse (Gn 49^{4}); (*c*) he intervenes to prevent Joseph's brethren from killing him (Gn 37^{21}). How far these episodes are to be taken as evidence for the existence of Reuben as an historical character is open to question. The second episode is made the explanation for the chequered history of the tribe of Reuben, and it is with the history of Reuben as a tribe that most of the remaining references to Reuben are concerned.

The first point to be noted is the grouping of the tribes in the various tribal lists (Gn 49, Nu 26, Nu 1). In each of these lists the same group of six tribes comes first, headed by Reuben, Simeon, and Levi. Of these three, Reuben is said to have suffered a diminution of population; Simeon disappears as a tribe, and is apparently absorbed by Judah; while Levi also disappears as a territorial tribe, and becomes the priestly tribe. The second point is that in the narratives of the settlement of the tribes, Reuben, Gad, and the half-tribe of Manasseh (Machir), are associated as a group located on the E side of the Jordan (Nu 32, Jos 13^{15-31}). Thirdly, the Song of Deborah (Jg 5^{15-16}) seems to picture Reuben as settled in pasture-land in Canaan W. of the Jordan; and a tradition in Jos 15^{6} 18^{17} mentions a place called 'the stone of Bohan, the son of Reuben,' situated to the S. of Jericho. Noth suggests (*History of Israel*, p. 64) that as Hebrew *bōhen* means 'thumb,' the name of the place was originally 'thumbstone,' and that Bohan was later taken to be a personal name and connected with a tradition that Reubenites had lived in the district. Lastly, the Reubenite family of Carmi (1 Ch 5^{3}) is assigned in Jos 7^{1} to the tribe of Judah, from which it may be inferred that the Reubenites who lived in the neighbourhood of Judah were ultimately absorbed into the tribe of Judah. From these various elements of tribal tradition it may be inferred that in the earliest stages of settlement Reuben, Simeon, and Levi occupied some part of the central territory W. of the Jordan, and had then, for reasons which are not clear, dispersed, migrated, and made room for the Ephraim tribes which occupied that district later. Reuben probably never had any definite tribal boundaries W. of the Jordan, and when the scattered elements of the tribe migrated to the E. of the Jordan, they shared the territory already occupied by Gad (Gilead).

There is much to recommend Noth's theory that the six tribes previously referred to had, in the early period of settlement, constituted a tribal society or league with its religious centre at Shechem. (For the arguments in support of this theory cf Noth, *History of Israel*, pp.

86–89). A tradition is preserved in 1 Ch 5[10, 18–22] that in the time of Saul the Reubenites made war on the Hagrites (q.v.), *i.e.* the Ishmaelites, and occupied their territory until the captivity, by which is meant the invasion of Tiglath-pileser III. in 734 B.C. when most of the northern tribes were carried away to Assyria. Whether Reuben had maintained its separate identity as a tribe to so late a date is open to doubt. S. H. He.

REUEL.—1. A son of Esau, Gn 36[4, 10, 13, 17], 1 Ch 1[35, 37]. **2.** The father-in-law of Moses, Ex 2[18], Nu 10[29] (AV in the latter **Raguel**). See HOBAB and JETHRO. **3.** Nu 2[14] (AV, RV); see DEUEL. **4.** A Benjamite, 1 Ch 9[8].

REUMAH.—The concubine of Nahor, Gn 22[24].

REVELATION.—1. Modern use of the word.—A common modern usage has been to speak of 'revelation and reason' as the two possible forms of access to the knowledge of God. For Biblical study this contrast has a double disadvantage; firstly that this contrast and the definition of its terms are not drawn from Biblical thought, and secondly that it implicitly lumps together all human knowledge of God apart from direct Divine action as 'reason' and all human knowledge which depends upon such action as 'revelation.' Twentieth-century theology in fact makes much less use of this contrast. In many circles, however, it continues to speak of revelation as a comprehensive term for all forms of Divine self-communication. Almost any kind of Divine action or utterance is thus treated as 'revelation.' The use of the word in the Bible is, however, considerably less comprehensive and more particular, and the use of the word as a blanket term may only obscure the sense of particular occurrences.

2. Method of this article.—We shall proceed here therefore strictly from the Biblical usage of words meaning 'reveal,' and shall not discuss such traditional problems as 'revelation and reason,' 'general revelation,' or 'revelation in nature' except in so far as they are forced on us by the Biblical statements. For the other method, readers are referred to the articles 'Revelation' in Richardson, *Theological Word Book of the Bible*, and Allmen, *Vocabulary of the Bible*. A strict investigation of the word 'reveal' may help us to judge whether the above problems are, in the light of Biblical thinking, correctly and appropriately posed. We shall not accept as material any terms for Divine communication in general, such as 'to speak' or 'to make known.'

3. Biblical words for revealing.—The English word is derived from a Latin word meaning to unveil or uncover, and this sense adequately represents the Greek *apokalyptō*, the noun from which is *apokalypsis*, apocalypse. Similar to this Greek word is the Hebrew root *gālāh* to uncover, of which it is the usual translation in the Septuagint; the related compound *anakalyptō* also represents *gālāh* quite frequently.

Of other terms that which may be most closely associated with our subject is the group 'manifest' (Gr. *phaneros*), 'to make manifest' (*phaneroun*) etc. Members of this group do a few times represent Hebrew *gālāh* 'uncover' in the LXX, so that the possibility has to be considered that in the NT 'reveal' and 'manifest' may occasionally be roughly synonymous. An examination of the passages, however, suggests that they are not usually interchangeable without shift of sense or reference. Occurrences of 'manifest' will not therefore be normally adduced here.

4. Common uses in the OT.—A basic and frequent use of 'uncover' in the OT is with reference to the human body. Ruth 'uncovers the place of the feet' to lie down near Boaz (Ru 3[4]). The uncovering of the body is often strongly associated with shame and impropriety; so Is 47[2f], part of the humiliation of Babylon. In particular, some of the law codes describe incest or intercourse with a menstruous woman as 'uncovering of nakedness' and peculiarly abominable. This lies in a tradition of custom where propriety demands that certain things should not be uncovered, a tradition also expressed in the story of paradise where after man's disobedience he felt shame for his nakedness and God mercifully gave him a covering.

The word can also be used for a document which is left open and not sealed.

We also find the usage of 'to uncover the ear,' hence to disclose—my father, says Jonathan, does nothing great or small without uncovering my ear, 1 S 20[2]. This leads on to—

5. Usage in the prophets.—The prophets are granted special sensitivity in vision and audition. So Samuel's ear is uncovered, 1 S 9[15], and Nathan's, or David's through Nathan, 2 S 7[27]. He whose ear is uncovered by God receives a message from God. Similarly, the eyes are uncovered in the case of Balaam, so that he sees a vision of God (Nu 24[4, 16]). These ways of speaking are not, however, common in the classical prophets.

More important and characteristic for the classical prophets is Amos's affirmation (3[7]): 'Surely the Lord God does nothing without revealing his secret to his servants the prophets.' 'Secret' is rather too precise here; it means the private discussion in which God's mind has been made up, on the basis of which He will act. What God uncovers to the prophet is His decision and purpose; hence the validity and the urgency of the prophetic message. The wisdom literature warns against the gossip who discloses private discussion (Pr 20[19] etc.); but God discloses His private counsel to His servants. Amos is probably using a rather original metaphor here, for 'revealing' did not become a technical term among the prophets for the source of their message, and it appears elsewhere among the prophets only of Samuel (1 S 3[7, 21]) and Isaiah (22[14]) apart from the uncovering of eye or ear already mentioned. The prophet, speaking of the source of his message, usually says not 'God revealed,' but 'I saw' and 'I heard.'

6. God and His revealing.—The assertion that God reveals Himself is infrequent, and of the many Divine appearances in the Pentateuch it is used only once, Gn 35[7]; also in the Samuel and Isaiah traditions, 1 S 3[21], Is 22[14]. These are, however, sufficient to indicate that God is covered or hidden from normal human access, but hardly to show how far this hiddenness is complete or absolute. The revealing is at the will of God and is not conditioned by human effort.

Some important cases also occur where it is the glory (Is 40[5]) or the deliverance or vindication (Is 56[1], Ps 98[2]) of God which is to be revealed. The important thing in these is that the revealing is in the future or is the impending or immediately past appearance of something new, such as the judgment of the world in righteousness. A purpose or status which has not been hitherto clear or properly recognized is now to be made evident.

We also find a significant usage in which it is sin or evil that is uncovered or revealed, Ezk 21[24], Hos 7[1], Is 26[21]. One may conceal or ignore evildoing, but in the time of God's visitation it becomes evident. The sky reveals the iniquity of the wicked man, Job 20[27]; secret evil passions will be exposed, Pr 26[26], Sir 1[30]. The prophets should have uncovered the sin of Jerusalem, but failed to do so, La 2[14].

Rather exceptional is Jer 11[20] 20[12], where Jeremiah expects God's vengeance on his enemies, 'for to thee have I revealed my case' (RSV 'committed my cause'). Here man uncovers or discloses to God.

God's power may be seen when he uncovers elements of the world which are inaccessible to men, Job 12[22], Ps 18[15].

It is commonly suggested that God revealed Himself in His 'mighty acts' in the history of Israel, and especially in the Exodus complex; but curiously not a single certain case exists of a use of the word 'reveal' for the events of the Exodus and Mount Sinai. 1 S 2[27] refers not to the Exodus story but to a particular revelation to the ancestors of the house of Eli. To say that these mighty acts are the centre of revelation in the OT would seem therefore incongruous with actual usage. Dt 29[29] would seem to mean that the sphere of human obedience is the

world open and accessible to man, unlike the hidden world which is reserved to God (cf 30[11-14]).

7. Apocalyptic literature.—'To reveal mysteries' is a frequent phrase in Dn 2, and the theme of the chapter is that 'there is a God in heaven who reveals secrets.' The depth of the mystery is apparent because the king cannot tell the dream which is to be interpreted; but also because the content of the secret, once known, is the scheme of the sequence of the earthly kingdoms which in due time are succeeded by the kingdom of God. The contribution of this class of literature is to heighten the sense of deep mystery which has to be broken through, and on the other hand to discern a movement through a number of historical epochs to a culmination 'in the latter days.' The treatment in Daniel is in some ways related to the Israelite Wisdom conception; yet it is made clear that Daniel's success is not the result of his own wisdom, 2[30]. Similarly, in a writing of similar date, God reveals His secrets not to the lofty but to the meek, Sir 3[19].

The Book of Enoch uses the phrase 'reveal secrets' more liberally than Daniel, and in other connexions. There are cosmological secrets of the skies, secrets of invention which the evil angels revealed to men, the name of the Son of Man which is to be revealed. Enoch's commission is to reveal the hidden things for a future generation. But the content of the secrets is less connected with a historical movement than in Daniel, and the atmosphere is more otherworldly and fantastic.

8. General NT usage.—The simple sense 'to uncover' of a body or the like is not found, and usage is therefore more specialized in a theological direction. Some cases with a fairly general sense 'disclose' appear, as Mt 10[26], 'Nothing is covered that will not be revealed,' cf Lk 12[2], both apparently in warnings against the insincerity of enemies, and so in the OT tradition of Pr 26[26] and the like. Mk 4[22] gives a different setting and slant to the saying, using 'manifest' rather than 'reveal.' In Lk 2[34-35] the coming of Jesus will create unrest in Israel and uncover the secret thoughts of many, again a development of the OT tradition, and for the sense cf He 4[12-13]. Lk 2[32], 'a light for revelation to the Gentiles' may rather be a linking of Is 42[6] and 49[6] and mean 'a light for the bringing forth of the nations to the light.'

9. The Father revealed.—The phrases 'God reveals himself' and 'the revelation of God,' remarkably enough, do not occur, and the passage which comes nearest thereto is Mt 11[25-27], Lk 10[21-22], where 'no one knows the Father except the Son and any one to whom the Son chooses to reveal him.' Father and Son are known only to each other, but the Son may reveal the Father to whom He wishes. Nothing is said of revealing the Son; nor do we hear that the Son is the revelation of the Father. The central point is the reciprocity of Father and Son, and within this theme the unique place of the Son, to whom 'all things have been delivered,' as having sovereign authority to reveal the Father. Two verses earlier we hear of the Father hiding 'these things' from the wise and revealing them to babes. 'These things' may perhaps be the Divine counsel as in Am 3[7], announced by John the Baptist or the seventy disciples, and disclosed to the simple as Sir 3[19].

It is appropriate to take along with this Mt 16[17], where the content of the revealing is the recognition of Jesus as the Christ. The source of this disclosure is not within humanity but is 'My Father who is in heaven.' That Jesus is the Christ is not evident and unmistakable, especially when He does not declare Himself as such, and is a secret which must be broken through. This only the Father grants. Mt 11[27] and 16[17] might reasonably be taken together as complementary. The Son alone reveals the Father. The Father does not reveal the Son, He discloses who Jesus is. The examples here cannot be generalized as cases of 'divine revelation,' since they are significant only within the schema of Father and Son in which they are given.

10. Future revelation.—A much more frequent usage in the NT is to indicate something that is hidden for the present time but will be uncovered in the end-time. In that time the Son of Man will be revealed. Lk 17[30] (cf 'the coming of the Son of Man,' Mt 24[37]). The Day of Judgment itself is to be revealed, 1 Co 3[13] (probable meaning). We speak of 'the revelation of Jesus Christ' precisely because He is the one whom we now do not see but love and trust, 1 P 1[7-8], so 1[13]. This way of speaking is frequent in 1 Peter, where we have also 'a salvation ready to be revealed in the last time' (1[5]).

This usage is found notably in connexion with the revealing of 'glory.' We now share in the sufferings of Christ, but later will share in His glory which is to be revealed, 1 P 4[13] 5[1]. Paul also knows of this future glory; its revelation is 'the revealing of the sons of God' in their glory, Ro 8[17-21]. Cf the thought in Col 3[3-4], where the term 'manifest' or 'appear' is used.

Future revelation is not only of Christ and the glory of His followers, however, but also of the ultimate expression of evil, the 'man of lawlessness' of 2 Th 2[3, 6, 8]. Evil is now at work, but is at least to some extent veiled in secrecy; but its true nature must be disclosed in order that it may be destroyed. Cf the uncovering of sin by the Divine visitation in the prophets, and the eliciting of the enemies of Israel to their destruction, Ezk 38–39.

11. Mystery and Spirit.—The term 'mystery' in the sense of a secret Divine purpose embracing the ages and culminating in the establishment of the Divine kingdom is inherited in the NT from Apocalyptic. This mystery was not known to other generations as 'it has now been revealed to his holy apostles and prophets by the Spirit' (Eph 3[5]); its content here in particular is the place of the Gentiles in the Divine purpose, in 1 Co 2[6-10] it is the hidden meaning of the death of Christ. The precise reference in Ro 16[25] is not easy to fix, but probably is the respective places of Jew and Gentile as in Eph 3[5]. The sense of the word 'mystery' in the NT seems to go beyond this, but this seems to cover those cases where the word is used with 'reveal' or 'revelation.' The verb 'make to know' is more frequent.

The place of the Divine Spirit in uncovering mysteries is also found in Daniel (4[8f, 18] 5[11, 14]). The place of the Spirit in these NT passages just discussed may be understood from the general work of the Spirit as giving a foretaste of future realities still inaccessible to ordinary contact. The full meaning of the Divine plans becomes evident only at the end, but the Spirit reveals or discloses them even now to chosen people.

12. Direct revelation.—What has just been said leads us on to notice how often 'revelation' in the NT refers to a particular reception by a person at a particular time. When the church assembles, each has a hymn, a lesson, or a revelation (1 Co 14[26]); when one is speaking, revelation may come to another who is sitting (14[30]). This is a direct personal revelation as it is understood to come to prophets, as it came also to the OT prophets (1 P 1[12]); the book of Revelation is intended as an example of this, and is so entitled (Rev 1[1]). Such direct revelations are frequently mentioned by Paul. One of them may well coincide with his conversion experience, the 'revelation of Jesus Christ' (Gal 1[12, 16]); another seems to be special guidance (Gal 2[2]). The revealing of the mystery of Gentile participation in the plan of God is also of this kind (Eph 3[3]); other revelations are of the heavenly world (2 Co 12[1, 7]). The strong presence of, or possession by, the Spirit is characteristic of this type of revelation (Rev 1[1]) and they come among the 'spiritual gifts' of 1 Co 12–14.

13. Righteousness and wrath.—Ro 1[17-18] speak of the righteousness of God being revealed in the gospel, and go on to say that the wrath of God is revealed from heaven against the ungodliness of man. The first phrase is close to Ps 98[2] (see above), and the sense in general that the righteousness of God is not something naturally self-evident, and Paul's unashamed attachment to the gospel is because in it this righteousness is disclosed. The revealing of wrath lies somewhat in the

prophetic tradition of the uncovering of evil at the approach of God, but goes farther in that it suggests not that the evil was hidden but that the Divine reaction of anger was hidden.

14. General and Conclusion.—It can scarcely be doubted that 'reveal' is a very important word of Biblical vocabulary. It is not, however, extremely frequent, and its distribution is uneven (*e.g.* no cases in Mark except in the Freer MS ending, and none in the Johannine literature). And as soon as we go beyond the general sense 'uncover,' which seems to be common to all occurrences, it is doubtful whether we can identify any 'Biblical concept of revelation' with which all cases would fit. In particular, it is doubtful whether the common theological use of 'revelation' for the Divine self-communication is appropriate in the light of the Biblical usage. In usage, 'reveal' has certain quite definite and particular connexions in which it appears, and these are an important part, but not the whole, of the Divine communication with man.

Whether traditional problems such as 'revelation and reason,' 'general revelation' or 'revelation in nature' are to be posed depends therefore on whether we wish our language to be conformed to Biblical usage or not. If we do so wish, we have no reason to suppose that anything like 'reason' or 'nature' was ever thought of in connexion with, or as a contrast to, revelation; and as for 'general revelation,' all the Biblical evidence is for revelation as special and particular, with its own content of communication in each situation. The now common theological use of 'revelation' for divine self-communication in general needs to be criticized wherever it has grown too far away from the Biblical usage. See also INSPIRE, INSPIRATION. J. Ba.

REVELATION, BOOK OF.—This is the only apocalypse in the NT. Like other apocalypses Revelation shows dependence on various other religious writings, borrowing 245 times from the OT, 9 times from the NT, and suggesting inferences in many places from the Apocrypha and the Pseudepigrapha. It is mostly in prose; only 37 of its total 394 verses are in poetry ($4^{8, 11}$ 5^{9f} 7^{15-17} 11^{17f} 13^{10} 15^{3f} 16^{5-7} $18^{2-8, 10, 14, 16, 19-20, 21-24}$ $19^{1-5, 6-8}$). Its language is shrouded with mystery, its ideas are clothed in imagery, symbolism, myth, and numerology. The number 'seven' is used 54 times as applied to such objects as the churches, seals, heads, trumpets, angels, bowls, and plagues. Multiples of 12 and 1000 are used: the names of the faithful are 144,000; the crown has 12 stars; there are 12 gates around the New Jerusalem; the city is 12,000 stadia in length, breadth, and height. The Roman emperor cult is symbolized as a beast with 10 horns and 7 heads; the number of the beast is 666; the time of terrible persecution is to be 42 months, 3½ years, 'time, times, and half a time.' The word 'apocalypse' means 'revelation' or 'uncovering.' Hence as the student interprets the truths hidden amid the mysterious figures the purpose of Revelation is unfolded.

1. Outline of the Book.—With the author's artistic use of the numbers 'seven' and 'ten' the book fits naturally into seven acts and ten scenes, exclusive of the Prologue and the Epilogue:

Prologue 1^{1-8}
Act I First Vision, $1^{9-3}22$. *The Son of God in the Earthly Church*
Scene 1, Setting for John's Initial Vision (1^{9-20})
Scene 2, Letters to the Seven Churches (2, 3)
Act II Second Vision, 4^{1}–8^{1}. *God's Plan for History*
Scene 3, John's Vision of the Court of Heaven (4^{1}–5^{14})
Scene 4, Opening of the Seven Seals (6^{1-17})
[The first parenthesis, Vision of the Redeemed (7^{1-17}); Silence in Heaven (8^{1})]
Act III Third Vision, 8^{2}–11^{19}. *The Church Faces Trouble*
Scene 5, Blowing of the Seven Trumpets (8^{7}–9^{21})
[The second parenthesis, Vision of the Book (10^{1-11}); Prophecy Regarding Israel's Repentance (11^{1-13}); Voices Speak from Heaven (11^{14-19})]
Act IV Fourth Vision, 12^{1}–14^{20}. *The Battle Won by the Righteous in Heaven is Transferred to Earth*
Scene 6, The Third Parenthesis: The Oracles about the Last Judgment (12^{1}–14^{20})
Act V Fifth Vision, 15^{1}–16^{21}. *God's Wrath Visits the World*
Scene 7, Pouring of the Seven Bowls: The Last Plagues (15^{1}–16^{21})
Act VI Sixth Vision, 17^{1}–20^{10}. *Judgment Visits 'Babylon'*
Scene 8, Vision of the Fall of the Great Harlot (17^{1}–18^{24})
Scene 9, Vision of the Return of the Victorious Christ (19^{1}–20^{10})
Act VII Seventh Vision, 20^{11}–22^{5}. *God's Purpose is Consummated in the 'New Jerusalem'*
Scene 10, Vision of the New Jerusalem (20^{11}–22^{5})
Epilogue 22^{6-21}

2. Canonicity.—R. B. Y. Scott views Revelation as written in Hebrew and translated into Greek. C. C. Torrey believes it was written in Aramaic and translated into Greek. Most present-day scholars assume that Revelation was originally composed in Greek, agreeing with Dionysius of Alexandria that the Greek in Revelation is unusual, with no parallel in the NT.

The Revelation was not universally accepted by the early Church as canonical. There is no evidence of its existence worthy of consideration in the writings of the Apostolic Fathers, although it is just possible that Papias may have known of it. By the middle of the 2nd cent., however, Revelation is well known, and is declared by Justin to be by the Apostle John (*Dial.* lxxxi. 15). It is also used, among others, by Melito, Tertullian, Clement of Alexandria, and Origen, and attributed to the Apostle John by the first-named as well as by Irenaeus. The fact that it appears in the Canon of the Muratorian Fragment is evidence that by the middle of the 2nd cent. it was accepted in the West. After its defence by Hippolytus its position was never seriously questioned except in the East. Jerome is, in fact, the only Western theologian of importance who doubts it, and he puts it among those books which are 'under discussion,' neither canonical nor apocryphal.

In the East, as might be expected, it was rejected by Marcion, and, because of disbelief in its Apostolic authorship, by Dionysius of Alexandria (middle of the 3rd cent.). Palestinian and Syrian authors (*e.g.* Cyril of Jerusalem) generally rejected it, in large measure because of the struggle with the Montanists, by whom Revelation was used as a basis of doctrine. It does not appear in the lists of the Synod of Laodicea, the *Apostolic Constitutions*, Gregory of Nazianzus, Chrysostom, the *Chronography* of Nicephorus, the 'List of the Sixty Books,' or in the Peshitta version of the NT. It was included by the Gelasian Decree at the end of the 5th cent. as canonical, and was finally recognized by the Eastern Church. Yet as late as 692 a Synod could publish two decrees, the one including the Apocalypse in the Canon, the other excluding it. It was not held in high repute by the Reformers Carlstadt, Luther, Zwingli, all of whom doubted its apostolicity. Luther placed Revelation along with Jude, James, and Hebrews in an Appendix.

3. Integrity.—In our earliest NT manuscripts the entire Book of Revelation is found in Codex Sinaiticus and Codex Alexandrinus. Codex Ephraemi has the following lacunae: 3^{19}–5^{14} 7^{14-17} 10^{10}–11^{3} 16^{13}–18^{2} 19^{5}–22^{21}. Several views, however, have been suggested regarding the composition of the book.

(1) One view is that the work, while essentially a literary unit, is *a Christian redaction of a Jewish writing*. This view would attribute to the Christian redactor the first three chapters and important sections like 5^{9-14}

7^{9-17} 13^{11ff} 22^{6-21}, in addition to separate verses like 12^{11} $14^{1,5}$ $12^{13,15}$ 16^{15} 17^{14} $19^{9,10,13b}$ 20^{4-6} 21^{5b-8}. The difficulties with this position are not only those which must be urged against any view that overlooks the evidences of the composite authorship of the work, but also the impossibility of showing that ch. 11 is Jewish in character.

(2) *Theories of composite origin.*—These are of various forms—(*a*) The theory according to which an original work has been interpolated with apocalyptic material of various dates (7^{1-8}, $9-17$ 11^{1-13} $12^{1-11,12-17}$ 13^{17}) and subjected to several revisions. (*b*) The view that Revelation is a Christian book in which Jewish apocalypses have been framed. (*c*) The theory according to which Revelation is composed of three sources, each of which has subdivisions, all worked together by a Christian redactor. (*d*) Notwithstanding the difficulty in determining the sources, critics are fairly well agreed that, as the book now stands, it has a unity which, though not inconsistent with the use of older material by its author, is none the less easily recognized. Some of this older material, it is now held, undoubtedly represents the general stream of apocalyptic that took its rise in Babylonian mythology. The structural unity of the book appears in the repetition of sevenfold groups of episodes, as well as in a general grammatical and linguistic similarity. In achieving this remarkable result, the redactor so combined, recast, and supplemented his material as to give the book an essentially Christian rather than Jewish character.

(3) While Revelation borrows from the OT, the book as a whole in its literary development seems to have unity. The consistency of the texts found in codices Sinaiticus, Ephraemi, and Alexandrinus points to the fact that interpolations or deletions from the original text were slight and negligible.

4. Date.—Various dates have been assumed for the writing of Revelation: (1) in the latter part of Nero's reign (A.D. 54–68); (2) during the days immediately preceding the fall of Jerusalem in A.D. 70; (3) during the reign of Vespasian (A.D. 69–79), after the fall of Jerusalem; (4) in the latter part of Domitian's reign (A.D. 81–96), about A.D. 95. Irenaeus, Clement of Alexandria, and Pliny support the date A.D. 95. The myth of Nero's suicide and resuscitation and the expectation of his return with his soldiers from Parthia also fit smoothly into the latter part of Domitian's reign.

5. Authorship.—Dionysius of Alexandria said that John Mark was possibly the author. Eusebius described him as John the Elder. Irenaeus designated John the disciple of the Lord as its author. Justin Martyr viewed the work as written by John the Apostle. While we are not certain as to which John wrote the book, we note certain characteristics about him: (1) he was possibly a Jew well versed in the Scriptures; (2) he had perhaps learned Greek rather late in life, as is evidenced by his often awkward Greek style; (3) he was a church leader, well known to the seven churches of the Province of Asia; (4) he was a deeply religious man, with great faith in the ultimate victory of the Christian religion over the demonic forces of the world; (5) he was not an eyewitness of Jesus, for he never refers to personal reminiscences of Jesus' life, and never indicates himself as an apostle or disciple; he refers to himself as a servant (1^{1}) and a brother (1^{9}); (6) he was a literary genius, his skilled artistry giving us one of the most important and beautiful of the apocalypses.

6. Interpretation.—Revelation was written from Patmos, a small, rocky, sparsely populated island in the Aegean Sea, fifteen miles SW. of Ephesus; today it is known as Patino. It was originally addressed to the seven churches of Asia, to encourage them to be faithful during the impending persecution under Domitian and thus prepare themselves for the great reversal on the Day of Judgment and for citizenship in the New Jerusalem. But it has been interpreted in a variety of ways: (1) Some view it as a book to be ignored, with no value or significance for a scientific age. (2) Others hold to the *futurist* interpretation, believing that it accurately foretells what will happen in the last days of history before the end of the world. (3) The *preterist* interpretation sees many of its predictions already fulfilled in the fall of Jerusalem in A.D. 70 and the downfall of the Roman Empire in 476. (4) The *continuous-historical* view, for which Revelation depicts important historical events in the time of various Popes, Martin Luther, Napoleon, Kaiser Wilhelm, Mussolini, Hitler and others. However, since the Church has already passed through these events, this interpretation is not highly esteemed today by many people. (5) The *timeless-symbolic* interpretation, which holds that the author had no specific historical situation in mind, but sets forth a philosophy of history wherein Christian forces are continuously meeting and conquering the demonic forces of evil. Its symbols describe this everpresent conflict. (6) The *demythologizing* approach sees the religious ideas in Revelation clothed in myth—such as the Roman emperor cult, symbolized as a beast with ten horns and seven heads. We must now 'demythologize' the book and try to find the underlying truths which lie beneath the mythological symbols. (7) Incorporating much of the demythologizing interpretation of Revelation is the *religious-historical* method. It asks the reader first to study Revelation in the light of events in Domitian's time, when the return of Nero was expected, and to learn what the book had to say as an encouragement to the faithful Christians of that time. Then the reader must come back to the present day, and partly by demythologizing the symbols of the book and partly by unravelling its initial religious truths, ask what religious teaching it contains for the contemporary world. As the reader discovers the message which encouraged Christians to be faithful to God and Christ, when the forces of evil tried to dominate the world, its present religious value becomes clear. It assures us that God, through the fidelity of Christians, will overcome the demonic forces in the world, and that God will reward His martyrs and faithful followers at the end of this age with citizenship in the New Jerusalem.

The first beast with ten horns and seven heads (13^{1-10}) symbolizes the ten Roman emperors from Tiberius (A.D. 14–37) to Domitian (A.D. 81–96); the second beast (13^{11-17}) symbolizes the priesthood of the Roman emperor cult who, with the aid of Roman soldiers, are forcing the Christians to worship the emperor as a deity. The 'number of the beast,' 666 (13^{18}), probably refers to Nero, who was rumoured to have been revived after his suicide in A.D. 68, hurried to Parthia, and from there with ten Parthian satraps was expected soon to return to the Roman Empire—though later it was thought he would be released from Sheol where he was imprisoned until the final battle at Armageddon against Christ and His faithful followers. The *Nero redivivus* myth—'the beast that you saw was, and is not, and is to ascend from the bottomless pit and go to perdition' (17^{8})—fits best into the period of Domitian's reign. It was amid the threatening circumstances of Domitian's time that the Book of Revelation encouraged its readers to be faithful to God and to Christ, rather than yield to pressure and worship Domitian as 'Lord and God.' Such a book, through the long centuries and still today, has continued to encourage faith and loyalty despite the demonic forces which have repeatedly threatened to dominate the world.

S. M.—T. S. K.

REVENGE.—See AVENGER OF BLOOD, KIN (NEXT OF).

REVERENCE.—See FEAR.

REVISED STANDARD VERSION.—See ENGLISH VERSIONS, 37.

REVISED VERSION.—See ENGLISH VERSIONS, 35.

REVIVE.—In 1 K 17^{22}, 2 K 13^{21}, Neh 4^{2}, Ro 14^{9} (RV, RSV 'live again'), 'to revive' is literally 'to come to life again,' as in Shakespeare, 1 *Henry VI*, I. i. 18—'Henry is dead, and never shall revive.' We thus see the force of Ro 7^{9}, 'When the commandment came, sin revived, and I died.'

REWARD.—In the Bible God is conceived of as inflexibly just, and so as punishing the evil and rewarding

the good (Is 62[11], Pr 1[31] 24[12], Ob [15], Mt 16[27], Eph 6[8], 2 Ti 4[14], He 2[2f]; cf Rev 18[6]). He punishes the sin of Adam and Eve (Gn 3[16–19]), of the generation of Noah (Gn 6[5–7]), of the people of Sodom (Gn 18[20f]), of those who violate His Covenant (Ezk 17[19]), of Israel (2 K 17[23] and often), and of foreign nations (Am 1[3]–2[3], Is 10[12]). His **punishment** is conceived for the nation in terms of defeat at the hands of enemies or of natural disasters (Dt 28[15–68]), or for the individual in terms of death (Ezk 18[4], Ro 6[23]) or misfortune (2 Ch 26[20], Jer 11[11] 28[16]). Nevertheless, God's justice is often tempered with mercy, and while He never exceeds desert in punishment, He may spare the sinner all he deserves (Ps 103[10]). To those who keep His Covenant He gives reward (Ps 19[11], Am 5[4]), usually conceived in the OT in terms of material blessing (Dt 28[1–14]). In Dn 7 those who suffer through their loyalty to Him are promised the reward of authority and power (cf Mt 19[28], 2 Ti 2[12]). There are, however, passages in the OT which penetrate to a deeper understanding. In Ps 73 the psalmist envies the prosperity of the wicked, and then comforts himself with the thought that their prosperity is fleeting, but finally realizes that since he has God he has the true reward which he would not change for their prosperity. Similarly Job ceases to cry out against God when he finds in his very suffering an experience of God that surpasses all he had known before as sight surpasses hearsay (Job 42[5f]; cf 2 Co 12[9]). In the NT the reward is commonly looked for in the future (Mt 25[34–40], Lk 14[14], 2 Ti 4[8], Rev 7[14–17]), where it is conceived in terms of bliss in the presence and service of God rather than in self-indulgence and sensuous enjoyment. The punishment of the evil is to be evil, and the reward of the holy is to be holy (Rev 22[11]).

H. H. R.

REZEPH.—A city mentioned in the message of the Rabshakeh of Sennacherib to Hezekiah, 2 K 19[12], Is 37[12]. It is the *Raṣappa* or *Raṣapi* of the Assyrian inscriptions, the modern *Ruṣâfeh*, between Palmyra and the Euphrates. This district belonged for several centuries to the Assyrians, and many of the tablets show it to have been an important trade-centre. Between 839 and 737 B.C. the prefects who had authority in the place were, to all appearance, Assyrians, only one, of unknown but apparently late date, having a name which may be West Semitic, namely Abda', possibly a form of Abda or Obadiah. T. G. P.

REZIA, 1 Ch 7[39] (AV).—See RIZIA.

REZIN.—From the ancient versions and the cuneiform inscriptions it is clear that the form should be *Razon* or *Razin*.

1. The last king of Damascus. Towards the close of the 8th cent. B.C. Damascus and Israel were under the suzerainty of Assyria. Tiglath-pileser III. enumerates the articles paid him in tribute by *Raṣunnu* of Damascus and Menahem of Israel (738 B.C.). **Pekah**, one of Menahem's successors, joined Rezin in the attempt to throw off the yoke. Failing to secure the co-operation of Ahaz, they turned their arms against Judah (734 B.C.). (2 K 16[6] mentions, among the incidents of the campaign, that 'Rezin, the King of Aram, recovered Elath for Aram, and drove the men of Judah from Elath.' This statement originated in a scribal error, the *r* of *Aram* having been substituted for the *d* of *Edom*, with which it is almost identical, and Rezin's name having been added later [cf 2 Ch 28[17]]. RSV corrects the error and renders 'the King of Edom recovered Elath for Edom'). The two allies besieged Jerusalem, greatly to the alarm of the populace, and Isaiah strove in vain to allay the terror (Is 7–9). Ahaz implored aid from Tiglath-pileser, to whom he became tributary (2 K 16[8]). On the approach of the Assyrians, Pekah was murdered by his own subjects. Damascus sustained a siege of more than a year's duration, but was eventually taken (732 B.C.); Rezin was slain (2 K 16[9]), and his kingdom became subject to Assyria (cf *ANET*, p. 283).

It is not known who '**the son of Tabeel**' (Is 7[6]) was. Winckler proposed to identify him with Rezin (*Alttest. Untersuchungen*, pp. 74 f), but this is most improbable. Tabeel seems rather to be a place name (cf Albright, *BASOR* 140, December 1955, pp. 34 f). The 'son of Tabeel' would then be a Tabeelite whom the confederates purposed to seat on the throne of Judah.

2. The 'sons of Rezin' are mentioned as a family of Nethinim (q.v.) in Ezr 2[48], Neh 7[50], 1 Es 5[31] (AV, RV **Daisan**—another confusion of *r* and *d*). They may have been of foreign descent. J. T.—H. H. R.

REZON.—According to 1 K 11[23–25], Rezon, son of Eliada, was one of the military officers of that Hadadezer, king of the little realm of Zobah (cuneiform, *Subiti*), S. of Damascus and not far from the Sea of Tiberias, whom David overthrew, 2 S 8[2ff]. For some unknown reason he deserted Hadadezer, gathered a band of freebooters, seized Damascus, and founded there the dynasty which created the most powerful of the Syrian kingdoms. He was a thorn in Solomon's side, and his successors were bitter adversaries of Israel. The text seems to be in some disorder. The LXX omits vv.[23–25a] and for v.[25b] reads 'This is the evil which Hadad did; and he abhorred Israel, and reigned over Edom,' and this is probably correct. The story appears, with some variations, in the LXX after v.[14a], where it is quite out of place. There is no reason to doubt that it is ancient and authentic. The suggestion that Rezon should be identified with **Hezion** (q.v.) of 1 K 15[18] is accepted by many.

J. T.—H. H. R.

RHEGIUM (now *Reggio*) was an old Greek colony near the SW. extremity of Italy, and close to the point from which there is the shortest passage to Sicily. Messana (modern Messina) on the opposite side is but six miles distant from Rhegium. The whirlpool of Charybdis and the rock of Scylla are in this neighbourhood, and were a terror to the ancient navigators with their small vessels. Rhegium was in consequence a harbour of importance, where favourable winds were awaited. The situation of the city exposed it to changes of government. In the 3rd cent. B.C. Rome entered into a special treaty with it. Soon after 90 B.C. it acquired municipal status. In NT times the population was mixed Graeco-Latin. Greek was spoken here throughout imperial times. St. Paul's ship waited here one day for a favourable S. wind to take her to Puteoli. Ac 28[13] describes how the ship had to tack ('make a circuit') to get from Syracuse to Rhegium, owing to the changing winds. A. So.—F. C. G.

RHEIMS VERSION.—See ENGLISH VERSIONS, **29.**

RHESA.—A son of Zerubbabel (Lk 3[27]).

RHODA.—The name of the maid-servant in the house of Mary, John Mark's mother, when St. Peter came there on his release from prison by the angel (Ac 12[13]).

A. J. M.

RHODES was one of the most important and successful cities in ancient Greece, at the NE. corner of the island of the same name, which is 43 miles long and 20 miles wide at its widest. In 408 B.C., during the war with Athens, it became the federal capital of the island by the union of three Dorian city-states, Ialysus, Lindus, and Camirus. The situation was admirable, and the people were able to take advantage of it and to build up a splendid position in the world of commerce. It reached the summit of its prosperity in the 2nd cent. B.C., after the settlement with Rome in 189 made it mistress of great part of Caria and Lycia. Its fleet was one of the most famous in the ancient world, and its maritime law had wide influence. Rome's trade interests were seriously threatened by this powerful rival, and in 166 B.C. Rome declared the Carian and Lycian cities independent, and made Delos a free port. Its conspicuous loyalty to Rome during the first Mithridatic War was rewarded by the recovery of part of its former Carian possessions. It took the side of Caesar in the civil war, although most of the East supported Pompey, and suffered successive misfortunes, which reduced it to a common provincial town, though it remained a free city in Paul's time, and retained its fine harbours, walls, streets, and

stores. Paul touched here on his way from Troas to Caesarea (Ac 21[1]), as it was a regular port of call on that route. Rhodes is mentioned in 1 Mac 15[23] as one of the free States to which the Romans sent letters in favour of the Jews. Ezk 27[15], according to the LXX, reads 'sons of the Rhodians': this is probably correct (so RSV; AV, RV **Dedan**); cf Gn 10[4] (LXX) and 1 Ch 1[7] (LXX) where the Hebrew is Dodanim and Rodanim. The famous *Colossus* was a statue of the sun-god at the harbour entrance, 150 feet high. It stood only from 280 to 224 B.C. The Temple Chronicle of Lindus is important for the history of Hellenistic religion.

A. So.—**F. C. G.**

RHODOCUS.—A Jewish traitor (2 Mac 13[21]).

RIBAI.—The father of Ittai or Ithai, 2 S 23[29], 1 Ch 11[31].

RIBBAND.—Found only in AV in Nu 15[38] in the expression 'ribband (RV, RSV 'cord') of blue.' In the same expression it is rendered 'lace' in Ex 28[28, 37] 39[21, 31] in AV, RV and RSV.

RIBLAH.—1. An important town (modern *Ribleh*) and military station on the eastern bank of the Orontes, 50 miles S. of Hamath. It is mentioned in the Bible only in the literature of the Chaldaean period, and was apparently the headquarters of Nebuchadrezzar the Great for his South-Syrian and Palestinian dominions. From this position the Phoenician cities of the coast were within easy command, as also were Coele-Syria and the kingdom of Damascus, along with the land-routes leading farther S. Here judgment was pronounced upon Zedekiah and his officers (2 K 25[6, 20f], Jer 39[5f] 52[9ff]).

The statement of 2 K 23[33], that Pharaoh Neco put Jehoahaz in bonds at Riblah in the land of Hamath, is to be corrected by the parallel passage 2 Ch 36[2], where the transaction is said to have taken place in Jerusalem itself. The true reading is, 'and Pharaoh Neco removed him from reigning in Jerusalem' (cf also the LXX). It was the later action of Nebuchadrezzar with regard to Zedekiah, above referred to, that suggested the change in the text. The phrase 'in the land of Hamath' (2 K 25[21]) is to be compared with the 'nineteen districts of Hamath' enumerated in the Annals of Tiglath-pileser III.

Riblah should be read for **Diblah** (RV, AV Diblath) in Ezk 6[14] (so RSV). See **2.**

2. Riblah (with the article) is, if the reading is correct, mentioned as one of the eastern boundary marks of Israel in Nu 34[11]. The place intended was not far NE. of the Sea of Galilee, but the exact site is unknown.

It was, of course, not the Riblah on the Orontes. It is remarkable, however, that this Riblah is mentioned in connexion with the 'approach to Hamath' (v.[8]), which, as Winckler has shown, was on the SW. of Mount Hermon, and the centre of the kingdom of Hamath of the time of David. Cf Ezk 6[14] as above corrected.

J. F. McC.—**J. Gr.**

RICHES.—See WEALTH.

RIDDLE.—The Hebrew *ḥîdhāh* means a perplexing or obscure observation, and it includes what we mean by 'riddle.' It is rendered 'riddle' in AV only in Jg 14[12ff], Ezk 17[2]. Elsewhere it is rendered '**dark saying**' (Ps 49[4] 78[2], Pr 1[6]), 'dark speech' (Nu 12[8]), 'dark sentence' (Dn 8[23]), or 'hard question' (1 K 10[1], 2 Ch 9[1]). RV agrees in all cases, but has 'riddle' in margin in Pr 1[6]. RSV has 'dark saying' in Ps 78[2], 'dark speech' in Nu 12[8], and 'hard question' in 1 K 10[1], 2 Ch 9[1], but 'riddle' in all the other passages. In Hab 2[6], for *mᵉlîṣāh ḥîdhôth* AV and RV have 'taunting proverb' (with RVm 'taunting riddle'), and RSV 'scoffing derision.' The word is commonly rendered in LXX *ainigma*. This word is found in Wis 8[8] (AV 'dark sentences,' RV 'dark sayings,' RSV 'riddles'), Sir 39[3] (AV 'dark [parables],' RV 'dark sayings [of parables],' RSV 'obscurities [of parables]') 47[15] (AV and RV 'dark [parables],' RVm '[parables of] riddles,' RSV '[parables and] riddles'). In NT *ainigma* is used once, in 1 Co 13[12] (AV and RV 'darkly,' AVm and RVm 'in a riddle,' RSV 'dimly'). See also PARABLE (IN OT).

RIE (the AV spelling of '**rye**') occurs twice (Ex 9[32], Is 28[25]) in AV as rendering of *kussemeth*, which in Ezk 4[9] is rendered 'fitches.' In all three passages RV and RSV have '**spelt.**' Whatever *kussemeth* was, it was neither true rye, which is a cereal unknown in Palestine, nor spelt. See FITCHES.

RIGHTEOUSNESS.—I. IN OT.—'Righteousness,' 'righteous' (except in a few passages) stand in EV for some offshoot of the Semitic root *ṣdḳ* which, in Arabic, originally appears to have meant either 'straightness' (Nöldeke, Delitzsch) or 'hardness' (Skinner). The former is probably the sounder. The Hebrew words are the adjective *ṣaddîḳ*, and the nouns *ṣedheḳ* and *ṣᵉdhāḳāh* (indistinguishable in meaning) and the verbal forms *ṣādhaḳ*, *hiṣdîḳ*, etc. This group of words is represented in EV in about 400 passages by 'righteousness,' 'righteous' and the like: in the remainder, about one-fifth of the whole, by 'just,' 'justice,' 'right,' 'salvation.' RSV has made more use of such a rendering as 'innocent,' particularly in forensic contexts.

The material can conveniently be arranged under two heads: (1) 'righteousness' in common speech; (2) 'righteousness' in religious terminology. It has been held that the development of the idea of righteousness in OT moves in the opposite direction to that traversed by the idea of holiness, *i.e.* from man to God rather than from the Divine to the human, and there is some truth in this.

1. 'Righteousness' in common speech.—(*a*) It is perhaps safest to begin with the forensic or juristic application. The plaintiff or defendant in a legal case who was in the right was 'righteous' (RSV 'innocent,' Dt 25[1], Is 5[23]), and his claim resting on his good behaviour was 'righteousness' (1 Kg 8[32]). A judge who decided in favour of such a person gave 'righteous judgment,' literally 'judgment of righteousness' (Dt 16[18]), judged 'righteously' (Dt 1[16]). The Messianic King was to be the ideal judge, and this meant he would be 'swift to do righteousness' (Is 16[5]) and 'with righteousness he shall judge the poor' (11[4]), and 'righteousness shall be the girdle of his waist' (v.[5]). A court of justice was, in theory, 'the place of righteousness' (Ec 1[16]). The purified Jerusalem would be 'a city of righteousness' (Is 1[26]). On the other hand, corrupt judges 'cast down righteousness to the earth' (Am 5[7]), and 'deprive the innocent of his right' (Is 5[23]: RV 'take away the righteousness of the righteous from him'). (*b*) From the forensic use is readily developed the general meaning 'what is right,' 'what ought to be,' though some scholars reverse this order and think that the idea of 'rightness' comes first. Indeed, it is probably better to take the earlier idea to be 'in the right,' 'conforming to the norm,' 'conforming to the standard.' Balances, weights, and measures which came up to the required standard were 'just balances,' etc., literally 'balances of righteousness' (Lv 19[36]), whilst their converse were 'wicked scales' and 'deceitful weights' (Mic 6[11]) or 'false balances' (Am 8[5]). (*c*) Righteous speech also, *i.e.* truthful speech, came under the category of 'righteousness.' 'Righteous lips,' literally 'lips of righteousness,' 'are the delight of a king' (Pr 16[13]).

2. Righteousness in religious terminology.—(*a*) For the ancient Hebrew, 'righteousness' was especially *correspondence with the Divine will*. This is why it is better to think of the original idea as 'in the right,' 'conforming to the norm,' especially when we remember that the thought of God was perhaps never wholly absent from the mind of the Hebrew when he used the word. Note, for this conception of righteousness, Ezk 18[5–9], where doing 'what is lawful and right (*ṣᵉdhāḳāh*)' is illustrated by a number of concrete examples followed up by the general statement, 'walks in my statutes, and is careful to observe my ordinances—he is righteous.' The Book of Ezekiel has many references to righteousness thus understood. (*b*) As the Divine will was revealed in the Law, 'righteousness' was thought of as *obedience to its rules* (Dt 6[25]). Restoration of a pledge at sun-down was 'righteousness'

(Dt 24[13]). The avenging deed of Phinehas was 'reckoned to him as righteousness' (Ps 106[31]). And so 'the Lord is righteous, he loves righteous deeds' (Ps 117: literally 'righteousness'). (*c*) In most of the passages quoted, and in many places in Ezekiel, Job, Proverbs, and Ecclesiastes, the righteousness of the individual is referred to; but in others Israel (Ps 14[5] 97[11] 118[20] etc., Is 41[8-11] and other parts of Deutero-Isaiah, Hab 1[13] etc.), or a portion of Israel (Is 51[1, 7] etc.) is represented as 'righteous.' (*d*) Since righteousness is conformity to the Divine will, and since Israel was often unrighteous, the righteousness of God would then be revealed only in judgment (Is 1[37] 5[16] 10[32]), and in nationalistic contexts it was revealed in judgment on their heathen oppressors (Ps 40[9f] 98[2] etc.). (*e*) On the other hand, beginning with Amos, a fundamental element in the ethical teaching of the prophets is a special consideration for the poor and the unprivileged. This is because if righteousness and justice are to be established there must be most said in cases where they do not exist. God's righteousness is therefore particularly concerned with the poor and those who have no helper. Thus *ṣ^edhāḳāh* tends to pass over from being a barely ethical word into the vocabulary of salvation. *Ṣ^edhāḳāh* stands primarily for the establishment of God's will on earth. It becomes a wider term than justice. God has a particular regard for the helpless. Thus, already in OT, there is 'a righteousness which is better than that of the scribes' (Dalman). In the Targums and the Talmud, the Hebrew *ṣ^edhāḳāh* and the corresponding Aramaic *ṣidhḳāh* most frequently mean 'almsgiving' and 'benevolence,' so that in modern Hebrew a benevolent deed is a *ṣ^edhāḳāh*. This development of *ṣ^edhāḳāh* to suggest mercy, benevolence, leads to the fact that in a number of passages, especially in Is 40–66, 'righteousness' is practically synonymous with 'salvation' (Is 45[8] 46[13] 51[5f] 58[8] 59[9] 61[11] 62[1]; many passages in Psalms [22[32] 24[5] etc.], Mal 4[2] [Heb 3[20]]). In addition we have such a passage as Ex 9[27], where Pharaoh says, 'The Lord is in the right (*ṣaddiḳ*),' meaning 'victorious'; this passage, combined with the idea of 'salvation,' gives the translation 'whom victory (*ṣedheḳ*) meets at every step' (Is 41[2]). For more on this subject cf JUSTIFICATION.

II. IN NT.—The Greek equivalents of *ṣaddiḳ*, *ṣedheḳ*, etc., are *dikaios* (81 times), 'righteous,' 'just'; *dikaiōs* (5), 'justly,' 'righteously'; *dikaiosynē* (92), 'righteousness'; *dikaioō* (39), 'justify'; *dikaiōma* (10), etc.

In the teaching of Jesus (Mt 5[6, 10, 20] 6[1, 33] 21[32], Jn 16[8, 10]), and in NT generally, 'righteousness' means, as in OT, conformity to the Divine will, but with the thought greatly deepened and widened. In Mt 6[1] the Textus Receptus has *eleēmosynē* (pity, almsgiving, charity), and the alternative reading is *dikaiosynē* ('righteousness,' RSV 'piety'), a plain case of the benevolent meaning of the Hebrew *ṣ^edhāḳāh*. For a fuller treatment, cf JUSTIFICATION, since the Greek words are usually translated 'justification,' 'justify.'

W. T. S.—N. H. S.

RIMMON (god).—'The Thunderer,' cf Akkadian *ramânu*, 'to roar.' The deity whom Naaman the Syrian and the King of Damascus worshipped in his temple, probably at Damascus (2 K 5[18]). The god was known to the Assyrians as *Ramanu*, a title of **Hadad** (q.v.), the god of storm, rain, and thunder, called in Syria Ba'al, *i.e.* 'the lord.' The identity of Rimmon with Hadad and his significance in the religion of the Aramaeans of Damascus is confirmed by the fact that Hadad occurs as an element in the theophoric name Benhadad, borne by several kings of Aram, and Tabrimmon, the father of Benhadad, the contemporary of Asa of Judah (1 K 15[18]). (On the particular features of this god and his cult in Palestine as Hadadrimmon, see HADAD.)

J. Gr.

RIMMON.—1. A Beerothite, 2 S 4[2, 5, 9]. **2.** The rock whither the remnants of the Benjamites fled, Jg 20[45, 47] 21[13]. It has been identified with a lofty rock or conical chalky hill, visible in all directions, on the summit of which stands the village of *Rammûn* about 3 miles E. of Bethel. **3.** A city in the south of Judah, towards the border of Edom, Jos 15[32]; in 19[7] (AV **Remmon**; RSV **En-rimmon**), 1 Ch 4[32] counted to Simeon. In all these three passages Rimmon is preceded by 'Ain,' which should probably be combined with it to yield **En-rimmon** (q.v.). In Zec 14[10] Rimmon is named as lying S. of Jerusalem. **4.** A city of Zebulun, Jos 19[13] (AV **Remmon-methoar**); called **Dimnah** (probably a copyist's error for *Rimmonah*) in Jos 21[35], and **Rimmono** in 1 Ch 6[77] (AV **Rimmon**); modern *Rummâneh*.

RIMMONO.—See RIMMON, 4.

RIMMON-PAREZ, Nu 33[19f] (AV).—See RIMMON-PEREZ.

RIMMON-PEREZ.—A stopping-place on the wanderings, Nu 33[19f] (AV **Rimmon-parez**). It is possibly modern *Naqb el-Biyâr*, W. of *'Aqaba*.

RING.—See ORNAMENTS, 2, 4. In Ca 5[14] for AV and RV 'ring' we should read '**cylinder**,' with RVm. The comparison is either with the fingers of the hand, or with the arm, as RSV 'His arms are rounded gold.'

RINGSTRAKED.—See COLOURS, 6.

RINNAH.—A Judahite, 1 Ch 4[20].

RIPHATH.—One of the sons of Gomer, Gn 10[3]; called **Diphath** in 1 Ch 1[6] (RV, RSV; AV **Riphath**).

RISSAH.—A stopping-place on the wanderings, Nu 33[21f]. It is possibly modern, *Kuntilet el-Jerâfî*.

RITHMAH.—A stopping-place on the wanderings, Nu 33[18f]. The site is unknown.

RIVER.—For the meaning and use of *'âphîḳ*, *y^{e'}ōr*, and *naḥal*, sometimes rendered 'river,' see BROOK. *Yûbhal* (Jer 17[8]), *'ûbhal* (Dn 8[2f, 6]), are from the root *yâbhal*, 'to flow.' *Pelegh*, 'division,' signifies an artificial water-channel, used for irrigation (Ps 1[3] etc.). It is used poetically of the stream bringing the rain from the great storehouse on high (Ps 65[9]). *T^e'ālāh* (Ezk 31[4]) is properly a 'channel' or 'conduit' (so 2 K 18[17] 20[20], Is 7[3] 36[2], also Job 38[25] RV). The usual word for river in OT is *nâhār* (Job 40[23], Ps 46[4] etc.). It is often used of rivers that are named: *e.g.* the rivers of Eden (Gn 2[10] etc.), the Euphrates (Gn 15[18] etc.), the rivers of Damascus (2 K 5[12]). The Euphrates is called '**the river**' (RSV 'the Euphrates,' Gn 31[21] etc.), and '**the great river**' (Gn 15[18], Dt 1[7]), a title given also to the Tigris (Dn 10[4]). *Aram-naharaim* (Ps 60 [title], also Heb. Gn 24[10], Dt 23[4]), 'Aram of the two rivers,' is Mesopotamia. The word appears to have been used like the Arabian *nahr*, only of perennial streams. It is applied, indeed, to the Chebar (Ezk 1[1]) and the Ahava (Ezr 8[21]), while in Ps 137[1], Nah 2[6], Ex 7[19] 8[5], canals seem to be intended. The NT word is *potamos* (Mk 1[5] etc.).

In the figurative language of Scripture the rising of a river in flood signifies the furious advance of invading armies (Jer 46[7f] 47[2], Is 8[7]). The trials of affliction are like the passage of dangerous fords (Is 43[2]). The river is significant of abundance (Job 29[6] etc.), and of the favour of God (Ps 46[4]). To the obedient, peace is exhaustless as a river (Is 48[18]; cf 30[28]). Prevailing righteousness becomes resistless as an overflowing stream (Am 5[24]). And in several at least semi-eschatological passages the ideal Jerusalem is pictured as the source of a life-giving river, or rivers, which will flow down to fertilize barren places (Ps 46[4], Is 33[21], Ezk 47[1], Jl 3[18], Zec 14[8], Rev 22[1]).

Palestine is not rich in rivers in our sense of the term. The Jordan is perhaps the only stream to which we should apply the name. Apart from the larger streams, the *wâdy* of the mountain is sometimes the *nahr* of the plain before it reaches the sea, if in the lower reaches it is perennial. The location and modern names of the 17 or so main 'rivers' may be found on any good physical map of Palestine.

The rivers may be crossed today, as in ancient times, by **fords**. When the rivers are in flood, tragedies at the fords are not infrequent. Possibly this gave rise to the old belief in an antagonistic river-deity, which seems to

lie behind the story of Jacob's wrestling-match at Penuel (Gn 32^{22ff}). The rivers that open into the Mediterranean have their main fords at the mouth. The sand washed up by the waves forms a broad bank, over which the water of the stream spreads, making a wide shallow.

W. E.—D. R. Ap.-T.

RIVER OF EGYPT.—See EGYPT (RIVER OF).

RIZIA.—An Asherite, 1 Ch 7^{39} (AV Rezia).

RIZPAH.—Daughter of Aiah, concubine of Saul, seized by the ambitious Abner after he had placed Ishbosheth (Ishbaal) on the throne. When accused by the king, Abner, who was the real ruler of Israel, promptly proffered the Northern Kingdom to David, 2 S 3^{7}. A three years' famine was divined to be due to the displeasure of Yahweh at the slaughter of the Gibeonites by Saul. When David inquired what expiation he should make, the Gibeonites refused money compensation, but demanded descendants of Saul to expose before Yahweh. The king gave them two of Rizpah's, and three of Michal's (RSV Merab's) sons, who were slain and exposed on Mount Gibeah, 2 S 21$^{1-14}$. Rizpah spread sackcloth on the rock—a sign that the land repented—and watched the dead till the anger of Yahweh relented, and the rain came. Her vigil ended, she was at liberty to perform the rite of burial. J. H. St.

ROADS AND TRAVEL.—In RSV 'road' is frequently the rendering of Hebrew *derekh*, for which AV and RV normally have 'way.' 'Highway' renders Hebrew *m^{e}sillāh*, which means a raised road or embankment (from *sālal*='cast up'). For the chief trade routes through Palestine, see TRADE AND COMMERCE, 7. '**Byways**' in Jg 5^{6} should rather be 'roundabout ways.' In Jer 18^{15} '**bypaths**' (RV, RSV) are opposed to the old tracks.

ROBBERS OF CHURCHES.—See CHURCHES [ROBBERS OF].

ROBE.—See DRESS.

ROBOAM, Mt 1^{7} (AV)=**Rehoboam** (q.v.).

ROCK represents various Hebrew words, which, generally speaking, have the same ideas as the English—strength, security, height, etc. (cf Stanley, *SP*, Appendix). The rocks named in OT are Oreb (Jg 7^{25}, Is 10^{26}), Etam (Jg 15^{8}), Rimmon (20^{45} 21^{13}), the crags Bozez and Seneh (1 S 14^{4}), Sela-hammahlekoth (23^{28} AV, RV; RSV 'Rock of Escape'). In 2 K 14^{7}, Is 16^{1} 42^{11} 'the Rock' (RV and RSV '**Sela**') is a proper name, Sela or Petra, the rock-city *par excellence*; in Jg 1^{36} (RVm and RSV 'Sela') the identification is doubtful. Rocks were the haunt of the eagle (Job 39^{28}), of the wild goat (v.^{1}), or the coney (Pr 30^{26}); cf Ps 104^{18}. Pr 30^{19} refers to the mysterious gliding of the serpent over a rock; Am 6^{12}, to the proverbial impossibility of horses running over crags. Dt 32^{13} emphasizes the fact that in Palestine even the rocks are the home of bees (cf Ps 81^{16}, Is 7^{19}), and the rocky soil produces olives (Job 29^{6}). Besides this natural marvel, we have the miracles of Ex 17^{6}, Nu 20^{8} etc. In 1 Co 10^{4} St. Paul follows a wide-spread Jewish *haggādhāh*, which can be traced to the 1st cent. A.D., according to which the rock (perhaps originally *the well*) followed Israel; when the Tabernacle was pitched, the water gushed out afresh, the princes singing the song of Nu 21^{17}. The epithet 'spiritual' does not deny the literal reality of that to which it refers; the manna was literal to St. Paul, and the water and rock must have been so too. He sees in the literal fact a foreshadowing of the Christian sacraments. Further, he identifies the rock with Christ, implying His pre-existence and care for His people; cf Philo's identification of it with the Wisdom and Word of God.

Rocks, particularly the soft sandstone of Edom, were primitive dwelling-places (Job 24^{8} 30^{6}), and were used for sepulchres (Is 22^{16}, Mk 15^{46}). Job 19^{24} refers to the permanence of the rock inscription; 28^{9} (a somewhat unusual word, 'flinty rock' RV and RSV) to mining. In Jg 6^{20} 13^{19} the rock is a natural monolithic altar; in 6^{26} translate 'strong-hold' with RV and RSV. Rocks as dangers to ships are mentioned in Ac 27^{29}, and metaphorically in Jude ^{12} RV (but RVm and Bigg retain 'spots' of AV [cf RSV 'blemishes'], which has the support of the parallel 2 P 2^{13}). The barrenness and desolation of a rock is the point of Ezk 26$^{4, 14}$, with a pun on *Tyre* (=rock); cf the unfruitful 'rock' (Lk 8^{6}), or 'rocky ground' (Mt 13^{5} RSV; cf RV) of the parable of the Sower; *i.e.* rock with a thin layer of earth. The rock meets us continually as a place of refuge, literal or metaphorical (Nu 24^{21}, 1 S 13^{6}, Is 2^{19}, Jer 48^{28} 49^{16}, Ob 3$^{}$); cf 'feet on rock' (Ps 27^{5} 40^{2}); in Is 32^{2} it is a shade from the heat. And so it is a frequent *title for God*, as the unvarying strength and support of His people (Dt 32^{4ff} [6 times], Ps 18^{2} etc., Is 17^{10} 30^{29}, Hab 1^{12}). It is often represented by 'God,' and vague terms ('help,' etc.) in the ancient versions, as well as AV and Prayer Book (*e.g.* Ps 95^{1}). A sufficient explanation of the use is found in the natural scenery of Palestine. It is doubtful how far 'Rock' (*Ṣûr*) was a definite name for God. It has been found in compounds in S. Arabian inscriptions, and occurs in the proper names of Nu 1$^{5f, 10}$ 3^{35}. 'Great Rock' is a common title of Ashur and Bel in Assyria. In Dt 32^{31}, Is 31^{9} the title is given to heathen gods, but in the latter passage the word *Ṣela*, is used. And the fact that this word is freely employed in this connexion side by side with *ṣûr* rather contradicts the supposition that the latter was technically a proper name. Convulsions of nature and the power of God are connected with breaking the rock (1 K 19^{11}, Job 14^{18}, Jer 23^{29} Nah 1^{6}, Mt 27^{51}), and in Jer 5^{3} it is a symbol of obstinacy. In Mt 7^{24} it represents the sure foundation; cf Mt 16^{18} and POWER OF THE KEYS. The name 'Peter' is a translation of the Aramaic **Cephas**, the Hebrew form of which is used Jer 4^{29}, Job 30^{6} (see PETER). For the 'rock of offence *or* stumbling,' see Is 8^{14} 28^{16}, Ro 9^{33}, 1 P 2^{6}. Precipitation from a rock was a form of execution (2 Ch 25^{12}; cf Lk 4^{29}). C. W. E.

ROCK BADGER.—See BADGER.

ROCK OF ESCAPE.—A rock or cliff in the wilderness of Maon, to which Saul returned from pursuing after David, 1 S 23^{28} (AV, RV **Sela-hammahlekoth**). It is possibly modern *Wâdī el-Malâqi*.

ROD.—The rods, sticks, staves, and clubs carried or otherwise used by the Hebrews were probably as varied in size and shape as those in use among the inhabitants of Palestine at the present day, of which a minute description, with illustrations, is given by Baldensperger in *PEFSt*, 1905, 35 ff. No hard-and-fast distinction can be made out between the *maṭṭeh*, the *shēbhet*, and the *makkēl*—all three rendered in EV by 'rod' or 'staff.' The context must generally decide which of the two is the better rendering. For example, the twigs which Jacob peeled in the device recorded in Gn 30^{37ff} are true rods; but in 32^{10} the same word (*makkēl*) is properly rendered '**staff.**' On the other hand, Moses' 'rod' (so EV) is rather his shepherd's 'staff' (Ex 4^{2} etc.).

For the rod as an instrument of punishment, *shēbhet* is more frequently employed than *maṭṭeh*, as in Pr 10^{13} 13^{24} 26^{3}, although both are not seldom employed in parallel lines (Is 10^{24} 30^{31f} etc.). The former also denotes the shepherd's **club** (q.v.; described and figured in Hastings' *DB*, iv, 291^{a}, *PEFSt*, 1905, 36), as in Ps 23^{4}, Lv 27^{32} (AV, RV 'rod,' RSV 'staff') etc. See also SCEPTRE.

A. R. S. K.

RODANIM.—See DODANIM.

ROE, ROEBUCK.—1. *ṣ^{e}bhî* and *ṣ^{e}bhiyyāh*; see GAZELLE. 2. *ya'^{a}lāh*, Pr 5^{19} (RV, RSV **doe**); see 'Wild Goat' under GOAT. 3. *'ōpher*, Ca 4^{5} 7^{3} (AV 'young roe'; RV, RSV '**fawn**'). 4. *yaḥmûr* (literally 'red'), Dt 14^{5}, 1 K 4^{23} (AV '**fallow deer**'; RV, RSV 'roebuck'). The true fallow-deer is the *'ayyāl* or hart; see HART. In the LXX *yaḥmûr* is translated *boubalos*, the bubale; but it is much more probable that it is the roebuck (*Cervus capreolus*), still called the *yaḥmûr* by some Arabs. It is a gazelle-like animal with three-branched upright horns. E. W. G. M.

ROGELIM.—The native place of Barzillai the Gileadite, 2 S 17[27] 19[31]; possibly modern *Bersíniyā*.

ROHGAH.—An Asherite, 1 Ch 7[34].

ROIMUS, 1 Es 5[8] (AV, RV).—See REHUM, **1.**

ROLL.—See WRITING, **6.**

ROMAMTI-EZER.—A son of Heman, 1 Ch 25[4, 31].

ROMAN PUBLIC LAW.—1. Jurisdiction.—The juridical capacity of the governors of Judaea differed in no known respect from that of governors of other provinces under the control of the emperor. The equestrian *procuratores* and *praefecti* of the smaller provinces such as Judaea, Thrace, and Noricum, were given powers equivalent to those held by the senators who as legates of Caesar technically held *imperium pro praetore*. (Cf Tacitus, *Ann.* xii. 60. Jos. *BJ* II. viii. 1 [117]). This gave its holder unrestricted powers of judgment in cases of civil law and of punishment for all criminal offences committed by persons of ordinary provincial status (*peregrini*). Nominally the governors held the same powers over Roman citizens in their provinces unless these exercised their right of appeal to the emperor (see below). Only the governor himself could exercise the supreme criminal jurisdiction, which unlike the civil could not be delegated to assistants. Governors gave jurisdiction either at their capital or on an annual tour of assize centres.

Minor criminal offences, which involved fines and beatings rather than such sentences as expulsion, exile, hard labour, or death, were handled not by imperial judges but by municipal courts in which the magistrates were the annually elected civic authorities (see below). These were expected to refer cases beyond their competence to the governor for trial.

The jurisdiction of the governors in the 1st cent. A.D. was remarkably unfettered either by statute laws or by rules of procedure. They might, but were not bound to, follow the definitions and penalties provided by the Roman system, or *ordo* of *leges publicae*, for the major criminal and political offences such as murder, forgery, treason, and public violence. These laws operated in Italy, and formed the *ordo iudiciorum publicorum*. Many forms of crime were outside their scope, since they were largely concerned with the offences of officials. The governor's jurisdiction was mostly '*extra ordinem*' or outside the schedule. He was left generally free to make his own definitions of crimes and penalties. Hence there were remarkable differences even in the later empire between the criminal codes of different provinces. The only check on freedom of jurisdiction lay in the consideration that excessive cruelty in the use of *imperium* might lay the governor open to complaints by the provincials to the emperor or Senate and to a prosecution under the Roman extortion law when his office had expired.

Governors were expected but not compelled to follow a customary procedure inherited from the Republican period. Initiation of charges and conduct of prosecutions were left to independent prosecutors, who might be either private persons or municipal representatives, but who were in no sense officials of the Roman government. Parties might speak for themselves or be represented by advocates. The governor sat as judge, but was expected to take the advice of a *consilium* or committee, which he selected from among his personal friends and assistants, or notable personalities of the province. This was not a jury, and he was not bound to follow its advice, but commonly he gave sentence in accordance with its opinion: '*e consilii sententia*.'

The prosecution of Roman citizens took the same form as the above with two exceptions. First, the accused, by exercising his right of appeal to the emperor (see below) could avoid provincial jurisdiction in serious charges altogether. Second, in certain provinces, which contained large numbers of Roman citizens, the Italian system of independent jury courts (*quaestiones*) was introduced for crimes covered by the *ordo*. This system did not last long in the provinces, and is clearly documented only in Cyrenaica. But on its disappearance the governors seem to have been left with the power of sentencing Roman citizens for crimes within the *ordo*, without appeal.

Such was the normal method when charges were brought to the notice of the governors by third parties. In times of riot and crisis governors and their assistants freely exercised repressive police powers of arrest and chastisement (*coercitio*) under the general authority of their *imperium*. But the tendency was only to punish summarily the man caught in the very act of crime, or accused of a minor offence. The account of the various arrests and trials of St. Paul in the *Acts* and of Christ in the *Gospels* can be explained simply according to this system. Earlier discussions have been apt not to recognize the informality of Roman procedure, and hence to create unreal difficulties and to pose unreal questions about the details of the jurisdiction of the procurators.

In the various trials of Christ and Paul either private individuals or members of the Sanhedrin acting as private prosecutors try to persuade the procurators to construe something that was an offence under Jewish law as a capital crime under his own jurisdiction (*cognitio*). The details are clearest in the accusation before Gallio, proconsul of Achaea (Ac 18[12–16]). He refused jurisdiction in terms that underlined the freedom of his tribunal: 'I do not wish to take cognisance of such matters.' So too the town clerk of Ephesus insists accurately: 'If Demetrius and his fellow craftsmen have any complaint against him, there are assizes and proconsuls. Let them plead against each other' (Ac 19[38]). The long story of the prosecution of Paul before Felix and Festus is clear in its main features. Sundry Jews were trying to involve Paul in a charge based on the contravention of Jewish custom before the tribunal of the procurator, who correctly declared: 'I will hear your case when the accusers also are present' (Ac 23[35]; cf 22[1, 30] 23[29–30] 25[9]). So too Festus later (Ac 25[16]): 'It is not the custom of the Romans to condemn a man before the accused has faced his accusers and has had opportunity to defend the charge.' But the story is confused in two sections. In the opening phase the activities of the tribune Lysias have been misunderstood. He arrested Paul in the course of an open riot under the impression that Paul was the troublemaker. Hence the prisoner was chained and scourged before questioning (Ac 21[33] 22[24]). Lysias so far was exercising *coercitio* as the subordinate officer of the procurator. Even so he was not prepared to punish the man without further investigation. The revelation of the Roman status of Paul at this moment changed the mode but not the substance of the procedure. The following scene before the Sanhedrin was not a trial, as has sometimes been supposed, but an attempt to establish the charges by gentler means, as the letter of Lysias to Felix makes clear (Ac 22[30] 23[10] 24[26–30]). The second confusion arises when the Jews, after Festus succeeded Felix as procurator, tried to have the case heard not at Caesarea but at Jerusalem (Ac 24[1–11]). Strictly, this is represented as a trial 'before,' *i.e.* 'by,' the procurator, though in an atmosphere unfavourable to Paul. But the author also implies that such a trial would amount to the mere ratification by Festus of the sentence of the Sanhedrin, as in the trial of Christ. Nothing in Roman law prevented Festus from using the Sanhedrin as his *consilium* if he so wished, provided that the actual accusers were kept distinct.

Paul was asked if he would accept this proposal. The question was political rather than legal. A Roman citizen had no right to determine the form of his trial except by the exercise of his right of appeal. Paul objected: 'I stand at the tribunal of Caesar where I ought to be judged' (Ac 25[10]). This meant only that he was prepared to accept the independent judgment of the procurator as the officer—but not strictly the delegate—of Caesar. The words were immediately followed by Paul's formal 'appeal to Caesar,' by which

he altogether avoided the risk of a virtual trial by the Sanhedrin. See also JUSTICE, 3.

Apart from these two obscurities the Acts give the normal procedure of the Roman criminal jurisdiction *extra ordinem*. The narrative continually mentions or implies in a non-technical manner the presence of accusers, charges, advocates, speeches in defence, and even the *consilium* of the procurator. The account of the trial of Christ before Pilate in the Gospels is much less precise. In Mt 27^{11-15} and Mk 15^{1-6} the charges are not mentioned, though they may be inferred from Pilate's references to Christ as a king. Pilate hears the accusers and invites Christ to reply. His silence, from the Roman aspect, left Pilate no option but to condemn him: 'Do you answer nothing? Why, what charges they make against you' (Mk 15^{4}). In Lk 23^{1-16} political charges are formulated—'stirring up the people,' 'forbidding the payment of tribute to Caesar,' 'calling himself a king'—which Pilate rejects as baseless. In these three accounts the real basis of the condemnation is left obscure. Only John (18^{31} 19^{6}) suggests directly that Pilate confirmed the sentence given by the Sanhedrin on religious grounds. There is nothing in the four accounts that contradicts ordinary Roman provincial usage: it was a long established custom to allow the subject peoples to 'use their own laws' when possible.

2. Provocatio.—The 'appeal to Caesar' of the Roman citizen in the Empire derived from the *provocatio ad populum* guaranteed by the protective powers of the Tribunes of the Plebs, which existed throughout the Republican period. In the late Republic the citizen in Italy was protected from arbitrary beating or execution at the hands of a Roman official, and could only be sentenced to such punishment by regular jury courts established by *leges publicae*. By the time of Augustus a *lex Iulia de vi publica* had guaranteed to the Roman citizen in the provinces the privileges which he enjoyed in Italy under the laws of *provocatio*. The emperor, whose powers included an extensive form of the tribunician authority (*tribunicia potestas*), took the place of the college of tribunes and of the jury courts as the effective organ of appeal. So much may be inferred from the legal text, *Sententiae Pauli*, v. 26, 1, where the original wording of the *lex* is given in part: 'Whoever kills, orders to be killed, tortures, beats, sentences, or bids to be set in bonds a Roman citizen who exercises his right of appeal, as formerly to the People, so now to the emperor, etc.' The author of Acts is aware that it was dangerous for a governor to bind or beat a Roman citizen in any circumstances, though twice he speaks loosely as if it was lawful to beat after condemnation in a court (Ac 22^{29} 16^{37-39} 22^{25}).

It is possible that the right of appeal only operated outside the sphere of crimes regulated by *leges publicae* (see above), and that governors in the Empire were empowered to execute Romans condemned for crimes within the *ordo*, either at their own tribunal or at the provincial jury courts (see above). Several examples are known of such sentences (cf Pliny, *Epp.* II. xi. 8; x. lviii. 3; Suetonius, *Galba*, ix. 1). Appeals to the emperor would then have been operative only for charges *extra ordinem*, such as those made against Paul. Hence the Jews attempted to show that Paul was also guilty of recognized crimes such as treason and sedition; the author of Acts might be right in implying that a Roman could be punished in such cases after due condemnation. In a later age governors tended automatically to send Roman citizens direct to Rome for trial, without waiting for their formal appeal (cf Pliny, *Epp.* x. xcvi. 4). The *lex Iulia* quoted above confirms Acts in the suggestion that the procurator could try and sentence Roman citizens if they did not exercise their right of appeal (Ac 27^{32}). The words of Festus should not be pressed technically against this: 'Since he has appealed to Caesar I have *determined* to send him (*sc.* to Rome)' (Ac 25^{25}). The trial could not be continued after the appeal because the *lex Iulia* did not allow any form of sentence, even to a non-capital form of punishment such as expulsion from the province, after appeal had been made. Festus consulted his advisers at this juncture because he was not familiar with the procedure (Ac 25^{12}, see below). No known rules controlled the moment at which appeal might be made.

The dispatch of prisoners in chains and under guard to Rome for trial is well documented, both for Romans and for provincial subjects (cf Josephus, *Vita*, 76 [424]; *BJ* I. xxix. 3 [577]; II. xiii. 2 [253]; Pliny, *Epp.* x. lvii. 2; S. Riccobono, *Fontes Iuris Romani Antejustiniani*, I., No. 68, 2, lines 45–50). The Prefects of the Praetorian Guard were normally in charge of such prisoners; the 'prefect of the camp' mentioned in Ac 28^{16} should be one of them. The trial might not come before the emperor himself. Later emperors commonly nominated a senior senator, or an official such as the City Prefect or the Praetorian Prefect, to hear such cases in their stead (cf Pliny, *Epp.* VII. vi. 8–11).

That Paul remained 'two whole years' without trial (Ac 28^{30}) may well be due (as is suggested in Foakes-Jackson and Lake, *Commentary*, cited below) to the failure of their accusers to appear. It is possible that he was then discharged. But the suggestion that there was a legal rule at this time allowing discharge automatically in such cases after two years is not probable. The intention of enactments of this period about absent prosecutors was to compel the absentees to complete their actions, under severe penalties—not to let the accused escape trial (cf Riccobono, *F.I.R.A.*, I., No. 44, col. ii. Generally, Marcian, *Digest*, 48, 16, 1, 7–14, on the *Senatus Consultum Turpilianum*). The edict quoted in support of this theory belongs to a much later age (*F.I.R.A.*, I., No. 91). The *lex Iulia* quoted above allowed the withdrawal of a charge only on special grounds (*Dig.* 48, 2, 3, 4).

3. Local Administration.—Control of local affairs in Roman provinces was vested in municipal authorities who enjoyed a large measure of independence. There were magistrates elected annually by assemblies of local citizens, and town councils composed either of aldermen holding office for life, as most commonly, or of persons elected annually. These authorities governed the territory surrounding and belonging to their communes with little interference from the Roman governors, except in matters affecting the upper criminal and civil jurisdiction, imperial taxation, and public disorders (cf Ac 19^{40}). The forms of government in the eastern provinces were commonly Greek, derived from the Hellenistic civilization, but pre-Greek native institutions survived in many areas, particularly in village administration, and notably in Judaea, which was an area of mingling cultures. It was Roman policy to encourage the spread of Greek forms of city government in the East, and the family of Herod supported this policy in their principalities. Caesarea, Samaria, Tiberias, and the cities of the Decapolis, were notable centres of Hellenistic influence. Acts rightly depicts Paul on his travels as much more frequently in conflict with civic authorities than with Roman governors, as at Pisidian Antioch, Iconium, Thessalonica, and Ephesus (Ac 13^{50} 14^{5} 16^{19-23} 17^{6-10} 19^{29-40}). Special privileges were enjoyed by a few cities in the East which received settlements of Roman veteran legionaries in the time of Caesar and Augustus (*coloniae civium Romanorum*). Hence the designation of Philippi in Macedonia as 'First city and colony' (Ac 16^{12}). Corinth and Pisidian Antioch were also colonies, but are not so noted in Acts (18^{1-17} 13^{14}). The Roman element, which provided the governing class of such cities, was apt to be submerged by a large population of Greeks, who formed the mass of the inhabitants. Except in frontier provinces the governors seldom had effective forces for police duties. Hence the civic authorities were responsible for the ordinary maintenance of public order, and had powers of arrest and minor punishment, but serious charges, even at Roman colonies, were reserved for the tribunal of the governors (Ac $16^{19-23, 35}$ 17^{9} 18^{12-15} 19^{38-39}). No municipal magistrate in the Roman empire could

sentence a man to death, except in a small number of cities known as 'free states' (*civitates liberae*) and 'states free by treaty' (*civitates foederatae*). Even these could not sentence Roman citizens, and appeals from their courts came to be allowed in other cases also to the governors and to the emperor. Among cities visited by Peter and Paul in Acts, Syrian Antioch, Thessalonica, and Athens were thus 'free.' So too were Tarsus itself, and probably Tyre and Sidon (Ac 12^{20}).

But local government in Palestine and southern Syria differed from most of the empire. Greek city-government existed in many coastal cities, in the Decapolis, and in the new foundations of Herod at Tiberias and Samaria. But the rest of the kingdom of Herod had a centralized Hellenistic bureaucracy similar to that of Ptolemaic and Roman Egypt. Numerous 'toparchies,' or districts of villages, were administered by *strategi*. Each village had its clerk appointed by the king. This system survived in the tetrarchies and even under the Roman procurators. But before the rise of Herod the Romans had also divided the old Jewish kingdom into five large districts, including Galilee, Judaea proper, and the region of Samaria. These were set under the government of a Council or *Synhedrion* of gentry. Traces of this system survived the Herodian period, notably in the function of the Sanhedrin at Jerusalem. This acted or tried to act as the local authority for Jewish affairs in Jerusalem and throughout Judaea. The curious dispatch of Saul to deal with Jews at Damascus, an independent city over which the Sanhedrin had no power, suggests a claim to authority throughout the Diaspora. The procurators treated the Sanhedrin as the effective town council of Jerusalem, but because of the city's turbulence exercised closer control over its affairs than was normal in other provinces. Its control over public order was limited largely to the Temple precinct by the presence of a permanent Roman garrison under a military resident (Ac $5^{17-18, 40}$ 21^{31-32}). The Sanhedrin acted as a supreme court in matters of Jewish religious and civil law. But even its religious authority was hampered by the insistence of the Romans on keeping custody of the sacred vestments of the High Priest, which through a historical accident had fallen into their hands as part of the royal establishment when the kingdom became a province. Though this control was suspended from time to time, the claim was maintained *de iure* as a useful form of political pressure (Jos. *Ant.* xv. xi. 4 [398]; xviii. iv. 3 [91]; xx. i. 2 [12]). In lacking the power of capital punishment the Sanhedrin was in the same condition as most local authorities throughout the empire. Such incidents as the stoning of Stephen and the attempt to kill Paul at Jerusalem were violations of the Roman order, like the stoning at Lystra (Ac 7^{57-60} 14^{19} 21^{30-31}). The special power of executing persons who violated the Temple sanctuary was a deliberate exception for particular reasons (Jos. *BJ* vi. ii. 4 [126]; OGIS 598).

In initiating prosecutions and complaints in the interest of the province, the Sanhedrin acts like other provincial councils of the Empire. These, composed of annually elected representatives of the provincial communes, acted as intermediaries between the province and the Roman authorities, though otherwise their functions were very different, since they had no responsibility for municipal administration, and were closely associated with the politico-religious cult of the emperor, of which their presidents were high priests. But in Roman eyes the two institutions were analogous. The Asiarchs who made trouble for Paul at Ephesus were either deputies or ex-presidents of the council of the Asian province (Ac 19^{31}).

4. Procurator and province.—The procurators of Judaea were not men experienced in provincial government. For most of them it was their first post in the administrative service following tenure of a military command at the intermediate level, as military tribune of a legion and prefect of a regiment of the auxiliary army (see below). Their training was limited to military administration and courts martial. Hence they depended greatly on the advice of their cabinet or *consilium* (see above) (cf Ac $25^{12, 23}$). Hence too the tendency frequent in Judaea to leave difficult matters to Rome or to the legate of Syria, or to take the advice of local dynasts (Ac 25^{25-27}, Lk 23^{6-12}; cf Jos. *Ant.* xviii. iv. 2–3 [88–95]; 8, 2 [261 ff]; *BJ* ii. xii. 6 [241–244]). The title, before Claudius, was probably *praefectus*, not *procurator*.

The procurator of Judaea had four or five regiments of infantry and at least one of cavalry at his disposal. This was an extremely large force by Roman standards for police duties within a province that had no problems of frontier defence. The men were not Roman legionaries but local provincial levies. The imperial army consisted in roughly equal proportions of (*a*) legions of infantry—divisions composed of Roman citizens recruited in Italy or the provinces with a paper strength of about 5550 men—and (*b*) auxiliary troops—regiments of infantry (*cohortes*) and of cavalry (*alae*)—levied mostly from the native, and often the most barbarous, inhabitants of the provinces. The cohorts had a nominal strength of either 500 or 1000 men, and the cavalry of 1000 troopers. Their commanders were entitled *praefectus* or (for the cohorts at double-strength) *tribunus*. In and after the period of Acts these officers were, like the procurators, drawn from the Roman 'equestrian' or upper and middle class. They were commonly commissioned in their thirties and might hail either from Italy or from citizen families in the provinces (see below). Sometimes they were promoted from the centurionate of the legions. The company officers of the auxiliary regiments were centurions commanding a unit of about 90 infantrymen, or *decuriones* commanding a squadron of cavalry. These officers do not correspond, as is commonly believed, to the non-commissioned officers of modern army system. Socially they belonged to the class that filled the town councils of the municipalities. They were often promoted from within the auxiliary units, though some were transferred from the legionary army. By this system men might rise socially from the proletarian to the middle class of Roman and provincial society. Auxiliary centurions were not always Roman citizens (unless they were ex-legionaries), but like the rankers of the auxiliary army they received the Roman citizenship after twenty-five years' service.

The units in Judaea were mostly recruited locally from the population of Samaria and Caesarea, according to Josephus (*BJ* ii. xiii. 7 [268]; *Ant.* xix. ix. 1 [357]; xx. viii. 7 [176]). But the *cohors secunda Italica civium Romanorum*, which is probably the unit meant in Ac 10^{1}, belonged to a special group of units originally raised in Italy from freed slaves; for this unit see the inscription in Dessau, *Inscriptiones Latinae Selectae* 9168. The *cohors Augusta* of Ac 27^{2} is less certainly identifiable among several units so named.

It was held even by Mommsen that procuratorial Judaea was not a *provincia populi Romani* before the Jewish rebellion of A.D. 66–70, and that the procurator was simply a substitute for the expropriated king, managing the kingdom in the interests of the Emperor. The point is of little practical importance, but it can hardly be maintained. Judaea in every respect resembles other kingdoms, such as Thrace, Mauretania, and Cappadocia, which were turned into provinces of the Roman empire in the time of Tiberius and Claudius, and governed by equestrian *praefecti* and *procuratores* when the former ruling house failed to produce satisfactory heirs. The reason for the use of equestrian instead of senatorial men as governors lies in the internal politics of Rome, and not in the status of the regions concerned. The introduction of Roman forms of taxation, with the attendant census, of Roman jurisdiction, and permanent military occupation, is decisive. Such kingdoms had been part of the Roman empire before they became territorial provinces; they had been at the absolute disposition of the Romans, who rearranged the principalities as they saw fit at the death or even during the lifetime of the rulers.

The procurator administered Judaea with full power akin to that of the proconsuls and *legati propraetore* of the greater provinces. But his authority (*potestas*) was subordinate to that of the *legati* of Syria, who exercised a general supervision over Judaean affairs. Both before and after the creation of the province the legates of Syria frequently intervened at times of crisis and insurrection in Judaea. This was probably enjoined in their general instructions (*mandata*) from the emperor; they had similar authority in the affairs of Cappadocia and Armenia. When unusual complaints were made against the procurator Pilate and, later, Cumanus, a special commission was given to the legate of Syria to investigate the matter and to send the offending procurators back to Rome (Jos. *Ant.* XVIII. iv. 2 [89]; XX. vi. 2 [132]; *BJ* II. xii. 6–8 [244–249]; Tacitus, *Ann.* XII. liv). But in ordinary administration the procurator was independent of the legate. He was not the deputy but the representative of the emperor, holding a power absolute in itself. Strictly the appeal of Paul from the jurisdiction of Festus to that of Caesar was not from a lower to a higher but to a different tribunal. Once sentence had been given by a provincial governor it could not normally be reversed by another court.

5. Taxation.—The procurator was responsible for supervision of the collection of the imperial taxes. The principal tax was the land tax, *tributum soli*, a percentage tax on real estate. There was also a poll tax (*tributum capitis*) and there were indirect taxes of which the customs dues, or *portorium*, was the chief. Land values were assessed by the Roman census, first made in Judaea at the establishment of the province in A.D. 6. All inhabitants were required to register their real property, if any, their persons and those of their families, in accordance with a set formula. The provincial census was usually repeated at long intervals, but nothing is known of a second census between A.D. 6 and 66. The work was organized on a municipal basis, and supervised by military officers under the authority of an imperial legate, much as described in Lk 2^{1-3} (there, however, there is a notorious difficulty about the date, which seems to have been displaced by obscurities in the chronology of the life of Christ, since Josephus dates the census under Quirinius in A.D. 6, *Ant.* XVII. xiii. 5 [355]; XVIII. i. 1 [1]). Taxes were collected by the use of tax farmers or *publicani* who probably managed the taxes of subdivisions of the province, either municipal territories or toparchies. The cities also collected local taxes for their own purpose, such as customs and sales taxes. Hence 'publicans' mentioned in the NT may be collecting either Roman or local taxes. After the Jewish revolt the emperor Vespasian confiscated the levy which Jews throughout the Diaspora paid to the Temple at Jerusalem, and treated it as an additional poll-tax on all persons of Jewish faith.

The main items of the provincial budget were the cost of armed forces and the salary and establishment of the governor. His staff were drawn from the personnel of his army. Within the client kingdoms, large and small, these expenses fell upon the local rulers, who were not required to make any direct contribution to the Roman treasury (Jos. *Ant.* XVII. xi. 4 [317–20]; XIX. viii. 2 [343–52]). But their armed forces were placed at the disposal of the legate of Syria or the procurator of Judaea in time of need.

Considerable tracts of land in the provinces were owned by the emperors. These were administered as private estates by agents of equestrian class who also bore the title of procurator, but in public law they formed part of the province in which they lay. Such was the former small principality of Jamnia from the time of Tiberius onwards. Their rents formed part of the private revenues of the emperors.

6. Roman citizenship.—All free-born inhabitants of Italy (except resident aliens) and of official Roman colonial settlements overseas were Roman citizens. In the early empire the Roman citizenship was also given to numerous native communities in the western provinces, and to individuals who either as common soldiers from the working classes or as leading men in municipalities had served Rome well. In the eastern provinces citizenship was given only to individuals and in the latter manner. Such grants were authorized by the emperor in edicts published at Rome. To secure citizenship a recommendation from an official or notable Roman was necessary, which might be secured by merit, personal influence, or bribery (as in Ac 22^{28}). Such grants were relatively common in the Greek-speaking provinces. Service in the auxiliary army (see above) opened the privilege to members of the urban and rural proletariat. Paul's family at Tarsus seems to have belonged to the commercial class of the city and might have secured the citizenship for political or economic services. Citizenship descended to all a man's children born of a legal wife who was also a Roman citizen. Births of Romans were legally registered, and certificates of birth existed, by which a man might prove his claim. New citizens were often furnished with a copy of the edict which made them citizens. False claims were liable to the death penalty. The legally freed slaves of Roman citizens also became Roman citizens, but their rights were restricted to those of private life.

The advantages of citizenship to a provincial were social and legal rather than political. The Roman citizens were the upper crust of provincial society. They enjoyed special advantages in criminal jurisdiction (see above), and in civil law their property could not be disposed arbitrarily by governors but was treated according to the rules of Roman jurisprudence. Citizenship was the key to lucrative professions. Common service in the army was a well paid employment for the toiling peasantry, and the wealthy few could enter the service of the Roman state, as military tribunes and prefects, and even rise to the governorship of provinces. Three of the twelve procurators of Judaea, including Antonius Felix, were Roman citizens who originated in the eastern provinces. The son of such a procurator might hope to enter the Roman Senate and reach the highest rank of the Roman administration. Thus Gallio, the proconsul of Achaia, originated from an 'equestrian' family in Spain.

7. Religious duties of Roman citizens.—Nominally Roman citizens were required to maintain the cults of the gods upon whose favour the safety of the state depended. They were not allowed to worship foreign deities unless their cult had been officially sanctioned by a decree of the Senate or later the emperor. This principle was only enforced when such worship was associated with immoral behaviour (*flagitia*, *scelera*) or led to civil disturbances. In the early empire the cults and followers of Isis, Magianism, and Judaism were occasionally expelled from Italy and Druidism was suppressed in Gaul on such grounds. Otherwise Romans were free to follow private religions, and in the provinces the official religions of local communities were protected. Judaism not only in Judaea but throughout the Diaspora was protected by a series of decrees which dispensed the Jews from certain obligations ordinarily required of provincial subjects but incompatible with Judaism. Hence even devout Jews like Paul found no difficulty in holding the Roman citizenship. The cults and ceremonies of the Roman gods were entirely in the hands of official priesthoods and magistracies, both national and municipal. No active co-operation was required of the private citizen. So too the new political cult of the emperor, often combined with that of *Roma* as a deity, which in various forms was encouraged throughout the provinces as a bond of loyalty, was not obligatory on private individuals. The apostles had no difficulty in bidding the faithful to 'honour the king.'

In Judaea the Roman governors took great pains to avoid thrusting the polytheistic ceremonies and symbols of the Roman state upon the notice of the Jews. The only violation of this policy was the unfortunate insistence of the third emperor, Gaius Caesar (Caligula), that his statue should be set in the Temple at Jerusalem,

in conformity with the usual practice of the non-Jewish provincial communities.

The magistrates of the Roman colony of Philippi fairly represented the theory and practice of Rome in Ac 16[20-21]: 'These men who are Jews *disturb our city* and introduce customs which it is not lawful for us as Roman citizens to take up.' Throughout Acts the Christian preachers have trouble with Roman authorities only in so far as they are thought to cause civil disturbances. The Romans, regarding them as Jews, were indifferent to their religious activity.

Apart from specific decrees about particular cults on special occasions, there were no legal enactments controlling the religious activities of Roman citizens or provincial subjects; there was no need for them. In the post-Apostolic generation, when the distinction between Jews and Christians became apparent (particularly through the claim of Jewish Christians to exemption from the new poll-tax), Christians came to be sporadically prosecuted, as earlier sects had been, for the immoral activities (infanticide, incest) supposed to be associated with their cult—*flagitia cohaerentia nomini Christianorum.* This is first clearly documented in the letter of the Younger Pliny to the emperor Trajan about the Christians of Pontus written about A.D. 110-112 (Pliny, *Epp.* X. xcvi f). Such prosecutions were sanctioned by no general enactment, but depended upon the loosely defined power of provincial governors to punish malefactors, in the system of jurisdiction *extra ordinem* (see above), for any behaviour deemed criminal by the governor. The notion that the Christians were opposed to the Roman government developed only when it was found that Christians like Jews (from whom it was never required) objected to making sacrifices to the images of the emperors. But not till the end of the 2nd cent., in the writing of Tertullian, does this appear as the main charge against the Christians.

8. Right of Assembly.—In republican Rome it was illegal to hold any public meeting except under the presidency of an official of the State. In the empire there was similar objection to the holding of private assemblies; hence the agitators at Ephesus tried to transform their demonstration into a meeting of the civic assembly, to the dismay of the city magistrates (Ac 19[31-32, 40]). This general principle appears mainly in rules controlling the formation of societies and groups —*collegia, sodalitates*—which might tend to become subversive political organizations. Some types of these, particularly those concerned with certain crafts, or those attracting men of substance, required authorization by Senate or emperor. But from the time of Claudius or Nero onwards, small associations of working men, usually connected with religious cults—*collegia tenuiorum religionis causa*—were dispensed from such necessity. In Roman eyes the early 'churches' were hardly distinguishable from such groups. Hence the Christians had no legal difficulty in holding their meetings for the agapê, preaching, and eucharist. Besides, it is improbable that the legislation controlling clubs was applied extensively in the eastern provinces before the end of the 2nd cent. A.D. In practice its serious enforcement was beyond the scope of the governors' administrative machinery in most provinces, though the civic authorities might succeed in detecting major violations.

A. N. S.-W.

ROMANS, LETTER TO THE.—1. Occasion, purpose, and character.—From beginning to end, Paul's letter to the Romans is permeated with the pastoral concern of a missionary 'to all the nations' (1[5-6] 15[14-16]). In it every man stands before God as a sinner with nothing to plead but guilty. But the judge, by sheer grace, through the death and resurrection of His Son Jesus Christ, leads him to repentance, reckons his faith as righteousness, forgives him, and changes his status from criminal in court to son and heir in his eternal kingdom of righteousness and peace and joy in the Holy Spirit. 'Justification by faith' is the Latin for this saving activity of God. Paul's Greek is *dikaiosynē tou Theou,* 'the righteousness of God,' which means that God vindicates His righteousness by loving sinners and putting them into right relationship with Himself on the basis of faith in Christ. This creative act of forgiveness sets men free from their slavery to the flesh, which rebels and defeats even their best efforts to make themselves acceptable to God by credit for obedience to His law. But God's grace-gift of life in Christ brooks no licence to keep on sinning, as if being right with God through faith were separable from doing right. Those who accept it die in baptism with Christ, who died to sin: transformed and led by the Spirit of God, they must present themselves as a living sacrifice in spiritual service in this present world, looking to the perfect righteousness which will be theirs when God sets His whole creation free from its bondage to decay. This is the gospel which Paul preaches in his letter to the Christians in Rome.

The occasion can be inferred from the letter itself in the light of Luke's narrative in Acts. Paul had long wanted to visit Rome, but his work in Asia, Macedonia, and Greece prevented. At last he was ready to turn west to Spain. But first he must go to Jerusalem with delegates from the churches in Macedonia and Achaia to make sure that the fund they had raised for the poor would be delivered and accepted in a spirit that would break down the separation between Jew and Gentile and foster unity between the Jewish Christians and their Gentile brethren. Since he was risking death at the hands of unbelievers in Judaea, his plans might once again be thwarted; and so, as he set out for Jerusalem, he wrote, telling the Romans of his intention to visit them on his way to Spain, to be refreshed by their company and then to be sped on his way by them (1[8-15] 15[14-32]). The steadfastness of his fellow believers was part of his very life (1 Th 3[8]), and the faith of the Christians in the capital was being proclaimed throughout all the Roman world. He needed strength from them and they from him, so that he and they might be mutually encouraged, each by the other's faith. His plea for their prayers and support was written sometime during his three months in Greece following the riot of the silversmiths which had ended his work in Ephesus (Ac 19[21] 20[3]). The year is not certain; Corinth in the spring of A.D. 55 comes closest to satisfying the chronological data, but it may have been A.D. 56 or 57. (See CHRONOLOGY OF NT and PAUL.)

Paul's boldness in addressing a church which others had founded grew out of his debt to preach to all men and to bring Jewish and Gentile believers into one body in Christ (1[1-17] 12[3-8]). He needed the influence of the Roman church on all the other churches he was labouring to knit together by his visits and his letters. But his Jewish opponents might prejudice the Roman Christians by impugning the truth of his interpretation of the gospel and misrepresenting his motives for preaching it. His extension of God's kingdom to all men on equal terms of faith apart from works of law seemed to degrade God's chosen people, who regarded themselves as 'sons of light,' to the level of the Gentile 'sons of darkness,' who were usurping the throne of David (2[25-29] 3[27-31]). He was doing this at the very time when thousands of these sons of light, goaded to apocalyptic fury by their worsening situation under the Roman procurators, were planning the Messianic war which would set their feet upon heaps of the slain and make their oppressors lick the dust of their feet (1 *QM* xii. 10-15). The rejection of Christ by the majority of the Jewish nation was cited against Paul's gospel, and Jewish Christians were under patriotic pressure to regard Jesus not as the Saviour who had died to reconcile all men to God (5[6-11]), but as a national Messiah who was going to subjugate or destroy all but the remnant whom God had predestinated for life in the Age to Come. The temper of the times can be judged from what happened to Paul when he arrived in Jerusalem (Ac 21[27-36]). The strategic position of the Roman Christians in this struggle for the integrity, freedom, and universality of the Christian

gospel explains why Paul made this exception to his rule not to build on another man's foundation (15$^{14-21}$).

Romans is therefore not to be interpreted as a general treatise on systematic theology abstracted from the historical process through which it originated. Paul was addressing the members of a particular church under stress of a specific situation in which he and they and his world mission were involved at the moment of writing. As an apostle to all the nations, he aimed to free the Christian gospel from the double constriction of legalism and Jewish nationalism without cutting it loose from God's special revelation to Israel and turning it into a cult of antinomians who would not make responsible use of their freedom by living according to the indwelling Spirit of God (8$^{12-14}$). Every Christian whose conduct fell below the righteousness set by the Law could be used by Paul's Jewish opponents to discredit his faith that good works are not the condition but the result of God's grace. They too recognized their dependence on God's mercy and power, but their remedy for the weakness of the flesh which had defeated Paul was not to despair of law observance as God's acceptable way of salvation but to ask His help to obey it more strictly (*e.g.* 1 *QS* i. 1–15; xi. 7–10; 1 *QH* ix. 2—xi. 27). The function of law in Christianity thus became a question of sharp debate. Some, fearing God's wrath, continued to observe certain food taboos and holy days to which they had been accustomed, and became self-righteous in judging others, who had abandoned them; while the latter, considering themselves strong in faith, regarded their critics as weak. Not all these 'weak' Christians were Jews: some were Gentiles from cults in which salvation depended upon the observance of law; and the 'strong' likewise came from both groups. The Gentiles, who constituted the majority of the Roman church, had to be warned against unbrotherly treatment of the Jews (11$^{17-24}$). Before they could set a valid example to all the other churches, they must learn to live in harmony (15$^{5-6}$). Roman governmental restrictions on private religious associations made it hard enough without these 'disputes over opinions' (14^{1}) to give these Christians, who met in isolated groups in the homes of their respective members, the sense of belonging to a church which embraced them all. Pleading for conduct befitting their new status as sons and heirs of God, Paul bids them welcome each other as Christ has welcomed them (15^{7}). He bases his appeal on his theology, but he treats only those subjects which are required by his theme in relation to his purpose in writing this letter.

In stating his theme, Paul interprets Hab 2^{4} to prove that 'The righteous shall live by faith' (1^{17} RV; RSVm). 'By faith' is not only reliance on the grace of God for life in the age to come but also a way of living in this present world. Habakkuk's faith was inseparable from his faithfulness in doing God's will, and the Greek *pistis* which translates his Hebrew word for it includes both faith and faithfulness. Ro 8$^{12-14, 28-29}$, 1 Co 13^{2}, Gal 5$^{16-25}$, and many other passages show that Paul's repudiation of salvation by merit does not allow Christians to divorce the faith which trusts God for His grace from the faithfulness which bears the fruit of His Spirit. But when the RSV changes the translation to 'He who through faith is righteous shall live,' it obscures this inseparability of faith from faithfulness and blunts the ethical edge of Paul's insistence that the faith which accepts God's grace-gift of life is faith energized by the Spirit for creative living (Gal 5^{6}). The argument for the change is that Paul's purpose in adapting Hab 2^{4} was to persuade his readers to stop seeking life by claiming their own righteousness instead of trusting 'the righteousness of God' to accept sinners for the sake of Christ. This is true, and it is also true that, by reason of his own previous experience, Paul must have had the opposition between these two ways of salvation in mind when he wrote Ro 1^{17}. But the order of the words in his Greek sentence favours 'The righteous shall live by faith.' A reader of Ro 1$^{1-17}$, who was familiar with Habakkuk in the Septuagint, but who had never heard of Paul and his gospel before, could not have read all this argument for the RSV into Paul's quotation from Hab 2^{4} until he came back to it after going on to the end of the letter.

2. Argument and content.—The content of Romans was not the flash of the moment of writing, but had been taking shape in Paul's personal living and public debate for many years. Therefore what he is writing in one part of his letter cannot be separated from what he has written, or is going to write, in another part. Sometimes he will start to answer an objection only to break off and leave it suspended for fuller treatment later; examples are 3$^{1-4}$, which is continued in chs. 9–11 and 3$^{5-8}$, which is developed in chs. 6 and 8 and 12^{1}–15^{13}. The extreme difficulty of maintaining the priority of Israel as God's chosen people while insisting that every man's salvation is based on grace and that grace is for all leads his argument into some broken sentences which have affected the transmission of the text and have helped to produce important differences of theological interpretation. In this letter Paul's preaching passes into dialogue in the manner of the Stoics, and there are Hellenistic as well as Semitic ideas and forms of expression, together with liturgical elements which indicate that what he is writing has long been a matter of private prayer and public worship. Although clarity requires us to divide Romans into sections with appropriate headings, one must be careful not to cut the thread of the theme which runs through it from beginning to end. Justice to Paul also requires the analysis to make clear that his faith includes not only entrustment of himself solely to God's grace but also faithfulness in living the new life in Christ by the power of the Spirit. His argument proceeds through four stages:

(1) Man's sin and God's righteousness (chs. 1–4).
(2) The new life in Christ: its basis and its character (chs. 5–8),
(3) God's lifegiving purpose for *all* men, Gentiles as well as Jews (chs. 9–11), and
(4) Living in accord with Christ in this present age (chs. 12–15^{13}).

(1) Introducing himself as an apostle called to preach Christ among all the nations, Paul thanks God for the faith of the Christians in Rome and tells why he is eager to visit them (1$^{1-15}$). Stating his theme (1$^{16-17}$), he proceeds to show that *all* men are sinners. The Gentiles do not have righteousness to set themselves right with God, and their lack is their own fault. God has shown them all that can be known about Himself; but, instead of worshipping Him as their Creator, they made images of His creatures. Therefore God gave them up to their lusts, so that they not only do all manner of wickedness but approve others who do the same even though they know they deserve death (1$^{18-32}$). Presuming on God's kindness and forbearance, which are meant to lead them to repentance, they store up wrath for the day of judgment, when God will render impartially to every man according to His works (2$^{1-11}$).

Turning to the Jews, Paul reminds them that they too lack righteousness to make them acceptable to God. Since it is not hearers but doers of the law who are righteous before God, the Jew who sins will be judged by the law he has, while the Gentiles, who do not have this law, will be judged according to their own conscience for having done or not done by nature what the law requires (2$^{12-16}$). The Jews, who are sure that they are the light of the world, are causing God's name to be blasphemed among the Gentiles by breaking his law. Consequently their circumcision becomes of no value, and the Gentiles, who are not circumcised but who keep the precepts of the law, will condemn the Jews who break it. Real circumcision is spiritual, and not literal (2$^{25-29}$).

Then what advantage has the Jew, and why not do evil in order to magnify God's glory by giving occasion

for His grace to abound in coping with it? These objections come from patriotic Jews who charge Paul with fostering sin and regard his gospel as an affront to their nationalism. Paul repudiates the charge as slander and says those who make it will get what they deserve. He agrees that the Jews have the advantage of being the recipients of God's Torah. But then, reading this revelation as God's preannouncement of the gospel of Christ, he quotes from it (*a*) to show that the faithlessness of some of God's people cannot nullify the faithfulness of God; (*b*) to vindicate God's justice in punishing those who thus presume on His grace; (*c*) to clinch the charge that *all* men are slaves of sin; and (*d*) to prove that no man will be justified by works of the law (3$^{1-20}$). On the contrary, this same revelation bears witness to God's universal salvation, open without distinction to all who believe. Since all men have sinned, God accepts them by His grace through faith in Christ Jesus, whom He has offered as an expiation, and who frees them from slavery to sin. In this way, without compromising His own righteousness, God acquits sinners and passes over the sins of the people who lived before Christ (3$^{21-26}$). And since this God is *one* and not many gods, He will accept both the Jews and the Gentiles on the same basis of faith. All human boasting is excluded, and Paul's gospel, to which the law points, does not overthrow but fulfills the law (3$^{27-31}$).

But Paul's opponents, quoting Gn 15^{6}, claim that Abraham had been obeying God all his life previous to his circumcision, and that his act of believing God's promise to make him and his descendants heirs of the world was one of the meritorious deeds that were reckoned to him *as* but not *instead* of the righteousness necessary to make him acceptable to God. Paul replies that Abraham's circumcision was simply a sign and seal of the righteousness which he had by faith while he was still uncircumcised; otherwise God would not have been exercising grace but paying wages. God's purpose in making His promise depend on faith apart from works of law is in order that the uncircumcised who share the faith of Abraham may enjoy the blessedness of the man to whom the Lord will not reckon his sin (Ps 32$^{1-2}$), and may grow strong in Abraham's invincible faith in the God who gives life to the dead and calls into existence the things that do not exist (4$^{1-25}$).

(2) Having shown that all men are guilty and justified only by faith in Jesus Christ, Paul is ready to describe the new life in Christ (chs. 5–8). This is a life of peace with God based on His reconciling love through His Son, who died for us while we were yet sinners; of faith that trusts God and gratefully accepts His gift of acquittal and access to Himself; of reliable hope produced by character which develops through joyful endurance of suffering; of God's love poured into our hearts through His Holy Spirit; of victory over the sin of Adam, which brought condemnation and caused death to reign over all men because all men sinned. Contrasted with life under the law, which could only increase man's trespass, life in Christ is one of abounding grace reigning through righteousness to eternal life (5$^{1-21}$).

In answer to those who charge him with saying, 'Let us do evil that good may come,' Paul explains that, since Christians are united in baptism with Christ in a death like His, which was death to sin, and since they expect to be united with Him in a resurrection like His, they must consider themselves dead to sin and alive to God. Free from sin, whose wages is death, they are now slaves of God, whose free gift is eternal life (6$^{1-23}$). Under grace they can yield themselves to righteousness for sanctification, because they are as free from the old written code, which can only arouse rebellion and sinful passions, as a woman whose husband has died is free to marry another (7$^{1-6}$).

Speaking now in the first person singular, Paul describes his own and everyman's enslavement to sin, which keeps man from becoming righteous in God's sight. The law itself is holy and just and good, but because of the weakness of man's flesh it cannot give life. When the law said, 'You shall not covet,' Paul rebelled, and sin, which had lain dormant within him, sprang up and took him prisoner, forcing him to do the evil he abhorred and thwarting his best efforts to do the good he approved (7$^{7-25}$). But God set him free from this law of sin and death to live according to the Spirit, whose mind is life and peace, and who frees men from fear and bears witness with their spirits that they are children and heirs of God (8$^{1-17}$). The struggle to put to death the deeds of the body that are dictated by the sin that dwells in it, and to become what children of God ought to be, continues; but it is no longer hopeless. Nor are the sufferings of this present time worth comparing with the glory that will result when God's whole creation, now groaning for release from bondage to decay, obtains the glorious liberty of the children of God (8$^{18-25}$). Meanwhile, the indwelling Spirit of God bears the burden with us, intercedes for us, teaches us how to pray; and God is working all things for good with those who love Him, whom He has called and predestined to be conformed to the image of His Son. Since God is for us, nothing in all the universe, past, present, or future, will be able to separate us from His love in Christ Jesus (8$^{26-39}$).

(3) But in view of God's lifegiving purpose for all men, what of the future of God's covenant people? In chs. 9–11, Paul explains Israel's rejection of Jesus as the working of God's sovereign power to harden Pharaoh, to choose Isaac and not Ishmael, and to say, 'Jacob I loved, but Esau I hated.' In reply to the objection that God is unjust in punishing those whom He has chosen to harden, he says that the pot is not in position to talk back to the Potter, and that Israel's stumbling was also their own fault (9$^{1-33}$). But Paul's own abiding love for his stumbling kinsmen leads him to seek a better answer. He recognizes their zeal for God but calls it unenlightened, because they do not see that righteousness based on faith does not depend on human striving to bring it down from heaven or up from the abyss, but is in the heart of everyone who calls upon Jesus and confesses that He is Lord. But since believing requires hearing and hearing requires preaching, Christ must be preached to all the nations if all men are to be saved. God's purpose in hardening all but a remnant of Israel is not to destroy them but to make their opposition His means of thrusting His preachers into all the world. When the rejecters see the blessings Christ is bestowing on all the other nations, they will be moved to jealousy and accept Him (10$^{1-21}$). Therefore Paul magnifies his ministry to the Gentiles, who are being grafted as wild olive branches into God's tree. But Gentile Christians must not deride the Jewish branches that have been cut off because of their unbelief; for unless they continue in God's kindness, they too will experience God's severity. He has consigned all men to disobedience in order that He may have mercy upon all: He can graft the broken branches in again, and in the end all Israel will be saved (11$^{1-32}$). Recognizing that God's ways are inscrutable, Paul turns this insoluble mystery of Divine predestination and human responsibility into a doxology (11$^{33-36}$).

(4) Having described the nature and future of this new life in Christ, Paul appeals to his brethren in Rome to live it, beginning now in this present world (12^{1}–15^{13}). Presenting themselves as a living sacrifice transformed by the renewing of their minds, they will discern and do the good and acceptable and perfect things that constitute the will of God. They will be zealous, joyful, hopeful, patient and prayerful, generous and hospitable, each thinking soberly of himself and exercising his spiritual gift for the harmonious functioning of the community. They must aim at peace with all men, feeding their enemies and overcoming evil with good (12$^{1-21}$). They will obey the governing authorities and owe no one anything except to fulfil the whole law by loving one another as themselves. Since God's new age is at hand, they must cast off the works of darkness and clothe themselves with the character of Christ (13$^{1-14}$). Christians are free with respect to holy days and food taboos, but since the

kingdom of God is not eating and drinking but righteousness and peace and joy in the Holy Spirit, and since Christ did not please Himself but fulfilled the Scriptures by enduring the reproaches of men, the strong ought to bear with the weak, each pleasing his neighbour for his good. They will live in such harmony that all, both Jews and Gentiles, may with one voice glorify God; and Paul prays that the God of hope may fill them with all joy and peace in believing (14[1]–15[13]). The remainder of ch. 15 explains why Paul is writing.

3. Chapter 16 and the original form of Romans.—Ch. 16 consists of a letter commending Phoebe, a deaconess from Cenchreae; greetings from Paul and his fellow workers to members of the church to which Phoebe is taking the letter; a warning against teachers who flatter, deceive and create dissension; and a doxology 'to the only wise God,' who is now disclosing His long-hidden mystery to all nations. Textual variations, however, raise the question whether this chapter belongs to Romans. In most manuscripts the words 'The grace of the Lord Jesus Christ be with you all. Amen' occur twice, once as 16[20b] and again as 16[24]; but some omit them at 16[20] and others at 16[23], while a few have them after 16[27]. The doxology in vv.[25–27] also shifts its position. Sometimes it stands at the end of ch. 14 and sometimes it follows 16[23(24)], while a few manuscripts give it at both places. But the 3rd cent. papyrus codex P^{46} puts it at the end of ch. 15, then continues with 16[1–23]. Manuscript G (9th cent.), which lacks the address *en Rōmē* in 1[7, 15], does not have the doxology at all but leaves a space which would be large enough for it after 14[23]. These textual variations indicate that there were two forms of Romans, one consisting of chs. 1–14, the other of chs. 1–16. Tradition attributes the short form to Marcion but cannot explain why he made the cut at 15[1] rather than at 15[14]; and the same difficulty faces the hypothesis that chs. 15 and 16 were omitted because they were not of general interest when the letter began to circulate elsewhere than in Rome. The shifting position of the words of grace and the doxology does not disprove the genuineness of ch. 15, but the case for ch. 16 is complicated with historical questions which illustrate the effect of the circulation and use of Paul's letters upon their text.

The principal points urged against the genuineness of ch. 16 are (*a*) the residence in Rome of so many of Paul's friends, particularly Prisca and Aquila, whom he had left in Ephesus only a few months before (Ac 20[1]); (*b*) the designation of Epaenetus as the first convert in Asia, which would be more natural for Ephesus than for Rome; (*c*) the harsh warning in vv.[17–20], for which the reader of chs. 1–15 is unprepared, but which would be in keeping with the situation in Ephesus described in Ac 20[28–30]; and (*d*) the difference in language and ideas between vv.[25–27] and the doxologies in the undisputed letters of Paul. But the attempt to solve these difficulties by supposing that this chapter was a separate letter, or fragment of a letter, addressed to the church in Ephesus does not explain satisfactorily how so short a letter consisting mainly of personal greetings came to be added to *Romans*; and the view that Ro 1–15 was written as a theological circular of which Phoebe was taking a copy to Ephesus is only conjecture. Another hypothesis, which holds that ch. 16 was written and added in Paul's name in order to claim his authority for the Roman church against such heretics as Marcion, raises difficulties at least as formidable as the textual and historical problems it is designed to solve. But since the view that Paul wrote this chapter as the conclusion of his letter to the Romans also leaves some questions without satisfying answers, any deductions from it that go beyond what can be inferred from chs. 1–15 must be regarded as uncertain and tentative. For this reason no reference has been made to ch. 16 in the account of the occasion, purpose and character of Romans in section one; if accepted, this chapter will supplement, but if rejected it will not invalidate what is there said concerning the historical context of Paul's purpose. One would expect him to appeal for co-operation to every person then living in Rome with whom he had worked elsewhere, and his missionary planning may even have had something to do with their going there. In view of the mobility of the peoples of the Roman world, the residence of so many of his friends in its capital is not fatal to the hypothesis that vv.[1–23] of this chapter belong to his letter to that city. Afterthoughts and sudden changes in tone as in vv.[17–20] are not unusual in Paul's letters; but vv.[25–27], which, in the form of a doxology, also serve as a summary description of the theme and content of the letter, may be later than Paul.

The fact that Romans stands first in the canonical order of Paul's correspondence measures its pre-eminence in capacity to function throughout the centuries in the shaping of Christian life and theology. Although written to a particular church in a specific situation in the middle of the first Christian century, its recognition of the futility of man's efforts to conquer the evil drive within himself and to reconcile his alienation from God by observance of God's law, its acceptance and sole reliance on God's way of effecting this reconciliation by His grace through faith in Christ, and its resulting incentive to live the new life in Christ make it both relevant and of ultimate concern to every man in every age. Permeated throughout by Paul's trinity of faith, hope, and love, its gospel abides forever, making those who accept it 'more than conquerors' in the midst of ceaseless change (8[37–39]).

R. T. S.

ROME.—1. The City.—The beginnings of Rome are shrouded in obscurity. The city was situated on the left bank of the Tiber, about 18 miles from its mouth. Though it is known as the city of the seven hills, the original Rome was built on one hill only, the Palatine; but the neighbouring hills were successively included, and about the middle of the 6th cent. B.C., according to tradition, a wall was built to enclose the enlarged city. The whole circuit of this wall was about 5 miles, and it was pierced by nineteen gates. Within the walls was a large area of vacant spaces, which were gradually built on later, and at the beginning of the Empire (roughly middle of 1st cent. B.C.) not only was the city congested with buildings, but large areas without the wall were also covered with houses. The Roman Forum, an open space measuring over 300 feet in length, and about 150 feet in breadth, was the centre of political, legal, and commercial life. At one end was the *rostra* or platform, from which speeches were delivered to the public; at the other end were shops. It was flanked by the senate-house and law-courts. On the top of the Capitoline Hill was the *Capitolium*, or great temple dedicated to Jupiter, Juno, and Minerva, and on the Palatine Hill the principal residence of the Emperor, and the Temple of Apollo, containing the public libraries, Greek and Latin. In the Imperial period four additional *fora* were built, devoted entirely to legal, literary, and religious purposes—the *Forum Iulium* begun by Julius Caesar, the *Forum Augustum* built by Augustus, the *Forum Transitorium* completed by Nerva, and the *Forum Traiani* built by Trajan—the most splendid work of Imperial times. Near the Viminal Gate in the E. lay the camp of the Praetorian guard (since Tiberius), to which Paul must have been conducted. On the 'Vatican Mount' W. of the Tiber lay the *Circus of Gaius and Nero*, where Peter may have been martyred. Various estimates of the population of Rome in the 1st cent. have been given: 2,000,000 seems not unlikely. All nationalities in the Empire were represented—among them many Jews, who were expelled by Claudius in A.D. 50, but returned at his death four years later. Slaves constituted a great part of the population.

2. Early history.—The Romans began as one of the members of the Latin league, of which, having become presidents, they eventually became masters. After conquering Latium they were inevitably brought into conflict with the other races of Italy, over most of which they were sovereign by about the middle of the 3rd cent. B.C.

The Roman State was at first ruled by kings, but these gave place to two rulers, known later as *consuls*. Their powers were gradually circumscribed by the transfer of some of their duties to other magistrates. The period of steady accession of territory was coincident with a bitter struggle between the patrician and the plebeian classes, both of which comprised free citizens. The contest between the orders lasted for about two centuries, and at the end of that period all the offices of State were open equally to both. This was not, however, the establishment of a real democracy, but the beginning of a struggle between the governing class and the mass of the people, which eventually brought the Republic to an end. The civil wars, which during the last century of its existence had almost destroyed it, had shown clearly that peace could be reached only under the rule of one man.

3. Expansion of territory.—The rise of Rome to almost universal power represents a remarkable history of diplomatic and military triumphs. After lower Italy had been subjugated (by 266 B.C.) Rome faced the power of Carthage, which held Sicily. The latter was swiftly taken in the First Punic War (264–241 B.C.) and in 238 B.C. Sardinia and Corsica were also seized. In the second Punic War (218–201 B.C.) Hannibal from his base in Spain crossed the Pyrenees and the Alps and invaded Italy. He was eventually defeated at Zama in Africa (202 B.C.). In 201 B.C. Carthage had to cede Spain to Rome and hand over its navy. The Romans now turned their attention toward the East. At Cynoscephalae they defeated Philip V. of Macedon, who had supported Carthage. The effort of the Seleucid king, Antiochus III., to establish himself in control of the straits leading to the sea of Marmora led to a clash with Rome that ended with his defeat at Magnesia in 190 B.C. and involved the loss of all Seleucid possessions W. of the Taurus. In the second Macedonian war king Perseus was defeated at Pydna in 168 B.C. and the country annexed. Greece now was also subjugated and Corinth brutally destroyed (146 B.C.). In the third Punic War (149–146 B.C.) Carthage was destroyed by Scipio Africanus. In 133 B.C. Attalus of Pergamum bequeathed his realm to Rome. The attempt of Mithridates of Pontus, from 95 B.C. on, to expand the influence of his realm into western Asia Minor and Greece led to Sulla's victories in Greece and to a temporary peace in 85 B.C. After Sulla's death in 78 B.C. Pompey, as leader of the Senatorial party, came to the fore. He was given extraordinary powers to put down the piracy rampant on the Asia Minor coast, and then became commander in the East, where he concluded the third war with Mithridates of Pontus in 64 B.C. and gave the *coup de grâce* to the Seleucid realm. He created Bithynia and Pontus as a province, and also Syria as another province. It was at this time (64 B.C.) that he took a hand in the affairs of Judaea.

4. Dictatorship and Empire.—The two-consul system which Sulla had replaced with dictatorship was restored under Pompey and Crassus in 70 B.C. But Pompey became sole consul in 52 B.C. Meanwhile Caesar had become a great factor through the successes he had won in his campaigns. In 49 B.C. came his break with the Senate and the beginning of a civil war. His victory over Pompey at Pharsalus in 48 B.C. and his success in the Egyptian War in 48–47 B.C. led to his being made dictator for ten years in 46 B.C. and for life in 44 B.C. His assassination robbed him of the fruits of his great achievements. Mark Antony sought to succeed to his rôle, but Caesar's adopted son Octavian, with Senatorial aid, forced the creation of a triumvirate. Antony took command in the East, and Octavian, who soon ousted the triumvir Lepidus, had control in the West. In the battle of Actium (31 B.C.) Octavian won the supremacy. He was given the title of Augustus and in addition bore the family name of Caesar. He ruled as autocrat under constitutional forms: the appearance of a republic was retained, but the reality was gone, and the appearance itself gradually disappeared also. The *Imperium Romanum* now had at its head an *Imperator* (whence our words Empire and Emperor).

5. The Provinces.—For the city of Rome the Empire was a time of luxury and idleness, but the provinces entered upon an era of progressive prosperity. The Emperor was responsible for the government of all provinces where an army was necessary (for instance, Syria), and governed these by paid deputies of his own. The older and more settled provinces were governed by officials appointed by the Senate, but the Emperor had his financial interests attended to by procurators of his own even in these. Under the Empire the provinces were much more protected against the rapacity and cruelty of governors than in Republican times. The Emperors themselves stood for just as well as efficient administration, and most of them gave a noble example by strenuous devotion to administrative business.

The resident Romans in any of the forty-two provinces consisted of (1) the officials connected with the Government, who were generally changed annually; (2) members of the great financial companies and lesser business men, whose interests kept them there; (3) citizens of *coloniae* (or military settlements), which were really parts of Rome itself set down in the provinces; (4) soldiers of the garrison and their officers; (5) distinguished natives of the province, who, for services rendered to the Roman State, were individually granted citizenship. Such must have been one of the ancestors of St. Paul. The honour was not conferred on all free male inhabitants of the Empire till A.D. 212, and in NT times those who possessed it constituted the aristocracy of the communities in which they lived.

6. The Jews and Rome.—Under the Maccabaean rulers the Jews had become virtually independent of the moribund Seleucid realm. In their rise the diplomacy of the Romans, who aided and abetted all enemies of the Seleucids, may have played a rôle. In 1 Mac 8 is vividly reflected the impression made on the Jews by Rome. Whether there was any historical basis for the alleged treaty with the Romans at the time of Judas Maccabaeus or not, the sending of an embassy to Rome to seek their support is plausible enough. A renewal of the treaty is claimed for the time of Jonathan (1 Mac 12^{1-4}) and again of Simon (1 Mac 14^{24} 15^{15-24}). Hyrcanus (134–104 B.C.), too, had Roman support (*Ant.* XII,. ix. 2 [259 ff]; XIV. x. 22 [190 ff]). The quarrel between the sons of Alexander Jannaeus (103–76 O.C.) was judged by Pompey in 63 B.C., and as Aristobulus acted suspiciously Pompey seized Jerusalem and terminated the kingship of the Hasmonaean house. During Caesar's campaign in Egypt (48–47 B.C.) Antipater, an Idumaean, and his son Herod (q.v.) succeeded in gaining the favour of Caesar and were given control of the Jewish kingdom. The favour of Antony and subsequently of Augustus led to the kingship of Herod (37–4 B.C.) over all Palestine and adjacent northern districts. In his testament, Herod divided his realm. The division was approved by Augustus, but Archelaus, who had the most important share, was soon deposed (A.D. 6) and Judaea put under imperial government. The procurator resided at Caesarea. One of the incumbents of the office was Pontius Pilate (q.v.).

Under Caligula (A.D. 37–41), Herod Agrippa was made king, and for a few years (A.D. 41–44) the situation existing in the days of Herod the Great was virtually restored. At Agrippa's death, however, Rome again took over direct control of Judaea. Rising Jewish terrorism led to open rebellion in A.D. 66, and this to the campaign of Vespasian and Titus which resulted in the devastation of Palestine and the destruction of Jerusalem in A.D. 70. The arch of Titus in Rome is a surviving monument of this event, as are the *Judaea capta* coins. A tax, the so-called *Fiscus Judaicus*, was imposed on all Jews of the realm in place of their old Temple-tax. Under Domitian (A.D. 81–96) strict measures against the Jews continued. Under Nerva (A.D. 96–98) things were less strict; there was even a coin bearing an inscription that accusations based on the annual Jewish tax were now set aside (*Fisci Judaici calumnia sublata*).

Under Trajan (A.D. 98–117), however, it became apparent that the Jews were a menace to the Empire. In his effort to subdue the Parthians the Jews of Mesopotamia offered strong resistance, and Jewish revolts broke out in Egypt, Cyrene, and Cyprus. It required the sending of strong military forces to master the situation. Lucius Quietus carried on a war of destruction against the Jews of the Euphrates-Tigris lands and Martius Turbo in Egypt and Cyrene. In Cyprus the Jews were exterminated and their kin forbidden the island. The synagogue of Alexandria, famed for its beauty, was destroyed. Quietus was about to proceed against the Jews in Palestine, where they had again become numerous, when Trajan died and Hadrian (A.D. 117–138) succeeded him. The new ruler was inclined to moderation, and held friendly talks with the Jewish Patriarch, Joshua. After the latter's death, Akiba, a proponent of active rebellion, came to the fore, and leagued himself with the political leader and insurrectionist Barcochba (*c* 132; his real name and title, preserved in a papyrus from Wâdī Murabba'ât near the Dead Sea, were 'Simeon ben Kosebah, Prince of Israel'). Even the Samaritans and pagan mercenaries participated on the side of the Jews in this fantastic venture. The Roman commander Tineius Rufus was unable to control the situation. Hadrian recalled one of his best generals, Julius Severus, from Britain, and sent him to Palestine with the necessary troops. The country was subjected, the final tragedy taking place at Beth-ter (*Bittīr*) S. of Jerusalem. Tineius Rufus was again put in charge of the region, and no Jew was allowed to set foot in *Aelia Capitolina*, the newly founded city on the site of Jerusalem. A temple of Aphrodite was built on the site of Golgotha, a temple of Jupiter on the site of the Jewish Temple in Jerusalem and also one in place of the Samaritan temple on Mount Gerizim. With the accession of Antoninus Pius, A.D. 138, Roman policy became more tolerant. While Aelia was still closed to them many Jews returned to the land of their fathers and devoted themselves to peaceful pursuits. Circumcision, which had been forbidden, was again allowed.

7. The Christians and Rome.—Christians were at first considered a Jewish sect by the Romans. But when the Jews disowned them this posed a difficult situation. Anti-Christian actions by the Roman authorities arose chiefly out of the refusal of Christians to worship the deified past emperors and the state gods. Nero's persecution was local and represented a whim rather than a policy. Domitian was the first emperor to claim divinity for himself. A persecution in his time in the province of Asia is reflected in the Revelation of St. John. Under Trajan occurred the martyrdom of Symeon of Jerusalem and Ignatius of Antioch, as well as the persecution in Bithynia under Pliny the Younger (see his *Epistles*, x. 96–97). Hadrian in an order issued to the governor of Asia discouraged active attempts to bring Christians to trial. Antoninus Pius (A.D. 138–161) discouraged anti-Christian tumults, but various martyrdoms occurred in his time, notably that of the aged Polycarp of Smyrna (A.D. 156). Marcus Aurelius (A.D. 161–180) renewed the law against superstitious cults, thus causing a state of danger for Christians. In his time Justin was martyred at Rome (A.D. 165), and there were martyrs in Asia Minor and in Gaul. Under Commodus (A.D. 180–192) there were scattered persecutions in N. Africa, Asia Minor, and Rome. The period from Decius (A.D. 249–251) on was one of planned persecution. That ruler, as well as Valerian (A.D. 253–260) and Diocletian (A.D. 284–305), vainly sought to destroy Christianity. The victory of Constantine over the usurper Maxentius in A.D. 312 paved the way for the edict of Milan (A.D. 313), in which Christianity was recognized as a legitimate religion (*religio licita*). The sons of Constantine abandoned the tolerant attitude and proceeded to persecute heathenism. After a heathen revival under Julian the Apostate (A.D. 361–363), Theodosius the Great and Gratianus from A.D. 381 on engaged in the destruction of heathenism and in the creation of a state-church.

8. The Religion of Rome.—The old Roman religion was one of fear and awe in the presence of mysterious divine powers, coupled with methodical efforts to placate them. Even before Rome's founding Jupiter ('heaven-father') was worshipped in that vicinity and he remained the highest god to the end. His temple on the Capitol was the religious centre of both the Republic and the Empire. He was storm-god and guardian of law and order. Other gods were Mars, god of war; Saturn who guarded the crops and Ceres who nurtured them, along with Faunus, patron of the herds. Vesta, goddess of the hearth and Janus, god of the door, were worshipped in every home, but also cultivated by the State. The temple of Vesta had its six vestal Virgins, whose task it was to keep the sacred flame burning. The Romans had a tendency to develop specialized gods as patrons of all manner of activities. Those of the household were included in the general name Penates (*penus*, 'store-room'). Certain concepts were even deified *e.g. pietas*, 'reverence for one's parents.' Considerable change was wrought in Roman religion by the wars with Hannibal and the fierce Gauls. They struck fear into people's hearts and a desire to appease the anger of the gods. Much new Greek and eastern lore was introduced through the attention given the Sibylline books. The Sibyls were the oracle-priestesses of the Apollo-cult in S. Italian cities. The books of the Sibyl of Cumae were even brought to the Capitol and their advice was seriously consulted. This could even lead to the introduction of new cults, as when the goddess Cybele, the *magna mater*, was imported from Pergamum in 204 B.C. With the rise of the Empire and of emperors a cult of emperor-worship (q.v.) arose. It served to make the provincials conscious of their dependence and of the blessings they enjoyed through the protection of Rome. In the cult of Mithras, which came to Rome in the time of Trajan and flourished under Commodus (A.D. 180–192) and after, Christianity faced a formidable rival. Other Hellenistic mystery cults also had their devotees, with the result that the picture of Roman religion under the Empire is one of great diversity.

See articles on the Emperors: AUGUSTUS, TIBERIUS, etc.; PROVINCE, PROCURATOR, ROMAN PUBLIC LAW.

A. So.—E. G. K.

ROOF.—See HOUSE, 5.

ROOM.—See HOUSE, 2. For the 'upper room,' see *ib.* 5, and for the now obsolete use of 'room' in the sense of place at table, as 'the chief room' (Lk 14[7]) the 'highest room' (v.[8]—RV in both cases 'chief seat'; RSV 'place of honour'), or 'the uppermost room' (Mt 23[6], Mk 12[39], RV 'chief place'; RSV 'place of honour'), see MEALS, 6. A. R. S. K.

ROPE.—See CORD.

ROSE.—Hebrew *ḥ[a]baṣṣeleth*, Ca 2[1] (**rose of Sharon**), Is 35[1] (AV, RV; RSV **crocus**). All authorities are agreed that the translation 'rose' is incorrect. The *ḥ[a]baṣṣeleth* appears to have been a bulbed flower. The RVm suggests 'autumn crocus' (*colchicum autumnale*); on the other hand, many good authorities suggest the much more striking and sweeter-scented plant—the narcissus, which is a great favourite to-day in Palestine. Two species are known—*N. Tazetta* and *N. serotinus*. In Wis 2[8], Sir 24[14] 39[13] 50[8] we have mention of *rhodon* (Gr.). Whether this is, as Tristram maintains, the Rhododendron or the true rose is uncertain; both occur in parts of Palestine. E. W. G. M.

ROSH.—**1.** A descendant of Benjamin, Gn 46[21] (but the text is doubtful). **2.** In Ezk 38[2f] 39[1] the word *Rosh* is thought by many interpreters to refer to a people (so RV), otherwise unknown, but coupled with *Meshech* and *Tubal* (q.v.). It is possible, however, that the word meaning 'head' is used as a preposition 'over,' so that the phase here applied to Gog (q.v.) simply means, 'prince over Meshech and Tubal (cf AV and RSV 'chief prince of'). J. F. McC.

RUBY.—See JEWELS AND PRECIOUS STONES.

RUDDER.—See SHIPS AND BOATS, 2 (2).

RUE (Lk 11^{42}).—The rue of Palestine is *Ruta chalepensis*, a variety of the officinal plant, which is cultivated as a medicine.

RUFUS.—1. The brother of Alexander and son of Simon of Cyrene (Mk 15^{21} only). **2.** A Christian at Rome greeted by St. Paul (Ro 16^{13}) as 'eminent in the Lord,' together with 'his mother and mine.' It has been conjectured that these two are the same person, that Simon's widow (?) had emigrated to Rome with her two sons, where they became people of eminence in the Church, and that this is the reason why the brothers are mentioned by St. Mark, who probably wrote in Rome.

RUG.—Found in Jg 4^{18} (AVm, RV, RSV; AV 'mantle'). The meaning is uncertain.

RUHAMAH.—The second child (a daughter) of Gomer, Hosea's wife, was called **Lo-ruhamah,** 'unpitied,' Hos 1$^{6, 8}$ (RSV 'not pitied'). The name was given symbolically to indicate that God had ceased to pity Israel, and given her over to calamity. The return of God's mercy is indicated in Hos 2^{1} 'Say ye unto your brethren, *Ammi* (RSV 'My people,' in opposition to **Lo-ammi,** 'not my people'); and to your sisters, *Ruhamah* (RSV 'She has obtained pity'). A similar play on the word is found in Hos 2^{23} 'I will *have mercy on* her that had not obtained mercy (*lô-rūḥāmāh*).'

W. F. B.

RULE.—See Arts and Crafts, **1.**

RULER OF THE FEAST.—See Governor, Meals, **6.**

RULER OF THE SYNAGOGUE.—See Synagogue, **5.**

RULERS OF THE CITY.—EV translation in Ac 17$^{6, 8}$ of the Greek *politarchai*, which was the special local title of the magistrates or city councillors of Thessalonica. They were five or six in number. RSV 'city authorities.'

RUMAH.—The home of Pedaiah, the maternal grandfather of Jehoiakim, 2 K 23^{36}. Josephus (*Ant.* x. v. 2 [83]) reads *Abouma*, no doubt a scribal error for *Arouma*, which may be the **Arumah** of Jg 9^{41} near Shechem. There was another Rumah in Galilee (Jos. *BJ* III. vii. 21 [233]), perhaps the modern *Kh. er-Rūmeh* near Nazareth; and Pedaiah may have been a Galilean.

W. F. B.

RUNNEL.—This word is used only in RSV in Gn 30$^{38, 41}$ for watering troughs (AV, RV 'gutter'). In Ex 2^{16} the same word is rendered 'trough' in AV, RV and RSV.

RUNNERS.—See Footman, Guard, and Post.

RUSH, RUSHES.—1. Hebrew *gôme'*, Ex 2^{3} (EV **bulrushes**; RVm 'papyrus'), Job 8^{11} (AV, RV 'rush'; RVm, RSV 'papyrus'), Is 8^{2} (AV 'bulrushes'; RV, RSV 'papyrus') 35^{7} (EV 'rushes'). This was probably the once famous plant the papyrus (*Cyperus papyrus*, Arab. *babîr*), which now flourishes in the Huleh swamps. The bulrush (*Scirpus maritimus*) and other species may have been included in the Hebrew name *gôme'*. **2.** Hebrew *'agmôn*, Job 41^{2} (AV 'hook'; RV, RSV 'rope'; RVm 'a rope of rushes') 41^{20} (AV 'caldron'; RV, RSV '[burning] rushes'), Is 9^{14} 19^{15} (both AV, RV 'rush'; RSV 'reed') 58^{5} (AV 'bulrush'; RV, RSV 'rush'). There are some twenty kinds of rushes in Palestine, but it is impossible to fit the references to any one kind and, indeed, some kind of reed (q.v.) is quite as probable, especially in Is 58^{5}.

E. W. G. M.

RUTH.—A woman of Moab, who, like her mother-in-law Naomi, and her sister-in-law Orpah, was left a widow. On Naomi's desiring to return to her own people in Bethlehem-Judah—which she had left with her husband owing to a famine—Ruth refused to leave her, and the two returned to Bethlehem. Here she became the wife of **Boaz,** and bore him Obed, who became the father of Jesse; she therefore figures in the genealogy of Christ (Mt 1^{5}). See, further, the next article.

W. O. E. O.

RUTH (Book of).—1. Contents.—The book is a short story, told in a very charming manner; indeed it is often cited as a perfect example of its literary *genre*. It tells how Naomi, a Judaean, after the death in Moab of her husband and two sons, started to return to Bethlehem, leaving her Moabite daughters-in-law. Orpah returned to her family, but Ruth loyally remained with Naomi. Subsequently Ruth was married to a kinsman, Boaz, and bore a son, who was the grandfather of David. Naomi, Ruth, and Boaz are all represented as wholly admirable characters, and there is no villain in the narrative.

Though a charming story, this book presents many difficulties in interpretation. Why was it written? Many interpreters say it was composed as a protest against the narrow nationalism which prevailed in the time of Ezra and Nehemiah, or at some other time. Was it written to plead for a wider interpretation of levirate marriage than was customary? Was it intended to present the story of a beautiful friendship between a mother-in-law and her daughter-in-law? Some scholars believe it was written only to entertain, and with no other motive. Some think it developed from an ancient fertility myth of Bethlehem. Rabbinic Judaism saw in Ruth the example of a perfect proselyte. It is not probable that the story was told only to entertain; any adequate view of its purpose must take into consideration the fact that Ruth, the central character, is a Moabitess by birth, but is represented as being completely loyal to her mother-in-law and her adopted nation, and as an ancestress of the great king David.

Much interest has been aroused by the legal customs reflected in the book, especially in 4$^{1-12}$. These do not correspond precisely to the known customs of any period of Hebrew history. The legal transaction of ch. 4 seems to combine features both of levirate marriage (Dt 25$^{5-6}$) and of redemption of property (Lv 25). The curious custom of drawing off the sandal (4^{8}) may represent a token payment for the rights of the nearest of kin.

2. Date.—The language of the book and other considerations point to the post-exilic period as the time of composition of the book in its present form. It may draw upon a very ancient tale, which was used by the author for his own purpose. In the Hebrew canon Ruth is one of the Hagiographa, or Writings. More precise dating depends upon the view one takes of the purpose of the story and of the legal customs involved in it. A date between 450 and 250 B.C. is probably correct.

SABBATH.—1. Origin of the Sabbath.—The name 'Sabbath' (Heb. *shabbāth*, from a verb *shābhath*, meaning 'to desist') might be applied to any sacred season as a time of cessation from labour, and is so used of the Day of Atonement, which was observed annually on the tenth day of the seventh month (Lv 16[31] 23[32]). But in usage it is almost confined to the day of rest which closed each week of seven days, the cycle running continuously through the calendar without regard to the month or the year. The origin of this institution and its early history among the Israelites are involved in much obscurity. That it has affinities with certain Babylonian observances is obvious; but the differences are very marked, and a direct dependence of the one on the other is difficult to understand. It is known that in two months (possibly in all) the 7th, 14th, 21st, and 28th days (those in which the moon enters a new phase), and also the 19th (the 7×7th = 49th from the beginning of the previous month), were regarded in Babylonia as days of ill omen, on which certain actions had to be avoided by important personages (king, priest, physician). The name *shapattu* has also been found in the inscriptions, where it is explained as *ūm nuḫ libbi* 'day of the appeasement of the heart' (of the deity)—in the first instance, therefore, a day of prayer or atonement. But that the five days of ill omen mentioned above were called *shapattu* has not been proved, and is indeed, rendered improbable by the more recent discovery that *shapattu* was a name for the day of the full moon (the 15th of the month). When we turn to the early references to the Sabbath in the OT, we find a state of things which seems at first sight to present a parallel to the Babylonian usage. It is a singular fact that except in the expansions of the Fourth Commandment in Ex 20[9-11] and Dt 5[13-15] (which are evidently no part of the original Decalogue), there is nothing in the pre-exilic literature which explicitly indicates that the word 'Sabbath' denoted a weekly day of rest. In the kernel of the Decalogue (Ex 20[8], Dt 5[12]), the observance of the Sabbath is enjoined; but neither the manner of its observance nor the period of its recurrence is prescribed. Where, on the other hand, the weekly rest is inculcated (Ex 23[12] 34[21]), the name 'Sabbath' does not occur. In the prophetic and historical books 'Sabbath' and 'new moon' are associated in such a way as to suggest that both were lunar festivals (Am 8[5], Ho 2[11], Is 1[13], 2 K 4[23]); and the attempt has been made to trace the transition from the Babylonian institution to the Hebrew Sabbath by the hypothesis that originally the Sabbath in Israel was the feast of the full moon, just as in Babylonia. This theory, however, is little but an ingenious paradox. It is arbitrary to deny the antiquity of Ex 23[12] or 34[21]; and if the word 'Sabbath' is not found in these passages, yet the related verb *shābhath* is used in both, as is rarely the case except in connexion with the Sabbath. Moreover, the way in which the Sabbath is isolated from all other sacred seasons (Decalogue, 2 K 11[5ff], 16[18]) goes far to show that even in the pre-exilic period it was a festival *sui generis*, and had already acquired something of the prominence which belonged to it in later times. It is not too much to say that the Israelite origins of the institution are to be traced to Moses himself (Ex 20[8] 23[12] 31[15] 34[21]) and that the later prophetic interpretations of its true significance have their source in the Mosaic traditions. The most reasonable conclusion is that the weekly Sabbath is everywhere presupposed in the OT, and that, if it be connected historically with Babylonian institutions, the development lies behind the range of Israelite tradition, and in all probability was a feature of Canaanitish civilization when the Hebrews settled in the country. It must be remembered, however, that the hypothesis of a Babylonian origin does not exhaust the possibilities of the case. It has often been asserted that a regularly recurring day of rest is neither necessary nor possible for pastoral nomads, but it must be pointed out that the Israelites were semi-sedentary and it is quite conceivable that some form of Sabbath observance depending on the phases of the moon, was practised by the Hebrews in the desert, and that the transformation of this primitive lunar festival into the Sabbath as we find it in the OT was due to the suppression of its superstitious associations under the influence of the national religion of Israel.

2. Religious significance of the Sabbath.—The distinctive characteristics of the Hebrew Sabbath were mainly these two: it was, first, a day sacred to Yahweh, and second, a day of rest. In the earlier period cessation from labour may have been merely a consequence of the festal character of the day; although the reinforcement of the ceremonial sanction by humanitarian motives in the legislation (Ex 23[12], Dt 5[14]) shows that already the religious mind of the nation had grasped the final justification of the Sabbath as an institution made for man, and not one for which man was made. This conception of the Sabbath underwent a radical modification in the age of the Exile. It is hardly accurate to say that the change was entirely due to the fact that the Sabbath was one of the few religious ordinances by which the Israelite in a foreign land could mark his separation from heathenism. The idea of the Sabbath as a covenant between Yahweh and Israel, which is elaborated in Ezekiel and the code called the Law of Holiness, is foreshadowed in Dt 5[15]; and even the more imposing conception of it as a memorial of the Creation finds expression in Ex 20[11], which is quite possibly of older date than the Priestly account of Creation in Gn 1. The truth is that in this, as in many other cases, the real turning-point was not the deportation of the people but the suppression of the popular ritual by Josiah's reformation. None the less it is important to observe that, for whatever reason, a profound transformation of the character of the Sabbath emerges in writings of the Exilic and post-exilic period. The obligation of rest, from being a necessary concomitant of acts of worship, or a means to a higher end, becomes an end in itself, a form of self-denial, pleasing to the Deity as an act of implicit obedience to His positive command. The whole of the subsequent legislation proceeds from this point of view. In Ezekiel and the Law of Holiness the Sabbath (as has just been observed) is conceived as an arbitrary sign of the covenant between Yahweh and Israel, and of the individual's fidelity to that covenant. The Priestly Code not only exalts the Sabbath by making it the impressive climax of its account of the creation of the universe and by basing its sanction on the example of the Creator (Gn 2[2-4], Ex 31[17]), but seeks to enforce its observance by the imposition of the death penalty (Ex 31[14], Nu 15[32-36]), and sets the example of guarding its sanctity by prohibitive regulations (Ex 35[3]). The memoirs of Nehemiah reveal at once the importance attached to the Sabbath as a mark of the distinction between the faithful Jews and their heathen neighbours (10[31] 13[15]), and the stern determination which was necessary to compel obedience (13[17ff]). In post-exilic prophecies there are several allusions to Sabbath observance as a supreme religious duty, and a condition of the fulfilment of the Messianic expectations (Jer 17[19ff], Is 56[2ff] 58[13f] 66[23]). At the commencement of the Maccabaean revolt, regard for the Sabbath was so ingrained in the mind of the people that strict Jews allowed themselves to be slaughtered by their enemies rather than use arms for their own defence (1 Mac 2[31ff]); though after one incident of this kind the maxim laid down that defensive operations in war were legitimate on the Sabbath (v.[41]).

3. Sabbath in the NT.—The Gospels show that by the time of Christ the casuistry of the scribes had hedged round the Sabbath with many of those petty and vexatious rules which are preserved in the Rabbinical literature. The scribal interpretation of the Sabbath law was one of the subjects of controversy between Jesus and the Pharisees (see Mt 12[1ff, 10f], Lk 13[14ff] 14[1ff], Jn 5[5ff] 7[23] 9[14ff] etc.). As regards our Lord's own attitude it is

enough to say that it combined reverence for the ordinance, in so far as it served religious ends (Lk 4[16] etc.), with a resolute vindication of the principle that 'the Sabbath was made for man and not man for the Sabbath' (Mk 2[27]). Similarly, in the Pauline Epistles the Sabbath is relegated, either inferentially (Ro 14[5f], Gal 4[9ff]) or expressly (Col 2[16f]), to the category of things morally indifferent, with regard to which each man must follow the dictates of his conscience. It is significant also that the decree of the Council of Jerusalem does not impose the observance of the Sabbath on the Gentile Churches (Ac 15[29]). On the later Christian observance of the first day of the week, and its assimilation to the Jewish Sabbath, see LORD'S DAY. J. S.—J. Mu.

SABBATH DAY'S JOURNEY.—See WEIGHTS AND MEASURES, 1.

SABBATHEUS, 1 Es 9[14] (AV).—See SHABBETHAI.

SABBATICAL YEAR (including **year of Jubilee**).—**1. OT references.**—In a consideration of the regulations connected with the Sabbatical and Jubilee years, it is of the greatest importance to keep distinct the various stages of the Jewish legislation on the subject. The various ordinances differ greatly in character and detail; and in order to comprehend the diversity it is necessary to assume as granted the main conclusions of OT criticism, and to admit at any rate that a separation in time and difference in spirit characterize the several parts of the 'Mosaic Law.'

Exodus. In 23[10f] an entire cessation of all fieldwork is ordered to take place in every seventh year. This is said to be dictated by a regard for the poor and the beasts of the field. In effect the gift of one year's produce to the poor is prescribed, that the landless may enjoy a share in the produce of the soil. In 21[2-6] it is laid down that a Hebrew slave can be kept in bondage only for six years. After this period he was automatically emancipated, though his wife and children must remain in servitude, if he had married after his term of service began. But provision was made for cases where a slave might desire to remain in this condition. A public ceremony took place which signified his acceptance of the position in perpetuity. Nothing is here said which leads us to suppose that there was one simultaneous period of emancipation all over the country, and no reference is made to redemption of land or remission of debts.

Deuteronomy. In 15[1-3] the seventh year is assigned as the period at which all the liabilities of a Jew were suspended (or possibly, as Josephus supposes, entirely cancelled); this provision was to be of universal operation. 15[12-18] repeats the ordinances of Ex 21 with regard to the emancipation of slaves; here again no simultaneity of redemption can be inferred. 31[10-13] prescribes that the Law is to be read every seventh year (the 'year of release') at the Feast of Tabernacles (cf Neh 8[13-18]). Nothing is said in Deuteronomy about a possible redemption of land.

Leviticus. In 25[1-55] provision is made for a seventh-year fallow; but there is no mention of the poor. The reason assigned is that the land, being Yahweh's land, must keep Sabbath, *i.e.* the Sabbath principle is extended to cover nature as well as man. We also find here the jubilee ordinances. After forty-nine years had elapsed, every fiftieth year was to be inaugurated as a jubilee by the blowing of the trumpet (Heb. *yōbhēl,* hence the name jubilee) on the Day of Atonement. All slaves were to be emancipated (this may be a modified substitute for the earlier provisions with regard to emancipation after seven years); no mention is made of the possibility of perpetual slavery, but it is ordained that the Hebrew slave of a foreigner may be redeemed by a relative, all Jews being essentially Yahweh's servants. The land was to be fallow. Providential aid was promised to ensure sufficient food while crops could not be gathered when the land lay fallow (presumably both for the jubilee year, vv.[11f], and for the seventh year, vv.[20-22]). Here also we find elaborate directions for the redemption of land in the jubilee year. They may be thus summarized: (1) No landed property may be sold, but only the value of the series of crops up to the next jubilee, and the price must be calculated by the distance from that period. (2) A kinsman may redeem land thus mortgaged, or (the meaning may possibly be) exercise a right of pre-emption upon it. (3) The mortgager may redeem at the selling price, less the yearly proportion for the time elapsed since the sale. (4) House property in walled towns (not in villages) may be sold outright, and is redeemable only during one year. Such property was presumably regarded as human and artificial, whilst all land was essentially the property of Yahweh. (5) The Levitical possessions were redeemable at any time, and did not come under the jubilee provisions. (6) Nothing is said in Leviticus as to the remission of debts, but there is a general prohibition of usury. (7) In Lv 27[16-25] a field devoted to Yahweh must be valued by the priest with reference to the number of crops before the next jubilee and might be redeemed at this price with the addition of one-fifth. If not redeemed by the jubilee it became sacred property; no redemption of it was thereafter possible.

2. Purposes of the Sabbatical rules.—The purposes underlying the ordinances above catalogued may be classified under four heads; but it is practically impossible to assign any certain priority of time to any one of the classes. (*a*) *The periodical fallow.* This is a very common provision in agriculture, and the seven years' period is still observed in Syria. Since the fallow year was not at first everywhere simultaneous, the earlier historical books are silent about it; and indeed it cannot have been generally observed. The seventy years' captivity and desolation of the land was regarded as making up for the unobserved Sabbaths of the land (2 Ch 36[21], cf Lv 26[34, 43]). The reference in Neh 10[31] may be to the periodical fallow or to the remission of debts. But 1 Mac 6[49, 53] shows that the fallow year was observed later. (*b*) *The emancipation of slaves* (cf Jer 34[8f]). Such a provision must have been very difficult to enforce, and we find no other possible reference to it. (*c*) *The remission or suspension of debts.* The only reference is the dubious one in Neh 10[31]. (*d*) *The redemption of real property.* The kind of tenure here implied is not uncommonly found in other countries, and Jer 32[6ff], Ru 4, Ezk 7[13] show that something akin to it did exist in Palestine (cf also Ezk 46[17]). But that it was in no sense universal may be inferred from Isaiah's and Micah's denunciations of land-grabbing; on the other hand, 1 K 21[3f] furnishes an instance of the inalienability of land.

In general we have no sign that the sabbatical and jubilee provisions were ever strictly observed in Biblical times. Their principles of rest and redemption, though never practised as a piece of social politics, were preached as ideals, and may have had some effect in discouraging slave-owning, land-grabbing, and usury, and in encouraging a more merciful view of the relations between Jew and Jew. Thus Is 61[1-3] is steeped in the jubilee phraseology, and Christ adopted this passage to explain His own mission (Lk 4[18ff]). A. W. F. B.—L. H. B.

SABBEUS, 1 Es 9[32] (AV, RV).—See SABBAIAS.

SABI.—1. 1 Es 5[28] (RV); see SHOBAI. **2.** 1 Es 5[34] (AV; 1611 ed. **Sabie**); see POCHERETH-HAZZEBAIM.

SABIAS, 1 Es 1[9] (AV).—See HASHABIAH, 6.

SABIE, 1 Es 5[34] (RV).—See POCHERETH-HAZZEBAIM.

SABTA, SABTAH.—In the genealogical list of Gn 10[7] (**Sabtah**) and 1 Ch 1[9] (**Sabta**) a son of Cush, named between Havilah and other Arabian districts. It was probably a region on or near the east coast of Arabia, but in spite of several conjectures it has not been identified with any historical tribe or country. The relationship with Cush is to be accounted for on the ground that the Cushites were held to have extended across the Red Sea from Nubia north-eastward over the great peninsula. J. F. McC.

SABTECA.—The youngest son of Cush according to Gn 10^{7}, 1 Ch 1^{9} (AV **Sabtecha**). The only identification at all plausible has been made with *Samydake* on the E. side of the Persian Gulf. But this is improbable, since that region did not come within the Cushite domain, as judged by the names of the other sons of Cush. Possibly *Sabteca* is a mis-writing for **Sabtah** (q.v.). J. F. McC.

SABTECHA, Gn 10^{7}, 1 Ch 1^{9} (AV).—See SABTECA.

SACAR.—**1.** 1 Ch 11^{35} (AV, RV); see SACHER. **2.** A family of gatekeepers, 1 Ch 26^{4}.

SACHER.—The father of Ahiam, 1 Ch 11^{35} (AV, RV **Sacar**).

SACHIA.—A Benjamite, 1 Ch 8^{10} (AV, RV **Shachia**).

SACKBUT.—See MUSIC, etc., **4** (*c*).

SACKCLOTH.—The sackcloth of OT was a coarse dark cloth woven on the loom from the hair of goats and camels. In the OT it has the following uses: (*a*) a sack for grain (Gn 42^{25}, Lv 11^{32}); (*b*) a garment worn in mourning, or spread out to lie upon (2 S 21^{10}, 1 K 21^{27}). It may also have been a waist-cloth, if the frequently occurring expression 'to gird sackcloth upon the loins' is to be understood in that sense. But it need not imply more than that the garment of sackcloth was to be fastened about the waist (2 S 3^{31} *et al.*). The wearing of sackcloth is associated with rending of the clothes and putting ashes upon the head, as signs of grief and penitence. These customs have been interpreted by anthropologists as remains of rites practised by primitive peoples caused by fear of the dead, with the intention of disguising themselves from recognition by the spirits of the dead. In Jon 3^{8} the Ninevites are said to have put sackcloth upon their animals, where the sackcloth can hardly be understood as a waistcloth. It is even said to have been put upon the altar (Jth 4^{11}), where it can still less be a waist-cloth. See MOURNING CUSTOMS. S. H. He.

SACRAMENTS.—**1. The term.**—Although applied by common consent to certain institutions of the NT, the word 'sacrament' (Lat. *sacramentum*) is not a Scriptural one. In classical Latin *sacramentum* (from *sacrare*, 'to consecrate') is used especially in two senses: (*a*) passively, as a legal term, to denote a sum of money deposited by the parties to a suit, which was forfeited by the loser and appropriated to sacred uses; (*b*) actively, as a military term, to denote the oath taken by newly enlisted soldiers. When it came to be applied to Christian uses, the word retained the suggestions of both of these earlier employments. A sacrament was something set apart for sacred purposes; it was also, in certain cases, of the nature of a vow of self-consecration, resembling the oath of the Roman soldier (cf Tertullian: 'We were called to the warfare of the living God in our very response to the sacramental words,' *ad Mart.* iii.). But the application and history of the word in the Christian Church were determined chiefly by the fact that in the Old Latin and Vulgate it was repeatedly employed (*mysterium*, however, being employed more frequently) to render the Greek *mystêrion*, 'a mystery.' Thus Vulgate translated St. Paul's 'This mystery is great' (Eph 5^{32}) by 'Sacramentum hoc magnum est'—a rendering that had not a little to do with the subsequent erection of marriage into a sacrament. See also RSV, 'This is a great mystery.' This identification of the idea of a sacrament with that of a mystery was carried still further by Tertullian (see article MYSTERY). Tertullian (end of 2nd cent. and beginning of 3rd) is the first writer to apply the name 'sacrament' to Baptism, the Eucharist, and other rites of the Christian Church.

When Pliny (*c* A.D. 112), in his account of the worship of the Christians of Bithynia, describes them at their morning meetings as 'binding themselves by a *sacramentum* to commit no kind of crime' (*Epp.* x. xcvi), it has been suggested by some that he was using the word in the Christian sense, and was referring either to the baptismal vow or to participation in the Eucharist. The probability is that Pliny intended it in the old Roman sense of an oath or solemn obligation.

2. Nature and number.—(1) Though used especially of Baptism and the Eucharist, the application of the term by Christian writers was at first exceedingly loose, for it was taken to describe not only all kinds of religious ceremonies, but even facts and doctrines of the Christian faith. The prevailing notion is illustrated by Augustine's remark that 'signs pertaining to things Divine are called sacraments,' and by his well-known definition of a sacrament as 'the visible form of an invisible grace.' It is otherwise illustrated by the fact that Hugo of St. Victor (12th cent.) enumerates about thirty sacraments that had been recognized in the Church. The Council of Trent defined the nature of a sacrament more closely, by laying it down that not all signs of sacred things have sacramental value, and that visible forms are sacraments only when they *represent* an invisible grace and become its channels. It further delimited the sacramental area by re-enacting in its seventh session (1547) a decision of the Council of Florence (1439) in which effect was for the first time authoritatively given to the suggestion of Peter Lombard (12th cent.) and other Schoolmen that the number of the sacraments should be fixed at seven, namely, Baptism, Confirmation, the Eucharist, Penance, Extreme Unction, Orders, and Matrimony—a suggestion that was evidently influenced by the belief that seven was a sacred number.

(2) In the Reformed Churches criticism of this scheme was based on the fact that the number 7 is arbitrary. While, therefore, the Reformers retained the term 'sacrament,' for 'an outward and visible sign of an inward and spiritual grace given unto us,' they found the distinguishing mark of a sacrament in the fact of its being instituted by Christ Himself and enjoined by Him upon His followers. **Baptism** and the **Lord's Supper** are the only two rites for which they could make this claim. The uniqueness that belongs to these as resting upon Christ's personal appointment and being bound up with His own words (Mt 28^{19}, Mk $16^{[16]}$; Mt 26^{26-29}||, 1 Co 11^{23-25}) justified them in separating these two from all other rites and ceremonies. A justification of this segregation of Baptism and the Lord's Supper from all other rites, and their association together under a common name, is furnished in the NT by Ac 2^{41f} and 1 Co 10^{1-4}. A further justification may perhaps be found in the fact that St. Paul traces an analogy between Circumcision and the Passover—the two most distinctive rites of the Old Covenant—on the one hand, and Baptism (Col 2^{11}) and the Lord's Supper (cf 1 Co 5^{7} with 11^{26}) respectively, on the other.

SACRIFICE AND OFFERING.—**1.** TERMINOLOGY OF SACRIFICE.—(*a*) *General.* Since every sacrifice was an offering, but not all offerings were sacrifices, this preliminary study of the usage of these two important terms may start from the more comprehensive 'offering.' It is true that in the majority of the occurrences of 'offering' it is simply a synonym of 'sacrifice.' This is the case more particularly in the extensive nomenclature of the various sacrifices, *e.g.* 'burnt offering' (which also appears in AV as 'burnt sacrifice') or 'cereal offering.' Names of this type would be more correctly joined by a hyphen as in American RV: 'burnt-offering,' etc; for as will presently appear (**2**), the compound expression in such cases represents but a single word in the original, which is the technical term for the particular sacrifice.

In the remaining occurrences, however, 'offering,' or its synonym 'oblation,' is used in a more extended application to denote a gift offered to God, as opposed to a secular gift, in the form of a present, bribe, or the like, to a fellow-creature. Such 'holy gifts' (Ex 28^{38}) or offerings may be divided into three classes, namely, (1) altar-offerings, comprising all such offerings as were brought into contact with the altar (cf Mt 23^{19}), mostly for the purpose of being consumed thereon;

(2) the stated sacred dues, such as tithes, first-fruits, etc.; and (3) special votive offerings, *e.g.* those specified in Nu 7. In this comprehensive sense of the term, 'offering' or—as almost uniformly in RV—'oblation,' corresponds to the Hebrew *ḳorbān*, a word peculiar to Ezekiel and the priestly legislation. It is the **Corban** of Mk 7^{11}, 'that is given to God' (AV literally, 'a gift'), and means 'something brought near,' *i.e.* to the altar, or at least presented at the sanctuary, in other words, a present to God. The term, as has been said, appears late in the history of OT sacrifice (Ezk 20^{28} 40^{43} and the various strata of P *passim*), the nearest corresponding term in the older literature being *minḥāh*, for which see **2.**

The classification of OT offerings above suggested serves, further, to bring into relief the relation of 'sacrifice' to 'offering.' The former may be defined as *an offering which is consumed, in whole or in part, upon the altar*, or, more briefly, as an altar-offering. It is in this more restricted sense of altar-offering that 'sacrifice' and 'offering' are employed synonymously in our English nomenclature of sacrifice.

'Sacrifice' is the common translation for Hebrew *zebhaḥ*, which is the characteristic designation of an **animal** offering. Literally it means 'slaughter'; the verb is originally to slaughter generally, then specially to immolate the sacrificial victim, to sacrifice. Hence comes also the word for **'altar,'** *mizbēaḥ*, literally the place of slaughter (for sacrifice). In a number of passages this word is coupled with *minḥāh*, which in the early literature could mean any offering to God but later was specialized to mean the non-animal offerings of cereal, oil, etc. In late occurrences of the phrase 'sacrifice and offering' we then have animal and cereal types taken together; such will certainly be the sense in Dn 9^{27}. In some other passages it is doubtful if we can give the second noun the later precise meaning, and the phrase may be taken as meaning altar-offerings in all their various forms; so Ps 40^{6}, 1 S 3^{14}, Is 19^{21} (in this last RSV certainly mistranslates with 'burnt offering').

2. Terminology of Sacrifice.—*(b) Special.* To the foregoing study of the more general terms may now be added a brief review of the more specific renderings of the names of the principal altar-offerings, reserving for later sections the examination of their characteristic features. Following the order of the manual of sacrifice, Lv 1–5, we have (1) the **burnt offering**—AV uses also 'burnt sacrifice'—Hebrew *'ōlāh*, literally 'that which goes up' (on the altar). A derivation meaning 'that which is cooked' has also been suggested. The name is supposed to point to the feature by which the *'ōlāh* was distinguished from all other sacrifices, viz., the burning of the whole victim as a holocaust upon the altar. This characteristic is more explicitly brought out by the rare designation (2) *kālîl*, the **'whole burnt offering'** of Dt 33^{10} and Ps 51^{19}.

(3) **Cereal offering** (AV 'meat offering,' RV 'meal offering') translates *minḥāh* in its normal sense in the Levitical code. The word could in earlier times be used of any gift or present, *e.g.* that of Jacob to Esau (Gn 32^{13}) or that which a king would expect to receive from his subjects (1 S 10^{27}). When used of a gift to Yahweh it could include both animal and cereal offerings, as in the case of Cain and Abel (Gn 4^{3ff}). When it was specialized to the sense of 'cereal offering,' its place as a general term for sacred gifts was taken by *ḳorbān*. With the cereal offering may be taken (4) the **drink offering** or **libation** (Gn 35^{14}, Nu 15^{1-10} etc.).

(5) **Peace offering** is at best only a token translation for the term *shelem*, nearly always in the plural *shᵉlāmîm*. In the Levitical system the distinguishing feature of this sacrifice is the eating of the main part of the animal by the offerer and his family or friends after the choice portions have gone to the altar and the priests. The name of the sacrifice may be connected with *shālōm* 'peace,' to reflect the harmonious relations of worshipper and worshipped expressed in the sacrifice. Even in this case the reader should not interpret the name 'peace offering' as an offering to make peace, a kind of propitiation, as sometimes in colloquial English, which is certainly not the meaning. It is perhaps better to take the word in the sense 'completeness' (a general meaning of the root, and one which could well fit this particular use). When several types of animal sacrifice follow in series, the 'peace offerings' come at the end, and the sense 'final offering' has in fact been suggested. We may note that two of the three sub-divisions of this sacrifice in the Levitical code suggest the completion of something, a blessed event or a vow. These three are: (6) the *tôdhāh*, or **thank offering** (RSV usually 'thanksgiving'), Lv 7^{13}, Jer 17^{26}, Ps 107^{22}; (7) the **votive offering** (AV, RV 'vow'), clearly a sacrifice vowed and performed when the time or occasion is fulfilled, and (8) the **freewill offering**, offered from no other special motive than the desire to offer at this time. These two types appear together in Lv 7^{16}, Nu 15^{3}.

The probable meaning of the difficult terms rendered (9) **sin offering**, and (10) **guilt offering** (AV **trespass offering**) will be more profitably discussed when the precise nature and object of these offerings are under consideration (**14** f). All the various offerings (1) to (10) are explicitly or implicitly included in a favourite term of the Priestly legislation namely (11) *'ishsheh*, **fire offering**, RSV 'offering by fire.' The fire offering is also mentioned in Dt 18^{1} and 1 S 2^{28} (a Deuteronomic passage).

Two other significant terms may be taken together, namely, the **heave offering** and the **wave offering.** The former is the rendering, in this connexion, of (12) *tᵉrûmāh*, which would apparently signify not something 'heaved up' (so Ex 29^{27}), but rather 'what is *lifted off* a larger mass, or separated from it for sacred purposes.' The Hebrew word is used in a variety of applications—gifts of agricultural produce, of the spoils of war, etc., and in these cases is rendered 'offering' or 'oblation' (see Driver, *DB* iii. 588, and *Com. on Deut.* 142, who considers 'that "contribution" is perhaps the English word which . . . best suggests the ideas expressed by the Hebrew *tᵉrûmāh*'). In connexion with sacrifice, however, it denotes certain portions 'taken or lifted off' from the rest and assigned to the priests as their due, in particular the 'heave thigh' (Lv 7^{34} RV), or 'the thigh of the heave offering' (Ex 29^{27f}). 'Heave offering' accordingly in the sacrificial terminology is the equivalent of 'priest's portion' (cf Lv 6^{17}, where, however, a different word is used). RSV translates this term variously as 'priests' portion' (*e.g.* Ex 29^{27-28}) or 'that is offered' (*e.g.* Lv 7^{34} 10^{14}) or 'an offering' (Lv 7^{32}, and often in non-sacrificial contexts).

(13) With the *tᵉrûmāh* is closely associated the *tᵉnûphāh* or **wave offering.** The Hebrew word denotes a movement to and fro, swinging, 'waving,' the priest lifting his share of the victim and moving it to and fro in the direction of the altar, thus symbolizing the presentation of the part of Yahweh, and Yahweh's return of it to the priest. It is applied specially to the breast of the sacrificial victim, hence termed 'the breast of the wave offering' (Ex 29^{26f}), or more tersely 'the breast that is waved' (Lv 7^{34} 10^{14f}). Further, like *tᵉrûmāh*, *tᵉnûphāh* is also used in the more general sense of 'offering' (Ex 35^{22}; cf Nu $8^{11, 13}$ of the Levites, where the change from 'offering' (AV) to 'wave offering' (RV, RSV) is not an improvement).

(14) **Memorial portion,** or memorial, is the translation usual for *'azkārāh*, which is the handful of the cereal offering burned by the priest on the altar (Lv $2^{2, 9}$ etc.), and also the incense accompanying the bread of the presence (24^{7}). The meaning may originally have been 'the odorous part'; but it was later interpreted from the root *zākhar* 'remember' in the sense 'memorial.'

3. Sacrifice and Offering in the Pre-Exilic Period.—The history of OT sacrifice, like the history of the religion of Israel of which it is a characteristic expression, falls into two main divisions, the first embracing the period from Moses to the end of the monarchy (586 B.C.), the second the period from the Babylonian exile to the destruction of the Temple in A.D. 70. For

the latter period we have the advantage of the more or less systematic presentation of the subject in the various strata of the complex legislation of P (especially Lv 1–7); for the former we must have recourse to the numerous references to sacrifice in the non-Priestly sources of the Pentateuch, in the early narratives of the historical books, and in the writings of the pre-exilic prophets.

It should not, however, be supposed that the Levitical system of sacrifice is something wholly new, appearing for the first time after the Exile. When we bear in mind the common conservatism of practice in such matters as sacrifice, it is likely that the Levitical system has a long development behind it, and that many aspects of it were already in operation some centuries before our literary evidence first appears. For example, the element of expiation is much less clearly marked in pre-exilic texts than in Ezekiel and Leviticus; yet it is by no means convincing to attribute this to a growth in the sense of sin as a result of the Exile. In fact the sense of a need for expiation is in some ways a primitive one, and there are many aspects of the expiatory ceremonies of the Levitical system which look very ancient and are most unlikely to have been the invention of the priests returned from exile. It will be convenient, however, to speak first of the material from pre-exilic texts and secondly to deal with the post-exilic system, although we leave it open that some elements of the latter may have been already working in the earlier period.

The sacrificial worship of the earlier differs from that of the later period mainly in the greater freedom regarding the occasion and in particular the place of sacrifice. As for the place of sacrifice, first of all, every village appears to have had its sanctuary or 'high place' with its altar and other appurtenances of the cult. Not that sacrifice could be offered at any spot the worshipper might choose; it must be one hallowed by the tradition of a theophany: 'in every place where I record my name I will come unto thee and I will bless thee' (Ex 20^{24} RV). With the abolition of the local sanctuaries by Josiah in 622–621 B.C. the Temple at Jerusalem became, and henceforth remained, the only legitimate place of sacrifice, as required by the legislation of Deuteronomy (12^{2ff}).

The **occasions of sacrifice** were manifold, and in the days of the local sanctuaries, which practically means the whole of the period under consideration, these occasions were naturally taken advantage of to an extent impossible when sacrifice was confined to the Temple of Jerusalem. Only a few of such occasions, whether stated or special, can be noted here. Of the regular or stated occasions may be named the daily sacrifices of the Temple—a burnt offering in the morning followed by a cereal offering in the afternoon (2 K 16^{15}, cf 1 K $18^{29, 36}$, which, however, may refer to one or more of the large sanctuaries of the Northern Kingdom, *e.g.* Bethel or Samaria), the 'yearly sacrifice' of the various clans (1 S 20^{6}), those at the recurring festivals, such as the new moon and the three agricultural feasts (Ex 23^{14ff} 34^{22ff}), at which the oldest legislation laid down that 'none shall appear before me empty' (23^{15} 34^{20}), that is, without an offering in token of gratitude and homage. Still more numerous were the special occasions of sacrifice—the installation of a king (1 S 11^{15}), the arrival of an honoured guest, family events such as the weaning of a child, a circumcision, a marriage, the dedication of a house (Dt 20^{5}): no compact or agreement was completed until sealed by a sacrifice (Gn 31^{54} etc.); at the opening of a campaign the warriors were 'consecrated' by a sacrifice (1 S 13^{9ff}, Is 13^{3}). One of the most fruitful occasions of sacrifice was undoubtedly the discharging of a vow, of which those of Jacob (Gn 28^{20-22}), Jephthah (see **5**), Hannah (1 S 1^{11}), and Absalom (2 S 15^{7}) may be cited as typical specimens, just as in Syria to-day, among *fellahin* and *bedouin* alike, similar vows are made to the *welys* of the local shrines by or on behalf of sick persons, childless women, or to avert or remove plague or other threatened calamity.

4. THE VARIETIES AND MATERIAL OF SACRIFICE IN THIS PERIOD.—Three varieties of sacrifice are met with in the older Hebrew literature, viz. the **burnt offering,** the **'peace' offering,** and the **'cereal offering.'** The two former, appearing sometimes as 'burnt offerings and sacrifices' (Ex 18^{12}, Jer 7^{22} etc.), sometimes as 'burnt offerings and peace offerings' (Ex 24^{5}, 1 S 13^{9} etc.), exhaust the category of animal sacrifices, the special 'sin' and 'guilt' offerings being first definitely named by Ezekiel (see **13–15**). The typical animal offering in the pre-exilic period is that now termed 'sacrifice' (*zebhaḥ*) simply, now 'peace offering' (Am 5^{22}) to differentiate it more clearly from the burnt offering, now still more explicitly 'sacrifice of peace offerings.' Almost all the special offerings and most of the stated ones were of this type. Its distinguishing feature was **the sacrificial meal,** which followed the sacrifice proper. After the blood had been returned to the Giver of life (we have no details as to the manipulation of the blood in the earliest period, but see 1 S 14^{32-34}), and the fat burned upon the altar (1 S 2^{15}; cf Is 1^{11}), the flesh of the victim was eaten at the sanctuary by the sacrificer and his family (1 S 1^{3-7}) or, in the case of a communal sacrifice, by the representatives of the community (9^{22-25}). The last passage shows that a special 'guest-chamber' was provided at the 'high place' for this purpose.

It is this kind of sacrifice, more than any other, that is susceptible of interpretation primarily as a form of communion with God, the interpretation championed especially by Robertson Smith. The worshippers were the 'guests' (Zeph 1^{7}) of God at His sanctuary, and as such secure of His favour. It is probably, however, too crude and one-sided an interpretation to say that the worshippers were sharing a common meal with the deity. The characteristic Deuteronomic phrase is 'ye shall eat (and drink) before the Lord your God' (Dt 12^{7}; not 'eat with him') and 'ye shall rejoice before the Lord your God' (the note of joyousness emphasized in Deuteronomy and noticeable in the early sources frequently). It is rather more probable that the common eating of the group is the increase and sustenance of their strength and welfare as a group, family or cultic or both, by partaking in the presence of God ('before him') of a victim sanctified to Him, whose life force has been set free, sanctified by application of the blood to the altar, and released for the benefit of the worshippers.

Much less frequent in the older documents is the mention of the **burnt offering,** more precisely the 'whole' offering (see above, **2**). The fact that the whole was consumed upon the altar enhanced its value as a 'holy gift,' and accordingly we find it offered when the occasion was one of special solemnity (Gn 8^{20}, 1 K 3^{4} etc.), or was otherwise extraordinary, as *e.g.* 1 S 6^{14}. In most cases the burnt offering appears in conjunction with the ordinary 'sacrifice' above described (Ex 18^{12}, 1 S 6^{15}, 2 S 6^{17}, 2 K $16^{13, 15}$; cf Is 1^{11}, Jer 7^{22} 17^{26}).

Apart from the special offering of the **first-fruits,** the cereal offering is rarely mentioned as an independent offering in this period, but is frequently named along with the two more important offerings discussed above, as Jg 13^{23}, Am 5^{22}, Jer 14^{12} (with the burnt offering), 1 S 2^{29} 3^{14}, Is 19^{21} and often. 'When the Hebrew ate flesh, he ate bread with it and drank wine, and when he offered flesh on the table of his God, it was natural that he should add to it the same concomitants that were necessary to make up a comfortable and generous meal' (*RS*^{2}, 222). The various forms which the meal offering might assume are attested for a later period by Lv 2, for which see **11.** One form occurring there is undoubtedly ancient, viz. parched ears of corn (2^{14}; cf FOOD, **2**).

Another very ancient form of offering, although not an altar-offering in the strict sense (yet strangely reckoned among the fire offerings, Lv 24^{9}), is that named 'the **bread of the Presence'** (AV, RV 'shewbread'). It is clear that this is connected with the old idea of a meal for the deity, but equally clear that this cannot explain the custom in its present form. The bread was in fact eaten normally

by the priests (or others who are properly sanctified in earlier times, 1 S 21[4-6]) and only a small portion was offered to God (Lv 24[5-9]). The idea is rather the exposure of the bread in the presence of God than His partaking of it. The mention of 'its flagons and bowls with which to pour libations' (Ex 25[29]) shows that, as for an ordinary meal, the holy bread was accompanied by a provision of wine, in other words by a libation. This species of offering occurs as an independent offering only in Gn 35[14]. The skins of wine mentioned in 1 S 1[24] 10[3] doubtless served in part for a drink or 'wine offering' (Hos 9[4]), in part, like the accompanying flour and loaves, for the sacrificial meal. More explicit reference to the wine of the drink offering as an accompaniment of animal sacrifice is found in Dt 32[38] (cf the early reference, Jg 9[13], to wine 'which cheereth God'). For the ritual of the later drink offering, see **11**. It is significant of the predominant part played by the drink offering in early Babylonian ritual, that the word for libation (*niqu*) has there become the usual term for sacrifice.

A brief reference must suffice for **oil** in early ritual (Gn 28[18], Jg 9[9], Mic 6[7]—for the later ritual, see **11**). A **water** offering appears only in the isolated cases 1 S 7[6], 2 S 23[16], but emerges as an interesting survival in the rites of the Feast of Tabernacles (q.v.). **Honey**, although offered among the **first-fruits** (2 Ch 31[5]), was excluded, along with milk, from the altar (Lv 2[11]), on the ground that both were liable to fermentation (see also LEAVEN).

5. MATERIAL AND RITUAL OF SACRIFICE IN THIS PERIOD.—From the details just given it is evident that 'among the Hebrew offerings drawn from the vegetable kingdom, meal, wine, and oil take the chief place, and these were also the chief vegetable constituents of man's daily food' (*RS*[2], 219). The same remark holds good of the animal sacrifices, which were drawn chiefly from 'the herd,' *i.e.* neat cattle, and from the 'flock,' *i.e.* sheep and goats. Excluded from the altar, on the other hand, were not only all unclean animals, but also game and fish, which, not being reared by man, were probably regarded as God's special property, and therefore inadmissible as a present from man. This idea that only what was a man's 'very own' constituted an appropriate sacrifice is reflected in David's words to Araunah, 2 S 24[24] (offerings 'which cost me nothing'). Males of the various species—a heifer is mentioned in connexion with ordinary sacrifice only 1 S 16[2] (Gn 15[9], Dt 21[3ff], 1 S 6[14] do not belong to this category).—and of these, yearlings, as in the later legislation, were doubtless the commonest victims, although we read of 'a bullock of three years old' (1 S 1[24], following reading of LXX and Qumrân; 'seven years' is mentioned in Jg 6[25], and seems to be the true reading, though the text of the other words may be confused).

The complicated question of **human sacrifice** cannot be fully discussed here. 2 K 3[27] reports a human sacrifice by the Moabite king, a burnt offering of his son with propitiatory and apotropaic intent. 1 K 16[34] is probably a foundation sacrifice. The existence of these types is supported for Canaanite culture by archaeological evidence. The chief appearance of human sacrifice in Israel is, however, the 'passing through the fire' of children in the non-Yahwistic Moloch-worship, so powerful in the later kingdom. The case of Jephthah's daughter in Jg 11 is certainly a human sacrifice and made to Yahweh, but is hardly to be interpreted as a normal case even in the early times from which it comes. The understanding of the human first-born as one whose life was forfeit and must therefore be returned to God by killing was at a very early date in Israel superseded or alleviated by the practice of substitution or redemption (Ex 34[20]), and the story of Isaac's imminent sacrifice by his father (Gn 22[1-14]) is a narrative related to this substitutionary practice. Though the practice of human sacrifice was probably well known from experience of what other peoples did, and may well have satisfied certain traditional instincts which found fulfilment in the Moloch worship of the late kingdom, there is no evidence that it was a normal or regular part of Yahwism in the historical period. Indeed the tradition suggests the opposite, that the Yahwistic law put the life and blood of man on a different level from the life and blood of beasts from an early date.

As regards the ritual of sacrifice in this period, we have little information, 1 S 2[13-16] being the only passage that touches definitely on this subject. This much is certain, that much greater latitude prevailed while the local sanctuaries existed than was afterwards the case; and also, that the priest played a much less conspicuous part in the rite than he does in the developed system of the priestly laws. The chief function of the priest in the earliest times was to give 'direction' (*tôrāh*) by means of the oracle, and to decide in matters pertaining to the sphere of 'clean and unclean.' The layman—as father of the family or head of the clan, still more the anointed king—offered his sacrifice without the intervention of the priest. The latter, however, as the custodian of the sanctuary, was entitled to his due (see 1 S 2[13-16], Dt 18[3]). At the more frequented sanctuaries—Jerusalem, Bethel, Beersheba, etc.—a more or less elaborate ritual was gradually evolved, for which the priest, as its depositary, became indispensable.

But even from the first the deity had to be approached with due precaution. The worshippers 'sanctified' themselves (1 S 16[5]), by washing (Ex 19[10]) or changing their garments (Gn 35[2]); for only those who were ceremonially 'clean' could approach the altar of Yahweh. The sacrificer then entered the high place and immolated the sacrificial victim, originally, it would appear, upon the altar itself (Gn 22[9], 1 S 14[33f]), so that the blood ran over it; later, near to the altar, care being taken that the blood was caught and poured out at its base. The victim was next cut up and the fat of the viscera removed. In the case of an ordinary sacrifice (*zebhaḥ*), to judge from 1 S 2[16], the flesh was boiled for the sacrificial meal, and not until the latter was ready was the fat, Yahweh's special portion, burned upon the altar. By this simultaneous consumption of the sacrifice the table-fellowship of Yahweh and His guests was more strikingly realized, the latter 'eating and drinking before the Lord' as the 'sweet smoke' (*ḳᵉṭōreth*) ascended from the altar, an 'odour of soothing (EV 'sweet savour') unto the Lord.'

While the normal attitude of the worshippers on such occasions was one of rejoicing, as became those who, by thus renewing their covenant relation to Yahweh in the way appointed, felt themselves secure of His favour and protection, a more serious note, implying a sense of alienation and the need of propitiation, is not infrequently found even in pre-exilic sacrifice, as will appear in a later section (**13**).

6. THE DEVELOPED SACRIFICIAL SYSTEM OF THE POST-EXILIC PERIOD—ITS GENERAL FEATURES.—The first fact of importance for the new situation is the concentration of sacrificial worship at Jerusalem. Hitherto any slaughter of a domestic animal for the entertainment of a guest or to celebrate an event was a form of sacrifice. Henceforth this is no longer so, and Dt 12[15-16] permits slaughter of animals for eating 'within your gates,' *i.e.* without the journey to the one place of sacrifice at Jerusalem, on the one condition that the blood be not eaten.

The transference of all worship to Jerusalem made it possible for a more uniform sacrificial procedure to develop and become normative. Though we have little definite evidence, it is probable that considerable divergences in procedure and terminology existed in different parts of the country. The cultus now assumes a much more official character, and the Levitical sacrificial codes are not so much an innovation planned and later put into effect as a hardening into system of long-established procedures. With the one sanctuary also the sacrifices are an affair for the whole national community, and the initiative of tribe and family recedes somewhat, although even in the fully developed system regularity by no means ousts the opportunity for the worshipper voluntarily to bring his offering.

We also have a greatly increased emphasis on the **priesthood** as the ministers of sacrifice. In Ezekiel only the sons of Zadok can serve the altar; in P only the sons of Aaron—the Levites are their assistants but cannot perform the one peculiarly priestly task, the bringing of the sacrifices to the altar and the manipulation of the blood. In the priestly conception of holiness special and inviolable holiness belongs to the sanctuary, and within that to the ministry, and within it to the priesthood and the altar which they served; still more to the most holy place, entered by the high priest once a year only. The sacrificial service is part of the sustenance of the holiness of the sanctuary, and must be properly continued at all times. Beyond immolating the victims, the laity are no longer competent to perform the sacrificial rites, although the participation of the laity remains by his laying on of hands on the victim.

Priestly thinking was characterized by its clear, regular and systematic care for the proper categories, and it is to this interest in clarity, developed probably in centuries of the giving of priestly instruction or *tôrāh*, that we owe the systematic presentation of the Levitical laws. It is notable on the other hand how reserved these codes are in any statement of the value or effectiveness of the sacrificial ceremonies.

The relative importance of the two older animal sacrifices, the *'ōlāh* and the *zebhaḥ*, is now reversed. The typical sacrifice is no longer the latter with its accompanying meal, but the 'continual burnt offering,' an act of worship performed every morning and evening (Nu 28^{1-8}) in the Temple in the name of the community. Also characteristic of the late sources is the special treatment given to the expiatory sacrifices, the sin and guilt offerings. The new importance of these is commonly ascribed to the humiliating and disillusioning effect of the Exile and the deepened sense of sin. It is perhaps more probable that the expiatory interest and the special rituals of these sacrifices were ancient, but that they are not brought into prominence until the Levitical codes give precision to their terminology and status. The lack of specific mention in early sources is probably because these sacrifices more than any other were the special concern of the priests and of the inner holiness of the sanctuary.

7. The five kinds of altar-offerings in P.—The numerous altar-offerings mentioned in the various strata of the Priestly legislation are divided by Josephus into two classes: (i) those offered 'for private persons,' and (ii) those offered 'for the people in general'—a classification corresponding to the Roman *sacra privata* and *sacra publica* (*Ant.* III. ix. 1 [224]). The public sacrifices were either stated or occasional, the former and more important group comprising the daily burnt offering (see **10**) and the additional sacrifices at the stated festivals—Sabbath, New Moon, New Year, the three great feasts, and the Day of Atonement.

Since it is impossible within present limits to attempt to enumerate, much less to discuss, the multifarious varieties and occasions of public and private sacrifices, it will be more convenient to follow, as before, the order of the five distinct kinds as given in the systematic manual, Lv 1–7. These are (1) the burnt offering, (2) the cereal offering, (3) the peace offering, and the two expiatory sacrifices, viz. (4) the sin offering, and (5) the guilt (AV 'trespass') offering. Arranged according to the material of the offering, these fell into two groups represented by the terms 'sacrifice' and 'offering' (cf **1**); in other words, into animal and vegetable or cereal offerings (including the drink offering). The four animal or bloody offerings may be classified according to the destination of the flesh of the victim, thus (cf below)—

(i) The flesh entirely consumed upon the altar—the burnt or whole offering.

(ii) The flesh not consumed upon the altar—the peace offerings and the two propitiatory offerings.

The second group may again be subdivided thus—

(*a*) The flesh, apart from the priest's dues, assigned to the offerer for a sacrificial meal—the peace offering.

(*b*) The flesh assigned to the priests to be eaten within the sanctuary—the guilt offerings and the less important of the sin offerings.

(*c*) The flesh burned without the sanctuary—the more important sin offerings.

8. The material of sacrifice in P.—'*Holy*' *and* '*most holy*.'—The material of all these remains the same as in the pre-exilic period (**5**), with the addition of pigeons and turtle-doves to meet the needs of the poor, but the victim for each special kind of sacrifice, and its qualifications, are now definitely prescribed. As regards neat and small cattle, the victims must be males for the most part, entire and without blemish (see Lv 22 for list of imperfections—an exception, however, was made for the freewill offering, v.^{23}). For the peace offering both sexes were equally admissible (3^{1}), and a female victim is specially prescribed for the less important sin offerings ($4^{28, 32}$). The animals were eligible for sacrifice from the eighth day onwards (22^{27}), but the typical sacrifice was the yearling. For the material of the cereal offering see below.

Here may be noted an interesting contrast between such offerings as were regarded as merely 'holy' and those reckoned 'most holy.' The limits of the former category are somewhat vague, but it certainly included firstlings and **first-fruits**, the tithe and the portions of the peace offerings falling to the priests, whereas the showbread (Lv 24^{9}), the sacred incense (Ex 30^{36}), the meal offering (Lv 2^{3}), and the sin and guilt offerings ($6^{25, 29}$ $7^{1, 6}$) are all classed as 'most holy.' One practical effect of the distinction was that the 'most holy things' could be eaten only by the priests, and by them only within the Temple precincts ($6^{16, 26}$, Nu 18^{10}; cf Ezk 42^{13} 46^{20}). As charged with a special potency of holiness, which was highly contagious, the 'most holy things'—there were many other entries in the category, such as the altar and the high priest's dress—rendered all who came in contact with them 'holy,' (Lv $6^{18, 27}$). The 'holy things,' on the other hand, might be eaten by the priests and their households, if ceremonially clean, in any 'clean place,' *i.e.* practically in Jerusalem (10^{14} $22^{3, 10-16}$, Nu 18^{11ff}).

9. The ritual of post-exilic sacrifice.—This is now, like all else, a matter of careful regulation. The ritual, as a whole, doubtless continued and developed that of the pre-exilic Temple, where the **priest** had long taken the place of the lay offerer in the most significant parts of the rite. After the offerer had duly 'sanctified' himself as explained in **5**, and had his sacrifice examined and passed by the Temple officials, the procedure comprised the following 'actions':—

(1) The formal presentation of the victim to the priest officiating at the altar.

(2) The *s*mikhāh* or laying on of hands; the offerer leaned his right hand—both hands were used by the high priest on the scapegoat on the Day of Atonement, Lv 16^{21}—upon the head of the victim. The meaning of this is characteristically not stated, but it may most probably be interpreted as an act of identification accepted or sought.

(3) The immolation of the victim, on the north side of the altar (Lv 1^{11} 6^{25}), by severing the arteries of the neck. In private sacrifices this was always done by the person presenting them.

(4) The manipulation of the blood by the priest. This, the central action of the whole rite, varied considerably for the different sacrifices. After being caught by the priest in a large basin, the blood was in most cases tossed against the sides of the altar. In sin offerings the blood was also 'sprinkled' (a different word) before (on the Day of Atonement, within) the veil of the most holy place, and blood was applied to the horns of the altar. Generally it may be said that the more pronounced the expiatory character of the sacrifice, the nearer the blood was brought to the presence of the deity (see **14**), the climax being reached in the blood-rite of the Day of Atonement (16^{14}, see Atonement [Day of]).

(5) The skinning and dismemberment of the animal,

including the removal of the internal fat, as specified 3^{3f} and 4^{8f}. The hide fell to the officiating priest, except in the case of the sin offering, when it was burned with the flesh (Ex 29^{14}).

(6) The arrangement of all the pieces upon the altar in the case of the burnt offering, of the specified portions of 'the inwards' in the case of the others; and finally—

(7) The burning—literally the turning into 'sweet smoke'—of these upon the altar of burnt offering, the fire on which was kept continually burning (Lv 6^{13}).

Of these various elements of the ritual, those requiring contact with the altar as a 'most holy thing,' viz. (4), (6), and (7), represent the priest's, the rest the layman's, share in the rite of sacrifice. In Ezekiel's plans the slaying of the victim was to be done by those Levites who were not of the Zadokite house and had gone far from Yahweh (Ezk 44^{11}).

10. The burnt offering (Lv 1^{1-17} 6^{8-13}, Ex 29^{15-18}).—The first place in the manual of sacrifice, Lv 1–7, is occupied by the sacrifice which alone was entirely consumed upon the altar, a feature which constituted it the typical honorific sacrifice, the fullest expression of homage to Yahweh on the part alike of the community and of the individual. The victim from the flock and the herd was always a male—young bull, ram, or he-goat. The turtle-dove and the young pigeon of the poor had their special ritual (1^{14-17}). The most important of the stated sacrifices in the period under review was the **'continual burnt offering'** (Ex 29^{38-42}, Nu 28^{3-8}), so called because it was presented every morning and evening along with a cereal oblation by the particular 'course' of priests on duty in the Temple. The victim was a yearling lamb, which was offered on behalf of the whole community of Israel throughout the world. An interesting survival of the primitive anthropomorphic conception of sacrifice, as affording a complete meal to the deity, is seen in the provision that every burnt offering (as also every peace offering) must be accompanied by both a meal offering and a drink offering (see **11**).

11. The cereal offering (Lv 2 6^{14-23}, Nu 15^{1-16} etc.).—As pointed out in an early section, the term *minḥāh*, which originally was applicable both to an animal and to a cereal offering, is in the later legislation limited to the latter species. As such it appears in a large variety of forms, and may be either an independent offering, as contemplated in Lv 2, or, as in most cases, an accompaniment of the burnt and peace offerings (Nu 15^{1-16}). One of the oldest form of the *minḥāh* was, undoubtedly, the 'cereal offering of **first-fruits**,' as described Lv 2^{14-16}; another antique form survived in the unique offering of barley meal in the **offering of jealousy** (Nu 5^{15}). As an ordinary altar-offering the *minḥāh* consisted of 'fine flour,' and was presented either cooked or uncooked, as prescribed in detail in Lv 2^{1-7}. The flour was placed in a vessel and mixed with oil, the equivalent of our butter in culinary matters, and salted, an indispensable accompaniment of this type of offering (2^{13}). The dough was then covered with incense, when it was ready for presentation at the altar. The priest took off all the incense, then removed a handful of the dough, and proceeded to burn the latter with the incense on the altar; this was the *'azkārāh* or memorial portion (**2**). The remainder fell to the priests and was eaten by them as a 'thing most holy.' The cereal offerings of the priests themselves, on the other hand, were wholly burned (Lv 6^{23}).

In Nu 15^{1-16} and elsewhere, minute instructions are given as to the precise amounts of fine flour, oil and wine, which should accompany the burnt and peace offerings (cf Ezk 46^{5-14} and the tabular comparison of the quantities in the two passages in Gray, 'Numbers' [*ICC*], 170). These were regulated by the importance of the animal sacrificed, the **libation** of wine (Hos 9^{4}), for example, being uniformly ½ hin for a bullock, ⅓ hin for a ram, and ¼ hin for a lamb—the hin may be taken approximately as 12 pints.

No instructions have been preserved as to how the wine was to be offered, but from later evidence it appears that, like the blood, it was 'poured out at the foot of the altar' (Sir 50^{15}; cf Jos. *Ant.* III. ix. 4 [234]). For the importance of incense in the later ritual, see INCENSE.

12. The peace offering (Lv 3^{1-16} $7^{11-21, 28-34}$ 17^{1-9} 22^{21-33} etc.).—Its distinguishing feature continued to be the sacrificial meal which followed. For the three subdivisions of this offering, the thank offering, the votive offering, and the freewill offering, see above under **2**. The freewill offering admits of certain imperfections in the victim (Lv 22^{23}), probably because it alone depends purely on the worshipper's initiative and not on a previous sacred sanction like a vow or a Divine intervention such as would motivate a thank offering. As a fourth variety may be reckoned the priests' **installation** or consecration offering of a ram (Ex 29^{19-26}).

The *modus operandi* was essentially the same as for the burnt offering—female victims, however, being admitted equally with males. Special instructions are given as to the removal of the fat adhering to the inwards, along with the appendage of the liver (held by G. F. Moore to be the caudate lobe) and the two kidneys. The parts falling to the priests, the breast and the right hind leg—these varied at different times, cf Dt 18^{3} with Ex 29^{26}, Lv 7^{31f}—were symbolically presented to and returned by Yahweh, by being 'waved' towards the altar (see **2** for this ceremony, and for the expressions 'heave offering' and 'wave offering'). The fat was then salted and burned, while the remainder of the flesh furnished the characteristic meal. Both sexes, if ceremonially clean, might partake of this meal, but only on the day of the sacrifice or the day following (Lv 7^{16-18} 19^{5-8}). The flesh of the special thanksgiving offering (*tôdhāh*), however, had to be eaten on the day it was offered (7^{15} 22^{29f}).

13. THE SPECIAL EXPIATORY SACRIFICES.—The **sin offering** and the **guilt offering**.—Although we have no very early texts mentioning these offerings by name, it has already been suggested that they, and the expiatory interest which they serve, have probably a long history before their precise formulation in the Levitical codes, and that the common theory of their origin in the dark days of the dying monarchy or during the exile is not a probable one. Some more precise arguments may now be given:

Firstly, it is in any case admitted that concepts of expiation or propitiation are associated with sacrifice in early times and during the kingdom (*e.g.* 1 S 3^{14} 26^{19}, 2 S 24^{25}, Mic 6^{6-7}; see the articles EXPIATION and PROPITIATION). The removal of sin is, without doubt, one of the principal motives for sacrifice in Semitic culture, and was well established in Mesopotamia long before our period. Certainly the early Israelite sources quoted above do not name any special kind of sacrifices for the expiatory purpose, but we do not have a precise vocabulary for Israelite sacrifice before Ezekiel, and special expiatory techniques may well be concealed by familiar words.

Secondly, there is certain internal evidence in the OT for the antiquity of the expiatory offerings. We may first mention 2 K 12^{16}, which mentions certain moneys which were not brought into the Temple but went direct to the priests. This was the money of *'āshām* and of *ḥaṭṭā'ôth*, the terms used for the guilt and sin offerings. This does not mean money deposited to buy sacrificial victims. But in spite of the powerful arguments of G. B. Gray (*Sacrifice in the Old Testament*, pp. 61 f) and others, it seems most likely that the passage intends not merely monetary payments of restitution totally unconnected with sacrifices, but such payments made to the priests in connexion with special rituals of expiation (we do not go so far as to argue that the rituals must have been identical with those of Leviticus), and most probably payments to the priests for their service, just as in Punic sacrificial tariffs payments to the priests are appointed (though in that case for all types of sacrifice). That the money in this case went to the priests is naturally to be connected with the fact that in Leviticus it is the expiatory offerings in which the main share goes to the priests.

The date of the events of 2 K 12 is about 814 B.C. To this we may add that Ezekiel, usually taken to be the first literary source for our terms as technical words for offerings, shows no sign of speaking of innovations or unfamiliar entities (Ezk 40[39] etc.). Further, we have already pointed out that certain aspects of these rituals bear every mark of high antiquity, *e.g.* the goat 'for Azazel' on the day of Atonement, and one has to bear in mind the considerable conservatism common in sacrificial matters.

Thirdly, some interesting evidence exists in the Punic sacrificial tariffs of Carthage and Marseilles (see especially R. Dussaud, *Les origines cananéennes du sacrifice israélite*, 2nd edition, 1941). In these three types of animal sacrifice are treated, and while for one kind nothing goes to the priest but the money payment which applies in all cases, for another they receive certain parts of the animal while the remainder goes to the offerer, and in the third nothing is recorded as going to the offerer but a stated weight of flesh goes to the priest. In none of these does the name of the Israelite expiatory offerings appear, and while some of the names of sacrifices are related to Israelite names, they do not appear to mean the same thing or apply to the same procedures. But it does appear that three modes of disposal of sacrificial flesh exist here, as in the Levitical system, and one of them is that special mode in which the main part of the flesh goes to the priests. If there is something in common between the Levitical code and the Punic tariffs, it can only be by connexion through a common and remote ancestry. Ugaritic literature does not seem to have yielded much definite evidence (see J. Gray, *The Legacy of Canaan*, pp. 143–7).

From the point of view of ritual, the chief points of difference between the sin offering and the guilt offering are these: (1) In the guilt offering the manipulation of the blood agrees with that prescribed for the older sacrifices; in the sin offering, on the other hand, the blood ritual is more complicated and varies in intensity according to the theocratic and social position of the offerer. This feature alone is sufficient to distinguish the sin offering as *par excellence* the sacrifice of expiation and atonement. (2) For the guilt offering the victim is uniformly a ram ('the ram of atonement,' Nu 5[8]); for the sin offering the victim varies according to the same principle as the blood ritual: the higher the position of the offerer in the theocratic community the more valuable the victim. On the other hand, both agree as compared with the other sacrifices: (1) in the disposal of the flesh of the sacrifice in so far as it was neither entirely burned on the altar as in the whole offering, nor assigned to the offerer for a sacred meal as in the peace offering, but was otherwise disposed of (see below); and (2) in the absence of the cereal and wine offerings which were the regular accompaniments of the other animal sacrifices.

14. The sin offering (Lv 4[1–5]13 6[24–30], Ex 29[11–14], Nu 15[22–29] etc.).—Leaving aside the question of the relation of these sections to each other as to origin and date—all-important as this is for the evolution of the sin offering—we find from a comparison of Lv 4, 5[7–13], the most systematic as it is probably the latest exposition of the subject, with other sections of the code where this special sacrifice is required, that the latter was the prescribed medium of expiation for two main classes of offences. These are (1) sins committed in ignorance or by inadvertence (4[2, 13, 22], Nu 15[24–29]) as opposed to sins committed 'with an high hand' (v.[30] RV), *i.e.* in conscious and wilful defiance of the Divine law, for which no sacrifice could atone; (2) cases of defilement or uncleanness, contracted in various ways and having no connexion with 'sin' in the modern sense of a breach of the moral law, such as the defilement of childbirth and of leprosy, the uncleanness of the altar and the like.

At this point it will repay us to examine the origin of the term *ḥaṭṭā'th*, omitted from **2**, as likely to afford a clue to the true significance of the sacrifice. Derived from the verb signifying 'to sin' in the sense of 'to miss (the mark or the way),' *ḥaṭṭā'th* denotes sin, then a sacrifice for sin. It may be questioned, however, whether this transference of meaning was as direct as is usually implied. The intensive stems of the root-verb are repeatedly used in the 'privative' sense best expressed by 'to unsin' (German, *entsündigen*) by some rite of purification, as Lv 8[15] Ezk 43[20–23], of 'unsinning,' *i.e.* purifying or purging the altar; Nu 19[19], of 'unsinning' a person defiled by contact with a corpse; 8[21] 'the Levites unsinned themselves (RV purified themselves from sin) and washed their clothes,' where the 'sin' of RV refers only to ceremonial uncleanness. From this use of the verb, *ḥaṭṭā'th* itself acquired the secondary sense of 'purification,' *e.g.* Nu 8[7] (AV rightly 'water of purifying'—RV 'expiation') and 19[9–17], where the red heifer and her ashes are described as a *ḥaṭṭā'th*, that is, as the means of removing the uncleanness caused by the dead. It follows from the above that 'purification offering' better expresses to the modern mind the purposes of the *ḥaṭṭā'th* than does 'sin offering,' with its misleading association.

On the other hand we see that the distinction between moral and ritual offences is one foreign to priestly thinking. Even what is committed 'in error' is not mere accident, but may be the infatuation or blindness of one possessed, for the same word is used for the infatuation of the lover, the uncontrolled words and deeds of the drunkard, or Saul's fanatical pursuit of David. God's holiness is not in fact ethical perfection, but includes His awesomeness as the mysterious source of life and the one to whom life returns; and many of the 'ritual offences' are points of human life which approach too closely to the mystery of life and death which belongs to God alone. Holiness requires obedience of heart and observation of the due limits which God has set for men, and which must be observed throughout His sacral community. This shows why there is a gradation in the rituals of the sin offering for different persons; the closer the person to God as the centre of holiness, the more dangerous and comprehensive the contagion of his offence, and the more deeply the inviolable holiness of God is threatened.

Returning to Lv 4[1–5]13, we find that, apart from the gradation of the prescribed victims already referred to, the distinguishing feature in the ritual of the sin offering is the more intense application of the blood. In this respect two grades of sin offering are distinguished, a higher and a lower. In the higher grade, which comprises the offering of the high priest and that of the 'whole congregation,' the blood is carried by the officiating priest into the Holy Place of the Tent of Meeting—in practice the Temple. There some of it is sprinkled with the finger seven times before the veil, and some applied to the horns of the altar of incense, while the rest is poured out at the base of the altar of burnt offering. The victim in both cases is a young bull, the flesh of which is so sacrosanct that it has to be burned without the camp.

In the lower grade, part of the blood was smeared upon the horns of the altar of burnt offering, while the rest was poured out, as before, at its base. It is interesting to note, as bearing on the evolution of the ritual, that in a presumably older stratum of P (Ex 29[11–14]), the blood ritual, even for the high priest's offering, does not exceed that of the lower grade of Lv 4. The flesh of the latter, which was also 'most holy,' was eaten by the priests within the sanctuary (6[24–30]). To meet the requirements of the poor man, provision was made for the admission of 'two turtle-doves or two young pigeons,' and in cases of extreme poverty of 'the tenth part of and ephah of fine flour' (about 7 pints), offered without oil and without incense (5[11–13]).

15. The guilt offering (AV trespass offering; Lv 5[14–6]7 7[1–7], Nu 5[5–8]).—This offering, the *'āshām*, is prescribed in the Levitical system for cases involving restitution, *e.g.* when a man finds something lost and keeps it, refuses to return a deposit, or swears falsely in property questions (Lv 6[1–6]). In these cases restitution is made (with an addition of one-fifth as compensation), and the restitution is accompanied by the guilt offering to Yahweh. We

note also from a much earlier time the guilt offering of the Philistines when they make restitution of the Ark to Israel, in this case a gift of restitution rather than a sacrifice (1 S 6[1-9]). Even in the priestly legislation we find *'āshām* being used (Nu 5[8]) for the 'restitution for wrong,' *i.e.* the property wrongly possessed and now to be restored, which in the case where the rightful owner is no longer accessible goes 'to Yahweh,' *i.e.* to the priest. Another connexion with property restitution appears in that a valuation of the sacrificial victim by the priest is normal for most cases of the guilt offering (Lv 5[18 6]).

The occasion of the sacrifice may then reasonably be held to be restoration or reintegration to normality after an offence. In this case the offences are mostly what we would call moral offences, but the distinguishing of the moral nature of the offence is no more the point here than in the sin offering. The interpretation of the sacrifice as one of reintegration fits with such passages as Ezr 10[19] (for priests after putting away foreign wives), Nu 6[12] (for the Nazirite as he resumes his period of consecration after its interruption by contact with the dead), Lv 14 (restoration of the leper). In Lv 19[20-22] the offering is explicitly connected with cleansing or forgiveness of 'the sin which he has committed' (intercourse with a slave woman betrothed to a man; in this case the guilt offering probably applies since it is regarded as a property matter, but the man is punished first of all by flogging, since this is the probable meaning in Lv 19[20] rather than 'an inquiry shall be held' as RSV puts it; cf Mishnah *Ker.* ii 4). The phrase declaring forgiveness is recurrent in Lv 4–5. In Lv 5[17-19] the guilt offering is related like the sin offering to sins of which the person does not know. Provision is made for a public confession in some cases, Nu 5[7]. Normally the victim is a ram, and the ritual is like that of the ordinary sacrifices, but the flesh is eaten, like that of the lower grade of sin offerings, only by the priests 'in a holy place.' In the case of the restoration of the leper, however, a 'male lamb' is specified, and a special blood ritual is carried out.

It should be mentioned at this point also that in one quite isolated but very important passage, the Servant Song of Is 53 (v.[10]), the Servant's life or person is mentioned as being made a 'guilt offering' (most translations 'an offering for sin' presumably understanding that the reference to sacrificial ceremonies is quite vague and general), cf the references to 'sin-bearing' in vv.[11-12]. It is difficult to know how far the precise characteristics of the Levitical guilt offering are understood to apply in Is 53.

For the expiatory offerings in general, see EXPIATION.

16. Combinations of sacrifices.—On solemn occasions we may have a combination of various categories of sacrifice, and then the order is normally (1) the expiatory offerings (2) the burnt offerings (3) the peace offerings. This full sequence appears in Lv 9. In many places we have only the elements (2) and (3), while in mainly expiatory rituals the peace offerings are often not mentioned, so that the elements are (1) and (2), *e.g.* the cleansing of the leper in Lv 14 or the Day of Atonement, Lv 16. The Day of Atonement is built up from sin-offerings, followed by the scapegoat release, followed by burnt offerings. Where the full series appears it is reasonable to see a thought of expiation as the first need on approaching Yahweh, followed by the burnt offerings as the culmination of worship to Him, followed by the peace offerings as the sharing of the community by its partaking in the sacrificial meal. A cereal offering accompanied the burnt and peace offerings, but not the expiatory type. For the occasions of various types of sacrifice, see ATONEMENT [DAY OF], NAZIRITE, TITHE, VOW, etc.

It should further be remembered that while this article has confined itself for the most part to sacrifice understood as what is brought to the altar and offered there, it is difficult or impossible to make an absolute distinction between such sacrifices and certain other rituals. The killing of the passover, for example, is not treated here, because it required neither priest nor altar, but it was a *zebhaḥ* or animal killing like the altar sacrifices, and one can hardly say the translations are wrong in rendering this as 'sacrifice of the passover' (Ex 12[27]). Similarly Ex 13[15] uses the verb 'sacrifice' for the killing of the first-born. On the other hand, the sacrificial system shares many conceptions and procedures with other offerings which were not in any part consumed on the altar, but were only presented at the altar or in the Temple premises. See therefore PASSOVER, FIRST-BORN FIRST-FRUITS, TITHE, etc.

17. THE SIGNIFICANCE OF SACRIFICE IN THE OT.—The question may first of all be asked, how far the sacrificial system of the OT is the peculiar property of Israel, and how far it is shared with the religion of sister Semitic peoples. A comparison in detail cannot be entered upon here, and in any case no such fullness of data is available for Israel's neighbours as we have in the OT, although much material is known for Mesopotamia. The Punic (Carthaginian) tariffs have been mentioned, but offer only a small fraction in quantity of the OT's sacrificial codes. It may be said in general that Israelite sacrifice had large elements in common with widespread Semitic practice, and it is not probable that any large proportion of its procedures are specifically Yahwistic innovations. Sacrifice was, of course, common property of most or all ancient religions, and though the OT represents its sacrificial practice as being commanded to Moses and Aaron by God, it also knows in certain of its traditions of sacrifice offered to God by the earliest men (Gn 4[3]) and by Noah, the father of all existing men and not of Israel only (Gn 8[20]). Nevertheless Israelite sacrificial procedure, however much of it was inherited, came to be integrated in the national consciousness, and we can see how well it fits into other expressions of religious life. In certain cases special connexions can be seen; *e.g.* the avoidance of milk and honey in altar offerings is probably to be understood in their liability to fermentation like leaven—though honey is included in offerings of first-fruits, Lv 2[11-12].

It has already been noted that the Levitical sacrificial codes are very reserved towards any statement of the theory or theology behind sacrifice, and confine themselves to a large extent to formal statements of procedure. Even where they use terms which might help us to understand their theory of the effect of sacrifice, such as 'a pleasing odour,' 'it shall be accepted for him,' 'to make expiation,' these terms are not themselves explained further. In some cases the formulae themselves may well be traditional and may no longer be understood in the sense suggested by their etymology. Important as must be the study of the origins of sacrifice, we must remember that these lie far in the prehistory of Israel, and the meaning of a custom for Israel may be quite a different one from the intention which gave rise to it.

The formal expression of the laws should not lead us to assume that Israel held a mechanical view of the efficacy of sacrifice. Sacrificial thinking should not be classified under 'magic,' nor did the Hebrews have the clear hard understanding of 'cause and effect' by which one would interpret the sacrifice as a cause which once set in motion could not fail to effect the good will of God. Terms like 'validity,' 'efficacy' and '*ex opere operato*' are inappropriate to OT thinking. Even those abuses in sacrificial worship which the prophets criticized were not so much 'mechanical' as syncretistic, un-Yahwistic, and separated from the ethical traditions of the covenant. Now that the Psalter is being dated in many parts much earlier than scholars were formerly willing to do, it becomes possible to use sections of it with care as being the sung liturgy which was used in the Temple and accompanied the sacrificial service. In certain Psalms we find the reception of sacrifice a matter of prayer (*e.g.* Ps 20[3]); the need of inward worship is emphasized (4[5]), and it is proclaimed that sacrifice is not something needed by God (Ps 40 and 50). Passages like these should probably not be ascribed to an anti-cultic reform atmosphere which wishes to replace the sacrifices by a spiritual worship, but rather may be taken as a complement to the sacrificial worship. Similarly in

Ps 51[15-17] inward cleanliness is demanded by God, and sacrifices are not a substitute for it; the paradox of the ending of this Psalm should not be too easily evaded by regarding the last two verses as a secondary addition. The Psalter with its emphasis on God's mercy, love, freedom and judgment is a balance to the more formal sacrificial laws.

One interpretation of sacrifice which is almost certainly archaic for developed Israelite thought is that which speaks of it as the 'food' of God (Lv 3[11] 21[6], Ezk 44[7]). See also above, on the bread of the Presence. That God eats the flesh of animals is denied and mocked by Ps 50[12-13]. It is probable that with the thought of God as the one God and universal creator the idea of His needing nourishment dies away. But its effect remains not only in the phrase 'food of God' but in the use for sacrificial material of the normal foods. On the other hand it is relevant that food is the source of strength, and is itself composed of animal and vegetable life; and in accordance with the common Hebrew conception of holiness and increase by deprivation, it may have been felt that the taking of so much strength in the form of food from the community and its devotion to the centre of life and holiness is a building up of increased life and welfare. Such a construction would fit well the continual offering which was made twice daily in the later ritual. In this sense it is possible to give more real content to the sacrificial use of the word 'food.'

The 'communion theory' of sacrifice has already been mentioned, and was supported especially by Robertson Smith (see **4** above). He saw in it the main force of sacrificial religion. It was, however, in his exposition (*The Religion of the Semites*) linked with the institution of totemism among the Semites; the absence of evidence for the latter has greatly weakened his case. His case applied best to the peace offerings and could not explain the burnt offering well. It has already been suggested above that the peace offering or communion type may be best understood as the increase and sustenance by the worshippers of their welfare as a group, by partaking in the presence of God (not partaking 'with him,' still less 'of him,' but 'before him') of a victim sanctified to Him, of which the blood and fat have been applied to the altar.

It has equally been maintained that the basis of sacrifice is to be found in the conception of a gift given to God; though even G. B. Gray, the most scholarly supporter of the gift theory for the OT (in his *Sacrifice in the Old Testament*), readily admitted that it did not explain *all* sacrifice, and in particular of course not the peace offering, where the worshippers ate the main part of the victim. The strength of this explanation is in certain terms, such as *minḥāh*, which may be used of any present from man to man as well as being a principal sacrificial term, and also that it brings the sacrificial worship of the altar into line with certain other rituals which are not related to the altar and are undoubtedly to be understood as gifts. Its weakness as an overall theory is perhaps that it does not explain enough; for even where much, or most, sacrifice is a gift, it is not therefore immediately clear why the gift is given. The proper extension of the gift theory may be partly in what was said above about the 'food of God,' partly in conceptions of propitiation and expiation, and perhaps most generally in the conception that God wills to be worshipped with the returning to Him of life and strength.

The reader of the NT will often have the impression that the main purpose of the OT sacrifices was expiatory, and some interpretations of sacrifice have in fact so concentrated on the expiatory function as to obscure the existence of sacrifices such as the peace offering or the cereal offering which cannot easily be thus explained. The group of sacrifices which may be specially called expiatory have already been discussed, and for the more general concept of expiation see EXPIATION, PROPITIATION, ATONEMENT. It should, however, be mentioned here that the Hebrew phrase *kipper* 'make expiation' is applied in the sacrificial codes not only to the expiatory sacrifices proper but to certain others: in particular to burnt offerings (Lv 1[4]), and to any sacrificial blood (Lv 17[11]).

It is in fact probable that the purpose or intention of Israelite sacrifice was complex, and that no one motivation can be built into a theory which will explain the most part of it. Central to all animal sacrifices is the application of the blood to the altar or the presence of Yahweh, which may be understood as returning of life to God for the increase of the living force of the community which has the sanctuary as its centre, and also as expiatory of offences by the life which is in the blood. Where part of the sacrifice remains to be consumed by worshipper or priest, the application of the blood or the burning of the other parts constitutes a sanctifying of the portion to be consumed, its introduction within the sphere of deep holiness related to the altar. The leaning of the hand on the victim seems to mean an identification in which the worshipper enters into the act of sacrifice, for increase of his life and strength and for expiation of his sin.

A sacrifice like the peace offering stresses more the increase of life and prosperity for the group; the expiatory type is concentrated on the removal of sin. All sacrifice is worship in the sense of the proper action of man before God; sacrifice can indeed be a form of prayer or supplication. God is pleased to be properly worshipped (this is the probable meaning ascribed in historical times to the phrase 'for a pleasing odour,' see PROPITIATION). Where there is sin unexpiated, God's anger will speedily visit people and land; in such a case the expiation is a turning away of anger and catastrophe. In later Judaism, with the concentration of piety on the obedience of the Law, the motives for sacrifice were rather simplified, for the final reason for sacrificing was simply enough that God had commanded Moses that sacrifice should be made in such and such a way.

A. R. S. K.—**J. Ba.**

SACRILEGE.—In Ro 2[22] AV and RVm have 'commit sacrilege' where RV and RSV have 'rob temples.' On the other hand, RSV has 'sacrilegious' in Ac 19[37] where AV and RV have 'robbers of churches (or temples).' In 1 Mac 1[54], Mt 24[15], Mk 13[14] RSV has 'desolating sacrilege' for AV and RV 'abomination of desolation.'

SADAS, 1 Es 5[13] (AV).—See AZGAD.

SADDEUS, 1 Es 8[45] (AV).—See IDDO, **1.**

SADDUC, 1 Es 8[2] (AV).—See ZADOK, **8.**

SADDUCEES.—Probably the name 'Sadducee' is derived from the name Zadok, a notable priest in the time of David and Solomon (2 S 8[17] 15[24], 1 K1[34]). His descendants long played the leading part among the priests, so that Ezekiel regarded them as the only legitimate priests (Ezk 40[46] 43[19] 44[15] 48[11]). The name indicates the fact that is most decisive for the right understanding of the Sadducees. About the year 200 B.C., when party lines were beginning to be drawn, the name was chosen to point out the party of the priests. That is not saying that no priest could be a Pharisee or a Scribe. Neither is it saying that all the priests were Sadducees. In the time of Jesus many of the poor priests were Pharisees. But the higher priestly families and the priests as a body were Sadducees. With them were joined the majority of the aristocratic lay families of Judaea and Jerusalem. This fact gives us the key to their career. It is wrapped up in the history of the high priesthood. For two centuries after the Exile the high priesthood earned the right to the leadership of the Jewish nation. But in Jesus' time its leadership lay far back in the past. Its moral greatness had been undermined on two sides. On one side it had lost touch with what was deepest in the being of the Jews. For the most part this was due to its aristocratic bias. The Levitical priesthood was a close corporation. No man not born a priest could become a priest. More and more, as the interests of the nation widened and deepened, the high priesthood failed to keep pace. Its alliance with the aristocratic families made things worse.

The high priesthood and the people drifted apart. No great institution can do that and remain great.

From another side also—the political—the high priesthood was undermined. Owing to the mixture of Church and State the high priests were necessarily in politics all the time. Consequently the historical process, which ended by incorporating Palestine in the Roman Empire, drained away from the high priesthood much of the moral responsibility involved in the handling of large affairs. So, undermined on two sides, the high priesthood lost the right to lead. And the party which grew up about it—the Sadducees—became the party of those who cared more for their own well-being and for the maintenance of things as they were than for the Kingdom of God.

When we turn to the tenets of the Sadducees, it is still the contrast with the *Pharisees* that puts them in an intelligible light. Pharisaism, with all its faults, was the heart and soul of the nation, the steward of its treasures, the Holy Scriptures, the trustee of its vitalizing hope. The Sadducees stood for the tenaciously conservative tendencies in the nation. They lay under the curse which rests upon all aristocracies, the inability to realize that the best things must grow. In contrast to the Pharisees they had clung to the letter of the Law, refusing to modify it in any form. Thus they insisted on applying the *lex talionis* literally. In cases that were not clearly covered by Pentateuchal law, the Sadducees, when in power, enacted new laws of their own. As the latter accumulated, they tended to push the old Law into the background. Further, the draconic character of their laws outraged the people. According to *Megillath Taanith* iv, the day upon which the Sadducean code was abrogated was observed as a holiday by the people. They denied the Pharisaic doctrine of the resurrection of the body (Mk 12^{18}, Mt 22^{23}, Lk 20^{27}, Ac 23^{8}). The NT is a better guide in this field than Josephus, who affirms (*BJ*, II. viii. 14 [165], *Ant.* XVIII. i. 4 [16]) that they denied the immortality of the soul. Josephus overstated things in his desire to make the Jewish parties look like the philosophical schools of Greece. The Sadducees did not deny the immortality of the soul. But they lingered in the past, the period when the belief in immortality was vague, shadowy, and had not yet become a working motive for goodness. They did not accept the developed faith in immortality which was part and parcel of the Pharisaic teaching regarding the Kingdom of God. And this meant that their nation had outgrown them. The Sadducees also denied the Pharisaic doctrine regarding angels and ministering spirits (Ac 23^{8}). Thereby they maintained a certain sobriety. They even emancipated themselves from a considerable amount of superstition bound up with Pharisaism. But they paid for it by a wholly disproportionate sacrifice of vital piety.

From this sketch we can see why Jesus had almost no dealings with the Sadducees during His ministry. His interests were with the common people. This brought Him into continual conflict with the Pharisees. It was not until His popularity seemed to threaten the peace of Jerusalem that the high priest, with the Sadducees at his back, was moved to decisive action. We can also see why the Apostolic Church, in her first years, had most to fear from the Sadducees (Ac 4 and 5).

As the party of the priestly aristocracy bound up with the Temple and the sacrificial cult, the Sadducees sustained a death blow by the tragic events of the year A.D. 70. Only remnants lingered on and finally merged with the Karaitic movement in the 8th cent. H. S. N.—S. S. C.

ṢADHE.—See TZADE.

SADOC.—1. 2 Es 1^{1} (AV, RV); see ZADOK, **6. 2.** Mt 1^{14} (AV, RV); see ZADOK, **7.**

SAFFRON.—Hebrew *karkōm*, Ca 4^{14}. This is identical with the Arabic *kurkum* or *za'farân* (whence is derived the English 'saffron'), the name of a variety of crocus (*Crocus saticus*), of which the yellow styles and stigmas are used for dyeing and for flavouring food. A similar dye, also called saffron, is more commonly derived from the florets of the *Carthamus tinctorius* (*Compositae*) cultivated everywhere in Palestine for this purpose. E. W. G. M.

SAHIDIC VERSION.—See GREEK VERSIONS OF OT, **11**, and TEXT OF NT, **27.**

SAILS.—See SHIPS AND BOATS.

SAINTS.—See HOLINESS, II, and SANCTIFICATION.

SAKKUTH.—A word which is found in parallelism with Kaiwan in Am 5^{26}. The AV and RV forms are 'Siccuth' and 'Chiun,' as in the Massoretic Text, due to the Massoretic combination of the consonants with the vowels of *shiḳḳūs* ('abomination'). Sakkut is another name for the Assyrian god Ninurta, god of the planet Saturn; thus Sakkuth and Kaiwan are synonymous. See STARS. W. M. N.—C. J. M. W.

SALAH, Gn 10^{24} 11^{13-15} (AV).—See SHELAH, **2.**

SALAMIEL.—An ancestor of Judith, Jth 8^{1} (AV **Samael**).

SALAMIS, in Cyprus, which must not be confused with the scene of the great battle between Xerxes and the Greeks in 480 B.C., was the first place visited by Paul and Barnabas on the first missionary journey (Ac 13^{5}). It is already mentioned in 7th-cent. Assyrian inscriptions. A whole line of its kings is known. It attained great power under Evagoras (410–373 B.C.). It was besieged by the Persians (381 B.C.). The royal house ended in 310 B.C. In Roman times it remained a flourishing commercial city, and the eastern half of the island was governed from there. There were very many Jews in Cyprus. Christianity was early preached there (Ac 11^{19f}), and among early converts were Mnason (Ac 21^{16}) and Barnabas (Ac 4^{36}). Under Trajan (A.D. 116–117) the Jews made an uprising and destroyed the city. They were annihilated, and Jews were henceforth not allowed on the island. A. So.—E. G. K.

SALASADAI, Jth 8^{1} (AV).—See SARASADAI.

SALATHIEL.—1. 1 Es $5^{5, 48, 56}$ 6^{2} (AV, RV) and Mt 1^{12}, Lk 3^{27} (AV); see SHEALTIEL, **1. 2.** 2 Es 3^{1} (AV, RV); see SHEALTIEL, **2. 3.** 2 Es 3^{15} (AV); see PHALTIEL, **2.**

SALCAH, Jos 12^{5} 13^{11}, 1 Ch 5^{11} (AV).—See SALECAH.

SALCHAH, Dt 3^{10} (AV).—See SALECAH.

SALECAH.—The most easterly of the towns claimed by Israel; it was assigned to Gad and is always described as being on the eastern frontier of Bashan Dt 3^{10} (AV **Salchah**), Jos 12^{5} 13^{11}, 1 Ch 5^{11} (AV **Salcah**). It is better indicated less theoretically as being in the extreme SE. of the Ḥauran. On account of its commanding position it has always been of strategic importance; but it was probably never permanently occupied by any of the Israelitish people. It was a Nabataean and Roman stronghold, and a station on the great trade and military road from Gadara and Edrei eastward through the desert to the Persian Gulf. It is now inhabited by Druses, and bears the name *Salkhad.*

SALEM.—1 Es 8^{1} (RV); see SHALLUM, **6.**

SALEM.—The name of the city where the mysterious **Melchizedek** (q.v.) was king and priest (Gn 14^{18}; cf He 7^{1f}). Modern scholarship has inclined toward the view that Salem is **Jerusalem** (q.v.). This identification appears to be supported by references to the city as *Urusalim* in the Tell el-Amarna tablets of the patriarchal period, and as *Ur-sa-li-im-mu* in Assyrian records from the time of Hezekiah. Josephus clearly makes this identification, stating that 'they afterwards called Salem *Jerusalem*' (*Ant.* I. x. 2 [180]). An important confirmation of this view appears in one of the Dead Sea Scrolls which was first called the Lamech Scroll, later the Genesis Apocryphon, col. XXII. lines 13–14, where it is reported that Abram 'came to Salem, that is Jerusalem. And Abram camped in the Valley of Shaveh, that is the King's Dale, the plain of Beth-karma (*bḳ'th byth krm*').' The

meaning of the last phrase, which does not occur in the Genesis account, is uncertain, but in the light of the geographical information preceding, and references to Beth-kerem in the Mishnah (*Midd.* iii. 4, *Nidd.* ii. 7) and in Jer 6[1] to Beth-haccherem (*byth hkrm*, 'house of the vineyard'), it must have been located in the vicinity of Jerusalem.

The likelihood that Melchizedek came from Jerusalem is supported by the statement that his meeting place with Abraham and the king of Sodom was 'at the Valley of Shaveh (that is, the King's Valley),' Gn 14[17]. This valley directly E. of Jerusalem is referred to in connexion with Absalom (2 S 18[18]), and Jehoshaphat Jl 3[2, 12]). Also, Jerusalem is alluded to in Ps 76[2] where the name *Salem* is used. Although neither name appears in Ps 110, the references to Zion (v.[2]) and Melchizedek (v.[4]) suggest the traditional association of the latter with Jerusalem. The Samaritans did not accept this identification but claimed that Salem or Salim of the Abraham story was located near Shechem. The LXX reads *Salem* for *Shiloh* (q.v.) in Jer 41[5], although most translators consider this an erroneous reading. Since the name was from a common Hebrew root, it came to be applied to other places. The early Christians knew of a Salem S. of Beth-shean. The valley of Salem is mentioned in Jth 4[4] and has been understood to be in the Jordan Valley, but this is uncertain. However, the two OT references to Salem (Gn 14[18], Ps 76[2]) support the view that Salem was another name for Jerusalem.

SALEMAS, 2 Es 1[1] (RV).—See SHALLUM, 6.

SALIM, near to which was **Aenon** (Jn 3[23]), lay on the W. of Jordan (cf 1[28] 3[26] 10[40]). Aenon is placed by the *Onomasticon* eight Roman miles S. of Scythopolis (*Beisān*), 'near to Salim and Jordan.' This points to the neighbourhood of the ruin *Umm el-'Amdân*, with Tell er-Ridhghah on the N., where the tomb of Sheikh Selīm probably preserves the ancient name. *Aenon*, 'place of springs,' we may find in the seven copious fountains near by. In the 1st cent. the district belonged probably to Scythopolis, not to Samaria. The difficulties of other suggested identifications can be got over by doing violence to the text or to the sense. W. E.

SALIMOTH, 1 Es 8[36] (RV).—See SHELOMITH, 5.

SALLAI.—1. A Benjamite, Neh 11[8]. **2.** A priestly family, Neh 12[20]; called **Sallu** in v.[7].

SALLU.—1. A Benjamite family, 1 Ch 9[7], Neh 11[7]. **2.** See SALLAI, 2.

SALLUMUS, 1 Es 9[25] (AV,RV); See SHALLUM, 11.

SALMA.—1. One of the sons of Caleb the son of Hur and 'father' or founder of Bethlehem, 1 Ch 2[51, 54]. **2.** See SALMON, 1.

SALMAI, Neh 7[48] (RV).—See SHALMAI.

SALMANASAR, 2 Es 13[40] (AV, RV)=**Shalmaneser** (q.v.).

SALMON.—1. The father of Boaz, Ru 4[20f]; in the direct line of the ancestry of our Lord, Mt 1[4f], Lk 3[32] (in the last **Sala** in RSV); called **Salma** in 1 Ch 2[11]. **2.** Ps 68[14] (AV); see ZALMON, 1.

SALMONE.—A promontory at the NE. end of Crete, now *Cape Sidero*. St. Paul's ship, after reaching Cnidus with difficulty, was met by a powerful NW. wind, which forced the captain to alter the course. Off Salmone (Ac 27[7]) he decided to work his way westward under the lee of Crete. A. So.

SALOAS, 1 Es 9[22] (RV).—See ELASAH, 2.

SALOM.—1. Bar 1[7] (AV, RV); see SHALLUM, 6. **2.** 1 Mac 2[26] (AV); see SALU.

SALOME.—1. The daughter (unnamed in NT) of Herodias who according to Mk 6[17–29], Mt 14[3–11] danced before Herod Antipas and received as a reward the head of John the Baptist. **2.** One of the women who were present at the crucifixion (Mk 15[40]) and who afterwards visited the sepulchre (16[1]). Mt 27[56], compared with Mk 15[40], shows that Matthew identified Salome with 'the wife of Zebedee' whom he had mentioned in 20[20]. W. F. B.—E. H.

SALT.—Salt is rightly included by Ben-Sira among the things 'basic to all the needs of man's life' (Sir 39[26] RSV). The Hebrews of the Southern Kingdom, at least, had access to inexhaustible stores of salt, both in the waters of the Dead Sea ('the Salt Sea,' Dt 3[17] and elsewhere), whence it could easily be obtained by evaporation, and in the deposits of *Jebel Usdum* (Arabic for Mount of Sodom) at its south-western extremity. References to 'salt pits' are found in Zeph 2[9], 1 Mac 11[35]. One hundred pounds of water from the Dead Sea are said to yield 24½ lb. of salt, compared with 6 lb. obtained from the same quantity of water from the Atlantic Ocean.

In addition to its daily use as a condiment in the preparation of food (cf Job 6[6]), and its important place in the sacrificial ritual, salt was employed by the Hebrews in an even greater variety of ways than it is among ourselves. Newborn infants, for example, were rubbed with salt (Ezk 16[4])—a practice in which a religious, rather than a hygienic, motive may be detected. A grain of salt placed in the hollow of a decayed tooth was considered a treatment for toothache (Mishnah, *Shabbath*, vi. 5). In other tractates of the Mishnah we find frequent references to the use of salt for preserving fish, for pickling olives, vegetables, etc. The salting of meat for preservation is referred to in the 'Letter of Jeremiah' (Bar 6[28]). The modern Jewish custom of laying meat in salt for the purpose of more thoroughly draining it of the blood was doubtless observed in Bible times. In Palestine, under the Seleucids, salt formed a government monopoly (1 Mac 10[29] 11[35]), as it did in Egypt under the Ptolemies.

As regards the presence of salt in the ritual of sacrifice, the words of Mk 9[49] AV, 'every sacrifice shall be salted with salt,' although omitted by RV and RSV following the best authorities, are nevertheless true to fact. The legislation of the Priests' Code, at least, expressly ordains: 'with all your offerings you shall offer salt' (Lv 2[13]). This passage specifies that the cereal offerings ('meal offerings' in RV; 'meat offerings' incorrectly in AV) as well as the more important animal sacrifices had to be salted (cf Ezk 43[24]). A special 'salt chamber' is mentioned among the rooms adjoining the Priests' Court in the description of Herod's Temple given in the Mishnah (*Middoth*, v. 3). The sacred incense also had to be 'seasoned with salt' (Ex 30[35] RV and RSV); likewise the showbread ('bread of the Presence' in RSV), according to the Greek text of Lv 24[7]. Probably the idea behind all this was that since salt was an indispensable accompaniment of man's food, it could not be absent from the 'bread (or food) of God,' as the sacrifices are termed in Lv 21[6, 8, 17, 22].

In the developed priestly legislation, however, there can be little doubt that the presence of salt had a symbolic significance. From its use as a preservative, reflected in our Lord's figure, 'You are the salt of the earth' (Mt 5[13]), and as an antidote to decay, it is natural that salt should become a symbol of permanence, and even of life as opposed to decay and death. From this symbolical standpoint we probably reach the true explanation of the striking expression 'a covenant of salt' (Nu 18[19], 2 Ch 13[5]), which denotes a covenant that is inviolable and valid in perpetuity. Therefore the presence of salt with every sacrifice may have come to symbolize the irrevocable character of Yahweh's covenant with Israel (see commentaries on Nu 18[19]; cf Ezr 4[14]).

In marked contrast to the employment of salt as a symbol of life, stands its parallel occurrence as a symbol of barrenness, desolation, or death (Dt 29[23] and elsewhere). This is partly due to the fact that land saturated with salt, such as that around the Dead Sea, is barren like a desert (cf Jer 17[6]). By this aspect of the symbolism of salt it has been usual to explain the treatment meted out by Abimelech to the city of Shechem, Jg 9[45]: 'He razed the city and *sowed it with salt*.' It is possible,

however, in harmony with the fundamental conception of the ban (see BAN) to regard the strewing of a city with salt as symbolizing its complete dedication to a deity.

A. R. S. K.—W. F. S.

SALT, CITY OF.—A city of Judah, Jos 15[62]. It may be inferred to have been somewhere near the Dead Sea on the W. side, but the location is unknown.

SALT SEA.—See DEAD SEA.

SALT, VALLEY OF.—The scene of memorable victories of David over the Edomites, 2 S 8[13], 1 Ch 18[12], Ps 60 Heading; at a later period Amaziah here defeated the same enemies, 2 K 14[7], 2 Ch 25[11]. It is probably modern *Wâdī el-Milḥ*, which still bears the same name.

SALTWORT, Job 30[4] (RV).—See MALLOWS.

SALU.—The father of Zimri, Nu 25[14], 1 Mac 2[26] (AV Salom).

SALUM.—1. 1 Es 8[1] (AV); see SHALLUM, **6. 2.** 1 Es 5[28] (AV, RV); see SHALLUM, **8.**

SALUTATION (or greeting) is a serious matter in the East; some knowledge of immemorial practice is necessay in dealing with Orientals. The subject salutes his king by prostration; the humble his superior by touching the ground with his hand, and then his lips and brow. The young salutes the aged, the rider the footman, etc. In crowded streets only men of age, rank, and dignity need be saluted (Mt 2[37] etc.). Common forms of salutation are, 'Peace be upon you'; response, 'And upon you': 'May your day be happy'; response, 'May your day be happy and blessed': and, in the highway, 'Blessed be he that cometh' (Jg 18[15], Mt 10[12], Lk 24[36] [AV, RV, RSVm]. Ps 118[26], Mt 21[9] etc.). Salutations are frequently prolonged, and repeated inquiries after health and welfare extremely tedious (2 K 4[29], Lk 10[4]). See also GESTURES, KISS. W. E.

SALVATION, SAVIOUR.—'Salvation' is the generic term employed in Scripture to express the idea of any gracious deliverance of God, but specially of the spiritual redemption from sin and its consequences predicted by the OT prophets, and realized in the mission and work of the Saviour Jesus Christ.

1. In the OT.—The root meaning of the principal OT words for 'save,' 'salvation,' 'saviour' is, *to be broad, spacious*; salvation is enlargement. As illustrations of this OT meaning of salvation may be taken the words of Moses at the Red Sea, 'Stand firm, and see the salvation of the LORD' (Ex 14[13])—'He has become my salvation' (15[2]); or the avowal of the psalmist, 'This poor man cried, and the LORD heard him, and saved him out of all his troubles' (Ps 34[6]). Y″ is said to have given 'saviours' to Israel in the time of the Judges (Neh 9[27]). Victory in battle is 'salvation' (Ex 14[14], 1 S 14[45], Ps 20 etc.). Salvation, or deliverance, of this kind is sometimes national, but sometimes also individual (cf of David, 2 S 22, Ps 18). Such external deliverances, however, it is to be observed, are never divorced from spiritual conditions. It is the righteous or penitent alone who are entitled to look to God for His saving help; no others can claim Him as the rock of their salvation (Ps 18[1-3], cf 4[1]). When, therefore, the people had turned their backs on Y″, and abandoned themselves to wickedness, salvation could come only through a change of heart, through repentance. The chief need was to be saved from the sin itself. In the prophets, accordingly, the perspective somewhat changes. External blessings, deliverance from enemies, return from exile, are still hoped for, but the main stress is laid on a changed heart, forgiveness, restoration to God's favour, righteousness. In the pictures of the Messianic age it is these things that come to be dwelt on (cf Jer 31[31-34], Ezk 36[26-28], Hos 14 etc.). As the idea of salvation becomes more spiritual, it likewise becomes more universal; the Gentiles are to share its blessings (Is 45[23f] 49[8-12] 60[1-12]).

The teaching of the prophets bore fruit in the age preceding the advent of Jesus in deepening ideas of the future life, of resurrection and a future perfected state, of the connexion of prosperity with righteousness—though mostly in the sense of outward legal obedience the very error against which the prophets declaimed—and in more concrete representations of the Messiah. But there never failed a godly kernel, who cherished more spiritual hopes, and waited in patience and prayer for 'the consolation of Israel' (Lk 2[25]).

2. In the NT.—In the NT the word 'salvation' (*sōtēria*, from *sōtēr*, 'saviour') is sometimes applied to temporal benefits, like healings (*e.g.* Mt 9[22] 'your faith has made you well,' literally 'saved you'), but most generally it is employed as a comprehensive term for the spiritual and eternal blessings brought to men by the appearance and redeeming work of Jesus Christ. The name *Jesus* was given Him because 'it is he that shall save his people from their sins' (Mt 1[21] RV); He is distinctively the 'Saviour' (Lk 2[11]); His work on earth was 'to seek and to save the lost' (Lk 19[10]); His death and resurrection were a means to salvation (Ro 5[9f]); He is exalted 'as Leader and Saviour' to give repentance and forgiveness of sins (Ac 5[31]); 'and there is salvation in no one else' (4[12]). In Apostolic usage, therefore, salvation is the all-embracing name for the blessings brought by the gospel (cf 'the gospel of your salvation,' Eph 1[13]; 'the message of this salvation,' Ac 13[26]; 'a repentance that leads to salvation,' 2 Co 7[10] etc.). To expound fully the contents of this term, accordingly, would be to expound the contents of the gospel. Enough here to say that it includes deliverance from all sin's evils, and the bestowal of all spiritual blessings in Christ (Eph 1[3]). It begins on earth in forgiveness, renewal, the bestowal of the Holy Spirit, enlightenment, guidance, strengthening, comfort; and is perfected in the blessedness and glory, in which body and soul share, of the life everlasting. The fact never to be forgotten about it is, that it has been obtained at the infinite cost of the redeeming death of God's own Son (cf Rev 5[8]). For further elucidations, see ATONEMENT MEDIATOR, REDEMPTION. J. O.—N. H. S.

SAMAEL, Jth 8[1] (AV).—See SALAMIEL.

SAMAIAS.—1. 1 Es 1[9] (AV, RV); see SHEMAIAH, **14. 2.** 1 Es 8[39] (AV, RV); see SHEMAIAH, **16. 3.** 1 Es 8[44] (RV); see SHEMAIAH, **15. 4.** To 5[13] (AV); see SHEMAIAH, **28.**

SAMARIA.—A city built on a hill purchased by Omri, king of Israel, from a certain **Shemer,** and by him made the capital of the Israelite kingdom (1 K 16[24]). We gather from 1 K 20[34] that Ben-hadad I., king of Syria, successfully attacked it soon afterwards, and had compelled Omri to grant him favourable trade facilities. Ahab here built a Baal temple (1 K 16[32]) and a palace of ivory (22[39]). Ben-hadad II. here besieged Ahab, but unsuccessfully, and was obliged to reverse the terms his father had exacted from Omri. Jehoram attempted a feeble and half-hearted reform, destroying Ahab's Baal-pillar, though retaining the calf-worship (2 K 3[2]) and the *'ᵃshērāh* (13[6]). The city was again besieged in his time by Ben-hadad II. (2 K 6, 7). After this event the history of Samaria is bound up with the troublesome internal affairs of the Northern Kingdom, and we need not follow it closely till we reach 724 B.C., when Shalmaneser IV. besieged Samaria in punishment for king Hoshea's disaffection. It fell three years later; and Sargon, who had meanwhile succeeded Shalmaneser on the Assyrian throne, deported its inhabitants, substituting a number of people drawn from other places (2 K 17). In 331 B.C. it was besieged and conquered by Alexander, and in 120 B.C. by John Hyrcanus. Herod carried out important building works here, large portions of which still remain. He changed the name to *Sebastē* in honour of Augustus. Philip preached here (Ac 8[5]). The city, however, gradually decayed, fading before the growing importance of Neapolis (Shechem). The Crusaders established a bishopric here.

Extensive remains of ancient Samaria still exist at the mound known as *Sebasṭiyeh* (Sebaste), a short distance from *Nâblus*. It is one of the largest and most important mounds in ancient Palestine. Excavations under the

auspices of Harvard University were carried out 1908–1910, and there were joint expeditions 1931–1933 and 1935. Amongst the discoveries were the palace of Ahab or Jeroboam II., a number of ostraca, and many ivories. See J. W. Crowfoot, *et al.*, *Samaria-Sebaste*, 3 vols.
R. A. S. M.—J. Bo.

SAMARITAN, GOOD.—See NEIGHBOUR.

SAMARITANS.—Religio-ethnic Hebrew sect whose laity claim descent from the Joseph tribes, but their priesthood from Phinehas. The OT reference (2 K 17[29]) to Samaritans over-emphasizes non-Hebraic racial admixture and reflects the later enmity between Jew and Samaritan. This enmity was a continuation of the pre-720 B.C. Ephraim versus Judah strife. After 586 B.C. the north had the advantage this time over Judah and made the returning exiles aware of this. In the 5th cent. Sanballat the Horonite (Aaronide ?; in Samaritan sources Sanballat is regarded as Levitical) was the native ruler of Palestine under the Persians; at first Samaritan obstructionism was political, after Ezra's purging of the priesthood it was also religious. The Jews only in the time of John Hyrcanus (the end of the 2nd cent. B.C.), with his destruction of the Samaritan Temple on Gerizim, were able to retaliate, but the Samaritans (who maintained their national entity until the time of Justinian, A.D. 527) never recognized Jerusalem and Mount Zion as the chosen place for God's sanctuary; in their eyes the chosen place was Mount Gerizim, which had been an Israelite Holy place before Jerusalem. The question is not when the Samaritan Temple was first built on Gerizim, but when it was first regarded as their only sanctuary; this was probably after Ezra's rebuff.

The Holy Book of the Samaritans is the Torah, the perfect recension of which they hold they and not the Jews have; their one prophet is Moses. Their religion and life is still under the control of their priests, very much as in post-exilic Judaism prior to the emergence of the Pharisaic rabbis. Since the Samaritan priesthood is Zadokite it is not surprising that resemblances can be found between some Samaritan practices and those of Sadducees and Dead Sea Sectaries. There are no heathen beliefs or practices in Samaritanism. The Jewish attitude to the Samaritans is reflected in the various attitudes of the Gospels. Matthew is hostile, Mark ignores them, Luke, while fair, is distant. John is more conciliatory. The Talmud's attitude varies with the individual opinion cited, yet the only heresies were belief in Mount Gerizim and alleged denial of the resurrection of the dead (cf Tractate *Kuthim*). At least for the first millennium of our era, Samaritans were divided into two groups the Sabbuai and the Dositheans. The former were conservative and orthodox, the latter influenced by Gnosticism.

There is a large Samaritan literature in Hebrew, Aramaic, and Arabic, the bulk of which still awaits investigation and is important for the study of the text of the Bible and the Targum. Their liturgical, exegetical, midrashic, and halakhic works are important for the study of Sectarian Judaism.

The Samaritan Diaspora once widespread is now represented by seventy Samaritans at Holon in Israel, the rest of the sect live at *Nâblus*, successor to the ancient Shechem.

SAMATUS, 1 Es 9[34] (AV, RV).—See SHALLUM, **12,** and SHEMAIAH, **29.**

SAMECH.—Fifteenth letter of Hebrew alphabet, and so used to introduce the fifteenth part of Ps 119, every verse of which begins with this letter.

SAMEIUS, 1 Es 9[21] (AV).—See SHEMAIAH, **17.**

SAMELLIUS, 1 Es 2[16f, 25, 30] (RV).—See SHIMSHAI.

SAMEUS, 1 Es 9[21] (RV).—See SHEMAIAH, **17.**

SAMGAR-NEBO.—One of the Babylonian princes who, at the taking of Jerusalem by Nebuchadnezzar, in the eleventh year of Zedekiah, came and sat in the middle gate, Jer 39[3]. There has been much discussion concerning this name, due to the varying forms of the Greek version. The most probable explanation is that of Schrader, namely, *Shumgir-Nabû*, a name meaning 'Be gracious, O Nebo.' As, however, *Rab-saris* and *Rab-mag* are titles, the question arises whether *Samgar-nebo* may not be one also. If so, it may be a corruption of *sangu Nebo*, 'the priest of Nebo'—an office possibly held by **Nergal-sharezer,** who, if identical with king Neriglissar, was closely connected with E-zida, the temple of Nebo at Borsippa. His daughter married a priest of E-zida in the first year of his reign. Other textual reconstructions have been attempted, resting on the comparison of the text here with v.[13], but no satisfactory solution has been reached.

SAMLAH.—An Edomite king, Gn 36[36f], 1 Ch 1[47f].

SAMMUS, 1 Es 9[43] (AV, RV).—See SHEMA, **3.**

SAMOS was an important island in the Aegean Sea off the coast of Ionia. It was a centre of luxury, art, and science. In 84 B.C. it was united to the province of Asia, and in 17 B.C. was made a free state by Augustus. This it was when St. Paul touched here (Ac 20[15]) on his way home from his third journey. There were many Jewish residents on the island, and it was one of the places addressed by the Romans in favour of the Jews (1 Mac 15[23]).
A. So.

SAMOTHRACE.—An island S. of Thrace and NW. of Troas, from which place St. Paul had a straight run to it (Ac 16[11]). It was a regular stop for vessels sailing between Syria and the Hellespont (see *Ant.* XVI. ii. 2 [23]). The town of the same name was on the N. side of the island. Herod gave the people of Samos generous presents (Jos. *BJ* I. xxi. 11 [425]). The island is mountainous and has a summit nearly a mile above the sea level. Samothrace played little part in Greek history, but was famous as the seat of the mysterious cult of the divinities known as Cabiri (see Herod. ii. 51).
A. So.—E. G. K.

SAMPSACES, 1 Mac 15[23] (AVm, RVm) = **Sampsames** (q.v.).

SAMPSAMES.—One of the places to which the Romans wrote in favour of the Jews (1 Mac 15[23]); often identified with *Samsun*, which however was called Amisus then, a seaport town on the Black Sea. AVm and RVm with Vulgate, have **Lampsacus.**

SAMSON.—The form of the name in EV is from LXX and Vulgate; Hebrew *Shimshôn* suggests a derivation from *shemesh*, 'sun,' and the meaning 'sun-man.' His birthplace, Zorah, was close to Beth-shemesh, 'house of the Sun.' The account of Samson occurs in Jg 13–16 and he is alluded to in He 11[32].

1. The story of Samson need not be recapitulated; but it falls into two well-defined parts: Jg 13[1–24], The Birth of Samson; Jg 13[25]–16[31], The Exploits of Samson. The birth is supernaturally foretold to a hitherto childless couple; the scene is the Danite territory before the enforced migration of that tribe northward. He is to be a Nazirite, *i.e.* a dedicated man in the nomadic tradition from birth. The religious motif of the story is similar to that of Jg 6[11–24]. The exploits are of a different character, and show the marks of stories long preserved in the oral traditions of the district. They are practically devoid of religious interests, though they reflect a belief in God who works for His people even through the waywardness of men. It seems reasonable to suppose that these popular stories were gathered together by the author of Jg 13[2–24] and that the whole cycle was given literary form in the Deuteronomic circle, when the opening and closing comments were added (Jg 13[1] 16[31b]). If the stories existed in oral form, this may well account for the formal inconsistencies and additions.

It is evident that 'his father and mother' have been added at 14[5, 6b, 10a]. The original story would have told of Samson's request to his parents for a marriage of the normal kind, but with a Philistine woman. This was

refused, and Samson arranged a marriage of the ṣadiḳa type (cf MARRIAGE), in which the bride remains as a member of her own clan as do the children of the marriage. Hence the friends of the bridegroom, 14^{11}, are Philistines and not Danites. The 'linen garments' (14^{12}) are pieces of fine linen (Pr 31^{24}, Is 3^{23}) and the 'festal garments' are gala dress suitable for the occasion (cf 2 K $5^{5, 22}$). For 'before the sun went down' we should read 'before he entered the bridal chamber' (14^{18}). In 16^{13f} the words '. . . and make it tight with the pin, then I shall become weak, and be like any other man. So while he slept, Delilah took the seven locks of his head and wove them into the web' have been restored to the text from LXX. Delilah wove Samson's hair into the cloth that was being woven on the loom; but when Samson was aroused, he pulled up the whole loom as it was thus fastened to his hair. When he was finally captured and made to grind at the mill in the prison, it was the ultimate dishonour that the strong man of the Hebrews should be condemned to a woman's work. Dagon (v.^{23}; cf 1 S 5) was a Semitic corn deity.

2. Origin and nature of the story.—It may be hazardous to assign the narrative to the J source in the Pentateuch, and perhaps misleading to think of it as a 'document' before its incorporation into the complex of the book of Judges. It would appear that we have here a series of popular stories about a local hero, Samson, preserved in the district of Mahaneh-dan. It is possible that we have preserved a selection from a much wider series of stories. As we have it, the narrative falls into three clearly defined sections: (*a*) the birth narrative, ch. 13, the most distinctively 'religious' section, which may well have been associated with a local sanctuary; (*b*) a series of exploits, chs. 14 and 15, in which the 'religious' motif is least apparent; and (*c*) the account of Samson's downfall and humiliation, through which the defeat of Israel's enemies is brought about in the very house of their god. In this last section we may feel that the religious interest, though never obtrusive, is most profound. It is said that he began 'to deliver Israel from the hand of the Philistines' (13^{5}), and that he 'judged Israel twenty years' (15^{20} 16^{31}). There is, however, no suggestion in the stories that he was recognized as the leader of his people, and he was certainly not so acknowledged by the men of Judah (15^{10-13}). His actions are prompted by selfish interests and private revenge; the events are of local significance. Parallels can be found in many parts of the world, particularly among peoples who have known oppression and foreign domination. It is therefore impossible to assert or to deny, on the basis of evidence, the factual historicity of the events associated with Samson. Yet the obvious antiquity of the stories is evidence for an attitude of mind among the Israelites which was to come to clearer expression under Saul, and to victory under David. The name Samson has suggested that the stories associated with the hero have their origin in a solar myth, but attempts to identify certain elements in the story with known sun-myths are hardly convincing. His long hair (rays of the sun), the burning of the crops, the name of his paramour Delilah (worshipper or devotee, *sc.* of Ashtart), and certain similarities between the Samson and Gilgamesh stories have been cited in support of this suggestion. But these features, with a great deal that has no possible solar connexion, are integral to the story and they serve no mythic function. It is possible that vague memories of the Gilgamesh myth have coloured the incidents, but there is no suggestion that Samson is 'two-thirds god and one third man'; he has no traffic with the deities and there is nothing to correspond to Enkidu. Similarly, the association of the jaw-bone incident with Ramath-lehi (the height of Lehi) would naturally suggest the throwing away of the jaw-bone (*lᵉḥî*), while En-hakkore (Partridge-spring) would call to mind the occasion when Samson called (*ḳārā'*) on the Lord. In other words, these place names have conditioned the form of the stories, but have not created them. In fact the stories are told with artless simplicity and rustic humour and reflect the historical situation and local customs. Parallels with the Hercules cycle have been noted, but they are not close enough to suggest identity of origin. It is a fact of experience that great heroes have killed wild beasts, suffered thirst, and sometimes been unwise in their choice of a mate. The incidents in the Samson story find their natural explanation as belonging to a historical situation as preserved in local tradition.

3. Historical value.—From this point of view the great importance of the stories lies in their portrayal of the political and social conditions of the time. The southern part of Canaan is completely under Philistine control; what is described is not a condition of war but of domination against which the inhabitants of the districts bordering on the Maritime Plain have no thought of rebelling (15^{10f}). Samson himself leads no political revolt; his actions are the result of private quarrels. There is no suggestion of Philistine objection to intermarriage; although it is offensive to Israelite tradition. There appears to have been no restriction of movement imposed by the Philistines on the inhabitants of the district. The Philistines have successfully established control and the process of assimilation has begun. It is to be noted that the Philistines have adopted a Semitic corn deity. We gain from the story a clear picture of early *marriage* customs, accompanied by lavish feasting lasting for a week and gifts of clothing. The riddle is of greater significance than it would be among us. It is a test, not of mental agility, but of wit and ability to find the answer which could only be known to the questioner. The solution, however dubiously obtained, brought 'honour' to the answerers.

4. Religious significance.—This can be recognized at two levels; first that which is inherent in the stories themselves, and second, that which arises from the use made of these stories by the deuteronomic editor. The religious emphasis on the birth of Samson is evident. The birth is a miracle, not in the modern sense of something abnormal, but in the Biblical sense of an event in which Divine activity is apparent. He is to be a Nazirite from the time of his conception: the rules for a Nazirite in Nu 6 agree with what we find in Jg 13—clear evidence of the high antiquity of some of the material found in the Priestly Code. The consecration of the hair, regarded as a seat of life, was particularly associated with war regarded as a religious activity (Dt 32^{42}, Ps 68^{21}). The prohibition against fermented drink is a negative side of the same consecration, since the mysterious phenomenon of fermentation was regarded as evidence (to the man of the desert tradition) of the activity of an alien deity. This applies also to 'unclean' food. The exceptional thing about Samson was that he should be a life-long Nazirite. Samson's strength was particularly associated with his hair: but at times he was seized with a demonic frenzy, when the Divine energy 'struck' him (13^{25}) or 'came powerfully upon him' ($14^{6, 19}$ 15^{14}). The sequel to Ch 13 can only be regarded as a degradation of a life specially equipped for a high purpose. But this association may well indicate the high art as well as the profound religious insight of the deuteronomist. For the writing of this whole story in its present form could only have taken place after the reform of King Josiah, and perhaps during the Exile period. Its parallel to the life of Israel then becomes obvious. Yet, in spite of Israel's waywardness, the Divine purpose will be accomplished, even in Israel's humiliation and death. Samson was, even in his ignorance, an exponent of Israel's deepest faith. It may be that this is intended in the reference to him in He 11^{32}.

C. W. E.—A. S. H.

SAMUEL.—The figure of Samuel is similar to that of Moses in that no single one of the sacral institutions of Israel, *e.g.* the offices of prophet, seer, judge, or sacrificial intercessor, can be used to characterize his position. Both men combine the traits of several of these offices in the tradition we have of them. This makes it hard to determine their precise historical position. In the case of Samuel it is possible to see that different sections of

the tradition have seen him in a different way, or attached to his name different examples of sacred life and action. These different traditions can probably not be separated by pure literary criticism which would seek to identify various 'documents' or 'sources'; rather we may discern the special interest of various parts of the narrative, as cherished in various centres and circles of tradition.

1 S 1–3 is probably from the tradition of Shiloh and tells how Samuel's birth was an answer to prayer and a reversal by God of human weakness (the theme of the song of Hannah, 1 S 2^{1-10}); and how the child was dedicated to God and became the established mouthpiece of the Divine word at Shiloh, at a time when the priesthood of the house of Eli is falling into decadence and destruction. Samuel is here seen as a prophet, a prophet established at the sanctuary, receiving and transmitting oracles of the future will of Yahweh. It has long been noticed that the etymologizing interpretation of the name of the child (1 S $1^{20, 27-28}$) as 'lent, asked' (Heb. *Shā'ûl*) fits not the name of Samuel but the first king Saul. But if so only the particular theme of the naming has been transferred from Saul to Samuel, probably because of the interest in the Divine calling and sending of Samuel; it is not credible that the whole of 1 S 1–3 originally belonged to Saul.

1 S 7^{3-14} displays Samuel rather as a war-leader or deliverer on the pattern of earlier 'judges' like Gideon. The tradition here has come from Mizpah and is interested in the stone Ebenezer where the Philistines were said to have been defeated. The story of the victory is a rather flat and featureless one, and the most interesting thing is Samuel's act of intercession by sacrifice. In later times the few references to Samuel outside the books that bear his name remember him as a great intercessor like Moses (Jer 15^{1}, Ps 99^{6}).

The following passage (7^{15}–8^{3}) sees Samuel as a judge in the proper sense, a guardian and interpreter of the sacred law, who went round the great sanctuaries of Israel. His sons, appointed as colleagues and successors, lead by their corrupt ways to a demand for monarchical government.

The place of Samuel in the traditions of the origin of the kingdom is a complicated one. In chs. 8 and 12, Samuel makes more or less the standard Deuteronomic criticisms of the kingdom, with Solomon's rule as the standard bad example; even here, though it is held that Israel has done wrong to ask for a king, it is admitted that God has appointed them a king. Chs. 9–10 represent Samuel as a seer, who can be asked for guidance in a case of lost asses, who is given Divine guidance for the choosing out of the man to be king, who can tell what Saul will meet on his way as he departs. From certain unevennesses in the narrative it seems likely that traditions of different localities have been fused together. We see the emphasis on Samuel as director in sacrificial worship (9^{13} 10^{8}) and we have mention of bands of ecstatic prophets, among whom Samuel appears as a leader at Ramah in 1 S 19^{18-24}. 1 S 10^{17-27}, on the other hand, shows Samuel convoking an assembly of all Israel and installing Saul as king on the basis of the sacred lot; this is again the Mizpah tradition, and at the sanctuary there Samuel deposits the 'book' of the rights and duties of the kingship. 11^{14} probably speaks not of 'renewing' but of 'inaugurating' the kingdom in the original sense, and is the tradition of the rise of Saul to kingship after his successful Ammonite campaign, and its sanctification by Samuel at Gilgal—perhaps the most historically probable of these traditions. In its present place it is no doubt intended as a renewal of the kingship.

Two incidents at Gilgal, 13^{8-15} and 15^{10-31}, indicate hard opposition between Samuel and Saul. The first is connected with war against the Philistines (and is rather an interruption to the story of the war), and Samuel is represented as claiming exclusive rights, or priority of rights, in the offering of sacrifice. The second concerns the non-execution of the ritual destruction of the booty in the Amalekite war. In the first case Samuel pronounces the non-continuance of the kingdom of Saul rather than his rejection; in the latter the opposition is sharper and goes on to rejection. Both passages show that Saul's motives were either reasonable or religious or both. 1 S 15^{22-23} contains a passage about the value of sacrifice which suggests the prophecy of the 7th cent. rather than Samuel's time. The stories show how the older premonarchic sacral leadership, represented by Samuel, was able to resist the freedom for innovation by the first king and to interpret his innovations as disobedience to Yahweh. The story indicates also that Samuel was not lacking in personal sympathy for Saul (15^{35} 16^{1}).

1 S 16^{1-13} tells how Samuel chose David on God's behalf out of the family of Jesse, and anointed him as king. The story again shows Samuel's special place in sacrificing. Other stories of the rise of David are independent of Samuel. We find David during his flight from Saul taking refuge with Samuel at Ramah, 1 S 19^{18}. But from this time Samuel has no central place in the tradition. His death is mentioned in 25^{1}, and 28 is devoted to the story of how his ghost is called up by Saul; the ghost repeats the accusation of disobedience in the case of Amalek, and prophesies the defeat by the Philistines in which Saul perished.

The different traditions about Samuel have been fairly carefully put together and in spite of occasional unevennesses may be read as one story. Samuel is in this context seen as destined to be the last of the 'judges' and the human mediator to Israel of the origin of the kingship and its messianic line, along with the dark and mysterious choice and rejection of the first king and the ambiguity of the Divine judgment of the kingdom.

We have no exact data for the chronology of the life of Samuel or for his age at his death; but his life certainly lay within the approximate limits 1070–1000 B.C. If we can take as historical the accounts of his activity as a 'judge,' and there is no reason to doubt them, his work as a guardian of the sacred law in a number of centres must have done much to consolidate the unity of Israel, to provide a certain minimal administration of the ancient law, and to keep alive the knowledge of the God of Israel upon whose action the law, the covenants and the traditions depended.

Samuel was of Ephraimite family, and it is only the later genealogical interest which tries to make him a Levite, in conformity with the later rules of priesthood (1 Ch 6^{28}). J. Ba.

SAMUEL, BOOKS OF.—1. Title.—The two Books of Samuel are really parts of what was originally one book. This is shown not only by the fact that the narrative of Book I. is continued without the slightest interruption in Book II., and that the style, tone, point of view, and purpose are the same throughout, but also by their appearance as one book bearing the simple title 'Samuel' in the oldest known Hebrew MSS. The division of the Hebrew text into two books was first made in print by Daniel Bomberg in his Hebrew Bible (2nd edition, 1517). In doing so he was in part following the text of the Septuagint and the Vulgate, in which the Books of Samuel and Kings are described as the First, Second, Third, and Fourth Books of Kingdoms (LXX), or Kings (Vulgate). The title 'Samuel,' less accurately descriptive of the contents than that of 'Kingdoms' or 'Kings,' owes its origin to the prominent place held by Samuel in 1 S 1–16. A late Jewish interpretation regarded it as declaring Samuel's authorship of the narrative; but this is impossible, in view of the fact that the history extends through the reign of David, long after the death of Samuel (1 S 25^{1}).

2. Contents.—The period covered by the Books of Samuel extends from the birth of Samuel to the close of David's reign, *i.e.* approximately from 1070 B.C. to 961 B.C. The narrative can conveniently be divided into seven sections which are roughly marked off by content and by the history of the tradition they contain. These are (largely following Hertzberg, *Die Samuelisbücher*, *ATD*, 1956): 1. The childhood of Samuel and his relation to the Eli priesthood at Shiloh (1 S 1–3); 2. The

Ark and its wanderings (1 S 4[1]–7[2]), with which 2 S 6 is closely connected; 3. The story of Samuel, the beginnings of the kingdom, and the conflict of Saul with Samuel (1 S 7–15); 4. The story of Saul and David, from the anointing of David down to the defeat and death of Saul by the Philistines (1 S 16–2 S 1); 5. David as king, first in Hebron over Judah and then in Jerusalem over all Israel; his establishment of Jerusalem as capital, the question of a house there for Yahweh, the promise to the Davidic dynasty, and his imperial conquests (2 S 2–8); 6. The 'Succession Story' of David, in which the central interest and architectonic theme is the question who should follow David as king (2 S 9–20); 1 K 1–2 belong originally to this narrative, and relate how Solomon was established on the throne after David. The division after 2 S 20 is, however, an old one, and the editors of the Book of Kings have taken the extreme old age of David (1 K 1[1]) as their starting point; 7. A series of appendices (2 S 21–24). These are six in number, and appear to have been placed inside one another in such a way that the first and sixth, the second and fifth, and the third and fourth should be taken together. Thus we have three pairs: (1) Two stories of divinely-sent catastrophe and its ending by apotropaic ceremonies, 2 S 21[1-14] and 24. (2) Stories of heroic deeds against giant enemies, and lists of heroes, 21[15-22] and 23[8-39]. (3) Two poems, a 'song of David' (identical with Ps 18 except for small details) and the 'last words of David,' 2 S 22 and 23[1-7] respectively.

3. Text and Versions.—It has long been recognized by many scholars that Samuel is a book where the LXX presents at many points a better text than the traditional Hebrew text. The RSV indicates in its margin numerous cases where it has followed the Greek reading where it affords better sense than the Massoretic; the reader may compare 1 S 1[24-25] 9[25] 14[41] in the RSV text with the translation of the Hebrew text in the AV or the RSV margin. The value of the LXX in Samuel has now been substantially reinforced by the texts discovered at Qumrân which in some cases give a Hebrew text superior either to the Greek or to the Massoretic. An impression for a passage of some length may be got from Allegro, *The Dead Sea Scrolls*, pp. 57–65, and cf Cross, *The Ancient Library of Qumrân*, pp. 133–145. This does not mean that the Massoretic text is always 'wrong' when it disagrees with LXX or Qumrân. Decisions about the best reading, *i.e.* the one nearest to the original writing of the passage, have to be made on their own merits for each passage. The value of the new evidence is that it sets us free from limitation to a very narrow line of witness such as the Massoretic text affords.

The other versions of the book, Latin, Syriac and so on, also present differences from the MT, but these are less striking than those of the LXX. For those passages of Samuel which are repeated in Chronicles it is now possible to take into consideration also the value of the Chronicles text. Cross (*op. cit.*, p. 141) points out that a Qumrân text of Samuel contains a phrase which appears in the MT of Chronicles (1 Ch 21[16], 'standing between earth and heaven, and his sword drawn in his hand'). The evaluation of evidence of this kind must in many cases await more complete publication of the texts discovered.

4. Sources and Date.—It is probable that the Books of Samuel are not a single composition made at one time, but have drawn at various stages from different circles and settings of tradition. The evidence for this is to be found not so much in the existence of inconsistencies and doublets, although these occur (*e.g.* the two accounts of David's introduction to Saul in 1 S 16[17ff] and 17[55ff], or the inconsistency of 1 S 7[13-14] with 1 S 13). The evidence lies rather in the differing 'interest' in which the various blocks of tradition handle the material. Something of this should be evident from our summary of contents, where we note that 1 S 4–6 is interested in the Ark, while for the long composition 2 S 9–20 the interest is the problem of succession to David. See also SAMUEL.

It is, however, improbable that sources can be separated by purely literary-critical methods. That is to say, this book cannot be satisfactorily explained as the product of two or more parallel sources in written form put together more or less mechanically by an editor. The attempt made by many earlier scholars to trace the Pentateuchal documentary sources J and E through Samuel must be regarded as a complete failure, and few scholars would try such a method to-day.

In a number of cases we can discern the setting of the tradition quite easily. This is so especially when an important sanctuary is involved in the story, and it is extremely likely that the story relates the event as it was remembered at that place. So the first group of traditions about Samuel (1 S 1–3) is centred at Shiloh and concerns the fate of its priesthood; it was almost certainly cherished by later priestly circles after the fall of Shiloh. The story of how the kingdom began was related at Mizpah, and we have that form of the story in 1 S 10[17-27]; the Gilgal form appears in 11[12-15]. We have already mentioned the Ark's own tradition, and this would be cultivated at Jerusalem after the Ark came there (2 S 6). Other aspects of the tradition would form part of the cult story of the Jerusalem holy place, *e.g.* David's plan to build a temple there, and the story of the purchase of the threshing floor as a sanctuary (2 S 24). Some passages came from official records (such as the lists of officials) and some would be handed down in official or military groups (heroic deeds of David's men).

But for the story of Saul and David we can safely say that most was handed down by simple reminiscence by eye-witnesses of the events. In these cases the stories reached their present form when they were still quite fresh from the historical actuality. David in particular was a great centre of popular interest and veneration, and from an early stage in his conflict with Saul he had with him his band of men who shared his present experiences and learned of his earlier ones. These men later came to official position in Jerusalem, the royal city. For most of the David story, then, we may be fairly sure of eye-witness material reaching its present form while David was still alive or in the reign of his successor Solomon. The long Succession Story of 2 S 9–20 may confidently be taken to have been composed by a contemporary; we can only guess who he may have been.

In the stories of Samuel there is a bigger gap probably between the original event and the present form of its narration, and the tradition was handed down longer in a plastic form. Alive as it must have been in David and Solomon's time, it may not have been till the 9th cent. that the different traditions had grown together, and certain aspects in their handling would suggest that the incipient Deuteronomic school had had some effect on them (*e.g.* Samuel's speech in 1 S 12); this would suggest they were still fluid in the 8th cent., and the same applies to the similarities to the prophets in passages like 1 S 15[22-23].

In any case it is not likely that the books of Samuel were subjected to a heavy editorial revision in late times, nor were its early stories fitted within a chronological or other framework, as happened in both Judges and Kings to some extent. For the most part the old stories were left to tell their own tale.

On the other hand, the interest of those who retold and remoulded the stories was in some ways orientated in a new way, towards the origin of the kingdom as the messianic house. Within their general outlook some of the inconsistencies of the present narrative would not be inconsistencies so much as proper expressions of different aspects in a reality itself ambiguous and mysterious. Such a case is the estimate of the value of the monarchy. It is true that different traditions have been more or less willing to welcome it or to criticise it. But the circles of the late tradition were willing to include both, and they did not try to suppress one of them. And the opposition between the sources should not be exaggerated, for even those which regard the call for a king as rejection of God do not dispute that God did in fact give a king in answer to this call. Nor does any source which criticises the

kingdom suggest that all would have gone well if no demand for a king had arisen; and though Samuel is seen in 1 S 7 as one who could deliver from the Philistine menace, 8^{1-3} go on to tell how Samuel's form of rule could not lead on to satisfactory government, for his own sons were corrupt.

In general, then, we may regard it as probable that much of the material of these books had reached substantially its present form by about 940–930 B.C., and the remainder gradually fell into shape between that time and perhaps 700 B.C. Of really late material there is very little sign.

5. Historical and religious value.—As historical sources those sections of the Books of Samuel which rest very nearly on contemporary or eye-witness accounts must be estimated highly, and a passage like the Succession Story is as good a historical source as we find anywhere in the OT. Even contemporary accounts are, however, not without their own special interest and viewpoint. The Succession Story is not an attempt to write a history of David's reign, but a study of the vicissitudes of the succession. Even where this is accurate there will be many things left out or unsaid because they are not part of the interest of the narrative. An appreciation of the literary interest of documents like the Succession Story is therefore necessary before a judgment can be made how far they are adequate as historical sources.

Where accounts are more remote from contemporary experience, as in parts of the Samuel story appreciation is more difficult. It is not easy from the varied traditions of the origin of the kingdom to state what the historical circumstances in fact were. It is rather arbitrary to accept one account as the earliest and brush the others aside completely. In fact all or nearly all of the narratives are not simply historical information but theologically interested history, and have to be interpreted first to see what is their religious and theological interest (which has preserved, selected, and moulded the stories); only after that can an assessment of historical accuracy be begun. On the other hand even stories of predominantly theological character have embedded in them all sorts of accurate remembrance of old customs and events. In this it is a great help that the books of Samuel were not subjected to an extensive editing in late times, so that many primitive customs and events remain unchanged.

The same applies to these books as a source for the history of religion in this period. Editors have not been at work excising the references to early practices which were later abnormal or unorthodox, and very many of the religious practices mentioned may be taken accurately as having existed in the time of Saul or David. As examples we may give: the sacrificial practice at Shiloh ($1\ S\ 2^{12-17}$); the sacrificial intercession of Samuel (7^{8-11}); the use of the term 'seer' (9^{9}); the kind of activity one would expect from a band of prophets (10^{5-6} 19^{18-24}); the general shape of the image or *teraphim* (19^{11-17}); the use of the ephod in divination (23^{9-13}). We cannot, however, take absolutely everything contained in these books as certainly expressing the religion of the period, *e.g.* Samuel's words in $1\ S\ 15^{22-23}$ are not likely to be the atmosphere of the 11th cent. B.C.

In any case we should remember that the books are not intended as a survey of religion as it was in that time. Their own religious interest is not that of producing a history of religion. The interest ultimately is in the history of Israel as a history governed and guided by God, and more particularly in the series of events by which God initiated or permitted the rise of the monarchy and the way in which that institution became the possession of the house of David, the messianic house, to whom was recorded the promise that a son of its family would never be lacking, to sit on the throne of his father David.

SANASIB, 1 Es 5^{24} (AV, RV).—See ANASIB.

SANBALLAT (Ass. *Sin-uballiṭ*, 'Sin gives life').—The most inveterate of Nehemiah's opponents, Neh $2^{10, 19}$ $4^{1\text{ff}}$ $6^{1\text{ff}}$ 13^{28}. He is called a Horonite, which probably means a native of Beth-horon. From the Elephantine Papyri we know that he was Governor of Samaria in 407 B.C., when he seems to have been an old man, since affairs were apparently left in the hands of his sons. The fact that these sons bore names compounded with Yahweh, Delaiah, and Shelemiah, suggests that he was a worshipper of Yahweh, and this is borne out by the fact that his daughter married the son of the Jerusalem High Priest, Neh 13^{25}. When Nehemiah came to Jerusalem to repair the walls, Sanballat, with his allies **Tobiah** (q.v.) and **Geshem** (q.v.) met him with derision; and after the work was well under way he stirred up the garrison of Samaria and planned an attack against the builders. This was prevented by the watchfulness of Nehemiah and the workmen. Several devices aimed against the life of Nehemiah were also thwarted by the sagacity of the latter. On Nehemiah's second visit he banished Sanballat's son-in-law from Jerusalem, Neh 13^{28}. It is sometimes supposed that the Samaritan schism dates from this time; but see H. H. Rowley, *BJRL*, xxxviii, 166 ff. J. F. McC.—**H. H. R.**

SANCTIFICATION, SANCTIFY.—'Sanctify' (Latin, from the Vulgate)=the native English 'hallow' (*i.e. make, count, keep holy*), the latter word being in use somewhat the loftier. AV uses 'hallow' thirty-five times in OT and twice in NT (Mt 6^{9} || Lk 11^{2}), 'sanctify' one hundred and ten times in OT and twenty-six times in NT—for identical Hebrew and Greek terms. For the same Hebrew and Greek terms, in the same passages, RSV uses 'hallow' twelve times, 'sanctify' fifty-five times, 'consecrate' fifty-six times, 'dedicate' ten times, and verbal phrases containing 'holy' or 'holiness' thirty-one times. For the meaning of the root word 'holy,' see article HOLINESS. The noun 'sanctification'—denoting first the *act* or *process* of making holy (hallowing), then the resultant *state* (hallowedness)—appears only in NT. RSV retains it in 1 Co 1^{30}, 1 Th 4^{3}, 2 Th 2^{13}. For the same Greek noun, AV uses 'holiness' in Ro $6^{19, 22}$, 1 Th 4^{7}, 1 Ti 2^{15}, He 12^{14}; RSV retains 'holiness' except in Romans, where it uses 'sanctification,' and it changes to 'holiness' in 1 Th 4^{4}. In all these passages the *state* rather than the process is implied. In 1 P 1^{2}, however, 'sanctification' stands for the act or process, and RSV uses verbs rather than nouns: 'chosen and destined by God the Father and sanctified by the Spirit for obedience to Jesus Christ and for sprinkling with his blood.'

1. In the Israelite as in other ancient religions, that is 'holy' which is set apart for Divine use, so that the 'sanctified' is the opposite of the 'common,' secular, profane. Is 65^{2-7} 66^{17} illustrate the application of this term in heathenism. With this broad signification it is applicable to whatever is devoted to the public service of the Lord: to persons—priests, Nazirites, etc.; to sacrifices; to vessels, garments, buildings, days (especially the Sabbath). In Jl 3^{9}, Jer 6^{4} (see RVm) even 'war' is 'sanctified'; in Is 13^{3} the warriors are 'my sanctified ones' (RV 'consecrated ones'); in Nu 21^{14} we hear of 'The Book of the Wars of the Lord.' The numerous Levitical and other kindred uses of the verb bear this formal sense. But as 'holy' came to designate the specific character of the Lord—'the Holy One of Israel' (see Isaiah *passim*)—in distinction from heathen gods, 'sanctify' acquired a corresponding ethical connotation; holiness came to imply a *character* (actual or ideal) in the holy people, accordant with its status. For Israel, being the Lord's servant, is 'brought near' to Him (Ex 19^{4-6}, Dt 4^{7}, Jer 2^{2}, Ps 65^{4} $73^{27\text{f}}$ 148^{14}; contrast Ex 19^{12-24}, Jer 2^{13}, Hos 9^{1} etc.), and such proximity necessitates congeniality—that congruity of nature whereof circumcision and the ceremonial cleansings were

symbolical (Ps 15, 24$^{3-6}$; cf Is 1$^{4, 16f}$ 3^{8} 6$^{3-8}$, Jer 4$^{1-4}$, Hab 1^{12f}, Ezk 36$^{16-28}$, Ps 51 etc.). The refrain 'I am the Lord' resounds through the Law of Holiness in Lv 17–26; this code blends the ritual and the moral in the holiness it demands from Israel, which is the corollary of the Lord's own holiness. Such is the OT doctrine of sanctification. The prophets, it is said, taught an ethical monotheism—which is to say, in effect, they *ethicized holiness*. The sanctification binding Israel to the Lord was, in a sense, reciprocal: 'You shall not profane my holy name (cf Ex 20^{7}, Lv 19^{22} 22^{2}, Am 2^{7}, Mal 1^{11f}), but I will be hallowed among the people of Israel; I am the Lord who sanctify you' (Lv 22^{32}); to sanctify the Lord or his 'name' is to recognize and act towards Him as holy, to 'make him holy' in one's thoughts and attitude (Is 8^{13}). This expression is characteristic of Isaiah (5^{16} 29^{23}) and Ezekiel (20^{41} 28$^{22, 25}$ 36^{23} 38$^{16, 23}$ 39^{27}), who regard the Lord as 'sanctified' when His awe-awakening judgments bring men to acknowledge His Deity and character. The Lord is said to sanctify Himself or His 'great name' when He vindicates His holiness and makes Himself known in the sight of many nations for what in truth He is. RSV expresses the Divine initiative more clearly in these texts; where AV has 'be sanctified' RSV has 'shows himself holy' (Is 5^{16}), 'manifest my holiness' (Ezk 20^{41} 28$^{22, 25}$), 'vindicate my holiness' (Ezk 36^{23} 38^{16} 39^{27}).

2. In the NT we must distinguish the usage of our Lord, of the author of the Letter to the Hebrews, and of the Apostle Paul.

(1) Adopting the language of Lv 22^{32} and of the prophets, Jesus bids the disciples pray, 'Our Father . . . *hallowed* be thy name . . . on earth' (Mt 6^{9f} || Lk 11^{2}). To bring about this 'hallowing' is the very work of Jesus, who for this end 'makes known' the Father's 'name' (Jn 1$^{14, 18}$ 14$^{7-9}$ 17$^{6, 25f}$, Mt 11^{27}; cf Jn 17^{3}, 2 Co 4^{6}, also Jer 9^{23f} 31^{34}). In (*a*) Jn 10^{36} and (*b*) 17$^{17-19}$ our Lord makes Himself the object of the verb—in the second instance the subject also. (*a*) The Father 'consecrated' Him for His world-mission (a pre-incarnate destination; see 1^{18}, 1 Jn 4$^{9, 14}$; cf Jer 1^{5}); (*b*) at the Last Supper the Son endorses that consecration in view of its dread issue, and proposes to share it with His disciples, as He dedicates Himself to the sacrifice of the cross. Thus in the Person of Jesus Christ sanctification assumes a new and very definite character; as *Christian* holiness, general consecration to the service of God becomes a specific consecration to the mission of redemption.

(2) The Letter to the Hebrews builds upon the OT conception of holiness. Its doctrine of sanctification is found in 2^{11} 9$^{11-13}$ 10$^{10-14, 19-22}$ 12^{14} 13$^{11-12}$. Being 'the pioneer of their salvation' and 'high priest' of mankind, it is the office of Jesus to 'sanctify' His brethren, *i.e.* to consecrate them to God's service, for which as sinners they have been disabled (5^{1} 10^{22}). This He effects God-ward by making expiation for their sins (2^{17}), and man-ward by cleansing their conscience with the virtue of His blood—by removing the sense of personal guilt before God—even as the animal sacrifices 'sanctified' the Israelites 'for the purification of the flesh,' and made their ritual worship possible (9$^{11-14}$). The chasm which sin has opened between man and God was bridged by the mediation of Jesus Christ; no longer is he kept aloof from the Divine presence, but is bidden to 'draw near with confidence to the throne of grace' (4^{16} 10$^{19-22}$). 'Once for all' this access has been secured, this qualification bestowed on 'the people' whom Jesus sanctified 'through his own blood' (9^{26} 13^{12}): 'we have been sanctified' according to 'the will of God,' which Jesus embraced and whose demands He met on our behalf with perfect loyalty, in 'the offering of his body' (10$^{5-10}$). By that one offering 'he has perfected for all time those who are sanctified'—He has assured, for all who will accept it, till the world's end, a full qualification for fellowship with God (10^{14}). Hebrews supplies the link between the 'I consecrate myself' of Jesus and 'that they also may be consecrated in truth' (Jn 17^{19}). With the writer of Hebrews 'purify' and 'sanctify' define, on the negative and positive sides, all that St. Paul means by 'justification' and 'sanctification'; only, the second term is here made more prominent and wider in meaning than with the Apostle. St. Paul sees the sinner confronted by the Law of God, guilty and impotent; his fellow-teacher sees him standing outside the Temple of God, defiled and banned. Sanctification means, for the former, engagement to God's service (Ro 6$^{12-22}$); for the latter, empowerment for God's worship. That this grace imports, however, in Hebrews more than a status once conferred, is evident from 12^{14}; it is a state to be increasingly realized, an ideal to be pursued to the end.

(3) St. Paul addresses his readers constantly as 'saints' (see article, HOLINESS): once as 'sanctified in Christ Jesus' (1 Co 1^{2})—a phrase synonymous with 'called saints,' *i.e.* made holy by God's call which they obeyed, when He summoned them into His Kingdom (1 Co 1^{9}, $^{26-30}$, 1 Th 1^{4} 2^{12}). The former expression points to the completed act of God by which they have become His saints (1 Co 6^{11}, Ac 20^{32} 26^{18}). That sanctity, with St. Paul, is a term of relationship, not primarily of character, is evident from 1 Co 7^{14}, where the unbelieving husband or wife is said to be 'consecrated' through the Christian wedded partner, so that their offspring are 'holy': the person of the unbeliever, under the marriage-bond, is holy in the believer's eyes, as indeed every possession and instrument of life must be (see 1 Ti 4$^{3-5}$). In the case of the believer himself, who 'in Christ Jesus' is brought into immediate personal contact with God (Col 3^{3}), destination and use imply moral condition—the vessels of the Lord must be clean and 'ready for any good work' (2 Ti 2$^{19-22}$; cf **1** above, touching the OT Law of Holiness); so that, while 'sanctity' does not denote character, it normally connotes this; all virtue comes under the category of what 'is fitting among saints' or 'is fitting in the Lord' (Eph 5^{3}, Col 3$^{12-18}$ etc.). Accordingly, in 1 Th 4$^{3-8}$ 'sanctification' and 'holiness' are opposed specifically to 'lust' or 'uncleanness.'

Sanctification completes justification (q.v.); together, these constitute the present work of salvation, the reinstatement of the sinful man before his Maker, his instatement into the Christian standing and condition (see 1 Co 6^{11}, and the connexion between chs. 5 and 6 of Romans). In principle the former depends on the latter, in experience they are concomitant (Ro 6$^{6f, 22}$). They are alike acts of God, dealing with men in His grace through Christ (Ro 8$^{30, 33}$, I Th 5^{23f}, Jn 17^{17}; cf Lv 22^{32f}). The language of 2 Co 1^{21f}, while referring formally to baptism, substantially describes sanctification, since God consecrates the believer for His use and marks him in baptism with His 'seal.'

As the writer of Hebrews shows in his own way—see (2) above—Christ is the mediator of sanctification no less than of justification. He 'bought' men with the 'price' of His blood—the body along with the inner self—so that we are no longer our own and may not live for ourselves, but are, from the hour we know this, men living for God in Christ Jesus; and Christ 'presents' His redeemed to God as 'holy' and makes them God's 'own possession' destined 'to the praise of His glory' (1 Co 6^{19f}, Ro 6$^{11-14}$ 12^{1}, Col 1^{22}, Eph 1^{14}, 1 P 2^{9}, Rev 1^{6} etc.). Once, in relation to the Church His bride, Christ is Himself called the sanctifier (Eph 5^{26}; cf He 13^{12}). Being our Head and Representative before God, dedicating all His own (Jn 17^{10}) to the Father in the offering of Calvary, Jesus virtually accomplished the sanctification of His people, with their justification, once for all (1 Co 1^{30}): Paul's saying, 'I have been crucified with Christ' (Gal 2^{20} 6^{14}), implies that he has been, by anticipation, included in the perfect sacrifice; he thus unfolds the implicit doctrine of Jn 17$^{9f, 17-19}$ (see (1) above; cf He 10^{14}).

Collectively, believers were sanctified in the self-devotion of their redeeming Lord; individually, they are sanctified when they accept the Redeemer's sacrifice and personally endorse His action. From the latter

point of view, sanctification is the man's own deed; he presents himself to God as 'brought from death to life' (Ro 6[13, 18]); but the sinner is never, as in OT phrase, said to 'sanctify himself.' The Holy Spirit is, with much emphasis, identified with the work of sanctification; Christian believers are 'sanctified in the Holy Spirit' (Ro 15[16], 1 Co 6[11]; also 1 Th 4[7f], Eph 4[30]; cf 1 P 1[2] etc.). To receive the gift of the Spirit and to be sanctified are the same thing; when God takes possession of the believer, his 'body' becomes a 'temple of the Holy Spirit' (1 Co 6[19])—then he is a holy man; and to possess the Spirit is, in effect, to have Christ dwelling in the heart (Eph 3[16–19]). This twofold identity ('sanctified'='in the Spirit'='united to the Lord') holds alike of the Church and of the individual Christian (1 Co 3[16f] 6[17], Eph 2[21f]; cf 1 P 2[9]). Faith conditions this experience (Ac 26[18], Eph 1[13f]). Like the author of Hebrews, Paul recognizes a progressive holiness based upon the fundamental sanctification of the believer, the former being the growing and finally complete realization of the latter. Holiness is the starting-point, perfect holiness the goal of the Christian course—the progress 'is a growth *in* holiness rather than *to* holiness' (Bartlet). Hence in Ro 6[19–22] the aim of one's service to God and righteousness is found in 'sanctification'; and in 1 Th 5[23f] the Apostle prays that God will sanctify his readers wholly, who are still lacking in many respects (3[10]), so that their 'spirit, soul, and body may be kept sound and blameless at the coming of our Lord Jesus' (3[13]). This prayer touches the ideal life in Christ; but it is an ideal to the present Christian state, and is not to be relegated to the visionary or the celestial: 'He who calls you is faithful, and he will do it' (1 Th 5[24]).

St. John does not employ in his Letters either 'sanctify' or 'sanctification,' but their whole substance is there. 1 Jn 1[3, 6f] 2[1f] recall the teaching of Hebrews in speaking of 'the expiation' made by our 'Advocate,' whose 'blood cleanses us from all sin' and thus brings the sinner into 'fellowship with the Father.' Paul's doctrine of holiness is resumed in such passages as 3[23f] 4[13f] 5[3f, 20], setting forth union with Christ through the indwelling Spirit as the spring of a new, eternal life for the man, in the strength of which God's commandments are kept in love, sin and fear are cast out, and the world is overcome.

SANCTUARY.—See HIGH PLACE; TABERNACLE, 7 (*b*); TEMPLE.

SAND.—Minute particles of silex, mica, felspar, etc., easily rolled before the wind; hence, probably, its Hebrew name *ḥôl*. It lies in great stretches along the Palestinian and Egyptian sea-board—an apt symbol of the incalculably vast or numerous (Gn 22[17] 41[49], Jer 33[22] etc.). For 'sand,' in Job 29[18], some would read, with RVm, 'phoenix.' This goes back to the Talmud (*Sanhedrin*, 108b), but no evidence that *ḥôl* had this meaning is known, and no derivation can be provided. However compact and firm, sand at once becomes soft at the touch of water (Mt 7[26f] etc.).

SAND FLIES.—See LICE.

SAND LIZARD.—See LIZARD.

SANDAL.—See DRESS, 6.

SANHEDRIN.—The Greek word *synedrion* (EV council) was so familiar to the Jews that they adopted it in the form 'Sanhedrin,' which occurs very frequently in the Talmud where it is the title and subject of a tractate. Accurate information about the Sanhedrin, its history, its composition, and its authority is elusive. Statements about it in the Mishnah and in the NT need careful weighing, for they are both internally inconsistent and also mutually contradictory. The material in the Mishnah may well reflect a later age which attributed its own procedures to the earlier Sanhedrin of which it had only hazy recollections.

1. According to Rabbinic tradition the Sanhedrin was created by Moses in obedience to Divine command (cf Nu 11[16]), and existed, and exercised judicial functions, throughout the whole period of Biblical history right up to Talmudic times. However, this cannot have been the case. King Jehoshaphat is mentioned as having instituted the supreme court at Jerusalem (2 Ch 19[8]). This court cannot have been identical with the Sanhedrin of later times, for the latter had governing powers as well as judicial functions, while the former was a court of justice and nothing else. It is possible that the '**elders**' (q.v.) mentioned in the Book of Ezra (5[5, 9] 6[7, 14] 10[8]) and 'rulers' in the Book of Nehemiah (2[16] 4[8 (14), 13 (19)] 5[7] 7[5]) constituted a body which to some extent corresponded to the Sanhedrin properly so called. The Sanhedrin is often referred to as a *Gerousia* (*i.e.* an aristocratic, as distinct from a democratic, body), and as such it is not mentioned before the time of Antiochus the Great (223–187 B.C.); it is reasonably certain that, in its more developed form at all events, it did not exist before the Greek period. The Sanhedrin is referred to under the name *Gerousia* (EV **senate**) in 2 Mac 1[10] 4[44], Jth 4[8] 11[14] 15[8] and elsewhere in the Apocrypha, in Ac 5[21], and frequently in Josephus, *e.g. Ant.* IV. viii. 14 [218].

The Sanhedrin was conceived of mainly as a court of **justice**, and it is in this sense that it is usually referred to in the NT (see, *e.g.* Mt 5[22] 26[59], Mk 15[1], Lk 22[66], Jn 11[47], Ac 4[15] 5[21] 6[12] 22[30] etc.). Sometimes in the NT the terms *Presbytērion* and *Gerousia* are used in reference to the Sanhedrin (Ac 5[21] 22[5]). A member of this court was called a *bouleutēs* ('councillor'). Joseph of Arimathaea was one (Mk 15[43], Lk 23[50]). The Sanhedrin disappeared after the destruction of Jerusalem (A.D. 70), and was replaced by the Beth Din, the court of law.

2. Regarding the composition of the Sanhedrin, the hereditary high priest stood at the head of it, and in its fundamental character it formed a sacerdotal aristocracy, and represented the nobility, *i.e.* predominantly the Sadducaean interest; but under Herod, who favoured the Pharisaic party in his desire to restrict the power and influence of the old nobility, the Sadducaean element in the Sanhedrin became less prominent, while that of the Pharisees increased. During the Roman period the Sanhedrin contained representatives of two opposed parties, the priestly nobility with its Sadducaean sympathies, and the learned Pharisees. According to the Mishnah, the Sanhedrin consisted of seventy-one members (*Sanhed.* i. 6); when a vacancy occurred the members co-opted some one 'from the congregation' to fill the place (*Sanhed.* iv. 4), and he was admitted by the ceremony of the laying on of hands. The reliability of the Mishnah at this point is often challenged.

3. The extent of the Sanhedrin's jurisdiction varied at different times in its history. In a certain sense it exercised civil jurisdiction over all Jewish communities, wherever they existed, but the extent to which Jewish communities outside of Judaea were willing to submit to such orders depended entirely on how far they were favourably disposed towards the central authority; it was only within the limits of Judaea proper that real authority could be exercised by the Sanhedrin (Ac 9[2] 22[5] and 26[12] attribute to the Sanhedrin the power to extradite Jewish Christians from Damascus; the historical reliability of the right, and of the passages in Acts, has been questioned). It was the supreme native court, as contrasted with the foreign authority of Rome; to it belonged all such judicial matters as the local provincial courts were incompetent to deal with, or as the Roman procurator did not attend to himself. Above all, it was the final court of appeal for questions connected with the Mosaic Law; its decision having once been given, the judges of the lower courts were, on pain of death, bound to acquiesce in it.

The NT offers some questionable though interesting examples. Jesus appeared before it on a charge of blasphemy (Mt 26[57], Jn 19[7]), Peter and John were accused before it of being false prophets and deceivers of the people (Ac 4[5ff]), Stephen was condemned by it because of blasphemy (Ac 7[57f]), and Paul was charged with transgression of the Mosaic Law (Ac 22[30]). It had independent authority and right to arrest people by its own officers (Mt 26[47], Mk 14[43], Ac 4[3] 5[17f]); it

had also the power of finally disposing, on its own authority, of such cases as did not involve sentence of death (Ac 4$^{5-23}$ 5$^{21-40}$). It was only in cases when the sentence of death was pronounced that the latter had to be ratified by the Roman authorities (Jn 18^{31}); the case of the stoning of Stephen must be regarded as an instance of mob-justice.

While the Sanhedrin could not hold a court of supreme jurisdiction in the absence, or, at all events, without the consent, of the Roman procurator, it enjoyed, nevertheless, wide powers within the sphere of its extensive jurisdiction. Recent interpreters have sought to harmonize the conflicting data in NT and Rabbinic literature by various devices, principally by assuming that there were two Sanhedrins, one political-civil (which would accord with NT data), the other religious (which would accord with Talmudic data). Such harmonizations are ingenious but not persuasive.

4. The Sanhedrin, according to Rabbinic sources, met in the Temple, in what was called the *Lishkath-hag-Gāzîth* (the 'Hall of hewn-stones') as a general rule, though an exception is recorded in Mt 26^{57ff}, Mk 14^{53ff}. The members sat in a semicircle in order to be able to see each other; in front stood clerks of the court, and behind these, three rows of disciples of the 'learned men.' The prisoner had always to be dressed in mourning. When anyone had spoken once in favour of the accused, he could not afterwards speak against him. In case of acquittal the decision might be announced the same day, but a sentence of condemnation was always pronounced on the following, or later; in the former a simple majority sufficed, in the latter a majority of two-thirds was required. SARA, He 11^{11}, 1 P 3^{6} (AV) = **Sarah** (q.v.).

SARABIAS, 1 Es 9^{48} (AV, RV).—See SHEREBIAH.

SARAH.—**1.** The wife of Abraham. In Gn 11^{29} she is called Sarai, and in Gn 17^{15}, in connexion with the promise of the birth of Isaac, Y^{e} is said to have changed her name to Sarah. There is no philological significance in the change, Sarai being an archaic form of the feminine Sarah, meaning 'princess.' Her parentage is not given in Gn 11^{29}, but in the E narrative of Abraham's sojourn in Gerar (Gn 20$^{1-18}$), Abraham is said to have told Abimelech, the king of Gerar, that Sarah was his half-sister. According to the J genealogy in Gn 11^{29}, Abraham's brother Haran's daughter Milcah married Nahor, the other brother of Abraham. Apparently among the Terahites marriage between near relations was the rule (cf Gn 20^{12} 24^{3ff} 29^{10}). It is noteworthy that in the Terahite genealogy the two female names Sarah (princess) and Milcah ('queen') correspond to two deities in the pantheon of Harran; Sarratu being the title of the moon-goddess, the consort of Sin, and Malkatu a title of Ishtar, who was also worshipped there. Those passages in the Abraham sagas which give definite statements about the ages of Abraham and Sarah are usually assigned to P, and they raise some difficulty by contrast with other elements in the sagas, such as the description of Sarah's great beauty at the age of sixty-five (Gn 12^{14}). However, the Yahwist's purpose in using the saga material before him was to present a picture of Abraham as the typical man of faith; hence he uses the tradition of the birth of Isaac when both Abraham and Sarah were past the natural age of expectation as the supreme example of the Divine response to faith. According to the P narrative in Gn 23, Sarah died in Hebron at the age of 127, and was buried by Abraham in the cave of Machpelah which he bought from the Hittites for that purpose. In He 11^{11} Sarah is also included among the examples of faith, although in Gn 18$^{13-14}$ she is rebuked by Yahweh for her incredulity with regard to his promise of a son. In the NT she is mentioned in Ro 4^{19} 9^{9}, He 11^{11}, 1 P 3^{6}, Gal 4$^{21-31}$.

2. Sarah, daughter of Raguel and wife of Tobias (To 3$^{7, 17}$ and elsewhere).

SARDINE STONE.—Found in AV in Rev 4^{3}, where RV has '**sardius**' and RSV '**carnelian.**' See JEWELS AND PRECIOUS STONES.

SARDIS was the capital of the ancient kingdom of Lydia on the western coast of Asia Minor, and in the 6th cent. B.C. one of the most powerful cities of the world. It stood on one of the alluvial hills between Mount Tmolus and the sea, about 1500 feet above and S. of the great plain of the river Hermus, and was inaccessible except by a neck of land on the S. The situation was ideal for an early fortified capital of a kingdom. As time advanced, extension was necessary, and a lower city was built on the W. and N. sides of the original city, near the little river Pactolus, and probably also on the E. side. The older city now acted as acropolis, or citadel, for the latter. This rich Oriental city, whose wealth depended on well-cultivated land and incessant commerce, was for centuries to the Greek the type of an Oriental despotism, under which all must sooner or later bend. Its absorption was not without its effects on the conquerors, and Sardis became the home of a newer Hellenism, different from the old.

Croesus was king of Lydia in the second half of the 6th cent. B.C., and planned a campaign against Cyrus, the Persian king. He proceeded with the greatest caution, and crossed the river Halys. There he was completely defeated. He returned to prepare a second army, but Cyrus pursued him in haste, and besieged him in Sardis before he could get it ready. The citadel was captured by means of a climber who worked his way up by an oblique crevice in the perpendicular rock. The city was similarly captured by Antiochus the Great from Achaeus late in the 3rd cent. B.C. The patron deity of the city was Cybele, but she was conceived as possessing different attributes from those usually associated with the name. A special characteristic was the power of restoring life to the dead. Sardis is mentioned in Ob 20 as Sepharad (Assyrian *Saparda*). The late passage presupposes the Jewish dispersion in Asia Minor. Jews of Sardis are referred to in *Ant.* XIV. x. 24 [259 ff]. The city suffered greatly from an earthquake in A.D. 17, and received a large donation as well as a remission of five years' taxation from the Emperor Tiberius. The greatness of the city under the Roman empire was due entirely to its past reputation. The acropolis ceased to be inhabited, being no longer necessary for purposes of defence. Its use was revived in the earlier Turkish days, but for long there has been no settlement at Sardis. Its place is taken by Salikli, above 5 miles to the E.

The letter addressed by the writer of the Apocalypse to Sardis (Rev 3$^{1-6}$) shows that the church at that place

was practically dead. Most of the Christians had fallen back to the pagan level of life. The few noble ones shall have their names enrolled in the list of citizens of heaven. But Christianity survived at Sardis. It was the capital of the province of Lydia, instituted about A.D. 295. The bishop of Sardis was metropolitan of Lydia, and sixth in order of precedence of all the bishops subject to the patriarch of Constantinople. Important excavations have been conducted at the site of Sardis.

SARGON (Assyr. *Šarru-kēn(u)*, 'the king is legitimate'). Although mentioned in the Bible only in Is 20^{1}, this king of Assyria (722–705 B.C.) is now well known from Assyrian inscriptions and letters. At the death of Shalmaneser V., he seized the throne with the support of the disaffected priesthood of the cities Ashur and Harran and took the name of the famous Sargon who had ruled the empire of Akkad almost two thousand years earlier. Shortly after usurping the throne, he reaped the harvest of Shalmaneser's three-year siege of Samaria by taking as booty 27,290 prisoners and repopulated the city with peoples from other countries. In 720 B.C. Sargon captured Qarqar and Hamath in Syria, which had revolted, and put down a rebellion on the part of Hanno of Gaza, who had been aided by the Egyptians. Carchemish, a strategic commercial centre, which with the aid of King Midas of Phrygia had plotted a revolt, was captured in 717 B.C. (cf Is 10^{9}). In his eleventh year, 711 B.C., Sargon abolished the rule of Azuri, king of Ashdod, who had refused to send tribute, and placed his pro-Assyrian brother Ahimiti on the throne. When the people of Ashdod revolted and made a Greek their king, Sargon secured by extradition the custody of the rebel Greek ruler who had fled to Ethiopia. After conquests in Syria, Palestine and Armenia, Sargon set out to extend his empire to the E. and S. in his twelfth year (710 B.C.). He entered Babylon as a liberator and a restorer of religious freedom. Mardukapaliddin (Biblical Merodach-baladan), a Chaldaean who had been the master of the S., was defeated and his town Bit-Iakin taken. Sargon proclaimed himself as the governor of Babylon. During his reign Sargon extended the borders of Assyria from the Caucasus to Egypt and from Elam to Cyprus—the largest area of Assyrian domination until his time. Toward the end of his reign he constructed a magnificent palace and temple complex at Dûr-Sharrukîn (Sargonsburg), the modern Khorsabad, to the NE. of Mosul. The remains of this capital city, excavated by the French a century ago, are the principal sources for our knowledge of this important king. He was killed in battle during an expedition to the region of western Iran and was succeeded by his son Sennacherib.

J. B. P.

SARID.—A border town of Zebulun, Jos $19^{10, 12}$. Probably *Sarid* is a copyist's error *Sadud* (so Gr. MSS and Pesh.); modern *Tell Shadûd*, to the N. of the plain of Esdraelon.

SAROTHIE.—A family of 'Solomon's servants' (1 Es 5^{34}).

SARSECHIM.—A Babylonian official, Jer 39^{3}; but the versions—*Nabousachar, Nabousarach, Sarsacheim*—suggest that the text was early corrupt. There is no known Babylonian name which exactly corresponds to any of these variants, and it is impossible to identify the person intended. The word is absent from v.[13], and some have attempted to reconstruct the text to bring the two verses into closer accord.

C. H. W. J.

SARUCH, Lk 3^{35} (AV).—See SERUG.

SASH.—This occurs in RV and RSV in Is 3^{20} (AV 'headband' q.v.). In Jer 2^{32} the same Hebrew word is rendered 'attire,' where it refers to the girdle of a bride (cf Is 49^{18}, where the cognate verb is used).

SATAN.—1. In the OT.—The term *Satan* is Hebrew and means 'adversary.' In the earlier usage of the language it is employed in the general sense of 'adversary,' personal or national: (cf *e.g.* Nu 22^{22}, 2 S 19^{22}, 1 K 5^{4} 11^{25} etc.). In such passages no trace of a distinct being designated 'Satan' is to be seen. Such a being meets us for the first time in the OT in the prologue (chs. 1 and 2) of the Book of Job, in the person of one of 'the sons of God' who bears the title of 'the Satan.' Here Satan appears as a member of the celestial council of angelic beings who have access to the presence of God. His special function is to watch over human affairs and beings with the object of searching out men's sins and accusing them in the celestial court. He is thus invested with a certain malevolent and malignant character; but it is to be observed that he has no power to act without the Divine permission being first obtained, and cannot, therefore, be regarded as the embodiment of the power that opposes the Deity. In Zec 3^{2} essentially the same view of 'the Satan' is presented. But in 1 Ch 21^{1} ('And Satan stood up against Israel, and incited David to number Israel') the personality of this being is more distinct: he appears now as 'Satan' (a proper name without the article), the tempter who is able to provoke David to number Israel. This is the Chronicler's (4th or 3rd cent. B.C.) reading of the incident which in the earlier narrative (2 S 24^{1}) is ascribed to the direct action of God Himself. Here (in Chronicles) the work of Satan is apparently conceived of as more or less independent of, and opposed to, the Divine action.

2. In the extra-canonical literature of the OT.—In the later (apocryphal) literature of pre-Christian Judaism the dualistic tendency becomes more pronounced—a tendency powerfully affected by Persian influence, it would seem, which is also apparent in the development of an elaborate Jewish angelology and demonology. This is most clearly visible in the *apocalyptic literature*. In the oldest part of the Book of Enoch (chs. 1–36), dating, perhaps, from about 180 B.C., the origin of the demons is traced to the fall of the angelic watchers, the 'sons of God' who corrupted themselves with the 'daughters of men' (Gn 6^{1f}). It was from the offspring of these sinful unions—the 'giants' or *n^{e}phîlîm*—that the demons were sprung. Of these demons the **Asmodaeus** of the Book of Tobit ($3^{8, 17}$) seems to have been regarded as the king (Bab. Talmud, *Pes.* 110*a*). The name *Asmodaeus* (or in Heb. *Ashmedai*) has plausibly been connected with the ancient Persian *Aeshma daeva, i.e.* 'the covetous or lustful demon'; in its Hebrew form it suggests the meaning 'destroyer' or 'bringer of destruction,' and this demon may be intended by 'the destroyer' of Wisdom 18^{25} and by the **Apollyon** (='Destroyer') of Rev 9^{11}. In the latest part of the Book of Enoch, however, the so-called 'Similitudes' (chs. 37–71), which perhaps dates from about 64 B.C., 'the fallen watchers' (and their descendants) are carefully distinguished from the Satans, who apparently belong to 'a counter kingdom of evil' which existed before the fall of the watchers recorded in Gn 6^{1}, the latter, in consequence of their fall, becoming subject to the former. Apparently these 'Satans' are ruled by a single chief, who is styled 'Satan' in one passage (Enoch 54^{6}). 'Their functions were threefold: they tempted to evil ($69^{4, 6}$); they accused the dwellers upon earth (40^{7}); they punished the condemned. In this last character they are technically called "angels of punishment" (53^{3} 56^{1} 62^{11} 63^{1})' (R. H. Charles).

In the Book of Wisdom (2^{24}: 'by the envy of the devil death entered into the world') we already meet with the identification of the **Serpent** of Gn 3 with Satan, which afterwards became a fixed element in belief, and an allusion to the same idea may be detected in the Psalms of Solomon 4^{11}, where the prosperous wicked man is said to be 'like a serpent, to pervert wisdom, speaking with the words of transgressors.' The same identification also meets us in the Book of the Secrets of

Enoch (? 1st cent. A.D.), where, moreover, satanology shows a rich development (the pride, revolt, and fall of Satan are dwelt upon). Cf FALL.

The secondary Jewish (Rabbinical) literature which is connected with the text of the OT (especially the Targums and the Midrashim) naturally reflects beliefs that were current at a later time. But they are obviously connected closely with those that have already been mentioned. The Serpent of Gn 3 becomes 'the old serpent' who seduced Adam and Eve. The chief of the Satans is Sammael, who is often referred to as 'the angel of death'; and in the Secrets of Enoch he is prince of the demons and a magician. It is interesting to note that in the later Midrash one of the works of Messiah ben-Joseph is the slaying of Sammael, who is 'the Satan, the prime mover of all evil.' In the earlier literature his great opponent is the archangel Michael. The Rabbinic doctrine of the 'evil impulse' (*yēṣer ra'*), which works within man like a leaven (*Berak.* 17*a*), looks like a theological refinement, which has sometimes been combined with the popular view of Satan (Satan works his evil purpose by the instrumentality of the 'evil impulse').

3. In the NT.—In the NT, Satan and his kingdom are frequently referred to. Sometimes the Hebrew name 'Satan' is used (*e.g.* Mk 3^{26} 4^{15} etc.), sometimes its Greek equivalent (*diabolos*: cf our word 'diabolical'), which is translated 'devil,' and which means 'accuser' or 'calumniator.' In Mt $12^{26, 27}$ (cf 10^{25}) Satan is apparently identified with **Beelzebul** (q.v.) (or Beelzebub), and is occasionally designated 'the evil one' (Mt $13^{19, 38}$ etc.; so, perhaps, also in the Lord's Prayer: 'deliver us from *the evil one*').

The demonology that confronts us in the NT has striking points of contact with that which is developed in the Enochic literature. The main features of the latter, in fact, reappear. The 'angels that did not keep their own position' (Jd 6, 2 P 2^4) are the angelic watchers whose fall through lust is described in Enoch 6–16. Their punishment is to be kept imprisoned in perpetual darkness. In Enoch the demons, who are represented as the evil spirits which went forth from the souls of the giant offspring of the fallen watchers, exercise an evil activity, working moral ruin on the earth till the final judgment. In exactly the same way the demons are described in the NT as disembodied spirits (Mt 12^{43-45}, Lk 11^{24-26}). The time of their punishment is to be the final judgment (cf Mt 8^{29}: 'Have you come here to torment us *before the time*?'). They belong to and are subject to Satan. As in the Book of Enoch, Satan is represented in the NT as the ruler of a counter-kingdom of evil (cf Mt 12^{26}, Lk 11^{18} 'if Satan casts out Satan, how then will his kingdom stand?'); he led astray angels (Rev 12^4) and men (2 Co 11^3); his functions are to tempt (Mt 4^{1-12}, Lk 22^{31}), to accuse (Rev 12^{10}), and to punish (1 Co 5^5: impenitent sinners delivered over to Satan for destruction of the flesh). It should be added that in the Fourth Gospel and Johannine Epistles the lesser demonic agencies disappear. Opposition is concentrated in the persons of Christ and the devil. The latter is the ruler of this world (Jn 16^{11}), and enslaves men to himself through sin. The Son of God is manifested for the express purpose of destroying the devil's works (1 Jn 3^8).

Both in St. Paul (cf Ro 16^{20}, 2 Co 11^{2f}) and in the Apocalypse Satan is identified with the **Serpent** of Gn 3. It is also noteworthy that St. Paul shared the contemporary belief that angelic beings inhabited the higher (heavenly) regions, and that Satan also with his retinue dwelt not beneath the earth, but in the lower atmospheric region; cf Eph 2^2, where 'the prince of the power of the air'=Satan (cf also Eph 6^{12} and Lk 10^{18} 'I saw Satan fallen as lightning *from heaven*'). For Satan's rôle in the Apocalypse see ESCHATOLOGY. See also DEMONS AND DEMONOLOGY.

4. The attitude of our Lord towards the Satan-belief.—Our Lord, as is clearly apparent in the Synoptic tradition, recognized the existence and power of a kingdom of evil, with organized demonic agencies under the control of a supreme personality, Satan or Beelzebul. These demonic agencies are the source of every variety of physical and moral evil. One principal function of the Messiah is to destroy the works of Satan, and his subordinates (Mk $1^{24, 34}$ $3^{11f, 15}$ etc.). Maladies traced to demonic possession play a large part in the Synoptic narratives (see EXORCISM, POSSESSION especially **3**). In the expulsion of demons by Himself and His disciples, Jesus sees the overthrow of Satan's power (Lk 10^{18} 11^{20}). The evil effected by Satanic agency is intellectual and moral as well as physical (Mk 4^{15}, Mt $13^{19, 39}$; cf 2 Co 4^4). That our Lord accepted the reality of such personal agencies of evil cannot seriously be questioned; nor is it necessary to endeavour to explain this fact away. The problem is to some extent a psychological one. Under certain conditions and in certain localities the sense of the presence and potency of evil personalities has been painfully and oppressively felt by more than one modern European, who was not prone to superstition. It is also literally true that the light of the gospel and the power of Christ operate still in such cases to 'destroy the works of darkness' and expel the demons.

G. H. B.—J. Macq.

SATCHEL.—See BAG.

SATHRABUZANES (1 Es $6^{3, 7, 27}$ 7^1)=**Shethar-bozenai**, Ezr $5^{3, 6}$ $6^{6, 13}$.

SATRAPS.—RV and RSV translation of *'ahashdarpenîm* (and its Aram. form), Ezr 8^{36}, Est 3^{12} 8^9 9^3 (AV **lieutenants**), Dn $3^{2f, 27}$ 6^{1ff} (AV **princes**). The term stands for the Persian *khshatrapân* (='protector of the realm'). The satrap was the governor of a whole province, and he held the position of a vassal king. His power, however, was checked by the presence of a royal scribe, whose duty it was to report to the 'great king' on the administration of the province.

SATYR.—The Hebrew word *śa'îr*, means primarily 'he-goat,' but the plural, *se'îrîm*, is translated 'satyrs' in Lv 17, 2 Ch 11^{15} (AV 'devils,' RV 'he-goats'), Is 13^{21} 34^{14} (RVm 'he-goats'). Possibly too in 2 K 23^8 *she'ārîm* ('gates') should be *śe'îrîm*, and translated 'satyrs.' In these passages some 'hairy' demon is to be inferred, to whom 'sacrifices' were made (Lv 17), 'high places' erected (2 K 23^8), and 'priests' set apart (2 Ch 11^{15}). The association of these creatures with the mythological **Lilith** (q.v.) in Is 34^{14} is specially noticeable.

E. W. G. M.

SAUL.—1. First king of Israel who reigned at Gibeah in Benjamin. Historically dependable information about his reign and achievements is meagre. The digest of information given in 1 S 14^{47-52} suggests that lost sources reported a great deal more about him, and that achievements of David were wrongly ascribed to him in some quarters. A new order began with him. He was essentially king of a small territory whose leadership was acknowledged by the Hebrews of other tribes or territories both W. and E. of the Jordan. However, it does not seem that he had the capacity to organize a kingdom and bring the various tribes or districts under firm control. Theirs was only a loose allegiance for the duration of a crisis. Nor can we say how far his power extended in any direction, except perhaps the S.

Main interest of the surviving narratives about Saul centres on his attainment of the kingship. Stories of conflicting viewpoint contained in two or three narrative strands as in the Hexateuch, have been combined by a compiler, and the first task is to disengage them. According to 1 S 8 the popular desire for a king was regarded as apostasy. Samuel accedes to it, however, and convokes the people at Mizpah, where a king is chosen by lot (10^{17-27}). In 1 S 9^1–10^{16} a much-pleased Samuel discovers the right man for the kingship and anoints him secretly. Saul, imagined as a youth from Gibeah, returns home and says nothing about this. On the way, however, he experiences happenings that Samuel had predicted and which therefore confirm his belief in his own election. It seems probable that the event which led Saul to reveal

himself as leader and king has been omitted by the source or by the compiler, for Chapter 11 gives a third explanation of how Saul became king. Here the Philistine crisis is forgotten and there is no thought of Samuel except in the probably interpolated v.[14]. The plea for deliverance by Jabesh comes to Saul at Gibeah. He goes to the rescue and defeats the Ammonites. He thereupon is made king at Gilgal. While the deliverance of Jabesh is certainly historical, the account can scarcely be reliable in connecting it with the rise of Saul. A mobilization and foreign war in the midst of the Philistine occupation is too improbable. Since 1 S 13–14[46] assumes that Saul already is king and has an adult son Jonathan, whose act at Gibeah (slaying of the Philistine prefect?) touches off the events leading to the liberation from Philistine oppression, it is apparent that no dependable account of Saul's rise exists. That he attained power by his own efforts is the view of the author of 1 S 14[47].

The story of the war of liberation of 1 S 13–14 into which the compiler has introduced the Gilgal excursion (especially 13[7b–15a]), is very much interested in Jonathan, and in the pursuit episodes already makes Saul a rather sinister figure. The initial events centering about Geba (not Gibeah !) and Michmash show good local knowledge.

That Saul not only ousted the Philistines from Benjamin and probably also from the Ephraimite and Manassite regions and held them off at the Danite-Judaean border to the W. is the presupposition of such a narrative as that of David and Goliath (1 S 17) and other David stories. Valuable information about his subjection of the Amalekites, implying his control of Judah, is offered by 1 S 15, a narrative that in other respects is governed by the theocratic ideal and tells of the break between Samuel and Saul (a theme already occupying the material in 1 S 13[7b–15a]).

That Saul maintained a small mercenary force is stated in 1 S 14[52]. A Judaean from Bethlehem, David, gained his favour and Saul gave him one of his daughters to wife. But Saul was soon consumed by jealousy and sought David's life. Saved by the loyal friendship of Jonathan David fled and became an outlaw, whom Saul vainly pursued. Saul, however, is only a secondary figure in this group of narratives, the hero of which is David. That Saul became mentally disturbed, as they imply, cannot be doubted. The fearful vengeance he took on the priests of Nob for aiding David (1 S 20–21) shows up his ferocity. In the David-Saul stories Saul is the Lord's Anointed for David, and hence untouchable. This presupposes a different view of how Saul assumed office from that of the narratives discussed above presented.

Perhaps we come closest to historical realities in the final narrative about Saul, 1 S 28 and 31. It assumes that Saul had control of the Manassite area, though the status of the great old Canaanite cities is not clarified. The Philistines invade the Esdraelon plain, while Saul is encamped on the slopes of Mount Gilboa. His nocturnal journey to the witch of Endor ; the battle in the forest ; his death by suicide ; the hanging of his and his sons' bodies on the walls of Beth-shean ; the rescue of these bodies by the men of Jabesh, are plausibly and impressively told. The elegy ascribed to David (2 S 1[19–27]) suggests that Saul's reign brought great economic prosperity (v.[24]). It is thus incredible that his reign should have lasted only two years, as the very uncertain text of 1 S 13[1] states. Years later the bodies of Saul and Jonathan were transferred to Zela in Benjamin (2 S 21[13]). That evidently was the real home of Saul, before he established himself at Gibeah. The excavations at the latter place have shown that Saul built himself a palace there. **2.** Gn 36[37f] (AV) ; see SHAUL, **1.** **3.** Saul of Tarsus ; see PAUL. E. G. K.

SAVIAS.—A descendant of Aaron, 1 Es 8[2] (AV, RV) ; omitted from RSV with LXX[B], and not in the parallel passage in Ezr 7[4].

SAVIOUR.—See SALVATION.

SAVOUR.—The word 'savour' is used in AV and RV literally for *taste*, as in Mt 5[13] 'If the salt have lost his savour' (RSV 'taste'), and for *smell*, as 2 Es 2[12] 'an ointment of sweet savour' (RSV 'fragrant perfume'). It is also used figuratively in the sense of *reputation*, Ex 5[21] 'Ye have made our savour to be abhorred (RSV 'us offensive') in the eyes of Pharaoh' (literally 'our smell to stink' as AVm). The verb 'to savour' is either 'to taste *or* smell of,' as in Preface to AV 'to savour more of curiosity than of wisdom' ; or 'to seek out *or* to search by tasting or smelling,' used figuratively in Mk 8[33] AV 'Thou savourest not the things that be (RV 'thou mindest not the things,' RSV 'you are not on the side') of God.

SAW.—See ARTS AND CRAFTS, **1.**

SCAB.—See MEDICINE.

SCALES.—See BALANCE.

SCALING LADDER.—See FORTIFICATION AND SIEGECRAFT.

SCALL.—See MEDICINE.

SCAPEGOAT.—See AZAZEL, ATONEMENT [DAY OF].

SCARF.—The word as rendered occurs only in Is 3[19] (AV, RV 'muffler'), as an article of female attire. The cognate verb, in the sense of 'veiled,' is applied in the Mishnah (*Shabbath*, vi. 6) to Jewesses from Arabia. A close veil of some sort, therefore, is evidently intended by Isaiah.

SCARLET.—See COLOURS, **4.**

SCEPTRE, as translation of *shēbeṭ*, may stand either for a short ornamental sceptre such as appears in some representations of the Assyrian king, or for a long staff reaching to the ground, which characterizes some portrayals of the Persian monarchs. The long sceptre is simply an ornamented **staff**, the short one is a development of the **club** or *mace*. On Gn 49[10] see LAWGIVER and SHILOH. On the difficulty of approaching the presence of the Persian kings referred to in Est 4[11], cf also Herodotus, iii. 118, 140.

SCEVA.—In antiquity the Jews had the reputation of being the best exorcists. At Ephesus where Paul worked 'special powers' (Ac 19[11ff]), seven sons of a Jewish 'chief priest' Sceva tried to exorcise a demoniac saying : 'We adjure you by Jesus whom Paul preaches.' But the evil spirit answered : 'Jesus I know, and Paul I know ; but who are you?' And he attacked and wounded them and threw them all out of the house.

There are two difficulties in this story. The minor one is linguistic. The Greek text seems to say : 'He threw them out, "both of them" (*amphoterous*).' But this word could, in colloquial Greek, mean 'all,' for small numbers. The major difficulty is to get the gist of the story. This narrative tells us that Jesus with his supernatural power is unique, and that the best of non-Christian exorcists—the sons of the Jewish high priest, who had learned from him the secret name of God and were therefore able to do the most powerful miracles—could not equal, let alone rival, Him.

Professor Ramsay thinks that the whole passage is unworthy of Luke (*St. Paul the Traveller*, pp. 272 f). But it is unsafe to judge first-century thought by that of our own day. The Apostolic age firmly believed in possession by evil spirits ; and there is really nothing in this chapter unlike what we read elsewhere in NT. A. J. M.—E. H.

SCHISM.—See HERESY.

SCHOOL, SCHOOLMASTER.—'School' occurs in AV only in Ac 19[9] for the lecture-room (RSV 'hall') of an Ephesian rhetorician (cf EDUCATION) ; 'schoolmaster' only in AV in Gal 3[24f] for which RV has 'tutor' and RSV 'custodian.' The original is *paidagōgos*, literally 'child-conductor,' 'pedagogue'—an old and trusty slave, who accompanied the Greek child to and from school and 'was bound never to lose sight of him, to carry his lyre and tablets, and to keep him out of mischief' (Gardner and Jevons, *Manual of Gr. Antiq.* 303). He had nothing to do with the *teaching*, as is suggested by both

earlier English renderings. The same word is rendered 'instructors' in 1 Co 4[15] AV (RV, as before, 'tutors'; RSV 'guides'). In AV the latter word is found only in Gal 4[2] as the translation of an entirely different word, correctly rendered 'guardians' by RV, RSV. For the duties of guardians in Greek law see *op. cit.* 552 f.

A. R. S. K.—F. C. G.

SCHOOLS.—See EDUCATION.

SCIENCE.—The word 'science' occurs in AV only twice, Dn 1[4] (so RV; RSV 'learning'), 1 Ti 6[20] (RV, RSV 'knowledge'); in both places it simply means 'knowledge'; as in Barlowe's *Dialoge*, p. 109, 'There is no truthe, no mercye, nor scyence of god in the yerth.'

SCIMITAR.—See FAUCHION and ARMOUR, ARMS, 3.'

SCORPION.—Hebrew *'aḳrābh*, Dt 8[15], Ezr 2[6]; Greek *skorpios*, Lk 10[19] 11[12], Rev 9[3, 5, 10]. The scorpion belongs to the *Arachnidae* or spider family. It occurs plentifully in Palestine, ten species being known; it is nocturnal in its habits, and kills small insects, spiders, etc., for food, by means of the poisonous sting at the end of its tail. The effect of the poison on human beings is severe pain, and sometimes collapse and even death, the latter in young children only. The 'scorpions' 1 K 12[11, 14], 2 Ch 10[11, 14] are clearly used only figuratively. It is possible, but hardly likely (see Hastings' *DCG*, article 'Scorpion'), that the language of our Lord in Lk 11[12] is suggested by the egg-like form of the 'scorpion' when at rest. More probably He has in mind some such form of proverb as was current among the Greeks: 'Instead of a perch, a scorpion.'

SCOURGING.—See CRIMES AND PUNISHMENTS, 9, and CRUCIFIXION, 4.

SCREECH OWL, Is 34[14] (AV).—See OWL and LILITH.

SCREEN.—See HANGING, HANGINGS.

SCRIBE.—See KING, 2 (7), WRITING, 5.

SCRIBES.—The scribes were the *sōphᵉrîm*, *i.e.* writers, copyists, 'bookmen,' and consequently the interpreters of the sacred writings of the OT, as their professional occupation gave them unusual familiarity with these books. In Greek, *grammateus* usually meant secretary or recorder, though 'scribe' covered both its basic meaning and its acquired significance in the 1st cent. Among the forerunners of the scribes were also to be reckoned the 'wise' teachers of Israel who produced and handed on a body of oral teaching and eventually created the Jewish Wisdom Literature (see WISDOM). Sir 38–39 contains a classic description of the ideal scribe who is both student and teacher of 'the Law of the Most High.' (See G. F. Moore, *Judaism*, Int., ch. 3) The successors of the scribes, in turn, were the rabbis (q.v.) in the period following the two wars with Rome, when the Jewish schools were reorganised and the Oral Tradition was cultivated, transmitted, and eventually written down in Mishnah and Talmud.

After the Exile, the scribe tended to take the place of the priest as teacher of the Law (see Neh 8[9] 'Ezra the priest the scribe'). In the Gospels the scribes are sometimes referred to as 'lawyers' (*e.g.* Lk 10[25]), *i.e.* experts in the sacred Mosaic Law which was in theory the sole legislation, civil and religious, governing the Jewish people. They were usually associated with the Pharisees (*e.g.* Mt 12[38] Mk 7[5] Lk 6[7]); in Mk 2[16] we read of 'the scribes of the Pharisees,' which must mean scribes who belonged to the Pharisaic party (not the Pharisees' secretaries!). This connexion was most natural, for the Pharisees (q.v.), who originated among the Pious (*Ḥᵃsîdhîm*) in Maccabaean days, were a lay society devoted to the fullest possible observance of the Law as expounded by the scribal experts. In turn many of the scribes became members of the Sanhedrin, the highest legal and administrative body in the Jewish theocratic state. Among them were Gamaliel in Ac 5, Nicodemus in Jn 3 and 7. They sat 'on Moses' seat' (Mt 23[2]) as official interpreters of the Law. The later rabbis also administered the Law, especially after the destruction of Jerusalem. They thus had the power of 'binding and loosing,' *i.e.* of issuing authoritative judgments or decisions upon the legality or illegality of actions.

Among them were many noble characters, like Hillel and Shammai, early in the 1st cent., and Gamaliel (Ac 22[3]) who spoke for fairplay and against persecution (5[34ff]). Their services, both educational and judicial, were rendered freely and without compensation. Unless he possessed independent means the scribe had to earn a livelihood in other ways and then teach as an avocation. It has been suggested that the rule grew out of the danger of bribery, cited in Ex 23[8], Dt 16[19] where 'judges' were ordered not to accept fees or gifts. Presumably there must have been exceptions. Yet the ideal was ennobling (cf the rule for Christian evangelists, Mt 10[8b–9]), and it must have inspired devotion to their calling. At the same time, as with all professional clergy, their position encouraged a certain amount of pride and vanity. They stood on their prerogatives as 'Teachers' and they loved the title 'Rabbi' ('Master')—see Mt 23[5–7]; the title was forbidden the Christian scribes or teachers (23[8–10]).

It is true that criticism of the scribes (and Pharisees) may be found in their own literature, which is profoundly human. They criticized one another freely. But the invective set forth in Mt 23, in seven formal strophes which read like a quasi-poetical tirade of the kind to be found elsewhere in Oriental polemics, may reflect the crisis in feeling which arose between Christians and Jews toward the end of the 1st cent. It was the time when the Christians were excommunicated from the synagogue and when the malediction against the apostates (*mînîm*) was inserted in the *Shemoneh Esreh*. Other sections in the Gospels, even in Matthew, take a far friendlier view of the scribes, their teaching and practice (*e.g.* Mk 12[34]). Moreover, the methods of interpreting Scripture (q.v.) in the Jewish schools and among the Christians were entirely different, and led to inevitable conflict, the scribes (now rabbis) upholding their traditional views, interpretations, and methods, and sharply repudiating the methods and conclusions of the Christians.

It was inevitable that a religion based upon a sacred Law should require legal interpreters and casuists. It was also inevitable that the evangelical, prophetic, eschatological movement of early Christianity should collide squarely with the traditional legalism associated with scribal teaching and practice. The same tension has characterized the Christian church almost from the beginning. The opposing poles are legalism (or nomism) and anarchy (total absence of law and administration, following the free guidance of 'the Spirit' in all things). But the most wholesome religious life and thought appear to flourish at some distance from both extremes. And it is quite unfair to label other Christians or members of other religions with polemical titles which, doubtless true of individuals here and there, certainly in ancient times, scarcely fit whole groups or even religious bodies and justify their condemnation or exclusion from fellowship. From a strictly historical point of view, the wholesale condemnation of the scribes which we find in some Christian books is far too harsh, too sweeping, and too one-sided.

F. C. G.

SCRIP.—See BAG.

SCRIPTURE.—**1.** The word 'Scripture' (Lat. *scriptura*, 'a writing,' 'something written') is used for the Bible as a whole, more often in the plural form 'Scriptures,' and also more properly for a passage of the Bible. It appears as translation of the Greek *graphē*, which is used in the singular for a portion of the OT (*e.g.* Mk 12[10]), and also for the whole OT (Gal 3[22]), and more frequently in the plural (*hai graphai*). The specific idea of Scripture contains an element of sanctity and authority. Thus it becomes usual to refer to Holy Scripture, or the Holy Scriptures (*en graphais hagiais*, Ro 1[2]). See also BIBLE.

2. This specific conception of Scripture as distinguished from ordinary writing is due to the reception of it as a record of the word of God, and is therefore associated

with inspiration (q.v.). The earliest reference to any such record is in the narrative of the finding of the Book of the Law by Hilkiah the scribe in the time of Josiah (2 K 22^{8ff}). Since this book is now known to have been Deuteronomy or part of it, we must reckon that this was the first book treated as Scripture. Still greater sanctity was given to the enlarged and more developed Law in the time of Ezra, and from that time the whole Pentateuch, regarded as the Law given by God to Moses, is treated as especially sacred and authoritative. The special function of the scribes in guarding and teaching the Law rested on this Scriptural character attached to it, and in turn rendered it the more venerable as Scripture. Later the reception of the *Hagiographa* and *the Prophets* into the Canon (q.v.) led to those collections being regarded also as Scripture, though never with quite the authority attached to the Law.

The Rabbis cherished great veneration for Scripture, and ascribed to it a mechanical inspiration which extended to every word and letter. Philo (q.v.) also accepted plenary inspiration, finding his freedom from the bondage of the letter in allegorical interpretations.

Unlike the Palestinian Rabbis, in this respect followed by most of the NT writers, who quote the various OT authors by name, Philo quotes Scripture as the immediate word of God, and in so doing is followed by the author of Hebrews. Thus, while St. Mark says, 'as it is written in Isaiah the prophet' (Mk 1^{2}), and St. Paul, 'David says' (Ro 11^{9}), in Hebrews we read, 'He (*i.e.* God) says' (He 1^{7}), 'the Holy Spirit says' (3^{7}), or, more indefinitely, 'it is said' (3^{15}), which is quite in the manner of Philo. Still, the technical expression 'It is written' (*gegraptai*) is very common, both in the Gospels and in St. Paul's Epistles. As a Greek perfect, it has the peculiar force of a present state resulting from a past action. Thus it always conveys the thought that Scripture, although it was written long ago, does not belong to the past, but is in existence to-day, and its inherent present authority is thus emphasized as that of a law now in force. The impersonal character of the passive verb also adds dignity to the citation thus introduced, as something weighty on its own account.

3. No NT writings during the Apostolic age are treated as Scripture—a title, with its associated authority, always reserved by the Apostles for the OT. There is an apparent exception in 2 P $3^{15, 16}$, where the Epistles of 'our beloved brother Paul' are associated with 'the other scriptures'; but this is a strong argument in favour of assigning 2 Peter to a late period in the 2nd cent. Apart from this, we first meet with the technical phrase 'it is written' attached to a NT passage in Barn. iv. 4; but here it is a Gospel citation of a saying of Christ: 'As it is written, Many are called but few chosen.' Thus the authority of Christ's words leads to the record of them being cited as Scripture. In Polycarp (*Phil.* xii. 1) we have the title 'Scripture' applied to the source of a NT quotation, but only in the Latin translation (*his scripturis*). In 2 Clem. ii. 4 a saying of Christ is cited as Scripture. But, apart from these rare instances, no writer previous to the second half of the 2nd cent. appeals to the NT as technically Scripture. Clement of Rome, Barnabas (with the one exception referred to), Hermas, and even Justin Martyr use the title for the OT only. Theophilus of Antioch (*c* 180) cites passages from St. Paul as 'the Divine word' (*ad Autol.* iii. 14). Irenaeus (185), on the other hand, constantly treats NT passages as the word of God and authoritative Scripture. For an explanation of this remarkable development, see CANON OF NT.

W. F. A.—F. C. G.

SCROLL.—See WRITING.

SCROLLS, DEAD SEA.—See DEAD SEA SCROLLS.

SCULPTURE.—See ART.

SCURVY.—See MEDICINE.

SCYTHIANS.—A wandering race of the Indo-European stock who lived between the Danube and the Don, and spread over the territory between the Caucasus and the Caspian. They were a cruel and savage people, of huge build. The Athenians employed them as police. In Col 3^{11} they are mentioned as a degree worse than barbarians. The latter word simply connoted those who spoke neither Greek nor Latin. A. So.

SCYTHOPOLIS.—See BETH-SHEAN.

SEA in Scripture generally means the Mediterranean, variously called 'the Sea' (Nu 33^{8}, Ezk 26^{17f} etc.), 'the **Great Sea**' (Nu 34^{6}, Ezk 47^{10} etc.), 'the **sea of the Philistines**' (Ex 23^{31}), and 'the **western sea**' (Jl 2^{20}, Zec 14^{8}). The Dead Sea is known as 'the **Salt Sea**' (Gn 14^{3}, Nu 34^{12} etc.), 'the **eastern sea**' (Jl 2^{20}, Zec 14^{8}), or 'the **Sea of the Arabah**' (2 K 14^{25} etc.). Names for the Sea of Galilee are 'the **Sea of Chinnereth**' (Nu 34^{11}, Jos 13^{27} etc.), 'the **Lake of Gennesaret**' (Lk 5^{1}), and 'the **Sea of Tiberias**' (Jn 6^{1} 21^{1}). 'The Sea of Reeds' (Ex 10^{19}, Nu 14^{25} etc.) is rendered by '**Red Sea**' (so LXX), although it more properly refers to the marshes in the vicinity of Lake Timsâḥ.

The term 'sea' is also used for large rivers, specifically the Euphrates (Is 21^{1}, Jer 51^{36}) and the Nile (Is 18^{2}, Na 3^{8}). Since the Mediterranean forms the W. boundary of Palestine, 'sea' is a common expression for 'West' (Gn 12^{8} etc.).

The influence of the Babylonian and Canaanite (Ugaritic) myths of the conflict of the gods with the primeval sea may be traced in certain Scripture representations of the sea (Job 7^{12}, Ps 74^{13f} etc. See article 'Cosmogony' in Hastings' *DB*). *Tᵉhôm* (RSV 'deep') of Gn 1^{2} etc., is related etymologically to Babylonian *Ti'āmat*. By the dismemberment of this monster the ordered world is produced (Gn 1^{6}).

The turbulent and dangerous character of the sea is often referred to in Scripture (Ps 46^{2} 89^{9}, Is 17^{12}, Jer 49^{23} etc.). From the sea came up the monsters of Daniel's vision (7^{2ff}); so also in the Apocalypse (13^{1}). If in the literature of the Hebrews there is manifest a certain horror of, and shrinking from, the sea, which seem strange to a sea-faring people, we must remember that, as a nation, Israel never knew the sea; nor need we wonder if, viewed from their mountain heights, stretching vast and mysterious into the far horizons, it seemed to them the very home of storms and vague terrors. So when the Jewish seer depicts the future home of the blessed there is 'no more sea' (Rev 21^{1}). Cf DUALISM, **1**, RAHAB, **2**.

The word 'sea' was further employed to describe a huge bronze basin in the court of the Solomonic Temple (1 K 7^{23-26}) designed to contain water for the use of the priests. See C. C. Wylie, *Bib. Arch.* xii (1949), 86–90.

W. E.—R. J. W.

SEA (BRAZEN).—See TEMPLE, **6** (*c*).

SEA OF GALILEE.—See GALILEE (SEA OF).

SEA GULL, Lv 11^{16}, Dt 14^{15} (RSV).—See OWL.

SEA OF GLASS.—One of the features of the heavenly scene described in Rev 4^{6} 15^{2}. By its side stood those who had been victorious in the struggle with the beast, singing to the glory of God. Its location was apparently before the throne of God. The symbolism here intended is difficult to make out. The probability is, however, that there is no distinct symbolism whatever, but that the reference is rather to the brilliancy of the waters as one element in the supremely beautiful land of heaven. Some scholars have supposed the author's imagination thus recorded the view of the surrounding sea at Patmos (Rev 1^{9}). But he was an exile, and 21^{1} *ad fin.* surely reflects his feeling more accurately. S. M.—F. C. G.

SEAH.—See WEIGHTS AND MEASURES, **2**.

SEAL, SIGNET.—Sealing was done primarily to authenticate documents or to provide objects with a label. For the former purpose a seal must be different from every other. Where the seal was first developed is not clear. It appears on the scene very early in the Near East, and is made of semi-precious stone such as agate, steatite, chalcedony. The cylinder seal, of which upwards of 10,000 have been preserved, consists of a

stone cylinder perforated in its whole length and usually engraved with a pictorial scene on its surface. When gods or men are portrayed the style of dress gives ready indication of the period. In Babylonia and Elam this type of seal remained in constant use through millennia. This was because it was well adapted to the sealing of clay tablets; the witnesses to a business deal or a legal matter could take the seal which they wore on a string around the neck (Herod. i. 195) and unroll it on the tablet or its 'envelope' or casing. The stamp form of seal is characteristic of Hittite tablets from Asia Minor and Syria.

When papyrus or leather was used as writing material, as was the case in Israel, a seal could only be employed in connexion with a string around the rolled and folded document and a lump of clay covering the knot. A small seal of scaraboid and sometimes of conical shape thus arose about the 9th cent. in Palestine and Syria. On these there were engraved the owner's name (and station, if any) and occasionally an emblem of a figure, whether divine, human, mythical or animal. Particularly famous is the seal (found 1904 at Megiddo) '(Belonging) to Shema', the servant of Jeroboam' (II), with its life-like engraving of a roaring lion. The owner was thus an official of some sort. The seal (from *Tell en-Naṣbeh*) inscribed to 'Jaazaniah, servant of the king' has the figure of a fighting cock under the inscription. The owner may be the individual mentioned in 2 K 25[3]; the date is *c* 600 B.C. Pictureless, but with a dividing double line between two lines of inscription, is the seal of 'Eliakim, servant of Yaukin' (*i.e.* King Jehoiachin) found at *Tell Beit Mirsim*. From Lachish comes a seal of *c* 600 B.C. belonging 'To Gedaliah who is over the house'—thus confirming the title borne by some OT personages such as Shebna (Is 22[15]). A seal-impression from Beth-zur gives the name of a Judaean prince: 'Gealyahu son of the king.' Six seals bearing the names of women are extant. In all about 150 seals of this general type are known, dating from *c* 800–500 B.C. From the Persian period on the seals are generally without Hebrew inscriptions, and Greek influence on their design becomes important.

The seal engraver used a tool with diamond point (Jer 17[1]). His patience, skill, and industry aroused admiration (Sir 38[27]). The Hebrew seal was either pierced and hung on a string or set in the bezel of a ring. It was worn around the neck (Gn 38[18]), or on the arm (Ca 8[6]), or on the right hand (Jer 22[24]). It was used to seal documents (Jer 32[10, 14], Is 8[16] 29[11]) and letters (1 K 21[8]), and even for special purposes such as Dn 6[7], Mt 27[66]. Numerous papyri from Egypt, with strings and seals still intact, illustrate how sealing must have been done in biblical times. A document sealed with seven seals (Rev 5[1f]) is, however, a product of fancy.

E. G. K.

SEALSKIN.—See Porpoise.

SEAMEW, Lv 11[16], Dt 14[15] (RV).—See Owl.

SEA-MONSTER.—See Dragon, Leviathan, Rahab, Sea.

SEBA.—The eldest son of Cush in Gn 10[7], 1 Ch 1[9], named along with **Sheba** in Ps 72[10], and with Egypt and Cush in Is 43[3] 45[14] (the gentilic **Sabaeans** in the latter). In Is 45[14] its people are referred to as of high stature. A comparison with Is 18[2] points to a supposed connexion with the tall Cushites or Nubians, though there is no evidence which directly associates either the people or the country with Nubia proper, in the region of the Nile. More specific seem to be the references by Strabo and Ptolemy to a seaport *Saba* and *Sabat*, near the modern Massowa on the west of the Red Sea. This location, nearly opposite the ancient Sheba, gives some colour to the hypothesis that *Seba* is an African differentiation of **Sheba** (q.v.), the latter being naturally the parent community. J. F. McC.

SEBAM.—A place in the east-Jordan territory of Reuben, Nu 32[3] (AV **Shebam**); elsewhere the name appears in the feminine form **Sibmah,** Nu 32[38] (AV **Shibmah**), Jos 13[19], Is 16[8f], Jer 48[32]. The 'vine of Sibmah' is mentioned by Isaiah and Jeremiah as one of the possessions of Moab on which destruction was to fall. The location is uncertain.

SEBAT, Zec 1[7] (AV) = **Shebat** (q.v.).

SECACAH.—A Judahite town in the wilderness, Jos 15[61]. It is possibly modern *Kh. Samroh*.

SECHENIAS.—1. 1 Es 8[29] (AV, RV); see Shecaniah, 3. **2.** 1 Es 8[32] (AV, RV); see Shecaniah, 5.

SECHU, 1 S 19[22] (AV).—See Secu.

SECOND COMING.—See Parousia.

SECOND DEATH.—In Rev 2[11] 20[6, 14] 21[8] reference is made to the 'second death,' from which the righteous shall be preserved, but which shall overtake the wicked.

SECOND QUARTER.—See College.

SECOND SABBATH AFTER THE FIRST.—This expression is found in AV in Lk 6[1], but the word *deuteroprōtos* is found nowhere else and is of doubtful meaning. Many MSS omit the word, and so RV and RSV ('on a sabbath').

SECRET.—See Mystery.

SECT.—See Heresy.

SECU.—A place-name which appears only in the late narrative of 1 S 19[22] (AV **Sechu**) in connexion with Ramah, Samuel's home, and especially with the 'great well.' Its site is unknown. Some Greek and Old Latin texts read 'the well of the threshing-floor which is on the bare height,' and it is possible that it is not a place-name.

SECUNDUS.—A man of Thessalonica who accompanied St. Paul on his journey to Jerusalem (Ac 20[4]), perhaps as a delegate to carry alms from the church in his city. The verse is somewhat obscure, but the meaning probably is that Aristarchus and Secundus and those mentioned afterwards went directly from Troas to Corinth and waited there for the Apostle, who came with Sopater by way of Macedonia. See Sopater.

A. J. M.—F. C. G.

SECURE.—To be secure, in the language of AV, does not mean to be free from danger; it means not to anticipate danger. Thus, Jg 8[11] 'Gideon smote the host, for the host was secure.' The verb 'to secure' occurs in Mt 28[14] 'And if this come to the governor's ears, we will persuade him, and secure you,' where the Greek means literally *make you free from care, i.e.* make it all right for you, or 'keep you out of trouble' (RSV).

SEDECIAS.—1. Bar 1[1] (AV); see Zedekiah, 5. **2.** Bar 1[8] (AV) = **Zedekiah, 6** (q.v.).

SEDEKIAS.—1. Bar 1[1] (RV); see Zedekiah, 5. **2.** 1 Es 1[46], Bar 1[8] (RV) = **Zedekiah, 6** (q.v.).

SEDGE.—See Weed.

SEDUCTION.—See Crimes and Punishments, 3.

SEED, SEEDTIME.—As an essential part of agricultural routine, sowing the seed looms large in the Bible, and has its natural place in the proverbs of both Testaments, as, to choose at random, Dt 11[10], Job 4[8] 31[8], Ps 126[5], Pr 11[18] 22[8], Ec 11[4, 6], Hos 8[7], 2 Co 9[6], Gal 6[7], and many of the proverbs have become part of our common heritage.

There were three main times of sowing main crops, corresponding to the rainy seasons. The first was in October, before the early rains; the second, and most important, during the heavy rains of November, preferably, according to Hesiod, before the setting of the Pleiades in the middle of the month (cf Pr 20[4], which has an exact parallel in modern Arabic). In the third season, as we are reminded in Ja 5[7], the farmer does not ignore the latter rains of January–February, but not only are cereals sown then where the crop has failed, but also, as will be noted, there were a number of minor crops which were kept for this season. During February 1958, it was pathetic to see Jordan peasants ploughing in the sparse growth of the main sowing because the latter

rains had failed. Ploughing for the late sowing was always deeper than for other crops.

The main cereals, sown early, were barley and wheat, but there was also extensive sowing of leguminous crops—beans (*pôl*), fitches (Talmud *karshînāh*), lentils (*ʿadhāshāh*), flax (*pesheth*). Late crops include millet (*dôḥan*), sesame (introduced from Egypt into Palestine in Ptolemaic times), and *kussemeth* (translated 'spelt' in Ex 9^{32}, Is 28^{25}, Ezk 4^{9}; indigenous to Egypt, but possibly 'bearded wheat' which still grows wild in Palestine).

Seed, *Zeraʿ*, is also the word used for *semen virile*, hence, 'offspring,' and in this sense it was commonly used metaphorically and even typologically, especially in the NT. B. J. R.

SEER.—See ISRAEL, II, 3 (8), PROPHECY, 2.

SEETHE.—This verb, which means to *boil*, occurs occasionally in AV and RV, especially in the command (Ex 23^{19} etc.), 'Thou shalt not seethe (RSV 'boil') a kid in his mother's milk.' The past tense was **sod**, Gn 25^{29}, 'Jacob sod (RSV 'was boiling') pottage'; and the past participle, **sodden**, as La 4^{10} 'The hands of the pitiful women have sodden (RSV 'boiled') their own children.' RSV retains 'seethe' only in Ezk 24^{5}.

SEGUB.—1. The youngest son of Hiel who re-built Jericho, 1 K 16^{34}. He died, or less probably was sacrificed by his father, when the gates were set up. See HOUSE. **2.** Son of Hezron, 1 Ch $2^{21f.}$

SEIR ('hairy' or 'goat').—**1.** Eponym of a Horite clan, Gn $36^{20f.}$, 1 Ch 1^{38}. **2.** The name of a mountainous district E. of the Arabah, peopled by the Edomites, Gn $36^{8f.}$, Dt 2^{5}, Jos 24^{4}. **3.** Seir is also used for the district S. of the Dead Sea (cf Dt 1^{44}), and is practically synonymous with Edom (cf Gn 32^{3}). The district was formerly occupied by Horites (Gn 14^{6}), who were later incorporated into Edom (cf **1** above). **4.** A mountain mentioned in Jos 15^{10} among the points defining the boundaries of Judah; possibly modern, *Sārîs* preserves the name.

SEIRAH.—The place to which Ehud escaped after killing Eglon, king of Moab, Jg 3^{26} (AV **Seirath**); the location is unknown.

SEIRATH, Jg 3^{26} (AV).—See SEIRAH.

SELA means 'rock,' 'crag,' or 'cliff,' and as a common noun is of frequent occurrence in Hebrew. In a few passages (Jg 1^{36}, 2 K 14^{7} (AV **Selah**), Is 16^{1}, and, according to some, Is 42^{11}), the word appears to be a proper name, though it is generally used with the definite article. In Jg 1^{36} a site in the Arabah S. of the Dead Sea is required by the context, which would also satisfy the requirements of 2 K 14^{7} and Is 16^{1}. But it is not improbable that more than one place was so designated, and indeed Glueck attests one such place *Es-Selaʿ*, with traces of Iron Age occupation on a rocky site N. of Petra. Generally, however, as probably in 2 K 14^{7} and Is 16^{1}, Sela signifies the capital of Edom, named by Amaziah after its capture Joktheel (2 K 14^{7}, 2 Ch 25^{12}), which the *Onomasticon* identifies with the celebrated **Petra** ('Rock'), about 50 miles SSE. of the Dead Sea in an impressive sandstone canyon of the *Wâdī Mûsā* entered by the long, narrow *sîq* between cliffs towering 500 ft. high. The Early Iron, or Edomite, settlement has been located specifically by the work of Horsfield and Head at *Umm el-Bayāra*, an impressive height of *c* 3500 ft. comparatively isolated. The monuments of the more extensive site of Petra are great ornamental and smaller tombs, mortuary chapels, at least one temple, and two theatres, cut out of the grained sandstone rock, and the two 'high places,' or open-air sanctuaries on mountain-tops. The last date back probably to Edomite times, but the other monuments are of the Nabataeans, a virile mercantile people from N. Arabia, who occupied Edom in the 5th cent. B.C. Petra was the capital of this mercantile kingdom, one of whose rulers was Aretas IV. (9 B.C.–A.D. 40), the father-in-law and later enemy of Herod Antipas and the ruler of Damascus at the time of St. Paul's escape. Petra under the Nabataeans defied the Seleucids and Romans until A.D. 106, when it was taken by Trajan and incorporated in Provincia Arabia. It continued to be a populous caravan city, but declined with the rise of Palmyra in the 3rd cent. A.D. Most of its monuments show Hellenistic as well as Nabataean features, and are in consequence hard to date accurately. G. B. G.—J. Gr.

SELAH, 2 K 14^{7} (AV).—See SELA.

SELAH.—A Hebrew liturgical-musical term of uncertain meaning. It occurs (*a*) in the OT, (*b*) in the Psalms of Solomon, and (*c*) in the Jewish (Synagogue) Liturgy.

In the OT the term occurs 74 times altogether in the Hebrew text, viz. 71 times in the Psalter, and 3 in the Prayer of Habakkuk (Hab 3). In the Greek translation of the OT (the LXX) the Greek equivalent (*diapsalma*) does not always appear in the same places as in the Hebrew text; the number of occurrences is also rather larger in the LXX. Possibly in some cases 'Selah' has fallen out of the Massoretic text accidentally. In the *Psalms of Solomon* 'Selah' occurs twice (17^{31} and 18^{10}), and in the oldest parts of the Jewish Liturgy (apart from the canonical Psalms, which are incorporated in it) 5 times (3 in the 'Eighteen Blessings' and 2 in the morning Benedictions preceding the *Shemaʿ*).

Various explanations have been proposed as to the etymology and meaning of the term. Perhaps the least improbable of these is that which regards it as a liturgical direction intended to indicate the place for *lifting up* the voices in a doxology at the close of a section; such a doxology might have been sung at the end of a psalm or section of a psalm which liturgically was separated from the following (cf the use of the 'Gloria' at the end of Psalms or [in the case of the 119th] at the end of sections of the Psalm in Christian worship). Or it may have been a direction to the orchestra—'Lift up! loud!'—to strike in with loud music (after the soft accompaniment to the singers' voices) during a pause in the singing. Other theories, such as that it represents a Hebrew transliteration of a Greek word (*e.g. psalle*) or an acrostic of three words directing a change of voices or *da capo*, have little probability. The meaning of the LXX rendering (*diapsalma*) is as uncertain as that of the Hebrew word itself. G. H. B.—J. Mu.

SELA-HAMMAHLEKOTH, 1 S 23^{28} (AV, RV).—See ROCK OF ESCAPE.

SELED.—A Jerahmeelite, 1 Ch 2^{20}.

SELEMIA.—One of Ezra's swift scribes (2 Es 14^{24}).

SELEMIAS, 1 Es 9^{34} (AV, RV).—See SHELEMIAH, **2.**

SELEUCIA.—Commonly called Seleucia Pieria (after the mountain on its N. side) to distinguish it from other cities of the same name. It was on the coast of Syria, above the mouth of the Orontes River. It was founded by Seleucus I. as his capital, but, lacking control of the sea, he subsequently shifted his government to a new place farther up the river (Antioch). But he was buried at Seleucia. Seleucia was a great fortress. In the second Syrian war Ptolemy Euergetes established himself here (1 Mac 11^{8}) and it remained in Egyptian hands for 27 years. Antiochus III. the Great retook it in 219 B.C. Ptolemy VI. again seized it when he sided with Demetrius against Alexander Balas. It formed a league with Antioch, Apamea, and Laodicea. When Tryphon occupied Antioch, Seleucia was the seat of Demetrius II. From here Antiochus VII. Sidetes reconquered the realm. Faithful to Antiochus VIII. Grypus, it was given its freedom. It locked out Alexander Zabinas (123–122 B.C.) and it alone resisted the Parthian Tigranes (83–69 B.C.). Pompey awarded it liberty. Its greatness and importance for trade increased in imperial times. Important remains exist, and some work has been carried on there by the Princeton University Antioch Expedition. E. G. K.

SELEUCUS.—1. Seleucus I. (*Nicator*), originally a cavalry officer of Alexander the Great, became satrap of Babylon on the death of the king. After some vicissitudes his position there was securely established in 312 B.C., from which date the Seleucid era was reckoned (1 Mac 1^{16}). The battle of Ipsus, 301 B.C., made him

master of Syria and great part of the E. He founded Antioch (q.v.) and its fortified port Seleucia (1 Mac 11[8]), and is said by Josephus (*Ant.* XII. iii. 1 [119]) to have conferred on the Jews the privileges of citizenship. He is the 'one of his [*i.e.* the king of Egypt's] princes' (Dn 11[5]). He died 280 B.C.—**2. Seleucus II.** (*Callinicus*, 246–226 B.C.), son of Antiochus *Soter*, is entitled the 'king of the north' in the passage (Dn 11[7-9]) which alludes to the utter discomfiture of the Syrian king and the capture of Seleucia.—**3. Seleucus III.** (*Ceraunus*, 226–223 B.C.), 'one of his (Seleucus II.'s) sons' (Dn 11[10]), was murdered during a campaign in Asia Minor: the struggle with Egypt was continued by his brother Antiochus (Dn 11[10-16]).—**4. Seleucus IV.** (*Philopator*; but Jos., *Ant.* XII. iv. 10 [223], calls him *Soter*), son of Antiochus *The Great*, reigned 187–176 B.C. He it was who despatched Heliodorus to plunder the Temple (2 Mac 3[1-40], cf Dn 11[20]).—**5. Seleucus V.** (125-124 B.C.) and **VI.** (95-93 B.C.) are not of importance to the Biblical student. The four first-named belong to the 'ten horns' of Dn 7[24]. J. T.

SELF-CONTROL.—See TEMPERANCE.

SELF-SURRENDER.—Jesus told His disciples that they must deny themselves (Mk 8[34]) if they were to follow Him; and, as this verse and Jesus' own example alike show, there is no limit to what may be required in this surrender of oneself; it may mean death. But whatever it means in any given case, the practice of self-surrender or self-denial is never an end in itself; it is a presentation of oneself to God so that one may be used for His purposes. This presentation of oneself is described in the OT in language drawn from the servant's attendance on his lord (*e.g.* Job 1[6], Dn 7[10, 13], Zec 6[5]); and as the OT worshipper, when he presented himself before Yahweh at His shrine or Temple, had to be pure and to present an unblemished offering, so St. Paul exhorts his readers to present *themselves* as pure offerings to God (Ro 12[1]; cf 6[12-19]). With the Christian, as with His Lord, the offering called for is nothing less than himself. But this is only possible for men because Christ makes it so; hence it is He who is described as presenting the Colossians 'blameless and irreproachable' before God (Col 1[22]) and as presenting the Church in splendour before Himself (Eph 5[27]). To surrender ourselves to God, which is life in its true sense (cf He 12[9]), we must surrender ourselves first to Christ, by dying with Him that we may live with Him (Ro 6[1ff]); by being born again (Jn 3[3, 5]) into the Kingdom of the Son who has completely surrendered Himself to the Father (He 10[9], Jn 4[34] etc.). So St. Paul can sum up the origin and the consequences of self-surrender to God in the words: 'I have been crucified with Christ; it is no longer I who live, but Christ who lives in me' (Gal 2[20]). R. S. B.

SEM, Lk 3[36] (AV) = **Shem** (q.v.).

SEMACHIAH.—A Korahite family of gatekeepers, 1 Ch 26[7]. Perhaps the same name should be substituted for **Ismachiah** in 2 Ch 31[13].

SEMEI.—**1.** 1 Es 9[33] (AV, RV); see SHIMEI, **11.** **2.** Ad. Est 11[2] (AV); see SHIMEI, **12.** **3.** Lk 3[26] (AV); see SEMEIN.

SEMEIAS, Ad. Es 11[2] (RV).—See SHIMEI, **12.**

SEMEIN.—The father of Mattathias, Lk 3[26] (AV **Semei**).

SEMEIS, 1 Es 9[23] (RV).—See SHIMEI, **11.**

SEMELLIUS, 1 Es 2[16] (AV).—See SHIMSHAI.

SEMIS, 1 Es 9[23] (AV).—See SHIMEI, **11.**

SENAAH.—The children of Senaah, or more correctly **Hassenaah** (q.v.), were a clan or family who, according to Ezr 2[35], Neh 7[38], 1 Es 5[23] (AV **Annaas**, RV **Sanaas**), were among the exiles of the first Restoration under Zerubbabel, and had a share in rebuilding the walls, Neh 3[3]. They are elsewhere unknown, unless they should be classified with **Hassenuah** (q.v.), a clan of Benjamin, 1 Ch 9[7], Neh 11[9]. The latter would then be the correct reading. Other conjectures are less probable. J. F. McC.

SENATE is the translation of Greek *gerousia* in Ac 5[21], where 'all the senate of Israel' is intended to explain the preceding '**council**' (*synedrion*). See SANHEDRIN. It is the Jewish 'senate' that is meant likewise in 2 Mac 1[10] 4[44]. The Roman senate is alluded to in 1 Mac 8[17ff].

SENEH.—A rocky crag on one side of the Michmash gorge, opposite Bozez, 1 S 14[4].

SENIR.—The name of **Hermon** among the Amorites, according to Dt 3[9], but in Ca 4[8] and 1 Ch 5[23] distinguished from Hermon. It was famous for its large fir trees, Ezk 27[5]. The Amorite name was, naturally enough, the one in vogue among the Babylonians and Assyrians. In Deuteronomy it appears, like Hermon and Sirion, to designate the whole of Anti-Lebanon. When taken more strictly it stood, we may assume, for the northern portion. The Arab geographers gave the name to that part of the range lying between *Baʿalbek* and *Homṣ*.
J. F. McC.

SENNACHERIB (Ass. *Sîn-aḫê-eriba*, *i.e.* 'Sin has replaced the brothers'), son of Sargon, became king of Assyria on the 12th of Ab, 705 B.C. He first made Ashur his capital and later in 701 B.C. raised Nineveh to the position of capital city; at the latter site have been found Sennacherib's most famous monuments. In 703 B.C. he was faced with trouble in Babylon. Merodach-baladan had regained the throne from which he had been removed a few years before by Sargon. In a decisive victory Sennacherib subdued the Babylonian insurrection and placed Bêl-ibni of royal seed upon the throne as a vassal king. After wars against the Kassites and Yasubigallai, E. of the Tigris, Sennacherib turned his attention to rebellions in Syria and Palestine. Luli, king of Sidon, fled overseas; Ethbaʿal was placed as king over the Phoenician cities, which submitted to the Assyrian king. Kings to the south hastened to send gifts of tribute; among them were the kings of Ashdod, Beth-Ammon, Moab, and Edom. Sennacherib moved southward, where he captured Ashkelon and the surrounding cities. He set up a former pro-Assyrian king and imposed tribute. At Eltekeh he met and defeated the Egyptian and Ethiopian armies which had been summoned by the revolutionists at Ekron, who had thrown their former king Padi into fetters and given him over to Hezekiah, king of Judah, After capturing Eltekeh, Timnah, and Ekron, Sennacherib brought back Padi from Jerusalem and restored him to his throne. He next captured forty-six of the strong cities of Hezekiah and carried away 200,150 prisoners. Siege was laid to Jerusalem and Hezekiah himself was shut up 'like a bird in a cage.' Sennacherib records in his royal inscription tribute from Hezekiah amounting to 30 talents of gold and 800 talents of silver, as well as other precious materials. According to 2 K 18[14ff]. Hezekiah paid Sennacherib 300 talents of silver and 30 talents of gold while he was in Lachish. Lachish fell to Sennacherib; his artists later decorated the royal palace in Nineveh with pictures of the storming of the city and of the king sitting on his throne as 'passed in review the booty of Lachish.' The Assyrian Tartan (commander-in-chief), Rabsaris, and Rabshakeh went to Hezekiah in Jerusalem to demand surrender of the city (2 K 18[17ff]) but Hezekiah refused. A second embassy (2 K 19[9ff]) from Sennacherib likewise failed. According to 2 K 19[35-36] the siege of Jerusalem was lifted by the miraculous death of 185,000 Assyrians; from the Assyrian account it is clear that Jerusalem was not captured. There is some reason to think that certain Biblical narratives in 2 Kings (and their duplicates in Is 36–37) may refer to another campaign of Sennacherib towards the end of his reign. In 700 B.C. he marched again to Babylon, captured Bêl-ibni and pursued his old enemy Merodach-baladan, who had fled by ship to Elam. Sennacherib placed his own son Ashurnadin-shumu on the Babylonian throne. In 694 B.C., with a fleet constructed by Phoenician shipbuilders, Sennacherib again invaded the south to attack the Babylonians and the Elamites. After indecisive battles in the south, Babylon was finally taken in 689 B.C. and

wiped out. The remaining eight years of his reign were relatively quiet, to judge from the scant records we have. In 681 B.C. Sennacherib was murdered by two of his sons (2 K 19[37]), who escaped, and Esarhaddon, another son, reigned in his stead. J. B. P.

SENUAH, Neh 11[9] (AV).—See HASSENUAH.

SEORIM.—The name of the fourth priestly course, 1 Ch 24[8].

SEPARATE PLACE.—A space at the end of Ezekiel's Temple, Ezk 41[12ff] 42[1, 10, 13] (AV, RV; RSV 'temple yard').

SEPARATION, WATER OF.—See RED HEIFER.

SEPHAR.—Mentioned as a boundary of the descendants of Joktan in Gn 10[30]. The site is unknown.

SEPHARAD.—A country in which was a community of exiles from Judah in the days of the prophet Obadiah, Ob [20]. Targum and Peshitta render 'Spain,' and Vulgate 'Bosphorus.' It is probable that it was a district of Asia Minor, possibly Sardis.

SEPHARVAIM.—A city mentioned in 2 K 18[34] 19[13], Is 36[19] 37[13] among those captured by the Assyrians, all apparently in Syria; also in 2 K 17[24, 31] as the name of a place whose inhabitants were deported to Samaria. Its location is unknown. It is possibly to be identified with **Sibraim** (q.v.).

SEPTUAGINT.—See GREEK VERSIONS OF OT, **1.**

SEPULCHRE.—See TOMB.

SERAH.—A daughter of Asher, Gn 46[17], Nu 26[46] (AV **Sarah**), 1 Ch 7[30].

SERAIAH.—1. 2 S 8[17]; see SHAVSHA. **2.** High priest in the reign of Zedekiah, who was put to death, with other distinguished captives, by order of Nebuchadrezzar at Riblah, 2 K 25[18, 21], Jer 52[24, 27]. He is mentioned in the list of high priests, 1 Ch 6[14]. Ezra claimed descent from him, Ezr 7[1], 1 Es 8[1] (AV **Saraias,** RV **Azaraias**), 2 Es 1[1] (AV, RV **Saraias**). He is also named in 1 Es 5[5] (AV, RV **Saraias**). **3.** One of the 'captains of the forces' who joined Gedaliah at Mizpah, 2 K 25[23], Jer 40[8]. **4.** Second son of Kenaz, father of Joab, and brother of Othniel, 1 Ch 4[13f]. **5.** A Simeonite, 1 Ch 4[35]. **6.** One of the twelve leaders who returned to Jerusalem, Ezr 2[2], 1 Es 5[8] (AV **Zacharias,** RV **Zaraias**); called **Azariah** in Neh 7[7]; he sealed the covenant, Neh 10[2] 12[1], and is perhaps the same as the head of the priestly house named in Neh 12[12]. **7.** The grandson of Meshullam, Neh 11[11]; called **Azariah** in 1 Ch 9[11]. **8.** One of those sent to apprehend Jeremiah, Jer 36[26]. **9.** Son of Neriah, Jer 51[59ff]. He held the office of quartermaster.

SERAPHIM.—The seraphim are mentioned in only one passage in Scripture (Is 6[2ff]). In Isaiah's inaugural vision these constitute the celestial adorants who sing the Trisagion in antiphonal chorus. They are described as having six wings, one pair for veiling their eyes, another for covering their body (euphemistically called 'feet'), and one, for flying. These creatures had human hands and voices (vv.[6f]), but whether they had human bodies is not known. Their function was Yahweh's service, both in adoration and protecting Him from the approach of the profane and unholy. Though not mentioned as such in NT the four living creatures of Rev 4[8] are an obvious reflection of this passage and of Ezk 10.

Later Jewish tradition suggests that the Seraphim were serpentine (1 En 20[7] 61[10] etc.). This accords with the use of the singular *sārāph* (Nu 21[8], Dt 8[15], Is 14[29] 30[6]) for **fiery serpent,** also found in the plural (and thus identical with our word) at Nu 21[6]. The word is derived from a root meaning 'to burn.' An interesting relief on stone from Tell Halaf (Oppenheim, Plate 32A) shows a goddess with six wings holding a serpent in each hand. Whether this has anything to do with the Hebrew seraphim is, of course, undemonstrable.

J. A. K.—J. W. W.

SERAR, 1 Es 5[32] (RV).—See SISERA, **2.**

SERED.—A son of Zebulun, Gn 46[14], Nu 26[26]; the gentilic **Seredites** occurs in Nu 26[26] (AV **Sardites**).

SERGIUS PAULUS.—See PAULUS (SERGIUS).

SERJEANTS.—See POLICE.

SERMON ON THE MOUNT.—The first of the five major discourses in Matthew (5–7), paralleled by a briefer discourse in Luke (6[20–49]) which was delivered on the 'plain' or 'level place.' Because of its location, Luke's sermon is sometimes described as 'the ordination sermon to the Twelve'; but its contents, like those of Matthew, are general in application; Matthew's sermon is delivered to the disciples, but the crowd is also present. Like Matthew's other discourses, the material in chs. 5–7 has been collected and arranged by the author in order to set forth Jesus' teaching on one leading subject; here it is the 'new righteousness' or practice of religion (6[1]) which must not fall short but even exceed the religious practice of the Pharisees (5[20]). In view of the parallel in Luke, it is probable that such a collection of Jesus' sayings (though briefer) on discipleship, love of enemies, the criteria of true devotion, and the distinction between 'hearing' and 'doing' the word, was to be found in their common non-Marcan source (Q). Most of the material found in Mt 5–7 but not in Lk 6[20–49] is to be found elsewhere in Luke; *i.e.* it also belongs to this early gospel source, or to similar sources (*e.g.* 'M').

1. Structure.—Both 'sermons' begin with the Beatitudes (q.v.), 9 in Mt, 3 in Lk, where they are matched by the three 'Woes' setting forth the contraries. The new piety, which is required of Jesus' true followers or disciples, is 'perfectionist' and absolute in its demands. 'The poor' must be 'poor in spirit,' according to Matthew, not only in earthly possessions, as in Luke; *i.e.* they must be poor in their own self-esteem, helpless and dependent upon God rather than upon themselves; the 'meek' (or gentle) will inherit 'the land' (from Ps 37[11] LXX, possibly a later addition to the original series of Beatitudes); the 'mourners' will be comforted in the Age to Come, and the 'hungry' will be filled with good things (cf Lk 1[53])—here again Matthew adds an explanatory phrase, '(hunger) for righteousness,' in order to make sure the religious reference. Luke's bare 'you that hunger now,' which was perhaps the original form of the saying in Q, could easily be understood in a social revolutionary sense. The merciful, the pure in heart, the peacemakers, the persecuted (these verses are not in Luke) are those who supremely exhibit the devout character required by God: this was the teaching of Judaism (see especially the Psalms) as well as of Jesus and the earliest Christians. The appended Beatitude in Mt 5[11f] sums up and applies the teaching of the whole series to the early Christian situation. As C. F. Burney demonstrated, the Aramaic original underlying the Matthaean Beatitudes was probably metrical, and the explanatory glosses in vv.[3] and [6] overload the lines. It is also probable that the arrangement and form were meant for easy memorization, and may go back to Jesus Himself. Their outlook, not only in Luke but also in Matthew, is eschatological. 'Blessed' means more than 'happy' here and now (as in classical macarisms), *e.g.* as possessing true peace of mind; it is a felicitation pronounced upon—almost an apostrophe (Hail!) addressed to—those who are to be the inheritors of the Kingdom of Heaven.

2. Purpose.—The Beatitudes supply the clue to the purpose of the Sermon, which is to expound the meaning of the New Piety, that of Jesus' disciples, in contrast with the Old, that of the scribal teachers of the Law and their Pharisaic followers and supporters. The Sermon was therefore designed for reading and study, perhaps for memorization, like most of Jesus' teaching in Matthew, and certainly for practice in the Christian church of Matthew's time. The true disciples of Jesus are truly pleasing to God; they are 'the salt of the earth,' 'the light of the world,' 'a city built on a hill'; their only purpose in life is to serve God humbly and proclaim and exemplify the gospel (5[13–16]). Such 'righteousness' is not only superior to the ordinary, but far excels it,

and in fact carries out to its full realization the basic teaching of both the Law and the prophets (5$^{17-20}$); here Matthew specifically aligns Jesus' teaching with the traditional religion of his people (cf 23^{2f}). Anti-Pharisaism must not be allowed to go the length of irreligion, or anti-nomism to become antinomianism. Following this statement of the underlying principle of Jesus' interpretation of the Law (see other examples: *e.g.* Mk 7$^{9-13}$ 10$^{2-12}$ where He preserves the fundamental teaching but rejects the traditional interpretation), the Sermon proceeds to examine the teaching of the Law at six points: murder, adultery, divorce, oaths, revenge, and the treatment of enemies (5$^{21-48}$), concluding with the summary requirement, which is also 'perfectionist,' 'You therefore must be perfect, as your heavenly Father is perfect.' The Sermon then turns to the customary Pharisaic practice of religion, with three examples, the 'pious deeds' of almsgiving, prayer, and fasting, and warns against ostentation in their performance (6$^{1-18}$); here the model prayer of Jesus (see LORD'S PRAYER) is included in vv.$^{9-13}$. Following this formal examination of the traditional norms of piety, the Sermon continues with various sayings of Jesus on laying up treasure (6^{19ff}) and the importance of singleness of purpose (the parable of the eye, and the saying on serving one master, ^{22ff}). Then follow a series of warnings against anxiety, which destroys faith in God ($^{25-34}$), and against censoriousness (7$^{1-5}$) which invites a judgment upon oneself; the sayings on assurance in prayer ($^{7-11}$), the narrow gate (^{13f}, which may belong with the sayings on loyalty and sincerity, above); the warning against false (Christian) prophets without ($^{15-20}$) and self-deception within ($^{21-23}$). The Sermon concludes with the great parable of the Two House Builders who built, one upon sand, the other upon rock ($^{24-27}$), a sublime climax to a sermon on the practice of religion which stressed repeatedly the actual doing as opposed to the mere casual hearing of the words of the true Teacher.

Into this sequence of thought have been inserted two verses which are difficult to explain, and by some are thought to be derived from Matthew's 'M' material: 7^{6}, the warning against desecrating sacred things, which may refer to the teaching of the gospel, with its transcendent requirements, to those who will only reject and ridicule it or revile the teacher; and 7^{12}, the Golden Rule, which was already known in Judaism and is sound enough as far as it goes but seems out of place where it stands in Matthew. It may belong after 7$^{1-5}$, having been separated from that pericope by the insertion of $^{6-11}$.

3. Sources.—The basis of the Sermon was the combination of Q and M material, following the pattern just described. Into this combination Matthew inserted some material from Mark. The central section of Q was on discipleship, that of M was on the new interpretation of the Law. It is characteristic of Matthew that he often introduced sayings in groups of three, adducing two further sayings in support or elucidation of the one which provided the topic of the pericope. The background of the Sermon is the religious tradition of the Palestinian or Syrian church toward the end of the 1st cent., totally uninfluenced by 'Paulinism' with its repudiation of the Jewish Law. For Matthew, the Law was more binding than ever, now that its fundamental principles had been revealed by Jesus, the 'Second Moses.' His view resembles that of Philo (q.v.), for whom the Law is the expression of the eternal moral order which undergirds the universe.

4. Interpretation.—Although the Sermon on the Mount (in Matthew) has often been viewed as a brief, summary statement of the whole gospel of Jesus, this would not have been the view of Matthew, who supplies four or five other discourses setting forth other aspects of the Lord's teaching: the Mission of the Disciples (9^{35}–10^{42}), the Hidden Teaching of the Parables (13$^{1-52}$), Church Administration (17^{24}–18^{35}), the Discourse against the Scribes and Pharisees (23$^{1-39}$) followed by the Discourse on the Parousia (24^{1}–25^{46}). See MATTHEW, GOSPEL OF. Understood as Matthew doubtless meant it to be understood, *i.e.* as Jesus' programmatic discourse on the New Piety *versus* the Old, the Sermon yields rich insights, both into Jesus' teaching as a whole and into the religious life, beliefs, and even worship of the early Palestinian or Syrian Christians. Hence the modern interpretations of the Sermon must be appraised from the vantage point of critical scholarship. The Sermon is scarcely 'Christ's legislation' (Sir John Seeley, *Ecce Homo*, 1865; cf Thomas Aquinas's phrase, the *nova lex*), nor his programme for social betterment or the achievement of an ideal society (so the Ritschlians, more or less, and the 'social gospel' school earlier in this century), nor pure religious ethics (so Bishop Charles Gore, *The Sermon on the Mount*, 1900, who reduced Jesus' 'heroic' ethics to 'a safe life is better than a complete one'). Martin Dibelius (*The Sermon on the Mount*, 1940) and others influenced by modern continental theology have viewed it as setting forth 'the pure will of God,' regardless of whether or not it could be put in practice: if not, the result would be to force men in penitence to acknowledge their sinfulness and helplessness and to fling themselves down before God, crying for mercy and grace; but of this 'mirror of perfection' purpose the Sermon itself contains no suggestion. Hans Windisch (*Der Sinn der Bergpredigt*, 1929, 2nd edition 1937, English translation, 1951) compared the ancient Jewish religious ethics, with their similar strain of perfectionism (see the Testaments of the XII Patriarchs, the ethical sections in 1 and 2 Enoch, Pirke Aboth, etc.); evidently Jesus assumed that His disciples would put His teaching in practice. Apart from that assumption the Sermon (both in its Lucan and Matthaean form) would have been meaningless.

F. C. G.

SERON.—A Syrian commander defeated by Judas Maccabaeus at Beth-horon (1 Mac 3$^{13, 23f}$).

SERPENT.—1. *nāḥāsh*, generic name (cf Arab. *ḥanash*), Gn 3$^{1, 3}$ etc., the most commonly used word, occurs frequently.

2. *'eph'eh* (root 'to groan, hiss,' cf Arab. *af'a*) is applied to the viper (Job 20^{16}, Is 30^{6} 59^{5}).

3. *'akhshûb*, parallel to *nāḥāsh* in Ps 140^{3}. This word is a *hapax legomenon* in the OT, and is probably a textual error for *'akkābhîsh*, 'spider.'

4. *pethen*, translated 'asp,' Dt 32^{33}, Job 20^{14}, Is 11^{8}; translated 'adder' in Ps 58^{4}, where it is referred to as the favourite of the snake-charmer.

5. *sh^{e}phîphôn*, Gn 49^{17} 'viper' (RSV; AV, RV 'adder,' AVm 'arrowsnake,' RVm 'horned snake'); cf Arabic *shiffûn*, 'the one who looks askance,' though the Hebrew word is possibly cognate with the Arabic *siff*, 'speckled serpent.'

6. *ṣepha'*, Is 14^{29}, perhaps an onomatopoeic word meaning 'hisser.'

7. *ṣiph'ônî*, Pr 23^{32} 'adder'; so RSV in Is 11^{8} 59^{5}, Jer 8^{17} (AV 'cockatrice,' RV 'basilisk').

8. *ḳippôz*, Is 34^{15} 'owl' (RSV; AV 'great owl,' RV 'arrowsnake'). This is probably cognate with Arabic *qiffaza*, 'the arrowsnake,' from the verb *qafaza*, 'to leap,' *i.e.* out of a tree upon its victim. See OWL.

9. *sārāph*, Is 14^{29} 30^{6}, 'fiery serpent,' coupled with *nāḥāsh* in Nu 21^{6}, Dt 8^{15}.

10. *zōḥ^{a}lê 'āphār*, Dt 32^{24}; *zōḥ^{a}lê 'ereṣ*, Mic 7^{17}, creatures that glide on the dust or the earth, so probably serpents, cf the Stone of Zoheleth (1 K 1^{9}), where *zōḥeleth* means 'serpent' if the adjacent well of En-rogel is the 'Dragon's Well' of Neh 2^{13}. Cf WORM, **5.**

11. *tannîn*, translated 'serpent,' Ex 7$^{9f, 12}$ (RVm 'any large reptile'), Ps 91^{13} (AV and RV 'dragon'); cf Neh 2^{13}, where RSV has 'jackal' (AV, RV 'dragon'). See DRAGON.

12. (Greek) *echidna*—any poisonous serpent (Mt 3^{7} 12^{34} 23^{33}, Lk 3^{7}, Ac 28^{3}).

Serpents are very common in Palestine and the wilderness to the south, over thirty species being known. Though the great majority are really harmless, all are dreaded by the natives, and several kinds are most deadly, fatal snake-bites being by no means uncommon.

The Egyptian cobra (*naja ḥaji*) is found, but fortunately is not common. It is the favourite with snake-charmers, and is very probably the *pethen* (*v. supra*, 4). It was held in much veneration by the ancient Egyptians, and a little bronze serpent found in Macalister's excavations at Gezer was of this form, and was probably an object of worship in pre-Israelite Palestine. Another very dangerous snake is the horned sand-snake (*Cerastes hasselquistii*), supposed to be the 'asp' of Cleopatra. It lies in ambush (Gn 49^{17}) in depressions of the road and bites the passers-by. It is called by the Arabs *shiffûn* (*v. supra*, 5). Other poisonous Palestinian snakes belonging, like the last mentioned, to the viper family are *Vipera euphratica*, *V. ammodytes*, *Daboia xanthina*—a large nocturnal species—and the small *echis arenicola* which haunts the sandy deserts. These vipers are all included under the Hebrew *'eph'eh* (*v. supra*, 2). The viper of Ac 28^{3} was probably the *Vipera aspis*, which is common on most of the larger Mediterranean islands, though extinct in Malta. The expression 'fiery serpent' probably refers to the burning sensation produced by the bite; in Ps 140^{3} their poison is supposed to reside in their tongues (but cf *supra*, 3).

Some of the references to serpents do not apparently refer to any natural object. Apart from the 'cockatrice' and 'basilisk' of the English versions—the former a monster with the head and body of a cock and the tail of a serpent ending in a sting, and the latter properly the golden serpent on the royal headdress of Egypt—which almost certainly refer to local serpents in the original Hebrew, there are references to mythological monsters. The reference in Am 9^{3} to the serpent (*nāḥāsh*) at the bottom of the sea probably refers to the Canaanite myth of the conflict of Cosmos (Baal) and Chaos, represented by various sea-monsters including *tnn* and *ltn*, Hebrew Leviathan (see DRAGON and LEVIATHAN), a local variant of the Babylonian myth of the conflict of Marduk and Tiamat.

The serpent is found in association with the mother-goddess *Asherat* in pendant reliefs at Râs Shamra and on clay-moulded incense-altars of the pre-Israelite period at Bethshan. This association may have suggested the rôle which the serpent plays in the Fall in Gn 3 (see FALL and SATAN). E. W. G. M.—J. Gr.

SERPENT, BRAZEN.—Nu 21^{4-9} relates that Moses was commanded by God to make a bronze serpent and to set it on a pole in view of the people, in order that those who had been bitten by the fiery serpents (*i.e.* serpents whose bite caused a burning inflammation) might look upon it and be healed. Among many ancient peoples the serpent was regarded as sacred. The belief in its healing power was widespread (cf especially the serpent of the Greek god of healing, Asklepios). Serpent figures have been found in Palestine in such circumstances as to indicate that they represented the *vis genetrix* in a context of fertility cults. The serpent symbol, **Nehushtan**, in Jerusalem (2 K 18^{4}), which was destroyed by Hezekiah, may have been a pre-Davidic symbol which was taken over by the Israelites when they captured the city, or it may have been a well-known symbol in Palestine which they adopted for use in Yahweh worship. In either case the point of the story in Nu 21^{4-9} was probably to show that healing comes from God and not from any magical properties inherent in the symbol. Jn 3^{14} says that, as the Israelites in the wilderness looked to the bronze serpent on the pole for healing, so men must look in faith upon Christ upon the cross (cf Sir 16^{5-7}).

J. T.—J. Ma.

SERUG.—Son of Reu, Gn 11^{20-23}, 1 Ch 1^{26}, Lk 3^{35} (AV Saruch).

SERVANT.—See next article and SLAVE.

SERVANT OF THE LORD.—In this phrase, as is usual in EV of the OT, 'LORD' is substituted for 'Yahweh,' the proper name of the God of Israel, which stands in the Hebrew text.

1. Originally the term 'Servant' (Heb. *'ebhedh*) was simply correlative to such words as 'lord,' 'master,' which the Hebrews, like other Semites, applied to their God. In the first instance 'the servant of Yahweh' meant one who acknowledged, *i.e.* worshipped, Yahweh as his God. It could stand in antithesis to a phrase in which the name of another god takes the place of Yahweh. Thus, in 2 K 10^{23} a distinction is made between 'the servants (*'abh'dhê*) of Yahweh' and 'the worshippers (*'ôbh'dhê*) of Baal.' But there is little doubt that the original expression was 'the servants (*'abh'dhê*) of Baal'; so some MSS and LXX. The Massoretes made a conventional distinction between 'servants' of Yahweh and 'worshippers' of Baal, on the principle that only Yahweh could have 'servants.' Originally, of course, 'servant' and 'worshipper' in such expressions meant much the same.

2. Any Israelite might be called a servant of Yahweh and this is reflected in the name Obadiah, originally (as in LXX) Abdiyah. (There are no fewer than thirteen Obadiahs in the OT.) Similar names are found outside Israel, *e.g.* Ebed-melech='servant of (the god) Melek' (Jer 38^{7}), and Abd-Melkart, Abd-Eshmun, Abd-Manat, typical Phoenician and Nabataean names, servants of Melkart, Eshmun, and Manat respectively.

3. Much as modern terms like 'Christian' or 'believer' may differ greatly in the fulness of their meaning, so 'the servant of Yahweh' might imply a higher degree, or more special form, of service than is necessarily implied in the proper name Obadiah, or in the distinction between 'servants of Yahweh' and 'servants of Baal.' Such fuller significance is apparent when prophets (Am 3^{7}, 2 K 9^{7}, Jer 7^{25} and often) or priests and Levites (Ps 134^{1}) are called 'the servants of Yahweh'; so also when particular individuals are so described. Among individuals called 'the servant of Yahweh' (or 'my servant' when Yahweh Himself speaks) are Abraham (Gn 26^{24}), Moses (Ex 14^{31} and nearly forty times), Joshua (Jos 24^{29}), Caleb (Nu 14^{24}), Job (1^{8}), David (2 S 3^{18} and about thirty times), Hezekiah (2 Ch 32^{16}), and Zerubbabel (Hag 2^{23} and Zec 3^{8} 6^{12}, where 'the Branch,' a messianic title, refers to Zerubbabel).

4. In Is 40–55 there are passages in which the nation Israel is called 'my/his (*i.e.* Yahweh's) servant.' They are 41^{8f} $44^{1f, 21}$ 45^{4} 48^{20}. Israel is also, in all probability, 'my servant' in 42^{19} 43^{10}. This calling of Israel 'my servant' is unusual and deserves more attention than it has generally received. It appears that Deutero-Isaiah was the first, as he is also almost the last, to equate 'the servant of Yahweh' with Israel. Of the two passages outside Is 40–55 which identify the servant with Israel, Ps 136^{22} is late, and Jer 30^{10} (not in LXX)=46^{27f} cannot with any confidence be assigned to Jeremiah. (In Ezk 28^{25} 37^{25} 'my servant Jacob' is the patriarch of the past, not the nation of the present.) How Deutero-Isaiah came to equate the servant with Israel can only be decided from the contexts in which the equation occurs. In them the leading motif is that Yahweh 'chose' Israel. This brings the concept into close relation with the doctrine of the Divine 'election' of Israel, so prominent in Deuteronomy. The reason for the Divine choice is probably that Jacob-Israel is 'the offspring of Abraham, my friend' (41^{8}, cf 51^{2}).

5. Although the particular character of 'the servant of Yahweh' in which Israel is personified is almost confined to Deutero-Isaiah, similar personifications are common enough in OT, and are sometimes so remote from our habits of thought and expression that EV have sacrificed the figure for the sake of intelligibility, as, *e.g.* in Jos 9^{7}, which is literally 'And the man of Israel said to the Hivite, "Perhaps thou art dwelling in my midst; how then can I make a covenant with thee?"' Other examples of what has come to be called 'corporate personality' are Hos 11^{1}, 'When Israel was a child, I loved him, and out of Egypt I called my son,' and Ps 129^{1ff} 'Sorely have they afflicted me (Israel) from my youth, yet they have not prevailed against me. The ploughers ploughed upon my back; they made long their furrows' (cf Is 50^{6}).

6. Within Is 40–55 there are four passages, generally

called 'The Servant Songs,' which describe a servant of Yahweh, his call and mission, sufferings, death and resurrection, in much fuller detail than do the texts enumerated in **4** above. They are 42^{1-4} (9) 49^{1-6} (13) 50^{4-9} (11) 52^{13}–53^{12}. (The figures in brackets indicate the outside limits of the 'Songs'; the majority of scholars limit them to the unbracketed figures.) In them the Servant is anonymous, except that in 49^{3} he is called Israel. Until the end of the 18th cent. the almost unanimous Christian view was that these 'Suffering Servant' passages were predictions of the sufferings, death, and resurrection of Christ. Jewish scholars meantime held that the Servant was the Jewish people, as elsewhere in Is 40–55. Since the end of the 18th cent., when the view gained currency that Is 40–55 was the work of 'Deutero-Isaiah,' an anonymous prophet who lived during the Babylonian exile, many Christian scholars have maintained that the Servant everywhere in Deutero-Isaiah is Israel.

7. It is only since the end of the 19th cent. that the designation 'The Servant Songs' has been current. Their authorship has been much discussed, some maintaining that they are, others that they are not, from Deutero-Isaiah. Those who think they are not, generally date them about a century later than he. To judge from their style and vocabulary, the argument that they are *not* from Deutero-Isaiah is difficult to sustain, certainly as regards the first three, while the fourth is more like the work of Deutero-Isaiah than it is to the work of any other OT writer. On the whole, the view that Is 40–55, including the Songs, is substantially a unity, has steadily gained ground. At the same time, the differences between the Israel of the Songs—if the Servant in them is Israel—and the Israel of the rest of the prophecy is marked. Put summarily, outside the Songs Israel has suffered, deservedly, for his own sins; the Servant of the Songs suffers, undeservedly, for the sins of others. His is a character nobler than that of any individual figure in the OT, let alone of Israel.

8. It is therefore not surprising that many Christian scholars have abandoned the view that the Servant of the Songs is Israel. The many theories of who the Servant was, or whom the author took as his 'model,' may be briefly summarized. (*a*) Some who maintain a collective interpretation go so far as to admit that the Servant is not the deaf and blind (42^{19}) Israel of the Exile, but a pious 'kernel' of the nation, who constituted a kind of 'ideal' as distinct from the actual Israel. The most attractive form of this view is that based on the concept of corporate personality (see **5** above). In ancient Israel, as in the ancient world generally, it is said, thought could pass quickly from community to individual and back again, so that 'Israel' (49^{3}) could be said to have a mission to 'Israel' (49^{5f}). (*b*) Among historical individuals who have been suggested as models for the Servant are Isaiah, Hezekiah, Uzziah, Jeremiah, Zerubbabel, Jehoiachin, Moses, and even Cyrus. Variants of the theory are (i) that the Servant was an anonymous contemporary of Deutero-Isaiah, or an otherwise unknown teacher who lived about a century later than he; (ii) that he was Deutero-Isaiah himself. This view presupposes either that the prophet wrote about his own death, or that the last Song was written by one of his disciples. None of these historical individual theories has any strong following. (*c*) It has been suggested that the Servant is the future Messiah depicted in the category of the pre-exilic Davidic kings, who, it is conjectured, annually 'suffered' certain 'penances' in the New Year Festival ritual. This is sometimes coupled with the view that the king embodied in his person some of the functions of the dying and rising nature god Tammuz (see TAMMUZ), and is generally supported with reference to the words 'He shot up like a young plant' (Is 53^{2}). But precisely similar language is used of Achilles by his mother, the sea-nymph Thetis (*Iliad.* xviii, line 437), and Achilles cannot have had any association with Tammuz. The complexity of the problem and the difficulties encountered in sustaining any one theory to the exclusion of others, has resulted in attempts to combine two or even more views in synthesis, as that the Servant is at once collective and individual, or historical and ideal.

9. To suppose that the prophet intended *in the Songs* to describe more than one figure—as that the Servant is at once Israel, *and* the Messiah, *and* himself—can only result in confusion, though it may well be that the Servant is a composite figure in the sense that more than one individual, say Moses and Jeremiah, or type, say king and prophet, has contributed to the (ideal) portrait. That Deutero-Isaiah thought of Israel as the Servant of Yahweh is undisputed (see **4** above); but he may well have envisaged another Servant in the Songs, without laying himself open to the charge of muddled thinking. There is insufficient textual evidence to delete 'Israel' in 49^{3}, yet since this 'Israel' is distinguished from Israel (vv.^{5f}), he cannot be Israel *simpliciter*. And notwithstanding corporate personality, the Servant in 52^{13}–53^{12} leaves the almost overwhelming impression that an individual is in mind. The most likely solution of a very difficult problem is that the prophet started with the equation the Servant=Israel, and came at last to see that the perfect Servant of God is such an one as no nation, not even Israel, can ever be, one who by the sufferings, culminating in death, which are the inevitable lot of the perfect Servant of God in 'this naughtie world,' would reconcile both Israel and the world to God. In this sense the Servant of 52^{13}–53^{12} and the related passages foreshadows the sufferings, death, and resurrection of Christ, as tradition has affirmed, and as Christ Himself appears to have divined. And no matter what view any individual Christian scholar may hold about who the original Servant was, his last word on the subject is almost invariably that the only person in history who has ever completely embodied in Himself the person and mission of the Servant, is Jesus Christ. This is always said in all good faith, not as a concession to traditional orthodoxy or to conventional piety.

G. B. G.—C. R. N.

SESIS, 1 Es 9^{34} (AV, RV).—See SHASHAI.

SESTHEL.—See BEZALEL, **2.**

SET.—'Set at' is *valued at*, as 2 K 12^{4} AV, 'The money that every man is set (RV 'rated,' RSV 'assessed') at.' 'Set at nought' means *treat with contempt*, as Lk 23^{11} AV and RV, 'Herod, with his men of war, set him at nought' (RSV 'treated him with contempt'). 'Set by' is to *value, esteem*, as in 1 S 18^{30}. 'His name was much set by' (RSV 'was highly esteemed'). 'Set to' means to *affix*, as in Jn 3^{33} AV, 'He that hath received his testimony hath set to his seal (RV, RSV 'sets his seal to this') that God is true.'

SETH.—The third son of Adam, Gn 4^{25f} 5^{3ff}, 1 Ch 1^{1} (AV **Sheth**), Lk 3^{38}. In the first of these passages J assigns a characteristic etymology for the name, Eve being made to say, 'God hath set (*shāth*) for me another seed instead of Abel,' for which reason she called him *Shēth* (*i.e.* 'setting' or 'slip'). In Sir 49^{16} Seth is coupled with Shem as 'honoured among men.'

SETHUR.—The Asherite spy, Nu 13^{13}.

SETTLE.—Found in AV and RV in Ezk $43^{14, 17, 20}$ 45^{19} (RVm, RSV 'ledge') as translation of '*azārāh*, which is used of the two ledges between the base and the hearth of the altar.

SEVEN.—See NUMBER, **7.**

SEVENEH.—See SYENE.

SEVENTY.—See NUMBER, **7.**

SHAALABBIN.—See next article.

SHAALBIM ('place of foxes').—A town mentioned with Mount Heres and Aijalon as being occupied by the Amorites (Jg 1^{35}). It was, with Makaz and Beth-shemesh, in the district of one of Solomon's commissariat officers (1 K 4^{9}); and if it be the same place as **Shaalabbin,** it is mentioned with Aijalon and Beth-shemesh in Jos 19^{42}. It is probably identical with **Shaalbon,** the home of one of David's heroes who is called 'the **Shaalbonite**'

(2 S 23^{32}, 1 Ch 11^{33}). It may perhaps be identified with *Selbît*, about 8 miles N. of Beth-shemesh.

SHAALBON, SHAALBONITE.—See SHAALBIM.

SHAALIM, LAND OF.—A district in the hill country of Ephraim, 1 S 9^{4} (AV **Shalim**).

SHAAPH.—**1.** The son of Jahdai, 1 Ch 2^{47}. **2.** A son of Caleb by his concubine Maacah, 1 Ch 2^{49}.

SHAARAIM ('two gates').—**1.** A town of Judah, in the Shephelah, mentioned in Jos 15^{36} (AV **Sharaim**); mentioned in connexion with the pursuit of the Philistines after the death of Goliath, 1 S 17^{52}. The site is unknown. **2.** A town of Simeon, 1 Ch 4^{31}; called **Sharuhen** in Jos 19^{6}; and **Shilhim** in Jos 15^{32}. It is probably modern *Tell el-Fâr'ah*, S. of Gaza.

SHAASHGAZ.—A chamberlain of Ahasuerus, Est 2^{14}.

SHABBETHAI.—A Levite who opposed Ezra in the matter of the foreign marriages, Ezr 10^{15}, 1 Es 9^{14} (AV **Sabbatheus**, RV **Sabbateus**); cf Neh 8^{7} 11^{16}, 1 Es 9^{48} (AV **Sabateas**, RV **Sabateus**).

SHACHIA, 1 Ch 8^{10} (AV, RV).—See SACHIA.

SHADDAI.—See GOD, **4** (d).

SHADRACH.—The name given to **Hananiah**, Dn 1^{7}.

SHAFTS.—See ARMOUR, ARMS, **1** (*d*).

SHAGE, 1 Ch 11^{34} (AV).—See SHAGEE.

SHAGEE.—A Hararite (q.v.) mentioned in 1 Ch 11^{34} (AV **Shage**). See SHAMMAH, **3**.

SHAHARAIM.—A Benjamite, 1 Ch 8^{8}.

SHAHAZIMAH, Jos 19^{22} (AV).—See SHAHAZUMAH.

SHAHAZUMAH.—A town allotted to Issachar, Jos 19^{22} (AV **Shahazimah**). Its location is unknown.

SHALEM.—In Gn 33^{18} AV we read 'Jacob (on his return from Haran) came to Shalem a city of Shechem' (RV 'in peace to the city of Shechem'; RSV 'safely to the city of Shechem'; similarly Luther in his German translation). The word *shālēm* means 'peace,' and the preposition *b* 'in' may have fallen out owing to the final letter of Jacob. Otherwise we must suppose Shalem to be a small town (in the neighbourhood of Shechem), which has been identified with a village called *Salim*.

W. F. B.

SHALIM, 1 S 9^{4} (AV).—See SHAALIM, LAND OF.

SHALISHA.—A region through which Saul travelled with his servant in search of the lost asses, 1 S 9^{4} (RV **Shalishah**). The route as given probably describes a circuitous journey, to the NW., the E., and finally S. through Benjamin. This would place the 'land of **Baal-shalishah**' (q.v.) somewhere on the hills W. of Shiloh. **Baal-shalishah** (2 K 4^{42}) was doubtless a place in the same district.

SHALISHAH, 1 S 9^{4} (RV).—See SHALISHA.

SHALLECHETH.—See JERUSALEM, GATES OF.

SHALLUM, an inhabitant of Jabesh, was nominally king of Israel for one month in the period of anarchy which preceded the extinction of the nation. As he assassinated his predecessor, Zechariah, so in turn he was 'removed' by his successor **Menahem** (2 K 15^{10ff}).

H. P. S.

SHALLUM.—**1.** See preceding article. **2.** See JEROAHAZ, **2**. **3.** The husband (or son, LXX in 2 Kings) of Huldah, 2 K 22^{14}, 2 Ch 34^{22}. **4.** A Judahite, 1 Ch 2^{40f}. **5.** A descendant of Simeon, 1 Ch 4^{25}. **6.** A high priest, 1 Ch 6^{12f}, Ezr 7^{2}, 1 Es 8^{1} (AV **Salum**, RV **Salem**), 2 Es 1^{1} (AV **Sadamias**, RV **Salemas**, Bar 1^{7} (AV, RV **Salom**). **7.** A son of Naphtali, 1 Ch 7^{13}; called **Shillem** in Gn 46^{24}, Nu 26^{49}; gentilic **Shillemites** in Nu 26^{49}. **8.** The eponym of a family of gatekeepers, 1 Ch 9^{17}, Ezr 2^{42}, Neh 7^{45}, 1 Es 5^{28} (AV, RV **Salum**); perhaps the same as **Meshullam** in Neh 12^{25}. **9.** A Korahite gatekeeper, 1 Ch 9$^{17, 19, 31}$; called **Meshelemiah** in 26$^{1f, 9}$ and **Shelemiah** in 26^{14}. It is not at all unlikely that this name should be identified with the preceding. **10.** Father of Jehizkiah, and Ephraimite chief, 2 Ch 28^{12}. **11.** One of the porters who had married a foreign wife, Ezr 10^{24}, 1 Es 9^{25} (AV, RV **Sallumus**). **12.** One of the sons of Bani who had committed the same offence, Ezr 10^{42}; perhaps the same as **Shemaiah** in 1 Es 9^{34} (AV, RV **Samatus**). **13.** The son of Hallohesh, Neh 3^{12}. **14.** The uncle of Jeremiah, Jer 32^{7}. **15.** Father of Maaseiah, Jer 35^{4}. **16.** The son of Col-hozeh, Neh 3^{15} (AV, RV **Shallun**).

SHALLUN, Neh 3^{15} (AV, RV).—See SHALLUM, **16**.

SHALMAI.—A family of Nethinim (q.v.), Neh 7^{48} (RV **Salmai**); called **Shamlai** in Ezr 2^{46} (AV **Shalmai**), 1 Es 5^{30} (AV, RV **Subai**).

SHALMAN.—This name occurs only in the clause 'as Shalman spoiled **Beth-arbel** (q.v.) in the day of battle,' Hos 10^{14}. *Shalman* may be a contraction for *Shalmaneser*, but it is impossible to say which, if any, of the four kings of Assyria bearing that name suits the connexion. It has been suggested that the Moabite king Salmanu (mentioned in Tiglath-pileser's triumphal inscription, II Rawl. 67, line 60) may be the person referred to by the prophet. The Vulgate version seems to think of the slaughter of Zalmunna by Gideon (Jg 8). Some scholars read *Shallum* for *Shalman* (cf 2 K 15$^{10, 15}$).

W. F. B.

SHALMANESER (Assyr. *Šulmān-ašarēd*, *i.e.* 'Shulman is First'), son of Tiglath-pileser III., king of Assyria (727–722 B.C.), known now as Shalmaneser V. He also ruled Babylon, where he was known as Ululai. When Hoshea, king of Israel, with the king of Egypt conspired against Assyria and refused tribute (2 K 17$^{3-4}$), Shalmaneser marched to Palestine and brought Hoshea into subjection. He began the siege of Samaria, which later fell to Sargon II. On the occasion of a revolution instigated by the priests of Ashur and Harran, Shalmaneser was murdered and the throne was seized by the usurper Sargon II.

J. B. P.

SHAMA.—One of David's heroes, 1 Ch 11^{44}.

SHAMBLES.—See ARTS AND CRAFTS, **7**, FOOD, **11**, MARKET.

SHAME.—**1.** In the first Biblical reference to this emotion (Gn 2^{25}; cf 3^{7}) 'shame' appears as the 'correlative of sin and guilt'; it is, within a man's own inner experience, 'the overpowering feeling that inward harmony and satisfaction with oneself are disturbed' (Delitzsch, *Com., in loco*); and it means disgrace in the social sense of the loss of the esteem of one's fellow men, and in the religious sense of the loss of the favour and fellowship of God. From the OT point of view the crowning shame is idolatry: 'They say to a tree, you are my father' (Jer 2^{26}; cf Is 42^{17} 44^{11}). The all-inclusive promise to those who trust in God is 'none that wait upon thee shall be ashamed' (Ps 25^{3} RV; cf 119$^{6, 80}$, Is 45^{16f} 54^{4f}, Jer 17^{13}, Jl 2^{26f}, Ro 5^{5} 9^{33} 10^{11}). The absence of shame is always regarded as an aggravation of sinful conduct: Job (19^{3}) reproaches his friends because they are 'not ashamed' of dealing hardly with him; the climax of Jeremiah's complaint (6^{15}) against those who had 'committed abomination' is that 'they were not at all ashamed, neither could they blush' (cf 8^{12}, Zeph 3$^{5, 11}$). The culmination of shamelessness is seen in those 'who glory in their shame' (Ph 3^{19}); but in this passage, as elsewhere (Is 50^{6}; cf Pr 10^{5} 25^{8}), 'shame' is, by a natural transference of ideas, applied not to the inward feeling, but to its outward cause. The degradation of those 'whose god is their belly' is seen in their boasting of conduct which ought to have made them ashamed of their perversion of gospel liberty into sinful licence. The return of shame is a sign of repentance: 'then you will remember your ways and be ashamed' (Ezk 16^{61}; cf Ezr 9^{6}).

2. The consciousness of shame varies with the conventional standards adopted in any society. In the sense of violation of propriety St. Paul applies the word to men who wear their hair long and to women who wear it short (1 Co 11$^{6, 14}$; cf 6^{5} 14^{35}). Poverty (Pr 13^{18}), leprosy (Nu 12^{14}), widowhood (Is 54^{4}) are viewed as involving 'shame' when these conditions are regarded as tokens of the loss of God's blessing or as penalties

for sin. St. Paul describes God's ideal 'workman' as one 'who has no need to be ashamed' (2 Ti 2[15]).

3. In the NT *sin* is pre-eminently the shameful thing (Ro 6[21], Ph 3[19], Eph 5[12], Jd 13, 1 Jn 2[28]; cf 3[5]). But the distinguishing characteristic of the early Christian use of the word is occasioned by the fact that Jesus Christ releases men from the guilt and bondage of sin by 'becoming sin' for men (2 Co 5[21]); he 'endured the cross, despising the shame' (He 12[2]). When St. Paul says 'I am not ashamed of the gospel' (Ro 1[16]), he means that the 'offence' of the Cross has become the ground of his glorying (Gal 6[14], 1 Co 1[31], 2 Co 10[17] 12[9f]). 'To suffer as a Christian' and 'not (to) be ashamed' is to 'glorify God' (1 P 4[16]; cf 2 Ti 1[8f, 12, 16]). The Son of Man, in the day of judgment, will be ashamed of all who are now ashamed of Him and of His words (Mk 8[38], Lk 9[26]); but St. John's assurance is that those who abide in Christ 'may have boldness and not be ashamed before him at his coming' (1 Jn 2[28]). Of them who desire a heavenly country 'God is not ashamed . . . to be called their God'; for the city He has prepared, they are being prepared by the sanctifying grace of Him 'who is not ashamed to call them brethren' (He 11[16] 2[11]).

J. G. T.—J. Ma.

SHAMED, 1 Ch 8[12] (AV).—See SHEMER, 3.

SHAMER.—1. 1 Ch 6[46] (AV).—See SHEMER, 2. **2.** 1 Ch 7[34] (AV); see SHEMER, 3.

SHAMGAR smote 600 Philistines with an ox-goad, Jg 5[31]. There is no mention of his judging Israel, or of the duration of his influence. The exploit belongs to the latest redaction of the book; 4[1] continues the story of 3[30]. Nothing is known of any Philistine dominion at so early a period, and in some Greek MSS the verse follows 16[31]. His exploit resembles that of Shammah in 2 S 23[11] (cf 21[15–22]), and may have been attached to him as an expansion of the reference in the song of Deborah, Jg 5[6], There, however, he appears to be a foreign oppressor. and the connexion of the two passages is obscure, the song having to do with Caananite oppression in the N. The name is foreign, Hittite or Assyrian. He is 'the son of **Anath.**' *Anati* occurs in the Tell el-Amarna tablets, and *Anatu* is an Assyrian goddess. From the Râs Shamra texts we have now a considerable knowledge of her place in Caananite mythology. Her name appears in the place-names Beth-anath, Beth-anoth, and Anathoth (q.v.).

C. W. E.—H. H. R.

SHAMHUTH.—One of David's officers, 1 Ch 27[8]; called **Shammah** in 2 S 23[25]. See SHAMMAH, **4.**

SHAMIR.—1. A Kohathite, 1 Ch 24[24]. **2.** A town in the hill-country of Judah, Jos 15[48]. It is perhaps *Kh. el-Bîreh*, near *Kh. Sumara*, which preserves the ancient name. **3.** The home and burial-place of Tola, Jg 10[1f]. It was possibly later the site of Samaria.

SHAMLAI.—See SHALMAI.

SHAMMA.—An Asherite, 1 Ch 7[37].

SHAMMAH.—1. Son of Reuel, son of Esau, a tribal chief, Gn 36[13], 1 Ch 1[37]. **2.** Third son of Jesse, present when Samuel sought a successor to Saul, 1 S 16[9]; with Saul on the battlefield when David visited the camp, 17[13]; called **Shimeah,** father of Jonadab, in 2 S 13[3], **Shimea** in 1 Ch 2[13] (AV **Shimma**), and **Shimei,** father of Jonathan who slew the giant, in 2 S 21[21]. In 1 Ch 20[7] Jonathan is called son of Shimea. **3.** Son of Agee, a Hararite (q.v.), one of the three mighty men of David, 2 S 23[11]. Alone he held the field against the Philistines. The parallel passage, 1 Ch 11[12f], attributes the feat to Eleazar. In 1 Ch 11[34] 'son of **Shagee**' should probably read 'son of **Shammah**' (cf 2 S 23[32f], where the right reading appears to be 'Jonathan the son of Shammah'). In 2 S 23[11] Lucian reads 'Ela' for 'Agee,' and if this is right, perhaps **Shimei** the son of Ela (1 K 4[18]) is the same as Shammah. **4.** A Harodite (q.v.), one of David's heroes, 2 S 23[25]; called **Shammoth** in 1 Ch 11[27] and **Shamhuth** in 1 Ch 27[8]. He is probably the same as **3.**

J. H. St.

SHAMMAI.—1. A Jerahmeelite, 1 Ch 2[28, 32]. **2.** The 'son' of Rekem and 'father' of Maon, 1 Ch 2[44f]. **3.** A Judahite, 1 Ch 4[17].

SHAMMOTH.—One of David's heroes, 1 Ch 11[27]; called **Shammah** in 2 S 23[25]. See SHAMMAH, **4.**

SHAMMUA.—1. The Reubenite spy, Nu 13[4]. **2.** One of David's sons, 2 S 5[14] (AV **Shammuah**), 1 Ch 14[4]; called **Shimea** in 1 Ch 3[5]. **3.** A Levite, Neh 11[17]; called **Shemaiah** in 1 Ch 9[16]. **4.** The head of a priestly family, Neh 12[18].

SHAMMUAH, 2 S 5[14] (AV).—See SHAMMUA, **2.**

SHAMSHERAI.—A Benjamite, 1 Ch 8[26].

SHAPHAM.—A Gadite, 1 Ch 5[12].

SHAPHAN ('rock-badger').—**1.** The secretary of Josiah in 621 B.C., who laid before the king the law-book discovered by Hilkiah (q.v.) in the Temple, 2 K 22[3ff], 2 Ch 34[8ff]. Shaphan appears to have been the chief lay-leader in the execution of Josiah's reforms. His family for two following generations played a worthy part as servants of Yahweh, and friends of the prophet Jeremiah; the Ahikam of 2 K 22[12–14], 2 Ch 34[20–22] and Jer 26[24], the Gemariah of Jer 36[12, 25], and Elasah of Jer 29[3], were Shaphan's sons; the Micaiah of Jer 36[11f], and Gedaliah (q.v.), whom the Chaldaeans made governor of Judaea after the Captivity of 586 B.C., his grandsons. **2.** The 'Jaazaniah, son of Shaphan,' denounced in Ezk 8[11] as ringleader in idolatry, was possibly, but not certainly, a son of the same Shaphan.

G. G. F.

SHAPHAT.—1. The Simeonite spy, Nu 13[5]. **2.** The father of Elisha, 1 K 19[16, 19], 2 K 3[11] 6[31]. **3.** A name in the royal genealogy of Judah, 1 Ch 3[22]. **4.** A Gadite, 1 Ch 5[12]. **5.** One of David's herdsmen, 1 Ch 27[29]. **6.** A family which returned with Zerubbabel, 1 Es 5[34] (AV **Sabat,** RV **Saphat**); omitted in the parallel list in Ezra and Nehemiah.

SHAPHER, Nu 33[23f] (AV).—See SHEPHER.

SHAPHIR.—A city, probably on the Philistine plain, Mic 1[11] (AV **Saphir**). It is probably modern *Kh. el-Kôm*, W. of Hebron.

SHARAI.—One of those who had married a foreign wife, Ezr 10[40]; omitted in the parallel list in 1 Es 9[34].

SHARAIM, Jos 15[36] (AV).—See SHAARAIM.

SHARAR.—A Hararite (q.v.) mentioned in 2 S 23[33]; called **Sacher** (q.v.) in 1 Ch 11[35].

SHAREZER corresponds to Assyrian *Šar-uṣur*, which as a personal name is incomplete. **1.** In 2 K 19[37] = Is 37[38] Sharezer is a son of Sennacherib, who with **Adrammelech** (q.v.) murdered his father. The Assyrian records speak of only one son as the murderer of Sennacherib and do not name him. **2.** Sharezer appears in Zec 7[2] (AV **Sherezer**), but there is a possibility that the full name here is Bethel-Sharezer, as in certain Non-Babylonian documents.

J. B. P.

SHARON.—1. *hash-shārôn*, literally 'the plain,' 1 Ch 27[29], Ca 2[1], Is 33[9] 35[2] 65[10]; Greek *ho Sarōn*, whence AV **Saron,** Ac 9[35]. This is the great Maritime Plain extending from Jaffa, or a little S. of it, to Mount Carmel in the N. Though called a plain, it is of an undulating character, and was in parts, particularly towards the N., a forest of oaks (Is 35[2]). Although but poorly cultivated, it has a great depth of rich soil and is capable of much development; it yields annually a magnificent crop of beautiful wild flowers. It has always been a pasturage of flocks (1 Ch 27[29], Is 65[10]). Around Ramleh and Ludd are forests of olives, and the orange gardens of Jaffa are too well known to need more than a passing reference; wherever the hand of man has been diligent, there the soil has bounteously responded. Over a great part of the plain, especially near the sea, water may be tapped at no great depth. Its rivers are the marshy *Nahr ez-Zerqā* or Crocodile River, just below Carmel, *Nahr el-Mefjir*, *Nahr Iskanderûneh*, and *Nahr el-ʿAujā*, the last mentioned close to Jaffa. The chief town of Sharon was in ancient days Dor (Jos 11[2]

12^{23}, 1 K 4^{11}), in NT times Caesarea, and in later Crusading times (1218–1291) the fortified port of Athlît. In Jos 12^{18} **Lasharon** is mentioned as one of the royal cities of Canaan; as 'the king of' is omitted in the original, the passage may read 'king of Aphek in the Sharon.' For 'rose of Sharon' see ROSE.

2. A second Sharon (*Saronas*) is mentioned by Eusebius and Jerome as between Mount Tabor and Tiberias, and this is to-day represented by the village of *Sārôna* in the *Arḍ el-Ḥamma* NE. of Tabor. This may be the place mentioned in Jos 12^{18} (see above).

3. The suburbs (RSV 'pasture lands') of Sharon (1 Ch 5^{16}) are mentioned as among the possessions of Gad along with Gilead and Bashan. E. W. G. M.

SHARUHEN.—See SHAARAIM, **2.**

SHASHAI.—One of the sons of Bani who had married a foreign wife, Ezr 10^{40}, 1 Es 9^{34} (AV, RV **Sesis**).

SHASHAK.—A Benjamite family, 1 Ch $8^{14, 25}$.

SHAUL.—1. A king of Edom, Gn 36^{37f} (AV **Saul**), 1 Ch 1^{48f}. **2.** A son of Simeon, Gn 46^{10}, Ex 6^{15}, Nu 26^{13}, 1 Ch 4^{24}. The clan of which he is the eponym was of mixed Israelite and Canaanite descent, hence Shaul is called in Gn 46^{10} and Ex 6^{15} 'the son of the Canaanitess.' In Nu 26^{12} the patronymic **Shaulites** occurs. **3.** An ancestor of Samuel, 1 Ch 6^{24}; called **Joel** in v.^{36}.

SHAVEH, VALLEY OF.—A broad valley (*'ēmeḳ*), known also as **the king's valley** (Gn 14^{17}), which was near Salem. Here Absalom set up a pillar or monument, 2 S 18^{18}. Shaveh was possibly the broad open head of the valley of Hinnom which, lower down, contracts to a ravine.

SHAVEH-KIRIATHAIM ('the plain of Kiriathaim'). —The place where the Emim were smitten by the allied kings from the E. Gn 14^{5} (AV **Shaveh-Kirjathaim**). It probably derived its name from **Kiriathaim, 1.**

SHAVSHA occurs in the list of David's officers in 1 Ch 18^{16} as secretary, an office made necessary by the growth of the court and relations with other states. His name, and the fact of his father's not being mentioned, make it probable that he was a foreigner chosen to deal with foreign correspondence. His name was evidently unfamiliar; in the list of 2 S 20^{25} it appears as **Sheva**; in that of 8^{15-18} (otherwise identical with Chronicles) **Seraiah** has been substituted; LXX varies greatly in all passages. It is generally held that *Shavsha* is correct. Apparently in Solomon's time he was succeeded by his sons (1 K 4^{3} **Shisha** being probably only another variation of the name). It has been suggested that the name is the equivalent of *Shamsha*, the Sun-god. C. W. E.

SHAWL.—See WIMPLE.

SHEAL.—One of those who had married a foreign wife, Ezr 10^{29}, 1 Es 9^{30} (AV **Jasael**, RV **Jasaelus**).

SHEALTIEL.—1. The father of Zerubbabel, Ezr 3^{28} 5^{2}, Neh 12^{1}, Hag 1^{1-12} etc., 1 Es $5^{5, 48}$ etc. (AV, RV **Salathiel**), Mt 1^{12}, Lk 3^{37} (AV **Salathiel**). According to 1 Ch 3^{17}, Shealtiel was the eldest son of king Jeconiah. In v.^{19} the MT makes **Pedaiah** (a brother of Shealtiel) the father of Zerubbabel. **2.** Another name for Ezra, 2 Es 3^{1} (AV, RV **Salathiel**).

SHEARIAH.—A descendant of Saul, 1 Ch 8^{38} 9^{44}.

SHEARING-HOUSE, THE.—See BETH-EKED.

SHEAR-JASHUB ('a remnant shall return').—A symbolical name given to a son of Isaiah to signify the return of the remnant to God after the punishment at the hands of the Assyrians, Is 7^{3}; cf 8^{18} 10^{20f} and 7^{14} 8^{1-4}.

SHEATH.—See ARMOUR, ARMS, **1** (*c*).

SHEBA.—Spelt differently from the geographical name. **1.** A rebel against David's return to power (2 S 20^{1ff}). Exponent of N. Israelite secession. His revolt was nipped by speedy action led by Joab and Abishai. He took refuge in Abel-beth-maacah (q.v.). The inhabitants escaped punishment by throwing his head over the wall. **2.** A Gadite (1 Ch 5^{13}). **3.** A supposed place in Jos 19^{2}, but an error for Shema (15^{26}). See SHEMA, **4.** J. T.—E. G. K.

SHEBA.—The ancient name for what is now the heart of Saudi-Arabia. (Not to be confused with **Seba** q.v.) According to the ancients four peoples inhabited S. Arabia: the **Minaeans** (q.v.), the **Sabaeans**, with capital at Mariaba (*Marib* near *Ṣan'ā*) the **Qatabanians** with capital Tamna, and the **Chathramothites** (Heb. Hazarmaveth, q.v.), or people of *Ḥadramaut*, with capital Shabata (see Strabo, XVI. iv. 2). The Sabaeans or people of Sheba were the most important of these in Strabo's time. They controlled the S. Arabian trade in frankincense, myrrh, cinnamon and other much desired articles, and being protected by remoteness and intervening deserts from rapacious powers, waxed rich thereby.

In OT Sheba is considered a descendant of Shem in younger materials of Yahwistic stratum (Gn 10^{28}) but of Ham in P (Gn 10^{7}; cf 1 Ch 1^{9}). They are considered sons of Keturah in Gn 25^{3}. The visit of the Queen of Sheba (see next article) to Solomon has glamourized the country's name. Aside from this the allusions to Sheba are all relatively late. Import of frankincense and cinnamon for the Jerusalem cult is mentioned by Jeremiah (6^{20}). The Sabaeans traded with Tyre, bringing spices, precious stones and gold (Ezk 27^{22}). Sheba is mentioned as a remote point in Ezk 38^{13}. Along with the Nabataeans they carried raids into Syria until the Roman conquest of the latter region (Strabo, XVI. iv. 21), an item illustrating Job 1^{15}. Their caravan trade is mentioned in Job 6^{19}; their slave-trade in Jl 4^{8}. They are among the Arabian peoples that will bring gold and frankincense to Jerusalem in the Messianic times (Is 60^{6}), and their kings will be tribute-bearers (Ps 72^{10}).

The Assyrian inscriptions provide what is probably the oldest testimony to Sheba's existence. Tiglath-pileser III. (745–727 B.C.) records receiving tribute from It'amara king of the land of the Sabaeans. Sargon (721–705 B.C.) lists a king of that name as tributary. Under Sennacherib (704–681 B.C.) a *Karibīlu* of Sheba sent his present when the foundation of a *Bīt-akītu* was laid at Asshur.

Since the great expedition of Carsten Niebuhr (1761–1764) brought basic information about Arabia to Europe a number of explorers sought to penetrate into Yemen. The hostility and fanaticism of the people made this difficult. There are innumerable inscriptions there, written in characters resembling the Ethiopic (which was derived from the S. Arabian script), and some of these were copied or squeezes made of them. Great numbers of texts were obtained by Halévy (1869) and above all by Eduard Glaser (1882 f); many of the latter's are still unpublished. More recently the explorations of the *American Foundation for the Study of Man* under Wendell Phillips succeeded in doing some excavating at Marib in 1952, but the undertaking had to be abandoned very suddenly.

Yemen is superior to the rest of Arabia in climate and soil. The central district is a highland region with mountains attaining a height of some 8000 ft. above sea level. The air is comparatively cool. Ṣan'ā is on the southernmost of three great plateaux and Marib lies NE. of it between the rich valleys of the W. and Ḥadramaut. Particularly striking at Marib are the remains of a great dam, which burst about A.D. 450. Glaser published important inscriptions referring to the event. Photos of the remains of the dam were published by Ahmed Fakhri in his *An Archaeological Journey to Yemen* (pt. 3, 1951).

It has recently been recognized that the Sabaean kingdom antedates that of the Minaeans (contrary to the beliefs of Glaser and Hommel). There are three palaeographically distinct groups of inscriptions of the **Mukarribs** or priest-kings of the Sabaeans, all of which antedate 450 B.C. One may tentatively date the third group from 525–450 B.C., the second group with at least ten *mukarribs* from 675–525 B.C.; the first group in very archaic characters, with at least 5 *mukarribs* represented, from *c* 800 B.C. to 675 B.C. A radio-carbon date of charcoal,

from a beam found in excavations at *Ḥajar bin-Ḥumeid* in the Western Aden Protectorate, helps to put a monogram on a storage jar in the script of the first group before 700 B.C.

It seems probable that the last king of the first group, *Karib'il Watar son of Dhimri'lay*, is the *Karibilu* who sent presents to Sennacherib, because he built a *kutallum*, which is presumably a loan-word from Assyrian *bit kutalli*, 'arsenal.' Evidently the Sabaean king was impressed by the one that Sennacherib built. The It'amara of Sargon is probably his predecessor, as yet unrepresented by any inscription.

Most of the inscriptions of the *Mukarribs* are from *Ṣirwaḥ*. This seems to have been their residence. However, a new period of Sabaean history began about 525 B.C., contemporaneously with the rise of the Achaemenid empire. Marib now became the capital of the *kings* of Sheba (the *mukarrib* title is no longer used). In the Ptolemaic period sea-traffic between Egypt and India was opened up, and thereby the Sabaean position in the world of trade was damaged. The power over Sheba passed into the hands of the Himyarites, a tribe in the SW. corner of Arabia. The new rulers call themselves 'kings of Sheba and of Raidan' (the latter being their original centre). At this time, *c* 115 B.C., the kingdom of Qataban seems to have ceased. Some 26 Himyarite rulers are known from inscriptions, and the period lasted till about A.D. 300. In the year 26 B.C. a Roman expedition under Aelius Gallus was sent to subject the Sabaeans. He was a friend of the geographer Strabo, who reports in detail on the disastrous expedition (XVI. iv). Around this time, however, the Abyssinians—originally S. Arabians who had emigrated to Africa—established a foothold in S. Arabia, and soon came to have increased power. They seized control about A.D. 300, inaugurating a new period of Sabaean history. The rulers call themselves 'kings of Sheba and of Raidan, of Ḥadramaut and of Yemen.' After the destruction of Jerusalem by Titus in A.D. 70 great numbers of Jews came to S. Arabia. They made common cause with the Himyarites and ousted the Abyssinian rulers. A new Jewish-Sabaean kingdom was established, whose outstanding ruler was Dhu Nuwas. But the Christian Abyssinians of Africa, desiring to get control of the wealth of Sheba and enjoying the aid and support of the Eastern Roman empire, overthrew Dhu Nuwas in A.D. 525. The pagan elements in the country called in the Persians, who overthrew the Christian Dynasty in A.D. 575 and installed a Persian governor in Yemen. Half a century later Islam triumphed completely in Arabia and therewith Sabaean history ended.

The S. Arabian religion is of considerable interest to the student of the OT. The chief gods of Sheba were *Athtar* (male), *Haubas*, *Almakūhu* and *Shams* (female). The religion gives particular importance to the moon—Haubas being the Sabaean appellative for the deity as 'the drier' or regulator of the tides. In Ḥadramaut he is called *Sin*, as in Babylonia. The Minaeans call him *Wadd* 'friend,' the Qatabanians '*Amm* 'paternal uncle.' Very often he is *Ilu* 'the god,' and in personal names like *Ili-kariba* 'my god has blessed,' *Ili-rapa'a* 'my god has healed' the moon-god is meant. '*Ammi-yadi'a* 'my uncle knows,' *Abi-amara* 'my father has commanded,' *Sumuhu-kariba* 'his name has blessed,' provide further examples of appellatives for the moon-god. The last instance reminds of the use of Hebrew *shēm* 'name' as substitute for mention of Yahweh (cf Lv 24^{11-16}) or of the more frequent hypostasized use. The kinship of S. Arabian nomenclature with that of the Amorite First Dynasty of Babylon (cf *Sumu-abum*, *Ammi-ṣaduga*, etc.), as well as with Hebrew names, is noteworthy. Numerous cultic terms of the Hebrew have equivalents in the Sabaean inscriptions.

E. G. K.

SHEBA, QUEEN OF.—A visit of a Queen of Sheba to Solomon is narrated in 1 K 10^{1-13}. The narrative was no doubt drawn from the source mentioned in 1 K 11^{41}. Its popular nature is indicated by the fact that the name of the queen is forgotten and by the idea that she made her journey to ask questions of Wisdom of that wisest of potentates. A historical account would have mentioned her name and the more practical economic or political concerns that govern such visits of royalty. The inscriptions from **Sheba** (q.v.) have not as yet furnished any information going back to the 10th cent. B.C. Early Sabaean history shows the region under the rule of men bearing the title *mukarribs* or priest-kings. Future discoveries may of course vindicate the existence of an earlier stage of history in which queens reigned. Meanwhile, however, one may well ask whether the name Sheba was not used anachronistically here in an extended sense warranted in the story-teller's time, when Sheba's control extended far northward and included the areas in N. Arabia where queens are actually found ruling in the second half of the 8th cent. B.C., and so may already have reigned there in the 10th cent. We hear of *Samsî*, queen of Aribi, of *Zabibî* and of *Ya-ti-'i-e* in the days of Tiglath-pileser, Sargon and Sennacherib. A N. Arabian queen would have had good reason to negotiate with a ruler by-passing the trade-routes with ships sailing from Ezion-geber (1 K 9^{26}). The Koran (Sura 27^{22-45}) gives a variant of the Biblical story, but provides a name for the queen of Sheba, *Bilqīs*, and mentions the Sabaean capital Marib. In his *Lives of the Prophets* Tha'labi gives a further development of the legend. The Abyssinian *Kebra Nagast* seeks to justify the right of a new dynasty that began A.D. 1270 with the claim that it was descended from Menelik, son of Solomon by the queen of Sheba, who is given the name Makeda. The 'fact' was allegedly communicated to the council of Nicaea by the Patriarch Demetrius of Constantinople. E. G. K.

SHEBAH, Gn 26^{33} (AV).—See SHIBAH.

SHEBAM, Nu 32^{3} (AV).—See SEBAM.

SHEBANIAH.—1. A Levitical family, Neh 9^{4f} 10^{10}. **2.** A priest or Levite who sealed the covenant, 10^{4} 12^{14}; see SHECANIAH, end. **3.** Another Levite who sealed the covenant, 10^{12}. **4.** A priest, 1 Ch 15^{24}.

SHEBARIM.—A place mentioned (Jos 7^{5}) in the description of the pursuit of the Israelites by the men of Ai. Its location is unknown.

SHEBAT.—See TIME.

SHEBER.—A son of Caleb, 1 Ch 2^{48}.

SHEBNA (in 2 K $18^{18, 26}$ **Shebnah**: short form of **Shebaniah**; meaning uncertain, possibly connected with 'protection').—An official of Hezekiah, described as the steward, 'Over the house' (cf 1 K 4^{6}), the subject of a denunciation by Isaiah (Is 22^{15-25}). In 2 K $18^{18, 26, 37}$ 19^{2} = Is $36^{3, 11, 22}$ 37^{2} he appears as 'scribe' or 'secretary' whereas **Eliakim** (q.v.) is described as 'Over the house.' This may indicate the degradation of Shebna (Is 22^{19f}) and his replacement by Eliakim. P. R. A.

SHEBNAH.—See SHEBNA.

SHEBUEL.—1. A son of Gershom, 1 Ch 23^{16} 26^{24}; called **Shubael**, which is probably the original form of the name, in 1 Ch 24^{20}. **2.** A son of Heman, 1 Ch 25^{4}; called **Shubael** in v.^{20}.

SHECANIAH (Yahweh has taken up his abode).—**1.** Chief of the tenth course of priests (1 Ch 24^{11}). **2.** A priest in the time of Hezekiah (2 Ch 31^{15}). **3.** A descendant of Zerubbabel (1 Ch 3^{21f}; cf Ezr 8^{3}, 1 Es 8^{29} [AV, RV **Sechenias**]), father of Shemaiah, a builder of the walls with Nehemiah (Neh 3^{29}). **4.** The father-in-law of Tobiah the Ammonite (Neh 6^{18}). **5.** An exile returning with Ezra (Ezr 8^{5}, Es 8^{32} [AV, RV **Sechenias**]). **6.** A contemporary of Ezra, Ezr 10^{2}, 1 Es 8^{92} (AV, RV **Jechonias**). Also a priest of the time of Zerubbabel (Neh 12^{3}), but some manuscripts have **Shebaniah** (cf Neh 10^{4} 12^{14} and also 9^{4f} $10^{11, 13}$). The AV form in all OT passages is **Shechaniah**. P. R. A.

SHECHANIAH.—1. 1 Ch 3^{21f}, Ezr 8^{3} (AV); see SHECANIAH, **3**. **2.** Ezr 8^{5} (AV); see SHECANIAH, **5**. **3.** Ezr 10^{2} (AV); see SHECANIAH, **6**. **4.** Neh 3^{29} (AV);

see SHECANIAH, **3.** **5.** Neh 6[18] (AV); see SHECANIAH, **4.** **6.** Neh 12[3] (AV); see SHECANIAH, end.

SHECHEM.—**1.** The 'son' of Hamor (q.v.), Gn 33[19] 34[2, 4]. **2.** A Manassite clan, the **Shechemites**, Nu 26[31]; cf Jos 17[2], 1 Ch 7[19]. **3.** See next article.

SHECHEM.—An important town of Israelite and pre-Israelite days at the E. end of the pass between Mount Ebal and Mount Gerizim, placed as the neck between the shoulders (cf *shᵉkhem*, 'shoulder'), it was specifically associated with Jacob (Gn 33[18]), whose well (Jn 4[12]) is still shown. It was the scene of the violent reprisals of the tribes Simeon and Levi before the former migrated to the S. and the latter lost political status in Israel (Gn 34). This phase of the Hebrew settlement may correspond to the activities of the *Ḫabiru* which the Amarna Tablets note in the district of Shechem. A further association with the Hebrew patriarchs is the burial of Joseph in the vicinity (Jos 24[32]), this tradition being commemorated by the Moslem shrine to 'the Prophet Yussuf' by *Tell el-Balâṭah*, the ruins of Shechem. The name ('Mound of the Oak') may perpetuate the tradition of the sacred tree under which Jacob buried his teraphim, or household images (Gn 35[4]). Shechem, with its temple of Baal Berith, 'Lord of the Covenant' (Jg 9[4]), and as the scene of Joshua's covenant with Israel (Jos 24), and with its status as a Levitical city of refuge (Jos 20[7]), played an important part in Israelite religion. It is plausibly argued by M. Noth that it was the scene of the regular periodic recitation of the law in solemn assembly and of a renewal of God's covenant with Israel, which is the source of the narrative in Jos 24. No doubt Shechem played a much more prominent rôle in Israel than is immediately apparent, this having been obscured first by the concentration of the cult in Jerusalem under David and Solomon, second because of the predominance of Judahite tradition in the OT, and lastly because of the enmity of orthodox Judaism to the Samaritan sect. Noth's thesis is supported by the fact that on the death of Solomon Rehoboam met all Israel at Shechem, when the disruption of the kingdom was effected (1 K 12[1]). Shechem was also the first capital of N. Israel after the Disruption (1 K 12[25]). Even after the Hebrew occupation Shechem continued to be a stronghold of Canaanite influence and was the scene of the abortive attempt at kingship by Abimelech the son of Gideon by a local Canaanite woman (Jg 9).

Excavations at *Tell el-Balâṭah*, begun before the First World War, and continued at intervals since, have been again resumed under G. E. Wright, who has found traces of settlement from before *c* 3000 until the 2nd cent. B.C. There was a definite recession in the life of the city from about the 9th cent. to the 4th cent., no doubt because of the shifting of the capital to Tirzah in the vicinity of Shechem and then to Samaria, but Jeremiah (41[5]) indicates that after 586 B.C. there was still an orthodox Israelite community at Shechem. It is significant that there was apparently no destruction of Shechem corresponding to the destruction of Hazor, *Tell Beit Mirsim*, *Tell ed-Duweir* (Lachish), and Bethel about the beginning of the Iron Age, a fact which indicates that Israelite elements had effected a symbiosis with the local Canaanites before the final phase of the Israelite occupation, as the Jacob tradition in Genesis suggests. In the Christian era occupation shifted slightly westward, especially with the foundation of *Flavia Neapolis* after A.D. 70, the name of which survives in *Nâblus*, a vigorous centre of political and religious life in Jordan. Here there is a small native Christian community and a few hundred survivors of the Samaritan sect with a modest new synagogue on the slopes of Mount Gerizim, on the summit of which they still hold their annual Passover, with slaughter of lambs, which has fallen into desuetude in orthodox Judaism. J. Gr.

SHEDEUR.—A Reubenite, father of Elizur, Nu 1[5] 2[10] 7[30, 35] 10[18].

SHEEP.—The generic term for 'flocks,' *ṣôn* in Hebrew, *probaton* in Greek, includes both sheep and goats (q.v.), and the word for a single sheep, as for a single goat, in Hebrew is *śeh*. But we have, for sheep, at least five Hebrew words and three Greek, which indicate different ages and sexes—ram, ewe, lamb, young suckling lamb, yearling for sacrifice.

The usual Palestinian sheep is the fat-tailed *ovis laticaudata*, a rather small animal but sturdy, with wavy fleece, a high, curved nose and broad, flopping ears. Its main feature is the tail, and though Herodotus' remark that the tail extends to three cubits or more is overdone, the rumps hanging in the butchers' stalls in Jordanian Jerusalem to-day weigh up to 8 or 10 lbs. That, of course, is the explanation for the broad tail—it is a mass of fat which spreads over the whole rump and down to the caudal extremity and then turns back on it like an appendix. This is the *'alyāh*, which is designated (cf Ex 29[22], Lv 3[9] 7[3] 8[25] 9[19]; and probably 1 S 9[24]) as the choice bit for sacrifice to the deity or hospitality for the guest. The rest of the carcase looks very meagre.

The shepherd was ever a heroic figure, and, though a nomad, he was cultured and very well versed in country lore. He was responsible for finding pasturage, and wandered, with his family, over the barren country-side of Palestine—sometimes for many miles. He lived in a tent made of sheets woven from goat-hair. Gn 31[39f] gives a picture of the hazards of shepherding, and other passages (*e.g.* Job 1[16]), and the frequent mention of marauding bands and wild beasts fill out the picture. The shepherd's rod and staff were for defence as well as for counting the sheep when they were folded, and the sling, too, was expertly used. The ability to throw a well-aimed stone was useful to head off a straying sheep, but on one occasion in 1947 a boy missed his aim, and the stone fell into a cave and resulted in the discovery of the Dead Sea Scrolls! E. W. G. M.—B. J. R.

SHEEP GATE.—See JERUSALEM, GATES OF.

SHEEPCOTE.—Found in AV and RV in 2 S 7[8], 1 Ch 17[7] (RSV 'pasture') and in 1 S 24[3] (RSV 'sheepfold').

SHEERAH.—A daughter of Ephraim, 1 Ch 7[24] (AV **Sherah**). She built the two Beth-horons and **Uzzensheerah** (q.v.).

SHEET.—See DRESS, **4** (*d*).

SHEHARIAH.—A Benjamite, 1 Ch 8[26].

SHEKEL.—See MONEY, WEIGHTS AND MEASURES, III.

SHEKINAH (from Heb. *shākhan* 'to dwell' meaning 'dwelling' [abstract] or 'that which dwells').—The word is not found in OT, but occurs often in other Jewish literature, always of God. The OT, particularly in certain of its writings, uses 'anthropomorphisms' freely, *e.g.* it speaks of God dwelling in a place or being seen. Later thought objected to this, as materializing the Divine nature; hence in the Targums (Aram. paraphrases of the OT used, though not in their present form, by the 1st cent. A.D.) various devices were adopted to prevent popular misunderstandings. Paraphrases were used for the Divine name, 'the Word' (mêmrā'), 'Spirit,' or 'Wisdom' being substituted. One of the most important of these was 'the Shekinah.' 'God dwells' usually became 'the Shekinah rests'; 'the Temple of God' became 'the house of S.' (note the Tabernacle was the *mishkān*, from the same root). Gn 28[16] becomes 'the glory of the S. of Y" is in this place'; Is 6[5] 'my eyes have seen the glory of the S. of the King of the world.' God's hiding His face is the removal of the S. Now the presence of God (especially in P and related writings) was often manifested by a fiery appearance, or a light in a cloud. It was so in nature (Ps 18[11f]), on Sinai (Ex 24[16]), in the wilderness and in the Tabernacle (16[7] 29[43] 40[34], Nu 14[10]), in the Temple (1 K 8[11]); cf Ezk 1[28] etc. This glory was not God, but an effluence from Him, or from His Shekinah. For the S. was not 'the glory,' as is usually imagined, but the source and centre of it. It is a stage nearer to God Himself and, though often used in connexion with the physical manifestation, represents an invisible and universal presence. *E.g.* it is the source

of inspiration. Eli failed to recognize Hannah's condition because it had left him. It was present where three were gathered to administer justice. According to some it was inseparable from Israel, still hovering over the W. wall of the Temple. But it was commonly taught that it had always been absent from the second Temple, as had been 'the glory' (but cf Ezk 11^{23} 43^{2}); or again, that on the successive sins of Adam and his descendants it had been withdrawn from earth to the first heaven, and finally to the seventh. The conception, in fact, varied. It was disputed whether it was an entity distinct from God, or only the essence of God as manifested. Though at first regarded as impersonal and passive, as distinct from the Memra, the agent of creation, in the Talmud it becomes active and takes the place of the latter. The tendency to personification is significant. Insisting one-sidedly on the transcendence or aloofness of God, the Jew had to bring Him to earth again by such mediatorial agencies, which were semi-personal and Divine, but not God, and by the development of an elaborate angelology. In the NT the word **'glory'** seems often to refer to the Shekinah (cf Eth. Enoch 'Lord of glory' and 'the Great Glory,' as titles of God). Ro 9^{4} speaks of 'the glory' as a Jewish privilege; He 9^{5} of 'the cherubim of glory.' It was believed that the Shekinah would return with the Messiah; 'the glory of the Lord and the cloud will appear' (2 Mac 2^{8}). (*a*) It is connected with Christ (Lk 2^{9}, Mt 17^{5}; cf 2 P 1^{17} RVm and RSV, where the Shekinah is personified). In 1 P 4^{14} 'the spirit of glory' rests upon Christ, as upon the Tabernacle; in He 1^{3} He is 'the effulgence (RV; AV 'express image') of the glory' (RSV 'He reflects the glory'); in Ja 2^{1} He is apparently called 'the Shekinah.' Of special significance is Jn 1^{14}, which combines the expressions 'glory' and 'tabernacle' (Gr. *skēnoun*, probably intentionally chosen to represent 'Shekinah,' as in Rev 21^{3}). It connects the personal presence of God in Christ with the earlier presence in the Tabernacle; what was formerly symbol is now manifest 'in flesh.' The vagueness of the Jewish conception gives place to the definite presence of the personal Christ. Cf with Mt 18^{20} and 1 Co 11^{11}, sayings such as 'when two sit together and are occupied with the words of the Law, the Shekinah is with them,' or 'the man is not without the woman, nor the woman without the man, nor both of them without the Shekinah.' (*b*) It is connected with the Christian. The first of the six things lost by Adam was 'the glory,' *i.e.* the reflection upon him of the Divine glory, or perfection. Of this we fall short (Ro 3^{23}), but it is in process of being recovered by the Christian (5^{2} $8^{18, 30}$, 2 Co 3^{18} 4^{6}; cf 2 Es 7^{97f}).

C. W. E.

SHELAH.—1. The youngest son of Judah by Shua, Gn $38^{5, 11, 14, 26}$ 46^{12}, Nu 26^{20}, 1 Ch 2^{3} 4^{21}. The gentilic **Shelanites** occurs in Nu 26^{20}. Perhaps 'the Shelanite' should be read also for 'the **Shilonite**' in Neh 11^{5}, 1 Ch 9^{5}. **2.** The son of Arpachshad, Gn 10^{24} 11^{13-15} (AV **Salah**), 1 Ch $1^{18, 24}$, Lk 3^{35} (AV **Sala**). **3.** Neh 3^{15}; see SILOAM.

SHELEMIAH.—1. 2. Two of the sons of Bani, who married a 'strange' wife, Ezr $10^{39, 41}$, 1 Es 9^{34} (AV, RV **Selemias**). **3.** Father of Hananiah, Neh 3^{30}. **4.** A priest, Neh 13^{13}. **5.** The father of Jehucal or Jucal, Jer 37^{3} 38^{1}. **6.** The father of Irijah, Jer 37^{13}. **7.** 1 Ch 26^{14}. See MESHELEMIAH. **8.** Ancestor of Jehudi, Jer 36^{14}. **9.** Son of Abdeel, Jer 36^{26}.

SHELEPH.—A son of Joktan, and therefore a tribe in Southern Arabia, Gn 10^{26}, 1 Ch 1^{20}. It has not been identified.

SHELESH.—An Asherite, 1 Ch 7^{35}.

SHELOMI.—Father of an Asherite prince, Nu 34^{27}.

SHELOMITH.—1. The mother of the man who was stoned to death for having blasphemed 'the Name,' Lv 24^{11}. **2.** Daughter of Zerubbabel, 1 Ch 3^{19}. **3.** One of the sons of Izhar, 1 Ch 23^{18}; called **Shelomoth** in 24^{22}. **4.** A son of Rehoboam, 2 Ch 11^{20}. **5.** A family which returned with Ezra, Ezr 8^{10}, 1 Es 8^{36} (AV **Assalimoth**, RV **Salimoth**). **6.** 1 Ch $26^{25f, 28}$ (AV); see SHELOMOTH, **2. 7.** 1 Ch 23^{9} (AV); see SHELOMOTH, **3.**

SHELOMOTH.—1. See SHELOMITH, **3. 2.** A descendant of Moses, 1 Ch $26^{25f, 28}$ (AV **Shelomith**). **3.** A Gershonite, 1 Ch 23^{9} (AV **Shelomith**).

SHELUMIEL.—Prince of the tribe of Simeon, Nu 1^{6} 2^{12} $7^{36, 41}$ 10^{19}. See also SHEMUEL.

SHEM.—One of the three sons of Noah (Gn 5^{32}). The meaning of the word in Hebrew is 'name'; it also has the secondary meaning 'renown,' (cf Gn 6^{4}, *bᵉnê shēm*, 'men of renown'). In the J genealogy of Shem he is the ancestor of Eber the eponymous ancestor of the Hebrews, and ultimately the ancestor of Abraham. For the Yahwist the line of Divine purpose descends through Seth, Shem, and Eber to Abraham. According to the P genealogy the 'sons' of Shem are Elam, Asshur, Arpachshad, Lud, and Aram, representing an ancient Hebrew tradition of the territorial distribution of peoples to the NE. of Palestine. Of these only two, Asshur and Aram, are Semitic-speaking peoples, and Arpachshad and Lud cannot be identified with certainty. The designation Semite is derived from the name Shem.

S. H. He.

SHEMA' (Heb.—*Hear*).—The watchword of Jewish monotheism derived from the opening word of Dt 6^{4}, 'Hear, O Israel: The Lord our God, the Lord is one.' It consists of three sections: Dt 6^{4-9} 11^{13-21}, Nu 15^{37-41}. Together with the Decalogue, it served as the core of Jewish worship at the Temple in pre-Christian times (Mishnah, *Tamid*, v. 1; cf W. F. Albright, 'The Nash Papyrus,' *JBL*, 1937, pp. 145–176), and was carried by itself into the reconstructed morning and evening liturgy of the Synagogue for public and private use (Mishnah *Berakoth*, i. 1–2). Affirming the unity of God, it has served as the Jewish confession of faith (cf Mk 12^{29f}) in the face of polytheism and Persian dualism against which Is 45^{7} protested. Its recitation morning and evening may have been stimulated by the Persian practice to hail the sun at its rising and setting (*Sacred Books of the East, Avesta*, II. p. 351; *Pahlavi Texts*, I. 156 ff). The benedictions, preceding and following its recitation, praised God as Creator, as giver of the Law and as redeemer. See SYNAGOGUE, **2** (*b*).

S. S. C.

SHEMA.—1. A Reubenite, 1 Ch 5^{8}. See SHIMEI, **5. 2.** One of those who put to flight the inhabitants of Gath, 1 Ch 8^{13}; called **Shimei** (see SHIMEI, **14**) in v.^{21}. **3.** One of those who stood at Ezra's right hand, at the reading of the Law, Neh 8^{4}, 1 Es 9^{43} (AV, RV **Sammus**). **4.** A town of Judah, situated in the Negeb, Jos 15^{26}; called **Sheba** (see SHEBA, **4**) in 19^{2}. The site is unknown. It is probably this Shema that appears in 1 Ch 2^{43} as a 'son' of Hebron.

SHEMAAH.—A Benjamite, 1 Ch 12^{3}.

SHEMAIAH ('Y" has heard').—**1.** The prophet who with Ahijah encouraged the revolution of the ten tribes from Jeroboam. In MT he appears after the revolution has begun (1 K 12^{22-24}, 2 Ch 11^{2-4}). In the second LXX account, however, he appears at the beginning, at the assembly in Shechem (1 K 12^{24o}). He is mentioned further in 2 Ch 12^{5-8}, and his history in 12^{15}. **2.** Son of Shecaniah, descendant of Zerubbabel, 1 Ch 3^{22}. **3.** Son of Shecaniah, 'keeper of the East Gate,' and assistant to Nehemiah in repairing the wall, Neh 3^{29}. **4.** A Simeonite, 1 Ch 4^{37}; perhaps **Shimei** of vv.^{26f}. **5.** A Reubenite, 1 Ch 5^{4}. **6.** A Merarite Levite dwelling in Jerusalem, 1 Ch 9^{14}, Neh 11^{15}. **7.** A Levite of the family of Jeduthun, 1 Ch 9^{16}; called **Shammua** (see SHAMMUA, **3**) in Neh 11^{17}. **8.** Head of the Levitical Kohathite clan of Elizaphan in the time of David, 1 Ch $15^{8, 11}$. **9.** The scribe who registered the names of the priestly courses in the time of David, son of Nethanel, 1 Ch 24^{6}. **10.** A Korahite Levite, oldest son of Obed-edom, 1 Ch $26^{4, 6f}$. **11.** A Levite, teacher of the Law in Judah under Jehoshaphat, 2 Ch 17^{8}. **12.** A Levite of the family of Jeduthun, engaged in purifying the Temple under Hezekiah, 2 Ch 29^{14}. **13.** A Levite 'over the freewill offerings of God,' 2 Ch 31^{15}. **14.** A chief of the Levites, 2 Ch 35^{9}, 1 Es 1^{9} (AV, RV **Samaias**). **15.** A chief man under Ezra, Ezr 8^{16}, 1 Es 8^{44} (AV **Mamaias**, RV **Samaias**). **16.** One

of the family of Adonikam, Ezr 8[13], 1 Es 8[39] (AV, RV **Samaias**). **17.** A priest of the family of Harim who married a foreign wife, Ezr 10[21], 1 Es 9[21] (AV **Sameius**, RV **Sameus**). **18.** A layman of the family of Harim who did the same, Ezr 10[31]; perhaps the same as **Sabbaias** in 1 Es 9[32] (AV, RV **Sabbeus**). **19.** A prophet, son of Delaiah, hired by Sanballat and Tobiah to terrify Nehemiah, Neh 6[10–14]. **20.** A priest who sealed the covenant, Neh 10[8] 12[6, 18]. **21.** A man present at the dedication of the wall, Neh 12[34]. **22.** A priest, descendant of Asaph, Neh 12[35]. **23.** A singer who took part in the dedication of the wall, Neh 12[36]. **24.** Another, or perhaps the same, Neh 12[42]. **25.** Father of Uriah the prophet, Jer 26[20]. **26.** A prophet, called 'the Nehelamite' (q.v.), carried into captivity at Babylon with Jehoiachin, actively engaged in opposing Jeremiah, Jer 29[24–32]. Jeremiah predicted the complete cutting off of his family. **27.** Father of Delaiah, who was a prince in the reign of Zedekiah, Jer 36[12]. **28.** 'The great,' kinsman of Tobias, To 5[13] (AV **Samaias**). **29.** One who had married a foreign wife, 1 Es 9[34] (AV, RV **Samatus**); perhaps the same as SHALLUM, **12.** In several cases two of these may be the same individual. The identification has the most probability in reference to **2** and **3**, **8** and **9**, and **12** and **13**. G. R. B.

SHEMARIAH.—**1.** A Benjamite who joined David at Ziklag, 1 Ch 12[5]. **2.** A son of Rehoboam, 2 Ch 11[19]. **3. 4.** Two men who had married foreign wives, Ezr 10[32, 41].

SHEMEBER.—King of Zeboiim, Gn 14[2].

SHEMED.—See SHEMER, **4.**

SHEMER.—**1.** The owner of the hill purchased by Omri, 1 K 16[24]. **2.** A Merarite, 1 Ch 6[46] (AV **Shamer**). **3.** An Asherite, 1 Ch 7[34] (AV **Shamer**); called **Shomer** in v.[32]. **4.** A Benjamite, 1 Ch 8[12] (AV **Shamed**; RV, RSV **Shemed**). The Hebrew MSS show here some confusion between *r* and *d* as the final letter of the name, though the majority have *r*. The ancient versions favour *d*.

SHEMIDA.—A 'son' of Gilead, according to Nu 26[32]; called a 'son' of Manasseh in Jos 17[2]; his descendants are enumerated in 1 Ch 7[19] (AV **Shemidah**). The gentilic name **Shemidaites** occurs in Nu 26[32].

SHEMIDAH, 1 Ch 7[19] (AV).—See SHEMIDA.

SHEMINITH.—See PSALMS, **2.**

SHEMIRAMOTH.—A Levitical family, 1 Ch 15[18, 20] 16[5], 2 Ch 17[8].

SHEMONEH ESREH.—See APOSTASY, SYNAGOGUE, **2.**

SHEMUEL.—**1.** The Simeonite appointed to assist in the dividing of the land, Nu 34[20]. It is not improbable that the MT should be corrected to **Shelumiel** (q.v.). **2.** Grandson of Issachar, 1 Ch 7[2]. **3.** 1 Ch 6[33] (AV); see SAMUEL (so RV, RSV; cf 1 S 1[1] 8[2]).

SHEN ('the tooth' or 'crag').—Named in AV, RV in 1 S 7[12] with Mizpah; but RSV amends the text to read **Jeshanah** (q.v.).

SHENAZ(Z)AR.—See SHESHBAZZAR.

SHEOL.—In OT the abode of the dead, the equivalent of the classical **Hades.** The derivation of the word is uncertain. AV translates it as 'grave,' '**hell,**' or occasionally 'pit'; RSV consistently reads 'Sheol' (in NT 'Hades').

Though the ancient Israelites had no doctrine of a future life, they did not think of death as extinction. Like the Semites generally, they believed that the dead passed into Sheol, where they continued to pursue a conscious, but pale and inactive existence. Sheol was thought of as in the underworld (Nu 16[30ff], Am 9[2]), sometimes as if it were a huge grave where worms destroy the body (Is 14[4ff]; cf v.[11]). All men without distinction go there (Job 3[11ff]). One's loved ones do not return from there, but there one must eventually join them (2 S 12[23]). Hebrews looked upon Sheol with horror as a place without hope or communion with God (Ps 6[5] 88[4f], Is 38[18]). Though popular belief held that the dead could be brought back through necromancy (1 S 28), Israel's normative faith censured such practices (Dt 18[9ff], Is 8[19]).

But inequality in this life made the lack of a doctrine of future awards a theological problem with which men increasingly wrestled. There were those who were confident that Yahweh rules also in Sheol and would vindicate them even there (Ps 139[8] 49[14f] 73[23f], Job 19[25ff]). In a few late passages (Is 26[19], Dn 12[2]) we see the beginnings of the notion of liberation from Sheol through resurrection, in the latter a selective resurrection both of righteous and wicked to bliss and to shame respectively. Belief in resurrection established itself among the Jews, although even in NT times the Sadducees rejected it. In late literature there is considerable speculation about Sheol: *e.g.* in 1 En 22[1–14], where Sheol is divided into compartments—for the righteous, for sinners who have gone unpunished on earth, and for sinners who have suffered somewhat. But Judaism had no consistent doctrine on the subject.

In NT the whole concept is transfigured in the light of the resurrection of Christ. His body did not see corruption in Hades (Ac 2[31]); He has 'the keys of Death and Hades' (Rev 1[18]). Yet the notion of Sheol as the abode of the dead pending the judgment continued. Dives suffers torment in Hades (Lk 16[23]) while Lazarus rests in Abraham's bosom (NT, however, usually expresses punishment by **Gehenna**). Christ preached 'to the spirits in prison,' *i.e.* in Sheol (1 P 3[19]). And in the end Death and Hades will yield their dead to the last judgment and themselves be destroyed (Rev 20[13f]). J. Br.

SHEPHAM.—A place on the eastern boundary of the Promised Land, Nu 34[10f]. The site has not been identified. Perhaps Zabdi, the **Shiphmite** (1 Ch 27[27]) was a native of Shepham.

SHEPHATHIAH, 1 Ch 9[8] (AV).—See SHEPHATIAH, **5.**

SHEPHATIAH ('Y" has judged').—**1.** One of David's sons, 2 S 3[4], 1 Ch 3[3]. **2.** A family which returned with Zerubbabel, Ezr 2[4], Neh 7[9], 1 Es 5[9] (AV, RV **Saphat**); also with Ezra, Ezr 8[8], 1 Es 8[34] (AV, RV **Saphatias**). **3.** A family of the 'sons of Solomon's servants,' Ezr 2[57], Neh 7[59], 1 Es 5[33] (AV, **Sapheth**, RV **Saphuthi**). **4.** A Judahite family, Neh 11[4]. **5.** A Benjamite family, 1 Ch 9[8] (AV **Shephathiah**). Either this or the preceding should perhaps be identified with **2** above. **6.** A contemporary of Jeremiah, Jer 38[1]. **7.** A Benjamite warrior who joined David at Ziklag, 1 Ch 12[5]. **8.** A Simeonite prince, 1 Ch 27[16]. **9.** A son of Jehoshaphat, 2 Ch 21[2].

SHEPHELAH.—See PLAIN (5).

SHEPHER.—A stopping-place on the wanderings, Nu 33[23f] (AV **Shapher**). It is possibly modern *Jebel ʿArâyif en-Nâqah*, S. of Kadesh.

SHEPHERD.—See SHEEP.

SHEPHI (1 Ch 1[40]) or **SHEPHO** (Gn 36[23]).—A Horite chief.

SHEPHUPHAM.—See MUPPIM. The gentilic **Shuphamites** is found in Nu 26[39].

SHEPHUPHAN.—See MUPPIM.

SHERAH, 1 Ch 7[24] (AV).—See SHEERAH.

SHEREBIAH.—One of the Levites who joined Ezra (Ezr 8[18, 24], Neh 8[7] 9[4] 10[12] (Heb. 13) 12[8, 24], 1 Es 8[47] (AV **Asebebia**, RV **Asebebias**) [54] (AV **Esebrias**, RV **Eserebias**) 9[48] (AV, RV **Sarabias**). See MAHLI.

SHERESH.—A Manassite clan, 1 Ch 7[16].

SHEREZER, Zec 7[2] (AV).—See SHAREZER, **2.**

SHERIFF.—In Dn 3[2f] 'sheriffs' is the AV and RV translation of Aramaic *tiphtāyē'* (RSV 'magistrate').

SHESHACH.—A cryptic name of Babel found in the received text of Jer 25[26] 51[41] (AV, RV, RSVm; RSV substitutes 'Babylon'). It is formed by the method called Atbash, that is a substitution of *taw* for *aleph*, *shin* for *beth*, and so on. The word is, however, no part of the original text of Jeremiah, being a conceit of later editors. In both passages it is lacking in LXX. Cf LEB-KAMAI. J. F. McC.

SHESHAI.—A clan resident in Hebron, driven thence by Caleb, Nu 13[22], Jos 15[14], Jg 1[10].

SHESHAN.—A Jerahmeelite, 1 Ch 2[31, 34f].

SHESHBAZZAR.—This name is of Babylonian origin, most probably corresponding to Šin-ab-uṣur 'May Sin (moon-god) protect the father.' The name appears in various forms in LXX, and on the basis of some of these an alternative explanation connects it with the sun-god Šamaš, *i.e.* Šamaš-apla-uṣur. Sheshbazzar is described as 'the prince of Judah' and is said to have received from Cyrus' treasurer the sacred Temple vessels and to have taken them to Jerusalem (Ezr 1[8, 11] = 1 Es 2[12, 15]). These statements are repeated in Ezr 5[14] in the letter sent to Darius enquiring into the authority for rebuilding the Temple. Here Sheshbazzar is said to have been made governor (*peḥāh*) by Cyrus. He is also said to have laid the foundation of the Temple (Ezr 5[16]; cf 1 Es 6[18, 20]). The Persian title 'Tirshatha' ('Governor') in Ezr 2[63], Neh 7[65, 70] may refer to Sheshbazzar.

Since Ezr 3[8] describes Zerubbabel as laying the foundation of the Temple, Sheshbazzar and **Zerubbabel** have been identified by some scholars. The same person might bear two names (cf 2 K 23[34] 24[17], Dn 1[7]). But a comparison of Ezr 3[8] and 5[16], together with consideration of the intervening material, does not suggest that the two men are one and the same. In Ezr 4[4f, 24]—though there is clearly some confusion in the passage—it appears that such work as was begun by Sheshbazzar was then interrupted. The work began again in the time of Darius I. (cf Haggai) and Zerubbabel was then the governor. Either Sheshbazzar was responsible at the earlier period, under Cyrus, and Zerubbabel at the later—in which case Ezr 3[8] is merely a duplicate of 5[2]—or Zerubbabel was the actual builder at both periods and the work is attributed to Sheshbazzar in 5[16] because he was the governor. The latter would not be unnatural in an official report, though what the letter to Darius purports to record is the words of the Jewish leaders of whom Zerubbabel was presumably one; but it is strange that no reference is made to his own part in the earlier work. It is very probable that the Chronicler has confused the traditions concerning the two periods. The identifying of the two as different names of the same person is also improbable. In Dn 1[7] one name is Hebrew, and the other foreign, *i.e.* Daniel and Belteshazzar, whereas both Zerubbabel and Sheshbazzar are Babylonian names. The double naming of kings (as in 2 K 23, 24) may indicate the use of throne-names in Israel.

Sheshbazzar is likely to have been a Jew bearing a Babylonian name. He may be identical with **Shenazzar** of 1 Ch 3[18] (AV **Shenazar**), a son of Jehoiachin and uncle of Zerubbabel; and this would justify the title of 'a prince of Judah' given to him in Ezr 1[8]. The appointment of two men of the family of David as governors is exceedingly probable, but the family relationship again makes most probable the suggestion that Sheshbazzar belongs to the period of Cyrus and Zerubbabel to that of Darius I. W. F. B.—P. R. A.

SHETH.—'The sons of Sheth' are mentioned only in Nu 24[17] (AV, RVm, RSV), but RV translates the name 'sons of tumult.' A proper name is more in place as a parallel to Moab, but scarcely one so little known as Sheth. Albright identifies with the *Šwtw* of the Egyptian execration texts (*BASOR* 83, 1941, 34). For Sheth, 1 Ch 1[1] (AV), see SETH.

SHETHAR.—One of the seven princes who had the right of access to the royal presence Est 1[14].

SHETHAR-BOZENAI.—One of those who corresponded with Darius about the re-building of the Temple, Ezr 5[3, 6] 6[6, 13]; called **Sathrabuzanes** in 1 Es 6[3, 7, 27] 7[1].

SHETHAR-BOZNAI.—AV form of **Shethar-bozenai** (q.v.).

SHEVA.—**1.** A son of Caleb, 1 Ch 2[49]. **2.** See SHAVSHA.

SHEWBREAD.—See SHOWBREAD.

SHIBAH.—A name given to a well dug by Isaac, Gn 26[33] (AV **Shebah**); it gave its name to the town **Beersheba** (q.v.). The word means, according to the writer, 'an oath'; and *Beersheba* is 'the well of the oath,' so named from the swearing of the oath of friendship between Isaac and Abimelech, Gn 26[31]. In Gn 21[22–31] we have another account, according to which the well was dug by Abraham and received its name from the oath between Abraham and Abimelech. There is also a play on the word *shᵉbhûʿāh*, 'oath' and *shebhaʿ*, 'seven,' as a sacrifice of seven lambs was offered. Perhaps the name, however, was already in existence before Abraham's time, and the writer simply gives a more or less plausible explanation of the derivation. W. F. B.

SHIBBOLETH.—**1.** 'Ear of corn,' **2.** 'stream.' The only important occurrence of the word is in Jg 12[1–6] where, regardless of its meaning and on account of its initial sibilant alone, it serves as a test-word to distinguish between fugitive Ephraimites and Jephthah's revengeful Gileadites at the Jordan crossing. Commentators have mainly supposed that the dialectical differentiation was that the W.-Jordanian Ephraimites said, 'Sibboleth,' for 'Shibboleth'; but E. A. Speiser (*BASOR* 85 [1942]) has shown grounds for attributing the 'abnormality,' in fact, to the E.-Jordanian Gileadites, who pronounced the word in a 'non-Israelite' way, with an initial '*th*.' In either case the result was the same: exposure and execution of the heteroglot Ephraimites—though hardly 42,000 as the story now relates.
W. O. E. O—D. R. Ap-T.

SHIBMAH, Nu 32[38] (AV).—See SEBAM.

SHICRON, Jos 15[11] (AV).—See SHIKKERON.

SHIELD.—See ARMOUR, ARMS, 2 (*a*).

SHIGGAION.—See PSALMS.

SHIGIONOTH.—See PSALMS, 2.

SHIHON, Jos 19[19] (AV).—See SHION.

SHIHOR in Is 23[3] (AV **Sihor**), Jer 2[18] (AV **Sihor**, RSV 'the Nile') seems to mean Egypt (?), the Nile (?), or the waters of Egypt; in Jos 13[3] (AV **Sihor**), 1 Ch 13[5], it is the SW. frontier of Canaan. If the name is Hebrew it may mean 'the Black,' in allusion to the dark waters or even to the black alluvial land itself: the Egyptian name of Egypt is *Kemi*, meaning 'black.' But, as Brugsch pointed out, *Shi-Ḥōr* is the Egyptian name of a stream or canal, possibly the Pelusiac branch of the Nile, on or near the eastern border of Egypt (see SHUR). The black alluvium might well be counted as the boundary of Canaan; but elsewhere the boundary is 'the Brook' (or 'River') of Egypt, *i.e.* the *Wâdī el-ʿArîsh*.

SHIHOR-LIBNATH.—One of the boundaries of Asher, Jos 19[26]. It stands apparently for a river, most probably the *Nahr ez-Zerqā*, the Crocodile River.

SHIKKERON.—A place on the northern boundary of Judah, Jos 15[11] (AV **Shicron**). The site is unknown.

SHILHI.—Father of Asa's wife, 1 K 22[42], 2 Ch 20[31].

SHILHIM.—A town of Judah, Jos 15[32]: probably the same as the Simeonite **Shaaraim** (q.v.).

SHILLEM, SHILLEMITES.—See SHALLUM, 7.

SHILOAH.—See SILOAM.

SHILOH.—**1.** Here the Israelites are said to have assembled at the completion of the conquest, and erected the Tent of Meeting; portions were assigned to the still landless tribes, and cities to the Levites (Jos 18[1] etc. 21[1] etc.). At Shiloh the congregation deliberated regarding the altar built by the men of the eastern tribes in the Jordan valley (22[12f]). During the period of the Judges it was the central sanctuary (Jg 18[31]), the scene of great religious festivals and pilgrimages (21[19], 1 S 1[3]). On one of these occasions the Benjamites captured as wives the girls who danced among the vineyards (21[18f]). Here the youth of Samuel was spent, and from this narrative it appears that the 'tent' had given place to a permanent structure, a 'temple' (*hēkhāl*), under the care of the high priest Eli and his family. The loss of the Ark

and the disaster to his sons proved fatal to Eli (1 S 4^{12f}), and Shiloh apparently ceased to rank as a sanctuary, being possibly destroyed by the Philistines (Jer $7^{12, 14}$ $26^{6, 9}$; cf Ps 78^{60}). At any rate Eli's descendants are afterwards found at Nob (1 S 14^{3} 22^{11}). The prophet Ahijah was a native, or possibly a member of a prophetic guild, of Shiloh (1 K 11^{29} $14^{2, 4}$).

The original name, as shown by the gentilic **Shilonite**, was *Shîlôn*; cf modern *Seilûn*, a ruined site on a hill E. of the road from Jerusalem to Shechem, about 9 miles N. of Bethel and 3 miles E. of *Khan el-Lubbân* (Lebonah, Jg 21^{19}). Excavations by Kjaer and Schmidt demonstrated occupation in the first phase of the Iron Age (*c* 1200–1000), with destruction in the same period, possibly that to which Jeremiah alludes. No trace of the sanctuary was certainly identified, but a Byzantine church, the remains of which were discovered, presumably occupied the reputed site of the Israelite temple.

2. The real meaning of the clause translated in AV 'until Shiloh come' (Gn 49^{10}) is disputed. The Targums (Onkelos, Jerusalem, and pseudo-Jonathan) all interpret this of the Messiah, but no ancient version does so. Three possible readings are given in RVm. (1) 'Till he come to Shiloh'; grammatically correct, and supported by many scholars, being taken to refer to Judah's laying down the leadership which he had presumably exercised, when, the conquest finished, Israel assembled at Shiloh. Apart from other objections, however, *shēbeṭ*, 'sceptre,' seems to denote more than a tribal supremacy, and it is not certain that Judah possessed even that pre-eminence. (2) 'Until that which is his (*shellô*) shall come'; so LXX 'till the things reserved for him come.' (3) 'Until he shall come whose it is' (Peshitta, Targums as above; cf RSV). Another possibility which is admitted by Jerusalem Targum I. is that *shîlōh* means 'his progeny' (cf Late Heb. *shilyāh*, 'afterbirth.' The most satisfactory solution seems to be that the word *shîlōh* is a lost Hebrew cognate of the Akkadian *šilu*, 'ruler.' The verse obviously reflects the ascendancy of the House of David, but finds an eschatological Messianic interpretation only later in the Targums.

Shilonite = 'belonging to Shiloh' is used of—**1.** Ahijah (1 K 11^{29} etc.). **2.** A family dwelling at Jerusalem (1 Ch 9^{5}), though here the true reading may be **'Shelanite'** (cf Nu 26^{20}). See SHELAH, **1.** W. E.—**J. Gr.**

SHILONITE.—**1.** See SHILOH, **2.** **2.** See SHELAH, **1.**

SHILSHAH.—An Asherite, 1 Ch 7^{37}.

SHIMEA.—**1.** 1 Ch 3^{5}; see SHAMMUA, **2.** **2.** A Merarite, 1 Ch 6^{30}. **3.** A Gershonite, 1 Ch 6^{39}. **4.** 1 Ch 2^{13}; see SHAMMAH, **2.**

SHIMEAH.—**1.** A Benjamite who dwelt in Jerusalem, 1 Ch 8^{32}; called **Shimeam** in 9^{38}. **2.** See SHAMMAH, **2.**

SHIMEAM.—See SHIMEAH, **1.**

SHIMEATH.—A name given to the father or mother of one of the murderers of Joash, 2 K 12^{21}, 2 Ch 24^{26}. The murderer himself is called **Zabad** in 2 Chronicles, and **Jozacar** in 2 Kings. Probably for *Zabad* in 2 Chronicles we should read *Jehozabad*, and doubtless *Jozacar* and *Jehozabad* are identical (the letters are easily confused in Heb.), and by scribal repetition (dittography) we have two really identical names of the murderers, with the varying names for the parent, *Shimeath*, **Shimrith** and **Shomer**. The descriptions 'Ammonitess' and 'Moabitess' in 2 Chronicles are certainly later embellishments of the story, and Shimeath was probably the father of the one murderer, Jehozabad, and an Israelite. The **Shimeathites** were a family or division of the tribe of Caleb, 1 Ch 2^{55}. W. F. B.

SHIMEI, SHIMEITES.—Shimei was a popular name among the Hebrews, being especially common in Levitical circles. Of most of the persons bearing it, absolutely nothing except the name is known. **1.** The personage of this designation, of whom the historian has given us some details, is a Benjamite of the clan of Saul. On account of his tribal and family connexions, it is quite natural for him to be David's bitter enemy. As the latter is fleeing before Absalom, Shimei meets him and heaps curses and insults on the fugitive monarch. David's triumphant return, however, brings him in abject penitence to the feet of his sovereign, who pardons him (2 S 16^{5ff} 19^{17ff}). Nevertheless, David in his dying charge is represented as enjoining Solomon to 'bring his hoar head to Sheol with blood.' After this Shimei is not permitted to go beyond the walls of Jerusalem on pain of death; but presuming three years later to go to Gath in quest of fugitive slaves, he is executed by Benaiah at the command of the king (1 K $2^{8ff, 36ff}$). **2.** In the court intrigues connected with the royal succession, a courtier, Shimei (cf article REI) by name espoused the cause of Solomon (1 K 1^{8}). The official at the head of one of the prefectures which were erected by this monarch, is probably identical with him (1 K 4^{18}). **3.** A master of the vineyards under David (1 Ch 27^{27}). **4.** A prince of the Judaean royal house, a brother of Zerubbabel (1 Ch 3^{19}). **5.** The name occurs in the tribal genealogies of both Simeon and Reuben (1 Ch 4^{26f} 5^{4} [in v.^{8} **Shema**]). See SHEMAIAH, **4.** **6.** The grandson of Levi (Ex 6^{17} [AV **Shimi**], Nu $3^{18, 21}$, 1 Ch 6^{17} $23^{7, 9}$). **7.** A son of Merari (1 Ch 6^{29}). **8.** In the genealogy of Asaph (1 Ch 6^{42}). **9.** The tenth course of Levitical singers who were appointed by David (1 Ch 25^{17}). **10.** A Levite who took part in the cleansing of the Temple under Hezekiah, probably identical with one mentioned later as having charge of the tithes and oblations (2 Ch 29^{14} 31^{12f}). **11.** In post-exilic times the name appears among those who had married foreign wives (Ezr 10^{23}, 1 Es 9^{23} [AV **Semis**, RV **Semeis**], Ezr 10^{33}, 1 Es 9^{33} [AV, RV **Semei**], Ezr 10^{38}, 1 Es 9^{34} [AV **Samis**, RV **Someis**]). The individuals referred to in Ezr 10^{33} and ^{38} belong to the laity. In Zec 12^{13} the family of the **Shimeites** are mentioned as participants in the mourning for national guilt; they appear in this connexion as representatives of the Levites. **12.** The name occurs in the genealogy of Mordecai (Est 2^{5}, Ad. Est 11^{2} [AV **Semei**, RV **Semeias**]). **13.** Shammah, the brother of David, appears as **Shimei** in 2 S 21^{21}. **14.** 1 Ch 8^{21} (AV **Shimhi**) = **Shema** of v.^{13}. J. A. K.

SHIMEON.—One of the sons of Harim who had married a foreign wife, Ezr 10^{31}; called **Simon Chosamaeus** in 1 Es 9^{32}.

SHIMHI, 1 Ch 8^{21} (AV).—See SHIMEI, **14.**

SHIMI, Ex 6^{17} (AV).—See SHIMEI, **6.**

SHIMMA, 1 Ch 2^{13} (AV).—See SHAMMAH, **1.**

SHIMON.—A Judahite family, 1 Ch 4^{20}.

SHIMRATH.—A Benjamite, 1 Ch 8^{21}.

SHIMRI.—**1.** A Simeonite, 1 Ch 4^{37}. **2.** The father of one of David's heroes, 1 Ch 11^{45}. **3.** A family of gatekeepers, 1 Ch 26^{10} (AV **Simri**). **4.** A Levite, 2 Ch 29^{13}.

SHIMRITH.—See SHIMEATH.

SHIMROM, 1 Ch 7^{1} (AV).—See SHIMRON.

SHIMRON.—**1.** The fourth son of Issachar, Gn 46^{13}, Nu 26^{24}, 1 Ch 7^{1} (AV **Shimrom**). The gentilic **Shimronites** occurs in Nu 26^{24}. **2.** One of the towns whose kings Jabin called to his assistance, Jos 11^{1}; it was afterwards allotted to the tribe of Zebulun, Jos 19^{5}. It is perhaps modern *Kh. Semûniyeh*, W. of Nazareth.

SHIMRON-MERON.—A Canaanite town W. of Jordan, whose king was among those whom Joshua smote, Jos 12^{20}. Comparing its position in the list with that of **Shimron** (q.v.) in the list given in Jos 11^{1}, we may infer that the two places are identical. The LXX here separates the two parts of this name, and reads as two names.

SHIMSHAI.—The scribe or secretary of Rehum, Ezr $4^{8f, 17, 23}$, 1 Es 2^{16} (AV **Semellius**, RV **Samellius**).

SHIN and SIN.—Twenty-first letter of Hebrew alphabet, and so used to introduce the twenty-first part of Ps 119, every verse of which begins with this letter.

SHINAB.—The king of Admah, Gn 14^{2}.

SHINAR.—The term employed in the OT for the greater part, if not the whole, of **Babylonia**, Gn 10^{10} 11^{2}

$14^{1, 9}$, Is 11^{11}, Dn 1^{2}, Zec 5^{11} (also Jos 7^{21} RV and RSV; AV 'Babylonish'). It has been suggested that it is the equivalent of the Sumerian *Shingi-Uri*='Sumer and Accad,' but the attempt to equate the name with Sumer has been generally abandoned. Some have thought of Accadian *Shankhar*, which represents a country other than Babylonia. Egyptian texts mention the same country by the name *Sngr*. There is evidence to connect this with modern *Jebel Singhar*, W. of Mosul (cf de Vaux, *RB* Iv, 332 f). Whatever the origin of the name the use in the Bible as the equivalent of Babylonia is not in doubt.

SHINAR, MANTLE FROM (*'addereth Shin'ār*).—A garment stolen by Achan, Jos 7^{21} (AV 'Babylonish garment'; RV 'Babylonish mantle'); probably a cloak of embroidered stuff. Babylonia was famous in classical times for costly garments, and the sculptures exhibit the most elaborately embroidered dresses. The Babylonian inscriptions enumerate a great variety of such garments, worked in many colours. C. W. H. J.

SHION.—A town of Issachar, Jos 19^{19} (AV **Shihon**); possibly modern *'Aiyûn esh-Sha'în*, about 3 miles E. of Nazareth.

SHIPHI.—A Simeonite prince, 1 Ch 4^{37}.

SHIPHMITE.—See SHEPHAM.

SHIPHRAH.—One of the two Hebrew midwives, Ex 1^{15}.

SHIPHTAN.—An Ephraimite prince, Nu 34^{24}.

SHIPS AND BOATS.—1. In OT and Apocrypha.—(1) *Among the Israelites.*—In spite of the long line of coast by which Palestine is bordered, the Israelites were an agricultural rather than a maritime people. In fact a large part of the coast was occupied by the Phoenicians in the N. and the Philistines in the S. It seems that in the earliest times the people as a whole were ignorant of navigation. Exceptions more or less to the rule in relatively ancient times were the tribes of Asher on the N., and Dan, before its emigration, on the S.

> 'And Dan, why did he abide with the ships?
> Asher sat still at the coast of the sea,
> settling down by his landings' (Jg 5^{17}).

It is very doubtful whether **boats** were originally used, even by the Phoenicians and the Philistines, except for fishing, and perhaps for purely local traffic and communication. Sidon, the earliest Phoenician settlement, was, like its synonym Beth-saida, derived from a root meaning to catch prey, and was doubtless first noted as a fishing town. Again, the name of Dagon, the chief god of the Philistines, is derived from the word *dāgh*, meaning a fish.

At a somewhat later period we find Zebulun described as a '**haven for ships**' (Gn 49^{13}), and later still, probably after the division of the kingdom, Issachar is mentioned with Zebulun as deriving wealth from naval commerce (Dt 33^{19}).

In any case, it is not till the time of Solomon that we hear definitely of any important development of commercial enterprise. Under the direction, and with the co-operation, of the Phoenicians, cedar and cypress timbers from Lebanon were cut and floated down the rivers to the coast and formed into rafts, which carried the sawn stones to Joppa. Here they were broken up, and both were conveyed to Jerusalem for the building of the Temple 1 K 5^{9} [AV 'float'], 2 Ch 2^{16} [AV 'flote,' RV 'float']). Solomon had also a **navy** of ships navigated by Phoenician sailors. They were stationed at **Ezion-geber**, at the head of the Gulf of 'Aqaba, and traded in gold and precious stones (1 K 9^{26-28}) with Ophir, which may have been in the S. or E. of Arabia or on the African coast of Punt, in the general region of Somaliland. While the 'ivory and apes and peacocks (or rather, baboons)' of 1 K 10^{22} may have been imported from India, they could just as well have had their origin in Africa. In addition to this, there was a regular trade maintained with Egypt, whence Solomon imported chariots and horses ($10^{28, 29}$).

The conflict between the Northern and Southern Kingdoms after Solomon's death put a stop to the commercial activities of the Israelites, and there does not appear to have been any attempt to revive them till the time of Jehoshaphat, whose fleet of ships made for trading for gold to Ophir was wrecked at Ezion-geber. An offer of Ahaziah to join in a renewal of the enterprise was afterwards rejected (1 K $22^{48 f}$). The mention in Is 2^{16} of 'ships of Tarshish' among the objects against which Y"'s judgment would be directed, makes it likely that there was again a revival of naval commerce in the prosperous reigns of Jotham and Uzziah. Finally, in the time of the Maccabees we read that Simon, the brother of Judas, made **Joppa** a seaport (1 Mac 14^{5}). It was probably at this period that the Jews first began to have experience of **ships of war** (1 Mac 1^{17} 15^{3}; cf Dn 11^{30}), though they must have been in use at a much earlier period. There are figures of such ships, with sharp beaks for ramming, in A. H. Layard's *History of Nineveh*, and Sennacherib in his expedition against Merodach-baladan had ships manned by Tyrians. In Is 33^{21} the allusion is certainly to hostile ships, but the reference may be to ships of transport, rather than warships. In any case the distinction between a merchantman and a warship in early times was obviously not so definite as it afterwards became.

(2) *Among neighbouring nations.*—As early as 3000 B.C. men had learned to navigate the Nile, and great ships for this purpose were built in the 1st and 2nd Dynasties. In the 3rd Dynasty (2600–2550 B.C.) Snefru sent to Phoenicia 40 ships, which returned with cedars from Lebanon. In the 5th Dynasty Sahure built the first navy in the history of the world. Hatshepsut (1504–1482 B.C.) had a large fleet, which carried on an extensive trade with Punt by way of the Nile and the Red Sea. Ramses III. (1198–1167 B.C.) tells of a sacred barge at Thebes, which was 224 ft. long and built of enormous timbers of cedars of Lebanon. Also on the Euphrates there was navigation as early as 3000 B.C., and voyages were made from the upper Euphrates to Babylon. Unlike the Israelites, the Phoenicians were the great navigators of the ancient world. Their country was particularly favourable for such a development. Dwelling on a narrow piece of sea-board, unsuited for agriculture (they imported corn from Palestine, 1 K 5^{11}, Ac 12^{20}), they had behind them the Lebanon range, famed for its great cedars, and a coast with good natural harbours. By the time of Solomon they would seem already to have had an extensive trade. The phrase '**ships of Tarshish,**' which probably meant originally ships accustomed to trade with Tartessus in Spain, had come to be used in a secondary sense, like our 'East-Indiaman,' of large vessels suited for such a trade. It is believed that by this time they had penetrated as far as Cornwall, and had even found their way to the Canaries. The rise of Phoenicia as an independent marine power may be dated in the 12th cent. B.C. The numerous colonies of the Phoenicians were the result of their commercial enterprises by sea; their earliest settlement in N. Africa was Utica (1100 B.C.), and Carthage was founded *c* 822 B.C. The form of their ships was, it would appear, a gradual development from the hollowed trunk of a tree to the vessel of three banks of oars, known among the Greeks as a trireme (see Hastings' *DB*, article, 'Ships'). With the Assyrians navigation seems to have been confined to the Tigris and Euphrates, where small timber boats, supported by inflated skins, and coracles of plaited willow, were largely in use (see *EBi*, article, 'Ships'). On the other hand, the Babylonians extended their voyages to the Persian Gulf, and even engaged in commerce with India since the 7th cent. B.C. The Egyptians used '**vessels of papyrus**' for the navigation of the Nile (Is 18^{2}; cf Job 9^{26}), but it is not quite certain whether they were boats constructed out of papyrus, or rafts composed of bundles of these reeds bound together. We learn from Egyptian monuments that they had also ships of considerable size. We have very little to guide us in determining the form or size of ships during these early periods, but it is probable that

while at first they appear to have varied greatly, they gradually approximated to the type of vessel used in the Levant in NT times. It is not possible to say at what time **sails** were first introduced. We find them, or more correctly the sail, in the one great sail mentioned in Ezk 27[7] in addition to the oars. In Is 33[23] the sail only is mentioned. In v.[21] the '**galley with oars**' is mentioned distinctively, and in contrast to the '**stately ship,**' which probably means the larger vessel provided with a sail.

(3) *In literature.*—That the Israelites, though generally speaking unused to navigation, had some acquaintance with and took an interest in shipping, is clear from the constant reference to ships in their literature. Is 33[23], in which Israel is compared to a disabled vessel, has been already alluded to. Ezekiel's famous comparison of Tyre to a ship in 27[4–11] gives a fair general idea of the different parts of a ship of that period, though some of them—the deck-planks of ivory, the sail of fine bordered linen, the awnings of blue and purple—are evidently idealized. The graphic picture in Ps 107[23–28] of the terrors experienced by those 'who went down to the sea in ships' was almost certainly written by one who had experienced a storm at sea. In Ps 104[26] the ships are, as much as leviathan, the natural denizens of the deep. Of special beauty is the simile of the ship that passes over the waves and leaves no pathway of its keel behind (Wis 5[10]), to express the transitoriness of human life and human hope. The danger of ship-faring is pointed out in Wis 14[5]. That people should commit their lives to a small piece of wood would be absurd but for Divine Providence.

2. In the NT.—We are concerned chiefly with our Lord's Galilaean ministry and St. Paul's voyages. (1) *On the Sea of Galilee.*—The Galilaean **boats** were used primarily for fishing, and also for communication between the villages on the Lake, and probably for local trade. At least four of our Lord's disciples were fishermen, and were called while engaged in their work. He frequently crossed the Lake with His disciples, and sometimes preached from a boat to the people on the shore (Lk 5[3], Mk 4[1]). Among the most picturesque incidents of His life as recorded in the Gospels are the miracle of stilling the tempest and the miraculous draughts of fishes. The boats were small enough to be in danger of sinking from a very large catch of fish, and yet large enough to contain our Lord and at least the majority of His twelve disciples, and to weather the storms which are still frequent on the Lake. It appears from the frequent use of the definite article, 'the boat,' that one particular boat, probably St. Peter's, was usually employed.

(2) *In the Levant.*—Ships played an important part in St. Paul's missionary journeys. It was frequently necessary for him to cross the Aegean, and sometimes to make longer voyages to and from Syria. That he was frequently exposed to great danger we learn not only from the detailed account of his shipwreck in Ac 27, but from an express statement in 2 Co 11[25], in which, writing *before this event*, he says 'Three times I have been shipwrecked; a night and a day I have been adrift at sea,' which certainly seems to mean that he drifted for this space of time upon the spar or some part of a wrecked ship. But our interest is centred chiefly in the account of his voyage from Caesarea to Puteoli in Ac 27, 28. From this we learn that the larger vessels were of a considerable size, that of the shipwreck containing, according to what is probably the correct text, 276 persons (27[37]; according to B about 76). It was impelled only by **sail**, the only **oars** mentioned being the paddles used as **rudders**, which were braced up, probably in order to allow the ship to be more easily **anchored** at the stern (vv.[29, 40]). This, a custom not infrequently resorted to when some special purpose was served by it, was to enable them to thrust the vessel into a favourable place on shore without the necessity of turning her round. In addition to the **mainsail**, the vessel had a **foresail** (*artemōn*), which was used for the same purpose, as more easily adapted for altering the ship's course (v.[40]). The vessel had one small **boat**, which was usually towed behind, but was taken up for greater security during the storm (v.[16]). Another remarkable practice is that described in v.[17] as 'using helps, under-girding the ship.' These **helps** or 'under girders' were chains passed under and across the ship, and tightened to prevent the boards from springing. It was a common practice of ancient times, and is not unknown even in modern navigation. **Soundings** were taken to test the near approach to land, much as they would be at the present day. Though ships had to depend mainly on one great square sail, by bracing this they were enabled to sail within seven points of the wind. In this case, allowing another six points for leeway, the vessel under a north-easter (*Euraquilo*, v.[14]) made way from Cauda to Malta, a direction considerably N. of W. As, however, the vessel could not safely carry the mainsail, or even the yard-arm, these were first lowered on deck, and then the vessel must have been heaved to and been carried along and steadied by a small storm-sail of some kind. Had she drifted before the wind she would inevitably have been driven on to the Syrtis, the very thing they wished to avoid (v.[17]). This has been shown very clearly by James Smith in his classical work, *The Voyage and Shipwreck of St. Paul*, ch. iii. The same writer draws attention to the thoroughly nautical character of St. Luke's language, and the evidence of its accuracy by a comparison with what is known of ancient naval practice; and, what is perhaps even more striking, the evidence of skilful navigation to which the narrative points. He justly observes that the chief reason why sailing in the winter was dangerous (27[9] 28[11]) was not so much the storms, as the constant obscuring of the heavens, by which, before the discovery of the compass, mariners had chiefly to direct their course.

The fact that two of the ships in which St. Paul sailed were ships of Alexandria engaged in the wheat trade with Italy (27[6, 38] 28[11, 13]; Puteoli was the great emporium of wheat), is especially interesting, as we happen to know more about them than any other ancient class of ship. In the time of Commodus a series of coins with figures of Alexandrian corn-ships was struck to commemorate an exceptional importation of wheat from Alexandria at a time of scarcity. One of these ships, moreover, was driven into the Piraeus by stress of weather. Lucian lays the scene of one of his dialogues (*The Ship* or *Wishes*) on board of her. From the coins and the dialogue together we get a very good idea of the ships of that time (2nd cent. A.D.) and their navigation. Lucian's ship was 180 ft. by 45 ft., with a calculated tonnage of about 1200. It is not surprising, then, that the *Castor and Pollux* was large enough to contain, in addition to her cargo and crew, the 276 persons of the shipwrecked vessel (Ac 28[11]). Josephus was wrecked in a ship containing 600. The ships had one huge square sail attached to an upright **mast** about the centre of the vessel, with a very long yard-arm. There was also a second small mast, set diagonally near the bow, and looking not unlike a modern bowsprit, which carried the foresail. On the principal mast there was also sometimes a small triangular topsail. Both ends of the vessel curved upwards and were pointed horizontally, and terminated, the former especially, in some sort of decoration, very frequently a swan. The two **rudder paddles**, the universal method of steering till about the 12th cent., were usually in the larger vessels passed through port-holes, which could also serve as hawser holes when the vessel was **anchored** by the stern. For pictures of ancient ships, see F. Vigouroux, *Dict. de la Bible*, iv, 1494–1515 and *ANEP*.

(3) *In literature.*—In the books of the NT, shipping provided the writers with some striking similes. In referring to the Christian hope (He 6[19]), the writer says: 'We have this as a sure and steadfast anchor of the soul, a hope that enters into the inner shrine behind the curtain.' Again, St. James compares the tongue, in the control which its constraint exercises on the character, to the very small **rudders** by which ships, though they be so great, are turned about (3[4]). F. H. W.—H. S. G.

SHISHA.—See SHAVSHA.

SHISHAK.—Egyptian, *Sheshonq I*, founder of the 22nd Dynasty (*c* 940–919 B.C.). He may have been the unnamed Pharaoh who became the father-in-law of Solomon (1 K 3[1] 9[16, 24] 11[1]). Jeroboam fled to him (1 K 11[40]), and he plundered Jerusalem in the fifth year of Rehoboam (1 K 14[25], 2 Ch 12[2]). A list of 156 towns of Syria-Palestine was carved by Shishak on the S. wall of the temple of Karnak. Although Shishak claims to have captured these towns, it may be that they merely paid tribute. F. Ll. G.—**R. J. W.**

SHITRAI.—A Sharonite who was over king David's herds that fed in Sharon, 1 Ch 27[29].

SHITTAH TREE.—Hebrew *shiṭṭāh*, rendered ' shittah tree ' in AV in Is 41[19] (RV, RSV **acacia tree**); *ʿaṣê shiṭṭîm*, rendered ' shittim wood ' in AV in Ex 25[5, 10, 13] etc. (RV, RSV ' acacia wood '). The name *shiṭṭāh* was originally *shinṭāh*, and is equivalent to Arabic *sanṭ*, which is the *Acacia nilotica*; but the word no doubt included other desert acacias. The *seyâl* of the Arabs, which includes the gum-arabic tree (*A. seyal*), and *A. tortilis* would both furnish suitable wood. Both these trees are plentiful around the Dead Sea, particularly at *ʿAin Jidi* (En-gedi). E. W. G. M.

SHITTIM.—1. The last encampment of the Israelites on their journey from Egypt to Canaan (in Nu 33[49] called ' Abel-shittim [the meadow of acacias] in the plains of Moab '), possibly identical with modern *Tell Kefrein*, *c* 14 miles E. of Jericho. Here the Israelites ' began to play the harlot ' with the women of Moab and to worship the Baal of Peor (Nu 25[1ff]); from here Joshua sent his two spies to reconnoitre Jericho (Jos 2[1]) and later set out with the Israelites to cross the Jordan (Jos 3[1]). Josephus identifies it with ' the city Abila, . . . a place full of palm-trees ' (*Ant.* IV. viii. 2 [176]), which he locates about 7 miles E. of the Jordan (*ib.* v. i. 1 [4]). In Mic 6[5], ' remember . . . what happened from Shittim to Gilgal, that you may know the saving acts of Yahweh ' (cf RSV), should be understood as a reference to the events that attended Israel's entry into Canaan, from their last encampment before crossing Jordan to their first encampment after crossing (cf Jos 4[19ff]).

2. The ' valley of Shittim ' (Jl 3[18]), which is to be watered by the stream flowing from the Temple in Jerusalem (cf Ezk 47[1ff], Zec 14[8]), is probably the Kidron Valley (modern *Wâdī en-Nâr*), which runs from the SE. of Jerusalem to the Dead Sea; others identify it with the Valley of Elah (modern *Wâdī es-Sant*), which runs from Bethlehem towards Ashdod, but this is less likely.

G. A. B.—**F. F. B.**

SHIZA.—Father of a Reubenite chief, 1 Ch 11[42].

SHOA.—A race named in Ezk 23[23] along with Babylonians, Chaldaeans, Pekod, Koa and Assyrians. They are the *Sutū* of Accadian texts. These were nomads, frequently named in the same company by Assyrian and Babylonian writers, and among other seats inhabited the E. of the Tigris.

SHOBAB.—1. One of David's sons. 2 S 5[14], 1 Ch 3[5] 14[4]. **2.** A Calebite, 1 Ch 2[18].

SHOBACH.—The captain of the host of Hadarezer, the Aramaean king of **Zobah** (q.v.), who commanded the forces of that king when he aided the Ammonites in their war with king David. David defeated him, and Shobach lost his life, 2 S 10[16–18]. In 1 Ch 19[16] the name is spelled **Shophach**. Perhaps because so little was known of Shobach, he played an important part in the later imaginative tradition. The Mishnah (*Sotah*, viii. 1) makes him a giant of the Ammonites equal to Goliath, while the Samaritan Chronicle tells a long tale concerning him (chs. 26–38), making him the son of Haman, a king of Persia whom Joshua had killed, and who stirred up a great coalition to avenge the death of his father. All authentic information concerning Shobach is contained in 2 S 10[16–18], which 1 Ch 19[16] repeats. G. A. B.

SHOBAI.—A family of porters, Ezr 2[42], Neh 7[45], 1 Es 5[28] (AV **Sami**, RV **Sabi**).

SHOBAL.—1. A ' son ' of Seir the Horite, and one of the ' dukes ' of the Horites, Gn 36[20, 23, 29], 1 Ch 1[38, 40]. **2.** A Calebite family in the tribe of Judah; he is called a son of Caleb and father of Kiriath-jearim in 1 Ch 2[50], and a son of Judah in 4[1f]. The name may be connected with **1**.

SHOBEK.—A signatory to the covenant, Neh 10[24].

SHOBI.—A son of **Nahash**, the king of Ammon, who, with Machir of Lo-debar, showed kindness to David when he fled to Mahanaim at the time of Absalom's rebellion, 2 S 17[27]. He was perhaps the brother of Hanun, the son who succeeded Nahash, 1 Ch 19[1f].

SHOCHO, 2 Ch 28[18] (AV).—See Soco, **1.**

SHOCHOH, 1 S 17[1] (AV).—See Soco, **1.**

SHOCK, STACK.—' Shock ' is used in AV in Jg 15[5] and Job 5[26], and ' stack ' in Ex 22[6]. In all three cases RV has ' shock,' while RSV has ' stacked grain ' in Ex 22[26] and ' shock ' in the others. The Hebrews did not set up their sheaves in shocks (*Scoticé* ' stooks '), but piled them in **heaps** for conveyance to the threshing-floor (AGRICULTURE, 3). A. R. S. K.

SHOCO, 2 Ch 11[7] (AV).—See Soco, **1.**

SHOE.—See DRESS, **6.** The shoes were removed before entering a temple, or other sacred precinct, in order to save the latter from defilement. Hence the priests performed their duties barefoot. The shoe played a part, further, in certain symbolical actions in Hebrew law. One who renounced the duty of levirate marriage (see MARRIAGE, **4**) had his shoe publicly pulled off by the widow, who also spat in his face, Dt 25[9]. In Ru 4[7f] Ruth was not present when the next of kin renounced her, and he drew off his own shoe. This may have been a later modification of the custom, or, more probably, was due to the more distant relationship of the kinsman, and the consequent lessening of the degree of reproach resting on him. This passage further implies that it was customary for the vendor to draw off his shoe and hand it to the buyer on completing a transaction. A similar custom is widely known. (In early Babylonian deeds of sale concerning house property we find the pestle [of the mortar] was so transferred.)

In the expression ' upon Edom I cast my shoe ' (Ps 60[8] 108[9]) it is possible that there is an extension of this shoe symbolism, the taking possession of the property being symbolized by throwing a shoe upon it. Some prefer the sense of RVm ' unto Edom,' and see here a reference to Edom's servitude, it being the part of the slave to carry his master's shoes.

A. R. S. K.—**H. H. R.**

SHOHAM.—A Merarite, 1 Ch 24[27].

SHOMER.—1. 1 Ch 7[32]; see SHEMER, **3.** **2.** 2 K 12[21]; see SHIMEATH.

SHOPHACH.—See SHOBACH.

SHOPHAN, Nu 32[35] (AV).—See ATROTH-SHOPHAN.

SHOSHANNIM, SHOSHANNIM-EDUTH.—See PSALMS.

SHOVEL.—1. Ex 27[3] 38[3], Nu 4[14], 1 K 7[40, 45], 2 K 25[14], 2 Ch 4[11, 16], Jer 52[18], of a utensil for removing the ashes from the altar. **2.** Is 30[24], for the broad, shallow, winnowing shovel with which corn after threshing was thrown up against the wind to clear it of the chaff.

SHOWBREAD (**Shewbread** (AV and RV), also rendered as **Bread of the Presence** (RSV) and **Presence-Bread** (RVm Ex 25[30] 35[31])).—There are various terms used in the Bible to describe this bread which was placed before God in the shrine. The expression ' bread of the presence ' appropriately renders the Hebrew, literally ' bread of (the) face ' (so in Ex 25[30] 35[13] 39[36], 1 S 21[6], 1 K 7[48] || 2 Ch 4[19]). In Nu 4[7] the phrase is ' continual bread.' Corresponding to this, 2 Ch 2[4] has ' ordering of continuity,' ' continual offering of the showbread ' (RSV), ' continual shewbread ' (RV). The technical expression ' ordering,' ' row,' ' setting in order ' appears also in 1 Ch 9[32] 23[29], Neh 10[33], all referring to the ' bread of the ordering '; 2 Ch 13[11] reverses the words and has ' the ordering of (the) bread.' A different word for

'order' is used in Ex 40[23]. In 1 S 21[4] 'holy bread' is used.

The NT has two phrases, both rendered as 'bread of the Presence' (RSV), 'shewbread' (AV and RV). In He 9[2] RVm indicates the literal meaning as 'the setting forth of the loaves.' Mk 2[26] and its parallels Mt 12[4], Lk 6[4] have the words in the reverse order: 'the loaves of the setting forth.' These two phrases correspond exactly to the usage of the Chronicler, and are found in LXX, which uses also a more literal rendering of the phrase 'bread of the face' (cf Vulgate, *panis facierum, panis propositionis*). The term 'showbread' (shewbread) is due apparently to Tyndale, and is found as early as 1526, though he also uses other terms, *e.g.* 'the halowed loves.'

Various OT passages give further information about this bread. In 1 S 21[1-6] we are told of David's flight from Saul and his requesting bread from Ahimelech at the sanctuary at Nob. The bread is described as 'holy,' contrasted with common bread, and the priest was evidently concerned to know that those who were to eat it would be in a fit state. The bread is further described as that which is 'removed from before Yahweh so that hot bread is placed there on the day it is taken away.'

The two points here—the holiness of the bread and its periodic renewal—find further elaboration, and information is also given about the table upon which it is placed. Lv 24[5-9] describes its preparation. Twelve loaves are to be made, each containing one fifth of an ephah (q.v.) of fine flour. The loaves are placed upon the table in two rows, six in each row, and pure frankincense upon each row. The frankincense was to be offered by fire and the bread to be set in order on the sabbath. The loaves then removed were to be eaten by the priests within the holy place, because this bread is 'most holy.' This latter provision is indicated also in Mk 2[26] and parallels.

The table upon which the bread was to be placed is described in connexion with the Tabernacle (Ex 25[23-30]; cf TABERNACLE). In 1 K 7[48] a golden table (2 Ch 4[19] has the plural 'tables' but no mention of gold) is included among the Temple furniture. This is sometimes identified—though hardly rightly—with the 'altar of cedar' (1 K 6[20]; cf TEMPLE). Such an identification appears to be made in Ezk 41[22]. The existence of the table in the second Temple is indicated by 1 Mac 1[22]. The practice was restored by Judas Maccabaeus (1 Mac 4[49-51]) and such a table is portrayed on Titus' triumphal arch after the destruction of A.D. 70 (cf also Jos. *BJ* VII. v. 5 [148]). Further information is provided by later writers, *e.g.* Josephus, who says that the incense was in golden platters (or cups, *Ant.* III. vi. 6 [143]) and burnt at the end of the week (*Ant.* III. x. 7 [255 f]). Rabbinic information may be found in *JE*, xi, 312 f and *SB*, iii, 719 ff. The Letter of Aristeas (51 ff) gives an elaborate description of the table.

Parallels to such an offering of loaves have been found among the Babylonians, who laid cakes of sweet (unleavened) bread before various deities, in twelves or multiples of twelve (cf Zimmern, *KAT*[3] 600). In the Apocrypha, Bel and the Dragon (v.[11]) provides indirect evidence of a similar kind, though here with a ridiculing of the crude notion that the deity himself fed upon the bread. We may also compare the cakes offered to the Queen of Heaven (Jer 7[18] 44[19]), and in the Râs Shamra texts there are references to deities eating bread, possibly set out for them by the worshipper (cf *SS*, i. 6). Comparison has also been made with the Roman custom of *lectisternia*, banquets for certain gods, a celebration of Greek origin. The number twelve may well have had astral significance originally.

In the OT, the original intention of providing food for the deity, or of sharing a meal with Him, may well still be detected (see SACRIFICE AND OFFERING). But the stress is now laid upon the covenant, the number twelve being associated with the twelve tribes, so that the offering is a 'pledge of the covenant between the twelve tribes and Yahweh' (de Vaux, *Ancient Israel*, 1961, p. 422; cf Lv 24[8]). There may also be an allusion to the months of the year, and so perhaps to the dedication of the blessings of food to God who is the giver of them.

P. R. A.

SHRINE.—See ARTEMIS.

SHROUD.—This word is used in AV and RV in Ezr 31[3] in the general sense of 'shelter,' 'covering' (RSV 'forest shade' for 'shadowing shroud'), as in Milton's *Comus*, 147—'Run to your shrouds, within these brakes and trees.'

SHUA.—1. The father of Judah's Canaanite wife, Gn 38[2, 12] (AV **Shuah**); called **Bath-shua** in 1 Ch 2[3] (AV 'the daughter of Shua'). **2.** A daughter of Heber, 1 Ch 7[32].

SHUAH.—1. A son of Abraham and Keturah, Gn 25[2], 1 Ch 1[32]. The tribe represented by this name may perhaps be the *Suchu* of the cuneiform *Shuḫu* on the right bank of the Euphrates. Bildad the Shuhite (Job 2[11] 8[1] 18[1] 25[1] 42[9]) is probably intended to be thought of as belonging to this tribe. **2.** Gn 38[2, 12] (AV); see SHUA, **1.** **3.** 1 Ch 4[11] (AV); see SHUHAH.

SHUAL ('jackal').—An Asherite, 1 Ch 7[36].

SHUAL, LAND OF.—A region referred to in 1 S 13[17] as the destination of one of the three bands of Philistine raiders. The close connexion of Ophrah with the district named indicates that this was one of its towns. Its exact site is unknown.

SHUBAEL.—See SHEBUEL.

SHUHAH.—A brother of Chelub, 1 Ch 4[11] (AV **Shuah**).

SHUHAM.—A son of Dan, Nu 26[42]; called **Hushim** in Gn 46[23]. The gentilic **Shuhamites** is found in Nu 26[42f].

SHUHITE.—See SHUAH.

SHULAMITE, Ca 6[13] (AV) = **Shulammite** (q.v.).

SHULAMMITE.—See SHUNEM, SONG OF SONGS.

SHUMATHITES.—A family of Kiriath-jearim, 1 Ch 2[53].

SHUNAMMITE.—See next article.

SHUNEM.—A border town of Issachar (Jos 19[18]) and the camping ground of the Philistines opposite Gilboa before Saul's last battle (1 S 28[4]). It was identified already in the *Onamasticon* as *Suleim*, a site 5 miles S. of Tabor. The modern town of *Sôlam* or *Sûlam* lies on the W. slope of *Jebel Daḥī*. That the Shunem which was the scene of Elisha's miracle (2 K 4[8ff]) is probably not the same site is suggested by the story itself which indicates that it lay on the way from Samaria to Carmel near which it must have been (v.[25]).

The term **Shunammite** is applied to (1) the mother of the lad raised by Elisha (2 K 4[12]) and (2) Abishag (1 K 1[3]). Possibly the term is the original of the Shulammite of Ca 6[13] (cf Shunem, Solam). This identification has given rise to theories that Abishag was the prototype of the Shulammite. On the other hand, the term may simply be the etymological counterpart to Solomon. It would thus have nothing to do with Shunem at all.

C. W. E.—J. W. W.

SHUNI.—A son of Gad, Gn 46[16], Nu 26[15]; the gentilic **Shunites** occurs in Nu 26[15].

SHUPHAM, Nu 26[39] (AV).—See MUPPIM.

SHUPHAMITES.—See SHEPHUPHAM.

SHUPPIM.—1. See MUPPIM. **2.** A door keeper, 1 Ch 26[16].

SHUR ('wall').—A place or district on the NE. border of Egypt, Gn 16[7] 20[1] 25[18], Ex 15[22], 1 S 15[7] 27[8]. It probably refers to the border of Egypt in the isthmus of Suez, held by a line of forts, and perhaps especially to the 'wall of *Thāru*' (Egyp. *th* corresponds to *sh* in Heb.), at *Tell Abū Seifeh*, near *Qanṭarah*.

SHUSHAN.—See SUSA.

SHUSHANCHITES.—The gentilic from **Shushan** (see SUSA), found in RV of Ezr 4[9], where RSV has 'men of Susa.' They are here included among the colonists settled by **Osnappar** (q.v.) in Samaria.

SHUSHAN-EDUTH.—See PSALMS, **2.**

SHUTHALHITES, Nu 26[35] (AV).—See SHUTHELAH, **1.**

SHUTHELAH.—**1.** One of the three clans of the tribe of Ephraim, Nu 26[35f], 1 Ch 7[20]. The gentilic **Shuthelahites** occurs in Nu 26[35] (AV **Shuthalhites**). **2.** A son of Zabad, and descendant of Ephraim, 1 Ch 7[21].

SHUTTLE.—Only Job 7[6], where it is doubtful whether the reference is to the shuttle-rod of the loom, or to the loom itself. The Hebrew word has the latter meaning in its only other occurrence, Jg 16[14]. See SPINNING AND WEAVING, **4** (*b*).

SIA.—A family of Nethinim (q.v.) who returned with Zerubbabel, Neh 7[47]; called **Siaha** in Ezr 2[44], 1 Es 5[29] (AV **Sud**, RV **Sua**).

SIAHA.—See SIA.

SIBBECAI.—The name of one of David's thirty heroes, 2 S 21[18] (AV **Sibbechai**), 1 Ch 11[29] 20[4] (AV **Sibbechai**) 27[11]; called **Mebunnai** in 2 S 23[27].

SIBBECHAI, 2 S 21[18], 1 Ch 20[4] (AV).—See SIBBECAI.

SIBBOLETH.—See SHIBBOLETH.

SIBMAH.—See SEBAM.

SIBRAIM.—A place on the ideal northern boundary of the Holy Land, Ezk 47[16]. Its location is unknown, but it would appear to be in the neighbourhood of Hamath.

SICCUTH, Am 5[26] (RV).—See SAKKUTH. For 'Sakkuth your King,' AV has 'the tabernacle of your Moloch'; cf Ac 7[43] 'the tent of Moloch' (RSV).

SICHEM, Gn 12[6] (AV) = **Shechem** (q.v.).

SICK, SICKNESS.—See MEDICINE.

SICKLE.—Hebrew *ḥermēsh*, Dt 16[9] 23[26]; *maggāl*, Jer 50[16], Jl 3[13]; Greek *drepanon*, Mk 4[29], Rev 14[14ff]; in 1 S 30[20] RSV restores *ḥermēsh* with LXX (AV, RV 'mattock'). The Hebrew sickles or reaping hooks were successively of flint, bronze (rarely found), and iron, and set in handles of bone or wood. In Palestine the flint sickle goes back to the later Stone age (see illustrations from Gaza in Galling, *BRL*, p. 475). Similar flint sickles, with bone hafts, have been found in Egypt. The ancient sickles were of two kinds, according as the cutting edge was plain or toothed; the modern Palestinian reaping-hook is of the latter kind and somewhat elaborately curved. In Jer 50[16] the reaper is described as 'one who handles the sickle' (AVm **scythe**, which is also wrongly given as an alternative in AVm of Is 2[4], Mic 4[3] for 'pruning hooks'). In Jl 3[13] we should read with RVm 'put ye in the sickle, for the *vintage* is ripe,' the context, the LXX rendering, and the same figure in Rev 14[19f] all show that the reference is to the smaller but similarly shaped **grape-knife**, expressly named *maggāl* in the Mishnah, with which the grape-gatherer cut off the bunches of ripe grapes. A. R. S. K.—**H. H. R.**

SICYON.—This was one of the numerous places written to by the Romans on behalf of the Jews in 139 B.C. (1 Mac 15[23]). It was situated on the Gulf of Corinth, about 18 miles W. of Corinth and was an important stopping place for vessels; it was held to be an 8 days' sail from here to Brundisium. It was distinguished in plastic art, and was in early times very important and wealthy, but sank to insignificance early in the Christian era. Some excavations have been carried on here.

A. So.—**E. G. K.**

SIDEBOARD.—See CUPBOARD.

SIDDIM.—The 'Valley of Siddim' (derived by some from Hittite *siyantas*, 'salt') is mentioned only in Gn 14, where it is the scene of the defeat of the kings of Sodom, Gomorrah and the other cities of the Jordan pentapolis by Chedorlaomer and his allies. It is identified with the 'Salt Sea' (v.[3]) and described as being 'full of bitumen (AV, RV 'slime') pits' (v.[10]). Most probably it was a well-watered and fertile region, S. of El-Lisân, which is now covered by the southward extension of the Dead Sea. Its submergence beneath the sea may have been due to a faulting of the rock formation, induced by earthquake action. The Dead Sea, especially in its southern part, still yields masses of bitumen, and it was its bituminous products that procured for it from the Greeks the name *Asphaltitis*. See J. P. Harland, 'Sodom and Gomorrah,' *BA*, v (1942), 17 ff, vi (1943), 41 ff.

G. W. W.—**F. F. B.**

SIDE, a Greek colony, was situated on the coast of Pamphylia, on a low promontory about 10 miles E. of the river Eurymedon. It had two harbours and was well fortified. The remains are extensive and interesting (*Eski Adalia*). It was one of the cities addressed on behalf of the Jews by the Romans in 139 B.C. (1 Mac 15[23]).

A. So.

SIDON.—About midway between *Beirût* and Tyre, on the edge of a fertile strip of plain stretching from the mountain to the shore, a small rocky promontory juts into the sea. Here stood the ancient city of Sidon. The site was chosen doubtless because of the excellent harbour formed by a series of small islets, a short distance from the shore, which protected shipping lying by the city. In old times the islets were joined together by artificial embankments. This harbour lay to the N.; on the S. was a second one, larger but less secure, known as the Egyptian harbour. Sidonians is sometimes used for Phoenicians in the OT (Gn 10[15], Jg 10[12] etc.) as regularly in Homer. Sometimes Sidon is called 'Great Sidon' (Jos 11[8] etc.). The Sidonians excelled in artistic metal work (cf Homer, *Il*, xxiii. 743–748) and in the products of the loom, the value of which was enhanced by the famous dye, used first by the Sidonians, but known to the later world as 'Tyrian purple.' The planting of colonies was a natural, and almost necessary, outcome of her commercial enterprise. Aradus (Strabo, XVI. ii. 13) and Carthage (Appian, *de Rebus Punicis*, 1, etc.) are said to have been founded by her, and she seems to claim on a coin to be the mother-city of Melita or Malta, as well as of Citium and Berytus. King Zimrida of Sidon appears in the Amarna tablets as rebel against Egyptian rule. Sidonian ascendancy succeeded the decline of the Egyptian power after Rameses II. How long it lasted we do not know. The Asherites, who had not dispossessed the Sidonians (Jg 1[31]), allegedly suffered oppression at their hands (10[12]). By the time of Solomon, however, Tyre had assumed the hegemony (Jos. *Ant.* VIII. v. 3 [141 ff], *c. Apion*, i. 18 [116 ff]). But Assyrian power was now expanding and Tiglath-pileser I. *c* 1100 B.C. had already assumed the heritage of the Hittites by coming to Arvad. In 877 B.C. Sidon, with other Phoenician cities, submitted to Ashur-naṣir-pal and 'sent him presents.' Sidon suffered under Shalmaneser III., Tiglath-pileser III., Shalmaneser V., and finally was subdued by Sennacherib, who made Tubaal, a creature of his own, king. A revolt under Tubaal's successor led to the utter destruction of the city in 678 B.C. by Esarhaddon, who built a new city called by his own name. The attempt to gain Judah for the league against the growing power of Babylon brought an embassy to Jerusalem, in which the king of Sidon was represented (Jer 27[3]). A revolt joined in by Judah, was stamped out by Nebuchadrezzar in 597 B.C. Sidon's swift submission was due to devastating pestilence (Ezk 28[21ff]). The long resistance of Tyre led to her destruction and humiliation (Ezk 26[8ff]), Sidon once more assuming the leadership.

In the beginning of the Persian period the Phoenician cities enjoyed practical autonomy, and a time of great material prosperity. A friendly arrangement with Cambyses perpetuated this state of things, and in the Greek wars most valuable assistance was given by the Phoenicians to the Persians. The revolt of the Phoenicians, headed by Sidon, about 351 B.C., was remorselessly crushed by Artaxerxes Ochus. Sidon was betrayed into his hands by the despairing king, Tennes. The inhabitants burned the city, more than 40,000 perishing in the flames. Perhaps at this time Sidonians were settled at Shechem, where Alexander encountered a population claiming that name (Jos. *Ant.* XI. viii. 6 [344]). But the city rose again from its ashes, and regained something of its former prosperity. The son of Tennes became king and retained the sceptre till the advent of Alexander.

While Phoenicia then lost her predominance in the trade of the Mediterranean, Sidon retained considerable importance as the possessor of an excellent harbour, and as a seat of Phoenician industry. Lying in the territory often in dispute between Syria and Egypt, in the following centuries Sidon several times changed hands. Under the Romans she enjoyed the privileges of a free city. Sidon figures in the Gospel narratives (Mt 11^{21f} 15^{21}, Mk 3^{8} etc.). Jesus may have passed through territory belonging to the city (Mk 7^{31}). It appears in Ac 12^{20}, and was touched at by St. Paul in his voyage to Rome (Ac 27^{3}). It later became the seat of a bishop. Sidon suffered heavily during the Crusades. Under the Druse prince, Fakhreddin (1595–1634), its prosperity revived; but, in order to prevent the approach of the Turkish fleet, he caused the entrance to the harbour to be filled up, thus making it comparatively useless. The present walls of the city were built by Mohammed 'Ali of Egypt (1832–1840). The fortress, *Kal 'at el-Baḥr*, 'Castle of the Sea,' dating from the 13th cent., stands on the largest of the islands, which is joined to the mainland by a bridge of 9 arches. The present population is about 11,000. The chief occupations are fishing, and the cultivation of the gardens and orange groves for which modern Sidon is famous. While the oldest existing building dates from the Middle Ages, there are many remains of great antiquity, traces of walls, hewn stones, pillars, coins, and the reservoirs cut out of the rock. The most important discoveries so far have been (1855) the sarcophagus of king Eshmunazar (early in the 4th cent. B.C.), with the well-known inscription, now in Paris; and (1887) the tomb containing 17 Phoenician and Greek sarcophagi, highly ornamented; among them that of Tabnit, father of Eshmunazar, and the so-called Alexander Sarcophagus —probably that of Abdalonimus, whom Alexander restored to the throne of his fathers. W. E.—E. G. K.

SIEGE.—See Fortification and Siegecraft.

SIEVE.—See Agriculture, 3.

SIGN (Heb. *'ôth*; Gr. *sēmeion*).—The word occurs some 90 times in the OT and 74 in NT; also frequent in Hellenistic writers and with similar meanings.

1. A mark of identification: sun, moon and stars for signs of day, night and seasons (Gn 1^{14}); military standards (Nu 2^{2}); manger and swaddling clothes (Lk 2^{12}); Paul's penmanship (2 Th 3^{17}); Judas' kiss (Mt 26^{48}).

2. Memorials: stones from the Jordan (Jos 4^{6}); metal of censers (Nu 16^{38}); Aaron's rod (Nu 17^{10}); myrtle tree (Is 55^{13}); passover (Ex 13^{9}); pillar (Is 19^{20}).

3. Pledge of a covenant: rainbow (Gn 9^{12-17}); circumcision (Gn 17^{11}); Sabbath (Ex 31^{13-17}, Ezk 20^{12}).

4. Prophetic symbols: Isaiah and his children (Is 8^{18} 20^{3}); diorama of siege of Jerusalem (Ezk 4^{3}).

5. Signs and wonders: a standard idiom often used of omens and portents associated with the Exodus (Ex 7^{3} etc.), birth, life, death (Mt 27^{45-54}), and resurrection of Jesus, preaching of the apostles (Ac 2^{43}) and end of world (Mt 24^{1-31}). Josephus (*War* VI. v. 3 [288–309]) lists portents which accompanied the fall of Jerusalem in A.D. 70.

6. Signs and wonders were also attributed to false prophets (Ex 7^{11-12}, Dt 13^{2-3}), false Christs (Mk 13^{22}), and Satan (2 Th 2^{9}).

7. According to the earliest sources, Jesus Himself refused to give a sign to validate His ministry (Mk 8^{12}, Mt 4^{1-11}), but later traditions (Mt 16^{4} 12^{40}, Jn 20^{30-31} etc.) ascribe many signs to Him. It may be, however, that John means that the signs he records are allegories, written to replace parables such as are found in the other Gospels. The attitude of Jesus indicates that although He healed many persons of their diseases, He did this out of compassion, not as signs; and that He did not consider such things as a necessary basis of faith.

Cf also Miracles, and Wonders. S. V. McC.

SIGNET.—See Seal.

SIHON.—A king of the Amorites at the time of the conquest of Canaan. His dominion lay beyond the Jordan, between Jabbok on the N. and Arnon on the S., extending eastward to the desert, Jg 11^{22}. He refused to allow Israel to pass through his land, and was defeated at Jahaz, Nu 21^{21-24}, Dt 2^{26-36}, Jg 11^{19-22}. **Heshbon**, his capital, was taken; and his land, along with that of Og, king of Bashan, became the possession of Reuben, Gad, and the half tribe of Manasseh. Frequent reference is made to his defeat, Nu 32^{33}, Dt 1^{4}, Jos 2^{10}, 1 K 4^{9}, Neh 9^{22}, Ps 135^{11} 136^{19} etc. In Jer 48^{45} Sihon stands for Heshbon, the city of Sihon (RSV 'the house of Sihon' for AV and RV 'the midst of Sihon'). W. F. B.

SIHOR, Jos 13^{3}, Is 23^{3}, Jer 2^{18} (AV).—See Shihor.

SILAS (Acts) and **SILVANUS** (Epistles).—Silas is the Greek form of the Aramaic name *she'îlâ* (='asked for'); Silvanus is a Latin name very similar in sound. The Jews liked to have Greek or Latin names of similar sound in addition to their Hebrew or Aramaic names. Silas, according to Ac 15^{22} a Christian prophet at Jerusalem, was sent as a delegate to the community of Antioch; later on he accompanied St. Paul on the Second Journey (Ac 15^{40}–18^{50}). Then he disappears from the Pauline history in Acts.

In 1 Thessalonians, written during the Second Journey, Silvanus is named as sender besides Paul (and Timothy): 1^{1}. St. Paul reminds the Corinthians of Silvanus's former preaching (2 Co 1^{19}). In 1 P 5^{12} Silvanus is represented as accompanying St. Peter. The words 'By Silvanus . . . I have written' have been interpreted in various ways: Peter has dictated the letter, or he has indicated only the main lines. But because the letter is probably postapostolic, this tradition concerning Silvanus remains uncertain. E. H.

SILK.—See Dress, 1.

SILLA.—The servants of king Joash smote him 'in the house of Millo [read rather 'at Beth-Millo'] *on the way* that goes down to Silla,' 2 K 12^{20}. What Silla may have been there is nothing to show. The LXX reads *Gaala* or *Gaallad*. R. A. S. M.

SILOAH, Neh 3^{15} (AV).—See Siloam.

SILOAM.—The name survives in *Silwân*, the village on the steep E. slopes of the Kidron Valley stretching from opposite 'the Virgin's Fountain' (Gihon) to near *Bir Ayyûb* (En-rogel). The whole of the N. part of the village has been built upon in ancient times, and the whole area is riddled with cave-dwellings, cisterns, rock-cut steps and tombs, among which one, the defaced inscription of which intimates that it was that of a royal chamberlain and his slave-wife, may be that of the official Shebna, whose presumption in having such a tomb prepared for himself Isaiah (22^{15ff}) stigmatizes. It may be considered as certain that in NT times there was a considerable village here. The 'tower' which fell (Lk 13^{4}) may have been a building similar to many today built on the edge of the precipitous rocks above the Kidron. The source of the famous 'Pool of Siloam' is the above-mentioned 'Virgin's Fountain,' known to local Moslems as *'Ain ed-Daraj* ('the Spring of the Stairway') see Gihon. In 1867 Warren discovered a vertical shaft on the E. slope of the Ophel Hill leading down to a tunnel which connected with the spring in the Kidron Valley, thus making water accessible from the shelter of the city wall. This work and other tunnels at Megiddo, Gezer, and Gibeon no doubt reflect the insecurity in Palestine on the eve of the Iron Age *c* 1200. A later development is a channel which follows the contour on the E. slope of Ophel, sometimes under the rock, but more often open, until it debouches into an open pool, the city cesspool in Turkish times, but now dry, called *Birket el-Ḥamrā*, in the depression between the Ophel and the W. hill of Jerusalem. This work, rather for irrigation than drinking, was practicable only in the security of Solomon's reign. This, rather than the Pool of Siloam, may be 'the canalized water' (EV 'waters of **Shiloah**') of Is 8^{6}, *Birket el-Ḥamrā*, insofar as it actually adjoined the city wall, being the 'Pool of Shiloah' (AV **Siloah**; RV, RSV **Shelah**) of Neh 3^{15}, and 'the King's Pool' of Neh 2^{14}.

The water supply under this arrangement being vulnerable, Hezekiah ' stopped the upper water-course of Gihon and brought it straight down to the west side of the city of David ' (2 Ch 32^{30}; cf 32^{4}, 2 K 20^{20}), this being the famous **Siloam tunnel.** This runs in an extraordinary serpentine course for 1700 ft., debouching in the Tyropoeon Valley under the name of *'Ain Silwân* (' the Spring of Siloam ') to feed *Birket Silwân*, the Pool of Siloam. Close to the lower opening of the tunnel was found in 1880 a Hebrew inscription giving an account of the completion of the work, but not naming its author, who was nevertheless probably Hezekiah.

The original Pool of Siloam, of which the present *birkeh* occupies but a part, was excavated by Bliss, and proved to have been a rock-cut reservoir 71 ft. N. to S. by 75 ft. E. to W. A covered arcade, 12 ft. wide had been built, probably about NT times, round the four sides of the pool, and a division ran across the centre to separate the sexes when bathing. Such was probably the condition of the pool at the events described in Jn 9^{7}. The water of *'Ain Silwân*, like that of its source (Gihon), is naturally brackish and impregnated with sewage; it runs intermittently, a feature which may be indicated in the name of its source, Gihon (' Gusher ').

E. W. G. M.—J. Gr.

SILVANUS.—See Silas.

SILVER.—See Mining and Metals.

SILVERLING.—Only in Is 7^{23} AV and RV, where the original reads ' a thousand of silver,' the denomination to be supplied being ' shekels ' (so RSV).

SIMALCUE, 1 Mac 11^{39} (AV).—See Imalkue.

SIMEON (Lk 3^{30}, Ac 13^{1} 15^{14}; RV, RSV Symeon). —**1.** The second son of Jacob and Leah and the eponymous ancestor of one of the tribes of Israel. According to Gn 29^{33} he was named *Shim'ôn* by his mother because Yahweh ' has heard (*shâma'*) that I am hated '—an allusion to the fact that Rachel was Jacob's favourite wife. This association of the name with Leah's unhappiness is obviously legendary, though the derivation of it from *shâma'* will be correct if, as has been suggested by some scholars, it is an abbreviation of Ishmael (*Yishma'ēl*). Others have thought that it is connected with the Arabic *sim'*, the hybrid offspring of the hyena and the female wolf, which appears as a tribal name among the bedouin.

The fact that Simeon and Levi are specifically designated as ' Dinah's brothers ' in Gn 34^{25}, and again in 49^{5} are referred to as brothers, points to a particularly close association of the two tribes and suggests that their eponyms may have been regarded as brothers and sons of Leah before the growth and articulation of the tribal traditions placed them among the sons of Jacob. If so, then it may be assumed that Simeon had its own history before it entered the federation of southern clans which ultimately coalesced to form the tribe of Judah. The fact that its eponym was included among the sons of Jacob indicates that it was at one time a more important group than the Kenites, the Jerahmeelites, the Othnielites and the Calibbites, whose eponyms never attained this status.

There is a reminiscence of some episode in its history in the story of the seduction of Dinah in Gn 34. In its present context the story locates the event in Shechem, but nowhere else in the OT is there any suggestion that the Simeonites ever reached as far N. as this; furthermore there are indications in the tale itself that in the earlier of the two narratives of which it was composed the scene was in the S. (*e.g.* the LXX reading of ' Horite ' for ' Hivite ' in v.^{2}; cf Gn 36^{20} where the Horites are implicitly located in Edom). According to the oracle in Gn 49^{5-7} the tribes of Simeon and Levi were shattered as the result of some act of wanton violence. The terms in which this is described may suggest fratricidal warfare; they scarcely warrant the assumption that it was the treachery with which they are charged in Gn 34^{25f}, though this may well be appealed to as another instance of the ruthlessness and irresponsibility which brought about their destruction. By the time the oracle in Gn 49 took form—not later than the 9th cent. and probably considerably earlier—Simeon had already lost its tribal identity. But in the early tradition of the conquest preserved in Jg 1 it still appears as a separate entity though, significantly, in close association with Judah; and Jg 1^{17} would seem to imply that it was settled in the region of Zephath-Hormah, not far from Arad (cf Nu 21^{1-3}), some 17 miles S. of Hebron. In Jos 15^{30}, however, Hormah is mentioned as a city of Judah, and most of the cities assigned to Simeon in Jos 19^{1-9} reappear elsewhere as cities of Judah (cf Jos $15^{26-32, 42}$, 1 K 19^{3}, Neh 11^{26-29}, 1 S 27^{6} 30^{30}). The inference to be drawn is that following the disaster alluded to in Gn 49^{5-7} the survivors of Simeon were absorbed into Judah; and the fact that Simeon does not appear among the southern clans mentioned in 1 S 27^{10} 30^{29f} suggests that the survivors were so few and so scattered that they could not maintain themselves even as a political sub-division of Judah.

Nevertheless, the memory of the tribe was kept alive in the national tradition. Simeon is named in the Joseph story (Gn 42^{24}) as the hostage detained in Egypt to ensure the brothers' return with Benjamin. He is not mentioned in the blessing of Moses (Dt 33) but the tribe is included in the census lists in Numbers (1^{22f} 26^{12-14}). A note in 1 Ch $4^{39\pi}$, appended to the genealogical register of Simeon, says that some 500 men of the tribe, being expelled from Gedor (LXX Gerar) in the time of Hezekiah, migrated to Mount Seir and there seized the land of the Amalekites. If this is based upon an authentic tradition it indicates, somewhat surprisingly in view of the silence elsewhere, that Simeon was still an entity of sorts in the 7th cent.

It has been thought by some scholars that Simeon appears in the inscriptions of Esar-haddon as the name of a district in the vicinity of Apku which they identify with Aphekah, near Hebron (Jos 15^{53}). But the reading Simeon is precarious; Samaria may be intended; and there is an Aphek in Asher mentioned in Jos 19^{30}, possibly identical with that in Jos 12^{18} and another in Jos 13^{4} on the border of the territory of Sidon.

2. The great-grandfather of Judas Maccabaeus (1 Mac 2^{1}). **3.** The righteous and devout man who took the infant Jesus in his arms and blessed Him when He was presented in the Temple (Lk $2^{25\pi}$). **4.** A descendant of David (Lk 3^{30}) mentioned in the Lucan genealogy of Jesus. **5.** A leader of the church at Antioch (Ac 13^{1}). **6.** The apostle Peter (Ac 15^{14}). J. A. C.—C. A. Si.

SIMON (a Greek form of *Simeon*).—**1.** Simon Chosamaeus, who was found to have a ' strange ' wife (1 Es 9^{32} || Ezr 10^{31} **Shimeon**). **2.** The subject of the encomium in Sir $50^{1\pi}$, the high priest, son of Onias—probably Simon II. (*grandson* of Onias I.) early in the 2nd cent. B.C. **3.** The Maccabaean high priest and ethnarch, son of Mattathias, slain by his son-in-law Ptolemy, 135 B.C. (1 Mac 16^{16}; see Maccabees, **4**). **4.** A Benjamite, guardian of the Temple in the time of Onias III., who suggested to Apollonius, the governor, to plunder it (2 Mac 3^{4}). **5.** See Peter. **6.** See Simon Magus. **7.** Simon the Cananaean, one of the Twelve (Mt 10^{4}, Mk 3^{18}). The surname is an Aramaic equivalent of ' Zealot ' (Lk 6^{15}, Ac 1^{13}). **8.** See Brethren of the Lord. **9.** Simon the Leper, our Lord's host at Bethany (Mt 26^{6}, Mk 14^{3}; cf Jn 12^{2}), possibly husband or father of Martha, doubtless cured of his leprosy at some time before the anointing by Mary (cf Mary, **2**). **10.** The Pharisee who was our Lord's host when the penitent woman anointed Him (Lk 7^{40}). The contradictions between these two stories are so great that it is difficult to suppose that they relate the same event in different versions. Two such incidents may well have happened, and one may have suggested the other (cf Mary, **2**). **11.** Father, or brother, of Judas Iscariot, himself surnamed Iscariot (Jn 6^{71} 13^{26} ' Judas of Simon Iscariot,' 13^{2} ' Judas Iscariot son of Simon '). **12.** The Cyrenian who bore our Lord's cross (Mt 27^{32}, Mk 15^{21}, Lk 23^{26}); see Alexander and Rufus. The followers of Basilides in the 2nd cent.

said that Simon was crucified instead of Jesus. 13. The tanner, Peter's host at Joppa (Ac 9[43]). A. J. M.

SIMON MAGUS.—In the NT the Samaritan magician Simon appears only once (Ac 8[9–24]). He is converted to Christianity largely because of the miracles performed by the evangelist Philip (q.v.), though he does not receive the Holy Spirit, given by the imposition of the apostles' hands. He offers money to Peter and John, but Peter condemns him and urges him to repent; Simon then asks Peter to pray for him. Luke apparently knows more about Simon than this story, for he says Simon called himself 'someone great' and the Samaritans acclaimed him with the words 'The man is that power of God which is called Great.' Evidently the Samaritans regard Simon as an angelic messenger or, less probably, as the Samaritan *Taʿeb* or Messiah; in the year A.D. 36 there was a Samaritan prophet who told the people he could recover the lost sacred vessels buried by Moses on Mount Gerizim (Jos. *Ant.* XVIII. iv. 1 [85–87]).

In later times there was a gnostic sect of Simonians which flourished in Samaria but also had representatives in Rome; this is attested by Justin and Irenaeus, who say that Simon claimed to be the supreme deity from whom emanated a 'first thought' through whom the universe was made; this 'thought' had fallen and was imprisoned in a succession of female bodies; Simon himself finally descended in order to save her. Irenaeus tells us that he regarded himself as Father, Son, and Holy Spirit. It is by no means clear that this Simonian doctrine actually goes back even to the end of the 1st cent., and many aspects of Simonian thought seem to be based on NT writings.

A different account, found in the Ebionite pseudo-Clementine literature traces Simon's spiritual descent back to a certain Dositheus (Dosthai), whose doctrines, as described by late sources, were very close to those of the Essenes as revealed by the Dead Sea Scrolls. According to the Pseudo-Clementines, both Simon and Dositheus were disciples of John the Baptist; after John's death Dositheus was head of the sect, but soon came to recognize that Simon was 'the standing one.' This account may be more reliable than that of the church fathers, with which it can hardly be reconciled.

Perhaps we can differentiate two stages in Simonian doctrine, the earlier reflected in the Pseudo-Clementines, the latter found in church writers. The account in Acts might then represent an intermediate stage, described from a hostile point of view. R. M. G.

SIMPLICITY.—In the OT 'simple' is almost always the translation of a word (*pᵉthî*) which appears mainly in Proverbs, and can be used in a good or a bad sense. The simple are represented as on a level with the young (Pr 1[4]) and the foolish (1[22, 32]), the opposite of the 'prudent,' those who 'believe everything' and therefore 'acquire folly' (14[15, 18]). On the other hand, Yahweh guards them (Ps 116[6]) and His testimony makes them wise (Ps 19[7]). In 2 S 15[11] 'simplicity' means 'integrity' (*tōm*). In the Testaments of the Twelve Patriarchs (Issachar) the man of straightforward simplicity is vividly eulogized. In the NT 'simple' and 'simplicity' denote the same singleness of character (Gr. *haplotēs*) described in the Testament of Issachar, the attitude of 'sincere devotion' (as RSV translates the word in 2 Co 11[3]) to Christ. The 'sound eye' of Mt 6[22] (Gr. *haplous*) is a Semitic way of describing this type of character. Similarly, Jesus' disciples are told to be 'wise as serpents and innocent as doves' (Mt 10[16], cf Ro 16[19]). Because the 'simple' man (in this good sense) is generous without ulterior motives the term 'simplicity' comes to mean 'generosity' (Ro 12[8], 2 Co 8[2] 9[11, 13], Ja 1[5]; cf Pr 11[25] LXX). 'Singleness of heart' is another Semitic expression referring to purity in self-surrender (q.v.) to God (Eph 6[5], Col 3[22]). R. S. B.

SIMRI, 1 Ch 26[10] (AV).—See SHIMRI, 3.

SIN, Ezk 30[15f] (AV, RV).—See PELUSIUM.

SIN.—The earliest OT writers (J tradition) no sooner mention man than they find themselves faced with the problem of sin. It arose out of disobedience (Gn 3[11]) and it grew into falsehood, selfishness and defiance (Gn 4[9]). From the second chapter of the Bible to the last chapter we read of man's persistent sin, of God's varied methods of dealing with it, and of the rewards and penalties of sin. The Bible is essentially realistic, but never more so than in dealing with this problem. Others may 'call evil good and good evil' (Is 5[20]), but not the Bible writers. They condemn sin, they call sinners to repentance, they earnestly seek for a cure that no mortal man can provide, till finally God Himself in Christ provides the cure for 'every one who believes in' Christ.

I. THE OLD TESTAMENT.—**1. The early narratives.**—In the story of the Fall, not only does the writer (J) attribute sin to a positive act of conscious disobedience to God, but he regards it as an entity standing over against 'good' (2[17]). In the same writer's narrative of the murder of Abel, sin is represented as the *rōbhēṣ*, the door-demon who lurks outside in the dark to catch the unwary (4[7]). These stories are the beginning of the history of a long process of deterioration which culminated at the Flood. From individual acts of wrong-doing we are brought face to face with the condition, 'every imagination of the thoughts of his heart was only evil continually' (6[5]). The growth and arrogance of sin in the human race became so pronounced and universal that God is said to have rejected man completely, and in His wrath to have destroyed His creation, which was infected by man's corruption. He is 'grieved to his heart' and sorry that he ever 'made man on the earth' (6[6]). The same writer, in giving the current explanation for the diversity of human language, notes another racial rebellion against God, which was punished by the overthrow of Babel (11[1–9]).

A change in the Divine method of dealing with sinful man is now noticeable. The writers lead gradually up to this, beginning with Noah, whose righteousness (7[1]) stands in solitary contrast to the universal decadence. The elective principle enters into the relationship of God and man. A covenant is established by which this relationship is defined, and in consequence human consciousness of sin is gradually deepened. It is not always the patriarchs who lead the way. In individual cases outside the covenant we see, indeed, evidences of a higher standard of moral obligation (Gn 12[18f] 20[9f]). At the same time, the history of Esau furnishes us with proof that already glimmerings of a more profound ethical basis upon which to build human character than that recognized elsewhere, had begun to intrude themselves. If in the case of Abraham 'faith was reckoned as righteousness' (Ro 4[9]), and belief in the fidelity of God's promises in the face of the most untoward conditions, constituted the foundation-stone of the patriarch's noble character, so in Esau's case it was the lack of this belief, with the consequent inability to appreciate the dignity to which he was born, that lay at the root of his great and pathetic failure. The secret of Joseph's power to resist temptation lay, not merely in his natural inability to be guilty of a breach of trust towards his master, but still more in his intense realization that to yield would be 'a great wickedness and sin against God' (Gn 39[9]). Thus, while it is true to say that the dominating conception of sin in the OT is that it is the great disturbing element in the personal relations of God and man, it seems to have been realized very early that the chief scope for its exercise lay in the domain of human intercourse. The force of Abimelech's complaint against Abraham lay in the fact that the former was guiltless of wronging the latter, whereas he was in serious danger of sinning against God in consequence of the patriarch's duplicity.

2. The Sinaitic Law.—The next great critical point in the evolution of human consciousness of sin is reached in the promulgation of the Law from Sinai. Here the determinative process of Divine election is seen in its widest and most elaborate working. The central purpose of the Law may be considered as of a twofold character. Not only are the restrictions tabulated in order for the erection of barriers against the commission of sin ('God

has come to prove you, and that the fear of him may be before your eyes, that you may not sin,' Ex 20[20]), but positive enactments regulating the personal communion of God and Israel provide frequently recurring opportunities of loving and joyful service (Ex 23[14ff]). The law of restitution, as given in Ex 21–22, may be regarded as harsh in some of its enactments, but it may be easily conceived as an immense stride forward on the road to 'the royal law . . . You shall love your neighbour as yourself' (Ja 2[8]). It cannot be said that restitution and mutual service are left out of sight in those chapters of Exodus which are universally recognized as containing the oldest part of the Mosaic Code. Although anthropopathic conceptions of God abound and are to be seen, for instance, in the idea of His jealousy being roused by idolatrous practices (Ex 20[5]), yet the promises are made to Israel that, in return for services to Y″, He will save His people in the face of their enemies (Ex 23[25ff]).

3. Deuteronomy and the Historical Books.—In the Deuteronomic summary of the Law, whatever be the date at which it was edited, a loftier ground of obedience is attained. Love of God and of their fellow-men is more explicitly dwelt on as the motive power of human life (Dt 6[5] 10[12] etc.), and the heart is again and again referred to as the seat of that love, both passively and actively (11[18] 6[6] 10[16]). The basis upon which it is rested is the fact of God's persistent love for them and their fathers evidenced in many vicissitudes and in spite of persistent waywardness and stubbornness to hinder its activity (4[37] 7[7f] 10[15]). Though there are numerous echoes of the older conception that the keeping of God's commandments is one side of a bargain which conditions men's happiness and prosperity (4[24, 40] 6[15]), yet we observe a lofty range of thought bringing in its train truer ideas of sin and guilt. The sternness of God is insisted on, but as having for its objective the ultimate good of His people (10[13] 6[24]). It is a necessary phase of His love, compelling them to recognize that sin against God is destructive of the sinner. The ultimate aim of the Deuteronomist is the leading of men to hate sin as God hates it, and to love mercy and righteousness as and because God loves them (cf Dt 10[18f], Lv 19[33f]), by establishing the closest relationship and communion between Him and His people (cf Dt 14[1f] 7[6] 26[18f] 27[9] 28[9] etc.).

One sin is specially insisted on by the Deuteronomist, namely, the sin of idolatry. We know in these days that Israel had no genius for religion except in continually turning aside to worship the gods of Canaan. The tablets found from 1927 onwards at Râs Shamra (Ugarit) have given us a picture of Canaanite religion, the kind of religious ideas and cults with which the Hebrews came into contact when they entered Canaan. It is against Canaanite cults such as this that the Deuteronomists are fighting, as indeed we realize most clearly when we read a statement such as that in Jer 44[17], that for generations the Queen of Heaven had been worshipped. In Deuteronomy and the historical books the national disasters which recur so frequently are always atrributed to this sin of idolatry, *i.e.* worshipping the gods of Canaan, while the return of the people under the guidance of a great representative hero or later under the government of a good king, is marked by the blessings of peace and prosperity. In the story of the Northern Kingdom the constant refrain meets us in each succeeding reign: 'He clung to the sin of Jeroboam the son of Nebat which he made Israel to sin' (2 K 3[2] 10[29] 13[2] etc.). During the vigorous and successful reign of Ahab and Jezebel, the seeds of national decay were sown, and the historian does not neglect to point out the source to which the later mournful decline may be traced (1 K 16[31]). The great rebellion against the Davidic dynasty which occurred at the death of Solomon is attributed to the stated declension of Solomon in his old age from the pure Y″ worship so zealously and consistently advocated by his father David. We are not, however, altogether limited to what is here inferentially taught as to national sin, with its consequent national punishment. Side by side with the introduction of foreign religious ideas, vices peculiar to Oriental despotism invaded the royal court and the nation of Israel. David himself is represented as guilty of a sin which marred his character as an individual, and the census (2 S 24) was regarded as a breach of that trust held by him as God's vicegerent on earth. Both these cases are of interest in the light they throw on the doctrine of sin and its consequences. In the case of Bathsheba, which was a purely personal transgression, the prophet Nathan comes not only as the bearer of a message of Divine pardon to the repentant sinner, but also as the stern judge pronouncing sentence of severe and protracted punishment. The death of the newly born child and the subsequent distractions arising out of the affair of Absalom are looked on as expressions of God's wrath and of retributive justice (see 2 S 12[10–18]). Whatever the contemporary reasons for regarding the taking of the census as sinful, and even the reckless Joab considered it an act of wanton folly, we find the same features of repentance and forgiveness, and the same inclusion of others in the suffering consequent on its commission. The prophet Gad comes to the king as the revealer of God's wrath and the messenger of God's pardon (2 S 24[1–25]). Into this narrative, however, another element is introduced, telling of the difficulty which was felt, or perhaps not yet felt, as to the origin of sin. God is said by the early historian of David's reign to have been the instigator of the king's act, because His anger 'was kindled against Israel' (2 S 24[1]). It is difficult to avoid the conclusion that at one stage of Hebrew thought God was looked on as, in some respects at least, the author of evil (cf Ex 4[21] 7[3] 14[8], Jg 9[23], 1 S 16[14] 18[10] 19[9]). Nor ought we to be surprised at this, for this problem is one which was sure to present itself very early to the minds of thoughtful men; while the numerous instances where the commission of a sin seemed to have been made subservient by God to the exhibiting of His power and love afforded presumptive **prima facie** evidence that He Himself willed the act as the minister of His glory (see the history of Joseph with the writer's comments thereon, Gn 45[5] 50[20], Ps 105[17]; cf Job 1[6–12] 2[1–7], Hos 2). It is interesting to note the advance made in speculative thought with regard to this still unsolved, and perhaps insoluble problem, between the time of the above-mentioned historian and that of the later Chronicler (1 Ch 21[1]). Here the name of Satan or 'Adversary' is boldly inserted as the author of the sin, a fact which reminds us of the categorical denial of the Son of Sirach, 'He hath not commanded any man to be ungodly; and he hath not given any man licence to sin' (15[20]). That the origin of sin continued to be debated and speculated upon down to a very late period is evidenced by the vehement warning of St. James against imputing to God the temptation to evil (Ja 1[13]), and by the counter assertion that God is the author of nothing but good (v.[17]).

4. The Prophets.—By far the most important stage in the history of the OT doctrine of sin is that which is marked by the teaching of the prophets. The four practically contemporary prophets of the 8th cent. are Amos, Hosea, Isaiah, and Micah. The first named reveals a growing outlook on the world at large, and a recognition of the prevalence and power of sin in other nations than Israel. Damascus, Philistia, Tyre, Edom, Ammon, and Moab, as well as Judah and Israel, all come under the displeasure of the prophet Amos. Each had been guilty of cruelty and wrong against the people of Y″. The characteristic faults of these heathen peoples—lust and tyranny of the strong over the weak—had invaded Israel too. The love of money, with its attendant evils of injustice and robbery of the poor by the wealthy, is inveighed against by both Amos and Hosea as deserving of the wrath of God (cf Hos 12[7f], Am 4[1] 8[4ff]). This degeneracy of the people of the Northern Kingdom during the reign of Jeroboam II. was as much in evidence in the ranks of the prophets and priests as among the other ruling classes, and to it, as the cause, is assigned the downfall which so speedily followed (Am 3[11] 6[1–7] 2[7] 9[1ff], Hos 4[9] 9[7f] 5[1], Mic 3[5, 11] etc.). Both Isaiah and Micah mourn over the same moral declension (Is 5[8] 1[16f], Mic 2[2]

etc.), and it may be said that it is owing to the preaching of these four prophets that the centre of gravity, as it were, of sin is changed, and the principles of universal justice and love, as the fundamental attributes of Y″'s character and rule, are established. It was the prophetic function to deepen the consciousness of sin by revealing a God of moral righteousness to a people whose peculiar relationship to Y″ involved both immense privileges and grave responsibilities (Am 3[2], Hos 3[5ff], Mic 3[1ff] etc.). Terrible, however, as were the denunciations, and emphatic as were the declarations of the prophets against the vices of greed, oppression and lust, they were no less clear in their call to repentance, and in promises of restoration and pardon (Is 1[18f], Mic 7[18], Hos 6[1], ? Am 9[11f]). The later story of Jonah of Gath-hepher is the revelation of a growing feeling that the righteous dominion of Y″ was not, in the exercise of its moral influence, confined exclusively to Israel. The consciousness of sin and the power of repentance have now their place in the lives of nations outside the Abrahamic covenant.

Hitherto the prophetic teaching was largely confined to national sin and national repentance. It is not till the days of Jeremiah that the importance, in this respect, of the individual begins to manifest itself. The lament of Jeremiah, it is true, frequently expresses itself in terms of national infidelity (Jer 2[5–37] 8[7] 3[5]14–17 31[28] 32[32ff] etc.). At the same time an element of individualistic thought enters largely into his teaching (cf 17[10] 32[19]). On its darker side he notes how universally present sin is seen to be: he says 'from the least to the greatest,' or again, 'from prophet to priest' all are infected (8[10], cf v.[6]). It is impossible to find a man either just or truth-loving (5[1]); and the explanation is not far to seek for sin is a disease which affects the individual heart, and therefore poisons the whole life of each man (cf 13[7] 5[23] 7[24] etc.). The nature of the disease he characterizes as desperate is in the awful deceit which supervenes (17[9]). A hopeless pessimism seems at times to have pervaded the prophet's teaching, and such of the people as were aroused by his appeals were smitten by a blank despair (10[23] 2[25] 18[12] 13[23] etc). As the prophet grows older, however, and gains a wider knowledge from his own bitter experiences, he discovers a way of escape from the overpowering influence of sin. As the heart is the seat of evil, it is found that the creative act of God can provide a remedy (31[33] 32[39] 24[7]). A new heart straight from the hand of God, beating with new and holy impulses, is the sure, as it is the only, hope for men (32[40]). Every individual, from the least to the greatest, in whom the Divine activity has been at work shall have the felicity of hearing the blessed sentence, 'I will forgive their iniquity, and I will remember their sin no more' (31[34]).

Following up and developing this tendency, Ezekiel is express in his declaration of the moral independence of each man. Repudiating, as Jeremiah did, the doctrine that the sin and guilt of the fathers are imputed to the children, he elaborates clearly and emphatically the truth, which seems to us axiomatic, that the father as an individual is independent of the son, with the terrible but inevitable corollary, 'the individual who sins, shall die' (Ezk 18[4, 20]; cf vv.[10–20]). The profound truth which lies at the basis of the ancient belief in the close interaction of individual and racial guilt is, of course, valid for all time, and has been sanctified by the historical fact of the Incarnation. The life, work and death of Christ have their value in the re-establishment of this truth, and in the re-creation, as it were, of the concurrent truth of the solidarity of the whole human race (cf the expression 'we are all become like one who is unclean,' Is 64[6]).

5. Psalms.—We turn now to the Psalms, and there find, as might be expected, the deepest consciousness of personal guilt on the part of the sinner. Of course, it is to be remembered that the Jewish Psalter is the product of different epochs in the national history, ranging probably from the time of David and the heyday of prophetic religion to the age immediately succeeding the Captivity, if not much later. It may be said, indeed, that this volume of sacred poetry constitutes a kind of antiphonal response to the preaching of the Prophets. Not only so, but there is a considerable consensus of opinion in modern times that here we have also the apparatus of a living cultus. Thus, from both points of view, the Psalter has its roots and was imbedded in the religious life of the people. Confession of and repentance for sin, both personal and national, constitute the prominent feature of the authors' attitude. A deep love for God breathes through the poems, and a profound hope that at some future date Israel may be restored once more to the favour of Y″.

The climax of confession, repentance and restoration of the sinner is to be seen in Ps 51. Early editors of the Psalter who sought wherever possible to find an occasion for the psalm in the life of David, associated this psalm with David's sin with Bathsheba and his subsequent repentance. The first two verses of the psalm are instructive in ideas of sin, not only for the Psalter, but for the whole of the OT. Here there are three words used for 'sin': transgressions, iniquity, sin. The first is the Hebrew *pesha'*, which strictly means 'rebellion.' Sin is rebellion against God, and this is the characteristic idea of the prophets also. This means that sin is not the transgression of a code of morals so much as a personal rebellion against God. This conception of sin is important, and is one of the important contributions which prophet and psalmist make to true religion. The second word is *'āwōn*, which describes sin as a deliberate turning aside out of the way. Here is no mistake, nothing accidental, no weakness of humankind, but a deliberate choice. The third word is *ḥaṭṭâth*, which describes sin as missing the mark, missing one's way, the action of a man who goes astray, not wilfully, but because of the weakness of humankind. The first and the second types of sin are regarded as the most serious, cf Job 34[37], 'For he adds rebellion to his sin.' In this psalm also we get the conviction that all sin is against God (v.[4]), and that sin is so imbedded in human nature that the psalmist says he was born like that. He knows that the only way of getting rid of sin is that God shall cleanse him through and through. God must create in him a clean heart and give him a new and right spirit. This repentance and consequent cleansing is to issue in joyful song and witness to God's saving grace and the psalmist is to offer to God what God most desires 'a broken and a contrite heart' (v.[16]). Throughout the Psalter we get this deep understanding of the serious nature of sin, and the growing conviction that God, and God alone, can cleanse and release him from this incubus which weighs him down to death and dominates him from the cradle to the grave. It is doubtless because in these matters the Psalter reflects the inner struggles of every man that it has maintained its unique place in the devotions of the Church through the ages.

6. The Priestly Code.—Here we have an elaborate and intricate system of legal and ceremonial obligations, all associated with the ritual of the second Temple. This code, found in Exodus, Leviticus, Numbers, does not deal with deliberate sin, 'with a high hand' (Nu 15[30]). For such sin, the Priestly Code has no remedy except that 'that person shall be cut off from among his people' (Nu 15[30]). The laws deal with unwitting sin, where a man commits a fault in ritual affairs or touches what is unclean. This includes accidental defilement due to circumstances over which a man has no control. The Priestly Code has taken over those taboos which are associated with primitive religion, ideas concerning the sacredness of blood and fat, taboos concerning certain animals, birds and insects, and taboos concerning all types of uncleanness. The good element in this was the attempt to include all the details of everyday life within the sphere of God's direct concern. The bad element was in the tendency for these things to be taken to comprise the whole of religion. For all offences mentioned an offering was due, either a sin-offering or a guilt-offering. First, cases where a sin-offering is due: they are mostly accidental and unconscious. The Hebrew word is

bish^{e}ghāghāh (by error, inadvertence). A man does accidentally what is prohibited. The whole congregation errs and is not aware of it. When the 'sin' is known, then a sin-offering is due. Or again (Lv 5) a man is silent when he is put on oath as a witness; a man touches something unwittingly that is unclean of man or beast; a man makes a rash oath and does not realize it till it is pointed out to him—all these are faults for which a sin-offering is required when the fault is made known to the person concerned. But a man who unwittingly makes a mistake over a holy-gift, that is a gift which becomes the perquisite of the priest, must offer a guilt-offering. This is a case where damage has been done, or a right infringed and the damage can be assessed. This case is extended in Lv 5$^{17-19}$ to the man who does not know whether he has committed a fault or not, but wishes to offer a guilt-offering in case he has overstepped the mark. This was called the *'āshām tālûy* ('suspended guilt-offering'), and in the last days of the Temple men of the most scrupulous conscience used to bring such an offering daily, just in case by any possible chance, in spite of all earnest precautions, they had transgressed any rule in any detail, cf Job 1^{5}. The nearest approach to deliberate sin and conscious sin which we find in the Priestly Code is in Lv 6$^{1-7}$. This passage is concerned with such offences as dealing falsely with a neighbour in the matter of a deposit, a pledge or robbery, and of stealing by finding. The general opinion is that these are sins which would not have been known except for the offender's own confession. This was the interpretation of Rabbi Akiba in the 2nd cent. A.D., on the ground that lending or borrowing is done in the presence of a third person, but not depositing a pledge, and Rashi definitely says it is a matter that arises on the confession of the guilty party. The full use of the *'āshām tālûy* whilst the Temple was still standing makes this explanation likely, since in that case everything depended upon the confession of the person involved. This extension into the realm of deliberate fraud is probably an extension of the idea of not knowing. Other sin-offerings in the Priestly Code are concerned with cleansing from ceremonial uncleanness, either because of the impurity of any flow of blood or discharge from the genital organs, male or female, or in all skin diseases which are listed in Lv 3 under the head of 'leprosy.' They also include uncleanness from touching the dead, an unclean animal, etc.

In a general way all the sacrifices of the Priestly Code are 'to make atonement' (Lv 1^{4}) for the worshipper, but the sin- and guilt-offerings are for ritual and inadvertent offences, whilst the general statement is that the Code can do nothing for deliberate and presumptuous sin.

7. Job, Proverbs, Ecclesiastes.—The confidence thus expressed is all the more remarkable because of the general belief in the universality of sin and of its effects (cf Ps 14^{2f} 51^{5}), a belief which was shared by the authors of the Book of Job (14^{4} 15^{14ff} 4^{17}), Proverbs (20^{9}), and Ecclesiastes (7^{20}, cf 1 K 8^{46}). In the Proverbs we have what might be described as an attempt to place the moral life on an intellectual basis. The antithesis of wisdom and folly is that which marks the life of the righteous man and the sinner. Ethical maxims, the compiled results of human experience, follow each other in quick succession, but the book is devoid of the bright, warm hopefulness so characteristic of the Psalms. The sinner is left to his fate, and the wise man is he who, ordering his own life aright, leaves the fool to pursue his folly and deserve his fate.

The author of the Book of Job sets himself to solve the problem of the connexion between sin and human suffering, and though he fails, as he was bound to fail, to clear up the difficulty, he makes it evident that the one cannot always be measured in terms of the other. The conviction of his own innocence—Job's most treasured personal possession—upholds his belief against the prevalent conception that sin is *always* punished here and now, and that righteousness is *always* rewarded in like manner. The end of this dramatic treatise, however, emphasizes the popular creed, though the experience of Job must have shaken its universal validity. The conception of sin is, of course, entirely ethical, but is very wide in its scope. In defending himself against the thinly veiled accusations of his friends, Job reveals his ideas of the range and depth of the ravages of sin in human life and conduct, and gives evidence of remarkable spiritual penetration (*e.g.* ch. 31, see R. A. Watson's commentary on this book in *The Expositor's Bible*). Mention may, perhaps, be usefully made here of Elihu's contribution to the discussion, in which he intervenes by a lengthened argument to prove that suffering may be looked on not merely as *punishment* for sin, but also as a means of *discipline*, and as designed by God as a *warning* against sin (cf chs. 33 ff).

II. Apocryphal Books.—**Sirach** and **Wisdom of Solomon.**—The intellectualism which is characteristic of Proverbs and Ecclesiastes finds a prominent place in Sirach and the Wisdom of Solomon. There are here two sharply defined classes of men ('in pairs, one the opposite of the other,' Sir 33^{15}), a dualistic conception which permeates all creation (cf 42^{24}). The sinner is to be dealt with unmercifully ('Give to the godly man, but do not help the sinner,' 12^{4}), for no good can come from him who refuses instruction. It is possible, however, for the sinner to return to the Lord and forsake his sins (17^{25f}). The only way in which righteousness may be pursued is by the cultivation of wisdom and instruction, and by paying heed to the experiences of daily life (34^{9} 39 $^{1-8}$ 14^{20ff}). Let reason be the guide of human action and all will be well (37^{16}; cf 32^{19}). It is possible for the educated man to acquire such a command over his inclinations that he is able of himself to make the great choice between life and death (15^{17}), but for the fool there is little hope (15^{7}). Looking back on the centuries of human history, the writer discovers that sin has brought in its train all the great physical calamities which mark its progress (39^{28ff}). The relation is, however, external, and is a mark of Divine vengeance and wrath against sinners (cf 40^{9f}). There is no trace of the profound conception of spiritual sympathy between the different orders of creation, characteristic of the teaching of St. Paul (cf Ro 8$^{19-22}$).

The author of the Book of Wisdom displays the same fundamental thought that wisdom and sin are totally incompatible (Wis 1^{4f}). Ignorance and folly are identified with sin (2^{21f} 4^{15} 5^{4} etc.), and not merely the causes of sin. The only way to attain to righteousness is by the careful, unremitting discipline of the reason ('Great are thy judgments and hard to describe; therefore uninstructed souls have gone astray,' 17^{1}; cf 2^{1} 6^{15f}). Running like a thread of gold through the whole book, however, is the conception of the immortality of righteousness and of those who cultivate widsom (1^{15} 2^{23} 3^{4} 6^{18f} 8$^{13, 17}$ etc.). In the beautiful personification of Wisdom (6^{12}–8^{21}) we find the writer not only speaking of the Spirit of God as being its Author and Diffuser, but practically identifying them with each other (cf 9^{17} 12^{1}; cf 2 Es 14^{22}). The universality of sin does not figure largely in his teaching, but, with regard to its effects on those under its thrall, he is no optimist. Of such he could believe 'that their origin was evil and their wickedness inborn, and that their way of thinking would never change' (12^{10}). Such is the penalty of ignorance. 'All men who were ignorant of God were foolish by nature; and they were unable from the good things that are seen to know him who exists, nor did they recognize the craftsman while paying heed to his works' (13^{1}). The author appears to suggest that some were born to be righteous and some to sin, the power of moral choice being really confined to the former (cf 8^{19ff} 7^{16f}).

III. The New Testament.—**1. Synoptists.**—The practical outcome of the teaching of the OT is seen in the fact that the first of the Synoptists continually emphasizes that the mission of Jesus was to forgive sin. The account of the angelic communication to Joseph (Mt 1^{21}) is significant, 'You shall call his name Jesus, for he will

save his people from their sins.' This is the feature of Jesus' work upon which the apostles laid particular stress, in their earliest as in their latest teaching. The preparatory work of the Baptist aroused in the breasts of the multitudes who thronged to hear him an active consciousness of sin, together with the necessity for repentance and the possibility of consequent forgiveness (Mk 1[4]). The preaching of John, however, lacked the new power that the life and work of Jesus brought, giving men the gift of repentance (Ac 5[31] ; cf 11[18]), and enabling them to turn from their wickedness (Ac 3[26]). It is significant that the recorded teaching of Jesus reveals little direct and abstract instruction regarding sin. At the same time, we must not forget the scathing denunciation hurled by Him at the legalistic conceptions of sin found among the scribes of His time (Mt 23[1-28], Mk 7[9ff]), or the positive, authoritative declarations by which He drew from the ancient laws of Sinai the essential ethical ideas therein enshrined (Mt 5[21-48], where the teaching is not so much an extension of the area of sin as a plumbing of its depths). For Him 'the law and the prophets' had an abiding significance (Mt 5[17-20], 7[12]), but their interpretation and application were inadequate. Outward and physical behaviour was, for Jesus, a poor index of the sin against which the Law was meant to be a deterrent and the preaching of the prophets was a persistent and solemn protest (cf Lk 11[38-44]). Sin, whether inward or outward in appearance, is lodged in the deepest part of man's being. It destroys upward growth by poisoning the life at its roots, and here the language of Jesus assumes its most formidable prophetic severity. There are certain classes of sins, however, against which He uttered His most solemn warnings. Their common characteristic is that of wilful and deliberate rejection of truth and goodness. Remarkable amongst these is 'blasphemy against the Spirit' (Mt 12[31f] ; cf Mk 3[29], Lk 12[10]), which St. Mark designates 'an eternal sin.' Taking into consideration the circumstances in which the words were spoken, it is clear that Jesus was pointing to a condition when man loses the ability to retrace his steps, when, because he has rejected the Spirit and described Jesus' exorcisms as due to collusion with 'Beelzebul,' he has put himself into a position where he is cut off from the one power that might move him to repent and thus turn back for forgiveness. The sin of unreality, which could so easily be a stage toward this graver sin, was one to which the Pharisees were specially addicted, and to it, therefore, He drew their attention constantly (Mt 23[5-7], Mk 12[38f], Lk 11[43] 20[45f] ; cf Mt 6[1-16] 5[20]).

Every sin is bound to exercise influence, not only on the life and character of those immediately guilty, but also on a circle outside. There is, however, a species having for its special object the dragging down of those who would otherwise be innocent. The terms of the emphatic warning against leading others astray, either by positive interference or by the force of example (cf Mk 9[42], Mt 18[6], Lk 17[2]), remind us of the sad presage by which Jesus foreshadowed the traitor's end (Mt 26[24]). The word used to denote this sin is also employed in speaking of sin in its relation to the guilty individual. The fact that Jesus deals with both aspects at the same time shows how strongly He felt the impossibility of any sin remaining, in its working, a purely personal offence. There is always here in activity a force which may be described as centrifugal, inevitably bringing harm to those within the circle of its movement (cf Ro 14[7f]). Nor did Jesus hold Himself to be free from this danger of contamination ('You are a hindrance to me,' Mt 16[23]), while He points to the ideal Kingdom of the Son of Man where nothing causing men to stumble shall be allowed a place (Mt 13[41]). It is interesting to remember here that St. Paul uses the same word to express the result of the preaching of 'Christ crucified' to the Jews (1 Co 1[23] ; cf Gal 5[11], Ro 9[32f], 1 P 2[8]). This was, indeed, a contingency foreseen by Jesus Himself, as will be seen in His answer to the messengers of the imprisoned Baptist (Mt 11[6]). Doubtless these words were intended to convey a gentle warning to the prisoner against permitting the untoward circumstances of his life to overcome his once firm faith in the Messiahship of One whom he had publicly proclaimed as 'the Lamb of God' (Jn 1[29]). A direct reference to an OT example of this sin occurs in Rev 2[14], where the conduct of Balaam is held up to reprobation.

In the parable of the Pharisee and the Publican, Jesus taught the necessity for the realization of personal guilt on the part of the sinner in order to obtain forgiveness and justification in the sight of God (Lk 18[13]). In the same way, it was the lack of this sense by the Pharisees, so far as they were themselves personally concerned, that constituted the great obstacle to their conversion (Jn 9[41]).

A prominent feature of Jesus' teaching has to do not so much with active, deliberate sins as with what may be termed 'sins of omission.' It seems as if He wished to inculcate, by repeated emphasis, the truth that the best way to combat temptation with success is to be active in the pursuit of good. The spiritual side of this doctrine He enshrined in the form of a parable, in which He pointed out the danger to the soul arising from neglect to invoke the active agency of the Holy Spirit, even though the 'unclean spirit' had been exorcized and banished 'out of the man' (see Mt 12[43-45] || Lk 11[24-26]). In the discourse descriptive of the General Judgment, Jesus marks the crucial test by which men shall be tried : 'As you did it not to one of the least of these, you did it not to me' (Mt 25[45]). The same thought is conveyed frequently in parabolic form, as for example in the parables of the Ten Virgins (Mt 25[1-13]), the Talents (25[14-30]) in which is emphasized the profound lesson, 'from him who has not, even what he has will be taken away' (cf Mt 13[12]), Dives and Lazarus (Lk 16[19-31]) ; while much of the teaching in the Sermon on the Mount is based on the same principle (cf Mt 5[38-44]).

2. St. Paul.—The presentation of the gospel message to the world outside the Jewish nation led St. Paul to review in detail the origin, cause, scope, and result of sin. Starting from his own individual experience, which was that of a sinner profoundly conscious of his position (cf 1 Co 15[9] 9[27], Ro 7[18ff], 1 Ti 1[15]), and conscious also of the remedy inherent in Christ's gospel (2 Co 12[9]), he insists on the universality and power of sin, in order to establish the co-ordinate universality and power of 'the righteousness of God through faith in Jesus Christ' (Ro 3[21f] ; cf the expression 'where sin increased, grace abounded all the more,' 5[20]). The central feature of St. Paul's teaching is the activity of God's grace in forgiving, restoring, and justifying the sinner ; and for the purpose of establishing the reasonableness and the necessity (cf 1 Co 9[16]) of bringing the gospel before the world, it was needful first to establish the guilt of all for whom it was intended, and to create, so to speak, in men a consciousness of moral failure and helplessness. This he does in the opening chapters of his Epistle to the Romans. Here, although he deals separately with Jews and Gentiles, he maintains the proposition that all alike are sinners (Ro 5[12] ; cf Eph 2[3]). It is true that the Jew was the recipient of the Law ; and as such he occupied the position of the moral teacher of mankind. But instead of proving the means whereby a true 'knowledge of sin' (Ro 3[20] ; cf 5[13]) is gained, it became, through abuse, a hindrance rather than a help to his spiritual advancement (see 2[17ff]). And just as the Jews stultified the Divinely given Law, by the exaltation of its merely transitory elements at the expense of its essential moral ideals, so the Gentiles defied 'the law written in their hearts, testified to by their conscience' (Ro 2[15]).

This reduction of all mankind to the same level in the sight of God is further incidentally pressed by the establishment of a definite relationship between the sin of Adam and racial guilt (5[12, 18]). What precisely were St. Paul's opinions as to this connexion it is impossible to discover. It is doubtful whether, in face of the intensely practical work in which he was engaged, he

stopped to work out the problem of **'original sin.'** It is enough for him that 'sin came into the world through one man' and that 'by one man's disobedience many were made sinners' (see Sanday-Headlam, *Romans* in *ICC*, pp. 136 ff).

Different interpretations have been given to the words translated 'because all men sinned' (5^{12}). Some have tried to affirm that St. Paul is here asserting the freedom of the will, and is stating the plain proposition that all men have sinned as a matter of fact, and of their own choice. This, however, breaks up the parallelism with Christ and is, indeed, a notion foreign to Paul's thought as a whole. Others have seen in these words an explicit statement that the whole race was involved generically in Adam's sin. It is more constructive, however, to seek a synthesis of these two ideas. (See Nygren, *Romans ad loc.*) As a result of Adam's transgression sin obtained an entrance and a sphere of action in the world, and not only so, but a predisposition to sin was inherited, giving it its present power over the human will. At the same time, the simple statement 'all sinned,' explaining as it does the universality of death, includes the element of choice and freedom. Even those whose consciousness of sin was weakened, if not obliterated, by the absence of positive or objective law, were subjected to death. Paul assumes that physical death is the result of sin and that, therefore, because death is universal, sin is universal (cf 1 Co 15^{22}). Then, passing from physical death to that of which it is but a type, spiritual or moral death, he shows the awful depth to which sin has sent its roots in man's nature (Ro $6^{21\text{ff}}$; cf v.$^{8\text{ff}}$ $2^{7\text{ff}}$).

Mention has been made above of the power of choice, where sin is concerned, inherent in human personality. Into the very seat of this power, however, sin has made an entrance, and has found a powerful ally in 'the flesh' (7^{18}). The will to resist is there, but its activity is paralized. Though St. Paul makes 'the flesh' or 'the members' of the body the seat of sin, he is far from teaching that human nature is essentially evil. The flesh may be crucified with its 'passions and desires' (Gal 5^{24}; cf 1 Co 9^{27}, Ro 6^{19}), and the bodily members instead of yielding a foothold to impurity may be given up to righteousness with sanctification as the end (cf E. D. Burton, *Spirit, Soul and Flesh*, also article, 'Flesh' in Hastings' *DCG*). An important feature of St. Paul's doctrine of sin consists in his exposition of the function of law in revealing and arousing the consciousness of sin. The expression 'the mind that is set on the flesh' (Ro 8^{7}) emerges in this connexion, and the impossibility of its 'submitting to God's law' is insisted on. 'Apart from the law sin lies dead,' but, once the law came, sin sprang into life, its presence and power were revealed (cf 1 Co 15^{56}), and by it man was confronted with his own moral weakness.

In spite of his belief in the all-pervading character and strength of sin, St. Paul's gospel is the reverse of a gospel of despair. If, on the one hand, there is a death which connotes moral corruption and slavery to sin, on the other hand there is a *death unto sin* which is not only a realization of, but a participation in, the death of Christ. The fact of his employing the same word and idea in senses so completely contrasted lends force and finality to his teaching on the remedial and restorative effects of Christ's work (cf Ro 6^{2-14}, Eph 2^{1-10}). Paul often uses the figure of crucifixion. The believer in Christ has crucified his 'old self' (Ro 6^{6}), 'the flesh with its passions and desires' (Gal 5^{24}; cf 2^{20}). This is the end of the redemptive work of Christ. The experience of St. Paul forbade him to believe that the state of being 'dead to sin' is fully realized here and now. His continuous references to the Christian life as one of warfare, in which it behoves the follower of Christ to be armed with weapons offensive and defensive, shows that his conception of the struggle against sin is that of an unceasing age-long conflict, issuing in victory for the individual, as for the race, only when the Kingdom of Christ is established in a peace that is everlasting (Eph 6^{1-17}, 1 Ti 1^{18} etc.).

3. St. John.—(*a*) In order to understand St. John's presentation of Jesus' teaching on sin, it will be useful to see his own individual doctrine as given in his *Epistles*. Here it is stressed that Christ's mission was to take away sins (1 Jn 3^{8}; cf Jn 1^{29} 16^{11}), and 'abiding in him' is regarded as the guarantee of safety against sin (1 Jn 3^{6}; cf Jn $15^{4\text{ff}}$) as it also affords power to live the active, fruitful life of righteousness. Further, there is a law which expresses the Divine ideal for man, and whoever violates it, by wilfully putting himself in opposition to this law, is guilty of sin, for 'sin is lawlessness' (3^{4}). Another aspect of this law has to do with the mutual relationship of Christians who should be bound together by a love which is the reflection of the eternal love of God for men (1 Jn 4^{7-21}). If the law of love is neglected or broken, even in the matter of intercessory prayer for brethren who have sinned, wrongdoing is present, and 'all wrongdoing is sin' (5^{13-17}). From this we see how intensely real was St. John's belief in the presence and power of sin amongst men. Indeed, one of the tests by which a man's sincerity may be discovered is his power of realizing this fact. He, moreover, gives as his reason for writing this Epistle, 'that you may not sin' (2^{1}). The need of 'an advocate' who is also 'the expiation for our sins' is insisted on as being the special creation of Christ in Christian consciousness (1 Jn $2^{1\text{f}}$; cf Jn 14^{16}). All this brings into clearer relief and greater prominence his doctrine of the sinlessness of the professing follower of Jesus Christ. The Christian as such 'cannot sin because he is born of God' (1 Jn 3^{9}; cf 5^{18}, 3 Jn^{11}), and, on the other hand, 'he that commits sin is of the devil' (1 Jn 3^{8}). The Christian abides in Christ (cf Jn $15^{4\text{ff}}$), and because he does so he does not sin (3^{6}), whereas the committal of sin is the sure guarantee that he has neither seen nor known Him. The secret of his safety lies in the promise of Jesus that He 'keeps' (cf Jn 17^{12}) His own so that 'the evil one does not touch him' (1 Jn 5^{18}). The paradox in which St. John thus clothes his doctrine of sin reveals his profound conception of its character. Any sinful act by the Christian interrupts, and mars so far, his fellowship with God. If, however, the act be not the outcome of the man's habit or character, he cannot be said to do 'sin' in the sense of realizing sin in its completeness. The fruit of Divine fellowship is developed in the Christian's inner or central life from which sin is banished; and this reminds us somewhat of St. Paul's view of the crucifixion of the flesh with its 'passions and desires.'

A peculiar reference is made by St. John to 'sin which is mortal.' It is not any specific act or acts that he so characterizes. The saying must rather refer to sinful deeds of a character which wholly separates from Christ, and thus tends to death. In so far as it springs from a heart which wilfully and with contumely rejects Christ, it may be identified with the sin against the Holy Ghost (cf Mk 3^{29}, Mt $12^{31\text{f}}$, Lk 12^{10}). The writer's refusal to insist on intercessory prayer for one thus guilty calls to mind the warnings in the Epistle to the Hebrews against the sin of apostasy or wilful sin after the reception of 'the knowledge of the truth' (cf He 6^{4-6} 10^{26}). It is probable that St. John has in his mind a class of sins which combines within itself the characteristics of both those mentioned (see article, 'Sin' in Hastings' *DB*, iv, p. 535^{b}). One feature of 1 John connects this Epistle very closely with the Fourth Gospel, revealing itself in those passages which identify sin with falsehood, and righteousness with truth. It seems as if the writer traced all sin back to the spirit which leads men to deny 'that Jesus is the Christ' (1 Jn 2^{22} 4^{3}). On the other hand, the acceptance of this belief carries with it the assurance of God's abiding presence, wherein is the sure guarantee of the realization of His purpose in us—'that we might live through him' (1 Jn 4^{9}; cf 4^{2} 5^{1}).

(*b*) *Fourth Gospel.*—It is this last aspect of sin that is the dominant note of the teaching of St. John's Gospel. Indeed, this writing may be said to be a record of the sad rejection foreshadowed in the general terms, 'He came to his own home, and his own people received

him not' (1[11]). This was more particularly true of the Jews of Jerusalem and Judaea, where the story of Jesus' ministry as told in this Gospel is for the most part laid. It is thus significant that in His last great discourse with His disciples, occurring as it did in Jerusalem, the centre of the activity hostile to His claims, Jesus lays special stress on the sin of unbelief in Him ('He will convince the world of sin . . . because they do not believe in me' Jn 16[8f]). The revelation of the Divine life, with its manifold evidences of love and mercy in and by Jesus, took away whatever excuse men might have in the presence of God's judgment. The real reason for the rejection of Jesus by the Jews lay in their hatred of 'the Father' (Jn 15[24]; cf v.[22]). Indeed, it is this very revelation designed by God as the eternal remedy against sin (Jn 1[29]), which in its process and achievement affords further possibilities to sin and its consequences (Jn 9[41]; cf Lk 12[47f]).

Nor must we omit to note that in this Gospel sin is regarded as a species of slavery. The reference to this aspect occurs but once (Jn 8[34]), but that it occupied an important place in early Christian teaching is evident from the incidental notices found scattered throughout the NT (cf Ro 6[16-20], Tit 3[3], 2 P 2[19] etc.).

The popular belief in the connexion between sin and physical suffering is noticed also in the Fourth Gospel, where Jesus is represented as denying its universal applicability (Jn 9[3]). At the same time He recognized that in certain cases the belief was justified (Jn 5[14]). It was, perhaps, His profound knowledge of a similar but a deeper relationship than this—the relationship of sin to the whole life—that gave to the words and actions of Jesus that exquisite tenderness in His treatment of individual sinners so noticeable in this Gospel (cf Jn 8[11, 15]); a tenderness which he would fain impart to His followers in their dealings with fellow-sinners (cf Jn 7[24], Mt 7[1ff]).

We are thus enabled to see that the view of sin held and taught by Jesus is profounder and graver than any as yet existing, for it is an offence against One who is at the same time a righteous and loving Father and a just and holy God (Mt 5[48], Lk 15[18], Jn 3[16ff] etc.). The life of Christ is the object lesson which Christians are invited to imitate in their daily relationships and life (Mt 11[29], Jn 13[15], 1 Jn 2[6], Ph 2[5], 1 P 2[21] etc.), and St. John has pointed out to us, as the words of Jesus Himself, the standard to which His followers are asked to aspire when He challenged His enemies to convict Him of sin (Jn 8[46]).

4. St. James.—The author of this circular letter views sin in its practical bearings on the daily life of men. Nevertheless, his conception of its character and results is as far-reaching as we have seen it to be in both the Pauline and the Johannine teaching. Its origin he traces to the surrender of the individual's will to 'desire' (Ja 1[14f]). Desire is not of itself evil, but it becomes sin as soon as a man who knows the higher law of duty yields to the lower attraction. 'When indulged desire bears its natural fruit, first sin, then, ultimately, death' (J. H. Ropes, *The Epistle of St. James* in *ICC*, p. 157). The writer combats the idea that God is the author of evil by insisting on the fact that each man may make a good or a bad use of temptation. As a morally free agent he stands or falls, and the result of this freedom may be the promised 'crown of life' (1[12]) or hopeless 'death' (1[15]). We are here reminded of the 'sin which is mortal' (1 Jn 5[16]) referred to already, for sin, when it has become complete, fully developed, fixed and determined, inevitably brings forth death, its baneful fruit. This Epistle betrays its Jewish origin in the attitude of the writer to the Law; for him the result of the Christian revelation has been the transmuting of the Mosaic Law into 'the perfect law, the law of liberty' (1[25]; cf 2[12]), 'the royal law' (2[8]). It may be said that he sometimes merely echoes the well-known opinion of the Rabbis about transgressing the minutest commandment of the Law. At the same time it must be admitted that his conception of sin, even when it finds expression in the seemingly trivial case of 'partiality' (2[9]), is founded on a true spiritual view of the relation of man to God. The law of love is the essential guiding principle of all Christian life, and where this law is transgressed in the social relations of that life, the expression in our Epistle 'you commit sin' (literally 'you work sin,' 2[9]) is not too strong or emphatic.

A further point in connexion with St. James' teaching occupies the closing passages of his Epistle. In this, as in the whole of his writing, he deals with it from the point of view of the daily life. In his exhortation to mutual confession of sins and intercessory prayer for forgiveness he is incidentally dwelling on the truth that all real Christian life is conditioned by its adherence, both in word and in deed, to the principle of love (cf 2[15f]). The same may be said of his advice with regard to the corporate prayer of the Church, on behalf of one who is physically sick (5[14f]). It is probable that our author held the common Jewish belief that sin and disease were connected as cause and effect, and his conviction that 'the prayer of faith' reaches out in its power to the whole man, extending even to the forgiveness of his sins by God, is based on his belief in the solidarity of human life as well as of the law to which it owes its allegiance. As in the case of the member of the community whose bodily and spiritual needs are ministered to by the active intervention of the Church, so he urges each individual member to prayer on behalf of his erring brother. The twofold blessing promised to this act of brotherly love may well be taken as an expression of his conviction that the individual lives of the members of the Christian community are knit so closely together that no single act of sin can be committed without so far bringing death within range of all, and that no act of love can be exercised without so far bringing mercy and forgiveness to all, and thus 'covering a multitude of sins' (cf 1 P 4[8]).

5. Hebrews.—It cannot be said that there is any special doctrine of sin in this Epistle. Its readers were well acquainted with OT conceptions and teaching, and the writer deals mainly with the superiority of the New Covenant over the Old in supplying means whereby there shall be no longer 'any consciousness of sin' (He 10[2]; cf Westcott, *The Epistle to the Hebrews*, Additional Note on 9[9]). The central feature of this writing is the stress laid on the discovery by Christianity of 'the new and living way' (10[20]) by which we have direct access to God. It is by the removal of guilt in the forgiveness of sins by the sacrifice of Jesus that this way is opened 'once for all' (10[10]; cf v.[18] 9[12] etc.). Special emphasis is therefore laid on the failure of the Mosaic institutions to 'take away sins' (10[11]; cf 9[9]), and on the awful character of the danger of harbouring 'an evil, unbelieving heart' (3[12]).

The temptation to which the 'Hebrews' were exposed was that, under stress of persecution, they would reject the final revelation of God in Christ, or revert, under the influence of the Hellenistic Judaizers, to the somewhat eclectic faith of the latter. This wilful sin the writer characterizes as crucifying the Son of God afresh (6[6]) and as treading Him under foot (cf 10[29]). In warning them against the dangers to which they would be exposed during the time of suffering and trial now imminent, he points out to them that these trials may become in their own hands the means of their spiritual advancement. Instead of being the sole outcome of sin, suffering is often the chastisement of a loving Father 'that we may share his holiness' (12[10]). The great Example, whose solution of an age-long problem we are asked to study, was Jesus, 'who for the joy that was set before him endured the cross, despising the shame' (12[2]) and who though 'in every respect . . . tempted as we are, yet without sinning' (4[15]), was nevertheless made 'perfect through suffering' (2[10]).

J. R. W.—W. D. S.

SIN, WILDERNESS OF (name probably derived

from the moon-god Sin).—A region on the route of the Hebrews from Egypt to Mount Sinai. It is probably to be identified with modern *Debbet er-Ramleh*, and is not to be confused with the Wilderness of **Zin** (q.v.).

SINA, Ac 7[30, 38] (AV) = **Sinai** (q.v.).

SINAI.—The name of a mountain which, according to Hebrew tradition, was the scene of the theophany of Y″ and the giving of the Law. The connexion of the name with the Moon-god Sin is very doubtful, and Meyer's suggestion that there may be a connexion between the name Sinai and the unusual Hebrew word for the burning bush, *seneh*, is worth noting. The location of the Sinai of Hebrew tradition is very uncertain for several reasons. In the first place, the Christian tradition placing the site of Sinai in the SW. of the Sinai peninsula is late. Early in the 4th cent. A.D. it was identified with *Jeb. Serbâl*, and from the 6th cent. with *Jeb. Mûsa*. Secondly, the fact that Hebrew sources use two names for the sacred mountain, Sinai and **Horeb,** is more than a literary peculiarity. Behind the literary difference lie the traditions of the various tribes which passed through the wilderness experiences. As Professor Rowley has said, 'We have to distinguish between the history behind the tradition and the tradition as it is modified by combination with the traditions of the various tribes.' Thirdly, the weight of early Hebrew tradition connects the original home of Y″ with Mount Seir and Edom (cf Jg 5[4], Dt 33[2], Hab 3[3]); moreover the early episodes of the wilderness sojourn are placed at or near Kadesh, and that place is not in the SW. of the Sinai peninsula. Fourthly, in spite of efforts to disprove it, the phenomena connected with the theophany at Sinai-Horeb are clearly volcanic, and geological evidence has shown that there are no signs of volcanic activity in the SW. corner of the peninsula, but there is abundant evidence of such activity in the region to the S. of Edom. Hence, although *Jeb. Mûsa* may have been a sacred mountain and a place of pilgrimage long before the Christian era, the weight of probability is against it as the site of the theophany of Y″ and the giving of the Law.

For the allegorical use of 'Sinai' in Gal 4[25] see article, HAGAR. S. H. He.

SINAI (Peninsula).—The triangular tongue of land intercepted between the limestone plateau of the *Tih* desert in the N., and the Gulfs of Suez and *'Aqaba*, at the head of the Red Sea, on the SW. and SE. It is a rugged and waste region, little watered, and full of wild and impressive mountain scenery. Except at some places on the coast, such as Tor, there is but little of a settled population.

This region was always, and still is, under Egyptian influence, if not actually in Egyptian territory. From a very early period it was visited by emissaries from Egyptian kings in search of turquoise, which is yielded by the mines of the *Wâdî Maghârah*. There sculptured steles were left, and scenes engraved in the rock, from the time of Semerkhet of the 1st Dynasty, and Sneferu of the 3rd—dated by Professor Petrie in the 5th and 6th millennia B.C. These sculptures remained almost intact till recent years; till a party of English speculators, who came to attempt to re-work the old mines, wantonly destroyed many of them (see Petrie, *Researches in Sinai*, p. 46). What these vandals left was cut from the rock and removed for safety, under Professor Petrie's direction, to the Cairo Museum. A remarkable temple, dedicated to Hathor, but adapted, it would appear, rather to Semitic forms of worship, exists at *Serâbiṭ el-Khadim*, not far from these mines. It was probably erected partly for the benefit of the parties who visited the mines from time to time.

Geologically, Sinai is composed of rocks of the oldest (Archaean) period. These rocks are granite of a red and grey colour, and gneiss, with schists of various kinds—hornblende, talcose, and chloritic—overlying them. Many later, but still ancient, dykes of diorite, basalt, etc., penetrate these primeval rocks. Vegetation is practically confined to the valleys, especially in the neighbourhood of water-springs. R. A. S. M.

SINCERE.—The English word 'sincere,' as it occurs in 1 P 2[2] 'the sincere milk of the word,' is used in its old sense of 'unmixed,' 'pure' (RV 'without guile'). RSV reads 'pure.'

SINEW.—In Gn 32[32] there is preserved the traditional origin of a special food-taboo (cf FOOD, **10**), the result of which was that the Hebrews abstained from eating the sciatic muscle (AV 'the sinew which shrank'; RV and RSV 'the sinew of the hip') of animals otherwise clean. The prohibition is not mentioned in any of the legislative codes of the Pentateuch. A. R. S. K.

SINGERS.—See PRIESTS AND LEVITES, **3** (*c*).

SINIM.—The 'land of Sinim' (Is 49[12] AV and RV) must, from the context, have been in the extreme S. or E. of the known world. In the S. Sin (*Pelusium*, Ezk 30[15f]) and Syene (Ezk 29[10] 30[6]) have been suggested, and RSV reads the latter. This is favoured by discoveries of papyri (cf SYENE). The LXX favours the view that a country in the E. was intended, and some modern commentators have identified Sinim with China, the land of the Sinae, but this is generally abandoned to-day.

SINITES.—A Canaanite people, Gn 10[17], 1 Ch 1[15]. Their identification is quite uncertain.

SIN-OFFERING.—See SACRIFICE AND OFFERING, **13.**

SION.—1. A name of **Hermon,** Dt 4[48] (AV, RV, following Heb.). It is doubtless a textual error for **Sirion** (q.v.); so RSV. **2.** See ZION.

SIPHMOTH.—One of the places to which a portion of the spoil of the Amalekites was sent after David's return to Ziklag, 1 S 30[28]. The site is unknown.

SIPPAI.—See SAPH.

SIRACH.—See APOCRYPHA, **7.**

SIRAH, THE WELL OF.—The place at which Joab's messengers overtook Abner, 2 S 3[26]. It lay on the road from Hebron to Jerusalem, and is now probably *'Ain Sâreh*, near Hebron.

SIRION.—The name said to be given by the Sidonians to Mount Hermon, Dt 3[9]; also 4[48] in RSV (AV, RV **Sion,** q.v.). Like **Senir,** it may originally have been the designation of a particular part of the mountain. Cf SION, **1.**

SISAMAI, 1 Ch 2[40] (AV).—See SISMAI.

SISERA.—1. In Jg 4[2ff] Sisera is represented as captain of the host of **Jabin,** a Canaanite king; his army is overcome by the Israelites under Barak. In his flight after the battle, Sisera, overcome by fatigue, seeks refuge in the tent of **Jael,** who treacherously kills him while asleep. In an earlier account of the same episode (the Song of Deborah, Jg 5) Sisera appears as an independent ruler, and Jabin is not even mentioned; the two accounts differ in a number of subsidiary details, but in two salient points they agree, namely, as to the defeat of Sisera and as to the manner of his death. It is clear that in Jg 4 two traditions have been conflated; the story of Jabin's defeat apparently has been drawn from the record of Joshua's conquest of Hazor (Jos 11[1–15]; cf Jg 4[2]). In order to harmonize them Sisera has been made Jabin's captain (see BARAK, DEBORAH, etc.). **2.** A family of Nethinim (Ezr 2[53], Neh 7[55], 1 Es 5[32] AV **Aserer,** RV **Serar**). W. O. E. O.—D. N. F.

SISINNES.—The governor of Coele-Syria and Phoenicia under Darius (1 Es 6[3, 7, 27] 7[1]). In Ezr 5[3] etc., he is called **Tattenai** (q.v.).

SISMAI.—A Jerahmeelite, 1 Ch 2[40] (AV **Sisamai**).

SISTRUM.—See MUSIC, **4** (3) (*c*).

SITH.—'Sith,' *i.e.* 'since,' occurs in Ezk 35[6] AV and RV (RSV 'because').

SITHRI.—A grandson of Kohath, Ex 6[22] (AV **Zithri**).

SITNAH ('strife').—The name given to a well dug by the herdmen of Isaac in the region of Gerar, Gn 26[21]. The site is uncertain.

SIVAN.—See TIME.

SKIFF.—Found only in RSV in Job 9^{26} 'skiffs of reed' (AV, RV 'swift ships'). See REED, 5.

SKIRT.—See DRESS, 4 (*b*).

SKULL, PLACE OF A.—See GOLGOTHA.

SLANDER, TALEBEARING.—Both noun and verb 'slander' are used of malicious gossip of varying degrees of heinousness. The references are all to the slandering of persons, except Nu 14^{36} AV 'a slander upon (RV, RSV 'evil report against') the land.' The expression 'going about with slanders' (Jer 6^{8}; cf 9^{4}, Lv 19^{16}) is in the original identical with 'going about as a talebearer' (Pr 11^{13} 20^{19} [here RSV 'gossiping']; cf Ezk 22^{9}). The element of falsehood in the gossip is seen in 2 S 19^{27}, where 'slandered' is synonymous with 'falsely accused.' 'Of no sin and wickedness are there so many complaints in OT as of slander and false accusation—whereof the Psalms are witness' (Cornill, *Jeremia*, 89). See, further, CRIMES AND PUNISHMENTS, 5. A. R. S. K.

SLAVE, SLAVERY.—The Hebrew *'ebhedh*, usually translated **'servant,'** has a variety of meanings, between which it is not always easy to distinguish. *E.g.* in 2 S 9^{2} 'servant'=retainer, in v.^{10b}=bondman, in v.^{11}=a polite expression of self-depreciation (cf 2 K 4^{1} and 1 K 9^{22}). In a discussion of Hebrew slavery only those passages will be dealt with in which the word probably has the sense of **bondage.**

1. *Legally the slave was a chattel.* In the earliest code (Book of the Covenant [= BC]) he is called his master's money (Ex 21^{21}). In the Decalogue he is grouped with the cattle (Ex 20^{17}), and so regularly in the patriarchal narratives (Gn 12^{16} etc.). Even those laws which sought to protect the slave witness to his degraded position. In the BC the master is not punished for inflicting even a fatal flogging upon his slave, unless death follows immediately. If the slave lingers a day or two before dying, the master is given the benefit of the doubt as to the cause of his death, and the loss of the slave is regarded as a sufficient punishment (Ex 21^{21}). The *jus talionis* was not applicable to the slave as it was to the freeman (cf 21^{26ff} with ^{22ff}); and it is the master of the slave, not the slave himself, who is recompensed if the slave is gored by an ox (Ex 21^{32}). In these last two instances BC follows the Code of Hammurabi [= CH] (196–199, 252).

In *practice* the slave as a chattel was often subject to ill usage. He was flogged (Ex 21^{20}, Pr 29^{19}), and at times heartlessly deserted (1 S 30^{11ff}). Though the master is here an Amorite, the cases of runaway slaves in Israel bear testimony to their sufferings even at the hands of their fellow-countrymen; cf the experiences of the churl Nabal (1 S 25^{10}), of the passionate Shimei (1 K 2^{39}), and of Sarah (Gn 16^{6}); the implications as to the frequency of such cases in the law of Dt 23^{15ff} and in later times (Sir 33^{24-31}). The position of the **maid-servant** was in general the same as that of the man-servant. In the BC it is assumed that the maid-servant is at the same time a concubine (Ex 21^{7ff}; cf Hagar, Zilpah, and Bilhah in the patriarchal narratives). Even in P the idea of the slave-girl as property is still retained (Lv 19^{20}). Here the punishment for the violation of a slave-girl was almost certainly a fine to be paid to the master, if we may judge from the analogous law in Ex 22^{16}=Dt 22^{38}; *i.e.* it is an indemnity for injury to property. In practice the maid-servant, though the concubine of the master, is often the special property of the mistress (Gn $16^{6a, 9}$ 25^{12} 30^{3}), at times having been given to her at marriage (Gn 24^{59} $29^{24, 29}$). She is subject to field labour (Ru 2^{8ff}) and to the lowest menial labour (1 S 25^{41}, figurative, but reflecting actual conditions).

Slaves were *recruited* (1) principally from war, at least in earliest times. Captives or subject populations were often employed not only as personal attendants, but also as public slaves at the Temple (Jos $9^{23, 27}$ [^{21} a gloss], Neh 7^{57-60}, and see NETHINIM) or on public works in the *corvée* (Jos 16^{10}, Jg 1^{28ff}, I K 9^{20-22}=2 Ch 8^{7-9}), while captive women were especially sought as concubines or wives (Dt 21^{10-14}). (2) From the slave-trade, of which the Israelites undoubtedly availed themselves (cf the implications in Gn 37^{28} 17^{12}, Lv 25^{44}). This trade was mainly in the hands of the Phoenicians and Edomites (Am $1^{6, 9}$, Ezk 27^{13}, Jl 3^{6}). (3) From native Israelites who had become enslaved as a punishment for theft (Ex 22^{1-4}), whether for other crimes also is not stated; Josephus (*Ant.* XVI. i. 1 [3]) knows of no other. (4) From native Israelites who, through poverty and debt, had been forced to sell themselves (Ex 21^{2}, Am 2^{6} 8^{6}, Dt 15^{12}, Lv 25^{39}, Pr 11^{29} [?] 22^{7} [?]) or their children (Ex 21^{7}, 2 K 4^{1}, Neh $5^{5, 8}$, Is 50^{1}, Job 24^{9}) into servitude. (5) Possibly from the exposure of infants and the kidnapping of minor children, as in Mesopotamia. The latter is rather clearly implied by Ex 21^{16}, Dt 24^{7}; that the exposure of infants was sometimes practised is suggested by Ezk 16^{5}.

Whether the creditor had the right to force the debtor into slavery against his will is not clear. Ex 21^{2} and 2 K 4^{1} (cf Mt 18^{25}) rather favour this view. The reflexive verb in Lv 25^{39a} and in Dt 15^{12}, where the same verbal form should probably be again translated by the reflexive, not by the passive as in RV, favours voluntary servitude. But probably the later codes are modifications of the earlier practice. Neh 5^{5} is ambiguous.

As to the *number* of slaves we have no adequate data. Gn 14^{14} refers to retainers rather than slaves. The numbers in 1 K $5^{13, 15}$ must include native Israelites subject to *corvée*; it may not refer to state slaves at all, as 1 K 9^{21} does. The prosperous retainer of Saul has 20 servants (2 S 9^{10}). The proportion of slaves to freemen in Neh 7^{66ff} is 1 to 6.

The *price* of slaves naturally varied, but BC (Ex 21^{32}) fixes the average rate at 30 shekels, which apparently was maintained at later times (cf 2 Mac 8^{11}; *Ant.* XII. ii. 3 [25]; Mt 26^{15}). In CH the average price is 20 shekels (116, 214, 252).

It seems probable that the number of slaves in Israel was never high, certainly not as high as in Greece and Rome. In the economy of Palestine it was probably at most times cheaper to hire day labour than to buy and support slaves, except in domestic service. State slaves could be used in very large operations requiring much unskilled labour, such as Solomon's mining and building operations. In the time of Hammurabi in Babylonia, it is estimated that the price of a slave, 20 shekels, was equivalent to three or four years' wages of hired labour (I. Mendelsohn, *Slavery in the Ancient Near East*, p. 118). In Palestine the situation was probably even less favourable for slave-holding (but cf Dt 15^{18}). In the ancient Near East in general the basis of the economy was not slavery, but the free tenant and share-cropper in agriculture, and the free artisan and day labourer in industry (*ibid*, pp. 121 f). In Israel, most of the privately owned slaves were probably in domestic service; at certain times state slaves were used on large public works (in addition to the *corvée*), and temple slaves performed menial duties in the temples.

2. But while the slave was a chattel, nevertheless certain *religious and civil rights and privileges* were accorded him. *In law* the slave was regarded as an integral part of the master's household (Ex 20^{17}), and, as such, an adherent of the family cult (cf the instructive early narratives in Gn 24 and 16). Accordingly the BC (Ex 23^{12}) and the Decalogue (Ex 20^{10}) guarantee to him the Sabbath rest. Deuteronomy allows him a share in the religious feasts ($12^{12, 18}$ $16^{11, 14}$), the humanitarian viewpoint being chiefly emphasized. In P the more primitive idea of the slave as a member of the family, conceived as a religious unit, is still retained and utilized in the interest of religious exclusiveness. Thus, while the *gēr* (sojourner) cannot partake of the Passover unless circumcised, the slave must be circumcised and so is entitled to partake (Ex 12^{44}; cf the narrative Gn 17^{12ff}). Again, while the *gēr* in a priest's family, or even the daughter of a priest who has married

into a non-priestly family, may not eat of the holy things, the priest's slave is allowed to do so (Lv $22^{10\pi}$).

As to civil rights: In the BC, murder of the slave as well as of the freeman is punishable with death (Ex 21^{12}=Lv 24^{17}; the law is inclusive). If death results from flogging, the master is also punished, conjecturally by a fine (Ex $21^{20\pi}$). If the slave is seriously maimed by his master, he is given his freedom (Ex $21^{26\pi}$). At this point the BC contrasts very favourably with the CH. The latter does not attempt to protect the slave's person from the master, but only provides for an indemnity to the master if the slave is injured by another (199, 213, 214). While a man could be sold into slavery for debt (see above), **man-stealing** is prohibited on pain of death (Ex 21^{16}=Dt 24^{7}). Deuteronomy interprets the Exodus law correctly as a prohibition against stealing a fellow-countryman. Deuteronomy also forbids returning a slave who has escaped from a foreign master (Dt $23^{15\pi}$). If the slave in this case were a non-Israelite (which, however, is not certain), the law would be a remarkable example of the humane tendencies in Deuteronomy and would again contrast favourably with CH, which prescribes severe penalties for harbouring fugitive slaves (16, 19). The humane law for the protection of captive wives (Dt 21^{10-14}) is also noticeable.

But *practice* often went far beyond law in mitigating the severity of servitude. Indeed, slavery in the ancient East generally was a comparatively easy lot. The slave is grouped with wife and child as part of the master's household (Ex 20^{17}). Children are property and can be sold as well as slaves (Ex 21^{7}; cf 22^{16}=Dt 22^{28} where the daughter is regarded as the father's property). Children are flogged as well as slaves (Pr 13^{24}). Wives were originally bought from the parents, and wives and concubines are often almost indistinguishable. Hence the lot of the slave was probably not much harder than that of wife or child (cf Gal 4^{1}), and the law implies the possibility of a genuine affection existing between master and man (Ex 21^{5}=Dt 15^{16}). Accordingly we find many illustrations of the **man-servant** rising to a position of importance. He may be entrusted with the most delicate responsibilities (Gn 24), may be the heir of his master (Gn 15^{1-4}), is often on intimate terms with and advises the master (Jg $19^{3\pi}$, 1 S $9^{5\pi}$), the custom of having body-servants (Heb. *na'ar*, Nu 22^{22}, 1 K 18^{43}, 2 K 4^{12}, Neh 4^{22} etc.) favouring such intimacies, and he may even marry his master's daughter (1 Ch $2^{34\pi}$; cf similar cases in CH 175 ff). Especially servants of important men enjoy a reflected dignity (1 S 9^{22}, 2 K 8^{4}). The rise of servants into positions of prominence was so frequent as to be the subject of proverb-making (Pr 14^{35} 17^{2} 19^{10} 30^{22a}).

Whether a servant could own property while remaining a servant is not clear. The passages adduced in favour of it (1 S 9^{8} [a gratuity], 2 S $9^{2\pi}$ $16^{1\pi}$ [Ziba is a retainer], Lv 25^{49b} [not a real servant]) are not pertinent. Dt 15^{13} makes against it, but not necessarily, and the fact that in Arabia and Babylonia (CH 176) the slave could own property awakens a presumption in favour of the same custom in Israel.

Under a good house-wife the **maid-servant** would be well taken care of (Pr 31^{15}). At times she also seems to be the heir of her mistress (Pr 30^{23b} [?]). The son of the slave-concubine might inherit the property and the father's blessing (Gn $16^{1\pi}$ 21^{13} $49^{1\pi}$), but this depended on the father's will (Gn 25^{6}), as in Babylonia (CH 170 ff). The effect of occupying such positions of trust was often bad. Proverbs fears it (19^{10} 30^{21-23}), and such passages as 2 K $5^{20\pi}$, Neh 5^{15}, Gn 16^{4} justify the fear. Servants also tended to become agents of their master's sins (1 S 2^{13-15}, 2 S 13^{17}).

3. Thus far no *distinction between native and foreign slaves* has been observed either in law or in practice, except possibly by implication at Ex 21^{16}=Dt 24^{7}, and Dt $23^{15\pi}$. The view that the protective laws in Ex $21^{20\pi, 26\pi, 32}$ apply only to the native slave is without exegetical justification, and Gn 17^{12}, Ex 12^{44}, Gn 15^{2} [if the text can be trusted] $39^{1\pi}$ [probably equally applicable to conditions in Israel], 1 Ch $2^{34\pi}$ and Gn $16^{1\pi}$ show that the foreign man- or maid-servant may enjoy all the advantages of the native Israelite.

The distinction drawn between the subject Canaanites and the Israelites at 1 K $9^{20\pi}$=2 Ch $8^{7\pi}$ is clearly incorrect (cf 1 K 5^{13}) and belongs to a later development in the ideas of slavery (see below). The distinction drawn in P between the 'home-born' slave and the one 'purchased with money' (Gn 14^{14} 17^{12} etc.) does not refer to the two classes of foreign and native slaves.

In apparently but one particular, though this is of vital importance, the native slave is legally better off than the foreign-born, namely, in the right to *release*. Already in CH (117) provision was made for the release, after three years, of a wife or children who had been sold for debt. In the BC (Ex 21^{1-6}) this idea was associated with the Sabbath idea, and a release was prescribed after 6 years of servitude, but the law was extended to cover every Israelite man-servant. Yet in the specifications of the law (vv.$^{3, 4}$) the rights of the master still noticeably precede the rights of the husband and father. Provision is also made for the slave to remain in servitude if he prefers to do so. In this case the servant is to be brought to the door of the master's house, not of the sanctuary (the rite would then lose its significance), and have his ear pierced with an awl (a wide-spread symbol of servitude in the East), when he would become a slave for life.

The phrase **'unto God'** (v.^{6a}) can scarcely refer in this connexion to the local sanctuary, as has usually been held. It signifies the adoption of the slave into the family as a religious unit, and probably referred originally to the household gods (or ancestors ?).

In the case of the **maid-servant** (Ex 21^{7-11}) no release was permitted under ordinary circumstances (v.^{7}), for it is assumed that the slave-girl is at the same time a concubine, and hence release would be against the best interests both of herself and of the home. Yet she is not left without protection. Her master has no right to sell her to a family or clan not her own ('foreign people,' v.^{8b}, probably has this restricted significance, sale of an Israelite to a non-Israelite being out of the question), but must allow her to be redeemed, presumably by one of her own family. Failing this, he may give her to his son, in which case she is to be treated as a daughter (v.^{9}). If neither of these methods is adopted, a third way is provided. He may take another (concubine or wife), but must then retain the first, provide for her maintenance and respect her marital rights (v.^{10}). If the master refuses to adopt any one of these three methods ('these three,' v.^{11}, refers to the three methods in vv.$^{8-10}$, not to the three provisions in v.^{10}), then, and then only, the maid-servant has a right to release.

The Deuteronomic re-formulation of the Law of Release (Dt 15^{12-18}) is noteworthy. (1) Release is extended to the maid-servant. Consequently the specifications in Ex $21^{3, 4, 7-11}$ are allowed to lapse, and in the awl-rite only the possibility of the slave continuing in servitude through love of his master is considered. This change is due to the increasing respect for the marriage relation. The slave-husband's rights over the wife are now superior to the master's rights, and it is apparently no longer assumed that the maid-servant as such is the concubine of her master. Where concubinage does not exist, the maid-servant can be released without prejudice to the marital relation. (2) In Deuteronomy the awl-rite is clearly only a domestic rite. This confirms the interpretation of the rite given above. The Deuteronomist, who localizes all religious observances at the central sanctuary, consequently drops the 'unto God' of Ex 21^{6a}. (3) The characteristic humanitarian exhortation (vv.$^{13, 14}$) is added, and the reasonableness of the law defended (vv.$^{15, 18}$).

Jer 34^{8-17} describes an abortive attempt to observe the law in its Deuteronomic formulation. The law had evidently not been observed in spite of its reasonableness, and was subsequently again allowed to become a dead letter.

A third version of the Law of Release is found at Lv 25[39–55]. Three cases are considered: (1) That of the Israelite who has sold himself, because of poverty, to his fellow-countryman (vv.[39–43]). Such an one is not to be regarded as a real slave but as a hireling, and is to be released in the year of Jubilee. (2) Actual slaves are to be obtained only from non-Israelite peoples (cf 1 K 9[20]). For them there is no release (vv.[44–46]). (3) If an Israelite sells himself to a *gēr*, he may be redeemed at any time by his next of kin or by himself (power to acquire property assumed), but in any case he must be freed at the year of Jubilee (vv.[47–54]). The redemption-price is proportioned to the number of years he had yet to serve from the time of his redemption to the Jubilee year, in other words, to the pay he would receive as an hireling during that period. Thus the possibility of an Israelite becoming an actual slave is again obliterated. The differences between this law and the earlier legislation are marked. (*a*) It formulates the growing protest against the idea that an Israelite could be a slave (cf Neh 5[5, 8]). (*b*) Through the institution of the Jubilee year it provides that even the *quasi*-servitude which is admitted should not be for life, and consequently it ignores the awl-rite.

A difficulty emerges at this point. The Levitical law, which postpones release till the 50th year, seems to work a greater hardship at times than the earlier laws, which prescribe release in the 7th year. Here three things are to be remembered: (*a*) the earlier law had probably become a dead letter long before the present law was formulated (cf Jer 34, above); (*b*) the Jubilee law is the result of a theological theory (cf vv.[23, 42, 55]), and never belonged to the sphere of practical legislation; (*c*) as such it is to be construed, not in antithesis to the 7th year of the earlier laws, but to the life-long period of servitude often actually experienced. It will not lengthen the time until the year of release, but will theoretically abolish all lifelong servitude. This theoretical point of view so predominates that the prolongation of the time of servitude, if the law had ever become actually operative, is left out of account. The fact that the Israelite in servitude to another Israelite is really worse off than an Israelite attached to a *gēr*, who could be redeemed at any time, also shows that we are not dealing with practical legislation.

4. In these three laws of release we have three clearly marked stages in the recognition of the slave's personality. The BC provides for the release of the Israelite man-servant. Deuteronomy, with its humanitarian tendencies, extends this privilege to the maid-servant. Leviticus, on the basis of its theological conceptions, denies that any Israelite can be an actual slave. But all these laws remain within nationalistic limitations. *One step more must be taken.* The rights of the slave as a man, and not simply as a fellow-countryman, must be recognized. The growing individualism which accompanied the development of the doctrine of monotheism prepared the way for this final step, which was taken by Job in the noble passage 31[13–15]. In the same spirit Joel universalizes the primitive conception of the necessary attachment of the slave to the family cult, and makes him share equally with all flesh in the baptism of the Spirit of God (2[29]).

Note.—The relationship of servant to master is a favourite figure in the OT for the relationship of man to God (especially in the Psalms). The nation, Israel, is also often thought of as the servant of Yahweh (cf Is 41[8ff])—a thought which finds its most profound expression in Is 42[1–4] 49[1–6] 50[4–10] 52[13–53]12. Cf article, SERVANT OF THE LORD.

5. In the NT it is only the attitude of Jesus and St. Paul towards slavery that demands attention. Jesus was not a political agitator, or even a social reformer. In nothing is this fact more strikingly illustrated than in His allusions to slavery. He refers to it only for purposes of illustration (*e.g.* Mk 12[2, 4], Mt 24[45], Jn 8[35] etc.). He never criticises it, even when it violates, as He must have realized, His own principles of love and brotherhood (Mt 18[25], Lk 17[7ff]; contrast the figurative picture in Lk 12[37]). But, as Christianity reached into the world and developed into a social force, it became increasingly necessary to consider what its attitude towards slavery should be, especially as many slaves became Christians (in Ro 16[10f], 1 Co 1[11], Ph 4[22] 'those of Caesar's household' may include slaves). In this connexion St. Paul enunciates just one great principle—in Christ all the distinctions of this world disappear; the religion of Jesus knows neither bond nor free (1 Co 12[13], Gal 3[28], Col 3[11]). But he did not use this principle to overthrow the institution of slavery. On the contrary, at 1 Co 7[21–23] he counsels one who has been called (into the Christian life) while a slave not to mourn his lot. He even advises him, if the opportunity to become free is offered, to remain in servitude (v.[21], but the interpretation is doubtful), the near approach of the Parousia (v.[29]) apparently throwing these external conditions of life into a perspective of insignificance for St. Paul. The Apostle does not seek 'to make free men out of slaves, but good slaves out of bad slaves' (Eph 6[5–9], Col 3[22–41]; cf 1 P 2[18]). In these passages the corresponding duties of master to man are also insisted upon, as there is no respect of persons with Christ. It is significant that in the later Pastoral Epistles (1 Ti 6[1ff], Tit 2[9–11]) the exhortations to the masters are omitted. It would seem as if some slaves had taken advantage of the Christian principle of brotherhood to become insubordinate. In Philemon we have the classical illustration of St. Paul's attitude towards slavery exemplified in a concrete case. Here again he does not ask Philemon to free Onesimus; and it is clear from 1 Ti 6[1ff] and the subsequent history of the Church that Christians in good standing owned slaves. But in Phn[16] the slave is transfigured into a brother in Christ. For further discussion of this point see PHILEMON.

Though the Church recognized slavery, it is a remarkable fact that in the epitaphs of the catacombs the deceased is never spoken of as having been a (human master's) slave, though often described as a slave of God. In death, at least, the Christian ideal was fully realized. The slave becomes with the master only the slave of God. Contrast the gloomy equality in Job 3[19].

K. F.—J. P. H.

SLEDGE, THRESHING.—Found only in RSV for AV and RV 'threshing instrument'; see AGRICULTURE, 3.

SLEEVES.—See DRESS, 2 (*d*).

SLEIGHT.—The word translated 'sleight' in Eph 4[14], 'by the sleight of men,' means literally *dice-playing*. Tyndale uses 'wylynes,' which is more intelligible now than 'sleight.' RSV reads 'cunning.'

SLIME.—See BITUMEN, SIDDIM [VALE OF].

SLING.—See ARMOUR, ARMS, 1 (*e*).

SLOTHFULNESS.—See WORK.

SLUICE.—Found only in Is 19[10] AV (cf RVm), where RV and RSV have '(who work for) hire.' AV here follows Targum and Vulgate and Jewish commentators; LXX and Peshitta render by 'strong drink,' which represents a different vocalization of the Hebrew.

SMELTING.—See MINING AND METALS.

SMITH.—See ARTS AND CRAFTS, 2.

SMYRNA (also and more strictly *Zmyrna*) was founded as a colony from Greece before 1000 B.C., but the early foundation, which had been Aeolian, was captured by its southern neighbours the Ionian Greeks and made an Ionian colony. This second foundation became a powerful State, possessing territory far to the E., and as late as the 7th cent. B.C. fought as a member of the Ionian Confederacy against the great Lydian power (see SARDIS). It gradually gave way, however, and was captured and destroyed in 627 B.C. by Alyattes, king of Lydia. It now ceased to be a Greek city, and it was not till the 3rd cent. B.C. that it became so again. There was a State called Smyrna between 600 and 290 B.C., but it was mainly a loose congeries of villages scattered about the plain and

the surrounding hills, and not in the Greek sense a *polis* (city-State). Alexander the Great intended to re-found the city, but did not carry out his plan. It was left for his successors, Lysimachus and Antigonus, who accomplished it in 290 B.C. The old city had been on a steep high hill on the N. side of the extreme eastern recess of the gulf; the new was planted on the SE. shore of the gulf, about 2 miles away. The object of the change was to obtain a good harbour and a suitable starting-point for the land trade-route to the E. There were in reality two ports—a small inner one with a narrow entrance, and a mooring ground; the former has gradually filled up through neglect. Its maritime connexion brought it into contact with the Romans, who made an alliance with Smyrna against the Seleucid power. In 195 B.C. Smyrna built a temple to Rome, and ever afterwards remained faithful to that State, through good fortune and bad. Rome showed a thorough appreciation of this friendship and loyalty, and in A.D. 26 this city was preferred before all others in Asia as the seat of the new temple to be dedicated by the confederacy of that province to Tiberius.

The city was of remarkable beauty. Its claim to be the chief city of Asia was contested by Ephesus and Pergamum, but in beauty it was easily first. In addition to its picturesque situation it was commended by its handsome and excellently paved streets, which were fringed by the groves in the suburbs. The city was well walled, and in the *pagos* above possessed an ideal acropolis, which, with its splendid buildings in orderly arrangement, was known as the crown or garland of Smyrna. The protecting divinity of the city was a local variety of Cybele, known as the Sipylene Mother, and the towers and battlements of her head-dress bore an obvious resemblance to the appearance of the city. (The Greeks identified her with Nemesis, who here only in the Greek world was worshipped, and not as one but as a pair of goddesses.) There was one street known as the Street of Gold. It went from W. to E., curving round the sloping hill, and had a temple on a hill at each end. For its length and fine buildings it was compared to a necklace of jewels round the neck of a statue. The life of the city was and is much benefited in the hottest period of the day by a west wind which blows on it with great regularity, dying down at sunset. This was counterbalanced by a disadvantage, the difficulty of draining the lowest parts of the city, a difficulty accentuated by this very wind. Smyrna was a centre of learning, especially in science and medicine, and boasted that it was the birthplace of Homer, who had been born and brought up beside the river Meles. This stream is identified by local patriotism with the Caravan Bridge River, which flows northwards till it comes below the *pagos*, then flows round its eastern base and enters the sea to the NE. of it. But this is a mistaken view. The Meles is undoubtedly to be identified with the stream coming from the Baths of Artemis and called Chalkabounar, as it alone satisfies the minute description of the Smyrnaean orator Aristides (2nd cent. A.D.) and other ancient writers. It rises in the very suburbs of the city, and is fed by a large number of springs, which rise close to one another. Its course is circle-shaped at first, and afterwards it flows gently to the sea like a canal. Its temperature is equable all the year round, and it never either overflows or dries up. The city has suffered from frequent earthquakes (for instance, in A.D. 178), but has always risen superior to its misfortunes. It did not become a Turkish city till Tamerlane captured it in A.D. 1402. It has always been an important place ecclesiastically.

The **letter to the Church at Smyrna** (Rev 2^{8-11}) is the most favourable of all. The writer puts its members on a higher plane than any of the others. They have endured persecution and poverty, but they are rich in real wealth. They are the victims of calumny, but are not to be afraid. Some are even to be sent to prison as a prelude to execution, and to endure suffering for a time. If they are faithful unto death, they will receive the crown of eternal life. The church was dead and yet lived, like the city in former days. The Jews in Smyrna had been specially hostile to the Christians, and had informed against them before the Roman officials. Most of them were probably citizens of Smyrna, and had become merged in the general population, since the Romans ceased to recognize the Jews as a nation after A.D. 70. The hatred of the Jews there can perhaps be explained by the supposition that many of the Christians were converted Jews. Similarly they helped in the martyrdom of Polycarp (A.D. 155). In *c* A.D. 112 Ignatius of Antioch, on his way to martyrdom at Rome, visited the church in Smyrna and later, from Troas, sent them a letter, which survives. The city and its Christians have survived all attacks. A. So.—**F. C. G.**

SNAIL.—**1.** *ḥōmeṭ*, Lv 11^{30} (AV; RV, RSV 'sand lizard'); see LIZARD. **2.** *shabbᵉlûl*, Ps 58^{8} 'like the snail which dissolves into slime.' But G. R. Driver has shown that the word means 'a miscarriage,' before the foetus is old enough for its sex to be known (*JThS* xxxiv, 41 f); cf 'an untimely birth' in the parallel line.

SNARES.—A cord with running noose (*môḳēsh*, Am 3^{5} etc.; cf *yāḳôsh* 'one who lays snares,' 'fowler,' Hos 9^{8}) was used to catch ground game and birds. The fowler also used a **net** (*resheth*, Pr 1^{17}, Hos 5^{1} etc.), under which he tempted birds by means of food, and then, concealed near by, pulled it down upon them. The *paḥ* (Ps 124^{7}, Pr 7^{23}, Ec 9^{12} etc.) probably corresponded to the Arabic *fakhkh*, a trap made of bone and gut, with tongue and jaws on the principle of the common rat-trap. It is light, and the bird caught by the foot easily springs up with it from the ground in its vain efforts to escape. Of this Amos gives a vivid picture (3^{5}). In later times the fowler used decoys to lure birds into his cage (Sir 11^{30}). Both *môḳēsh* and *paḥ* are several times rendered in EV by **gin.** The NT *pagis* (Ro 11^{9} etc.), and *brochos* (1 Co 7^{35}; but cf RSV), may mean 'snare,' 'net,' or 'trap'; whatever seizes one unawares. W. E.

SNOW.—Every winter snow falls occasionally in the mountainous districts of Palestine, but seldom lies for more than a few hours—at most for a day or two. For the greater part of the year, however, snow, glistening on the shoulders of Great Hermon, is easily seen from most of the higher hills in the country. It is frequently used as a symbol of whiteness and purity (Ex 4^{6}, Ps 51^{7}, Is 1^{18}, Mt 28^{3} etc.). It stands for the cold against which the good housewife provides (Pr 31^{21}). From Mount Hermon snow has been carried since olden times to great distances, to refresh the thirsty in the burning heat of summer (Pr 26^{1}). Water *mithl eth-thilj* ('like the snow') for coolness, is the modern Arab's ideal drink. W. E.

SNUFFERS, SNUFF DISHES.—The former of these are the 'tongs' of Ex 37^{23} (RV; AV, RSV 'snuffers'), the latter the vessels in which the burnt portions of the wicks were deposited (RSV 'trays'; AV, RV 'snuff-dishes'). See FIREPAN and TABERNACLE, **6** (*b*).

SO.—The 'king of Egypt' with whom Hoshea corresponded (2 K 17^{4}) shortly before he openly revolted against Assyria in 725 B.C. So, written *Sw'* in the Hebrew text, is almost certainly to be identified with the Sib'u of the Annals of Sargon and with the Sib'e of Sargon's 'Display Inscription.' The name should therefore probably be vocalized Siw'e. In the Display Inscription Sargon says: 'Hanuno, king of Gaza, and Sib'e, the commander-in-chief of Egypt, advanced to Rapihu to make a direct attack and to battle with me. I defeated them. Sib'e fled . . . I received tribute from Pir'u of Muṣuru. . . .' If 'Pir'u of Muṣuru' is 'Pharoah of Egypt,' as seems most probable, though this identification has been disputed by some scholars, then So would appear to have been not the 'king of Egypt,' but a general under him. At the time of the battle of Raphia, where Sib'e was defeated, Piankhi, the founder of the Ethiopian (25th) Dynasty, was ruler of Egypt and Nubia, but the 'Pir'u of Muṣuru' of the Assyrian inscriptions is probably Bocchoris, one of the vassal princes whom he allowed to reign in Lower Egypt. Some scholars have identified So=Sib'e with Shabaka,

who succeeded Piankhi and reigned 716–701 B.C. In favour of this view it can be said that Shabaka, as crown prince, might well have been a commander of the Egyptian army and that the termination -ka, the main philological objection to the equation of the two names, is found with other royal names of the period. The identification is, however, very uncertain and few modern scholars accept it. T. W. T.

SOAP (*bōrîth*) occurs in EV (AV '**sope**') only in Jer 2^{22} (washing of the person) and Mal 3^{2} (operations of the fuller). Properly *bōrîth* denotes simply 'that which cleanses.' The cognate word *bōr* is commonly rendered 'cleanness,' but in Job 9^{30}, Is 1^{25} RVm and RSV have '**lye.**' Soap in the modern sense of the word was unknown in OT times, and we do not know what precisely is referred to by *bōrîth*. As in Jer 2^{22} *nether* (AV 'nitre' q.v.; RV, RSV 'lye'), a mineral alkali, is set in antithesis to *bōrîth*, it is supposed that the latter was some kind of vegetable alkali which, mixed with oil, would serve the purposes of soap. This may be confirmed by the fact that in Jer 2^{22} and Mal 3^{2} LXX renders *bōrîth* by *poia* = 'grass.' J. C. L.

SOBRIETY.—See TEMPERANCE, **1.**

SOCHO, 1 Ch 4^{18} (AV).—See SOCO, **4.**

SOCHOH, 1 K 4^{10} (AV).—See SOCO, **3.**

SOCKETS.—See TABERNACLE, **4** (*a*).

SOCO.—1. A fortified town in the lowland of Judah, mentioned with Adullam and Azekah in Jos 15^{35}; the Philistines gathered here (1 S 17^{1}), and later raided here (2 Ch 28^{18}); it was fortified by Rehoboam, 2 Ch 11^{7}; probably modern *Khirbet 'Abbâd*. The **Sucathites** (1 Ch 2^{55} [AV **Sucathites**]) are perhaps inhabitants of Soco. **2.** A city of Judah in the hill country, mentioned with Jattir and Debir in Jos 15^{48}; modern *Khirbet esh-Shuweikeh*, SSW. of Hebron, a Byzantine site known to Eusebius and Jerome, the earlier site being indicated by Iron Age potsherds at *Khirbet 'Abbâd* (see **1**, above), on a spur a little further W. **3.** A city in Solomon's 3rd district, mentioned in 1 K 4^{10}; modern *Tell er-Râs*, WNW. of Samaria. **4.** In 1 Ch 4^{18} Heber is said to be the father of Soco, where one of these towns may be meant. In the earlier editions of RSV (as in RV) the name was given as Soco in 1 Ch 4^{18}, 2 Ch 11^{7} 28^{18}, and Socoh elsewhere, but in later editions it is Soco in all places; AV employs the spellings Shocho, Shochoh, Shoco, Socho, Sochoh, Shocoh (q.v.).
E. W. G. M.—J. Gr.

SOCOH, Jos $15^{35, 48}$ (AV).—See SOCO, **1, 2.** This spelling is also found in some passages in RV and in early editions of RSV. See SOCO (end).

SOD, SODDEN.—See SEETHE.

SODERING.—AV form of 'soldering' in Is 41^{7}.

SODI.—The father of the Zebulunite spy, Nu 13^{10}.

SODOM.—See DEAD SEA, PLAIN [CITIES OF THE].

SODOM, SEA OF, 2 Es 5^{7} = the **Dead Sea** (q.v.).

SODOM, VINE OF.—See VINE.

SODOMA, Ro 9^{29} (AV) = **Sodom** (q.v.).

SODOMITISH SEA, 2 Es 5^{7} (AV, RV) = **Dead Sea** (q.v.)

SODOMY.—See CRIMES AND PUNISHMENTS, **3,** and HOMOSEXUALITY.

SOJOURNER.—See STRANGER.

SOLDERING.—Found only in Is 41^{7} for the joining up of the metal plates covering an idol.

SOLDIER.—See ARMY, LEGION, WAR.

SOLEMN, SOLEMNITY.—The adjective 'solemn' frequently occurs in EV, always with *assembly* or *meeting* or some such word, and always in its early sense of 'regular' or 'public.' Thus 'a solemn feast' means simply 'a stated feast'; there is no corresponding word in the Hebrew. In the same way 'solemnity' means 'public occasion.' How much this word, as used in EV, differs from its modern meaning, may be seen from Shakespeare, *Midsummer Night's Dream*, v. i. 376:

> 'A fortnight hold we this solemnity,
> In nightly revels and new jollity.'

SOLEMN ASSEMBLY.—See CONGREGATION.

SOLOMON.—1. Sources.—1 K 1–11 (cf 11^{41}), with parallels in 2 Ch 1–9 (add references in closing chs. of 1 Ch). In Chronicles the character of Solomon, as of the period as a whole, is idealized; *e.g.* nothing is said of the intrigues attending his accession, his foreign marriages and idolatry, or his final troubles, even with Jeroboam. Details are added or altered in accordance with post-exilic priestly conceptions (5^{12f} 7^{6} 8^{11-15}); 1^{3} (cf 1 K 3^{4}) makes the sacrifice at Gibeon more orthodox; the dream becomes a theophany; in $7^{1, 3}$ fire comes down from heaven. In 9^{29} reference is made to authorities, possibly sections of 1 Kings; there is no evidence that the Chronicler was able to go behind 1, 2 Kings for his materials. The books of OT and Apocrypha ascribed to Solomon are of value only as giving later conceptions of his career. Josephus (*Ant.* VIII. i.–viii.) cannot be relied on where he differs from OT; the same holds good of the fragments quoted by Eusebius and Clemens Alexandrinus. Later legends, Jewish and Mohammedan, are interesting, but historically valueless; the fact that they have in no way influenced the OT narrative is an evidence of its general reliability; only two dreams and no marvels are recorded of Solomon. Archaeological research and discovery in recent years has greatly increased our knowledge of his reign.

2. Chronology.—His reign is to be dated *c* 969–922 B.C. (*BASOR* 100, 16–23) and the reign of Shishak may be set *c* 940–920 B.C. while the reign of Hiram of Tyre should be placed *c* 969–936 B.C. The origin and interpretation of the 480 years in 1 K 6^{1} are very doubtful. The 'little child' (*na'ar qāṭôn*) of 3^{7} (cf Jer 1^{6}) does not imply the tradition that Solomon was only 12 years old at his accession; more probably he was near 20 years of age. The 40 years of his reign, as of David's, would seem to represent a generation.

3. Early years.—Solomon was the son of David and Bathsheba (2 S 12^{24f}), presumably their eldest surviving child; his position in the lists of 5^{14}, 1 Ch 3^{5} 14^{4} is strange, perhaps due to emphasis. The name means 'peaceful' (Heb. *Shᵉlōmōh*; cf *Irenaeus, Friedrich*), indicating the longing of the old king (1 Ch 22^{9}); cf *Absalom* ('father is peace'). The name given him by Nathan (2 S 12^{25}), **Jedidiah** ('beloved of Y"," the same root as *David*), is not again referred to, perhaps as being too sacred. It was the pledge of his father's restoration to Divine favour. We have no account of his training. 'The Lord loved him' (2 S 12^{24}) implies great gifts; and v.^{25} and 1 K 1 suggest the influence of Nathan. His mother evidently had a strong hold over him (1 K 1 2).

4. Accession.—The appointment of a successor in Eastern monarchies depended on the king's choice, which in Israel needed to be ratified by the people (1 K 12); where polygamy prevails, primogeniture cannot be assumed. 1^{13} implies a previous promise to Bathsheba, perhaps a 'court secret'; the public proclamation of 1 Ch 22^{2-19}, if at all historical, must be misplaced. Adonijah, 'a very goodly man' (1 K 1^{6}), relying on the favour of the people (2^{15}) [it is doubtful whether he was the eldest surviving son], made a bid for the throne, imitating the method of Absalom and taking advantage of David's senility. He was easily foiled by the prompt action of Nathan and Bathsheba; Solomon himself was evidently young, though soon able to assert himself. The careful and impressive ritual of the coronation was calculated to leave no doubt in the people's mind as to who was the rightful heir. The young king learned quickly to distinguish between his friends and enemies, as well as to rely on the loyalty of the Cherethites, his father's foreign bodyguard. The sparing of Adonijah (1 K 1^{53}) suggests that he was not a very formidable competitor; his plot was evidently badly planned. His request to Bathsheba (2^{13}) may have been part of a

renewed attempt on the kingdom (as *heir* he claims his father's wives), or may have been due to real affection. At any rate the king's suspicion or jealousy was aroused, and his rival was removed; Canticles suggests that Solomon himself was believed to have been the lover of Abishag. The deposition of Abiathar, and the execution of Joab and Shimei, were natural consequences; and in the case of the two last, Solomon was only following the advice of his father (2$^{5, 8}$). He thus early emphasized his power to act, and as a result 'his kingdom was established greatly' at a cheap cost. We shall hardly criticise the removal of dangerous rivals when we remember the fate which he himself would have met if Adonijah had succeeded (1^{21}), and the incidents common at the beginning of a new reign (2 K 11^{1}; cf Pr 25^{5}).

5. Policy.—The times were singularly favourable to Solomon at the time of his accession to the throne. The government of Egypt was in the hands of the last weak rulers of the Tanite Dynasty and they were incapable of any large enterprises. Assyria under Tiglath-pileser II. (966–935 B.C.) could stage no major effort and Sidon, with its capital at Tyre, was too heavily engaged in large commercial enterprises to give heed to Palestinian politics. The Aramaeans had been conquered by David and no signs of their resurgence appeared. It was an era of peace favourable to the policy of Solomon whose main aim was to surround his kingdom with all the outward signs of a great power. With this view he gathered to himself a very large harem, though the figures given may appear somewhat exaggerated (1 K 11^{3}, Ca 6^{8}). The buildings which he erected were something new in the way of luxury and extravagance: they included a Temple that rivalled in splendour the richest shrines of Phoenicia and Egypt. No serious military operations found place in his reign but Solomon set himself in a position of strength by establishing a powerful standing army, and particularly a chariot force which his father had steadfastly refused to employ. The figures given as to the size of this force vary but it seems probable that he had 1400 chariots, 4000 stalls for chariot horses, and some 12,000 horses. This seems a large and expensive establishment but it does not seem improbable: at the battle of Qarqar about a 100 years later Ahab's chariotry force almost equalled that of Hadadezer of Damascus. The earlier custom of hamstringing horses was abandoned by the Hebrews and archaeology has revealed that certain cities were chariot cities where the corps had headquarters. Such cities seem to have been Megiddo, Taanach, Gezer, Hazor: these are attested by archaeology and doubtless there were others. At Megiddo the excavators have uncovered stalls for 450 horses with space for about 150 chariots. As to how this corps was raised we learn from 1 K 10^{28}: this is quite unclear in the AV but the obscurity is cleared up in RSV. We translate with Albright (*ARI*, p. 135): 'And Solomon's horses were exported from Cilicia: the merchants of the king procured them from Cilicia at the current price; and a chariot was exported from Egypt at the rate of 600 shekels of silver and a horse from Cilicia at the rate of 150: and thus (at this rate) they delivered them by their agency to all the kings of the Hittites and the kings of Aram.' Solomon also developed a strong system of fortifications and fortified such towns as were of strategic or commercial importance—Hazor and Megiddo on the Egypt-Damascus road, Beth-horon and Gezer (probably also Baalath) guarding the approaches to Jerusalem, and Tamar, in Judah, protecting the road leading to the Dead Sea. In Jerusalem he built the Millo, a block of fortifications intended to 'close up the breach of the city of David' (1 K 11^{29}), that is, to fill in the ravine which formerly divided Zion hill from the site of the new royal palaces and the Temple. In addition to these measures Solomon strengthened himself by foreign alliances. Early in his reign he married the daughter of the Pharaoh and received Gezer as her marriage portion (1 K 3^{1}). He also entered into alliance with Hiram of Tyre and this opened up large opportunities for commercial expansion. Solomon became a great trader and the sources tell us of commercial dealings with Phoenicia, Egypt, S. Arabia, and adjacent regions, and with the more remote regions of Hittite N. Syria and Cilicia (see above). In this period the commercial expansion of Phoenicia had developed to a high degree and trading posts were established as far W. as Sardinia and Cyprus. We cannot say whether Phoenicia had expanded as far as Spain but it is not improbable. Archaeological discoveries have revealed that the term *Tarshish* was applied in the following century to *Nora* in southern Sardinia, and, as Albright has shown, the term *Tarshish* seems to have the general significance of 'refinery' (*ARI*, p. 136). The researches of Nelson Glueck (*The Other Side of Jordan*; also *BASOR* 90, 13 f) have shown how, with Phoenician co-operation, Solomon exploited the copper mines in the Ghôr and established great refineries at Ezion-geber (*Tell el-Kheleifeh*). Here the copper ore was smelted—probably by slave-gangs—to yield metal for his great building projects and for purposes of trade. Ezion-geber was formed into a great maritime trading centre from which ships sailed to SW. Arabia and probably the African coast to return with 'gold, silver, ivory, apes and monkeys,' (1 K 10^{22}). This maritime trade may well have cut into the overland caravan trade within Arabia, and it may well be that the visit of the Queen of Sheba was prompted not only by religious interest but by real economic concern. No permanent success attended these maritime ventures and we are later informed that Jehoshaphat failed to keep the enterprise in being (1 K 22^{48}). The Jews did not take naturally to the sea and such enterprises remained with the Phoenicians.

6. Internal condition of the kingdom.—Solomon sought to centralize authority in the crown by weakening tribal ties and increasing his control of the hierarchy. For purposes of administration the tribal divisions were replaced by 12 prefectures cutting across tribal boundaries (1 K 4^{2f}). Under both David and Solomon there was a fundamental conflict between the tribal separatism of early Israel and the centralizing tendencies of the crown. The prefectures were in charge of prefects whose sole loyalty was to the crown and their royal patron. Two of them are reported to have been married to daughters of Solomon (1 K 4$^{11, 15}$): the system was a close corporation and bureaucracy. It has been thought that Judah was exempted from this system but 1 K 4^{19f} seems to deny any such preferential treatment. It was the duty of those prefects to care for the provisioning of the royal household, each being responsible for one month. That this was no light burden is clear from 1 K 4^{22} (Heb 5^{2f}) where we learn that each district had to supply annually 5000 bushels of flour, 10,000 bushels of meal, 900 oxen, 3000 sheep. For districts of less than 100,000 population this must have been a crushing burden. The Samaritan Ostraca, found in the palace of Jeroboam II. at Samaria, give evidence of the system of taxation: many traces of 10-gallon jars have been found bearing the inscription 'for the king'—somewhat like O.H.M.S. These were evidently used in paying taxes in kind, mainly wine and oil. Archaeology has disclosed the fact that certain cities were 'store cities' (Lachish, Beth-shemesh, etc.). 'The king's mowings' (Am 7^{1}) would seem to imply a royal claim on the first cut grass for the army horses. The kind of impact made on the people may be gauged from the words describing the monarchy and its heavy exactions in 1 S 8$^{11-17}$. These words were written after sad experience of the institution. Nothing could be more grievous to the sons of the desert than to be pressed into a system of forced labour (*mas*, the same word as is used of Israel's hard labour in Egypt). There was conscription for the army and there was conscription for labour. Thirty thousand males were pressed into labour gangs and these were taken one month in every three to hew lumber in Lebanon. That is equal to 4 per cent. of the population: in Britain it would mean 2,000,000 people working four months each year on government building projects. In addition women were conscripted for palace service; such a

system must have involved serious dislocation of life's normal activities. Had Jeremiah lived in the days of Solomon he might well have excoriated him as he did Jehoiakim (Jer 22^{18}). To Solomon we owe the building of the Temple, but this did not at that time become the only legitimate centre of worship in Israel. As the royal chapel it assumed a high place in the religious life of the people. In its building we can discern the influx of Canaanite culture and alien religious ideas. It does not really set forth an example of authentic Israelite worship. There is little wonder that when the city fell in 586 B.C. Jeremiah did not feel an irreparable blow had been struck at religion: the prophet did not believe it was essential for the survival of the Hebrew faith.

7. His wisdom was the special gift of God (3^5). His 'judgment' (v.^{16ff}) is the typical instance. It presumably took place early in his reign (cf the contemptuous laughter of the people in Jos. *Ant.* VIII. ii. 2 [32]), and simply shows a shrewd knowledge of human nature; many parallels are quoted. It proves his fitness for judicial functions, and 4^{29-34} gives the general idea of his attainments. He was regarded as the father of Jewish proverbial (or gnomic) wisdom; 'wisdom books' existed in Egypt long before, but it seems impossible to distinguish in our present 'Proverbs' (*c* 250 B.C.) what elements may be due to him. Sirach and Wisdom have no title to his name. 1 K $4^{29, 33}$ suggest general and poetical culture, parables drawn from nature, rather than the beginnings of science. Ps 72 may possibly belong to his age, but not Ps 127 or Canticles. Later tradition added much; the solving of 'riddles' held a large place in the wisdom of the East and we hear of the 'hard questions' of the queen of Sheba (10^1), and of a contest between Solomon and Hiram (Jos. *Ant.* VIII. v. 3 [143]). Josephus also speaks of his power over demons; Rabbinical legend of his control over beasts and birds, of his 'magic carpet,' and knowledge of the Divine name. Examples of the legendary material are accessible in Farrar's *Solomon*.

8. Character.—Solomon evidently began his reign with high ideals, of which his dream (3^5) was a natural expression. His sacrifice at Gibeon (v.^{4}) gives another aspect; his religion was associated with external display. So the magnificence of the Temple, the pageantry and holocausts of its dedication (8), certainly ministered to his own glory, no less than to God's. His prayer, however, if it be in any sense authentic, is full of true piety, and he seems to have had a real delight in religious observances (9^{25}). His fall is connected with his polygamy and foreign wives (11, cf Neh 13^{26}). He not only allowed them their own worship, a necessary concession, but shared in it; the memory of his 'high places,' within sight of his own Temple, was preserved in the name 'Mount of Offence.' This idolatry was, in fact, the natural syncretism resulting from his habitual foreign intercourse. Self-indulgence and the pride of wealth evidently played their part in his deterioration. Of his actual end nothing is known; he was an 'old man' (1 K 11^4) at sixty years, but Jeroboam's flight suggests that he could still make his authority felt. Ecclesiastes gives a good impression of the 'moral' of his life; but whether he actually repented and was 'saved' was warmly debated by the Fathers. Dt 17^{16f} criticises his Egyptian alliance and harem, his love of horses and of wealth, and Sir 47^{12-21} is a fair summary of the career of one whose 'heart was not perfect with the Lord his God, as was the heart of David his father' (1 K 11^4). His wisdom could not teach him self-control, and the only legacy of a violated home-life was a son 'ample in foolishness and lacking in understanding.' C. W. E.—**J. Pn.**

SOLOMON, PSALMS OF.—See PSEUDEPIGRAPHA, 3.

SOLOMON'S PORCH or PORTICO.—See PORCH, TEMPLE.

SOLOMON'S SERVANTS.—See NETHINIM.

SOMEIS, 1 Es 9^{34} (RV).—See SHIMEI, **11.**

SOMETIME, SOMETIMES.—There is no difference in the use of these two forms in AV, and except in Sir 37^{14} ('For a man's mind is sometime wont to tell him,' etc.), where the meaning is 'occasionally,' as now, both forms are used in the sense of 'once upon a time.'

SON.—See CHILD, FAMILY.

SON OF GOD, SON OF MAN.—See CHRISTOLOGY.

SONG OF SONGS (or CANTICLES).—1. Place in the Canon.—The Song of Songs is one of the *Kᵉthûbhîm, Hagiographa*, or Writings, the third of the three classes into which the Jewish Canon was divided. Printed copies of the Hebrew OT follow the arrangement of the German and French MSS in placing it at the head of the five *Mᵉghillôth* or Rolls—the short books which are read at the great annual feasts of Passover, Pentecost, the 9th of Ab, Feast of Booths, and Purim. Probably it owes its position to the fact that the Passover is the earliest festival of the year. But there is reason for believing that a more ancient order survives in the LXX, where it stands by the side of Proverbs and Ecclesiastes, the two other works to which Solomon's name was attached.

Grave doubts were long entertained by the Rabbis respecting the canonicity of **Canticles** (a common name of the book, from Vulgate *Canticum Canticorum*), the school of Shammai opposing it, while the more liberal school of Hillel favoured its inclusion in the Canon.

The Synod of Jamnia (A.D. 90–100), after some discussion, decided in favour of its reception, and Rabbi Akiba (A.D. 135) lent to this conclusion the weight of his great influence: 'All the Hagiographa are holy, but the Song of Songs is the most holy, and the whole world is not of such importance as the day on which it was given.' The opening words of the Targum are equally strong: 'Songs and praises which Solomon the prophet, the king of Israel, spoke by the Holy Spirit before Yahweh, the Lord of the whole world. Ten songs were sung in that day, but this song was more to be praised than they all.' The Midrash asserts that 'Canticles is the most excellent of songs, dedicated to Him who one day will cause the Holy Spirit to rest on us; it is that song in which God praises us and we Him.'

2. Interpretation.—(*a*) The earliest type of interpretation was the *allegorical*. This type of exegesis undoubtedly explains its eventual inclusion in the Canon. According to its earliest form, the book is understood as symbolizing the relations of Yahweh (the bridegroom) and Israel (the bride) from the Exodus to Messianic times. In its Christian version the bridegroom and the bride became Christ and the Church (or the individual believer). The Jewish form persisted throughout the mediaeval period (Rashi, Saadia b. Joseph and Ibn Ezra), but eventually it became unpopular among Jewish scholars. To-day it is almost limited to orthodox circles.

Among Christians various forms of symbolism have been seen in the book. Origen, Jerome, Augustine, and others felt the book to refer to the love relation between Christ and the Church, an interpretation which still exists in certain Christian circles. Others such as Gregory of Nyssa and Bernard of Clairvaux felt that it referred to the relations of Christ and the individual believer. Some Roman Catholic writers interpreted the book as dealing with the incarnation, the Virgin Mary being the bride. Luther saw in the bride the state, with the songs being Solomon's thanksgivings for the blessings bestowed on his kingdom. Mystics have naturally found in the book reference to the mystical union. Still others see in the book reference to Wisdom (cf Pr 8 and 9). On the whole, most modern scholars do not follow an allegorical interpretation.

(*b*) *Dramatic.*—Origen already felt that on the surface the Song was a nuptial poem honouring Solomon's marriage to Pharaoh's daughter, though the real meaning was to be found in allegory. The dialogue nature of the Song was also indicated in early Greek MSS (Cod. Sinaiticus and Alexandrinus, with marginal notes indicating change of speakers) and Vulgate MSS (cf the rubrics prefixed to various verses in Cod. Amiatinus: 'Voice of the Church,' 'Voice of Christ,' 'Voice of Mary Magdalene to the Church'). It was, however,

not until modern times that a dramatic interpretation was fully worked out. The two main characters are Solomon and the Shulammite. Various attempts at dividing the book into acts were made, but it is difficult to promote any dramatic development with only two characters. Within the poem there is no movement towards a climax. Matters are as far advanced at 1^4 and 2^4 as at 8^5.

Somewhat more popular has been the three character dramatic interpretation (Solomon, the Shulammite, and the shepherd). The Shulammite and the shepherd are lovers, but Solomon has abducted the Shulammite for his harem, and tries to win her love. She resists her royal suitor, remaining true to her rustic lover. It is not fully clear why such an ancient version of the eternal triangle which places the great Solomon in a very bad light should have been incorporated into the canon. Furthermore, if this book were written as drama the speakers would certainly have been noted (as in the case of Job).

(*c*) *Wedding Cycle.*—On the basis of Wetzstein's *Die syrische Dreschtafel*, many felt the book to be composed of a number of originally detached pieces which were eventually brought together. Wetzstein noted, while living in Syria, that the peasant bridegroom and bride are entitled king and queen for the first week of married life; they are attended by a vizier, have their throne on the threshing-floor, and receive the homage of the whole countryside. Songs and dances are executed by the 'friends of the bridegroom,' the bystanders, and the newly married pair. Some of these songs, especially those which enumerate the charms of the bride, are of exactly the same character as certain sections of Canticles, and 7^{1ff} corresponds precisely with the *waṣf* ('description') which the bride sings as she goes through the sword-dance on her wedding night. These facts have induced a large number of expositors to believe that Canticles is a collection of love-songs, composed expressly for, or at any rate suitable for use at, marriage festivals. Budde in particular held to this view and presented it with such persuasion that it dominated the scholarly world for many years. Unfortunately, no Judaean counterpart to such *waṣfs* has ever been found, nor are the Syrian customs really parallel to Canticles. The bride is never called 'queen': the motifs of sword-dance and threshing floor are absent; nor is it reasonable to assume that such secular ditties would have been attributed (wrongly to be sure) to Solomon.

(*d*) *Secular love songs.*—Many believe Canticles to be a group of (possibly unrelated) secular love songs. This was already held by Theodore of Mopsuestia (A.D. 360–429). Due to von Herder's able defence of this interpretation it is widely followed to-day. Its ablest modern defence is that of Gordis who divides the book into twenty-eight poems, ranging in origin from the 10th to the 5th cents. Chief objections to this approach which have been raised are the reference to Solomon, the presence of the daughters of Jerusalem, the forwardness of the bride in pressing her love for the shepherd, and its inclusion in the Canon.

(*e*) *Liturgical.*—According to this theory, Canticles is an anthology of liturgies which in their original form were part of the ancient Hebrew New Year festivals in which the change of seasons, particularly that of springtime, was celebrated in dramatic form as the marriage of the Sun God with the Mother Goddess. These liturgies are then survivals of one of the forms of the ancient fertility cult as it was practised in Palestine. According to T. J. Meek, ablest and most vigorous exponent of this theory, there are numerous traces of such liturgical usage: the prominent rôle of the 'daughters of Jerusalem,' the separation of the lover and the beloved, the unnamed speakers, the rôle of the king (playing the part of the Sun God?), the repetitious nature of the speeches, its adjurations by animals known to be sacred to the fertility cult, certain cultic terms, and the use of the term 'Beloved' (the name of a fertility god). It must be admitted that a cultic background to Canticles best explains its continued usage by the Jews in connexion with Passover as well as its inclusion in the Canon. Meek also appeals to its elusive geographical background with its greater prominence to places in the north than in the south, but it is not clear why this fact should support any particular theory. Chief objections to this theory deal mainly with its speculative character and the slightness of any particular points cited in its favour. It should be added, however, that its proponents do maintain that these folk liturgies have been reworked to such an extent that in their present form they practically amount to secular love songs. But it is argued that only some original religious usage could have brought about acceptance of the work as canonical on the one hand, and the dominance of the allegorical interpretation on the other.

3. Its style.—The Hebrew of this book is unique in its consistent use of the short 1st singular pronoun as well as of the relative particle *she* (except for 1^1, on which cf below). Its vocabulary is unusual, full of *hapax legomena* and difficult words which defy certain translation. Phonologically the Hebrew is dialectally different from the Jerusalem dialect which dominates the OT. Syntactically it also presents a number of peculiar features such as the preponderance of the masculine, even where the feminine might be expected, the use of the pronoun with the finite verb, as well as other features, all of which have led scholars to feel that the basic substratum of the language of Canticles is the Northern dialect. Further support for this might be found in the allusions to Tirzah, Lebanon, Hermon, and Gilead.

4. Authorship and date.—According to a Southern (Jerusalem?) editor the book was attributed to Solomon (1^1). That the attribution is historically false is soon apparent. He is himself a character in the work. Its setting is mainly Northern with a later Judaean reworking of the poems to make them more suitable to a Southern context. On the other hand, the attribution was probably made because Solomon is mentioned (1^5 $3^{7,9,11}$ 8^{11f}), and because of his reputed wisdom, writing of Wisdom Literature, and his harem. Whether Canticles be simply love poetry or cultic in origin, it is probably folk song in character, and nothing can be said further concerning authorship.

The book in its present form contains evidence of late (3rd cent.?) rewriting. To be noted are the use of a Persian word *pardēs* in 4^{13} and *'appiryōn*, a Greek word, in 3^9. There are also a number of Aramaic spellings of words which suggests a late textual form. The original form of the poems was, however, much earlier. A number of place-names are mentioned which imply early authorship. Tirzah as Northern capital (6^4) implies a pre-Omrid (early 9th cent.) composition. Heshbon (7^4) and Gilead (4^1 6^5) were lost to Israel during the 8th cent. J. T.—**J. W. W.**

SONG OF THE THREE YOUNG MEN.—See APOCRYPHA, **10**.

SONS OF GOD.—See CHILDREN OF GOD.

SONS OF THE PROPHETS.—See PROPHECY.

SOOTHSAYER.—See MAGIC, DIVINATION, AND SORCERY.

SOP.—See MEALS, **5**.

SOPATER, SOSIPATER.—These are two forms of the same name; Luke, as usual, adopts the more colloquial. **1.** In Ac 20^4 we read that Sopater of Beroea, the son of Pyrrhus, accompanied Paul on his journey towards Jerusalem as far as Asia (if these last words are part of the true text), *i.e.* Troas [see SECUNDUS]. The mention of the father's name, unusual in NT, is thought by Blass to denote that Sopater was of noble birth. **2.** Sosipater (RSV), a 'kinsman,' *i.e.* fellow-countryman [see JASON], of Paul, who sends greetings in Ro 16^{21}. It seems unlikely, but not impossible, that these two men are the same. A. J. M.—**F. C. G.**

SOPE.—See SOAP.

SOPHERETH.—A family of Nethinim, Neh 7^{57}: also Ezr 2^{55} (AV; RV, RSV **Hassophereth**, q.v.).

SOPHONIAS, 2 Es 1[40] (AV, RV)=**Zephaniah** the prophet (q.v.).

SORCERY.—See MAGIC, DIVINATION, AND SORCERY.

SOREG.—See TEMPLE, **11** (*b*).

SOREK, VALLEY OF (perhaps='valley of the *śōrēḳ* vine' [cf VINE]).—The valley or Wady in which Delilah lived, Jg 16[4]. Eusebius and Jerome connect the valley with *Capharsorec*, a village to the N. of Eleutheropolis and near Saraa, that is Zorah, the home of Samson's father. Capharsorec is now *Kh. Surîk*, to the N. of *Wâdi eṣ-Ṣurâr*, which is identified with 'the valley of Sorek,' and not far from *Ṣar'ah*. See also ZORAH.

SORREL.—See COLOURS, **3.**

SOSIPATER.—See SOPATER.

SOSTHENES.—**1.** Ruler of the synagogue at Corinth, whom 'they all' laid hold on and beat when Gallio dismissed the case against Paul (Ac 18[17]). He probably succeeded Crispus as ruler when the latter became a Christian (v.[8]), and the hostility of the rabble to the Jews showed itself when they were worsted in the courts. **2.** The 'brother' associated with Paul in addressing the Corinthians (1 Co 1[1]), and therefore probably a native of Corinth who had special relations with the Church there. If both references are to the same man, he must have been converted after the Gallio incident. A. J. M.

SOSTRATUS.—The governor of the citadel at Jerusalem under Antiochus Epiphanes (2 Mac 4[27 (28), 29]).

SOTAI.—A family of 'Solomon's servants,' Ezr 2[55], Neh 7[57]; omitted in the parallel 1 Es 5[33].

SOUL.—The Biblical concept of soul appears in the Hebrew *nephesh*, which in various contexts may be rendered 'soul,' 'life,' or 'self.' It can be usefully compared with *bāśār*, 'flesh.' The soul is not an entity with a separate nature from the flesh and possessing or capable of a life of its own. Rather it is the life animating the flesh. The soul of the flesh can thus be identified with the blood (Lv 17[14]). Soul and flesh therefore do not go different ways, but the flesh (or a part like the eye or the hand) expresses outwardly the life or soul. When the soul thirsts for God, the flesh faints for him (Ps 63[1]). Soul is thus the living being. 'Flesh' can be lifeless, but *nephesh* in its normal usage is alive. Adam was made of the dust, but when God gave him breath he *became* (not obtained) a living *nephesh*. Man does not 'have' a soul, he is a soul. So are the beasts, for they too are 'living *nephesh*' (Gn 1[24]). Notice that in such cases the singular is usual, not the plural. Sometimes the word means what we would express by 'persons.' 'All the soul of those who came forth from Jacob's loins were seventy souls,' *i.e.* seventy persons (Ex 1[5], literally); in English we also talk sometimes of the number of 'souls' on board a ship or the like. 'Spirit' differs from soul in that it is commonly understood to belong to God; it is the breath of God by which human life is made possible, informed and guided. But it becomes possible for a man to speak of 'my spirit' also, and the lines between the anthropological concepts are not clearly drawn at every point.

In the NT the term *psychē* 'soul, life' follows many of the usages of the OT, though it is perhaps somewhat more individualized as the centre of the vital choices and decisions by which destinies are determined. Men can kill the body but not the *psychē*, Mt 10[28]; this is hardly a statement of the natural immortality of the disembodied soul, but means rather that the life of the self is a matter between man and God or man and devil. Nothing is more precious to man than his *psychē*, Mk 8[35-37]; it is beyond price, yet by seeking to guard it you can lose it, and by losing it you can save it. The contrast here is not between body and soul but between self or life and the world and possessions. The *psychē* is soul as centre of emotion and decision, *e.g.* Mt 26[38], Jn 12[27]; it can even be addressed and congratulated on its possessions, Lk 12[19]. The salvation of the faithful can often be called 'salvation of the soul' (1 P 1[9], He 10[39]), and the faithful have a will to serve 'from the soul' (Eph 6[6], RSV 'from the heart') and care for the soul of one another (3 Jn [2]). It should be remembered, however, that these are complementary, and not opposed, to statements about the body of Christ, the redemption of the body, and the body of the resurrection. J. Ba.

SOUL, PRE-EXISTENCE OF.—See PRE-EXISTENCE OF SOULS.

SOUTH.—See NEGEB.

SOWER, SOWING.—See AGRICULTURE, **1,** SEED.

SPAIN.—The country to which the name Spain or Hispania was given by the Romans, but which Greek writers called Iberia (country of the River Ebro); Paul shows Roman influence in using the Roman name of the region. The name Hispania really originated in the city of Hispalis (Seville). From that territory it was extended to cover the whole country now known as Spain. In the earliest times of which we have any knowledge it was inhabited, at least in part, by a race supposed to be a mixture of the aboriginal Iberian population with immigrant Celts. In 236 B.C., Hamilcar, father of the great Hannibal, invaded the country from Carthage, and after nine years of conquest was succeeded by his son-in-law Hasdrubal, who in turn was succeeded by Hannibal, under whom about 219 B.C. the conquest of the country was practically completed. Hannibal used it as his base in the Second Punic War against Rome. The Romans first invaded Spain in 218 B.C., and after various successes and reverses constituted two provinces there in 197 B.C., known for centuries afterwards as *Hispania Citerior* (Tarraconensis) and *Hispania Ulterior* (Baetica), separated from one another by the Ebro. The mountainous districts in the NW. were not actually subdued till the time of the Emperor Augustus (20 B.C.). The country was valued for its agricultural products as well as its precious metals. Much of Rome's power and wealth came from the control of this rich land. Vast numbers of enslaved Greeks had been sent to Spain, and it must have been they who attracted Paul to the area, for his mission was to Greeks. In Rome he only proposed to stay for a brief visit with Greek-speaking Christians (Ro 15[24, 29]) while en route to Spain. It is not known whether he carried out his plan. Spain claims more honoured names in Roman literature than any other country in the 1st cent. A.D., having been the birthplace of the two Senecas, Columella, Mela, Lucan, Martial, and Quintilian. A. So.—E. G. K.

SPAN.—See WEIGHTS AND MEASURES.

SPARROW (*ṣippôr*, Ps 84[3] 102[7]). The Hebrew word is probably equivalent of Arabic *'aṣfûr*, and includes any 'twittering' birds; generally translated 'bird' or 'fowl.' See BIRD. In the NT references (Mt 10[29], Lk 12[6f]) *strouthion* evidently refers to the sparrow, which to-day is sold for food as cheaply as in NT times. E. W. G. M.

SPARROW-HAWK.—See HAWK.

SPARTA, SPARTANS.—See LACEDAEMONIANS.

SPEAKING, EVIL.—See EVIL SPEAKING.

SPEAR.—See ARMOUR, ARMS, **1.**

SPEARMEN.—The rendering of AV in Ps 68[30] 'the company of spearmen' is quite indefensible, and we should certainly render the 'beasts that dwell among the reeds' with RSV (cf RV). In Ac 23[23] the word rendered 'spearmen' in AV, RV, and RSV is *dexiolaboi* (Codex A has *dexioboloi*), which is of uncertain meaning. It may possibly denote a bowman or slinger. Cf Arndt and Gingrich, *Lexicon*, s.v.

SPECK.—See MOTE.

SPECKLED BIRD.—Jer 12[9] (only). If the MT of this passage is correct, the translation can hardly be other than 'Is my heritage to me (*i.e.* to my sorrow) like a speckled bird of prey? Are the birds of prey against her round about?' (RSV; cf RV). The people of Israel is compared to a bird of *prey*, just as, on account of its hostility to Yahweh, it is compared in v.[8] to a lion. But, as a speckled bird attracts the hostile attention of other

birds, Israel becomes a prey to the heathen. The rendering proposed by some, ' mine heritage is unto me **the ravenous hyena**,' rests on an emended text.

SPELT.—See FITCHES, RIE.

SPICE, SPICES.—1. *bāśām*, Ca 5[1], RVm **' balsam '**; *bōśem* [once, Ex 30[23], *beśem*], plural *beśāmîm*. In Ex 30[23] is a list of various aromatic substances included under the name *beśāmîm*. These were stored in the Temple (1 Ch 9[29]), and in Hezekiah's treasure-house (2 K 20[13]); they were used for anointing the dead (2 Ch 16[14]), and also as perfumes for the living (Ca 4[10] etc.). **2.** *sammîm*, Ex 30[34] ' sweet spices '; and, along with ' incense,' Ex 30[7] 40[27], Lv 4[7], Nu 4[16] etc. (RSV ' fragrant incense '; for RV ' incense of sweet spices '). In the first passage the ' sweet spices ' are enumerated as stacte, onycha, and galbanum (qq.v.) in RV (RSV ' liquid myrrh,' ' sweet smelling cinnamon,' and ' aromatic cane '). **3.** *nᵉkhō'th*, Gn 37[25] ' spicery ' (RVm ' gum tragacanth *or* storax '; RSV ' gum '), 43[11] (RV ' spicery '; RSV ' gum '). The gum **tragacanth** is the product of the *Astragalus gummifer*, of which several species are known in Syria. The **storax** (*Styrax officinalis*), a shrub with beautiful white flowers, also affords an aromatic gum valued by the ancients. Whether *nᵉkhō'th* corresponded definitely to one of these, or was a generic term for ' perfumes,' is an open question. **4. 5.** Greek *arōmata* (Mk 16[1], EV ' spices ') and *amōmon* (Rev 18[13], RVm **' amomum '**; RV and RSV ' spice '; AV omits) are probably both generic. E. G. W. M.

SPIDER.—1. *śᵉmāmith*, Pr 30[28] AV (RV, RSV **lizard**). See LIZARD. **2.** *'akkābhîsh*, Job 8[14], Is 59[5]. Both references are to the frailness of the spider's web.

SPIKENARD (*nērd*, Ca 1[12] 4[13t]; also Gr. *nardos pistikē*, Mk 14[3], Jn 12[3]; RSV ' pure nard ').—The fragrant oil of an Indian plant, *Nardostachys jatamansi*, which grows with a ' spike.' The Arabic name *sunbul hindi*, Indian spike, preserves the same idea. The perfume when pure was very valuable (Jn 12[3]).

About the meaning of the Greek epithet *pistikē* there has been much speculation. See note in RVm at Mk 14[3] (' liquid nard ') and cf article, ' Spikenard ' in Hastings' *DCG*. E. W. G. M.—**F. C. G.**

SPINDLE.—See SPINNING AND WEAVING, 3.

SPINNING AND WEAVING.—1. *The raw material.*—In all periods of Hebrew history the chief textile materials were **wool** and **flax**, and to a less extent **goats' hair**. As for the last named, St. Paul's native province was famed for its goats' hair (*cilicium*) woven into coarse cloth used for tent furnishing such as curtains, rugs, as well as cloaks. Ac 18[3] suggests that the Apostle practised this trade in Corinth, being ' chargeable to no man ' (2 Co 11[9], AV). The RSV punctuation of this verse (a comma in place of the colon of AV and RV), rather suggests that his needs were met by the friends of Macedonia. The Greek word ' *skēnopoioi* ' of Ac 18[3] is correctly ' *tentmakers* ' etymologically, but most modern scholars consider that its meaning at this time was ' *leather-worker* ' (see *e.g.* E. Haenchen, *Die Apostelgeschichte* [1956], 476, in Meyer's Krit. exeg. K.u.d. NT). Eleven curtains of goats' hair made a ' tent over the tabernacle ' (Ex 26[7]). The preparations of the various materials for the loom differed according to the nature of each. Wool before being spun, was thoroughly scoured and carded, by means of the bow-string, the age-long method of E. and W. until the introduction of modern methods. In the case of flax, the stalks were rippled and exposed to the sun till thoroughly dry, frequently on the roofs of the houses (Jos 2[6]); thereafter by repeated processes of steeping, drying and beating, the fibres were ready for the ' heckling ' or combing. Representations of these processes are preserved in the tombs of Egypt.

Is 19[5-10] shows how the failure of the Nile waters can cause distress in the flax industry on its banks affecting the women combers and the men weavers of cotton, the other great cloth industry of Egypt. The translation of v.[9], however, is difficult, and the weavers may refer to those who work the finest *white* linen rather than white cotton. In Palestine itself, flax appears to have been an important crop near Gezer. The agricultural calendar found there in 1908 speaks of the ' month of pulling flax ' (so J. Mauchline in *Documents from O.T. Times*, ed. D. Winton Thomas [1958], p. 121).

2. *Spinning.*—The spinning was done, as all the world over, by means of the **distaff** and **spindle**, and was pre-eminently women's work (Ex 35[25f], 2 K 23[7], Pr 31[19]). Both men and women, on the other hand, plied the loom. The distaff probably consisted, as elsewhere, of a piece of cane slit at the top to hold the wool. The spindle was generally a round shank of wood (sometimes stone, bronze or ivory), 9–12 inches in length, furnished with a hook at the top for catching the wool or flax, and having its lower end inserted into a circular or spherical whorl of clay, stone or other heavy material to steady the rotary motion of the spindle. Many forms of spindles and whorls have been excavated (see R. J. Forbes, *Studies on Ancient Archaeology*, iv [1956], pp. 152 ff for description and illustration). Sometimes a piece of broken pottery served as a whorl (*PEFSt* 1902, 338). Distaff and spindle are named together in Pr 31[19] (AV reverses the renderings). In 2 S 3[29] ' who holds a spindle ' (literally ' one taking hold by the spindle ') expresses the wish that Joab's descendants may be womanish and effeminate. The AV rendering ' one that leaneth on a staff ' suggests a cripple in this context.

3. *The three variations of loom.*—**' Loom,'** which does not occur in AV, is found in RSV twice, viz., Jg 16[14] (see below **4** (*c*)), and Is 38[12] (so also RV) but RVm is ' thrum,' which rather describes the threads of the warp remaining on the loom when the web has been cut (see below **5**). Three varieties of loom were in use around the Mediterranean in ancient times—the horizontal loom and two varieties of the upright loom, distinguished by the Romans as the *tela pendula* and the *tela jugalis*.

(*a*) The horizontal loom is at least as old as the twelfth Egyptian Dynasty, and probably goes back to pre-historic times. A pottery dish found in a woman's tomb at Badari depicts a gound-loom with warp stretched between two beams with four pegs at the corners (Brunton and Caton Thompson, *The Badarian Civilisation*, plate 28). This type of horizontal ground-loom fits the Samson-Delilah incident (see below **4** (*c*)). It is still, with modifications, the loom in use in parts of the Arab world, India and farther E.

(*b*) The oldest variety of the upright loom is that familiar to classical students from the well-known representation on a Greek vase, of Penelope's loom. It consisted of two uprights joined at the top by a cross-beam, from which, or from a second beam below, depended the threads of the warp. These were kept taut by having small stone weights attached to their lower ends, hence the name *tela pendula*. In view of the numerous ' weavers' weights ' unearthed at various places in the present century (Megiddo, Jericho, Gezer, Lachish, and elsewhere) it is clear that this form of the upright loom was used in Palestine from the earliest age.

(*c*) The second and later variety of the upright loom had for its distinguishing features a second cross-beam at the foot of the uprights, which served as a **yarn-beam** or as a cloth-beam capable of revolving; a web of much greater length could be woven than if the latter were confined to the height of the loom. The loom in ordinary use in NT times was of this type, as is evident from many passages in the Mishnah.

4. *OT references to the processes of weaving.*—In its simplest form the art of weaving consists in interlacing a series of parallel threads, called the **warp**, with another series called the **weft** or **woof** or filling, in such a way that each thread of the weft passes alternately over and under each thread of the warp. In the beginnings of the art this interlacing was laboriously done by the fingers of the spinner as in plaiting of which weaving is only a more complicated variety. The first process is to stretch the threads of the warp (Lv 13[48ff]) evenly between the upper and lower beams of the loom. Behind the Hebrew

shāthōthêhā of Is 19[10], rendered in RSV ' those who are the pillars of the land,' may be the word *sh^{e}thî*, ' warp,' which would give an emended translation ' those who lay the warp ' ; elsewhere this process is used in a metaphorical sense, as Job 10[11] ' knit me together ' (so also RV, but AV ' fenced,' AVm ' hedged '), Ps 139[13] RSV and RVm, and the difficult passage Is 30[1] ' and who make a league,' which is also one of the three readings of RVm. But the first of the RVm is best, ' weave a web,' or, better still, ' warp a warp.' an apposite figure for commencing a new ' web ' of political intrigue (cf the similar metaphor 59[6]). The Hebrew law forbade the use of wool and linen, the one as warp, the other as woof or filling, in the same web (Dt 22[11]).

In the process of uniting warp and woof there are ' the three primary movements,' as they are called, to be considered. These are (1) shedding, *i.e.* dividing the warp into two sets of odd and even threads for the passage of the weft ; (2) passing the weft through the ' shed ' by means of a rod or a shuttle ; and (3) beating up the weft to form with the warp a web of uniform consistency. These three processes, so far as applicable to the Egyptian and Hebrew looms, are described in detail in Kennedy's article ' Weaving ' in *EBi* iv, 5282–87 (with illustrations). Certain OT references require special mention.

(*a*) The formation of the shed was effected by at least two leash-rods or shafts, the Roman *liciatoria*, suspended from the upper cross-beam (see illustration Wilkinson, *Anc. Egyp.* ii, 171) or otherwise, connected by loops or leashes with each of the odd and even warp-threads respectively. The two sets of threads were alternately brought forward (or raised in the horizontal loom) by pulling the leash rods, thus forming a shed for the passage of the shuttle-rod carrying the weft. With a heavy warp, the rods must have been of considerable thickness—a stout branch of a tree serves as a leash-rod, for example, in a modern Anatolian loom figured in Smith's *Dict. of Gr. and Rom. Ant.*[3] ii, 179. Accordingly when the shaft of Goliath's spear is compared to a weaver's *mānôr* (1 S 17[7], 2 S 21[19], 1 Ch 20[5] ; cf 11[23]), it is not to either of the ' beams ' of the loom but to a ' weaver's shaft ' or leash-rod that the comparison applies. The original term above given, it may be added, is from the same root as *nîr*, one of the Mishnah terms for the leash-rod (cf Jerome's true rendering, *quasi liciatorium texentium*).

(*b*) The weft or woof (Lv 13[48ff]) was passed through the shed by means of a staff or rod on which the yarn was wound. Homer, however, was already familiar with a shuttle-rod at one end of which was a revolving spool from which the weft-thread unrolled itself in its passage. A needle-shuttle with point at one end and hole at the other is among the finds at Ghassûl to be dated about 3rd millennium B.C. (Mallon, Koeppel, and Neuville, *Teleilât Ghassûl* [1934]). It is uncertain whether Job 7[6], the only EV occurrence of **shuttle**, refers to a shuttle-rod, or to the loom as a whole.

(*c*) The weft was beat up at each passage of the shuttle-rod by a thin lathe or pin, or batten, or, as later, by a special comb.

In Egypt, however, under the Middle Empire, it would appear that the more efficient ' reed,' still used in modern weaving, had already been invented for this purpose (Garstang, *Burial Customs of Anc. Egyp.* [1907], 133 ff with illustration) ; the two reeds there figured are 27 and 29 inches in length, showing approximately the width of the web. The Bedouin women of Moab still weave their curtains in strips about 5 yards long and from 16 to 20 inches wide, according to Jaussen (*Coutumes des Arabes*, etc. [1908], 74).

The Hebrews in early times used a ' pin ' simply to beat up the weft. In the Samson-Delilah story, Jg 16[13–14], the completeness of the weaving of Samson's locks into the warp of the web already begun on the loom is shown by the phrase ' and she made them tight with the pin ' (v.[14] RV ' she fastened it with the pin ' ; literally ' and she beat it with the pin '). Thus the slack of the hair in the weft was beaten in, so that it was one with the web. This sense is brought out by the RSV restoring to the text at the end of v.[13] and at the beginning of v.[14] sentences based on the Greek text here. The words lacking in the RV and AV are ' and make it tight with the pin, then I shall become weak, and be like any other man. So while he slept, Delilah took the seven locks of his head and wove them into the web.' For Delilah, seated on the ground beside her *horizontal* loom with Samson's head upon her knees (cf v.[19]), it was an easy matter to use his flowing locks as weft and to weave them into the warp of her loom. When she gave the alarm-call, Samson raising his head sharply to get up, wrenched the loom from the peg which fastened it to the ground. The RV and AV of v.[14b] seems to have in mind the same ' pin ' as in v.[14a], assumed to be fastening the web ' to the wall ' (so Greek text, *eis ton toichon*, [14a], and *ek tou toichou*, [14b]). The rendering ' *beam*,' properly ' *loom* ' (as already noted) may indicate the warp-beam.

With Penelope's type of loom, the web could be woven only from the top downwards. This was also the Jewish custom in NT times with the other form of upright loom. Our Lord's tunic, it will be remembered, ' was without seam, woven from top to bottom ' (Jn 19[23] ; AV, RV ' from the top throughout '). For the weaving of such **seamless robes**, which were in vogue in Egypt under the later dynasties at least, it was necessary to mount a double warp and to weave each face of the warp with a continuous weft (see *EBi* iv, 5289).

5. When the web was finished, the weaver cut it off ' from the loom ' (Is 38[12]) by severing the ends of the warp threads, and rolled it up. These two processes are the source of the figures for premature death in the passage cited (see also **3**). The ' unshrunk ' cloth of Mt 9[16], Mk 2[21] (AV ' new,' RV ' undressed '), was not fulled, that is, cloth fresh from the loom. The milling or fulling was the work of the fuller (Arts and Crafts, **6**).

6. *Special kinds of fabrics.*—By appropriate arrangements of the warp, woof, and leash-rods, striped, checked, and other varieties of cloth were produced. The cloth intended by the ' **chequer work** ' of Ex 28[4] is quite uncertain. The Revisers probably mean by the phrase a species of check, produced by alternating different coloured bands in the warp, or in the woof, or in both. The examination of the linen textiles used for wrapping and packing of the now famous ' *Dead Sea Scrolls* ' shows something of this special type of weaving (see Crowfoot, *Linen Textiles from the Cave of Ain Feshkha*, *PEQ*, 1951, 5 ff and illustrations). Ex 26[1–6] describes the fine quality expected in the Tabernacle curtains, including ' *cherubim skilfully worked*,' v.[1] (RV ' work of the cunning workman ') ; whether this refers to embroidery or **tapestry** work is uncertain. For Pr 7[16] 31[22], the RSV prefers ' *coverings* ' to the AV and RV ' tapestry.' The use of colours is evident in both places ' coloured spreads of Egyptian linen,' Pr 7[16], and ' fine linen and purple,' Pr 31[22].

A weft of gold thread was employed for the high priest's robes (Ex 28[5f] 39[2ff] ; cf Jth 10[21], 2 Mac 5[2] ' cloth of gold,' 2 Mac 5[2] RV ' robes inwrought with gold '). Herod Agrippa's ' royal robes ' (Ac 12[21]) are said by Josephus to have been woven throughout of silver thread.

In OT times the finer textile fabrics were imported from Babylonia, ' Shinar ' (Jos 7[21]), Phoenicia (Ezk 27[16f]), Egypt, and in NT times even from India for the high priest's dress (Mishnah, *Yoma*, iii. 7). In the days of the Chronicler the weavers formed a trade guild (1 Ch 4[21]), and so continued in later times. As a class they were held in disrepute by the mass of the people, so much so that the Talmud declares weaving to be ' the lowest of crafts,' an opinion also held, it seems, in ancient Egypt.

SPIRIT.—See Holy Spirit.

SPIRITS IN PRISON.—See Descent into Hades.

SPIRITS, UNCLEAN.—See Demons.

SPIRITUAL GIFTS.—1. The term.—A special Greek word, *charismata*, is used in NT for spiritual gifts. It

usually stands alone, but in Ro 1[11] it is coupled with the adjective *pneumatikon* ('spiritual'). It means concrete, dynamic manifestations of the grace (*charis*) of God in the life of the Christian and is almost a technical term, though in Ro 6[23], 2 Co 1[11] it is used generally of the free gift of God. The principal passages which deal with spiritual gifts are Ro 12[6ff], 1 Co 12, 13, 14, Eph 4[7ff], 1 P 4[10]. The gifts may be divided into the following categories: (*a*) the power of speech and understanding: *i.e.* speaking with tongues (see TONGUES, GIFT OF), and their interpretation, prophecy, the receiving of revelations and the discerning of spirits, exhortation, teaching, utterances of wisdom and knowledge; (*b*) the power of healing and working miracles (by faith), where we may instance exorcism ([Mk] 16[17], Ac 16[18] 19[12]), and the punishment of offenders (Ac 5[1–11] 13[9], 1 Co 4[21] 5[5]); (*c*) the powers of administration and help in the life of the congregation: *i.e.* to be an official (*e.g.* an apostle) in the church, or to render services, such as almsgiving and hospitality; (*d*) the power of continence and self-surrender (1 Co 7 7 13[3]). A list of the fruits of the Spirit, as shown in the Christian life, is given in Gal 5[22–23], but it differs somewhat, in its ethical setting, from the specific *charismata*.

2. Their nature.—Endowment with the power of the Divine Spirit is characteristic of the religious heroes and prophets of the OT, such as Gideon (Jg 6[34] 11[29]), Saul (1 S 10[6, 9ff]), Ezekiel (Ezk 2[2]). The Messianic age was conceived of as being distinguished above all by the outpouring of the Spirit, resulting in prophecy, miracles, and a marked intensification of life (Is 61[1ff], Jl 2[28f]; cf Lk 4[18f], Ac 2[17]).

In an analogous way the ministry of Jesus is described, in the Gospels, as a continuous manifestation of an inherent spiritual power, which revealed itself in the authority of His words and deeds (*e.g.* Mk 1[22, 27] 6[2]). The mission of the Twelve in Galilee also implies an endowment of the disciples with special gifts of an authoritative and miraculous character (*e.g.* Mt 10). According to Ac 2 the Spirit's coming, after the resurrection of Christ, is conceived as that of God's breath taking violent action as in OT days, inaugurating the new order and age of the Church. Paul speaks of the dynamic activity of the Spirit in his own apostolic ministry as well as in the life of the local churches, and He 2[4] mentions miraculous gifts as a recognized characteristic of the first age of Christianity. In this period the first-fruits of the new life could be actually experienced, with all their encouragement and power, even by the humblest Christian.

The different gifts acted as a proof of the presence and the creative activity of the Spirit within the Church, enabling each member to perform some special service for the community. Some of the gifts appeared to be plainly supernatural; others seemed to be natural powers raised to a new and supernatural efficacy. As Rudolf Otto held (*Reich Gottes und Menschensohn*, 1934, p. 292), these *charismata* are not to be considered as magic forces, such as a wonder-worker in the Hellenistic world would have boasted; they consist rather in a mysterious intensification of talents and faculties already possessed by their bearers, a phenomenon which has its analogies in general psychology.

The Corinthian congregation, which according to 1 Corinthians was specially rich in spiritual gifts, made a wrong use of them. Failing to recognize the unity of the Church and the place of mutual service, and at the same time believing that the full freedom of the age to come had already been realized, the more highly gifted made their gifts an occasion of pride, as marks of superior sanctity. Others, on the contrary, felt themselves forgotten, and yielded to jealousy or despair. Thus rivalry led to disorder.

3. Hence the tone of Paul's teaching as to their use. (*a*) He insists on their *regulation*. The gifts may be intermittent or dynamic; none the less their use must be orderly (1 Co 14[40]); ecstasy is no excuse for loss of self-control (v.[32]). Each Christian must recognize the limitations of his powers and not attempt to transcend them (Ro 12[6]). Love is the norm by which the gifts are to be judged; without love, which is the mark of eternal life, they are useless (1 Co 13).

There arises the question of the relation of the *charismata* to the ministry. Some have maintained that there was originally no fixed ministry, but only unorganized *charismata*; others again have tried to assign a definite office to most of the *charismata*. The truer view would seem to be that the *charismata* and the official ministry existed side by side, but were by no means identical. All Christians were supposed to have their share in the gifts of the Spirit, though there were special endowments which would be looked for in the case of officers of the Church. Thus Paul characterizes himself as an apostle in Ro 15[18ff], 2 Co 12[12]. In 1 Ti 4[14], 2 Ti 1[6] a *charisma* is connected with 'the laying on of hands.'

(*b*) *The purpose of the gifts is the edification and the service of the whole body.* Chrysostom, in his homily on 1 Co 12, calls attention to the change of word in vv.[4f]. The 'gifts' are also 'ministrations' (*diakoniai*), *i.e.* opportunities of service; hence the greater the gift the greater the responsibility, and the harder the work to be done. And so Paul passes on to the doctrine of the one body, served in different ways by all its members. Similarly in Eph 4[11] the possessors of the endowments are themselves gifts 'given' to the Church. The same truth is emphasized in Ro 12, 1 Co 14, 1 P 4, in fact in every place where the *charismata* are mentioned at any length; Paul's own object is always to 'impart' to others (Ro 1[11], 1 Co 14[19]; cf Jn 7[38]). (See the modern commentaries on 1 Co 12–14.)

(*c*) *Relative importance of the gifts.*—The more startling gifts are consistently treated as subordinate to gifts of character and edification. The former, indeed, are not decisive as to their origin; they are not peculiar to Christianity, and may be the accompaniment of evil and falsehood (Mt 7[22] 24[24], 2 Th 2[9], 1 Co 12[3], Rev 13[13f]). Indeed, in an age when ecstasy was a common feature of different religions, and the pagan *mantis* or frenzied prophet was a familiar phenomenon, it was impossible to ascribe all 'powers' or all 'inspiration' to the Holy Spirit. The test is on the one side doctrinal (1 Co 12[2f], 1 Jn 4[1–3]); on the other it is the moral life (Mt 7[15ff], Ro 8[9], 1 Co 13) and the practical tendency to edification (1 Co 14). The 'discerning of spirits' is itself an important gift (1 Co 12[10], 1 Th 5[21], 1 Jn 4[1]). It is, indeed, remarkable how steadily the NT concentrates attention on the inner gifts of character, which the popular mind would ignore; and if it does not disparage, it certainly does not exaggerate, those which at first sight seemed to give more direct evidence of the presence of the Spirit. As a fact of history these tended to degenerate and finally to disappear. Justin and Irenaeus mention them, and they played a large part in the Gnostic and Montanist movements; but after the 2nd cent. they practically died out as normal endowments of the believer, to be revived only sporadically in times of religious excitement. C. W. E.—H. R.

SPITTING.—See GESTURES.

SPONGE (Gr. *spongos*, Mt 27[48], Mk 15[36], Jn 19[29], used in the Crucifixion scene).—Sponges have been used from early times, and are common along the Syrian coasts of the Mediterranean.

SPOONS, Ex 25[29] (AV, RV).—RSV has 'dishes.' See TABERNACLE, 6 (*a*).

SPRINGS.—See FOUNTAIN, ISRAEL, II. 1 (6).

SPY.—See WAR, 3.

SQUAD.—Found only in RSV in Ac 12[4] for AV and RV '**quaternion**' (q.v.).

SQUARE.—See CITY.

STACHYS.—A Christian greeted by Paul in Ro 16[9].

STACK.—See SHOCK.

STACTE.—Hebrew *nāṭāph*, Ex 30[34]; cf Sir 24[15] (RV, RSV; AV 'sweet storax'). The Hebrew word

means literally 'drops.' It denotes some fragrant gum collected in drops, either *storax* or, more probably, myrrh.

STADIA.—See WEIGHTS AND MEASURES.

STAFF.—See CLUB, ROD, SCEPTRE.

STAIR.—See HOUSE, 5.

STALL.—See MANGER.

STALLION.—Found only in RSV in Jer 5[8] (rendering *sûs*, 'horse') 8[16] 47[3] 50[11] (rendering '*abbîr*, 'mighty one'; rendered 'steeds' in RSV in Jg 5[22]).

STANDARD.—See BANNER.

STAR OF THE MAGI.—The Gospel according to St. Matthew, after a brief reference to the birth and naming of Jesus, goes on to describe the visit of 'wise men' from the east who come to Jerusalem to worship Him that is born king of the Jews (Mt 2[1ff]). The Magi (q.v.) explain their arrival on the ground that they have seen His star 'in the east,' or rather, 'at its arising.' It may not seem obvious why the appearance of a star should lead them to conclude that a Jewish ruler had been born, but the explanation is no doubt to be found in Nu 24[17], 'A star shall come forth out of Jacob, and a sceptre shall rise out of Israel.' Taken in its context Balaam's prophecy anticipates a military leader who will 'smite through the corners (or temples) of Moab,' but it may have been taken as promising some heavenly manifestation of a more literal kind, thus linking a celestial phenomenon with the birth of the Messiah. Matthew's story may also have been influenced, as was later Christian tradition, by Is 60[3], 'Nations shall come to your light, and kings to the brightness of your rising'; but the Gospel does not say that the wise men were kings.

Matthew does not imply that the star led the Magi from the east to Jerusalem, but only that they understood its appearance as a sign that a king had been born in Judaea; but in the continuation of the story the star reappears to lead them to the house in Bethlehem where the young child was. Thus the star is no longer a portent, but a guide, without which the wise men would have been unable to find the child and present their gifts. So it is essential to Matthew's theme that the sages of the Gentiles worshipped Him whom the rulers of His own people rejected and sought to kill.

Speculations as to the nature of the star are unprofitable, for no natural phenomenon could have behaved as did the star of Bethlehem. Matthew's narrative of the birth of Jesus must be taken as a whole and compared with that of Luke from which it differs in many particulars. Matthew evidently regards Bethlehem as the home of Joseph and Mary, who only settle at Nazareth after the death of Herod the Great (Mt 2[23]). Luke, on the other hand, brings Joseph and Mary to Bethlehem for a short time only in connexion with the census, and after the birth of Jesus they return to their own city, Nazareth (Lk 2[39]). Luke knows nothing of the Magi and their star, or of the massacre of the children, or of the flight into Egypt, and he leaves no room for these things in his narrative. Nor does Matthew leave room for the Presentation in the Temple. It is clear that various stories about the birth of Jesus were current in the 1st cent., of which Matthew adopts one cycle and Luke another. Both narratives are beautiful, display the simple devotion of early days, and have inspired Christian art throughout the ages; but they cannot be reconciled, and only in the broadest outline do they provide material for an objective history of the birth of Christ. P. G.-S.

STAR-GOD.—Am 5[26] (RSV); see KAIWAN.

STARS.—The stars (Bab.-Ass. *kabkabu*, *kakkabu* = Syr. *kaukbhâ* = Heb. *kôkhābh* from a reduplicated root *kbb* 'to flicker'; cognate Bab.-Ass. *kabābu* 'to burn') were created by God (Am 5[8], Ps 8[3] 136[9], Job 9[7]) to give light (Gn 1[16], Jer 31[35], Sir 43[9]), being bright (Dn 12[2]) but differing in magnitude (1 Co 15[41]) and numberless (Gn 15[5], and *passim*), high above earth (Is 14[13], Ob [4]) and loftier than man (Job 22[12]) but lower than wisdom (Wis 7[29]). God gave them their 'paths' according to fixed laws (Jer 31[35]), keeping them in subjection to Himself (Job 9[7], Is 45[12], Ps 147[4], Bar 3[34] 6[60]), and called them by their names (Is 40[26]); and they ever praise Him (Dn 3[63]).

Occasionally reference is made to particular numbers of stars, *e.g.* to seven or twelve stars (Re 1[16] 12[1]), where the figures perhaps belong to the conventions of apocalyptic usage. Elsewhere, they may have special application: the 'eleven stars' which do obeisance to Joseph in his dream reflect not the eleven (twelve) Zodiacal constellations but the number of his brethren (Gn 37[9]; cf 35[23–27]), as 'the seven stars' correspond to the number of the seven churches (Rev 1[20]), whereas the 'seven stars' of Amos are the *Pleiades*, for which it is an old English name (Am 5[8] AV; see below). In poetry hyperbolical expressions are used of the stars: as at creation 'the morning stars sang together' (Job 38[7]), so at the battle in Taanach by the waters of Megiddo 'the stars in their courses fought against Sisera' (Jg 5[20]), where the implication is not perhaps that they were the host of Yahweh or the cause of the rainstorms that flooded the Kishon but that Israel's victory was not won by their own unaided efforts (Moore).

The appearance of an unusually bright star or comet (Heb. *shēbheṭ*, 'club' and 'comet' as shaped like a club; cf Arab *sabiṭa* 'was long, flowing,' of hair) was thought to portend the coming of some great personage: so Balaam prophesied that 'a star shall proceed out of Jacob, a comet arise from Israel' (Nu 24[17]). This prophecy was afterwards applied to the Epiphany (Mt 2[2]). In the Gospel 'the day of the Lord' will be heralded by 'signs in the sun and in the moon and in the stars' (Lk 21[25]); and in apocalyptic literature 'they that turn many to righteousness shall shine as the stars for ever and ever' (Dn 12[3]). Simon the high-priest is compared to 'the day-star in the midst of a cloud' (Sir 50[6]; *astēr eōthinos*) and Jesus describes Himself as 'the bright, the earliest star' (Rev 22[16]; *astēr orthinos*); and metaphorically the Christian is bidden to pay heed to the Gospel 'as unto a light that shineth in a dark place until the day dawn and the morning star arise in your hearts' (2 P 1[19], *phōsphoros*). Here these celestial bodies may be distinguished: the third is *Lucifer*, the morning and evening star (commonly the planet *Venus* but occasionally also other planets); the second is perhaps a star rising heliacally *i.e.* shortly before dawn; the third may be one which rises earlier but is noticeable for remaining visible while the sun comes up and perhaps also afterwards and which may sometimes be identical with the morning star. The distinction between the last two stars, however, is by no means certain, and what the 'early star' (Rev 2[28], *astēr prōinos*) is and how it differs from them is equally obscure; indeed, all three expressions may be synonyms. Contrariwise, the darkening of the stars was regarded as a presage of distress or disaster (Am 8[9], Job 2[10], and often elsewhere). Allusions also occur to 'wandering stars, for whom the blackness has been reserved for ever' (Jd [13]), *i.e.* shooting stars which come out of darkness and go back into it and can be seen on almost any night in Palestine and the neighbouring countries (cf Mt 24[29], Mk 13[25]).

Isaiah, describing the downfall of the king of Babylon, says 'how are you fallen from heaven, O Day Star, son of Dawn' (Is 14[12]), where the 'shining one' (Heb. *hêlēl*, here translated 'day-star'; RV, RSV) is usually supposed to be *Lucifer* (LXX, Vulgate and thence AV) or *Venus* as the morning star, in view of its brilliance when it is apparent and its total disappearance at times, while alternatively an allusion has been seen to the overpowering of the temporary brilliance of the morning star by the rays of the sun. No reason, however, for connecting this, though the brightest, planet with the Babylonian king is suggested, its daily disappearance is nowhere regarded as symbolic and is not likely to have become a symbol of total ruin since it regularly reappears next day, and the Assyrian *muštēlil* 'shining,' which is cited as an epithet of the same planet and so as evidence

for the identification, is a *vox nihili* based on a misreading of a cuneiform tablet. That the new moon (Arab. *hilâlu* 'shining one'='new moon') or the waning crescent moon as seen at dawn is meant (Winckler) is equally improbable, as the moon is not commonly connected with royalty. What is meant is perhaps rather *Jupiter*, the largest but not the brightest planet which ancient astrologers connected with royalty and whose principal Babylonian name was *Marduk*, which it shared with the chief god of Babylon. Although, too, *Venus* is most commonly *lucifer*, *Mercury* and *Jupiter*, *Mars* and *Saturn*, can each (though rarely) be so. Further, *Venus* is probably the 'queen of heaven' (Jer 7^{18} $44^{17, 19, 25}$), being described in Sumerian texts as 'queen of heaven and earth' and as 'bearded' (*i.e.* emitting rays); and while *Venus* can never be more than 47° away from the sun as seen from the earth, *i.e.* is never more than just over half-way from horizon to zenith, in the night-sky, *Jupiter* can appear at any angular distance from the sun and so be high in the night-sky; thus *Jupiter* rather than *Venus* fits the description of a star falling from a height to utter ruin. Lastly, *Jupiter* for about two months in every year is too near the sun to be visible and can also not be seen in the night-sky. Such periods of invisibility were regarded as especially dangerous for the Babylonian king; so, for example, an omen says 'when the *iku*-star (*Jupiter*) is present all day but at night-fall (?) enters the world below and is invisible all night, the king will die' (Virolleaud, *Astrologie Chaldéenne*, *Ishtar*, xxviii. 8). Possibly then Isaiah was using *Jupiter*'s descent into the world below and consequent invisibility as a symbol of the downfall of the king of Babylon and his disappearance from earth.

Individual stars are mentioned or named in various passages of the OT. In it God is pictured as sitting 'at the height of heaven,' *i.e.* the zenith, and contemplating 'the chief of the stars, high as they are' (Job 22^{12}); this is most probably the pole-star (Budde), which lies at the centre of rotation and was *β Ursae Minoris* or 'Kochab' between 1500 B.C. and A.D. 300; but *Gemini* (*Castor* and *Pollux*), which were at their highest point *c* 700 B.C. (Kugler), and *Aires*, the first of the Zodiacal constellations and therefore described as *caput . . . ante omnia princeps* (Manilius, *Astronomicon*, ii. 456; cf i. 263), have also been suggested. The zenith is perhaps mentioned also in a corrupt passage which may mean 'the sun forgot to turn in his course and the moon stood still at her zenith' (Hab $3^{10b, 11a}$). The stars, as the work of God's hands, mark the changes of day and night, summer and winter. They rise about sunset to indicate the onset of night (Neh 4^{21}), and the appearance of the day-star announces the dawn (2 P 1^{19}). God is further described as 'he who has made the *Pleiades* and *Orion*, who turns darkness into morning and darkens day into night . . . who makes *Taurus* (Heb. *shôr* for MT's *shōdh* 'sudden destruction') rise after *Capella* (Heb. *'ēz* for MT's *'az* 'strong') and *Taurus* (*do.*) to set hard on the rising of *Vindemiatrix* (Heb. *mᵉbhaṣṣēr* for MT's *mibhṣār* 'fortress'), as the text has been cleverly corrected and interpreted (Am 5^{8-9}; Hoffmann); accordingly it means that God has made the alternations not only of day and night but also of summer and winter (for *Taurus* rises soon after *Capella* in May–June and sets soon after the rising of *Vindemiatrix*, namely ε *Virginis*, in October–November). Again, it is He who has made *Aldebaran* (commonly mistranslated *Arcturus* or the 'Bear'), *Orion* and the *Pleiades* (Job 9^9 38^{31-32}). Their names are easily explained. The Hebrew *'ayish*, *'āsh* is identical with the Syrian *'yûthâ*, namely, *Aldebaran* (Schiaparelli), which the cognate Arabic *ġaithu* 'rain, clouds' connects with the rainy season, and 'his sons' (AV; cf RSV) or 'his train' (RV) are the *Hyades*, the *nimbosa Hyas* (Claudian, *Carmina* xvi. 497–8) or rainy constellation (cf Gr. *hūein* 'to rain'), of which *Aldebaran* is the brightest member. The Hebrew *kᵉsîl* 'stout, sturdy' denotes *Orion*, the magical hunter of gigantic strength and beauty, whom Aramaeans and Syrians as well as Arabs called the 'Giant' and whose 'strength' is often mentioned by the Greek poets from Homer onwards; the constellation consists of seven stars in the form of a colossal man with a narrow waist indicated by the three stars forming his 'belt' (Heb. *môshekheth* for MT *môshᵉkhôth*=Arab. *masakatu* 'bracelet, anklet; fetter'). The Hebrew *kîmāh* 'cluster' (cf Assyr. *kîmtu* 'family,' Arab. *kûmu* 'herd' and *kûmatu* 'heap') is the *Pleiadum parvo glomeramine sidus* (Manilius *Astronomicon*, iv. 520) and the *thurayyâ* 'multitude' (namely the *Pleiades*) of the Arabs; the absurdly translated 'sweet influences' (Job 38^{31} AV) of the *Pleiades* is a misrendering of a word which means 'cluster' (RV; Heb. *maᶜᵃdheneth* for MT *maᶜᵃdhannôth*=Ugar. *'dn* 'host' and Arab. *'adânatu* 'company, party of men,' from the same root as also the M.-Heb. *maᶜᵃdhān* 'bundle'), the *chorus Pleiadum* of the Latin poets. These three constellations, *Orion* with the *Pleiades* and *Hyades*, are mentioned together as in classical literature (Homer, *Iliad*, xviii. 486; Hesiod, *Works and Days*, 615); and so God asks Job whether he can bind, *i.e.* check the unleashing of, the rains when the *Pleiades* usher in the spring or 'unloose' *Orion*'s belt, *i.e.* release him from heralding the onset of winter, or whether he can 'guide,' *i.e.* control, the activity of *Aldebaran* and the *Hyades*, the seven stars whose rising simultaneously with the sun was held to portend wet weather.

God also asks Job 'canst thou bring forth *Mazzaroth* in their season?' (Job 38^{32} RV, RSV); what the Hebrew *mazzārôth* means is disputed, but it is perhaps best taken as standing for *maᶜᵃzārôth* (cf *makkōleth*=*maᶜᵃkhōleth* 'food-stuff, fuel') and so denoting 'girdling stars,' *i.e.* the Zodiacal circle, when the point of God's question is to imply that only He and no man can make the stars to rise and give their light in this great circle of constellations. Another term is 'the chambers of the south (*ḥadhᵉrê têmān*),' which the Greek translator known as 'the Hebrew' explains as 'the encirclers (cf Wis 13^2) of the south (*ḥôdhrê têmān*).' Babylonian astronomers divided the Zodiacal circle into six solar and six lunar 'houses,' *i.e.* groups of stars or constellations, which will correspond to the Hebrew 'chambers'; and these 'chambers of the south' will be the belt of stars or constellations lying roughly parallel to and to the S. of, *i.e.* below, the ecliptic (Zodiac), namely the Babylonian 'way of Ea' or *circulus austrinus* as classical writers (Eudoxus, Aratus, Hyginus, Martianus Capella) call it. Both Babylonian and classical lists vary: the former contain 12–15 stars amongst which 6 are commonly named (*Orion*, *Piscis*, *Austrinus*, *Aquarius*, *Ara*, *Centaurus*, *Canis Major*; if rightly identified); the latter contains 11–16 stars, of which 9 are constant (*Orion*, *Argo*, *Cetus*, *Eridanus*, *Piscis Austrinus*, *Hydrus*, *Ara*, *Centaurus*, *Procyon*).

Further, when Elihu says 'out of the chamber (*ḥedher*) comes the storm, and cold out of the north' (Job 37^9; cf RV), he is referring to definite stars or constellations, not merely to the points of the compass. The former is not the same as 'the chambers of the south' (RV; cf Job 9^9), but the principal constellation in that circle of stars, that which because of its circular configuration is called *alqubbatu* 'the tent' or 'vaulted chamber' by the Arabs (for the Heb. *ḥedher* is the same word as the Arab. *ḥidru* 'tent') and the Southern Cross (*Corona australis*) by western astronomers. When Job was written, though not now, this was visible on the extreme southern horizon of Palestine. The 'storm' coming from that direction is the sirocco. The latter name as it stands means 'scatterers' (cf RSV) and can hardly be explained; but if it be read *mizrayim* (so Schiaparelli), it can be translated as 'the two winnowing fans,' namely *Ursa Major* (which the Chinese call the Ladle) and *Ursa Minor* (which the Vulgate's *arcturus*, if taken with Grotius as an error for *arctus*, will support); the Greater Bear was much nearer the Pole in Job's time than now, the Phoenicians used the Lesser Bear to find the north, and the cold came to Palestine from that direction (Sir 43^{20}).

God further asks Job whether he can bid dawn appear 'that it might take hold of the ends of the earth and the

Wicked be shaken out of it, when it is changed as clay under the seal and stands forth as a garment and their light is withholden from the Wicked and the High Arm is broken?' (Job 38^{12-15}). Here 'the Wicked' are Orion's dogs, *i.e.* the Dog-stars (*Canis Major* and *Canis Minor*), of which one (*Sirius*, namely *α Canis Majoris*) was called the 'evil sign' (Homer, *Iliad* xxii. 29–30) because its rising in the torrid heat of late summer (July 13–August 10) was associated with sickness and plague and which was formerly thought to be nearest to earth because of its brilliance; and this suggestion is strengthened by a curious point in the Hebrew text which seems to suggest as an alternative reading 'hairy ones' (Heb. *śe'îrîm* for *re'shā'îm*), which will be the Dog-stars (cf Arab. *shi'rā*=*canis major* and *alshi'râni*=*Sirius* and *Procyon*). Then the 'High Arm' will be what is sometimes called the 'Navigator's Line,' namely *Sirius*—*Procyon*—*Gemini* (*Castor* and *Pollux*), patrons of seafarers (cf Ac 28^{11}), which are extended like a bent 'arm' (Heb. *z'rôa'*; cf Arab. *dhirâ'u* 'arm'=*Gemini* when extended and *Canis Minor* when contracted) across the sky from the horizon to the zenith (*Sirius* the shoulder, *Procyon* the elbow, *Gemini* the fingers) and which from their brilliance are a principal aid to navigation. Accordingly, the picture is that of the sun as it rises extinguishing the light of the stars one by one and picking out the hills and valleys as its rays reach them, like the pattern on a seal or the folds of a dress (G. R. Driver in *JThS* N.S. iv, 208–212, vii, 1–11).

The worship of the stars, commonly grouped together as the 'host of heaven,' is often mentioned (*e.g.* Jer 7^{18} 19^{13} 44^{17}, Ac 7^{43}) and condemned (2 K 17^{16}, Jer $44^{19, 25}$), and those who practised it are threatened with death in the Law (Dt 4^{19} 17^{2-5}). Nonetheless, Manasseh introduced it (2 K 21^{5}) but Josiah 'put down the idolatrous priests . . . and them that burned incense unto Baal, to the sun and to the moon and to the planets and to all the host of heaven' (2 K 23^{5}; see HOST OF HEAVEN). The Hebrew *mazzālôth* in this passage has often been taken for the Zodiacal signs (LXX, Vulgate; cf Aram. *mazzālâ* 'Zodiacal constellation'), but these are not likely to have been objects of worship; the term is therefore preferably translated 'planets' (cf Aram. *mazzālāthâ*=Syr. *mauzalāthâ* 'planets'). The 'queen of heaven,' who was worshipped in Jerusalem immediately before the Captivity (Jer 7^{18}) and to the neglect of whose worship the captives ascribed their disasters (Jer $44^{19, 25}$) was the Babylonian goddess Ishtar who, from early times, bore as one of her titles the Sumerian NIN-DAR-AN.NA 'bright mistress of heaven,' *i.e.* the Phœnician and Hebrew 'Ashtoreth'=Greek *Astartē* and Latin *Venus* (Gössmann, *Planetarium Babylonicum*, 120–122). A reference to the worship of the stars has also been found in 'ye have borne Siccuth (RSV 'Sakkuth') your king and Chiun (RSV 'Kaiwan') your images, the star of your god, which ye made to yourselves' (Am 5^{26}, RV), by reading 'Siccuth' as **sakkūth* and equating it with the Sumerian=SAG.KUD=Babylonian *Ninurta* god of war, and by reading 'Chiun' as **kaiwān*, which may then be taken as the Babylonian *Kaimānu* (cf Syr. *kewān*=Arab. *kaiwânu*) 'Saturn' (cf Ac 7^{43}, which is not necessarily decisive); but, although these two names occur together in a Babylonian incantation (Reiner, *Šurpu* ii. 180), they are not entirely in place here and are not supported by the earliest versions, which may accordingly be followed in reading 'but you shall now take up the shrine (Heb. *sukkath* for the MT *sikkūth*) of your idol-king and the pedestal(s) of your images, the star-gods which you have made for yourselves' to carry them into exile. Whether or how far the ancient Hebrews regarded the 'host of heaven' (which denotes also various heavenly beings) as the visible counterpart or image of the army of the angels (cf Is 24^{21}) is disputed.

The OT also occasionally speaks of astrologers, called 'dividers of the heavens' (*i.e.* those who divide them into sections by constellations in order to 'contemplate' the movements of the heavenly bodies), the 'star-gazers' and the 'monthly prognosticators' (Is 47^{13}), who professed a knowledge of future events based on a heavenly lore of which the prophet speaks with contempt, knowing them well from the experience of the Exile. They are the same as the 'Chaldaeans' and perhaps as the 'sooth-sayers' or rather 'determiners of fate' [not as the 'astrologers' (AV) or 'enchanters' (RV, RSV), who were rather 'exorcists' at the Persian court in Babylon] (Dn 5^{7}); the term translated 'determiners of fate' may mean the same class of persons as the above-mentioned 'dividers of the heavens' (Gesenius), while 'Chaldaeans' is a general term for members of the Babylonian learned and priestly class who made astronomy or astrology one of their principal studies (S. R. Driver, *Daniel*, 12–16).

STATE OF THE DEAD.—See DEATH, ESCHATOLOGY, PARADISE, SHEOL.

STATER.—See MONEY, 7.

STATUTE.—See DECREE.

STEALING.—See CRIMES, 6, 'Theft.'

STEEL.—See MINING AND METALS.

STEERSMAN.—See PILOT.

STEPHANAS.—A Corinthian, apparently of some importance, whose household were baptized by Paul personally (1 Co 1^{16}), and are called 'the first-fruits (='first converts' RSV) of Achaia' (16^{15}). Stephanas himself had joined the Apostle at Ephesus when he wrote, and was of great assistance to him there.

A. J. M.

STEPHEN.—The story of Stephen, told in Ac 6 and 7, narrates the election of Stephen and six other men for superintending the distribution of alms. But Stephen is shown to be a miracle worker and a debater. His success resulted in a trial before the Sanhedrin. False witnesses accused him of blasphemy and of speaking against the Temple and the Law. In his long speech Stephen gave a survey of the history of Israel. He described Moses as the type of Christ and stated that the Temple had been built contrary to the will of God (7^{48ff}). He accused the Jews of having persecuted the prophets, as they now had killed Jesus, and not keeping the Law themselves. His vision of the exalted Lord and his announcing of it exasperated the Jews. They cast him out of the city and stoned him. Thus Stephen became the first Christian martyr. His death led to a persecution of the whole community. Some of the dispersed disciples founded the Gentile Christian community of Antioch. In connexion with this persecution Saul of Tarsus was converted (9^{1ff}).

This picture has been corrected by modern critics at two points: 1. It was not the whole community which suffered persecution, but only the Hellenistic group about Stephen. 2. Stephen himself was lynched by a fanatical mob; the trial before the Sanhedrin is merely a device of the writer of Acts which enables him to insert the long speech in ch. 7.

E. H.

STEWARD.—This term is found seven times in the OT. In Gn $43^{16, 19}$ $44^{1, 4}$ Joseph's steward is literally 'he who was over his house.' In 1 Ch 27^{31} 28^{1} 'stewards' is the translation of Hebrew *śārîm* ('overseers' would be a good rendering). Another word, *sōkhēn*, used in Is 22^{15}, receives clarification in vv.^{21ff}. *Melṣar* found in Dn $1^{11, 16}$ might well be translated 'guardian.'

The NT terms are (1) *epitropos*, 'steward' in Mt 20^{8}, Lk 8^{3}; also translated 'guardians' in Gal 4^{2}; (2) *architriklinos* in Jn $2^{8f\ (twice)}$, which is quite possibly 'toastmaster,' 'master of the feast'; and (3) *oikonomos*, the usual term, 'one who manages a household.' This is used both literally and metaphorically; literally in Lk 12^{42} $16^{1, 3, 8}$, and metaphorically in 1 Co 4^{1f}, Tit 1^{7}, and 1 P 4^{10}. The cognate noun, *oikonomia*, 'stewardship,' is used similarly; the verb, *oikonomein*, has a literal meaning in Lk 16^{2}.

STOCKS.—See CRIMES, 9; PRISON.

STOICKS.—AV spelling of **Stoics** (q.v.).

STOICS.—When St. Paul met representatives of the Stoic philosophy at Athens (Ac 17[18]), that school had been in existence for about three and a half centuries. The name came from the *Stoa* or Porch (Stoa Poikilē) in Athens where Zeno (*c* 340–265 B.C.), the founder of the school, had taught his followers. The system was partly religious in outlook from the start. One of its finest religious expressions was the *Hymn to Zeus* written by Cleanthes, Zeno's successor. It is preserved in Stobaeus, *Eclogae*, I. i. 12 (see H. von Arnim, *Stoicorum Veterum Fragmenta*, i, 537). According to Cleanthes, God 'knows to make the crooked straight, prune all excess, give order to the orderless,' and bring good out of evil. Another great Stoic teacher was Posidonius of Apamea (135–51 B.C.), who exercised a strong influence on the Middle Stoa, especially its theology. His was the most universal mind of his age; he was not an Eclectic, but combined a consistent system of Monism with deep religious feeling. He was interested in the occult, like many other philosophers of the Hellenistic age, and he defined philosophy as the knowledge of things divine and human and their causes. He believed that a universal 'sympathy' explains nature as a whole and its diverse phenomena—*e.g.* the tides, which follow the moon; and he thereby opened the way to belief in astrology and divination, even among the educated. He looked upon the sun as the source of 'vital energy,' which floods and energizes the universe. Even souls are derived from the sun and fill the region below the moon. God is thus a fiery breath. Both sleep (dreams) and ecstasy lead to intuition, and religion arose from the contemplation of the heavens by early men, who lived more closely in communion with the gods than their descendants have done. Such a writing as the pseudo-Aristotelian essay, *On the Cosmos* (1st cent. B.C.), is filled with Posidonius's teaching, and is a good example of the popular type of Stoicism which belongs to the background of the NT and is taken for granted in Ac 17.

The early Stoic teaching was organized under three headings, Logic (including epistemology, logic, and rhetoric), Physics (including ontology, physics, and theology), and Ethics. The leading Stoic maxim was, 'Live in harmony' (so Zeno), to which Chrysippus added, 'with nature.' Both in the physical universe and in man, nature is to be interpreted by its highest manifestation, Reason, which appears in the world as the all-pervading ethereal essence or spirit, forming and animating the whole; in man it appears as the soul. Hence virtue is based on knowledge (as Socrates had held); and hence only the Wise Man can be really virtuous. The World-Soul, Reason, or Spirit of the universe is God, for the Stoic teachers (*e.g.* Cleanthes). According to Ac 17[28], Paul quoted the words of a Stoic writer: 'We are indeed his offspring' (or, 'belong to his race'; cf Aratus, *Phaenomena*, 5). But the quotation, though apt, represents a parallel in language rather than in ideas: the theology of the Stoics was pure pantheism. The Stoic god had no independent or personal existence—at least as conceived by the majority of teachers.

The supremacy of reason in man was pushed to such an extreme that virtuous conduct demanded the entire suppression of man's emotional nature. This rigorous moral standard became, for practical reasons, considerably modified, as by Seneca and Epictetus; but Stoic morality was always marked by rigidity and coldness.

The great quality of Stoicism, which set it apart from Epicureanism (q.v.), and brought it into line with Christianity, was its *moral earnestness*. In his famous dissertation on 'St. Paul and Seneca' (published in his *Commentary on Philippians*, 1868), Bishop J. B. Lightfoot wrote: 'Stoicism was the only philosophy which could even pretend to rival Christianity in the earlier ages of the Church.' Following the decline of the Academic philosophy into scepticism and the endless 'suspense of judgment' (see Cicero's *Academics* and *On the Nature of the Gods*), Stoicism remained the noblest school of thought with which the majority of men were acquainted; as such it was brought into contact with St. Paul by the author of Acts. Elsewhere he shows little knowledge of the system; see A. Bonhöffer, *Epiktet und das NT* (1911), pp. 98–180. The real influence of Stoicism upon Christian thought came later than the NT.

W. M. McD.—F. C. G.

STOMACH.—This English word occurs in 2 Mac 7[21] AV with the meaning of 'courage,' 'Stirring up her womanish thoughts with a manly stomach.'

STOMACHER.—The English word 'stomacher' was applied to that part of a woman's dress which covered the breast and the pit of the stomach. It was usually much ornamented, and was looked upon as an evidence of wealth. The word occurs in AV and RV in Is 3[24] as translation of Hebrew *pᵉthighil* (RSV 'rich robe'). Its meaning is very uncertain.

STONE.—I. In OT.—1. Several different words are rendered 'stone,' but the one of by far the most frequent occurrence is *'ebhen*, which has the same wide range of application as its English equivalent. Palestine is a stony country, and the uses to which stone was put were numerous and varied. In its natural state a stone served for a pillow (Gn 28[18]) or a seat (Ex 17[12]), for covering the mouth of a well (Gn 29[2ff]) or closing the entrance to a cave (Jos 10[18]). The stone rolled on to the opening of Christ's grave, Mt 27[60], was probably not in its natural state, and in a number of archaeological sites in Palestine traces can still be seen of the tracks along which the stones were rolled, and, indeed, of the way in which they were levered into place. Out of it, again, might be constructed a vessel (Ex 7[19]; cf Jn 2[6]), a mill (Dt 24[6]). Above all, stone was employed in architecture. Houses (Lv 14[42] etc.), walls (Neh 4[3], Hab 2[11]), towers (by implication in Gn 11[3]), and especially the Temple (1 K 5[17f] etc.), are referred to as built of stone. We read of foundation-stones (1 K 5[17]), of a corner-stone (Ps 118[22]), of a head-stone or finial (Zec 4[7]); and in 2 K 16[17] mention is made of a pavement of stone. Masonry was a regular trade (2 S 5[11] etc.), and stone-hewing is frequently referred to (2 K 12[12] etc.). Belonging to the aesthetic and luxurious side of life are precious stones and the arts of cutting and graving and setting them (Ex 28[9, 11] 31[5] etc.); see, further, JEWELS AND PRECIOUS STONES. The profusion of stones made it natural to use them as missiles. Stone-throwing might be a mark of hatred and contempt (2 S 16[6, 13]), or the expedient of murderous intentions against which provision had to be made in legislation (Ex 21[18], Nu 35[17]). In war, stones were regular weapons of offence. Usually they were hurled with slings (1 S 17[49], 1 Ch 12[2]), but, later, great stones were discharged by means of 'engines' (2 Ch 26[15], 1 Mac 6[51]). **Stoning to death** was a natural and convenient method of execution. At first an expression of popular fury (Jos 7[25]), it was afterwards regulated by law as an appointed means of capital punishment (Dt 17[5-7]; cf Ac 7[58f]). See, further, CRIMES AND PUNISHMENTS, **10**. The use of stones as memorials was common. Sometimes a single large stone, at other times a heap of stones, was raised (Gn 31[45f], Jos 8[29] 24[26]). Akin to this was their employment to mark a boundary (Jos 15[6] etc.). Stones would be the ordinary landmarks between the fields of one person and another, the removal of which was strictly forbidden (Dt 19[14] etc.). In religious worship stones were employed in the forms of the pillar (Gn 28[18, 22] 31[45] 35[14]) and the altar. The latter was at first a single great stone (1 S 6[14f]), but afterwards was built of several stones, which must be unhewn (Ex 20[25], Dt 27[5f]). See, further, PILLAR AND ALTAR. The use of stone for literary purposes (cf the Moabite Stone) is illustrated by the tables of stone on which the Decalogue was written (Ex 24[12] etc.) and the inscribed stones of the altar on Mount Ebal (Dt 27[2ff], Jos 8[30ff]).

2. Stones in Lv 21[2], Dt 23[1] (AV, RV), Lv 22[24] (RV) = testicles (so RSV).

II. In NT.—Here *lithos* is the ordinary word, and is found in most of the connexions already referred to. Noteworthy is the fact that Jesus, after quoting Ps 118[22],

took the rejected and exalted stone as a symbol of Himself (Mt 21^{42ff}, Lk 20^{17f}). St. Peter adopts the symbol in his address to the Sanhedrin (Ac 4^{11}), and enlarges it, with further reference to Is 8^{14} 28^{16}, in his figure of the 'living stone,' which is at once the foundation of God's spiritual house and a stone of stumbling to the disobedient (1 P 2$^{4-8}$). The 'stone' (*petros*) of Jn 1^{42} (AV), should be 'rock' (as RSV) or Peter (RV); 'Stony' (*petrōdēs*) in Mt 13^{5}, Mk 4$^{5, 16}$ (AV) should be 'rocky' (RSV). The 'white stone' of Rev 2^{17} represents *psēphos* 'a pebble,' and the reference, which has been variously interpreted, is best explained with Charles as 'an amulet engraved with . . . a name' (*Revelation*, ad loc.) a relic of the mystery cults which became transformed into a Christian symbol. J. C. L.—B. J. R.

STONE-SQUARERS.—Found only in 1 K 5^{18} [Heb. 32] AV; RV has **Gebalites** (RSV 'men of Gebal') as Jos 13^{5}, *i.e.* men of the Phoenician city of Gebal, or Byblos, mentioned in Ezk 27^{9}, where the elders and wise men of Gebal are referred to as caulkers of ships. It has been suggested that the gentilic had become an appellative in the sense of stonecutter (as Canaanite came to mean 'trader'), which is the meaning of AV. Others would emend the text (but cf Montgomery-Gehman, *ICC*, p. 140). A. R. S. K.

STONES, PRECIOUS.—See Jewels and Precious Stones.

STOOL.—'In older English (including AV) "stool" was used freely for any kind of seat' (*DB* iv, 621); similarly the Hebrew *kissē'* includes both chairs and stools, see House, **8**. In the difficult passage Ex 1^{16} the word rendered 'stools' (AV) in the sense of birth-stools (RV, RSV), *sella parturientis*, must be pointed to read 'stones' (*'abhnayim* for *'obhnayim*, both dual number), the reference being to the two stones or bricks on which a woman sat during her accouchement. This widely spread custom has been conclusively shown to have existed in ancient Egypt by Spiegelberg (*Aegypt. Randglossen*, 19–25), from the realistic representation preserved in an early hieroglyphic sign for birth confirmed by literary references. A. R. S. K.

STORAX.—See Poplar, Spice, Stacte.

STORK (*ḥᵃsîdhāh*).—The Hebrew *ḥᵃsîdhāh* is variously translated in the ancient versions, but the most likely renderings are 'heron' (Gr. versions and Vulgate often) and/or 'stork' (Peshitta in some places). The name means 'kindly,' and the stork has been called *ciconia pietaticultrix* (Petronius) for its parental affection; but the heron is equally assiduous in caring for its young. Therefore both birds, since they belong to the same order, may be denoted by the Hebrew word. Both the 'white stork' (*ciconia alba*) and the 'black stork' (*ciconia nigra*) as well as the 'common heron' (*ardea cinerea*) are well known in Palestine. The white stork nests both on houses and on trees, the black stork and the heron on trees, so that the reference to this habit (Ps 104^{17}) does not indicate which is meant. The common **heron** may be meant in some places, but the intended bird must be the white stork in two, namely when the expanse of its wings is in question (Zec 5^{9}), since it is far the largest and most conspicuous of these birds, and when its migratory habit is mentioned (Jer 8^{7}), since it is one of the very few birds which migrate in daylight, so that this habit must have been well known. The stork feeds on locusts and reptiles and is therefore highly valued, while the heron takes fish and reptiles and also frogs and water-rats; being predators, therefore, they are classed amongst unclean birds (Lv 11^{19}, Dt 14^{18}). The supposed reference to the *ḥᵃsîdhāh* in connexion with the ostrich (Job 39^{13}) is certainly due to textual corruption, and 'are pinion and plumage lacking (*ḥāsᵉrāh*)?' must be read (Hoffmann). G. R. D.

STORM.—See Galilee (Sea of), **3**; Whirlwind.

STORY (EV for 'storey').—See House, **5**.

STRAIT.—This English word is used in AV in the literal sense of 'narrow,' and in the figurative sense of 'strict' (of which it is simply another form). Once the verb 'strait' occurs, Sus 22 'I am straitened on every side.'

STRAKES.—AV and RV in Gn 30^{37} where RSV has 'streaks,' and in Lv 14^{37} where RSV has 'spots.' In the former case the word comes from a root meaning 'to peel,' and in the latter from a root meaning 'to be hollow.'

STRANGE FIRE (AV RV).—RSV 'unholy fire'; see Nadab.

STRANGER.—This seems, on the whole, the most suitable English word by which to render the Hebrew *zār*, which is a participle denoting primarily one who turns aside, one who goes out of the way, *i.e.* for the purpose of visiting or dwelling in another country. It has frequently the meaning **foreigner**, in contrast to 'Israelite,' especially with the added notion of hostility (cf 'estranged'), and in antithesis to 'Israel' (*e.g.* Hos 7^{9} 8^{7}, Is 1^{7}, Ezk 7^{21} 11^{9}, Jl 3^{17}, Ob 11, Ps 54^{3} etc.). In P the word takes on a technical meaning found nowhere outside the Hexateuch, and exclusively post-exilic. It means 'layman' (which might with advantage be substituted for EV 'stranger'), as opposed to a Levite (see Nu 1^{51} 18^{7}; RSV 'anyone else'), or to a priest proper, or Aaronite (see Ex 29^{33} 30^{33}, Nu 3$^{10, 38}$ 18^{2}, Lv 22$^{10, 12f}$ (H)).

The 'strange woman' of Pr 2^{16} etc. has the same technical sense as 'foreign woman' with which it stands in parallelism, viz. *harlot* (RSV 'loose woman').

Sojourner (sometimes the translation of *tōshābh*, 'settler [see below]) is frequently substituted by RV, RSV for the AV 'stranger,' as translation of *gēr*. The *gēr* was originally a man who transferred himself from one tribe or people to another, seeking, and usually obtaining, some of the rights of natives. A whole clan or tribe might be *gērîm* in Israel, as *e.g.* the Gibeonites (Jos 9), the Beerothites (2 S 4^{2}). The Israelites are themselves often spoken of as 'sojourners' in the land of Egypt (see Gn 15^{13}, Ex 22^{21} 23^{9}, Lv 19^{24} (H), Dt 10^{19} 23^{7} etc.). In the oldest Israelite code (the Book of the Covenant, Ex 21^{1} to 23^{13}), the *gēr* is protected against injustice and violence (21^{20} 23^{9}). The D code (*c* 620 B.C.) goes much further, for, besides making more explicit and urgent the duty of defending, helping, and even loving the 'sojourner' (Dt 10^{18} 14^{29} 24$^{14, 19}$), and also securing to him his rights (24^{17} 27$^{1-9}$), the *gēr* was to be allowed to participate in the three great annual feasts (Dt 16^{11ff}; cf 5^{14} and Ex 23^{12}). He is not, however, compelled, though allowed, to follow his protector's religion (Dt 14^{29}, 1 K 11^{7}). That he occupies a status inferior to that of the born Israelite is indicated by the fact that he is classed with the widow and orphan as needing special consideration (10^{18} 14^{29} 29$^{14, 19}$), and that the right of intermarrying is denied him (7^{1ff} 23^{4}). When, however, we come to P and to other parts of the OT which belong to the same stage of history and religion, we find the 'sojourner' almost on an equal footing with the native Israelite—he is fast becoming, and is almost become, the **proselyte** of NT and Rabbinical times. His position has now religious rather than political significance. He is expected to keep the Sabbath and to observe the Day of Atonement, as well as the three great feasts (Lv 16^{29}). He is to eat unleavened bread during Passover week (Ex 12^{19}; Passover and the Feast of Unleavened Bread are now blended), and, if circumcised (not otherwise), to keep the full Passover itself. But the *gēr* is not even yet the full equal of the Israelite, for he is not compelled to be circumcised, and no one can belong to the congregation who has not submitted to that rite (Ex 12^{47ff}, Nu 9^{14}); he has not yet received the right of intermarriage (Gn 34^{14}), and is prohibited from keeping Jewish slaves (Lv 25^{47ff}).

The closing of the ranks of Judaism, helped by the Samaritan schism, and consummated by the Maccabaean wars, led to the complete absorption of the 'sojourner.' The word *prosēlytos* (representing the Heb. *gēr*), common in classical Greek for one who has come to a place

(Lat. *advena*), acquired in Hellenistic Greek the meaning which meets us often in the NT (Mt 23[15], Ac 2[6] etc.) See PROSELYTE.

The indiscriminate use of 'stranger' with the meaning of 'sojourner,' and of '*alien*' and 'foreigner' is very confusing. 'Foreigner' is the proper rendering of Hebrew *nokhrî*. The Hebrew *tôshābh* (literally 'dweller') is a post-exilic substitute for *gēr* ('sojourner') in the original non-religious sense of the latter. For the sake of distinction it might be uniformly rendered 'settler' (EV 'sojourner,' 'stranger,' 'foreigner,' RSV 'sojourner,' 'stranger'). See, for the relations of Israel to foreigners proper, NATIONS. T. W. D.—W. J. Ha.

STRANGLING.—This is suggested as a mode of death, Job 7[15]. The cognate verb describes the manner of Ahithophel's self-inflicted death (2 S 17[23], EV 'hanged himself'; cf Mt 27[5] of Judas). The idea conveyed is death by suffocation, not necessarily produced by suspension. Elsewhere, where hanging is mentioned in EV as a mode of punishment, some form of impalement is intended (see CRIMES AND PUNISHMENTS, **10**). In the Mishnah strangling figures as one of the four kinds of death penalties inflicted by the court. The others are stoning, burning, and beheading (*Sanh.* vii. 1, 3, xi. i.).

In the pastoral letter sent down by the Council of Jerusalem to the early converts from heathenism, these are instructed to abstain *inter alia* 'from blood and from things strangled' (Ac 15[29], cf v.[20] 21[25]). Both belong to the category of Jewish food taboo (FOOD, **10**). The former refers to the prohibition against eating meat which had not been thoroughly drained of the blood, the second to the similar taboo affecting the flesh of animals not slaughtered according to the very minute Rabbinical rules then in force. Thus in the Talmudic treatise *Chullin*, specially devoted to this subject, it is laid down (i. 2) that 'any one may slaughter . . . with any instrument except a harvest-sickle, a saw, etc., because these strangle,' in other words, they do not make the clean incision required for proper slaughter. 'What is strangled' (Ac 15[20] RSV) or strangled meat is thus seen to be a current technical term of the Jewish *shᵉḥîṭāh* or ritual of slaughter. In modern phrase the Gentile converts were to eat only *kōsher* meat.

A. R. S. K.—S. S. C.

STRAW, STUBBLE.—In Hebrew the former is *tebhen*, the latter *ḳash*, and to Western ideas the one is as much 'straw' as the other. The distinction between the two is as follows: *tebhen*, the modern Arabic *tibn*, is the mixture of chopped straw and chaff, produced by the action of the threshing-drag and winnowed out by the fan (AGRICULTURE, **3**), as distinguished from the grains of wheat (so Jer 23[28] where 'straw' RSV, and 'chaff' AV are both inadequate). It is mentioned as the food of horses, asses, and camels. In reaping, as is still the custom, the stalks were cut knee-high or over; the length of stalk left standing is *ḳash*. Accordingly, when the Hebrews in Egypt 'gathered stubble for straw' (Ex 5[12]), what they did was to pull up the stalks of wheat left standing in the fields and cut them up into short pieces suitable for brick-making, instead of being allowed to procure the *tibn* ready to their hand from the local threshing-floors. Since the corn-stalks were usually burned as manure, 'stubble' is frequently found in metaphors suggested by this practice (Is 5[24] 47[14] etc.). In other passages containing reference explicit or implied to 'driven stubble' (41[2]), the smaller fragments of chopped straw which the wind blew away with the chaff from the threshing-floor may be intended.

A. R. S. K.

STREET.—The streets of ancient cities were very narrow (cf Jos. *Ant.* xx. v. 3 [111]) and followed no definite plan. In ancient times, as in modern, a feature of an eastern city was the collection of merchants or craftsmen dealing in the same commodities in the same streets or quarters. See ARTS AND CRAFTS, **10**.

STRENGTH OF ISRAEL.—The AV and RV translation of the Divine title *nēṣaḥ Yiśrā'ēl* in 1 S 15[29]. Probably a more accurate rendering would be 'Glory of Israel' (so RVm, RSV).

STRIPES.—See CRIMES, etc., **9**, 'Beating.'

STRONG DRINK.—See WINE AND STRONG DRINK.

STRONGHOLD.—See CITADEL.

STUBBLE.—See STRAW.

STUD.—This word is found in RV and RSV only in Est 8[10], where it renders a word of uncertain meaning, perhaps='bred in the royal stud.' *KB* suggests that it means 'swift-running mares.' AV has 'young dromedaries.'

STUFF.—In Lk 17[31] and elsewhere in AV 'stuff' means 'furniture' or 'goods'; cf Udall's translation of Erasmus' *Paraphrase*, i. 7, 'All that ever they had about them of stuffe or furniture.'

STUMBLING-BLOCK.—The OT word, *mikhshôl*, 'that which causes one to trip' or 'stumble,' is used in the literal sense in Lv 19[14], elsewhere figuratively. It is used of Yahweh in Is 8[14] without the causative idea, viz., 'stumbling.' Of the two NT words, the commoner, *skandalon*, has an earlier form which means the movable stick in a trap, on which bait is placed. In the NT it has the connotation of 'pitfall,' 'trap,' but always in a figurative sense, meaning (1) enticement to sin, as in Mt 18[7], where it is so translated, or (2) that which causes offence, as in 1 Co 1[23]. Another word, *proskomma*, is usually the equivalent of *skandalon*; in Ro 9[32f], 1 P 2[8] it means simply the act of 'stumbling.' J. H. Sc.

SUA, 1 Es 5[29] (RV).—See SIA.

SUAH.—An Asherite, 1 Ch 7[34].

SUBA, 1 Es 5[34] (AV).—See SUBAS.

SUBAI, 1 Es 5[30] (AV, RV).—See SHALMAI.

SUBAS.—A family of 'Solomon's servants,' 1 Es 5[34] (AV **Suba**).

SUBURB.—This word is used in AV in two quite distinct senses. (1) In 2 K 23[11] a certain chamber, really within the Temple precincts, is said to have been 'in the suburbs' (Heb. *parwār*, RV and RSV 'precincts'). Practically the same original is retained as a proper name, **Parbar,** in 1 Ch 26[18] (RVm 'the Precinct'), where the reference is probably to the same spot as in the former passage. Modern scholars find in this mysterious *parbār* or *parwār* a designation of the western colonnade (or part thereof) of the Temple (see PARBAR).

(2) In all other instances 'suburbs' (so AV, RV) occurs only in connexion with the so-called Levitical cities, as the rendering—derived from the Vulgate *suburbana* (fields, etc. close to a city)—of a Hebrew word meaning 'pasture lands' (so RSV). Each of the 48 cities, according to Nu 35[2ff], is to be provided with a square tract of land measuring 2000 cubits—roughly 1000 yards—each way, which is to serve the Levites as a common pasture ground 'for their cattle and for their livestock and for all their beasts' (v.[3]; cf the lists in Jos 21[2–42], 1 Ch 6[55–81]).

A. R. S. K.

SUCATHITES.—See SOCO, **1**.

SUCCOTH.—1. A town of Gad (Jos 13[27]) in the Jordan Valley near the Jabbok by Zarethan (1 K 7[4–6]), commanding the ford of *ed-Dâmiyeh* (Jg 8[4–5]), said to have been so called by Jacob, who built 'booths' (*sukkôth*) there for his cattle on his journey from Penuel to Shalem in the district of Shechem (Gn 33[17]). *Tell el-Akhṣâṣ* ('Mound of Bivouacs'), 1½ miles N. of the *Zerqā* (Jabbok) and 7 miles NE. of *ed-Dâmiyeh* would suit the Biblical data, but, in view of the significance of Succoth, a better location is 1 mile further S. at *Deir 'Allah*, a considerable site with abundant Iron Age deposits. This may be an Arabic corruption of *Tar'ālāh*, where the Talmud locates Succoth.

2. The first station of the Israelites in the Exodus (Ex 12[37] (J) 13[20] (P) Nu 33[5f] (P)). There is probably a double tradition in the matter of the route of the Exodus, namely that of J, which supports a northern route by way of the Serbonian Bog (*Sabkhāt el-Bardawîl*), and that of E, followed by P, which depicts an Exodus

through the *Wâdī Ṭumilāt* and southwards by the Bitter Lakes. In the latter region Succoth has been credibly identified with *Tell el-Mashkûṭeh* in the old Egyptian district of *Ṭeku* towards the E. end of the *Wâdī Ṭumilāt*.

S. R. D.—J. Gr.

SUCCOTH-BENOTH.—A deity whose image was made and set up in Samaria by the colonists from Babylon, 2 K 17[30]. 'Benoth' (LXX *Banith*) suggests 'banitu' as it appears in the name *Ṣarpanītu*—in the inscriptions *Ṣar-banitu*—the wife of Marduk, patron god of Babylon. It has further been suggested that *suk* is for *ṣar*, and that the name is a corruption of *Ṣarpanītu*.

SUCHATHITES, 1 Ch 2[55] (AV).—See Soco, **1.**

SUD, 1 Es 5[29] (AV).—See Sia.

SUDIAS.—A Levite, 1 Es 5[26]; see Joda, **1.**

SUFFER.—In AV and RV, in addition to its usual meaning, 'suffer' is used in the sense of 'permit,' as in 'Suffer the little children . . . to come to me' (Mt 19[14], Mk 10[14], Lk 18[16]). RSV has 'let' in all these cases, and completely eliminates the obsolete use.

SUKKIIM.—The name of a tribe led by Shishak against Judaea, 2 Ch 12[3] (AV **Sukkiims**). They are unidentified.

SULPHUR.—Found only in RSV in Rev 9[17t], where AV and RV have 'brimstone' (q.v.). In v.[17] the Greek once has *theiōdēs*, found only here in NT, and once *theion*, which stands in v.[18]. The latter word is rendered 'brimstone' in RSV in Lk 17[29], Rev 14[10] 19[20] 20[10] 21[8].

SUMER, SUMERIANS.—Excavation of some sites in Lower Mesopotamia has revealed prehistoric levels of culture. The earliest material remains were found at Obeid immediately above virgin soil. The next in age, and immediately above the Obeid type, were found at Uruk (Erech). There is great difference between the material remains found in the earliest Obeid-Uruk levels and those which follow, *i.e.* Uruk IV and III. It is agreed that the latter, which have yielded the first *cylinder* seals and the first inscribed tablets, are remains of Sumerian culture. Opinion differs on the question whether the former also are Sumerian. and therefore on the question whether the Sumerians were the first settlers in Lower Mesopotamia. Their original home is uncertain. The Caucasus region, India and Iran have been suggested. Archaeological remains found principally at Ur, Uruk, Kish, Eridu and Lagash establish that from *c* 3000 B.C. they created in Lower Mesopotamia the earliest civilization known to us in the Ancient Near East. Anthropological data are not sufficient to determine their race, nor can their language be placed within any known family.

The cities of Sumer known to us lay in the alluvial plain between the site of modern Baghdad in the N. and the marshland barrier in the S. Tradition, preserved in later King lists, assigns kings to some of these cities before the Flood. Written and non-written remains limit the Sumerian timetable to the 3rd millennium B.C. From the period *c* 2600 B.C. to the end of the 3rd millennium B.C. comes most of the published evidence of the political, religious, social and economic life of the Sumerians. They lived under kinglets, with titles *ensi* or *lugal*, until the coming of the Semitic Akkadians who *c* 2400 B.C. established hegemony over Sumer. The Akkadian king Sargon I. carried war into Elam and Syria. After the Akkadians came the Guti, barbarians from the Zagros district, with disaster especially for the northern land of Akkad. The Sumerian culture and language survived this long interlude of almost 300 years. From Lagash, under Gudea, and from Ur of the 3rd Dynasty of Ur at the close of the 3rd millennium, come some of the best extant examples of Sumerian craftsmanship. Under the five kings of that Dynasty, Sumer, now unified politically under Ur, had more than 100 years of prosperity. The proportion of persons in office bearing Semitic names is considerable, and non-Sumerian deities appear in the pantheon. But the religious pattern of former days is unchanged. There was one king over many cities, years were everywhere dated by the same formula of event, but the god of the capital, Nanna, the moon god, reigned only in the capital, and it was the god of Nippur, Enlil, who 'called' kings to office. Polytheism was the mark of Sumerian religion, and death the limit of human horizons. The earth was the local lord's and the fulness thereof. Man's function was to serve the gods by supplying foods and abodes. The temple, *i.e.* the deity, had the monopoly of all wealth. Next to him, the royal family. Land was not sold but given as maintenance to officials and worked by organized labour, free and slave. A simple but effective system of book-keeping, recorded all income and expenditure. Records were inspected and stored. Merchants traded on behalf of the temple, and from Ur of the 3rd Dynasty, local metal work was transported abroad, and local products have been found in India and in Syria.

From Sumer, the script. cuneiform, was carried far beyond its borders. Originally pictographic, it came to denote mere syllabic sounds with no reference to the original picture. There is reason to believe that it was originally written from right to left, but, apart from a few words, the order of the signs is from left to right in the text. The same sign may have two or more phonetic values, and different signs may have the same phonetic value. More than 500 signs were in use in the late Sumerian age, to the majority of which exact phonetic values can be assigned, though the Semitic equivalents are sometimes unknown or doubtful. The language which the signs convey belongs to the type known as agglutinative, to which Hungarian, Turkish, and Finnish belong. Itself not Semitic, its vocabulary is known through later bilingual, *i.e.* Sumerian and Akkadian, word lists, and through Akkadian texts which translate from the Sumerian which accompanies them. The verbal system, in respect of prefixes, infixes and postfixes provides the main area of debate amongst scholars. The literature comprises historical, legal, economic, religious texts written during the Sumerian age. The language survived through temple schools long after it ceased to be a spoken language, and was studied as late as the 3rd cent. B.C.

T. F.

SUN.—The first mention of the sun in the Bible is in Gn 1[16], as 'the greater light to rule the day.' It was looked upon as the greatest and most important of the heavenly bodies, and motion was attributed to it, as is still done in ordinary parlance. We read of the going down of the sun, and of its rising; of the increasing force of its heat as the day went on (Ex 16[21]), of its influence in the production of the crops of the ground ('the choicest fruits of the sun,' Dt 33[14]). The sun 'rises in his might' (Jg 5[31]). The situation of a place is spoken of as 'toward the sunrise,' *i.e.* to the east (*e.g.* Nu 34[15]). Things that were notorious and done openly were said to be 'before *or* in the sight of the sun.' But while the sun is strong, the power of God is greater still. This is expressed in Job's assertion (9[7]) that God 'commands the sun and it does not rise.' The power of the sun affects the complexion ('I go about blackened, but not by the sun,' Job 30[28]; cf Ca 1[6]), and even causes death. A case of death by **sunstroke** occurs in 2 K 4[18f], and this power is alluded to in Ps 121[6] 'The sun shall not smite you by day.' The light of the sun is cheering: 'it is pleasant for the eyes to behold the sun' (Ec 11[7]). Contrivances for measuring the length of the day by the shadow cast by the sun were invented: we have some kind of **dial,** of which steps formed a part, indicated in 2 K 20[9, 11], Is 38[8]. Though there is no actual mention of an **eclipse** in the Bible, part of the language used in describing the terrors of the day of the Lord both in OT and NT is derived from such an event: 'the sun shall be turned to darkness' (Jl 2[31]), 'the sun became black as sackcloth' (Rev 6[12]). On the other hand, the brilliance and glory of the future life is portrayed by comparison with the sun. 'Then the righteous will shine like the sun' (Mt 13[43]); 'The light of the sun will be sevenfold' (Is 30[26]); and even the sun will not be

required, for, as in Ps 84[11] 'the Lord God is a sun,' so in Rev 21[23] (cf 22[5]) 'the city has no need of the sun . . . for the glory of God is its light.' The wonders of the day of Joshua's victory over the Amorites, when at his command the sun and moon are said to have stood still (Jos 10[12-14]), were long remembered by the Israelites (Hab 3[11], Sir 46[4]).

The power and influence of the sun over the natural world would soon lead to its being personified and worshipped, inasmuch as what was done upon earth was done 'under the sun.' In one of Joseph's dreams there is a personification of the sun (Gn 37[9]). In the Book of Deuteronomy (4[19]) there is a caution against **sun-worship,** and the punishment of death by stoning is assigned to the convicted worshipper of the sun (17[3]), whilst in Job (31[26]) there is an allusion to a superstitious salutation of the sun by the kissing of the hand. Sun-pillars, or obelisks used in the worship of the sun, are mentioned frequently in the OT, *e.g.* Ex 23[24] (RVm), Lv 26[30], 2 Ch 14[3], Is 17[8], Ezk 6[4] (RV; but cf RSV); and in Phoenicia, a solar Baal, Baal-Hammon, was worshipped. Sun-worship itself was, in the later days of the kingdom of Judah at any rate, one of the permitted forms of worship in Jerusalem. Sun-images are mentioned in 2 Chronicles (14[5] RV; RSV 'incense altars') as existing in all the cities of Judah as early as the reign of Asa. In Josiah's reformation those who burnt incense to the sun were put down (2 K 23[5]), while the chariots of the sun were burned with fire (after being hewn down according to 2 Ch 34[4, 7]), and 'the horses that the kings of Judah had given to the sun' were taken away (2 K 23[11]). There was a great chariot of the sun at Sippar in Babylonia. We gather from Ezk 8[16] that this sun-worship actually took place in the inner court at the door of the Temple, between the porch and the altar; the worshippers turned their backs upon the Temple itself, and worshipped the sun toward the east. Certain places where this worship appears to have been most popular took the name **Beth-shemesh** (q.v.), 'house of the sun,' from the fact.

We must not forget, in conclusion, that, in one Messianic passage (Mal 4[2]), the coming deliverer is spoken of as 'the sun of righteousness.' H. A. R.

SUN IMAGES.—See PILLAR.

SUNDAY.—See LORD'S DAY.

SUNSTROKE.—See SUN, MEDICINE.

SUPERSCRIPTION.—See TITLE, and MONEY, **7.**

SUPH.—This occurs as a place-name in Dt 1[1] (AV 'the Red Sea,' elsewhere *yam sûph*; it is therefore assumed in AV that *yam* had fallen out). LXX and Vulgate understood as AV, which may be right. Otherwise Suph is unknown.

SUPHAH.—An unknown locality E. of Jordan, Nu 24[14] (AV 'the Red Sea').

SUPPER.—See MEALS; for Last Supper see EUCHARIST.

SUR.—**1.** An unidentified gate in Jerusalem, 2 K 11[6]. **2.** A town on the seacoast of Palestine, Jth 2[28]. Its site is unknown, unless it is a duplicate of Tyre.

SURNAME.—See NAME, **2.**

SUSA.—For many centuries the capital of Elam, and afterwards one of the three capitals of the Persian empire. It is mentioned in Neh 1[1], Dn 8[2], Est 1[2] etc., where AV and RV have **Shushan.** In Ad. Est 11[3] AV, RV and RSV have 'Susa.' It is modern **Shush,** in SW. Persia.

SUSANCHITES.—AV form of **Shushanchites** (q.v.).

SUSANNA.—See APOCRYPHA, **5.**

SUSI.—A Manassite, Nu 13[12] (Heb. 11).

SWALLOW.—**1.** Hebrew *dᵉrôr*, Ps 84[3], Pr 26[2]. The allusion to the nesting of this bird in the sanctuary and its swift (unalighting) flight fits the swallow. **2.** Hebrew *ʿâghûr*, Is 38[14], Jer 8[7] (AV; RV, RSV **crane**); see CRANE. **3.** Hebrew *sûs, sîs*, Is 38[14], Jer 8[7] (RV, RSV; AV **crane**). Some species of swallow or swift, of which ten species are common in the Holy Land, is here indicated. See CRANE.

SWAN, Lv 11[18], Dt 14[16] (AV).—See OWL.

SWEARING.—See OATHS.

SWEET CANE.—See REED.

SWINE (*ḥᵃzîr*).—Domesticated swine were probably kept in the East in the earliest historic times, when they appear to have been regarded as sacred. In a cave associated with the earliest place of sacrifice at ancient Gezer, in use certainly before 2000 B.C., large quantities of pigs' bones were found. It was the sacrosanct character of swine that lay at the root of the prohibition in Lv 11[7] and Dt 14[8]; and the eating of swine's flesh and offering of swine's blood (Is 65[4] 66[3, 17]) are clearly regarded as a sign of lapse into paganism. The heathen frequently tried to compel the Jews to eat swine's flesh (*e.g.* 2 Mac 6[18] 7[1]) and thus renounce their religion. The contempt felt for swine is shown by the proverbs quoted in Pr 11[22], Mt 7[6], and 2 P 2[22]. In the Talmudic writings the pig appears as the emblem of uncleanness, and those who keep swine are regarded with aversion. The same ideas colour the parable of the Prodigal Son (Lk 15[15]), where he is depicted as reaching the lowest depth of infamy in being sent to feed swine, and actually being reduced to covet their food; and also the narrative of the demoniacs, where the Gentile inhabitants of Gerasa lose their great herd of swine (Mt 8[30], Mk 5[13], Lk 8[32]).

In modern Palestine very much the same feeling survives. *Khanzîr* 'pig' is a common but very opprobrious appellation. Swine's flesh is loathed by Jews and Moslems; the latter, who otherwise eat the same food as Christians, are always very suspicious that any unknown food may be contaminated with it.

E. W. G. M.

SWORD.—See ARMOUR, ARMS, **1** (*c*).

SYCAMINE (Lk 17[6]).—*Sykaminos* is, strictly speaking, the black mulberry (*Morus nigra*, the *tût shâmî* of the Syrians), and it is probably this tree that is referred to in Lk 17[6] and in 1 Mac 6[34]. But *sykaminos* is also used in LXX in many passages as the equivalent of the *shiḳmîm* or **sycamore** (q.v.). E. W. G. M.

SYCAMORE (RV 'sycomore').—Hebrew *shiḳmîm*, 1 K 10[27], 1 Ch 27[28], 2 Ch 1[15] 9[27], Is 9[10], Am 7[14]; *shiḳmôth*, Ps 78[47]; Greek *sykomorea*, Lk 19[4]. This is the sycomore fig (*Ficus sycamorus*), a tree often 50 feet high, with an enormous trunk. It bears poor figs (Am 7[14]), but furnishes good timber. It is not to-day 'in abundance' as of old (1 K 10[27]), but considerable numbers flourish still in the plain around Jaffa. This tree must not be confused with the 'sycamore' (*Acer pseudo-platanus*) of our home lands, which is a species of maple. See also SYCAMINE. E. W. G. M.

SYCHAR.—'A city of Samaria,' near the parcel of ground that Jacob gave his son Joseph (Jn 4[5]). Jerome in *Onomast.* distinguishes Sychar from **Shechem,** but in *Ep. Paul.* and in *Quaest. Gen.* he identifies them, saying that the form *Sychar* is due to scribal error. The Old Syriac also reads *Shechem.* In A.D. 333 the *Itinerary of Jerusalem* places a *Sechar* one mile E. of Nâblus. Some authorities have suggested identification of Sychar with *ʿAskar*, a village on the skirt of Ebal, about 2 miles E. of Nâblus. An objection to this is the presence there of a copious spring, more than sufficient to supply the village; while from Jn 4[15] we learn that the woman of Sychar was accustomed to go to Jacob's Well for water. Ancient Shechem, we now know, lay at *Tell Balâṭah*, which bears evidence of occupation from the period of the Hebrew monarchy to Roman times. **Jacob's Well,** according to unanimous and unbroken tradition, lies about half a mile to the E. of *Tell Balâṭah*, on the S. edge of the plain, at the foot of Gerizim. It was formerly of great depth (Jn 4[11]). The sacred associations of the Well, and the 'lightness' of the water, compared with the hardness of that from the spring, would form attractions in early as in modern times. It seems certain that the story-teller meant Shechem. W. E.—E. G. K.

SYCHEM, Ac 7[16] (AV)=**Shechem** (q.v.).

SYCOMORE.—See SYCAMORE.

SYELUS, 1 Es 1[8] (AV).—See JEHIEL, 6.

SYENE.—This is the Greek form of the name Seveneh. Egyptian *Sewen* 'mart,' to-day still Assuan (*Aswân*), a town on the E. bank of the Nile, below the first cataract). Behind it are the quarries from which the stone used in so much Egyptian sculpture was obtained. In the river opposite it lay the island the Greeks called *Elephantine* (translation of Egyptian '*Iēbew* 'Elephant place,' *Yeb* in the Aramaic texts). On the W. shore of the Nile there are ancient tombs of princes of the 6th Dynasty period (*c* 2350–2190 B.C.). Situated on the border of Nubia Seveneh had a considerable commercial and military importance. For the OT 'from Migdol to Syene' (Ezk 29[10] 30[6] according to LXX, RV, RSV; AV 'from the tower of Syene') indicates the northern and southern limits of Egypt. Reference to the 'Syenians' is also made in Is 49[12]; here the 'land of Sinim' is to be read 'land of the *Swnyym*' according to Dead Sea Isaiah Scroll. In Persian times there was a foreign, Aramaic-speaking military colony at Elephantine and Syene. Among them were many Jews, who had a temple of Yahweh. The **Elephantine Papyri** (q.v.) give a vivid picture of their life. The Jewish temple antedated Cambyses (525 B.C.) and so the Jews must have been settled there earlier in the 6th cent. Temple and Jewish colony must have ended about 399 B.C., with the accession of Nepherites I. E. G. K.

SYMBOL.—The prevalence of figurative language in the Bible is due partly to the antiquity and Oriental origin of the book and to the fact that its subject, religion, deals with the most difficult problems of life and the deepest emotions of the soul. The English word 'type,' as the equivalent of 'symbol' or 'emblem,' is sometimes confusing, as it has been used both for the fulfilment of the prototype and as that which points forward to the antitype. Like the proverb and parable the symbol, implies a connexion between two things of which one is concrete and physical, the other abstract and referring to intellectual, moral, and spiritual matters. The former, of course, is the symbol.

1. Symbols of similarity.—Here the connecting principle is one of recognized likeness between the material object and its counterpart. Thus 'a watered garden' is made the emblem of a satisfied soul (Jer 31[12]). The similarity is that of supplied wants. In the same way the white garments of the priests and of the redeemed were emblematic of holiness (Ex 39[27–29], Rev 19[8]). Marriage, as an Oriental relationship of purchased possession, was an emblem of Palestine in covenant with God, and of the Church as the bride of Christ. Thus also the Christian life was a race (He 12[1]) and a warfare (Eph 6[11–17]). An element of similarity entered into the dream-visions recorded in the Bible and into the symbolism of prophetic warnings (Is 5[1–7], Jer 13[1–12], Ezk 37[1–11]). In the Epistles we meet with a rich variety of emblems created by the desire to interpret the Person and mission of Christ, and the relationship of the Christian believer to Him. The writers, being of Jewish origin and addressing communities which usually contained a number of Jewish Christians, naturally turned to the biographies, national history, and sacred institutions of the OT. Whatever was drawn from such a source would not only be familiar, but would seem to be part of an organic whole, and to possess a value of Divine preparation. Examples of these are the Second Adam, the Firstborn, the Chief Shepherd, the Chief Corner-stone. The journey to Canaan supplied Passover, manna, rock, redemption, better country, rest. From the Tabernacle and Temple were taken high priest, altar, sacrifice, veil, peace-offering, lamb, atonement.

2. Symbols of representative selection or Synecdoche.—The symbol is in this case the agent or implement, or some conspicuous accompaniment selected from a group of concrete particulars, so that the part represents the whole. Thus the insignia of office and authority are crown, sword, sceptre, seal, coin, robe, rod, staff. Various actions and relationships are symbolically indicated, such as the giving of the hand (compact), foot on the neck (conquest), bored ear (perpetual servitude), washing of the hands (innocence), bared or outstretched arm (energy), gnashing of teeth (disappointment and remorse), shaking the head (contempt and disapproval), averted face (angry repudiation), bread (hospitality), cross (suffering of Christ, and suffering for Him).

3. Memorial and mystical symbols.—These might belong to either of the above forms or be artificially selected, but the purpose was not so much to instruct and emphasize as to recall and perpetuate circumstances and feelings, or to suggest a meaning that must remain concealed. Such were the rainbow at the Flood, the stone Ebenezer, the symbolical names often given to children, as *Moses*, *Ichabod*, and the names in Jacob's family, the Urim and Thummim, the white stone, and the number of the beast, etc. Of this class were the sculptured emblems of the early Christians in the catacombs of Rome, such as the palm, dove, anchor, ship, fish, Alpha and Omega. Water, bread and wine, as the material elements in Baptism and the Lord's Supper, are the symbols of those Sacraments. The name 'symbol' is applied to the selection of generally accepted truths forming the Christian creed, or canon of belief. Certain characters in the Bible, such as Jonah, Mary Magdalene, Herod, Judas, have come to be identified with special types of character and conduct, and are said to be symbolical of those classes.

4. Dangers of symbolism.—(1) The act of transmitting spiritual and eternal truth through material and perishable media always involves *limitation and loss.* (2) The injudicious carrying out of symbolism into inferences not originally intended, leads into the opposite error of *irrelevant addition.* (3) The *scrupulous avoidance of symbolism* may itself become a symbol. (4) The external form which illuminates, emphasizes, and recalls is no guarantee of *inward reality.* The ceremony of purification is not purity, as the prophets so forcefully declared. Sheep's clothing may not be a robe of innocence, or rent garments indicate distress of soul. The cry 'Lord, Lord!' is not always raised by true discipleship. Hence Christ's message to the Samaritan woman concerning true worship, and His frequent protests against the ceremonial insincerities of the Pharisees. The condemnation of image-worship turned upon the total inadequacy of symbol to represent God. It might indicate man's thought of God, but it left untouched the constituent element of true religion, God's thought of man. 'Eyes have they, but they see not.'

G. M. M.

SYMEON (cf SIMEON, *ad init.*).—**1.** An ancestor of Jesus (Lk 3[30]). **2.** A prophet and teacher at Antioch (Ac 13[1]). **3.** Ac 15[14]=Simon Peter (see PETER).

SYMMACHUS' VERSION.—See GREEK VERSIONS OF OT, 18.

SYNAGOGUE.—1. Meaning and History.—Like its original *synagōgē* (literally a gathering, assembly—for its use in LXX see CONGREGATION), 'synagogue' is used in both rabbinic literature and NT in a double signification: (1) in the sense of a community organized for religious purposes, as Ac 6[9] 9[2] (cf Rev 2[9] 3[9]; *Aboth* 4[11], *Yoma* 7[1]); and (2) to denote the building in which the community met for worship (Mt 4[23] etc.; *Meg.* 3[1]). Its Hebrew equivalent is *kᵉneseth*, and in the latter sense, also *bêth kᵉneseth* ('house of assembly'). As a place of worship, the synagogue is named *bêth tᵉphillāh* (adopted from Is 56[7]), *proseuchē* (Ac 16[13], 'place of prayer' RSV). In rabbinical literature *bêth hammidhrāsh*, 'house of study' is used (*Ber.* 4[2], *Demai* 7[5]; cf Sir 51[23]).

The origin of the synagogue as a characteristic institution of Judaism is hidden in obscurity. Most probably it took its rise in the conditions that followed the dispersal of the Jewish people after the destruction of the first Temple in 586 B.C. Hitherto worship had practically meant sacrifice, but sacrifice was impossible

outside the Temple (cf Dt 12) and particularly in foreign lands (cf Hos 3^4 9^{3f}). There was still left, however, the living word of the prophet. From olden times it was customary to visit the man of God on Sabbaths and new moons and in times of stress for intercession and for counsel (2 K 4^{23}). Such visits to the priest-prophet Ezekiel by the elders of the captivity in Babylonia came to play a special rôle (Ezk 8^1 20^{1-3}). Some of his reflexions on the ways of God with His people were delivered at such gatherings. To similar gatherings in Palestine and in other lands the prophets addressed themselves (*e.g.* Zec 6–8, Is 58, Lv 26, Dt 28, etc.).

In Egypt, at Elephantine (before 526 B.C. and continuing till its destruction in 407 B.C.), a temple with sacrificial worship was maintained. During Maccabaean times, a rival sanctuary to that of Jerusalem was set up by Onias IV., in 160 B.C. These temples were in defiance of the Deuteronomic law which forbids sacrificial worship outside of Jerusalem. No question of legitimacy arose in connexion with the gathering places for instruction in the word of God and for prayer, which acquired the Greek name *synagogue*.

Archaeological discoveries have brought to light a record of the foundation of a synagogue at Alexandria in 308 B.C. and numerous inscriptions of the same sort from the following century (N. Bentwich, *Hellenism*, pp. 31 f). In every Jewish settlement of the expanding diaspora synagogues sprang up as rallying points of the Jewish people. In Palestine itself, due to the quickening of spiritual life in consequence of the reformation of Ezra–Nehemiah, religious assemblies outside of the rebuilt Temple increased. Psalm 74^8 suggests that religious meeting places had assumed a fixed character in pre-Maccabaean or probably in the Greek or even in the late Persian period. Around Christian times they were found in all cities and towns. A synagogue existed within the precincts of the Temple itself (*Tamid* v. 1 ; *Yoma* vii. 1).

2. Function of the Synagogue.—The three Hebrew names of the synagogue express the threefold function which it served in Jewish life.

(*a*) As a 'house of assembly,' it served as a meeting place for communal and philanthropic purposes. Thus it unified the Jews of each community and linked them with those of other communities in the diaspora and in Palestine. While all synagogues of Jewry were united by their common purpose, each synagogue enjoyed fairly complete autonomy. During Temple times, the synagogue functioned in an auxiliary capacity. After the fall of the Temple, it emerged as the sole agency for the preservation of Judaism.

(*b*) It is as a 'house of prayer' that the synagogue ultimately replaced the Temple. Rabbinic tradition refers the beginnings of synagogue worship to the 'Men of the Great Synagogue' (*Ber.* 33a). The reference to this unknown body (see below) points to the religious leadership during the Persian period, when Judaism came into contact with the Parsi religion, and when it acquired certain new elements (*e.g.* eschatology, angelology, etc.). Among them we note the recitation of prayers at sunrise. The Talmud reports that 'the pious (*ḥᵃsîdhîm*) used to complete reciting the *Shemaʿ* at sunrise' (Jer. *Ber.* ii. 1 ; Bab. *Ber.* 9b). That it was recited also in the evening is suggested by Is 45^7 and Ps 72^5. The usage may have been prompted by the Parsi practice of hailing the sun at its rising and setting, thus acknowledging Ahuramazda as creator (*Sacred Books of the East*, Pahlavi Texts, I. 156 ff ; K. Kohler, *Origins of the Synagogue and the Church*, 1929, ch. XII). The recitation of the Shemaʿ and the benediction *Yōṣēr* ('creator,' in the morning and a similar benediction in the evening, based on Is 45^7) aimed to emphasize the unity of God and to overcome the dualism suggested by the phenomena of light and darkness.

Among the followers of Ezra who carried forward the spirit of his reformation were the *scribes*. Drawn from both priestly and lay ranks, the scribes distinguished themselves not merely as scholars but also as men of devotion (Sir 39^{1-6}). Ben Sira exemplifies this type, combining mastery of sacred lore and tradition with worldly wisdom and proficiency in prayer. His influence on synagogue worship is marked.

The *ḥᵃsîdhîm* were men of prayer par excellence. While they came to the fore as a militantly religious body at the outbreak of the Maccabaean revolt, their existence goes back to earlier times. Their spirit is reflected in numerous Psalms (*e.g.* 30, 50, 73, 149, etc.). Daniel typifies these saintly men, whose piety expressed itself in zeal for the Law and in the practice of thrice daily prayer (Dn 6^{11}). The Mishnah reports that they used to spend an hour in preparation for worship, and would not be interrupted in their devotions even if greeted by a king or if a snake coiled itself at their heels (*Ber.* v. 1). They were valued as leaders of worship, especially in times of distress and on fast days (*Taʿanith* ii. 2, iii. 8).

Synagogue Worship.—Two stages may be noted in the development of synagogue worship. During Temple times it supplemented the sacrificial ritual. 1 Ch 23^{30} refers to the prayer services of the Levites, morning and evening (cf Ps 55^{18} (17) 92^3 (2)). As part of the democratization of the Temple service itself, the daily burnt offerings were supplied at the expense of the entire people and not of any private person or high priest. The ordinance (Nu 28^2) was understood by the Pharisees to require the presence of all the people at these sacrifices. As this was impossible, it was instituted that the country be divided into twenty-four sections, corresponding to the number of the priestly and Levitical divisions (1 Ch 23^{6-24} 24^{4-18} 25^{31}), and that a committee of each section (*maʿᵃmādh*) should go up to Jerusalem to stand, by the rotating course (cf Lk 1^8) of priests for one week in each half year, as representatives of all Israel during the sacrificial offerings. In turn, their brethren at home assembled in the synagogues of their respective towns and read verses from the first chapter of Genesis pertaining to the day of the week, and prayed for the various needs of the people (*Taʿanith* iv. 2 f, *Megillath Taʿanith* i).

An outline of the morning liturgy at the synagogue of the Temple is reported in *Tamid* v. 1, vii. 2. Following the preparations for the morning burnt offering, the priests would repair to the Chamber of Hewn Stones, which served as the Temple synagogue, for prayer. The liturgy began with a call to worship, modelled after the call of the Levites in the assembly of Ezra-Nehemiah (Neh 9^5). Then followed the recitation of the Decalogue, the three sections of the *Shemaʿ* (Dt 6^{4-9} 11^{13-21}, Nu 15^{37-41} ; cf Nash Papyrus), and three benedictions ; an affirmation of the faith, a petition for the acceptance of the worship, and a prayer for peace. After the prostrations, the high priest and his associates took their stations at the steps of the porch and pronounced the Aaronic benediction (Nu 6^{24-27}), without a pause as a unit. Outside the Temple, in the synagogues, it was pronounced as three blessings. In the Temple the Tetragrammaton (YHWH) was pronounced, but in the synagogues the substitute Adonai (Lord) was spoken. At the end of the offering, the Levites sang the Psalm of the day. (For a list, see end of Mishnah *Tamid*.)

With the destruction of the Temple, the worship at the synagogue entered at the second phase of its development. Whatever could be salvaged from the Temple ritual was carried into the synagogue. Worship now came to mean not sacrificial ritual but prayer, recited three times daily, corresponding to the times of the offerings at the Temple : *shaḥᵃrîth* (morning), *minḥāh* ('meal offering' corresponding to sacrifice at dusk), and *maʿᵃrîbh* ('evening,' which had no exact equivalent in the Temple ritual, but was artificially connected with the time of burning the remnants of the sacrificial animals at the altar fire) ; cf Ps 55^{17}. An additional service of prayer (*mûsāph*) was provided for the festival days when additional sacrifices were offered at the Temple (Nu 28–29). On the Day of Atonement a fifth service was added to correspond to the closing of the gates (*nᵉʿîlōh*).

Around the end of the 1st cent., Rabban Gamaliel II., as head of the reconstituted Sanhedrin at Jamnia, authorized a certain Simeon of Phecola to arrange a liturgy

of prayer to replace the defunct sacrificial service. From the first stage of synagogue worship, the Shema' and its benedictions were carried into the new liturgy. The addition consisted of the *Eighteen Benedictions* (Shemoneh Esreh). Simeon did not create them anew, but only arranged the existing traditions of prayer and established their sequence. These short paragraphs go back to the Prophets, Psalms, Sirach, etc. Their number is said to correspond to the eighteen times that the name of God appears in Ps 29, and, according to another view in the Shema'. They were also linked with the prayer of Hannah in 1 S 2^{1-10} (cf Lk 1^{46-55}). The first three praise God as the possessor of heaven and earth, whose might sustains the living and revives the dead, and who is holy and awe-inspiring, beside whom there is no other God. The second section consists of twelve (subsequently expanded to thirteen) petitions, six personal and six national. The personal pray for understanding, repentance, forgiveness, redemption, healing and blessing the year with plenty. The national petitions ask for the ingathering of the dispersed, restoration of the theocracy, punishment of the apostates and destruction of the dominion of arrogance, the well-being of the righteous and the proselytes, the rebuilding of Jerusalem and the advent of the Davidic Messiah. The intermediary group ends with a petition for the acceptance of these prayers. For those who were prevented from reciting the Eighteen Benedictions, the intermediary group was subsequently contracted into one short prayer. The three closing benedictions ask for Divine favour, express thanks for God's goodness, and pray for peace. The whole is introduced with Ps 51^{15}. On the Sabbath and festivals the intermediary group is replaced with a benediction for the day, thus reducing the eighteen to seven. Within the framework of these benedictions room was left for variations of expression, but in course of time they became fixed. Nonetheless, different versions of the Eighteen Benedictions have come down from Palestine, Babylonia, Yemen and elsewhere. (See G. Dalman, *Die Worte Jesu*, i, 1898, pp. 299–304; L. Finkelstein, 'Development of the Amida,' *JQR*, xvi, 1925, pp. 130–170; A. Marmorstein, 'The Oldest Form of the Eighteen Benedictions,' *JQR*, xxxiv, 1943, pp. 137–159). Recited standing, the Eighteen Benedictions are known also as the *Amidah*. Such importance was attached to this composition that it is referred to as *T^ephillāh* (prayer) par excellence.

(*c*) As a 'house of study' the synagogue served as the fountain-spring of religious knowledge. While children were taught in special schools (*bêth sēpher* and *bêth 'ûlpānâ*), the synagogue represented the popular home of adult instruction in Torah. Instruction, as we noted, formed the original object of synagogue assemblies. The procedure at the great assembly of Ezra-Nehemiah set the pattern of these meetings: 'and they read from the book, from the law of God, clearly [or with interpretation], and they gave the sense, so that the people understood the reading' (Neh 8^{8}). Philo describes the 'prayer houses' in the cities as places of instruction in morality, piety, and holiness (*Vita Mos.* ii. 168). The congregation listened in rapt attention to the teaching put forth by 'one most experienced' (*De Sept.* ii. 282 = *Spec. Leg.* ii. 62; see *Yalkut Shimeoni, Vayyākhel*). Josephus refers this phase of synagogue to Moses himself (*c. Ap.* ii. 17 [173 ff]). Similarly James declared, 'For from early generations Moses has had in every city those who preach him, for he is read every Sabbath in the synagogue' (Ac 15^{21}).

3. Scripture Reading.—Synagogue worship included a lesson from the Law. The five books were divided into 154 (or more) Sabbath pericopes or sections, so that the whole Pentateuch was read through in three years (or 3½ years, half of a Sabbatic period). In Babylonia an annual cycle of Torah reading was adopted, a custom which spread to all parts of the Diaspora. The custom of calling up seven readers in succession—a priest, a Levite, and five others—may be as old as the 1st cent. After the Law came, at the Sabbath morning service only, a lesson from the Prophets, read by one person and left to his choice. It was the *haphtarah*, as the prophetic lesson was termed, that Jesus read in the synagogue of Nazareth (Lk 4^{16-20}). In course of time the haphtarahs were fixed. 'The Hagiographa, except Esther, were not at this period read at divine service. Even the Psalms had no place in the usual service' (Dalman).

In order that the common people might follow the lessons with intelligence, these were translated into Aramaic, the vernacular of Palestine, by an interpreter (*m^ethûrg^emān*—our 'dragoman' is from the same root). The unique position of the Law in the estimation of the time is shown by the fact that the Pentateuch lessons had to be translated a verse at a time, while the Prophets might be rendered three verses at a time. Reader and interpreter stood while at the reading desk.

At this point in the service, on the principal occasions of worship, a sermon was introduced. The preacher sat while giving his exposition (Lk 4^{20}), which is often described in NT as 'teaching' (Mt 4^{23}, Mk 1^{21} 6^{2} etc.). In the synagogue there was full 'liberty of prophesying.' Any member of the community was free to exercise his gift. When a likely stranger was present, he was invited by the ruler of the synagogue to address the congregation (Ac 13^{15}). The service was closed by a priest pronouncing *the priestly benediction* (Nu 6^{24-26}); if no priest was present, it is said that a layman gave the blessing in the form of a prayer.

On some occasions, at least, it was usual to ask the alms of the congregation (Mt 6^{2}) on behalf of the poor. The full service, as sketched above, was confined to the principal service of the week, which was held on the forenoon of the Sabbath. At the other services, such as those held daily in the larger towns, where ten 'men of leisure' were available to form the minimum legal congregation, and at the Monday and Thursday services, some of these items were omitted.

4. The synagogue building and its furniture.—Remains, more or less extensive, of Jewish synagogues still survive from the second and third, more doubtfully from the first, centuries of our era, chiefly in Galilee. (See F. L. Sukenik, *Ancient Synagogues in Palestine and Greece*, Schweich Lectures, London, 1934; H. G. May, 'Synagogues in Palestine,' *Biblical Archaeologist* vii, 1944, pp. 1–20; C. H. Kraeling, 'The Earliest Synagogue Architecture,' *Bulletin of the American Schools of Oriental Research*, 59, 1934, pp. 18–20). In plan and details of ornamentation these Galilaean synagogues display a general similarity. The buildings are rectangular in shape, and divided into three or five aisles by two or three rows of pillars. The entrance is almost always in the south front, and often consists of a large main, and two smaller side, entrances. The most elaborate was the synagogue of Capernaum, where, as elsewhere, traces were found of galleries running round three sides of the centre aisle. These were probably assigned to the women (for a similar arrangement in Herod's Temple, see TEMPLE, **11** (*b*)), although the question of the separation of the sexes in NT times is one on which the best authorities disagree.

As regards the furniture of the synagogue, the most important item was the chest or cupboard (*tēbhāh*, the 'ark'), in which the sacred rolls of the Law and the Prophets were kept. The synagogues of NT times were also doubtless provided with a raised platform (*bîmāh*), on which stood the reading-desk from which the Scriptures were read. The larger portion of the area was occupied by benches for the congregation, the worshippers facing southwards, in Galilee at least, towards the holy city. A few special seats in front of the *bîmāh*, and facing the congregation, were occupied by the heads of the community. These are the 'chief seats in the synagogues' coveted by the Pharisees (Mt 23^{6}). In front of the 'ark' a lamp burned day and night. [The excavations in Palestine and neighbouring lands have yielded evidence of a lost pictorial art of the ancient synagogue. The most notable group of

Biblical frescoes was unearthed at Dura-Europos, built in A.D. 244. See C. H. Kraeling, *The Synagogue*, 1956.]

5. The officials of the Synagogue.—The general management of the synagogue of a Jewish town, where it served also as a court of justice and—at least in the smaller towns and villages—as a school, was in the hands of the elders of the community. It had no special priest or '**minister,**' as will appear presently. The leader of the service (*Sh^{e}liaḥ ṣibbûr*, 'representative of the congregation') held no official position. He was selected because of his religious character and familiarity with the ritual. A religious quorum consisted of ten males (*Meg.* 4^3; cf Ru 4^2; see PHARISEES). It was usual, however, to appoint an official called '**the ruler of the synagogue**' (Lk 8^{41} etc.) to whom the authorities of the community committed the care of the building as well as the more important duty of seeing that everything connected with the public services was done 'decently and in order.' Hence the indignation of the ruler of Lk 13^{14} at the supposed breach of the decorum of worship related in the preceding verses (vv.$^{10-13}$). It lay with the ruler also to select the readers for the day, and to determine the order in which they were to be called up to the reading-desk. Occasionally, it would seem, a synagogue might have two or more rulers, as at Pisidian Antioch (Ac 13^{15}).

The only other permanent official was the *ḥazzān* or *shammāsh*, '**the attendant**' of Lk 4^{20} RV and RSV (AV 'minister' in the same, but now obsolete, sense; cf Ac 13^5). The duties of the synagogue 'officer' were somewhat varied. He was responsible for the cleaning and lighting of the building; and during service it was his special duty to convey the sacred rolls from the ark to the readers at the desk, and to restore them when the reading was over, as recorded in Lk 4$^{17, 20}$. To him fell also the duty of scourging criminals condemned by the court (Mt 10^{17} 23^{34} etc.), but not, as is usually represented, the teaching of the school children (see EDUCATION, also art. 'Education' in *DB* i. 650a).

6. The influence of the Synagogue.—This article would be incomplete without a reference, however brief, to the influence of the synagogue and its worship not only upon the Jews themselves, but upon the world of heathenism. As to the latter, the synagogue played a conspicuous part in the *praeparatio evangelica*. From the outworn creeds of paganism many earnest souls turned to the synagogue and its teaching for the satisfaction of their highest needs. The synagogue of 'the Dispersion' (Jn 7^{35}, Ja 1^1, 1 P 1^1, all RSV) became in consequence the seed-plots of Christianity, as every student of the Book of Acts is aware.

The work which the synagogue did for Judaism itself is best seen in the ease with which the violent breach with the past, involved in the destruction of the Temple in A.D. 70 and the cessation of the sacrificial worship, was healed. The highest religious life of Judaism had already transferred its channels from the grosser and more material forms of the Temple to the spiritual worship of the synagogue.

Nor must a reference be wanting to the fact that the synagogue, and not the Temple, supplied the mould and model for the worship of the Christian Church.

7. The Great Synagogue.—In late Jewish tradition Ezra is alleged to have been the founder and first president of a college of learned scribes, which is supposed to have existed in Jerusalem until the early part of the Greek period (*c* 300 B.C.). To 'the men of the Great Synagogue,' or rather 'of the Great Assembly,' were ascribed the composition of some of the later OT books, the close of the Canon, and a general care for the development of religion under the Law. Recent writers, however, have in the main accepted the results of Kuenen's careful investigation in his *Gesammelte Abhandlungen* (German translation, 125–160), and now regard the Great Synagogue as unhistorical, the tradition of its existence having arisen from a distorted view of the nature and purpose of the great popular assembly of which we read in Neh 8–10. A. R. S. K.—S. S. C.

SYNOPTICS, SYNOPTISTS.—See GOSPELS, 3.

SYNTYCHE.—A Christian, perhaps a deaconess, at Philippi (Ph 4^2); see EUODIA. A. J. M.

SYNZYGUS (literally 'yoke-fellow').—This is taken by some as a proper name in Ph 4^3 ('Synzygus truly so called'), but it is nowhere else found as such (see RSV 'true yokefellow'). It is more probably a way of describing the leader of the church at Philippi. Lightfoot (*Com., in loc.*) suggests Epaphroditus; Ramsay (*St. Paul*, p. 358), Luke; others, Barnabas or Silas or Timothy. An old tradition of the 2nd cent. (Lightfoot, *ib.*) makes the '**yoke-fellow**' to be the Apostle's wife—a most unlikely guess; Renan supposed that Lydia is meant, and that she had become his wife—an equally improbable conjecture. See 1 Co 7^8.

A. J. M.—F. C. G.

SYRACUSE, on the E. coast of Sicily, was the principal city in the island. It was originally a Greek colony of ancient date, which was powerful enough to defeat the famous Athenian Sicilian expedition (415–412 B.C.). Its kings were often men of distinction, even in literature, of which they were noted patrons. The city had a varied career, being sometimes a kingdom, sometimes a democracy. In 241 B.C. the Romans took the western half of Sicily from the Carthaginians, but remained in alliance with the kings of Syracuse. The last king of Syracuse intrigued with the Carthaginians; the city was besieged and captured by Marcellus in 212, and the whole island was henceforth under a praetor, who had two quaestors, one residing at Lilybaeum in the W., the other at Syracuse. The city continued prosperous till about the end of the 2nd cent. B.C. After that date it declined in importance, though it remained the capital of the eastern half of the island. In NT times a large number of the inhabitants were Roman citizens.

St. Paul's ship lay at anchor in the harbour for three days, when he was on his way from Malta to Rome (Ac 28^{12}). He did not preach there. Christian memorials at Syracuse are not specially early. A. So.

SYRIA, SYRIANS.—See ARAM, ARAMAEANS.

SYRIA-MAACAH, 1 Ch 19^6 (AV).—See MAACAH.

SYRIAC VERSIONS.—See TEXT (OT, **15** (6), and NT, **11** ff), and GREEK VERSIONS OF OT, **11** (*c*).

SYROPHOENICIAN.—This is the designation of a 'Greek' (or Gentile) woman whose demoniac daughter Jesus healed when near Tyre (Mk 7^{26}). She was undoubtedly Greek-speaking, but was descended from the old Phoenicians of Syria (‖ Mt 15^{22} has 'Canaanite'), or lived in that part of the new Roman province of Syria which had once been known as Phoenicia.

A. J. M.—F. C. G.

SYRTIS (Ac 27^{17}).—The Syrtes, Major and Minor, are situated on the N. coast of Africa, in the wide bay between the headlands of Tunis and Barca. They consist of sandbanks occupying the shores of the Gulf of Sidra on the coast of Tripoli, and that of Gabes on the coast of Tunis or Carthage. They have been considered a source of danger to mariners from very early times, not only from the shifting of the sands themselves, but owing to the cross currents of the adjoining waters.

T

TAANACH (Jos 12^{21}, 1 K 4^{12}, 1 Ch 7^{29}).—One of the royal Canaanite cities, mentioned in OT always along with **Megiddo.** Though in the territory of Issachar, it belonged to Manasseh; the native Canaanites were, however, not driven out (Jos 17^{11-13}, Jg 1^{27}). It was allotted to the Kohathite Levites (Jos 21^{25} [AV **Tanach**]). It was one of the four fortress cities on the 'border of Manasseh' (1 Ch 7^{29}). The fight of Deborah and Barak with the Canaanites is described (Jg 5^{19}) as 'at Taanach by the waters of Megiddo.' The 'waters of Megiddo' are to be identified with the 'torrent Kishon' which flows down the *Wâdī el-Lejjûn*, just S. of *Tell el-Mutesellim* (Megiddo), about 4 miles NW. of *Tell Ta'annak* (the modern name of Taanach). It is not clear why Taanach and the waters of Megiddo are linked in the poem, but it has been suggested that at the time of the Song of Deborah, Megiddo was in ruins, and that Taanach was therefore the nearest large city (implying a date around 1100 B.C. for the battle and the poem; cf Albright, *BASOR*, No. 62 [1936], 26–31). The tell was excavated by Professor Sellin of Vienna. Many remains of Canaanite and Israelite civilization were found, and also a considerable number of clay tablets with cuneiform inscriptions similar to those discovered at Tell el-Amarna in Egypt. See Sellin in *Mem. Vienna Acad.*, 1 (1904), lii (1905). E. W. G. M.—D. N. F.

TAANATH-SHILOH.—A town on the NE. boundary of Ephraim, Jos 16^{6}. It is probably modern *Kh. Ta'nah el-Fôqā*, about 7 miles ESE. of *Nâblus*.

TABAOTH, 1 Es 5^{29} (AV, RV).—See TABBAOTH.

TABBAOTH.—A family of Nethinim (q.v.) who returned with Zerubbabel, Ezr 2^{43}, Neh 7^{46}, 1 Es 5^{29} (AV, RV **Tabaoth**).

TABBATH.—A place mentioned in Jg 7^{22}; possibly modern *Râs Abū Ṭâbât*.

TABEAL, Is 7^{6} (AV).—See TABEEL, **1.**

TABEEL.—1. The father of the rival to Ahaz put forward by Rezin (q.v.) and Pekah, Is 7^{6} (AV **Tabeal**). **2.** A Persian official, Ezr 4^{7}, 1 Es 2^{16} (AV, RV **Tabellius**).

TABELLIUS, 1 Es 2^{16} (AV, RV).—See TABEEL, **2.**

TABER.—Only in Nah 2^{7} AV and RV 'her handmaids mourn as with the voice of doves, tabering upon (ARV, RSV 'beating') their breasts.' Beating the breast was a familiar Oriental custom in mourning (cf Is 32^{12}). The Hebrew word here used means literally 'drumming' (cf Ps 68^{25}, translated 'playing,' its only other occurrence). The English word 'taber' means a small drum, usually accompanying a pipe, both instruments being played by the same performer. Other forms are 'tabor,' 'tabour,' and 'tambour'; and diminutive forms are **'tabret'** and **'tambourine.'**

TABERAH.—An unidentified stopping-place in the wilderness, Nu 11^{3}, Dt 9^{22}.

TABERNACLE.—1. The word is used in EV to translate three etymologically unconnected Hebrew terms: (*a*) *sukkāh* (and cognates)='booth,' as in Feast of Tabernacles (see next article), usually rendered **'Booths'** in RVm and RSV (except 2 Ch 8^{13}); (*b*) *'ōhel* ='tent' (so RV, RSV), especially in the phrase **'tent of meeting'**; (*c*) *mishkān*='dwelling place,' or 'habitation,' the place where Yahweh comes to dwell. It is with the last of these that this article deals. The rendering of the word by the Greek *skēnē* is appropriate by reason of its meaning and sound. This is less true of the Latin *tabernaculum*, anglicé 'tabernacle.' But since the Hebrew is in the main a highly technical cultic term, the English 'tabernacle,' which apart from its Biblical usage has no other content of meaning, may rightly be retained. The meaning of the Hebrew term, 'place of dwelling,' will determine its significance. It will be seen that, while there is a continuity of thought between the Tent (where first in the desert and later during the period of the monarchy Yahweh came to meet His people) and the Tabernacle, the latter is the term especially associated with the Jerusalem tradition. In P it virtually replaces the Tent. Thus it prepares the way for the later Jewish concept of **Shekinah** and the NT *skēnoun* (Jn 1^{14}). In Ex 25 ff it is described as an elaborate portable sanctuary prepared according to Divine instructions as the place of worship for Israel, to be in the midst of the camp during the wilderness wanderings. This, however, is confined to the P tradition of the Pentateuch, characteristic of the exiled priests and their descendants, and is to be carefully distinguished from the simpler structure, the Tent, characteristic of the E tradition. The relation between these two sanctuaries will be considered in **9.**

2. The section of P devoted to the details of the fabric and furniture of the Tabernacle, and to the arrangements for its transport from station to station in the wilderness, fall into two groups, viz. (*a*) Ex 25–27, 30, 31, which are couched in the form of instructions from Y″ to Moses as to the erection of the Tabernacle and the making of its furniture according to the 'pattern' or model shown to the latter on the holy mount ($25^{9, 40}$); (*b*) Ex 35–40, which tell *inter alia* of the carrying out of these instructions. Some additional details, particularly as to the arrangements on the march, are given in Nu 3^{25ff} 4^{4ff} and 7^{1ff}.

In these and other OT passages the wilderness sanctuary is denoted by at least a dozen different designations (see the list in Hastings' *DB* iv, 655). The most frequently employed is that also borne, as we have seen, by the sacred tent of E, **'the tent of meeting'** (so RV and RSV throughout). That this is the more correct rendering of the original *'ōhel mō'ēdh*, as compared with AV's **'tabernacle of the congregation,'** is now universally acknowledged. The sense in which the Priestly writers, at least, understood the second term is evident from such passages as Ex 25^{22}, where, with reference to the mercy-seat (see **7** (*b*)), Y″ is represented as saying: 'there I will *meet with you* and . . . will speak with you' (cf Nu 7^{89}). This, however, does not exclude a possible early connexion of the name with that of the Babylonian 'mount of meeting' (Is 14^{13}, RSV 'assembly,' AV and RV 'congregation'), the *mō'ēdh* or assembly of the gods.

3. In order to do justice to the Priestly writers in their attempts to give literary shape to their ideas of Divine worship, it must be remembered that they were following in the footsteps of Ezekiel (chs. 40–48), whose conception of a sanctuary is that of a dwelling-place of the Deity (see Ezk 37^{27}). Now the attribute of Israel's God, which for these theologians of the Exile overshadowed all others, was His ineffable and almost unapproachable holiness, and the problem for Ezekiel and his priestly successors was how man in his creaturely weakness and sinfulness could with safety approach a perfectly holy God. The solution is found in the restored Temple in the one case (Ezk 40 ff), and in the Tabernacle in the other, together with the elaborate sacrificial and propitiatory system of which each is the centre. In the Tabernacle, in particular, we have an ideal of a Divine sanctuary, every detail of which is intended to symbolize the unity, majesty, and above all the holiness of Y″, and to provide an earthly habitation

in which a holy God may again dwell in the midst of a holy people. 'Let them make me a sanctuary, *that I may dwell in their midst*' (Ex 25[8]).

4. Taking this general idea of the Tabernacle with us, and leaving a fuller discussion of its religious significance and symbolism to a later section (**8**), let us proceed to study the arrangement and component parts of P's ideal sanctuary. Since the tents of the Hebrew tribes, those of the priests and Levites, and the three divisions of the sanctuary—court, holy place, and the holy of holies—represent ascending degrees of holiness in the scheme of the Priestly writer, the appropriate order of study will be from without inwards, from the perimeter of the sanctuary to its centre.

(*a*) We begin, therefore, with 'the **court of the tabernacle**' (Ex 27[9]). This is described as a rectangular enclosure in the centre of the camp, measuring 100 cubits from east to west and half that amount from south to north. If the shorter cubit of, say, 18 inches (for convenience of reckoning) be taken as the unit of measurement, this represents an area of approximately 50 yards by 25, a ratio of 2 : 1. The entrance, which is on the eastern side, is closed by a **screen** (27[16] RV and RSV) of embroidered work in colours. The rest of the area is screened off by plain white **curtains** (EV '**hangings**') of 'fine twined linen' 5 cubits in height, suspended, like the screen, at equal intervals of 5 cubits from **pillars** standing in sockets (AV, RV) or **bases** (RSV) of bronze. Since the perimeter of the court measured 300 cubits, 60 pillars in all were required for the curtains and the screen, and are reckoned in the text in groups of tens and twenties, 20 for each long side, and 10 for each short side. The pillars are evidently intended to be kept upright by means of **cords** or stays fastened to **pins** or pegs of bronze stuck in the ground.

(*b*) In the centre of the court is placed the **altar of burnt-offering** (27[1-8]), called also '**the brazen altar**' and '**the altar**' *par excellence*. When one considers the purpose it was intended to serve, one is surprised to find this altar of burnt-offering consisting of a hollow chest of acacia wood (so RV and RSV throughout, for AV 'shittim')—the only wood employed in the construction of the Tabernacle—5 cubits in length and breadth, and 3 in height, overlaid with what must, for reason of transport, have been a comparatively thin sheathing of bronze. From the four corners spring the four **horns of the altar**, 'of one piece' with it, while half-way up the side there was fitted a projecting **ledge**, from which depended a network or **grating** (AV '**grate**') of bronze (27[4] 38[4] RV and RSV). The meshes of the latter must have been sufficiently wide to permit of the sacrificial blood being dashed against the sides and base of the altar (cf the sketch in Hastings' *DB* iv, 658). Like most of the other articles of the Tabernacle furniture, the altar was provided with rings and poles for convenience of transport.

(*c*) In proximity to the altar must be placed the bronze **laver** (30[17-21]), containing water for the ablutions of the priests. According to 38[8], it was made from the 'mirrors of the ministering women who ministered at the door of the tent of meeting'—a curious anachronism.

5. (*a*) It has already been emphasized that the dominant conception of the Tabernacle in these chapters is that of a portable sanctuary, which is to serve as the earthly dwelling-place of the heavenly King. In harmony therewith we find *the essential part of the fabric of the Tabernacle, to which every other structural detail is subsidiary*, described at the outset by the characteristic designation '**dwelling.**' 'You shall make the dwelling (EV tabernacle) with ten curtains' (26[1]). It is a fundamental mistake to regard the wooden part of the Tabernacle as of the essence of the structure, and to begin the study of the whole therefrom, as is still being done.

The ten **curtains** of the dwelling (*mishkān*), each 28 cubits by 4, are to be of the finest linen, adorned with inwoven tapestry figures of cherubim in violet, purple, and scarlet (see COLOURS), 'skilfully worked' (26[1] RSV). They are to be sewed together to form two sets of five, which again are to be 'coupled together' by means of **clasps** (RV and RSV; AV '**taches**') and **loops**, so as to form one large surface 40 (10×4) cubits by 28 (7×4), 'for the dwelling shall be one' (26[6]). Together the curtains are designed to form the earthly, and, with the aid of the attendant cherubim, to symbolize the heavenly, dwelling-place of the God of Israel.

(*b*) The next section of the Divine directions (26[7-14]) provides for the thorough protection of these delicate artistic curtains by means of three separate coverings. The first consists of eleven curtains of goats' hair 'for a **tent** over the dwelling,' and therefore of somewhat larger dimensions than the curtains of the latter, namely 30 cubits by 4, covering, when joined together, a surface of 44 cubits by 30. The two remaining coverings are to be made respectively of rams' skins and goatskins (RSV; RV 'sealskins'; Hebrew *taḥash*) dyed red (v.[14]).

(*c*) At this point one would have expected to hear of the provision of a number of poles and stays by means of which the dwelling might be pitched like an ordinary tent. But the author of Ex 26[1-14] does not apply the term 'tent' to the curtains of the dwelling, but, as we have seen, to those of the goats' hair covering, and instead of poles and stays we find a different and altogether unexpected arrangement in vv.[15-30]. Unfortunately the crucial passage, vv.[15-17], contains several obscure technical terms, with regard to which the true exegetical tradition has probably been lost. The explanation usually given, which finds in the word rendered 'boards' huge wooden beams of impossible dimensions, has been shown in a former study to be exegetically and intrinsically inadmissible; see article 'Tabernacle' in Hastings' *DB* iv, pp. 563[b] ff. To **7** (*b*) of that article, with which Haupt's note on 1 K 7[28] in *SBOT* should be compared, the student is referred for the grounds on which the following translation of the leading passage is based. 'And thou shalt make the frames for the dwelling of acacia wood, two uprights (EV 'tenons') for each frame joined together by cross rails.' The result is, briefly, the substitution of 48 light **open frames** (see diagrams, *op. cit.*), each 10 cubits in height by 1½ in width, for the traditional wooden beams of these dimensions, each, according to the usual theory, I cubit thick, equivalent to a weight of from 15 to 20 hundredweights!

The open frames—after being overlaid with gold according to our present but scarcely original text (v.[29])—are to be 'reared up,' side by side, along the south, west, and north sides of a rectangular enclosure measuring 30 cubits by 10 (3 : 1), the east side or front being left open. Twenty frames go to form each long side of the enclosure (1½×20=30 cubits); the western end requires only six frames (1½×6=9 cubits); the remaining cubit of the total width is made up by the thickness of the frames and bars of the two long sides. The two remaining frames are placed at the two western corners, where, so far as can be gathered from the obscure text of v.[24], the framework is doubled for greater security. The lower ends of the two uprights of each frame are inserted into solid silver **bases**, which thus form a continuous foundation and give steadiness to the structure. This end is further attained by an arrangement of **bars** which together form three parallel sets running along all three sides, binding the whole framework together and giving it the necessary rigidity.

Over this rigid framework, and across the intervening space, are laid the tapestry curtains to form the **dwelling**, the symbolic figures of the cherubim now fully displayed on the sides as well as on the roof. Above these come the first of the protective coverings above described, the goats' hair curtains of the '**tent**,' as distinguished from the 'dwelling.' In virtue of their greater size, they overlap the curtains of the latter, their breadth of 30 cubits exactly sufficing for the height and width of the dwelling (10+10+10 cubits). As they thus reached to the base of the two long sides of the Tabernacle, they were probably fastened by pegs to the ground. At the eastern end the outermost curtain was probably folded in two so as to hang down for the space of two cubits

over the entrance (26[9]). In what manner the two remaining coverings are to be laid is not specified.

This solution of the difficulties connected with the construction of the Tabernacle, first offered in *DB* iv, has been generally adopted; cf A. H. McNeile (WC), W. H. Bennett (CentB), and more recently F. M. Cross (*BA* x [1947], 46–68).

(*d*) The fabric of the Tabernacle, as described up to this point in Ex 26[1–30], has been found to consist of three parts, carefully distinguished from each other. These are (1) the artistic linen curtains of the **dwelling,** the really essential part; (2) their supporting **framework,** the two together enclosing, except at the still open eastern front, a space 30 cubits long and 10 cubits wide from curtain to curtain, and 10 cubits in height; and (3) the protecting **tent** (so called) of goats' hair, with the two subsidiary coverings.

The next step is to provide for the division of the dwelling into two parts, in the proportion of 2 to 1, by means of a beautiful portière, termed the **veil** (vv.[31ff]), of the same material and artistic workmanship as the curtains of the dwelling. The veil is to be suspended from four gilded pillars, 20 cubits from the entrance and 10 from the western end of the structure. The larger of the two divisions of the dwelling is named the **holy place,** the smaller the **holy of holies,** or most holy place. From the measurements given above, it will be seen that the most holy place—the true presence-chamber of the Most High, to which the holy place forms the antechamber—has the form of a perfect cube, 10 cubits (about 15 feet) in length, breadth, and height, enclosed on all four sides and on the roof by the curtains and their cherubim.

(*e*) No provision has yet been made for closing the entrance to the Tabernacle. This is now done (v.[36f]) by means of a hanging, embroidered in colours—a less artistic fabric than the 'skilfully worked' tapestry—measuring 10 cubits by 10, and suspended from five pillars with bases of bronze. Its special designation, '**a screen** for the door of the Tent' (v.[36] RV and RSV), its inferior workmanship, and its bronze bases, all show that strangely enough it is not to be reckoned as a part of the dwelling, of which the woven fabric is tapestry, and the only metals silver and gold.

6. Coming now to the furniture of the dwelling, and proceeding as before from without inwards, we find the holy place provided with three articles of furniture: (*a*) the table of showbread, or, more precisely, presence-bread (25[23–30] 37[10–16]); (*b*) the so-called golden candlestick, in reality a seven-branched lampstand (25[31–40] 37[17–24]); (*c*) the altar of incense (30[1–7] 37[25–28]). Many of the details of the construction and ornamentation of these are obscure, and reference is here made, once for all, to the fuller discussion of these difficulties in the article already cited (*DB* iv, 662 ff).

(*a*) The **table of showbread,** or presence-table (Nu 4[7]), is a low table or wooden stand overlaid with pure gold, 1½ cubits in height. Its top measures 2 cubits by 1. The legs are connected by a narrow binding-rail, one hand-breadth wide, the 'frame' of Ex 25[25], to which are attached four golden rings to receive the staves by which the table is to be carried on the march. For the service of the table are provided the 'plates and dishes for incense, the flagons, and the bowls with which to pour libations' (25[29]), all of pure gold. Of these the golden '**plates**' (AV, RV '**dishes**') are the salvers on which the loaves of the presence-bread (see SHOWBREAD) were displayed; the '**dishes**' (AV, RV '**spoons**') are rather cups for frankincense (Lv 24[7]); the 'flagons' (AV 'covers') are larger, and the 'bowls' the smaller, vessels for the wine connected with this part of the ritual.

(*b*) The **golden candlestick** or lampstand is to be constructed of 'beaten work' (*repoussé*) of pure gold. Three pairs of arms branched off at different heights from the central shaft, and curved outwards and upwards until their extremities were on a level with the top of the shaft, the whole providing stands for seven golden lamps. Shaft and arms were alike adorned with ornamentation suggested by the flower of the almond tree (cf diagram in *DB* iv, 663). The golden lampstand stood on the south side of the holy place, facing the table of showbread on the north side. The '**tongs**' of 25[38] (RV) are really '**snuffers**' (so RSV; cf AV 37[23]) for dressing the wicks of the lamps, the burnt portions being placed in the '**snuff dishes.**' Both sets of articles were of gold.

(*c*) The passage containing the directions for the **altar of incense** (Ex 30[1–7]) forms part of a section (chs. 30, 31) which, there is reason to believe, is a later addition to the original contents of the Priests' Code. The altar is described as square in section, one cubit each way, and two cubits in height, with projecting horns. Like the rest of the furniture it was made of acacia wood overlaid with gold, with the usual provision of rings and staves. Its place is in front of the veil separating the holy from the most holy place. Incense of sweet spices is to be offered upon it night and morning (30[7ff]).

7. In the most holy place are placed two distinct yet connected sacred objects, the Ark and the propitiatory or mercy-seat (25[10–22] 37[1–9]). (*a*) P's characteristic name for the former is the '**ark of the testimony.**' The latter term is a synonym in P for the Decalogue (25[16]), which was written on 'the tables of testimony' (31[18]), deposited, according to an early tradition, within the Ark. The Ark itself occasionally receives the simple title of 'the testimony,' whence the Tabernacle as sheltering the Ark is named in P both 'the dwelling (EV 'tabernacle') of the testimony' (Ex 38[21] etc.) and 'the tent of the testimony' (Nu 9[15] etc.). The Ark of the Priests' Code is an oblong chest of acacia wood, 2½ cubits in length and 1½ in breadth and height (5×3×3 half-cubits), overlaid within and without with pure gold. The sides are decorated with an obscure form of ornamentation, the 'moulding' (AV, RV 'crown') of Ex 25[11] (so probably; cf RVm 'rim *or* moulding'). At the four corners (v.[12] AV; RV and RSV, less accurately, 'feet') the usual rings were attached to receive the bearing-poles. The precise point of attachment is uncertain, whether at the ends of the two long sides or of the two short sides. Since it would be more seemly that the throne of Y", presently to be described, should face in the direction of the march, it is more probable that the poles were meant to pass through rings attached to the short sides, but whether these were to be attached at the lowest point of the sides, or higher up, cannot be determined. That the Decalogue or 'testimony' was to find a place in the Ark (25[16]) has already been stated.

(*b*) Distinct from the Ark, but resting upon and of the same superficial dimensions as its top, viz. 2½ by 1½ cubits, we find a slab of solid gold to which is given the name *kappōreth*. The best English rendering is the **propitiatory** (vv.[17ff]), of which the current **mercy-seat,** adopted by Tyndale from Luther's rendering, is a not inappropriate paraphrase. From opposite ends of the propitiatory, and 'of one piece' with it (v.[19] RV and RSV), rose a pair of **cherubim** figures of beaten work of pure gold. The faces of the cherubim were bent downwards in the direction of the propitiatory, while the wings with which each was furnished met overhead, so as to cover the propitiatory (vv.[18–20]).

We have now penetrated to the innermost shrine of the priestly **sanctuary.** Its very position is significant. The surrounding court is made up of two squares, 50 cubits each way, placed side by side (see above). The eastern square, with its central altar, is the worshippers' place of meeting. The entrance to the Tabernacle proper lies along the edge of the western square, the exact centre of which is occupied by the most holy place. In the centre of the latter, again, at the point of intersection of the diagonals of the square, we may be sure, is the place intended for the Ark and the propitiatory. Here in the very centre of the camp is the earthly throne of Y". Here, 'from above the propitiatory, from between the cherubim,' the most holy of all earth's holy places, will God henceforth meet and commune with His servant, Moses (25[22]). But with Moses only; for even the **high priest** is permitted to enter the most holy place

but once a year, on the great Day of Atonement, when he comes to sprinkle the blood of the national sin-offering 'with his finger on the front of the mercy-seat' (Lv 16^{14}). The ordinary priests came only into the holy place, the lay worshipper only into 'the court of the dwelling.' In the course of the foregoing exposition, it will have been seen how these ascending degrees of sanctity are reflected in the materials employed in the construction of the court, holy place, most holy place, and propitiatory respectively. It is not without significance that the last named is the only article of solid gold in the whole sanctuary.

8. These observations lead naturally to a brief exposition of the religious symbolism which so evidently pervades every part of the wilderness sanctuary. Its position in the centre of the camp of the Hebrew tribes has already been more than once referred to. By this the Priestly writer would emphasize the central place which the rightly ordered worship of Israel's covenant God must occupy in the theocratic community of the future.

The most assured fruit of the discipline of the Babylonian Exile was the final triumph of monotheism. This triumph we find reflected in the presuppositions of the Priests' Code. One God, one sanctuary, is the idea implicit throughout. But not only is there no God but Yahweh; Yahweh, Israel's God, 'is one' (Dt 6^{4} RVm), and because He is one, His earthly 'dwelling' must be one (Ex 26^{6}; cf **5** (*a*)). The Tabernacle thus symbolizes both the oneness and the unity of Y″.

Nor is the perpetual striving after proportion and symmetry which characterizes all the measurements of the Tabernacle and its furniture without a deeper significance. By this means the author undoubtedly seeks to symbolize the perfection and harmony of the Divine character. Thus, to take but a single illustration, the perfect cube of the most holy place, of which 'the length and breadth and height,' like those of the New Jerusalem of the Apocalypse (21^{16}), 'are equal,' is clearly intended to symbolize the perfection of the Divine character, the harmony and equipoise of the Divine attributes.

Above all, however, the Tabernacle in its relation to the camp embodies and symbolizes the almost unapproachable holiness of God. This fundamental conception has been repeatedly emphasized in the foregoing sections, and need be re-stated in this connexion only for the sake of completeness. The symbolism of the Tabernacle is a subject in which pious imaginations in the past have run riot, but with regard to which one must endeavour to be faithful to the ideas in the mind of the Priestly author. The threefold division of the sanctuary, for example, into court, holy place, and holy of holies, may have originally symbolized the earth, heaven, and the heaven of heavens, but for the author of Ex 25 ff it was an essential part of the Temple tradition (cf TEMPLE, **7**). In this case, therefore, the division should rather be taken, as in **7** above, as a reflection of the three grades of the theocratic community, people, priests, and high priest.

9. We must return, in conclusion, to the question mooted in **2** as to the relation of the gorgeous sanctuary above described to the simple **'tent of meeting'** of the older Pentateuch sources. In other words, is P's Tabernacle historical? In the first place, there is no reason to question, but on the contrary every reason to accept, the data of the Elohistic source (E) regarding the Mosaic 'tent of meeting.' This earlier 'tabernacle' is first met with in Ex 33^{7-11}: 'Now Moses used to take the tent and to pitch it (the tenses are frequentative) outside the camp, far off from the camp . . . and everyone who sought the LORD would go out to the tent of meeting which was outside the camp.' To it, we are further informed, Moses was wont to retire to commune with Y″, who descended in the pillar of the cloud to talk with Moses at the door of the tent 'as a man speaks to his friend' (see also the references in Nu 11^{16-30} 12^{1ff} 14^{10}).

It is not possible to reconcile the picture of this simple tent, 'far off from the camp,' with Joshua as its single non-Levitical attendant (33^{11}), with that of the Tabernacle of the Priests' Code, situated in the centre of the camp, with its attendant army of priests and Levites. Moreover, neither tent nor Tabernacle is rightly intelligible except as the resting-place of the Ark, the symbol of Y″'s presence with His people. Now, the oldest of our extant historical sources have much to tell us of the fortunes of the Ark from the time that it formed the glory of the Temple at Shiloh until it entered its final resting-place in that of Solomon (see ARK). But nowhere is there the slightest reference to anything in the least resembling the Tabernacle of **4–8**. It is only in the Books of Chronicles, in certain of the Psalms, and in passages of the pre-exilic writings which have passed through the hands of late post-exilic editors that such references are found. An illuminating example occurs in 2 Ch 1^{3f}, compared with 1 K 3^{2ff}.

The description of the Tabernacle in Ex 25 ff presents obvious difficulties, *e.g.* the brazen altar (**4** (*b*)), the great mass of silver and gold and the high degree of artistic skill hardly to be expected from recently liberated slaves. Neither does the worship associated with it appear to be appropriate to conditions in the desert, or to be discernible during the early period of Israel's history. The Tabernacle here described belongs to the Priestly stratum in the Pentateuch and can hardly have received its present form until the Persian period. It would appear that the elaboration of the picture arose among the exiled priests. Yet though it is an elaboration, it is not an invention or an innovation. It is evident from Ps 74^{7}, which describes conditions existing soon after 586 B.C., that a tabernacle was part of the pre-exilic Temple. Other Psalms point to the same conclusion, *e.g.* Ps 46^{4}(Heb. 5) 78^{60} $132^{5,7}$ etc. A tabernacle appears to be associated with the time of David (2 S 7^{6}). Here it is referred to together with a tent, and it seems hardly likely that two such dwellings for the same God were part of the same religious tradition (the recognition of this seems to have been responsible for RSV: 'a tent for my dwelling'—which is not a natural rendering of the Hebrew). Now the term *mishkān* appears, with *'ōhel*, in the Ugaritic texts as dwellings for the gods (Aqhat II. v. 31 f; Keret III. iii. 19). So too does the word *ḳeresh*, 'frame supports' (**5** (*c*)) (Baal I. i. 4; II. iv. 24; III. i. 7). In the Pentateuch this is a word peculiar to P (elsewhere only Ezk 27^{6}, apparently of some structure on the deck of a ship). This suggests the possibility that the Tabernacle belonged to the pre-Israelite Jerusalem sanctuary and that it was associated by David—as were other features of the ancient Jerusalem cultus—with the desert tradition, and in particular with the Tent. The Tabernacle appears to be peculiar to the Jerusalem tradition as reflected in the Psalter, Ezekiel, and P. It replaces the Tent in the ultimate form of that tradition, P, where what is described is an elaborated form of an earlier tabernacle, destroyed by the Babylonians. Every detail serves to glorify Him who is holy, unapproachable, yet dwelling in the midst (Ex 25^{8}). This may be more of a portrait of the shrine in the Temple-to-be than a reproduction between this portrait and the pre-exilic shrine, and, beyond that, the portable shrine of the Mosaic period. This is suggested by the conjoining of Tent and Tabernacle in Ex 26. Just as there is a living continuity of the post-exilic age and the people of God in the desert, so, and most importantly, there is a living continuity in worship. The externals may be modified to meet the conditions of changed circumstances; the confidence that the Lord their God dwelt with them remained. As if to express this, the cognate verb *shākhan*='dwell,' is used in the P tradition exclusively of God's coming to dwell in the midst of His people. A. R. S. K.—A. S. H.

TABERNACLES, FEAST OF.—1. OT references.—In pre-exilic times there was an autumnal feast, at the end of the Hebrew year, called the **Feast of Ingathering.** It

was observed for seven days and it began on the night of the September full-moon (the Harvest Moon), Ex 23[16] 34[22]. In post-exilic times this feast became broken up owing to the change of calendar. Part of the feast, the strictly new-year element, gravitated to the 1st of the seventh month (Tishri); part to the 10th of Tishri and became the Day of Atonement, whilst the rest kept to the night of the Harvest Full-Moon and became the *Feast of Tabernacles*.

In Dt 16[13–15] its name is given as the Feast of Tabernacles or **Booths**, probably referring to the use of booths of intertwined branches used in the vineyards during the vintage. It still is to last seven days; it is to be observed, not at every local shrine as in the earlier days, but at the Central Sanctuary, and it is to be an occasion of rejoicing. The association of penitence with the End of the Year Feast has gravitated to the ten days of Penitence, culminating in the Day of Atonement. In the 'year of release' (the sabbatical year), the Law is to be publicly read (Dt 31[10–13]). The dedication of Solomon's Temple took place at the autumnal feast; in the account given in 1 K 8[66] the seven-day rule of Deuteronomic and earlier times is observed; but the parallel narrative of 2 Ch 7[8–10] reflects later custom and assumes that the eight-day rule of Leviticus was followed.

In Lv 23[34ff] and Nu 29[12–39] we find elaborate ordinances. The feast begins on 15th Tishri (September–October) and lasts for eight days, the first and the last being days of 'holy convocation,' presumably meaning that all are specially enjoined to be there. The people are to live in booths. A very large number of offerings is ordained; on each of the first seven days two rams and fourteen lambs, and a goat as a sin-offering; and successively on these days a diminishing number of bullocks, thirteen on the first day, twelve on the second, and so on till the seventh, when seven were to be offered. On the eighth day the special offerings were one bull, one ram, seven lambs, and a goat as a sin-offering. The feast is mentioned in Ezr 3[4], but nothing is said of the method of observance. The celebration in Neh 8[16] follows the eight-day rule of Leviticus, with the eighth day as a 'closing-assembly,' and it is expressly stated that such had not been the case since Joshua's days.

2. Character of the Feast.—It was the Jewish harvest-home, both in the pre-exilic and the post-exilic periods. All the year's produce of every kind had been gathered in, and now last of all there came the vintage. Like the other feasts, it commemorated an event in the rescue from Egypt and the wanderings through the desert, that great saga of Israelite history. It was an occasion for great joy and was the most important of all the festivals, until perhaps in the last days of the second Temple, when Passover as the festival of the coming of Messiah took on increased importance. In Zec 14[16] the future sign of Judah's triumph over all the world is that all nations shall come up yearly to keep this festival.

There has been a great deal of discussion on the observance of and the meaning of this Feast, particularly as it was observed in pre-exilic times. Many scholars maintain that there were elaborate ceremonies on the analogy of the Babylonian new-year feasts or of Canaanite annual festivals. The case for a close parallel between the pre-exilic Feast of Ingathering and the Babylonian Festival is to be found in *Myth and Ritual* (ed. S. H. Hooke), pp. 1–146. The general pattern involved a dramatic representation of the death and resurrection of the god, a recitation of the myth of Creation, a ritual combat in which the god overcomes his enemies, a sacred marriage and a triumphal procession. To what extent these and other details were observed in Old Israel is a matter of dispute, but scholars generally are agreed that some such annual festival of the utmost importance for the life and well-being of king and community was regularly observed through the time of the Kingdoms. Mowinckel maintained that such psalms as 93, 95–99, 47 were the apparatus of a living cult, and since his *Psalmenstudien* II (1921), many other psalms and passages from both the Law and the Prophets have been connected with this Feast.

3. Later customs.—We have many details of customs observed in the last days of the Temple. How many of these go back to very ancient times, it is impossible to say. There were daily processions round the altar and a sevenfold repetition on the 7th day; the singing of special psalms, a procession on each of the first 7 days to Siloam to fetch the water for the drink-offering, the illumination of the Court of the Women by the lighting of giant candelabra, and all-night dancing in the court whilst spectators looked on from galleries above.

A. W. F. B.—N. H. S.

TABITHA.—See DORCAS.

TABLE.—See HOUSE, **8**; MEALS, **3, 4**. For 'Table of Showbread' see SHOWBREAD, TABERNACLE, **6** (*a*); TEMPLE, **5, 9, 12**.

TABLE, TABLET.—1. Writing tablet is indicated by the Hebrew *lûaḥ*, which is also applied to *wooden* boards or planks (Ex 27[8] 38[7] in the altar of the Tabernacle, Ezk 27[5] in a ship, Ca 8[9] in a door) and to *metal* plates (in the bases of the lavers in Solomon's Temple, 1 K 7[36]). It is, however, most frequently applied to tables of *stone* on which the Decalogue was engraved (Ex 24[12] 31[18] etc.). It is used of a tablet on which a prophecy may be written (Is 30[8], Hab 2[2]), and in Pr 3[3] 7[3] and Jer 17[1] figuratively of the 'tables of the heart.' In all these passages, when used of stone, both AV and RV translate 'table' except in Is 30[8] where RV has 'tablet.' *lûaḥ* generally appears in LXX and NT as *plax* (2 Co 3[3], He 9[4]). The 'writing table' (RV 'tablet') of Lk 1[63] was probably of wax.

2. Some article of feminine adornment is indicated by Hebrew *kûmāz*, AV 'tablets' RV, RSV 'armlets' RVm 'necklaces' and 'beads' respectively at Ex 35[22], Nu 31[50].

3. The AV 'tablets' in Is 3[20] is in RV, RSV 'perfume boxes,' literally houses 'of the *nephesh*.' Two alternatives may be suggested: (i) If *nephesh* here means 'throat,' the phrase may mean (gold or silver) collars; (ii) it may refer to a box into which the lover has breathed and so his 'soul' is kept by his beloved.

4. The 'tablet' (*gillāyôn*) in Is 8[1] signifies a polished surface. The same word appears in Is 3[23], AV 'glasses,' RV 'hand-mirrors,' RSV 'garments of gauze.'

W. F. B.—A. S. H.

TABLELAND.—In a number of passages RSV has 'tableland' for AV and RV 'plain' (Dt 3[10] 4[43], Jos 13[9, 16f, 21] 20[8], Jer 48[21]). Elsewhere it retains 'plain' (1 K 20[23, 25], 2 Ch 26[10], Jer 21[13] 48[8]).

TABLETS.—See PERFUMER.

TABOR.—1. A town in the tribe of Zebulun, given to Levites descended from Merari, 1 Ch 6[77]. It is perhaps modern *Kh. Dabûrah*, near Mount Tabor. **2.** A place near Ophrah, Jg 8[18]. **3.** The Oak (AV 'plain') of Tabor was on the road from Ramah S. to Gibeah, 1 S 10[3]. **4.** See next article.

TABOR (MOUNT).—A mountain in the NE. corner of the plain of Esdraelon, some 7 miles E. of Nazareth. Though only 1843 feet high, Tabor is, from its isolation and remarkable rounded shape, a most prominent object from great distances around; hence, though of much less size than the great mountain mass of Hermon (9232 feet high and 25 miles long), it was associated with it in popular thought (Ps 89[12]). In Jer 46[18] Nebuchadrezzar towers above men 'like Tabor among the mountains, and like Carmel by the sea.' Its Arabic name to-day is *Jebel eṭ-Ṭôr*, 'the mountain of the mount.' From its summit a magnificent outlook is obtained, especially to the W., over the plain of Esdraelon to the mountains of Samaria and Carmel.

It was on the common frontier of Zebulun and Issachar (Jos 19[12, 22]); it was an early sanctuary (Hos 5[1]), being probably the mountain where peoples are convoked and right sacrifices offered in Dt 33[19]. Here Barak mustered his forces before giving battle to Sisera (Jg 4[6, 12, 14]); here, too, in Gideon's day there was a clash between Midianites and Israelites (Jg 8[18]). In later history Tabor

figures mainly as a stronghold. In 218 B.C. Antiochus III. captured the city of Atabyrion on Tabor and fortified it. It was in Jewish hands from *c* 105 B.C. to the end of the Hasmonaean regime. Here in 53 B.C. Gabinius defeated the insurgent Alexander, son of Aristobulus II. In A.D. 66 Josephus fortified the hill against Vespasian, but it surrendered after the defeat of the Jewish troops by Placidus. During the Crusades it was for long in the hands of the Christians, but it fell to the Muslims after the battle of Hattin (1187), and was fortified in 1212 by Saladin's successor—a step which led to the abortive Fifth Crusade. At Mount Tabor Napoleon defeated a Turkish army in 1799.

The tradition that Tabor was the mountain of the **Transfiguration** has little evidence in its favour, although it is quite early. Its earliest form is that found in the 2nd-cent. 'Gospel according to the Hebrews,' where Jesus says: 'Even now my mother the Holy Spirit took me by one of my hairs and carried me up to the great mountain Tabor'—but this may be in origin an embellished variant of one of the Temptation incidents. Tabor was probably an inhabited spot at the time of Christ, while the requirements of the Biblical narrative of the Transfiguration (Mk 8^{27} 9^{2-10} and parallels) are met rather by a site near Caesarea Philippi, such as an isolated spur of Hermon.

Mount Tabor to-day is a well-wooded spot, groves of oaks and terebinths not only covering the hillsides but extending also over a considerable area of hill and valley to the N.; game abounds in the coverts. On the summit the Greek Church has a monastery and the Franciscans have the Basilica of the Transfiguration, with a hospice attached. The Franciscans in particular have carried out extensive excavations; the foundations of a great wall of circumvallation have been traced, many ancient tombs have been cleared, and the remains of several churches of the 4th and 12th cent. have been unearthed.

E. W. G. M.—F. F. B.

TABRET (see TABER) is the AV translation of *tōph* in Gn 31^{27}, 1 S 10^5 18^6, Is 5^{12} 24^8 30^{32}, Jer 31^4, Ezk 28^{13}. The same Hebrew word is translated '**timbrel**' in Ex 15^{20}, Jg 11^{34}, 2 S 6^5, 1 Ch 13^8, Job 21^{12}, Ps 81^2 149^3 150^4. RV substitutes 'timbrel' in 1 S 10^5 18^6, and RSV has 'tambourine' in Gn 31^{27}, 1 S 10^5, 2 S 6^5, 1 Ch 13^8, Job 21^{12}, but otherwise uses 'timbrel' (save Ezk 28^{13} where it has no reference to a musical instrument). It might have been well to drop both 'timbrel' and 'tabret,' neither of which conveys any clear sense to a modern ear, and adopt some such rendering as 'tambourine' or 'hand-drum.' The AV rendering of Job 17^6 'aforetime I was as a tabret,' has arisen from a confusion of *tōpheth* 'spitting' with *tōph* 'tambourine.' The words mean 'I am become one to be spit on in the face' (RV 'an open abhorring'; RSV 'a byword').

TABRIMMON.—The father of Benhadad, 1 K 15^{18}.

TACHES.—An old word of French origin used by AV to render the Hebrew *ḳᵉrāsîm*, which occurs only in P's description of the Tabernacle (Ex $26^{6, 11, 33}$ 35^{11} etc.). The Greek rendering denotes the rings set in eyelets at the edge of a sail for the ropes to pass through. The Hebrew word evidently signifies some form of **hook** or **clasp** (so RV, RSV) like the Roman *fibula*.

TACHMONITE.—See TAHCHEMONITE.

TACKLE in Is 33^{23} (AV, RV 'tacklings') simply means a ship's ropes; in Ac 27^{19} (AV, RV 'tackling') it is used more generally of the whole gearing (RVm 'furniture').

TADMOR.—City on the route from Damascus to the Euphrates, which route, however, was little used until Roman times, when Tadmor became a very great place and was called **Palmyra**. But the older name survives in present *Tudmur*. The corruption of the name *Tadmyra > Palmyra is difficult to explain. The ruins of old Tadmor must have been wiped out when the metropolis of the caravan trade arose in this desert oasis, which is watered by a brook of clear but sulphurous water. The Assyrian inscriptions have shown that Tadmor existed already in the time of Tiglath-pileser I. (1100 B.C.), who mentions *Tadmar* of the land of *Amurrū* (the name for the western regions). It is quite probable that some Apocryphon, like the one on Genesis found among the Dead Sea Scrolls in Qumrân Cave 1, attributed to Solomon the rule over Tadmor, as 2 Ch 8^{3-4} does over Hamath and Zobah. It was not just a mistake if 2 Ch 8^4 says that Solomon built 'Tadmor in the desert,' but an attempt to get into the sacred text an important fact affirmed by outside tradition. The obscure **Tamar** in the (Judaean) desert mentioned in the corresponding passage of 1 K 9^{18}, was the place originally meant by the Chronicler, but excellently served the reviser's purpose, as it was so easily changed into Tadmor. In his time Palmyra had begun to be of some consequence, and it was worth knowing that Solomon had held it. Jewish travellers now often took that road in going to Babylonia.

The first mention of Palmyra by a classical writer is by Appian (*Bell. Civ.* v. 9), who tells how the wealth of this caravan city excited the cupidity of Mark Antony (41 B.C.). In the Age of Augustus a temple of *Belos* (or *Beelsamen* in Greek transliterations) was built there, as an examination of the ruins has shown. Trajan wrought destruction here, but Hadrian rebuilt the city, calling it Adrianopolis. It became a Roman colony under Septimius Severus (A.D. 193–211), or Caracalla (A.D. 211–217), and since that time fell heir to the importance previously held by Petra. Under the rule of Odenathus and his successor, Queen Zenobia, Palmyra became an important power, even conquering Egypt. Zenobia was defeated by Aurelian near Antioch and Emesa (Hamath) and captured (A.D. 272). Under Diocletian (A.D. 284–305) a portion of the city was turned into a camp for the army. In the 4th–5th cents. there were desolate areas in it in which Christians could erect Basilicas. Construction of a city wall under Justinian (A.D. 527–565) did considerable damage to important buildings and changed the plan of the city. The decline of Palmyra was primarily due to Diocletian's policy of making Mesopotamia (with Edessa, Amida, and Nisibis) the focal point for relations with the East. There are numerous Palmyrene inscriptions, written in a western Aramaic dialect, and many of them with accompanying Greek version. Of particular interest is the Tariff inscription of A.D. 173. (See Cooke, *A Text Book of North Semitic Inscriptions* [1903], 313 f.) The inscriptions are also important for our knowledge of late phases of Semitic religion.

(For an interesting account of Palmyra see M. Rostovtzeff, *Caravan Cities*, 1932.) E. G. K.

TAHAN.—**1.** An Ephraimite clan, Nu 26^{35}; the gentilic **Tahanites** occurs in Nu 26^{35}. **2.** A descendant of Ephraim in the fourth or fifth generation, 1 Ch 7^{25}.

TAHAPANES, Jer 2^{16} (AV).—See TAHPANHES.

TAHASH.—A son of Nahor, Gn 22^{24} (AV (**Thahash**).

TAHATH.—**1.** A Kohathite Levite, 1 Ch $6^{24, 37}$. **2. 3.** Two (unless the name has been accidentally repeated) Ephraimite families, 1 Ch 7^{20}. **4.** An unidentified stopping-place in the wilderness, Nu $33^{26f.}$

TAHCHEMONITE (AV **Tachmonite**).—See HACHMONI.

TAHPANHES.—An Egyptian city mentioned in Jer 2^{16} (AV **Tahapanes**) 43^{7ff} 44^1 46^{14}, Ezk 30^{18} (**Tehaphnehes**), Jth 1^9 (AV **Taphnes**), the same as the Greek Daphnae, usually and most probably identified with the modern *Tell Defneh*, which lies on the Pelusiac branch of the Nile. The name means 'The Fortress of Penahse (*i.e.* the Negro).' Penahse was probably a powerful Theban general who lived in the 11th cent. B.C. and suppressed a rebellion in the north. Several cities were named after him, so effectively did he do his work. According to Herodotus, Daphnae was the frontier fortress of Egypt on the Asiatic side and was garrisoned by Greeks. *Tell Defneh* was excavated by Petrie at the end of the last century. In its ruins was found an abundance of Greek pottery, iron armour, and arrowheads of bronze and iron, while numerous small weights

bore testimony to the trade that passed through it. The garrison was kept up by the Persians in the 5th cent., and the town existed to a much later period.

F. Ll. G.—T. W. T.

TAHPENES.—The name of Pharaoh's wife, whose sister was given to Hadad the Edomite, 1 K 11^{19f}. It has the appearance of an Egyptian name, and has been explained by Albright as for **T^{3}-ḥu.t-p^{3}*(or *pr*)*-nsw* = 'she whom the king (or palace) protects' (*BASOR* 140, p. 32). The name of her son **Genubath** is not Egyptian. The Pharaoh should be of the weak 21st Dynasty.

TAHREA.—A grandson of Mephibosheth, 1 Ch 9^{41}; called **Tarea** (perhaps by a scribal error) in 8^{35}.

TAHTIM HODSHI, THE LAND OF.—A place E. of Jordan, which Joab and his officers visited when making the census for David, 2 S 24^{6} (AV, RV). It is mentioned between Gilead and Dan-jaan. The MT, however, is certainly corrupt. In all probability we should read *ha-Ḥittîm Ḳādēshāh* = 'to the land of *the Hittites towards Kadesh*'; cf RSV 'to Kadesh in the land of the Hittites,' *i.e.* to Kadesh on the Orontes.

TALE.—'Tale' in AV generally means 'number *or* sum,' as in Ex 5^{18} 'Yet shall ye deliver the tale of bricks' (so RV; RSV 'the same number'). And the verb 'to tell' sometimes means 'to number,' as Gn 15^{5}, AV and RV 'Tell (RSV 'number') the stars if thou be able to number them.'

TALEBEARING.—See SLANDER.

TALENT.—See MONEY, WEIGHTS AND MEASURES.

TALITHA CUMI.—The command addressed by our Lord to the daughter of Jairus (Mk 5^{41}), and interpreted by the Evangelist 'Little girl, I say to you, arise.' The relating of the actual (Aramaic) words used by Jesus is characteristic of St. Mark's graphic narrative (cf 7$^{11, 34}$ 14^{36} 15^{34}), and may have been embedded in the tradition he used.

TALMAI.—**1.** A clan resident in Hebron at the time of the Hebrew conquest and driven thence by Caleb, Nu 13^{22}, Jos 15^{14}, Jg 1^{10}. **2.** Son of Ammihur, king of Geshur, and a contemporary of David, to whom he gave his daughter Maacah in marriage, 2 S 3^{3} 13^{37}, 1 Ch 3^{2}.

TALMON.—The name of a family of Temple gatekeepers, 1 Ch 9^{17}, Ezr 2^{42}, Neh 7^{45} 11^{19} 12^{25}, 1 Es 5^{28} (RV **Tolman**). See TELEM.

TALMUD ('learning').—The principal literary production of post-Biblical Judaism. The collection is divided into two parts: the **Mishnah** ('second law'), corresponding chronologically to the NT and the Apostolic Fathers of the Christians; and the **Gemara** ('completion'), corresponding in time to the ante-Nicene, Nicene, and post-Nicene Fathers. There are two Talmuds, the Jerusalem or Palestinian, and the Babylonian, the names being derived from the two centres of redaction (eastern and western), just as Christian patristic literature may be divided into Greek Fathers and Latin Fathers.

1. Origin and character of the Mishnah.—Jewish tradition draws a distinction between the 'Oral Law,' which was handed down for centuries by word of mouth, and the 'Written Law,' *i.e.* the Pentateuch or Five Books of Moses. Both, according to Rabbinical teaching, originated with Moses. It was an article of faith that in the Pentateuch there was no precept or regulation of which God had not given to Moses all explanations necessary for their application, together with the order to transmit them by word of mouth. This, of course, was only a tradition giving proper authority to the Oral Law. Actually the Oral Law, though containing elements of great antiquity—*e.g.* details of folklore—probably dates from the time when the Written Law was first read and expounded to the people (Neh 8$^{1-9}$).

This oral expounding inevitably led to differing explanations. Hence in later times it was necessary to reduce to writing the explanations considered authoritative and correct. This process began in the time of Hillel and Shammai (end of 1st cent. B.C.) and came to be called *mishnah* ('repetition' or 'second law'). Frequently, each teacher would compile his own Mishnah, as was done by Rabbi Aqiba, Rabbi Meir, and others (1st cent. A.D.). There were even rules without apparent Scriptural authority. The confusion created by this state of affairs necessitated some authoritative action, which was taken by Rabbi Judah ha-Nasi, when he understook his great redaction of the Mishnah. Judah was born about A.D. 135 and died about A.D. 220; his title, *ha-Nasi*, means literally 'the Prince,' but was used at that time to denote the Patriarch or presiding officer of the leading Rabbinical school (then in Galilee, the centre of Jewish life). This was an influential position, and Judah graced it so well that he was sometimes referred to as 'Judah the Holy'; usually, he is called in the literature simply 'Rabbi,' without further qualification, a unique distinction indeed.

Judah's work of redaction was complete by about A.D. 200. Owing to the skill and authority of his work, the Mishnah of Judah the Patriarch soon superseded all other collections, and became the only one used in the schools. The object that Judah had had in view, namely, of restoring uniform teaching, was thus achieved. The Mishnah as we now have it is not, however, quite as he first produced it. There were some further changes by his pupils during his lifetime, with his acquiescence; there is also a reference to his death, mention of his sons, and a few references to teachers living shortly after his time. Moreover, in about thirty instances, his own teachings are referred to as those of 'Rabbi,' and the unsolved question arises as to whether he would have referred to himself in this way. Nevertheless, what we have is essentially his. It is written in Hebrew of a kind somewhat different from that of the OT, and is essentially the same in the two Talmuds, whereas the Gemara of both Talmuds is basically Aramaic in language, but otherwise very different as between the Babylonian and Palestinian versions.

The Mishnah is divided into six *Sedarim* (Hebrew for 'Orders,' often called 'Sections' in English). Each *Seder* or Section contains a number of 'treatises' or 'tractates'; each tractate is divided into chapters, and these again into paragraphs. In all there are sixty-three tractates, and it is to these, not to the Sections, that references are made, including the chapter and paragraph, in the fashion of a Bible reference, thus: *Nedarim* or *Ned.* ('Vows') iii. 5. The names of the six Sections, which to some extent indicate their contents, are: (1) *Zeraim* ('Seeds'), containing eleven tractates, treating mostly of agricultural tithes and offerings; (2) *Moed* ('Festival'), twelve tractates, having to do with the Sabbath, Passover, and the like; (3) *Nashim* ('Women'), seven tractates, special regulations relating to women, marriage, divorce, etc.; (4) *Nezikin* ('Damages'), ten tractates, on civil and criminal law; (5) *Kodashim* ('Holy things'), eleven tractates, mostly on animal sacrifices; (6) *Tohoroth* ('Ritually clean things'), twelve tractates, treating all phases of ritual impurity, how to avoid it and overcome it.

The accessibility of the Mishnah to readers of English has been enormously increased since the publication in 1933 of Herbert Danby's masterly translation, with introduction, notes, and appendices, all in one convenient volume. This work has been a boon especially to Christian students of the Bible who wish to inform themselves of what the Jewish teachers of the Mishnah (the so-called **Tannaim**) were saying during the first two Christian centuries. Also now available is *Mishnayoth*, an edition by Philip Blackman in seven volumes (1951–1956), with the Hebrew text, introductions, translation, notes, appendices, etc. Available in German is the very competent edition entitled *Die Mischna*, by G. Beer, O. Holtzmann, and others (begun in 1912, now nearing completion), with text, translation, and detailed discussions.

Two of the better known or more discussed tractates (at least among Christians) are *Aboth* ('Fathers') and

Middoth (' Measurements '). *Aboth*, also called *Pirke Aboth* (' Chapters of the Fathers ') and Sayings of the Fathers, is a collection of moral maxims and sayings in praise of the law attributed to some sixty teachers living between 300 B.C. and A.D. 200. Because of the fine ethical content, this tractate is much admired by both Jews and Christians, and has several times been published separately. *Middoth* is a detailed description of the Temple, based to some extent on recollections of Herod's sanctuary destroyed in A.D. 70 (see TEMPLE) but also in part presenting an idealized picture of what a future Temple should be like. These tractates, however, are not of the usual kind. In general, the material of the Mishnah is strictly **Halakhah** (' usage '), *i.e.* details of Rabbinic law, mostly, but not necessarily, based on Scripture. In contrast to Halakhah is **Haggadah** or **Aggadah** (' narrative '), exposition or interpretation of Scripture that aims at edification and includes a wide range of non-legal matter. There is little of this in the Mishnah except in *Aboth*.

Alongside the Mishnah, is a parallel collection, arranged in the same manner, known as the **Tosephta** (' addition ' or ' supplement '). Some say it was intended as a supplement to the Mishnah, others that it contains material excluded from the Mishnah and therefore is a sort of apocryphal Mishnah. It presupposes the Mishnah, treats its material more freely, and contains more Haggadic elements. No English translation of the whole is available. An important edition of the text has been published by M. S. Zuckermandel.

Material of Mishnaic type and date is also found scattered through the two Gemaras in small fragments. Each instance of such material is called a **Baraitha** (' outside Mishnah '). These Baraithas are in Hebrew, while their surrounding context is Aramaic. They are also introduced by certain formulas, such as ' Our Rabbis have taught,' ' There is a tradition,' or ' Rabbi So-and-so taught.' Like the Tosephta, the Baraithas may be considered ' apocryphal ' in relation to the Mishnah. Thus the Tosephta is essentially a collection of Baraithas.

2. The two Talmuds.—The Mishnah forms the basis of the Talmud ; the **Gemara** is an expansion, by means of comment and explanation, of the Mishnah ; thus the Talmud contains the Mishnah, with a great deal more additional matter. The Talmud is practically a mere amplification of the Mishnah by comments and supplementation ; even those portions of the Mishnah which have no Gemara are regarded as component parts of the Talmud.

The two Talmuds, the **Palestinian** and the **Babylonian**, are known in Hebrew as *Yerushalmi* (' Jerusalemite,' though it was not written in Jerusalem, the Jews having been expelled from there in A.D. 70) and *Babli* (' Babylonian '). The material which went to make up *Yerushalmi* was prepared in the academies, the centres of Jewish learning in Palestine, chief among which was Tiberias. It was from here that Rabbi Yohanan issued *Yerushalmi* in its earliest form, during the middle of the 3rd cent. A.D. The first editor, or at all events the first compiler, of *Babli* was Rabbi Ashi (died about A.D. 430), who presided over the academy of Sura. Both these Talmuds were constantly being added to ; *Yerushalmi* was not finally closed until the end of the 4th cent., *Babli* not until the beginning of the 6th. The teachers of the Gemaras, both Palestinian and Babylonian, are called **Amoraim** (' speakers,' ' interpreters ') in contrast to the **Tannaim** (' repeaters,' ' teachers ') of the Mishnah. By the time of the completion of the Talmuds, the centre of Jewish life had moved from Palestine to Babylonia (under the rule of the Sassanid Persians). Neither Talmud is complete, in the sense of containing an exposition of every tractate of the Mishnah ; but *Babli* is much more voluminous, being about three times the size of *Yerushalmi*. The latter has always occupied a position of subordinate importance, while *Babli* may be said to have absorbed the thought and learning of all the Jewish teachers of the Talmudic age, and hence is sometimes called simply ' The Talmud.' On the other hand, *Yerushalmi* has certain values of its own, such as the early date of some of its material, its simplicity, and especially its rich store of Haggadah. In the Babylonian schools intellectual acumen reigned supreme ; there was but little room for the play of the emotions or for the development of poetic imagination ; these were rather the property of Palestinian soil. But the Haggadah, whether in *Yerushalmi* or *Babli*, occupies in reality a subordinate place, for in its origin, as we have seen, the Talmud was a commentary on the Mishnah, which was a collection of Halakhah ; and although the Haggadic portions are of much greater human interest, it is the Halakhic portions that form the bulk of the Talmud, and that constitute its importance as the fountainhead of Jewish belief and theology.

In order to give some idea of Talmudic method, an abbreviated example may be cited. In the beginning of the Mishnah occurs this paragraph : ' During what time in the evening may the *Shema'* be recited ? From the time when the priests go in (to the Temple) to eat their heave-offering until the first watch of the night, according to R. Eliezer. But the Sages say, until midnight. Rabban Gamaliel says, until the coming of the dawn.' This is the text upon which *Yerushalmi* then comments in three sections. The first section contains the following : a citation from a Baraitha with two sayings of R. Jose to elucidate it ; remarks on the position of one who is in doubt whether he has read the *Shema'* ; another passage from a Baraitha, designating the appearance of the stars as an indication of the time in question ; further explanations and passages on the appearance of the stars as bearing on the ritual ; other Rabbinical sayings ; a Baraitha on the division between day and night, and other passages bearing on the same subject ; discussion of other Baraithas, and further quotations from important Rabbis ; a sentence of Tannaitic origin in no way related to the preceding matters, namely, ' One who prays standing must hold his feet straight,' and the controversy on this subject between Rabbis Levi and Simon, the one adding, ' like the angels,' the other, ' like the priests ' ; comments on the two comparisons ; further discussion concerning the beginning of the day ; Haggadic statements concerning the dawn ; a conversation between two Rabbis ; cosmological comments ; dimensions of the firmament, and more Haggadic comments ; a discussion on the night watches ; Haggadic material concerning David and his harp. Then comes the second section, thus : a Rabbinical quotation ; a Baraitha on the reading of the *Shema'* in the synagogue ; other Rabbinical and Haggadic matter ; further Haggadic sayings. Lastly, the third section gives R. Gamaliel's view compared with that of another Rabbi, together with a question that remains unanswered.

As with the Mishnah, the accessibility of the Babylonian Talmud to readers of English has been greatly eased by a new translation, the so-called Soncino Talmud, entitled *The Babylonian Talmud Translated into English*, edited by I. Epstein, in thirty-five volumes (1935–1952). This magnificent work also contains notes, introductions, glossaries, and other kinds of helpful material. There is a good German translation of *Babli* by L. Goldschmidt. The Palestinian Talmud is not as a whole available in English ; there is a useful French edition by Moise Schwab, *Le Talmud de Jérusalem*, in twelve volumes (1932–1933).

Another category of Rabbinical literature that should be mentioned in this connexion is the **Midrash** (plural Midrashim). A Midrash is a sort of commentary on a book of the Bible, based directly on the Biblical text taken verse by verse. This literary form is vast, having flourished all the way from the 2nd to the 10th cent. A.D. The earliest, or Tannaitic, Midrashim are *Mekhilta*, on the legal part of Exodus (English translation by Lauterbach) ; *Siphra*, on Leviticus ; *Siphre*, on most of Numbers and the whole of Deuteronomy (partial English translation by Levertoff). The most extensive and important collection of later Midrashim is that called

the *Midrash Rabbah*, or Great Midrash, based on the Pentateuch and a few other OT books. There is an epochal translation of this, the Soncino Midrash, or *Midrash Rabbah Translated into English*, edited by H. Freedman and M. Simon, in ten volumes (1939). The earliest Midrashim are more Halakhic, the later mostly Haggadic.

Another important type of Rabbinic literature has a special article in this dictionary; see TARGUMS.

3. The authority of the Talmud in Judaism.—The Oral Law, which with its comments and explanations is what constitutes the Talmud, is regarded as of equal authority with the Written Law. Hence the Talmud is considered, at least by orthodox Jews, as the highest authority on all matters of faith. It is true that in the Talmud itself the letter of Scripture is always clearly differentiated from the rest; but, in the first place, the comments and explanations declare what Scripture means, and without this official explanation the Scriptural passage would lose much of its practical value for the Jew; and, in the second place, it is firmly believed that the oral laws preserved in the Talmud were also delivered to Moses on Mount Sinai. It is, therefore, hardly an exaggeration to say that the Talmud is of equal authority with Scripture in orthodox Judaism.

4. The Talmud and Christianity.—Much that is written in the Talmud was originally spoken by men who were contemporaries of Christ and the early Christians, as was pointed out at the beginning of this article. It is, moreover, well known that a conflict was waged in the infant Church regarding the question of the admission of Gentiles, the result of which was an irreconcilable breach between Jew and Gentile, and an ever-increasing antagonism between Judaism and Christianity. There is, therefore, a likelihood that references to Christ and Christianity could be found in the Talmud. In recent times a number of friendly and objective scholars on both the Christian and Jewish sides have studied this question in considerable detail. The great translations mentioned above have helped immensely in mutual understanding. Jewish scholars have studied the NT and related literature, and Christian scholars have made an approach to the immense difficulties of Talmudic and Rabbinic lore. The present conclusions seem to be that there are indeed a few genuine references to Jesus in early Rabbinic literature, though they are usually veiled and sometimes unfriendly, as might be expected; and that the much-discussed term *Minim* ('heretics') in the Talmud does sometimes refer to the early Christians, but at other times to Jewish Gnostics or other Jewish heretics. There is no space here to discuss this important matter in detail; it must suffice to mention a few works available in English as indicators of what is being done and as guides to further study: R. T. Herford, *Christianity in Talmud and Midrash* (1903), and several later works on related subjects; J. Klausner, *Jesus of Nazareth* (1925); *idem*, *From Jesus to Paul* (1943); M. Goldstein, *Jesus in the Jewish Tradition* (1950), accurate, objective, and with an excellent, up-to-date bibliography. The most fruitful result of such study has not been the discovery by Christians of a few isolated references to Jesus and Christianity in the Talmuds or other Rabbinic literature, but the opening up of the Jewish background of Christianity to show the many features possessed in common by the two religions, as well as the differences. Outstanding in this respect is G. F. Moore, *Judaism in the First Centuries of the Christian Era* (3 vols., 1927–1930). Also useful in this connexion is J. Klausner, *The Messianic Idea in Israel* (1955). Unfortunately, H. L. Strack and P. Billerbeck, *Kommentar zum Neuen Testament* (4 vols., 1922–1928), the classic application of this method to NT exegesis, is not available in English. The best available introductory works are: W. O. E. Oesterley and G. H. Box, *A Short Survey of the Literature of Rabbinical and Mediaeval Judaism* (1920); M. Mielziner, *Introduction to the Talmud* (1925); H. L. Strack, *Introduction to the Talmud and Midrash* (1931). W. O. E. O.—W. F. S.

TALSAS, 1 Es 9[22] (AV).—See ELASAH, **1.**

TAMAH, Neh 7[55] (AV).—See TEMAH.

TAMAR.—1. A Canaanite woman, married to Er and then to his brother Onan (see MARRIAGE, **4**). Tamar became by her father-in-law himself the mother of twin sons, Perez and Zerah, Gn 38[6ff], Ru 4[12], 1 Ch 2[4], Mt 1[3] (AV **Thamar**). **2.** The beautiful sister of Absalom, who was violated and brutally insulted by her half-brother, Amnon, 2 S 13[1ff]. **3.** A daughter of Absalom, 2 S 14[27]. Cf MAACAH, **4.** **4.** See next article.

TAMAR.—1. A city in the S. of Judah, mentioned as one of the cities rebuilt by Solomon, 1 K 9[18] (AV **Tadmor**, which follows *Kᵉrê* and the Versions, is manifestly wrong; see TADMOR). It is probably to be identified with **Hazazon-tamar** (q.v.). **2.** The SE. boundary mark of the restored Kingdom of Israel in Ezk 47[19] 48[28]; perhaps the same as **1.**

TAMARISK.—Hebrew *'ēshel*, Gn 21[33] (AV **grove**, AVm 'tree') 1 S 22[6] (AV 'tree,' AVm 'grove') 31[13] (AV 'tree'). There are some eight species of tamarisks in Palestine; they are most common in the Maritime Plain and the Jordan Valley. Though mostly but shrubs, some species attain to the size of large trees. They are characterized by their brittle feathery branches and minute scale-like leaves. RVm gives 'tamarisk' for AV and RV '**heath**' in Jer 17[6], where a species of juniper is meant (RSV 'shrub'). E. W. G. M.

TAMBOURINE.—See TABRET.

TAMMUZ (Ezk 8[14]) was a Babylonian god whose cult is one of the oldest in the world and still survives in Kurdistan. It spread rapidly in Palestine after *c* 700 B.C. The name is Sumerian, **Du-mu-zi** ('faithful son'). He was the youthful lover of Ishtar and was the vegetation god who died at the time of greatest heat, and returned the following spring. Ishtar descended into the Underworld to bring him back to life. His departure was celebrated by dirges, many of which survive. His 'weeping' took place on the second of the month Tammuz (June–July). He was identified with the Phoenician Adon (Greek *Adonis*), and with the Egyptian Osiris. Cf Gn 35[8], Zec 12[11]. N. H. S.

TANACH, Jos 21[25] (AV).—See TAANACH.

TANHUMETH.—The father of Seraiah, one of the Hebrew captains who joined Gedaliah at Mizpah, 2 K 25[23], Jer 40[8].

TANIS (Jth 1[10]) = **Zoan** (q.v.).

TANNER.—See ARTS AND CRAFTS, **5.**

TAPESTRY.—See SPINNING AND WEAVING, **6.**

TAPHATH.—Daughter of Solomon and wife of Ben-abinadab, 1 K 4[11].

TAPHNES, Jth 1[9] (AV).—See TAHPANHES.

TAPHON, 1 Mac 9[50] (AV).—See TEPHON.

TAPPUAH ('apple').—**1.** A 'son' of Hebron, 1 Ch 2[43]. Probably the name is that of a town in the lowland, Jos 15[34]. There was a **Beth-tappuah** (q.v.) in the hill country. Tappuah is possibly modern *Beit Nettîf*. **2.** A place on the boundary between Ephraim and Manasseh, Jos 16[8] 17[8] (cf **En-tappuah**, 17[7]). It is probably modern *Sheikh Abū Zarad*. In 2 K 15[16] Tappuah (so RSV, following Lucian's recension of the LXX, instead of AV, RV **Tiphsah**) is said to have been sacked by Menahem. **3.** One of the towns W. of Jordan whose kings Joshua smote, Jos 12[17]. It was perhaps the same place as **2** above; but this is by no means certain. See also TIPHSAH and TEPHON.

TARAH, Nu 33[27f] (AV).—See TERAH, **2.**

TARALAH.—An unknown town of Benjamin, Jos 18[27].

TAREA.—See TAHREA.

TARES (Gr. *zizania*, Arab. *zuwān*) are certain kinds of darnel growing plentifully in cornfields. The bearded darnel (*Lolium temulentum*) most resembles wheat. The seeds, though often poisonous to human beings on account of parasitic growths in them, are sold as chicken's food. When harvest approaches and the tares can be distinguished, they are carefully weeded out by

hand by women and children (cf Mt 13[24-30]). RSV uses 'weeds.' E. W. G. M.

TARGET.—See ARMOUR, ARMS, 2.

TARGUMS.—Originally the word *targum* meant 'translation' in reference to any language; but it acquired a restricted meaning, and came to be used only of translation from Hebrew into Aramaic. As early as the time of Ezra we find the verb used in reference to a document written in Aramaic (Ezr 4[7]), though in this passage the addition 'in Aramaic' is made, showing that the restricted meaning had not yet come into vogue. As early as the time of the Second Temple the language of the Holy Scriptures, Hebrew, was not understood by the bulk of the Jewish people, for it had been supplanted by Aramaic. When, therefore, the Scriptures were read in synagogues, it became necessary to translate them, in order that they might be understood by the congregation. The official translator who performed this duty was called the *methurgeman* or *targeman*, which is equivalent to the modern *dragoman* ('interpreter'). The way in which it was done was as follows:—In the case of the Pentateuch (the 'Law') a verse was read in Hebrew, and then translated into Aramaic, and so on to the end of the appointed portion; but in the case of the prophetical writings three verses were read and then translated. Whether this sytem was the custom originally may be doubted; it was probably done in a less formal way at first. By degrees the translation became stereotyped, and was ultimately reduced to writing; and thus the Targums, the Aramaic translations of the Hebrew Bible, came into existence. The various Targums which are still extant will be enumerated below. While the texts of the official Targums may not have been fixed until the 5th cent. A.D., they were preceded by earlier written versions. There is a reference in the Talmud to a Targum of Job which Rabbi Gamaliel (*c* A.D. 50) ordered to be built into the wall of the Temple; the work must be earlier than this and probably there is a reference to it in the LXX at Job 42[17]. There is old pre-Christian material in the Jerusalem Targum, and this is now extant in a separate form in the manuscripts published by Paul Kahle in *Masoreten des Westens*, ii, pp. 1–65. Thus, although the evidence does not allow a definite date to be attached to the beginnings of written Targums, it is clear that the process of committing the translation to writing began very early. There are Targums to all the books of the Bible, with the exception of Daniel, Ezra, and Nehemiah; as these are to a large extent written in Aramaic, one can understand why Targums to these books should be wanting. Most of the Targums are mainly paraphrases; the only one which is in the form of a translation in the modern sense of the word is the Targum of Onkelos to the Pentateuch; this is, on the whole, a fairly literal translation. Isolated passages in the Bible which are written in Aramaic, as in Genesis and Jeremiah, are also called Targums. The following is a list of the Targums:

1. Targum of Onkelos to the Pentateuch, called also *Targum Babli*, i.e. the Babylonian Targum.
2. Old Palestinian Targum to the Pentateuch.
3. Jerusalem Targum to the Pentateuch.
4. Targum of Jonathan to the prophetical books (these include what we call the historical books).
5. Jerusalem Targum to the prophetical books.
6. Targum to the Psalms.
7. Targum to Job.
8. Targum to Proverbs.

9–13. Targums to the Five *Megilloth* ('Rolls'), namely: Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther.

14. Targum to Chronicles.

For printed editions of these and references to literature, see Aage Bentzen, *Introduction to the Old Testament*, vol. I., pp. 68–72; B. J. Roberts, *The Old Testament Text and Versions*, pp. 307 ff. A. Sperber has recently published an edition of the Targum of Onkelos with superlinear vocalization, based on the BM manuscript Or. 2363 (Leiden, 1959), and an edition of the Targum of Jonathan on the Former Prophets, based on the BM manuscript Or. 2210, as the first parts of *The Bible in Aramaic*.

The *Targum of Onkelos* is the official, revised, Aramaic version of the Pentateuch, probably Palestinian in origin but in its present form a product of the 5th cent. Babylonian Jews, hence the title *Targum Babli*. It is for the most part a literal translation, only here and there assuming the form of a paraphrase. The Hebrew text behind it is very close to the MT. The name of this Targum owes its origin to a passage in the Babylonian Talmud (*Megillah*, 3*a*), in which it is said: 'The Targum to the Pentateuch was composed by the proselyte Onkelos at the dictation of Rabbi Eliezer and Rabbi Joshua'; and in the Jerusalem Talmud (*Megillah*, 71*c*) it is said: 'Aquila the proselyte translated the Pentateuch in the presence of Rabbi Eliezer and Rabbi Joshua.' That Aquila is the same as Onkelos can scarcely admit of doubt, but that this Aquila is to be identified with the Aquila who in the 1st cent. A.D. produced a literal Greek translation of the OT is not proved; and, though in the tractate *Abodah zarah*, 11*a*, we are told that this Onkelos was the pupil of Rabbi Gamaliel the Elder, who lived in the second half of the 1st cent. A.D., there is a strong probability that the names Onkelos and Aquila are but conventional labels; cf the names Jonathan and Theodotion. It is characteristic of the Targum of Onkelos that, unlike the other Targums, the Midrashic element is greatly subordinated to simple translation; when it does appear it is mainly in poetic passages, though not exclusively (cf Gn 49, Nu 24, Dt 32[33], which are prophetic in character). Though it has been said that 'the idea apparently was that greater licence was permitted in dealing with passages of this kind than with those in which the legal element predominated,' a more likely explanation is that this material represents an earlier stage in the history of this Targum, before the version was revised to bring it into closer conformity with the Hebrew. As with the Targums generally, so with that of Onkelos, there is a marked tendency to avoid anthropomorphisms and expressions which might appear derogatory to the dignity of God; this may be seen, for example, in Gn 11[4], where the words 'The Lord came down,' which seemed anthropomorphic, are rendered in this Targum, 'the Lord revealed Himself.' Then again, the transcendent character of the Almighty is emphasized by substituting for the Divine Person intermediate agencies like the *Memra*, or 'Word' of God, the *Shekinah*, or 'Glory' of God, to which a more or less distinct personality is imputed; in this way it was sought to avoid ascribing to God Himself actions or words which were deemed unfitting to the inexpressible majesty and transcendence of the Almighty. A good example of this, and one which will also illustrate the general character of this Targum, is the following; it is the rendering of Gn 3[8ff]; 'And they heard the voice of the Word (*Memra*) of the Lord God walking in the garden in the evening of the day; and Adam and his wife hid themselves from before the Lord God among the trees of the garden. And the Lord God called to Adam and said: "Where art thou?" And he said: "The voice of Thy *Word* (*Memra*) I heard in the garden, and I was afraid, because I was naked, and I would hide."'

The *Old Palestinian Targum*, which preceded the official Targum of Onkelos, exists in fragments of several MSS which came from the Geniza or lumber-room of the synagogue of Old Cairo and which were published by Kahle in *Mas. d. Westens* ii. This Targum is less literal than the official Targum and contains much more explanatory matter. Its text is related to the text of the Syriac Peshitta version, and its language is the current Aramaic of the people of Palestine, whereas by the time the Targum of Onkelos was finalised Aramaic was no longer current speech in Palestine and so an artificial literary form, the creation of the Babylonian Rabbis, was used. An interesting illustration of the difference

between the interpretation of this pre-standard Targum and that later adopted officially may be perceived by comparing the RSV text at Ex 22^{5t}, which agrees with the official view, with that given in Smith-Goodspeed, *The Bible, an American Translation*, which here follows the interpretation of the Old Palestinian Targum.

Under the heading *Jerusalem Targum* come two forms of this Targum: one complete, the other in fragments. The latter, called also the *Fragment Targum*, exists also in two forms. The fragments have been gathered from a variety of sources, from MSS and from quotations in the writings of ancient authors. A copy of a Targum on the Pentateuch dating from the 15th cent. has been discovered in the Vatican Library (Neofiti 1), and it is claimed that this is a complete copy of the Fragment Targum (cf Díez-Macho, *Sefarad* xvii (1957), 117–121). Akin to these in language and outlook is the third Jerusalem Targum, sometimes erroneously called the 'Targum of Jonathan ben Uzziel on the Pentateuch.' But though this Jonathan was believed to be the author of the Targum to the Prophets which bears his name (see below), there was not the slightest ground for ascribing to him the authorship of this Targum to the Pentateuch. The mistake arose because this Targum was referred to as 'Targum J,' and the 'J,' which stood for 'Jerushalmi,' was in the 14th cent. wrongly taken to refer to Jonathan ben Uzziel. So tenaciously has the wrong name clung to this Targum, that a kind of compromise is made as to its title, and it is often known as the 'Targum of pseudo-Jonathan.' This Targum is like that of Onkelos in its avoidance of anthropomorphisms and in its desire not to bring God into too close contact with man; for example, in Ex 34^{5} the words: 'And the Lord descended in a cloud, and stood with him there, and proclaimed the name of the Lord' are rendered by the Targum as: 'The Lord revealed Himself in the clouds of the glory of His Shekinah,' thus avoiding what in the original text appeared to detract from the dignity of the Almighty. This kind of thing occurs with great frequency, and it is both interesting and important, as showing the evolution of the idea of God among the Jews. But in other respects this Targum differs from that of Onkelos, especially in its being far less a translation than a free paraphrase. Mohammed's wife and daughter are mentioned in the Targum of pseudo-Jonathan, and, if the names are not a later insertion, this would date the Targum as not earlier than the 7th cent. A.D. But this applies only to its final form, and it is generally agreed that in the Jerusalem Targum 'there are elements of translation and Halakhah which go back to an early period' (B. J. Roberts, *op. cit.* p. 204).

As the Targum of Onkelos was the official version of the Pentateuch, so the *Targum of Jonathan to the Prophets* was also an official recension. It owes its name to an ancient tradition, according to which Jonathan ben Uzziel composed it 'from the mouths of Haggai, Zechariah, and Malachi' (*Megillah*, 3*a*); this is merely a figurative way of saying that the traditional interpretation, as supposed to have been handed down by these prophets, was embodied in written form by Jonathan. It is said of him that when he occupied himself with the study of the Law, every bird that happened to fly over his head got burned, the reason being that so many angels had gathered around him to hear the words of the Law from his mouth (*Sukkah*, 28*a*). Jonathan was a pupil of Hillel and therefore lived during the middle and end of the 1st cent. A.D. (*Baba bathra*, 134*a*). But the date of the Targum cannot be deduced from this, for Jonathan is the Hebrew form of Theodotion, the name of the author of a Greek version of the OT, and the Hebrew name may have been attached to the Targum under the influence of the name of the Greek author, and only later was the name Jonathan connected with Hillel's pupil. In language, origin, and history the Targum of Jonathan resembles that of Onkelos, which indeed is often quoted verbatim. While the official editing of the Targum must be placed in Babylonia not earlier than the 5th cent. A.D., it must contain older Palestinian material. An interesting example of the Targum's treatment of the Biblical text is afforded by Is 53, where 'it is curious to note that the passages which refer to the humiliation of the Servant are interpreted of the people of Israel, while those which speak of the glory of the Servant are referred to the Messiah' (Oesterley and Box, *The Religion and Worship of the Synagogue*, p. 49). Professor Pinhas Churgin explains the fact that the 'man of sorrows' appears in terms of pride and exaltation and the defeat of the enemies of Israel by supposing that the translation was made at the time of bar Cochba (*c* A.D. 135) and reflects the contemporary political situation.

The *Jerusalem Targum to the prophetical books* is extant only in fragmentary form, notably as glosses in the Karlsruhe *Codex Reuchlinianus* (A.D. 1105), edited in 1872 by P. de Lagarde. These resemble the Jerusalem Targum to the Pentateuch and may have a similar history and represent the pre-official translation.

The Targums to the Writings are of various types. The Targum to the Psalms is sometimes literal, sometimes paraphrastic, which may point to different origins; and there are also signs in it of editorial activity, for example, in the conflate reading at Ps 97^{11}. The fact that Mt 27^{46} quotes from the Aramaic form of Ps 22 is relevant to the discussion of the age of the Targum. Very similar in character is the Targum to Job, while that to Proverbs is based not on the Hebrew but the Peshitta. The Targums to the Megilloth are Midrashes of different dates; on Esther there are three, one more literal and the others elaborate paraphrases, that called *Targum Sheni* being very popular. Finally, the Targum to Chronicles is usually fairly literal but it contains also Haggadic passages, which suggests a varied origin. There is no official revision of the Targums to the Writings.

The Targums are important not only for the study of Jewish theology and the history of Jewish exegesis but also for the proper understanding of the NT writings.

W. O. E. O.—W. D. McH.

TARPELITES.—One of the peoples settled in the cities of Samaria, Ezr 4^{9} (RSV 'the officials'). As a gentilic it is unknown.

TARSHISH.—**1.** See following article. **2.** A Benjamite family, 1 Ch 7^{10} (AV **Tharshish**). **3.** One of the seven princes who had the right of access to the royal presence, Est 1^{14}. **4.** The name of a precious stone, Ex 28^{20} 39^{13}, Ezr 1^{16} 10^{9} 28^{13}, Ca 5^{14}, Dn 10^{6}. See JEWELS AND PRECIOUS STONES.

TARSHISH.—**1.** A place far from Palestine (Jon 1^{3} 4^{2}), probably in the extreme W. of the Mediterranean. If Sheba and Dedan stand for the commerce of the East, Tarshish may stand for that of the West (Ezk 38^{13}). It is mentioned in Jer 10^{9} as the source of silver and, in Ezk 27^{12}, also of iron, tin, and lead. This indicates Spain and even the regions beyond the Straits. The Greeks were in touch with Tartessus in the 7th and 6th cents. B.C. (Herod. i. 163; iv. 152). The *Onomasticon* refers to *Tharseis hē Baitikē*, which points to the region of the Guadalquivir, anciently the *Baetis*. The name *Tarseion* occurs in a commercial treaty (Polyb. iii. 24) referring to a city of the Carthaginians in Spain.

The form of the word suggests a verbal noun derived from the root *ršš*. This is found in Akkadian in connexion with bright metals and mining products, so that Tarshish may have originally been a common noun, perhaps signifying 'metal refinery.' We may further note that one of the copper-smelting sites explored by Glueck in the Arabah is called *Mrashshash*. In any case it is significant that Tarshish and ships of Tarshish are generally mentioned in connexion with metal.

'**Ships of Tarshish**' did not necessarily belong to, or trade with, Tarshish, but signified large ocean-going ships voyaging primarily to the mines and refineries of the far West (Is 2^{16} 23^{1}, Ezk 27^{25}, Ps 48^{7}), but also as in the case of Solomon's navy (1 K 10^{22}; cf 1 K 22^{48}),

sailing S. and E. *from* the copper refineries of Ezion-geber. W. E.—J. Gr.

TARSUS, the capital of the Roman province of Cilicia (Ac 22[3]) in the SE. of Asia Minor, and the birthplace of Paul, is a place about which much more might be known than is known if only the ancient city could be excavated in the way that Pompeii, Olympia, Pergamum, and other cities have been excavated. Tarsus, as a city whose institutions combined Oriental and Western characteristics, was signally fitted to be the birthplace and training ground of him who was to make known to the Gentile world the ripest development of Hebrew religion.

Tarsus (modern *Tersous*) is situated in the plain of Cilicia, about 70 to 80 feet above sea-level, and about 10 miles from the S. coast. The level plain stretches to the north of it for about 2 miles, and then begins to rise gradually till it merges in the lofty Taurus range, about 30 miles N. The climate of the low-lying city must always have been oppressive and unfavourable to energetic action, but the undulating country to the N. was utilized to counteract its effects. About 9 to 12 miles N. of the city proper there was a second Tarsus, within the territory of the main Tarsus, in theory a summer residence merely, but in reality a fortified town of importance, permanently inhabited. It was to periodical residence in this second city among the hills that the population owed their vigour. In Roman times the combined cities of Tarsus contained a large population.

The history of the Maritime Plain of Cilicia was determined by the mutual rivalries of the three cities, Mallus on the Pyramus, Adana on the Sarus, and Tarsus on the Cydnus. The plain is mainly a deposit of the second of those rivers, and contains about 800 square miles of arable land, with a strip of useless land along the coast varying from 2 to 3 miles in breadth. The site of Mallus has been rediscovered at *Kara-Tash*, S. of Adana. The other two cities retain their names and some of their importance to the present day. In ancient times Mallus was a serious rival of Tarsus, and was at first the great harbour and the principal Greek colony in Cilicia. The struggle for superiority lasted till after the time of Christ, but the supremacy was eventually resigned to Tarsus. The river Cydnus flowed through the middle of the city. This river, of which the inhabitants were very proud, was liable to rise very considerably when there had been heavy rains in the mountains, but inundation in the city was in the best period very carefully guarded against. Between A.D. 527 and 563 a new channel was cut to relieve the principal bed, which had for some time previously been insufficiently dredged, and it is in this new channel that the Cydnus now flows, the original channel having become completely choked. About 5 or 6 miles below the modern town the Cydnus flowed into a lake; this lake was the ancient harbour of Tarsus, where were the docks and arsenal. At the harbour town, which was called Aulai, all the larger ships discharged, and in ancient times buildings were continuous between the north of this lake and the city of Tarsus. Much engineering skill must have been employed in ancient times to make a harbour out of what had been a lagoon, and to improve the channel of the river. This city lies on the road to one of the greatest passes of ancient times, the 'Cilician Gates.' Cilicia is divided from Cappadocia and Lycaonia by the Taurus range of mountains, which is pierced from NW. to SE. by a glen along which flows the Tchakut Su. This glen offers a natural road for much of its course, but there are serious difficulties to overcome in its southern part. A waggon road runs over the hills there, and a level path has been cut out of the solid rock on the western bank of the stream, perhaps already by the Hittite kings.

Shalmaneser III., king of Assyria, captured Tarsus about the middle of the 9th cent. B.C. as did Sennacherib. 696 B.C. Neriglissar campaigned in Ḫume (E. Cilicia) in 556 B.C. Afterwards kings ruled over Cilicia, with the Persian kings as overlords. In 401 B.C. there was still a king with the name or title Syennesis, but not in 334 B.C., when Alexander the Great entered the country. It then was governed by the Satrap Arsames. During the 4th cent. Tarsus was subject to the Greek kings of Syria of the Seleucid dynasty. It continued during the 3rd cent. in abject submission to them. The peace of 189 B.C. changed the position of Cilicia. Previous to that date it had been in the middle of the Seleucid territory. Now it became a frontier country. About 175–164 B.C. Tarsus was reorganized by Antiochus IV. Epiphanes as an autonomous city under the name Antioch-on-the-Cydnus (cf 2 Mac 4[30f. 36]). It is extremely probable that the exact date of this refoundation was 171–170 B.C.; the new name lasted only a few years. Not only Tarsus, but a number of other Cilician cities also were reorganized at this time, but Tarsus received the most honourable treatment.

The population of this reconstituted Tarsus in addition to what remained of the earlier population, consisted of Dorian Greeks from Argos. That the Greek element in the population was mainly Dorian is proved by the fact that the chief magistrates bore the Dorian title *damiourgos*. A mythology was invented to prove that this Dorian element was much earlier. It is likely that a large body of Jews also was added to the population by Antiochus. These would be incorporated in a new tribe by themselves, to enable them to practise their own religion unhindered. St. Paul, and probably the 'kinsmen' of Ro 16[7. 11. 21], were citizens of Tarsus enrolled in the Jewish tribe. As the Seleucid empire decayed, the Greek element in Tarsus became weaker, and the Asiatic spirit revived. About 83 B.C. its influence swept over Cilicia with the armies of Tigranes, king of Armenia, under whose power Tarsus fell. For about twenty years it continued under Oriental domination, till the reorganization of the East by Pompey the Great in 65–64 B.C. The Roman province Cilicia had been instituted about 104 or 102 B.C., but Tarsus was not then included in it. It was established mainly to control piracy in the Levant, and included the S. and E. of Asia Minor, but was not sharply defined in extent. In 25 B.C. the province GALATIA (q.v.) was established by Augustus, and Cilicia in the narrow sense became a mere adjunct of Syria. Tarsus was the capital even of the large province Cilicia, and remained that of the smaller under the Empire, which brought many blessings to the provinces and their cities. Experience of the barbarian Tigranes caused a revulsion in favour of Hellenism, and the Tarsians were enthusiastic for the Empire, which carried on the work of Hellenism. Cassius forced them, in 43 B.C., to take his and Brutus' side against Octavian and Antony, but they returned to their former loyalty on the earliest opportunity. Tarsus was made a free city (that is, it was governed by its own laws) by Antony, who met Cleopatra here. This privilege was confirmed by Octavian in or after 31 B.C. It is likely that Pompey, Julius Caesar, Antony, and Augustus all conferred Roman citizenship on some Tarsians, and these would take new names from their benefactors: Gnaeus Pompeius from Pompey, Gaius Iulius from Julius Caesar or Augustus, Marcus Antonius from Antony. The Roman administration probably trusted more to the Jewish than to the Greek element. The latter was capricious, and was restrained by the Stoic Athenodorus, a Tarsian, who had the influence of Augustus behind him. The Oriental element seems to have thus become more assertive, and about A.D. 100 it was predominant. This Athenodorus lived from about 74 B.C. till A.D. 7. He was a Stoic philosopher, distinguished for his lectures and writings. He gained a great and noble influence over Augustus, who was his pupil, and he remained in Rome from 45 B.C. till 15 B.C. as his adviser; in the latter year he retired to Tarsus. There he attempted by persuasion to reform local politics; but being unsuccessful, he used the authority granted him by Augustus, and banished the more corrupt of the politicians. A property qualification was now required for possession of the citizenship. (Among these citizens the Roman citizens formed an aristocracy.) Athenodorus was succeeded by Nestor, an Academic philosopher (still

living A.D. 19). These men had influence also in the university, which was more closely connected with the city than in modern times. A new lecturer had to be recognized by some competent body. There was a great enthusiasm in Tarsus and neighbourhood for learning and philosophy, and in this respect the city was unequalled in Greece. It was here that Paul learned sympathy with athletics, and tolerance for the good elements in pagan religion. The principal deity of Tarsus was Sandon (*Baʿal Tarz*), who was identified with Heracles. A. So.—**E. G. K.**

TARTAK.—An idol introduced by the Avvites into Samaria when Sargon of Assyria transported them thither, 2 K 17[31]. This deity is mentioned along with another called **Nibhaz**, and, according to the Babylonian Talmud, was worshipped in the form of an ass. In Assyro-Babylonian mythology no such deity is at present provable; moreover, the geographical position of the Avvites is uncertain, and their city may have been in one of the western States of Asia. A connexion with *Atargates* has been suggested. LXX^{A} replaces *Tartak* by *Naibas*, but this may be merely a corruption of *Nibhaz*. T. G. P.

TARTAN.—The title borne by two Assyrian officers, one of whom was sent by Sargon to Ashdod (Is 20[1]), while the other, with the **Rab-saris** and the **Rab-shakeh**, was sent by Sennacherib to demand from Hezekiah the surrender of Jerusalem (2 K 18[17]). The word is a transcription in Hebrew of the Assyrian *tartânû* or *tardinnu*, the second in command of the army. L. W. K.

TARTARUS.—See GEHENNA.

TASSEL.—See FRINGES.

TATNAI, Ezr 5[3, 6] 6[6, 13] (AV).—See TATTENAI.

TATTENAI.—The name of the governor of Coele-Syria and Phoenicia under Darius Hystaspis, Ezr 5[3, 6] 6[6, 13] (AV **Tatnai**). He is called **Sisinnes** in 1 Es 6[3, 7, 27] 7[1]; this is simply a reproduction in Greek of a Persian name *Thithinaia* (original *Thathanaia*?), with aspirated *t*.

TATTOO.—Found only in RSV in Lv 19[28], where AV and RV have ‘ print.’ The Hebrew word is found only here in OT.

TAU or **TAW.**—Twenty-second letter of Hebrew alphabet, and so used to introduce the twenty-second part of Ps 119, every verse of which begins with this letter.

TAVERNER'S BIBLE.—See ENGLISH VERSIONS, **21.**

TAVERNS, THREE (Lat. *Tres Tabernae*).—A name of uncertain origin, which might be translated ‘ three shops ’ or ‘ three huts.’ It was a station on the Appian Road (built 321 B.C.) which went from Rome to the S. along the W. coast. This was the principal road for all travellers to or from the S. and E., except those who embarked at Ostia at the mouth of the Tiber. The village was about 33 Roman miles from Rome, and to this point many Christians walked, or drove, to meet Paul on his arrival in Italy from the E. (Ac 28[15]). A. So.

TAW.—See TAU.

TAX COLLECTOR.—See PUBLICAN.

TAX OFFICE.—See CUSTOM(S). AV has ‘ receipt of custom,’ and RV ‘ place of toll.’

TAXES, TAXING.—See KING, **2** (5), PUBLICAN, TRIBUTE, QUIRINIUS.

TEACHER, TEACHING.—See EDUCATION.

TEBAH.—A ‘ son ’ of Nahor, Gn 22[24]; probably a tribal name. See TIBHATH.

TEBALIAH.—A Merarite gatekeeper, 1 Ch 26[11].

TEBETH.—See TIME.

TEHAPHNEHES (Ezk 30[18]).—See TAHPANHES.

TEHINNAH.—The father of Ir-nahash, 1 Ch 4[12].

TEIL TREE.—In Is 6[13] AV has this mistranslation for **terebinth** (q.v.), as in RV, RSV. See also OAK.

TEKEL.—See MENE MENE TEKEL AND PARSIN.

TEKOA (**Tekoah** in AV in 2 S 14[2, 49] and in RV in 1 Mac 9[33]; **Thecoe** in AV in 1 Mac 9[33]).—A fortress city on the edge of the wilderness to which it gave its name, 2 Ch 20[20]. From here came the ‘ wise woman ’ sent by Joab to plead for Absalom, 2 S 14[2, 4, 9]. Rehoboam fortified it, 2 Ch 11[6]; and apparently it continued to be a fortress, Jer 6[1]. Amos was among the shepherds of Tekoa, Am 1[1]. Tekoa is mentioned also in LXX in Jos 15[59], and in the genealogies in 1 Ch 4[5–8]. The site is now *Kh. Teqûʿ*, an extended but shapeless mass of ruins crowning the summit of a hill (2790 feet above sea level), 5 miles S. of Bethlehem. It is on the extreme edge of the cultivated lands. Bethlehem, the Mount of Olives, and *Nebi Samwil* (Mizpah) are all visible from it. A. R. S. K.

TEKOAH.—See TEKOA.

TEL-ABIB (? ‘ hill of corn ’).—A place on the Chebar, Ezk 3[15]. The site is unknown.

TELAH.—An Ephraimite, 1 Ch 7[25].

TELAIM (‘ the lambs ’).—The place at which Saul concentrated his forces, and numbered his fighting men before his campaign against the Amalekites, 1 S 15[4]. The LXX reads *Gilgal* for Telaim, and Josephus (*Ant.* VI. vii. 2 [134]) also makes Gilgal the place of assembly. A more suitable locality for the place of assembly would, however, be in the Negeb, or South; and here lay **Telem** (q.v.), with which Telaim is probably identical.

TELASSAR (‘ Ashur's hill or mound ’).—This city is mentioned with Gozan, Haran, and Rezeph and is spoken of as a place inhabited by ‘ the people (AV and RV ‘ children ’) of Eden ’ (2 K 19[12] [AV **Thelasar**], Is 37[12]). Assyrian inscriptions mention two places so called, one being *Til-Ashuri*, mentioned by Tiglath-pileser III., which had a renowned temple dedicated to Marduk and is stated to have been a Babylonian foundation. The other written *Til-Aššur*, is referred to by Esarhaddon as having been conquered by him (the people of Mihrānu, he says, called it *Pitānu*). It was inhabited by the people of Barnaki—a name which Delitzsch points out as similar to the Parnach of Nu 34[25]. This *Til-Aššur* is supposed to have lain near the land of Mitanni (Upper Mesopotamia), which would find support if *Mihrānu* be connected with the Mehri mentioned by Tukulti-Ninurta I. T. G. P.—**C. J. M. W.**

TELEM.—1. A gatekeeper who had married a foreign wife, Ezr 10[24], 1 Es 9[25] (AV, RV **Tolbanes**); perhaps the same as **Talmon** (q.v.). **2.** A town in Judah, Jos 15[24]; possibly the same as **Telaim** (q.v.). The exact site is unknown.

TEL-HARESHA, Neh 7[61] (AV).—See TEL-HARSHA.

TEL-HARSA, Ezr 2[59] (AV).—See TEL-HARSHA.

TEL-HARSHA.—A Babylonian town of unknown site, Ezr 2[59] (AV **Tel-harsa**), Neh 7[61] (AV **Tel-haresha**), 1 Es 5[36] (AV, RV **Thelersas**).

TELL.—See TALE.

TELL EL-AMARNA.—The modern name of Akhetaten, the city built by Akhenaten (*c* 1366–1350 B.C.) as the centre of his religious reform; on the E. bank of the Nile, about 190 miles S. of Cairo. The city lies in a great bay in the desert, 8 miles long, 3 miles wide, and is built around three roads parallel with the river. The principal units are: the South City, houses of nobles and a manufacturing quarter; Central City with the main temple, official and private palace, Foreign Office in which the Amarna Letters were found, and administrative offices; North Suburb, partly a merchants' quarter, partly a slum; the North City containing the palace to which Nefertiti was banished, offices, and a customs house. A mile to the E. of the main city was a small workers' village, and in the cliffs the tombs of the nobles. Included in the city was a large area on the W. bank that provided food for the inhabitants. Abandoned by Tutankhamun three or four years after the death of Akhenaten, all official buildings were destroyed by Haremhab and Ramesses II. and the site was never again inhabited. See AKHENATEN. H. W. F.

TEL-MELAH ('hill of salt').—A Babylonian town of unknown site, Ezr 2[59], Neh 7[61], 1 Es 5[36] (AV, RV **Thermeleth**).

TEMA.—A son of Ishmael, Gn 25[15], 1 Ch 1[30]. The country and people meant are still represented by the same name—the modern Teimā, a large oasis about 200 miles SE. of the head of the Gulf of 'Aqaba, and the same distances due N. of Medina in W. Arabia. It was an important community in ancient times, mentioned in Assyrian annals of the 8th cent. B.C., and later inhabited in part by Aramaeans, who have left inscriptions. It was noted for its caravan traffic (Job 6[19], Is 21[14]), as might be expected from its position on the great trade routes. In Jer 25[23] it is mentioned with 'all who cut the corners of their hair.' J. F. McC.

TEMAH.—A family of Nethinim (q.v.) mentioned in Ezr 2[53] (AV **Thamah**), Neh 7[55] (AV **Tamah**), 1 Es 5[32] (AV **Thomoi**, RV **Thomei**).

TEMAN.—A tribe (and district) of Edom, whose importance is indicated by its eponym being the eldest son of the eldest son (Eliphaz) of Esau (Gn 36[11, 15], 1 Ch 1[36]; cf Gn 36[42], 1 Ch 1[53]) and by its being taken along with Bozrah (q.v.) to represent the whole land of Edom (Am 1[12]; cf Ob [9]). Ezk 25[13] implies that Edom stretches from Teman to Dedan, from which we infer that the former lay in the NE. of the territory claimed by Edom, that is, to the SE. of Moab. Its inhabitants were renowned for wisdom (Jer 49[7]), and the chief of Job's counsellors was Eliphaz 'the **Temanite**' (Job 2[11]). J. F. McC.

TEMENI.—The 'son' of Ashhur, 1 Ch 4[6].

TEMPERANCE.—1. In the RV 'temperance' is the translation of the Greek word *enkrateia*, the root-meaning of which is 'power over oneself,' 'self-mastery.' It is a comprehensive virtue, and on this account '**self-control,**' the translation of RVm, RSV, is to be preferred (Ac 24[25], Gal 5[23], 2 P 1[6]). The corresponding adjective is found only in Tit 1[8], and the verb only in 1 Co 7[9] 9[25]. The negative form of the adjective is translated 'without self-control' (2 Ti 3[3]), and of the noun 'excess' (Mt 23[25]), and 'incontinency' (1 Co 7[5]). The RV translates another Greek word (*nēphalios*) 'temperate' in 1 Ti 3[2, 11], Tit 2[2]; its root-meaning points to the avoidance of intemperance in the form of drunkenness, but in actual usage it condemns all forms of self-indulgence. This extension of its significance must be remembered in expounding the passages in which the corresponding verb is found, for the RV (and RSV except 2 Ti 4[5]) always translates it (*nēphein*) 'to be **sober**' (1 Th 5[6, 8], 2 Ti 4[5], 1 P 1[13] 4[7] 5[8]).

2. From the philosophical point of view, 'self-control' is mastery over the passions; it is the virtue which holds the appetites in check; the rational will has power to regulate conduct without being unduly swayed by sensuous appetites. From the NT point of view the grace of 'self-control' is the result of the Holy Spirit's indwelling; it is the Spirit-controlled personality alone that is 'strengthened with power' (Eph 3[16]; cf 5[18]) to control rebellious desires and to resist the allurements of tempting pleasures.

3. The NT passages in which reference is made to this virtue form an instructive study. To Felix, with an adulteress by his side, Paul discoursed on 'self-control,' directing his stern condemnation against the vice of unchastity (cf 1 Co 7[5, 9]). But to every form of 'excess' (Mt 23[25]) it is directly opposed. In 1 Ti 3[3] 'not given over to wine' (*paroinos*, RSV 'drunkard') balances 'temperate' (v.[2], cf v.[8]), and from this chapter it is plain that the Apostle regards violent quarrelling (v.[3]), false and reckless speech (v.[8]), self-conceit (v.[6]), greed of filthy lucre (v.[8]), as well as fondness for much wine (v.[8]), as manifold forms of intemperance by whose means men 'fall into reproach and the snare of the devil' (v.[7]).

4. 'Self-control,' in its widest sense, as including mastery over all tempers, appetites, and passions, has a prominent place in two NT lists of the Christian graces. In 2 P 1[6], faith is regarded as the germ of every virtue; it lays hold of the 'divine power' which makes possible the life of godliness (v.[3]). The evolution of faith in 'manliness, knowledge, self-control' is the reward of its 'diligent' culture (v.[8]). This 'self-control,' as Principal Iverach says, 'grows out of knowledge, it is using Christian knowledge for the guidance of life' (*The Other Side of Greatness*, p. 110). In Gal 5[23], 'self-control' closes the list of the graces which are all 'the fruit of the Spirit,' just as 'drunkenness and revellings' close the list of 'the works of the flesh' (v.[21]). The flesh and the Spirit—these, indeed, are 'contrary the one to the other' (v.[17]). The flesh triumphs when the Spirit is quenched; but the Spirit's victory is gained, not by suppressing, but by controlling, the flesh. Those who are 'led by the Spirit' (v.[18]), who 'live by the Spirit' and 'by the Spirit also walk' (v.[25]) attain, in its perfection, the grace of complete 'self-control.'

J. G. T.—J. Ba.

TEMPEST.—See GALILEE [SEA OF], 3; WHIRLWIND.

TEMPLE.—1. The first Temple mentioned in connexion with the worship of Y" is that of Shiloh (1 S 1), 'where the ark of God was' (3[3]) in the period of the Judges, under the guardianship of Eli and his sons. It was evidently destroyed by the Philistines after their decisive victory which resulted in the capture of the Ark, as recorded in 4[10ff]; for the descendants of Eli are found, a generation afterwards, acting as priests of a temple at **Nob** (21[1ff] 22[9ff]). With the capture of Jerusalem by David, and the transference thither of the Ark, a new political and religious centre was provided for the tribes of Israel.

2. SOLOMON'S TEMPLE.—*The site.*—The successive Temples of Solomon, Zerubbabel, and Herod were buildings of moderate dimensions, and were built, by every token, on one and the same site. Now, there is only one place in Jerusalem where this site is to be looked for, namely, on that part of the eastern hill which is now occupied by the large platform, extending to some 35 acres, known as the *Ḥaram esh-sharîf* or 'Noble Sanctuary' (see JERUSALEM, and below, **11**). There has, however, been considerable difference of opinion in the past as to the precise spot within the Ḥaram area on which the 'holy house' itself was reared. Thus a few British writers, among whom Fergusson, the distinguished architect, and W. Robertson Smith, in his article 'Temple' in the *EBrit*[9], are the most influential, have maintained that the Temple and its courts occupied an area about 600 feet square in the SW. portion of the Ḥaram. But the great majority of scholars, both in Britain and abroad, are agreed in placing the Temple in close connexion with the sacred rock (*eṣ-Ṣakhra*) which is now enclosed in the mosque named after it 'the Dome of the Rock,' also, less appropriately, 'the Mosque of Omar.'

The remarkable persistence of sacred sites in the East, is a phenomenon familiar to all students of religion, and there can be little doubt that the Chronicler is right in identifying the site of 'the altar of burnt offering for Israel' (1 Ch 22[1]) with the spot 'by the threshing-floor of Ornan (in 2 S 24[16] Araunah) the Jebusite,' where the angel of the plague stayed his hand, and on which David by Divine command erected his altar of commemoration (see further, **6** (*b*)). This being so, the location of the Temple *immediately to the west of the rock* follows as a matter of course. The only possible alternative is to regard the rock as marking the site, not of the altar of burnt-offering, but of 'the holy of holies' of the successive Temples—a view beset with insuperable difficulties.

3. *The Temple building—Its arrangement and dimensions.*—The Temple and its furniture are described in 1 K 6[1–38] 7[13–51]—two passages which are, unfortunately, among the most difficult in the OT. This is partly by reason of the perplexing technical terms employed, but mostly because of the unsatisfactory nature of the received text. This latter difficulty seems to be due to the fact that the details of Solomon's Temple have been 'corrected' by a scribe who knew the Second Temple

and believed that the Second Temple was a replica of the First.

The most recent account of the Temple is A. Parrot, *The Temple of Jerusalem* (1957). Earlier books are G. A. Smith, *Jerusalem* (1908), vol. ii. (with plans), which deals fully with all the Temples, F. J. Hollis, *The Archaeology of Herod's Temple* (1934), Fathers Vincent and Abel, *Jerusalem II* (1926). Apart from the standard commentaries, the most useful of which for the textual difficulties is Burney's *Notes on the Hebrew Text of the Books of Kings* (1903), there are many articles, the chief of which are Vincent's articles in *RB*, 1907 and 1954, and G. E. Wright's articles in *BA*, 1941 and 1955.

The Temple proper was an oblong building, 60 cubits in length by 20 in breadth (1 K 6^{2}), with a porch in front, facing eastwards, of the same width as the main building and 10 cubits in depth. These, however, are inside measurements, as is evident from vv.$^{20, 24, 27}$. The corresponding outside measurements depend, of course, upon the thickness of the walls, which is nowhere stated. But inasmuch as Ezekiel, the Temple of whose vision is presumably, in part at least, a replica of that of Solomon, gives 6 cubits as the thickness of its walls (Ezk 41^{5}), except the walls of the porch, which were 5 cubits thick (40^{48}), those of the first Temple are usually assumed to have been of the same dimensions. Less they could scarcely have been, if, as will presently appear, rebatements of three cubits in all have to be allowed in the lower half, since a thickness of 3 cubits in the upper half seems necessary, in view of the thrust of a heavy roof of 20 cubits' span.

The interior was divided into two chambers by a transverse partition, implied in 6^{31}, but disregarded in the inside measurements given in v.^{2}. The anterior chamber, called 'the **house**' and the *hêkhâl* (Temple), measured 40 cubits by 20. It has been equated by the editor with the **holy place** of the Second Temple. It was twice as large as the inner chamber, the *dᵉbhîr* (EV 'oracle'), which was only 20 cubits by 20, and was identified by the editor with the **most holy place** (literally 'holy of holies'). The latter in fact formed a perfect cube, since its height was also 20 cubits, as compared with that of 'the holy place,' which was 30 cubits (6^{2}). Assuming that this was also the height of the porch, the whole building, we may conjecture, was covered by a flat roof of uniform height throughout, leaving an empty space 10 cubits in height over the inner chamber.

On all sides, except the front which was occupied by the porch, the Temple proper was surrounded by a lateral building of three storeys, the whole 15 cubits high (so the emended text of v.^{11}), each storey containing a number of small chambers for storage purposes. The beams forming the floors and ceilings of these **side chambers** were not let into the Temple wall, but were supported by making three successive rebatements of a cubit each in the wall (v.^{6}). The chambers accordingly increased a cubit in width in each storey, from 5 in the lowermost storey to 6 and 7 in those above. The entrace to the side chambers was on the S. side of the building. The nature and position of the **windows** which were made 'for the house' are alike uncertain. Openings fitted with lattice work are probably intended (v.^{4}). Their position was most likely in the side walls above the roof of the lateral building.

The question of the area covered by the complete building now described has usually been answered hitherto by a reference to Ezekiel's Temple, which was exactly 100 cubits by 50. But a careful comparison of the measurements of the two Temples makes it extremely probable that the numbers just given are due to Ezekiel's fondness for operating with 50 and its multiples. It is therefore most probable that the prophet has not only increased the depth of the porch from 10 to 12 cubits (Ezk 40^{49} LXX), but has likewise added to the thickness of the walls of the side-chambers and of the interior partition wall. For if the former are taken as 3 cubits in thickness, as compared with Ezekiel's 5, *i.e.* of the same dimensions as the upper half of the Temple walls, and the partition as 1 cubit thick in place of 2 (Ezk 41^{3}), we find the area of the whole building to be 96 cubits by 48, the same relative proportion (2 : 1), it will be noted, as is found in Ezekiel. Similarly, the outside width of the *naos* or sanctuary proper (32 cubits) stood to the total width as 2 : 3.

In the existing uncertainty as to the length of the cubit employed by Solomon's architects, it is impossible to translate these dimensions into feet and inches with mathematical exactness. If the long cubit of about 20½ inches employed by Ezekiel (see Ezk 40^{5} and cf 2 Ch 3^{3}) is preferred, the total area covered will be 164 by 82 feet, while the dimensions of 'the holy place' will be approximately 70 by 35 by 50 feet in height, and those of 'the most holy place' 35 by 35 by 35 feet. A serious objection to this adoption of the longer cubit, which was not foreseen when the article 'Weights and Measures' in Hastings' *DB* iv (see pp. 907 f) was written is presented by the detailed measurements of the interior of Herod's Temple in Josephus and the Mishnah (see below, **12**). These are numerically the same as those of the first Temple. but the cubit employed in the 1st cent. was the short cubit of 17.6 inches, and this has been shown by an inductive study of the Herodian masonry (*ExpT* xx. [1909], p. 24 ff). Now, it is certain that the *actual dimensions of Herod's Temple were not less than those of Solomon's*, as they would be if the cubits were in the ration of 6 to 7. It is more than probable, therefore, that the dimensions above given should be reduced by one-sixth—the Chronicler notwithstanding; in other words, 140 by 70 feet will be the approximate area of the building, 60 by 30 feet, and 30 by 30 feet—that of the 'holy' and 'most holy place' respectively.

4. *The interior of the Temple.*—The entrance to the Temple was through the open porch or vestibule on the eastern front. 'For the entering of the temple' was provided a large folding-door of cypress wood (6^{34}), each leaf divided vertically into two leaves, one of which folded back upon the other. According to v.^{35} in its present form, the leaves were ornamented with carved figures of cherubim, palms, and flowers, all overlaid with gold (but see below). The stone floor was covered with planks of cypress wood. That the latter should have been plated with gold (v.^{30}) is scarcely credible. The walls of both chambers were lined with boards (literally 'ribs') of cedar wood, 'from the floor of the house to the rafters of the ceiling' (so read v.^{15}). There is no mention in this verse, it will be noted, of any ornamentation of the cedar panels, which is first found in vv.^{18} and ^{29}; but the former verse is absent from LXX, and vv.$^{28-30}$ are recognized by all as a later addition. The ceilings, as we should expect, were formed of beams of cedar (v.$^{9, 15}$). Over all was probably laid an outer covering of marble slabs.

The inner chamber of the Temple (the oracle) was separated from the house, as has already been shown, by a partition wall, presumably of stone, which we have assumed above to have been a cubit in thickness. In it was set a door of olive wood, described obscurely in v.^{31}, which seems to say that its shape was not rectangular like the entrance door (see the Commentary on vv.$^{31, 33}$), but pentagonal; in other words, the lintel of the door, instead of being a single cross-beam, consisted of two beams meeting at an angle. In the centre of the chamber, facing the entrance (2 Ch 3^{13}), stood two **cherubim** figures of olive wood, each 10 cubits high, with outstretched wings. The latter measured 10 cubits from tip to tip, so that the two sets of wings reached from the north to the south wall of 'the most holy place' (1 K 6^{23-28}). It is entirely in accordance with ancient practice that these symbolic figures should be overlaid with gold (v.^{28}).

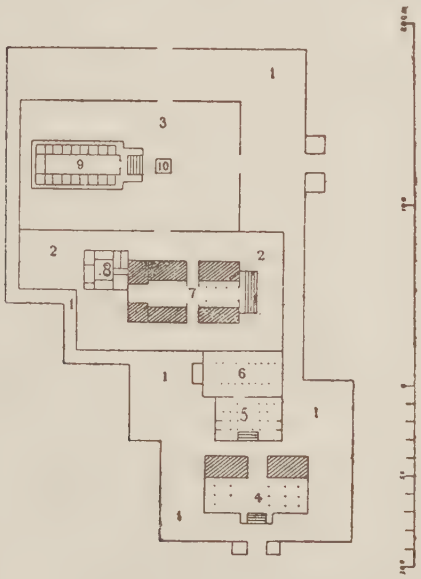
But with regard to the excessive introduction of gold plating by the received text throughout, including even the Temple floor, as we have seen, there is much to be said in favour of the view, first advanced by Stade, that it is due to a desire on the part of later scribes to enhance the magnificence of the first Temple. In the original text the gold plating was perhaps confined to the

cherubim, as has just been suggested, or to these and the doors, which appear to have had a gold sheathing in the time of Hezekiah (2 K 18[16]).

5. *The furniture of the Temple.*—If 1 K 7[48-51] is set aside as a later addition (see the Commentary), the only article of Temple furniture is the **altar of cedar** introduced in the composite text of vv.[20-22]. As there are good grounds for believing that a special altar of incense was first introduced into the second Temple (see **9**), the former is now identified by most writers with the **table of showbread** (see SHOWBREAD ; and TABERNACLE, **6** (*a*)). Its position is evidently intended to be in the outer chamber in front of the entrance to the inner shrine. The same position ' before the **oracle** ' (*dᵉbhîr* 7[49]) is assigned to the ten ' candlesticks,' properly **lampstands** (TABERNACLE, **6** (*b*)), five probably being meant to stand on either side of the entrance. Although, from the date of the passage cited, we may hesitate to ascribe these to Solomon, they doubtless at a later time formed a conspicuous part of the Temple furniture (cf Jer 52[19]).

On the completion of the Temple, the sacred memorial of earlier days, the already venerable **Ark of Y″** was brought from the tent in which David had housed it and placed within ' the oracle,' where it stood overshadowed by the wings of the cherubim (1 K 8[5ff]). Another sacred object of like antiquity, the **brazen serpent** (see SERPENT [BRAZEN]), found a place somewhere within the Temple.

6. *The court of the Temple and its furniture.*—(*a*) *The court and gates.*—The Temple of Solomon formed part of a large complex of buildings, comprising an arsenal, a judgment-hall, the palace with its harem, and finally the royal chapel, the whole surrounded by ' the great court ' of 1 K 7[9, 12]. Within this enclosure, at its upper or northern end, was ' the inner court ' of 6[36] 7[12] within



PLAN OF ROYAL BUILDINGS
(after Stade and Benzinger).

1. The great court. 2. The ' other ' or middle court. 3. The inner (or Temple) court. 4. House of Lebanon. 5. Porch of pillars. 6. Throne porch. 7. Royal palace. 8. Harem. 9. Temple. 10. Altar.

which, again, stood the Temple (8[64]). It is of importance to note that this single **court of the Temple** was open to the laity as well as to the priests (8[62]), as is specially evident from Jer 35[1ff] 36[10] etc.

Several **gates** of this court are mentioned by later writers, but their precise position is uncertain. The main entrance was doubtless in the east wall, and may be indicated by ' the king's entry without ' of 2 K 16[18], and ' the king's gate eastward ' of 1 Ch 9[18]. The ' gate of the guard ' (2 K 11[19]), on the other hand, may be looked for in the south wall separating the Temple court from ' the other court ' (1 K 7[8]) in which the royal palace was situated (cf Ezk 43[7f]). There were also one or more gates on the north side (Ezk 8[3] 9[2], Jer 20[2] **' gate of Benjamin,'** etc.). Cf JERUSALEM, GATES OF.

(*b*) *The altar of burnt-offering.*—It is surprising that no reference is made in the early narrative of 1 K 7 to the making of so indispensable a part of the apparatus of the cult. In the opinion of most critics, this omission is due to the excision from the original narrative of the relative section by a much later editor, who assumed that the brazen altar of the Tabernacle accompanied the Ark to the new sanctuary (but see Burney, *Notes on Heb. Text*, etc., 102 f). The Chronicler, whether informed by *his* text of 1 Kings or otherwise, tells us that Solomon's **altar of burnt-offering** (1 K 9[25]) was of brass (cf the ' brazen altar,' 8[64]), 20 cubits in length and breadth and 10 in height (2 Ch 4[1]). Its position was on the site of the earlier altar of David (2 Ch 3[1]), which, it may be asserted with confidence, stood somewhere on the sacred rock still to be seen within the Mosque of Omar (see **2** above). The precise position which the altars of the first and second Temples occupied on the surface of the rock, which measures at least some 50 by 40 feet, must remain a matter of conjecture. Herod's altar was large enough almost to cover the rock (**11** (*c*)). This question has been made the subject of an elaborate investigation by Kittel in his *Studien zur heb. Archäologie* (1908, 1–85). Solomon's altar was superseded in the reign of Ahaz by a larger altar of more artistic construction, which this sovereign caused to be made after the model of one seen by him at Damascus (2 K 16[10-16]).

(*c*) *The brazen sea.*—In the court, to the south of the line between the altar and the Temple (1 K 7[39]), stood one of the most striking of the creations of Solomon's Phoenician artist, Huram-abi of Tyre. This was **the brazen sea** (7[23-26], 2 Ch 4[2-5]), a large circular basin or tank of bronze, 10 cubits ' from brim to brim ' and 5 in depth, with the enormous capacity of 2000 baths, or more than 16,000 gallons. Even should this prove an exaggerated estimate, the basin must have bulged very considerably in the middle, and the medial diameter must have been at least twice that of the mouth. The brim curved outwards like the calyx of a flower, and underneath it the body of the ' sea ' was decorated with two rows of gourd-shaped ornaments. The basin rested on the backs of twelve bronze oxen, which in groups of three, faced the four cardinal points. Notwithstanding 2 Ch 4[6], written centuries after it had disappeared (Jer 52[17, 20]), recent writers are inclined to give the brazen sea a purely symbolical signification. But whether it is to be interpreted as a symbol of the primeval abyss (Gn 1[2]) and of Y″'s power as Creator, or in the terms of the Babylonian mythology as symbolizing the upper or heavenly sea, bounded by the zodiac with its twelve signs (the 12 oxen), or otherwise, must be left to the future to decide (cf G. A. Smith, *Jerusalem*, ii, 65 f).

(*d*) *The brazen lavers.*—A similar symbolical significance is probably to be assigned to the ten **lavers** of bronze (1 K 7[27-39]). These were smaller editions of the brazen sea, being only 4 cubits in diameter, holding only 40 baths (about 325 galls.), and resting on wheeled carriers, or **bases**. The peculiarly difficult description of the latter has been the subject of special study by Stade (*ZAW*, 1901, 145 ff, with which cf Haupt's *SBOT*), and more recently by Kittel (*op. cit.* 189–242). It must suffice here to say that each carrier was 4 cubits in length and breadth and 3 cubits in height. The sides were open frames composed of uprights of bronze joined together by transverse bars or rails of the same material, the whole richly ornamented with palm trees, lions, oxen, and cherubim in relief. Underneath were four wheels of

bronze, 1½ cubits in diameter, while on the top of each stand was fitted a ring or cylinder on which the laver directly rested.

(*e*) *The pillars Jachin and Boaz.*—Nowhere is the symbolical element in these creations of Huram-abi's art more apparent than in the twin pillars with the mysterious names *Jachin* and *Boaz*, which were set up on either side of the entrance to the Temple porch. They have been discussed in the article JACHIN AND BOAZ (where '**chapiter**' is explained) (see also Kittel's article 'Temple' in *PRE*[3], xix [1907], 493 f).

7. *General idea and plan of Solomon's Temple.*—The building of the Temple occupied seven years and six months (1 K 6^{37f}). After standing for three centuries and a half it was burned to the ground by the soldiers of Nebuchadnezzar in 587–586 B.C., having first been stripped of everything of value that could be carried away. Before passing to a study of its successor, it may be well to note more precisely the purpose for which it was erected, and the general idea underlying its plan. As expressly implied by the term 'the house' (*bayith*) applied to it by the early historian, the Temple was intended to be, before all else, the dwelling-place of Israel's God, especially as represented by the Ark of Y" (see, for this, 2 S $7^{2, 5ff}$). At the same time it was also the royal chapel, and adjoined the palace of Solomon, precisely as 'the king's chapel' at Bethel was part of the residence of the kings of Israel (Am 7^{13}). There is no reason for supposing that Solomon had the least intention of supplanting the older sanctuaries of the land—a result first achieved by the reformation of Josiah (2 K 23).

As regards the plan of the new sanctuary as a whole, with its threefold division of court, holy place, and holy of holies (to adopt, as before, the later terminology), its origin is to be sought in the ideas of temple architecture then current not only in Phoenicia, the home of Solomon's architects and craftsmen, but throughout Western Asia. Syria, as we now know, was influenced in matters of religious art not only by Babylonia and Egypt, but also by the so-called Mycenaean civilization of the Eastern Mediterranean basin. The walled court, the porch, fore-room, and innermost *cella* are all characteristic features of early Syrian temple architecture. Whether or not there lies behind these the embodiment of ideas from the still older Babylonian cosmology, by which the threefold division of the sanctuary reflects the threefold division of the heavenly universe (so Benzinger, *Heb. Arch.*[3], 328 f, following Winckler and A. Jeremias), must be left an open question. In certain details of the furniture, such as the wheeled carriers of the lavers and their ornamentation, may also be traced the influence of the early art of Crete and Cyprus through the Phoenicians as intermediaries.

8. THE TEMPLE OF EZEKIEL'S VISION (Ezk 40–43).—Although the Temple of Ezekiel remained a dream, a word may be said in passing regarding one of its most characteristic features, on account of its influence on the plan of the actual Temples of the future. This is the emphasis laid throughout on *the sacrosanct character of the sanctuary*—a reflection of the deepening of the conception of the Divine holiness which marked the period of the Exile. The whole sacred area covered by the Temple and its courts is to be protected from contact with secular buildings. One far-reaching result of this rigid separation of sacred and secular is the introduction of a second Temple court, to which the priests alone, strictly speaking, are entitled to access (Ezk 40^{28ff}). For the details of Ezekiel's sketch, with its passion for symmetry and number, see the Commentary and Witton Davies' article 'Temple' in Hastings' *DB* iv, 704 ff.

9. THE TEMPLE OF ZERUBBABEL.—The second Temple, as it is frequently named, was built, at the instigation of the prophets Haggai and Zechariah, under the leadership of Zerubbabel. According to the explicit testimony of a contemporary (Hag 2^{18}), the foundation was laid in the second year of Darius Hystaspis (520 B.C.)—a date now generally preferred to that of the much later author of Ezr 3^{8ff}. The building was finished and the Temple dedicated in 516 B.C. We have unfortunately no description of the plan and arrangements of the latter, and are dependent for information regarding it mainly on scattered references in the later canonical and extra-canonical books. It may be assumed, however, that the **altar of burnt-offering**, previously restored by the exiles on their return (Ezr 3^{3}), occupied the former site, now consecrated by centuries of worship, and that the ground-plan of the Temple followed as nearly as possible that of its predecessor (cf G. A. Smith, *op. cit.* ii, ch. xii).

As regards the furnishing of Zerubbabel's Temple, we have not only several notices from the period when it was still standing, but evidence from the better known Temple of Herod, in which the sacred furniture remained as before. Now, however scantily the former may have been furnished at the first, we should expect that after the introduction of the Priests' Code under Ezra, the prescriptions therein contained for the furniture of the Tabernacle would be carried out to the letter. And this is indeed to a large extent what we find. Thus only one **golden lampstand** illuminated 'the holy place' (1 Mac 1^{21}) instead of ten in the former Temple. The **table of showbread** succeeded 'the altar of cedar' of 1 K 6^{20} (for which see **5** above). The golden **altar of incense**, which belongs to a later stratum of P (TABERNACLE, **6** (*c*), was most probably introduced at a somewhat late date, since pseudo-Hecataeus in the 3rd cent. B.C., quoted by Josephus (*c. Apion.* i. 22 [198 f]), knows only of 'an altar and a candlestick both of gold, and in weight two talents'—the former presumably the altar or table of showbread. There is no reason, however, to question the presence of the incense altar by the 2nd cent., as attested by 1 Mac 1^{21ff} (cf 4^{49}), according to which Antiochus Epiphanes robbed the Temple of 'the golden altar and the candlestick of light . . . and the table of showbread,' where the first of these must be identified with the altar in question (see, against the scepticism of Wellhausen and others, the evidence collected by Schürer, *GJV*[4] ii [1907], 342 f [=[3] 285 f]).

In one point of cardinal importance the glory of the second house was less than that of the first. No attempt was made to construct another **Ark**; 'the most holy place' was empty. A splendid curtain or **veil** replaced the partition wall between the two divisions of the sanctuary, and is mentioned among the spoils carried off by Antiochus (1 Mac 1^{22}). In another way the second Temple was distinguished from the first; it had two courts in place of one, an inner and an outer ($4^{38, 49}$ 9^{54}), as demanded by Ezekiel. This prophet's further demand, that the laity should be entirely excluded from the inner court, was not carried out, as is evident from the experience of Alexander Jannaeus. Having given offence to the people while officiating at the altar on the occasion of the Feast of Tabernacles, he was pelted with the citrons which they carried. Alexander in consequence had the altar and Temple railed off to keep the worshippers henceforth at a more respectful distance (Jos. *Ant.* XIII. xiii. 5 [372 ff]).

The altar was no longer of brass but of unhewn stone (1 Mac 4^{47}), as required by Ex 20^{25}, and attested by the earlier writer above cited (*ap.* Jos. *c. Apion., l.c.*), who further assigns to it the same dimensions as the Chronicler gives to the brazen altar of Solomon (**6** (*b*)). In 168 B.C., Antiochus IV., as already stated, spoiled and desecrated the Temple, and by a crowning act of sacrilege set up a small altar to Zeus Olympius on the altar of burnt-offering. Three years later, Judas the Maccabee, after recapturing Jerusalem, made new sacred furniture—altar of incense, table of showbread, the seven-branched candlestick, and other 'new holy vessels.' The stones of the polluted altar were removed and others substituted, and the Temple dedicated anew (1 Mac 4^{41ff}). With minor alterations and additions, chiefly in the direction of making the Temple hill stronger against attack, the Temple remained as the Maccabees left it until replaced by the more ambitious edifice of Herod.

10. If only for the sake of completeness, a brief reference must be made at this point to *two other*

temples for the worship of Y″ erected by Jewish settlers in Egypt during the period covered by the previous section. The earlier of these came to light through the discovery of certain Aramaic papyri on the island of **Elephantine** (q.v.). These describe this temple of Yāhū (Yahweh), which existed at Elephantine before Cambyses invaded Egypt in 525 B.C., and had been destroyed at the instigation of Egyptian priests in 411 B.C. It was probably rebuilt soon after 408 B.C. The story of the other, erected at **Leontopolis** in the Delta by Onias, son of the Jewish high priest of the same name, in the reign of Antiochus IV., has been told by Josephus, who describes it as a replica 'but smaller and poorer,' of the Temple of Zerubbabel (*BJ* VII. x. 2 ff [420 ff], *Ant.* XIII. iii. 1 ff [62 ff]). This description has recently been confirmed by the excavation of the site, the modern Tell el-Yehūdīyeh, by Flinders Petrie (Petrie and Duncan, *Hyksos and Israelite Cities*, 1906, 1927, with plans and models, plates xxiii.–xxv.); not the least interesting feature of this temple *in partibus infidelium* is the fact that it seems to have been built according to the measurements of the Tabernacle. This is altogether more probable than the view expressed by Petrie, that Onias copied the dimensions of the Temple of Jerusalem (*op. cit.* 24).

11. THE TEMPLE OF HEROD.—It was in the eighteenth year of his reign that Herod obtained the permission of his suspicious subjects to rebuild the Temple of Zerubbabel. The Temple proper was rebuilt by a thousand specially trained priests within the space of eighteen months; the rest of the buildings took years to finish, indeed the last touches were given only six or seven years before the final catastrophe in A.D. 70, when the whole was destroyed by the soldiers of Titus. For a fuller study of several of the points discussed in this section, see the articles on 'Some Problems of Herod's Temple' in *ExpT* xx (1908–09), 24 ff, 66 ff, 181 ff, 270 ff.

(*a*) *The outer court, its size, cloisters, and gates.*—It is advisable in this case to reverse the order of study adopted for the first Temple, and to proceed from the courts to the Temple proper. In this way we start from the existing remains of Herod's enterprise, for all are agreed that the Ḥaram area (see above, **2**) and its retaining walls are *in the main* the work of Herod, who doubled the area of Zerubbabel's courts by means of enormous substructures (Jos. *BJ* I. xxi. 1 [401 f]). There are good grounds, however, for believing that, as left by Herod, the platform stopped at a point a little beyond the **Golden Gate** in the eastern wall, its northern boundary probably running in proximity to the north wall of the present inner platform of the Haram. (The latter has been considerably extended in this direction since Herod's day, and is indicated by double dotted lines on the accompanying plan). This gives an area of approximately 26 acres compared with the 35 acres, or thereby, of the present Ḥaram. The measurements were, in round numbers, 390 yards from N. to S. by 330 yards from E. to W. on the north, and 310 yards E. to W. on the south. If the figures just given represent, with approximate accuracy, the extended area enclosed by Herod, the outer court, called in the Mishnah 'the mountain of the house,' and by later writers '**the court of the Gentiles**,' will have appeared to the eye as almost a square, as it is stated to be, although with divergent measurements, by our two chief authorities, the Mishnah treatise *Middoth* (literally 'measurements') and Josephus (*BJ* v. v., *Ant.* xv. xi. and elsewhere).

The climax of Herod's architectural triumphs was reached in the magnificent colonnades which surrounded the four sides of this court. The colonnade along the south wall, in particular, known as '**the Royal Porch**' (or portico, *stoa*), was exceeding magnificent' (1 Ch 22^5). It consisted of four rows of monolithic marble columns of the Corinthian order, forming three aisles; the two side aisles were 30 feet in breadth and 50 feet in height, while the central aisle was half as broad again as the other two and twice as high (Jos. *Ant.* xv. xi. 5 [401 ff], but see *ExpT*, *l.c.*). The ceilings of the roofs were adorned with sculptured panels of cedar wood. On the other three sides of the court the colonnades had only two aisles, that along the east wall bearing the name of **Solomon's Porch** (Jn 10^{23}, Ac 3^{11} 5^{12}), probably from a tradition that it occupied the site of one built by that monarch.

The main approaches to the court were naturally on the west and south. The principal entrance from the west was by the **gate of Kiponos** (*Midd.* i. 3), the approach to which was by a bridge over the Tyropoeon, now represented by Wilson's arch. On the south were the two gates represented by the present 'double' and 'triple' gates, and named the **Huldah** (or 'mole') gates, because the visitor passed into the court by sloping tunnels beneath the royal porch. These ramps opened upon the Court of the Gentiles about 100 feet from the south wall (see plan and, for details, *ExpT*, *l.c.*).

(*b*) *The inner courts and their gates.*—The great court was open to Jew and Gentile alike, and, as we learn from the Gospels, was the centre of a busy life, and of transactions little in accord with its sacred purpose. The **sanctuary** in the strict sense began when one reached the series of walls, buildings, and courts which rose on successive terraces in the northern half of the great enclosure. Its limits were marked out by a low balustrade, the *sōrēgh*, which ran round the whole, and was provided at intervals with notices warning all Gentiles against entering the sacred enclosure on pain of death (cf Paul's experience, Ac 21^{26ff}). From the *sōrēgh*, flights of steps at different points led up to a narrow terrace, termed the *ḥēl* (XYZ in plan), 10 cubits wide, beyond which rose a lofty retaining wall enclosing the whole sanctuary, to which Jews alone had access.

The great wall by which the sanctuary was converted into a fortress, was pierced by nine gateways—H 1–9 on the plan—over which were built massive two-storeyed gate-houses 'like towers' (Jos. *BJ* v. v. 3 [203]), four in the N., four in the S., and one in the E. wall. The most splendid of all the gates was the last mentioned, the eastern gate, which was the principal entrance to the Temple. From the fact that it was composed entirely of Corinthian brass, and had been the gift of a certain Nicanor of Alexandria, it was known as '**the Corinthian gate**' (Jos.), and '**the gate of Nicanor**' (Mish.). There is little doubt that it is also '**the Beautiful Gate** of the temple' (Ac $3^{2, 10}$), as shown by Schürer in his exhaustive study (*ZNW*, 1906, 51–58). The other eight gates were 'covered over with gold and silver, as were the jambs and lintels' (Jos. *BJ* v. v. 3 [201]), at the expense of Alexander, the Jewish alabarch of Alexandria (*c* A.D. 20–40). All the gates were 20 cubits high by 10 wide, according to the Mishnah (Josephus says 30 by 15).

Entering by the 'Beautiful Gate,' H 5, one found oneself in the colonnaded **court of the women**—so called because accessible to women as well as men. This was the regular place of assembly for public worship (cf Lk 1^{10}). The women were accommodated in a gallery which ran round the court (*Midd.* ii. 5), probably above the colonnades as suggested in the plan. Along by the pillars of the colonnades were placed thirteen trumpet-shaped boxes to receive the offerings and dues of the faithful. These boxes are '**the treasury**' into which the widow's mites were cast (Mk 12^{42}).

The west side of this court was bounded by a wall, which divided the sanctuary into two parts, an eastern and a western. As the level of the latter was considerably higher than that of the eastern court, a magnificent semicircular flight of fifteen steps led up from the one to the other. At the top of the steps was an enormous gateway, 50 cubits by 40, allowing the worshippers an uninterrupted view of the altar and the Temple. The leaves of its gate were even more richly plated with silver and gold by Alexander than the others, and hence many have identified this gate with 'the gate that was called Beautiful' (but see Schürer, *loc. cit.* and *ExpT.* xx [1908–09]).

(*c*) *The court of the priests and the great altar.*—There is some uncertainty as to the arrangements of the western court, which we have now reached, owing to the divergent

data of our two authorities, Josephus and the Mishnah. The simplest solution is perhaps to regard the whole western court as in one sense **the court of the priests,** 'the court' *par excellence* of the Mishnah (*Midd.* v. 1, etc.). Alexander Jannaeus, we learned (9), railed off the Temple and altar, and restricted the male Israelites to the outer edge of the then inner court. This arrangement was retained when the courts were laid out anew by Herod. In *Middoth* ii. 6 a narrow strip by the entrance —only 11 cubits in width, but extending the whole breadth of the court from N. to S.—is named the **court of Israel.** Josephus, however, is probably right in representing the latter as running round three sides of the western court (as on plan BBB). Its small size was a reminder that the laity—apart from those actually taking part in the sacrifices, who had, of course, to be allowed even within the still more sacred precincts of the priests' court—were admitted on sufferance to the western court; the eastern court, or court of the women, was, as has been indicated, the proper place of worship for the laity. Along the north and south walls of the enclosure were built chambers for various purposes connected with the Temple ritual (*Midd.* v. 3, 4), chambers and gatehouses being connected by an ornamental colonnade. Those whose location can be determined with some degree of certainty are entered on the plan and named in the key thereto.

The inner court is represented in the Mishnah as a rectangle, 187 cubits by 135, the outer or women's court as an exact square, 135 cubits by 135 (and so on most plans, *e.g. DB* iv, 713). But the rock levels of the Ḥaram, the oblique line of the east side of the platform—due probably to the lie of the rock required for the foundation of the massive east wall—and the repeated appearance of 11 and its multiples (note that $187=11\times17$) in the details of the totals in *Middoth* v. 1, all combine to justify a suspicion as to the accuracy of the figures. On the accompanying plan the whole inner court, B and C, is entered as 170 cubits long from E. to W., and 160 broad. The outer court, A, has a free space between the colonnades of 135 by an average of about 110. The total dimensions of the sanctuary, including the surrounding buildings and the terrace (*hēl*) are as follows: (1) length from W. to E. across the rock, 315 cubits or 462 feet; (2) width from N. to S. 250 cubits or 367 feet. The data on which these measurements are based will be found in the essays in the *Exp. Times*, already frequently referred to.

In the latest, and in some respects the best, plan of Herod's Temple by Waterhouse in Sanday's *Sacred Sites of the Gospels*, the data of the Mishnah are set aside, and a large 'court of men of Israel' is inserted in the western court *in addition to* those above described. Against this view it may be urged, (1) that it requires its author to remove the eastern court, which was an essential part of the sanctuary, from a place on the present inner platform of the Ḥaram; (2) the consequence of this is to narrow unduly the space between the Beautiful Gate and Solomon's Porch. If there is one statement of the Mishnah that is worthy of credit, it is that 'the largest free space was on the south, the second largest on the east, the third on the north, and the smallest on the west' (*Midd.* ii. 1). But, as the plan referred to shows, this is not the case if the court of the women is removed so far to the east by the insertion of a large 'court of Israel.' The plan is also open to criticism on other grounds (cf G. A. Smith, *op. cit.* ii, 508 ff).

The altar of burnt-offering, D, was, like that restored by Judas the Maccabee, of unhewn stone, and measured at the base 32 cubits by 32 (47 feet square, thus covering almost the whole of the sacred rock, see 6 (*b*)), decreasing by three stages till the altar-hearth was only 24 cubits square. The priests went up by an inclined approach on the south side in accordance with Ex 20^{26}. To the north of the altar was the place where the sacrificial victims were slaughtered and prepared for the altar. It was provided with rings, pillars, hooks, and tables. **A laver,** O, for the priests' ablutions stood to the west of the approach to the altar.

12. *The Temple building.*—A few yards beyond the great altar rose the Temple itself, a glittering mass of white marble and gold. Twelve steps, corresponding to the height (12 half-cubits) of the massive and probably gold-covered stereobate on which the building stood, led up to the porch.

The porch was probably 96 cubits in height and of the same breadth at the base. The Mishnah gives its height, including the 6 cubits of the podium or stereobate, as 100 cubits. The real depth was doubtless, as in Solomon's Temple (3), 10 cubits in the centre, but now increased to 20 cubits at the wings (so Josephus). As the plan shows, the porch outflanked the main body of the Temple, which was 60—the Mishnah has 70—cubits in breadth, by 18 cubits at either wing. These dimensions show that Herod's porch resembled the pylons of an Egyptian temple. It probably tapered towards the top, and was surmounted by an Egyptian cornice with the familiar cavetto moulding (cf sketch below). The entrance to the porch measured 40 cubits by 20 (*Middoth*, iii. 7), corresponding to the dimensions of 'the holy place.' There was no door.

The **'great door of the house'** (20 cubits by 10) was 'all over covered with gold,' in front of which hung a richly embroidered Babylonian veil, while above the lintel was figured a huge golden vine (Jos. *Ant.* xv. xi. 3 [395], *BJ* v. v. 4 [210]). The interior area of Herod's Temple was, for obvious reasons, the same as that of its predecessors. A hall, 61 cubits long by 20 wide, was divided between the **holy place** (40 by 20, but with the height increased to 40 cubits [*Middoth*, iv. 6]) and the **most holy place** (20 by 20 by 20 high). The extra cubit was occupied by a double curtain embroidered in colours, which screened off 'the holy of holies' (cf *Midd.* iv. 7 with *Yoma*, v. 2). This is the **veil of the Temple** referred to in Mt 27^{51} and ‖ (cf He 6^{19} etc.).

As in Solomon's Temple, three storeys of side-chambers, probably 30 cubits in height, ran round three sides of the main building. But by the provision of a passage-way giving access to the different storeys, and making a third outside wall necessary, the surface covered by the whole was now 96 cubits in length by 60 in breadth, not reckoning the two wings of the porch. Over the whole length of the two holy places a second storey was raised, entirely, as it seems, for architectural effect.

The total height of the *naos* is uncertain. The entries by which the Mishnah makes up a total of 100 cubits are not such as inspire confidence; the laws of architectural proportion suggest that the 100, although also given by Josephus, should be reduced to 60 cubits or 88 feet, equal to the breadth of the *naos* and lateral chambers. On the plan the lowest side chambers are intended to be 5 cubits wide and their wall 3 (both as in 3), the passage-way 3, and the outside wall 3, giving a total width of $14+6+20+6+14=60$ cubits (Jos. v. v. 4 [207 ff]; cf *DB* iv, 715 for the corresponding figures of *Midd.* iv. 7). The result of taking the principles of proportion between the various parts as the decisive factor when Josephus and the Mishnah are at variance, is exhibited in the diagram on p. 968, which combines sections through the porch and the holy place.

The furniture of 'the holy place' remained as in former days. Before the veil stood the altar of incense; against the south wall the seven-branched **golden lampstand,** and opposite to it the **table of showbread** (Jos. *BJ* v. v. 5 [216 f]). A special interest attaches to the two latter from the fact, known to every one, that they were among the Temple spoils carried to Rome by Titus to adorn his triumph, and are still to be seen among the sculptures of the Arch of Titus.

'The most holy place' was empty as before (Jos. *ib.*), save for a stone on which the high priest, who alone had access to this innermost shrine, deposited the censer of incense on the Day of Atonement (*Yōmā*, v. 2).

All in all, Herod's Temple was well worthy of a place

KEY TO PLAN OF HEROD'S TEMPLE AND COURTS

a b c d, the surrounding balustrade (*sōrēgh*). **X Y Z**, the terrace (*ḥēl*).

A, Court of the Women. **B B B**, Court of Israel. **C C C**, Court of the Priests.

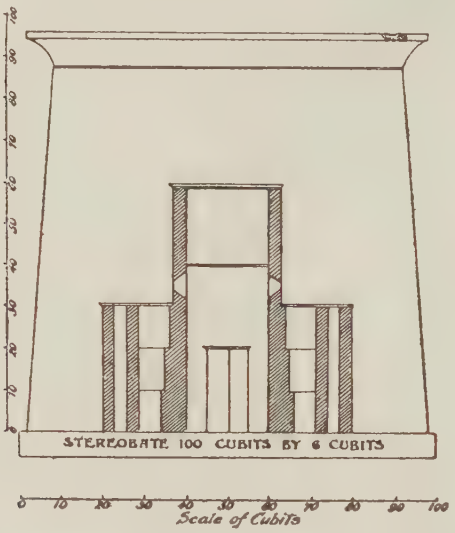
D, altar of burnt-offering. **E F G**, porch, holy place, and holy of holies. **O**, the laver.

H, 1–9, Gates of the Sanctuary (*Middoth*, i. 4, 5), viz.: 1, gate of the House Moked; 2, Corban gate; 3, gate Nitsus; 5, the gate of Nicanor, or the Beautiful Gate; 7, the water gate; 8, gate of the firstborn; 9, the fuel gate; 10, the 'upper gate,' wrongly called the gate of Nicanor.

K, the guardhouse Moked (=hearth). **L**, the 'northern edifice that was between the two gates' (see *BJ* VI. ii. 7 [150]). Here, it is suggested, the sacrificial victims were examined by the priests, having been brought in either by the underground passage shown on the plan, or by the ramp also shown. The upper storey may have contained the important 'chamber of the councillors' (*parhedrin*) (*Yoma*, i. 1).

M, the chamber Gazith, in which the priests on duty assembled for prayer (*Tamid*, iv. end). There are not sufficient data for fixing the location of the other chambers mentioned in the Mishnah. Their distribution on the plan is purely conjectural.

among the architectural wonders of the world. One has but to think of the extraordinary height and strength of the outer retaining walls, parts of which still claim our admiration, and of the wealth of art and ornament lavished upon the porticoes and buildings. The artistic effect was further heightened by the succession of marble-paved terraces and courts, rising each above and within the other, from the outer court to the Temple floor. For once we may entirely credit the Jewish historian when he tells us that from a distance the whole resembled a snow-covered mountain, and that the light reflected from the gilded porch dazzled the spectator like 'the sun's own rays' (Jos. *BJ* v. v. 6 [222]).



DIAGRAMMATIC SECTION OF TEMPLE AND PORCH

13. *The daily Temple service in NT times.*—This article may fitly close with a brief account of the principal act of Jewish **worship** in the days of our Lord, which centred round the daily or 'continual' (Heb. *tamîdh*, Ex 29^{42}) burnt-offering, presented every morning and every evening or rather mid-afternoon,, throughout the year, in the name, and on behalf, of the whole community of Israel (see Ex 29$^{38-42}$, Nu 28$^{3-8}$). A detailed account of this service, evidently based on reliable tradition, is given in the Mishnah treatise *Tamid* (cf also the full exposition given by Schürer, *GJV*^{3} ii, 288–299 = ^{4}345–357 [*HJP* II. i, 273–299]).

The detachment of priests on duty in the rotation of their 'courses' (Lk 1^8) slept in the 'house Moked' (K on plan). About cock-crow the priests who wished to be drawn for the morning service bathed and robed, and thereafter repaired to the chamber Gazith (M) in order to determine by lot those of their number who should 'officiate.' By the first lot a priest was selected to remove the ashes from the altar of burnt-offering, and prepare the wood, etc., for the morning sacrifice. This done, 'the presiding official said to them, Come and draw (to decide) (1) who shall slay, (2) who shall toss (the blood against the altar), (3) who shall remove the ashes from the incense altar, (4) who shall clean the lampstand, (5)–(10) who shall carry the parts of the victim to the foot of the altar [six parts are specified], (11) who shall prepare the (meal-offering) of fine flour, (12) the baked offering (of the high priest), and (13) the wine of the drink-offering' (Mishnah, *Tamid*, iii. 1).

At the hour of dawn the preparations here set forth were begun, and the Temple gates thrown open. After the victim, a yearling lamb, had been slain, the incense altar prepared and the lamps trimmed, the officiating priests assembled in the chamber Gazith for a short religious service, after which there commenced the solemn acts of worship in which the *tāmîdh* culminated —the offering of incense and the burning of the sacrificial victim. The priest, chosen as before by lot (Lk 1^9), entered the Temple with a censer of incense, and, while the smoke was ascending from the altar within the Holy Place, the worshippers without prostrated themselves in adoration and silent prayer. After the priestly benediction had been pronounced from the steps of the porch (*Tamid*, vii. 2), the several parts of the sacrifice were thrown upon the altar and consumed. The pouring of the drink-offering was now the signal for the choir of Levites to begin the chanting of the Psalm for the day. At intervals two priests blew on silver trumpets, at whose sound the people again prostrated themselves. With the close of the Psalm the public service was at an end, and the private sacrifices were then offered.

The order of the mid-afternoon service differed from the above only in that the incense was offered after the burning of the victim instead of before. The lamps, also, on the 'golden candlestick,' were lighted at the 'evening' service. A. R. S. K.—N. H. S.

TEMPLE SERVANTS.—See NETHINIM.

TEMPTATION.—1. The English words 'tempt' and 'temptation' are, in the OT—with the exception of Mal 3^{15}, where a synonym *bāḥan* is used—the translation of various forms of the root *nissāh*, which is properly rendered 'prove' or 'test.' In Gn 22^1 RV translates 'God did prove Abraham' (RSV 'God tested Abraham'). RV (but not RSV) retains 'temptation' for (*a*) God's testing of Pharaoh's character and disposition (Dt 4^{34}, RVm 'trials' or 'evidences'; cf 7^{19} 29^3); (*b*) Israel's distrustful putting of God Himself to the proof (Dt 6^{16}; cf Ex 17$^{2, 7}$, Nu 14^{22}, Ps 78$^{18, 41, 56}$). In Ps 95^8 RV and RSV rightly keep 'Massah' as a proper noun, the reference being to the historic murmuring at Rephidim (Ex 17^{7ff}; cf Dt 33^8, Ps 81^7).

Driver (*ICC*, on Dt 6^{16}) points out that *nissāh* is a neutral word, and means to *test* or *prove* a person, to see *whether* he will act in a particular way (Ex 16^4, Jg 2^{22} 3^4), or *whether* the character he bears is well established (1 K 10^1). God thus *proves* a person, or *puts* him *to the test*, to see if his fidelity or affection is sincere (Gn 22^1, Ex 20^{20}, Dt 8^2 13^3; cf Ps 26^2); and men *test*, or *prove* the Lord when they act as if doubting whether His promise be true, or whether He is faithful to His revealed character (Ex 17$^{2, 7}$, Nu 14^{22}, Ps 106^{14}; cf Is 7^{12}).' There appears to be a special meaning of 'testing' in Ex 20^{20}, Dt 7^{19} 8$^{2-16}$ 29^3, where the mighty works and theophanies of the Exodus story are to test the character of Israel.

2. In the intertestamental literature God's testing of Abraham (Gn 22$^{1-19}$) becomes a favourite theme and receives a special development, in that an evil angel tempts Abraham (*Apocalypse of Abraham* 12^{1ff}), and the angel Mastema suggests to God that Abraham (like Job) should be put to the test (*Jub.* 17–19). Isaiah is tempted at the time of his martyrdom to deny God and to obey the devil instead (*Martyrdom of Isa.* 5^{1ff}). Rabbinic tradition knows of ten temptations of Abraham (*Aboth* v. 4; cf the ten temptations of Joseph in *Test. Joseph* 2^7). In Ben-Sira, temptations are a part of God's testing of anyone who prepares to serve the Lord (Sir 2$^{1-5}$), but God will give help and rescue man from temptation (33^1). The idea is not unknown in pagan literature; Seneca, *de Providentia*, iv. 12, says that God tests noble spirits with severity.

3. The Greek word *peirasmos* is the usual LXX rendering of *massāh*. This and its cognates *peirazō*, *peiraomai*, etc., are also 'neutral' words. In pre-Christian Greek they cover the range 'attempt,' 'try,' 'make trial of,' 'put to the test,' 'tempt,' and 'seek to seduce.' In the NT the verb often retains the wider meaning of 'try,' 'test' (*e.g.* Mk 10^2, Jn 6^6, Ac 16^7), but also frequently refers to enticement into sin (Mt 4^1, 1 Co 7^5, Ja 1^{13} etc.; cf 'the tempter,' Mt 4^3, 1 Th 3^5).

In the RV it is almost always translated 'temptation,' with the occasional marginal alternative 'trial' (Ja 1[2], 1 P 1[6]); the exceptions are Ac 20[19], Rev 3[10], where 'trial' is found in the text. RSV substitutes 'try' or 'make trial of' ('trial') for 'tempt' ('temptation') wherever enticement to what is wrong is not evidently spoken of; but 'temptation' is retained in Mt 6[13] || Lk 11[4], where the range of the petition cannot be thus limited; cf Ja 1[2].

4. In NT eschatology there is a persistent idea that the woes of the last days are a final trial of the faithful (Mk 13[11-22], Rev 3[10]), and A. Schweitzer believes that this was a feature of Jesus' own teaching; it is, however, for the most part an idea of the early Christian community. But the idea is also present, as in Ben-Sira, that God will rescue the faithful out of their trial (2 P 2[9]). The phrase in the Lord's Prayer 'lead us not into temptation' (Mt 6[13] || Lk 11[4]) has been much debated, and the difficulty may be partly ascribed to the narrowing of the significance of the English word since 1611, so that it now most often has the sense of *provoking* or *enticing* a person so that he may act in a particular way. Perhaps the original meaning is 'preserve us from being put to the test.' At the same time, the Gethsemane saying (Mk 14[38]) seems to say that the disciples must watch and pray lest they enter into 'temptation.' The Epistle of James, however, argues (1[13f]) that God cannot be tempted to do evil and will not tempt anyone; temptation is due to one's own evil desires. Here the author may have in mind the Lord's Prayer with its difficult clause. Certainly it would seem unlikely that the prayer contemplates a situation in which the faithful are miraculously exempted from the normal trials and perplexities of the moral life. Although it is not said in so many words, the prayer may be for strength to overcome temptation. Paul teaches that God will not let the believer be tempted beyond his strength but with every temptation will provide a way to endure it (1 Co 10[13]). The Epistle to the Hebrews points to the temptation of Christ as a sign that the one who has thus been tempted is able to help others (2[18]). As in contemporary Judaism, the NT frequently ascribes to Satan rather than God the origin of temptation (1 Co 7[5], Rev 2[10]). The temptations of Christ include the temptation to put God to the test (Mt 4[5-7], Lk 4[9-12]); this is a familiar theme in the intertestamental literature and in Ac 5[9], 1 Co 10[9], He 3[9]. The stories of our Lord's temptations symbolize spiritual dangers which He faced at other points in His ministry. They have analogies in Jewish apocalyptic literature and in other religions, especially the temptations of the Buddha and Zoroaster. See JESUS CHRIST, **8.** S. E. J.

TEN.—See NUMBER, **7.**

TEN COMMANDMENTS.—1. The traditional history of the Decalogue.—The 'ten words' were, according to Ex 20, proclaimed vocally by God on Mount Sinai, and written by Him on two stones, and given to Moses (Ex 24[12] 31[18] 32[15f]; cf Dt 5[22] 9[10f]). When these were broken by Moses on his descent from the mount (Ex 32[19], Dt 9[17]), he was commanded to prepare two fresh stones like the first, on which God re-wrote the 'ten words' (Ex 34[4, 28], Dt 10[2, 4]). This is clearly the meaning of Exodus as the text now stands. But many critics think that v.[28b] originally referred not to the 'ten words' of Ex 20, but to the laws of 34[11-26], and that these laws were J's version of the Decalogue. It must suffice to say here that if, as on the whole seems likely, v.[28b] refers to our Decalogue, we must distinguish the command to write the covenant laws in v.[27], and the words 'he wrote' in v.[28b], in which case the subject of the latter will be God, as required by 34[1]. The two stones were immediately placed in the Ark, which had been prepared by Moses specially for that purpose (Dt 10[1-5] [probably based on JE]). There they were believed to have permanently remained (1 K 8[9], Dt 10[5]) until the Ark was, according to Rabbinical tradition, hidden by Jeremiah, when Jerusalem was finally taken by Nebuchadrezzar.

2. The Documentary History of the Decalogue.—The Decalogue of Ex 20 can be compared with two different sets of commandments, (*a*) that of the above-mentioned J collection in Ex 34[14-28] and (*b*) that of Dt 5[6-21]. (*a*) Historically the comparison with the J *corpus* is the more important. It is difficult to establish the exact number of laws in it, or indeed to extract them from their accretions, but the following list may be suggested:

(i) You shall worship no other god (v.[14]).
(ii) You shall make for yourself no molten gods (v.[17]).
(iii) The feast of unleavened bread you shall keep (v.[18]).
(iv) All that opens the womb is mine (v.[19]).
(v) None shall appear before me empty (v.[20]).
(vi) Six days you shall work, but on the seventh day you shall rest (v.[21]).
(vii) You shall observe the feast of weeks, . . . and the feast of ingathering at the year's end (v.[22]).
(viii) Three times in the year shall all your males appear before the Lord (v.[23]).
(ix) You shall not offer the blood of my sacrifice with leaven (v.[25]).
(x) The sacrifice of the feast of the Passover shall not be left until the morning (v.[25]).
(xi) The first of the firstfruits of your ground you shall bring to the house of the Lord (v.[26]).
(xii) You shall not boil a kid in its mother's milk (v.[26]).

Marks of affinity with the Decalogue are obvious—no other gods, no idols, Sabbath observance; but the differences are equally obvious, and explain why the one version is called the Ritual and the other the Ethical Code. The primitive nature of the Ritual code over against the Ethical is also obvious. Ex 34, too, lacks the prestige of Ex 20, placed as the latter is, at the head of an identifiable collection, the Book of the Covenant and the Code of Deuteronomy.

(*b*) A comparison of the Decalogue in Ex 20 with that of Dt 5 renders it probable that both are later recensions of a much shorter original. The phrases peculiar to Dt 5 are in most cases obviously characteristic of D, and must be regarded as later expansions. Such are 'as the Lord your God commanded you' in the 4th and 5th 'word,' and 'that it may go well with you' in the 5th. In the last commandment the first two clauses are transposed, and a more appropriate word ('desire') is used for coveting a neighbour's house. Here evidently we have a later correction. Curiously enough Ex 20, while thus generally more primitive than Deuteronomy, shows signs of an even later recension. The reason for keeping the Sabbath, God's rest after creation, is clearly based on Gn 2[1-3], which belongs to the post-exilic Priestly Code (P). The question is further complicated by the fact that several phrases in what is common to Ex 20 and Deuteronomy are of a distinctly Deuteronomic character, as 'who is within your gates' in the Fourth Commandment, 'that your days may be prolonged' 'in the land which the Lord your God gives you' in the 5th. We see, then, that the Decalogue of Exodus is in all probability the result of a double revision (a Deuteronomic and a Priestly) of a much more simple original. It has been suggested that originally all the commandments consisted of a single clause, and that the name 'word' could be more naturally applied to such. In favour of this view, beyond what has been already said, it is argued that this short form would be more suitable for inscription on stone.

3. How were the 'ten words' divided?—The question turns on the beginning and the end of the Decalogue. Are what we know as the First and Second, and again what we know as the Tenth, one or two commandments? The arrangement which treats the First and Second as one, and the Tenth as two, is that of the Massoretic Hebrew text both in Exodus and Deuteronomy, and was that of the whole Western Church from the time of St. Augustine to the Reformation, and is still that of the Roman and Lutheran Churches. Moreover, it may seem to have some support from the Deuteronomic version of the Tenth Commandment. Our present arrangement,

however, is that of the early Jewish and early Christian Churches, and seems on the whole more probable in itself. A wife, being regarded as a chattel, would naturally come under the general prohibition against coveting a neighbour's goods. If, as already suggested, the original form of the commandment was a single clause, it would have run, 'You shall not covet your neighbour's house.'

4. The contents of each table.—If, as suggested, the original commandments were single clauses, it is most natural to suppose that they were evenly divided between the two tables—five in each. This view is adopted without hesitation by Philo, and it is not contradicted by our Lord's division of the Law into the love of God and the love of one's neighbour. It would be difficult to class parents in the category of neighbour, whereas the reverence due to them was by the ancients regarded as a specially sacred obligation, and was included, by both Greeks and Romans at any rate, under the notion of piety.

5. Order of the Decalogue.—The Hebrew texts of Ex 20 and Dt 5 agree in the order—murder, adultery, theft—as the subjects of the 6th, 7th, and 8th Commandments. The LXX (best MSS) in Exodus have the order—adultery, theft, murder; in Deuteronomy—adultery, murder, theft. This last is borne out by Lk 18^{20}, Ro 13^{9}, and by the Nash Papyrus and Philo, and may possibly have been original.

6. Mosaic origin of the Decalogue.—The question has recently been thoroughly examined by H. H. Rowley ('Moses and the Decalogue,' *Bull. of the John Rylands Library*, 1951–52, pp. 81–118), and he concludes for the highly probable authenticity of Mosaic authorship of the Ethical Decalogue over against the Ritual *corpus*. The latter approximates to the pre-Mosaic form, but there are elements in the Ethical code which are more suitably attributed to Moses himself. The prohibition of images of Yahweh is consistent with the complete absence of proof that true Yahwism, which is demonstrably pre-Mosaic, had ever permitted an idol, and the once popular idea that the Ark of the covenant originally contained an image has no actual foundation. Weekly Sabbath observance, whatever it may have implied, goes consistently back to the very earliest form of the Decalogue, and a pre-Mosaic background is not unreasonable despite the nomadic life of the people. All this is common to both codes. The Ritual code is traced to the Kenite Yahweh worshipping groups with which Judah was associated. On the other hand, the Ethical Decalogue, in its simplest and most direct form, most probably belongs to the tribes which Moses himself led from Egypt to Sinai. 'The change from the primitive Decalogue to the Ethical Decalogue is most naturally to be associated with some great prophetic personality, and Moses would supply the personality, and the circumstances of the time the occasion, better than any other individual or time of which we have knowledge' (*op. cit.*, p. 100). This is a drastic and over-simplified statement of Rowley's survey, and although it is admittedly hypothetical it is unlikely that the conclusion will be denied unless some actual evidence to the contrary, such as the archaeological discovery of a post-settlement image of Yahweh among the orthodox Yahweh worshippers, is discovered to contradict it.

On the Decalogue in the NT see LAW (IN NT).

F. H. W.—B. J. R.

TEN-STRINGED HARP (or 'harp of ten strings,' or 'psaltery of ten strings').—See MUSIC, **4** (1) (*b*).

TENONS.—See TABERNACLE, **5** (*c*).

TENT.—Apart from the traditions of the patriarchs as 'quiet' men, 'dwelling in tents' (Gn 25^{27} RVm, RSV), the settled Hebrews preserved a reminder of their nomad ancestry in such phrases as 'going to one's tent' for 'to go home' (Jg 19^{9} RV, RSV, cf RVm), and in the recurring call, 'to your tents (*i.e.* to your homes), O Israel' (1 K 12^{16} etc.), as well as in a number of more figurative expressions, *e.g.* Job 8^{22}, Ps 132^{3}, Pr 14^{11}, Is 16^{5}, La 2^{4}. For an interesting case of adherence to the 'nomadic ideal' on religious grounds, cf Jer 35^{7ff} and see RECHABITES.

The Hebrew tent, even in later days, cannot have differed much from the simple Bedouin tent of to-day, made by sewing together strips of the native goats' hair cloth (cf Ca 1^{5} 'I am very dark . . . like the tents of Kedar'). These 'curtains' (Jer 4^{20}, Ex 26^{2} and often) are held up by poles, generally nine in number, arranged in three rows of three, and 6–7 feet high, which are kept in position by ropes—the '**cords**' of EV and the '**tent-cord**' of Job 4^{21} RV, RSV—attached to 'stakes' or '**tent-pins**' driven into the ground by a mallet (Jg 4^{21}). The larger the tent, the longer the cords and the stronger the stakes, according to the figure, Is 54^{2}. The tent, then as now, was probably divided into two parts by hanging a curtain from the three middle poles along the length of the tent—the front division open and free to all, the back closed and reserved for the women and the privacy of domestic life (Jg 15^{1}, Ca 3^{4}; cf Gn 18^{9f}). Adjoining such tents were tents for the cattle, cf 2 Ch 14^{14}, literally 'cattle-tents', and K. Galling, *Biblisches Reallexikon*, 1937, s.v. ZELT.

In time of war we read both of **booths** (2 S 11^{11}, so RV, RSV rightly for AV 'tents') and of tents (2 K 7^{7}, Jer 37^{10}). The Assyrian sculptures represent the soldiers' tents as conical in shape, supported by a central pole with two arms. On the famous bronze sheathing of the palace gates at Balâwât, representing every detail of the conduct of war, the royal **pavilion** (1 K $20^{12.16}$, RSV 'booths') is frequently represented. It was rectangular in shape, with ornamental wooden pillars with floral capitals at the four corners. The walls were probably of linen, and the roof evidently of tapestry or other rich material edged with tassels (see the plates in Billerbeck's *Die Palasttore Salmanassars* II., 1908).

In early times a special tent was pitched for a newly wedded pair (Ps 19^{5}, Jl 2^{16}; cf 2 S 16^{22}), as is still the custom among the Arabs. The **canopy** under which Jewish couples are married at the present day still retains the name, as it is a survival of the ancient *ḥuppāh* or bridal tent.

Priscilla and Aquila, as well as the Apostle Paul, were **tentmakers** (Ac 18^{2f}). See SPINNING AND WEAVING, **1**, **4** (*c*).

A. R. S. K.—E. T. R.

TENT OF MEETING.—See TABERNACLE, **1**.

TENT OF THE TESTIMONY.—See TABERNACLE, **7**.

TENTH.—See TITHES.

TEPHON.—One of the towns in Judaea fortified by Bacchides, 1 Mac 9^{50} (AV **Taphon**). Tephon was probably an old **Tappuah**; but whether it was Tappuah **1** or **2**, or Beth-tappuah, is uncertain.

TERAH.—The father of Abraham, Nahor, and Haran, Gn 11^{24-32}, 1 Ch 1^{26}, Lk 3^{34} (AV **Thara**). Along with his three sons he is said to have migrated from Ur of the Chaldees to Haran, where he died. In Jos 24^{2} it is said that he 'served other gods'—a statement which gave rise to some fanciful Jewish Haggadoth about Terah as a *maker* of idols. **2.** A stopping-place of the Israelites, Nu 33^{27f} (AV **Tarah**). Its location is unknown.

TERAPHIM.—See IMAGES, **2**; ISRAEL, II, **3** (7).

TEREBINTH.—The terebinth or **turpentine** tree (Sir 24^{16} AV) (*Pistacia terebinthus*, the *butm* of the Arabs) is one of the most imposing trees in Palestine. In almost every locality where it is allowed to attain its full growth—30 to 40 feet high—it is associated with a person or tomb (teacher's t. Gn 12^{6}, Dt 11^{30}, diviner's t. Jg 9^{37}, and as a burial place 1 Ch 10^{12}). Dwarfed trees occur everywhere among the oak brushwood. The tree has pinnate, lancet-shaped leaves, and small reddish clusters like immature grape clusters; it is also often covered with curious red galls—like pieces of coral. The dark overhanging foliage affords a grateful shade in summer, but in autumn the leaves change colour and fall off. It is this deciduousness (cf Is 1^{30}) which enables a distinction to be made between very similar Hebrew words, *'ēlāh*

and *'ēlōn*, 'terebinth' and *'allōn*, 'oak' (see OAK). The distinction is clear in Is 6^{13} and Hos 4^{13}. The abundant branching and foliage of the terebinth is mentioned in the story of Absalom (2 S 18^{9}). The word does not occur at all in AV, and only three times in RV and RSV—in Is 6^{13} for AV's 'teil tree,' in Hos 4^{13} for 'elm' and in Sir 24^{16} for 'turpentine tree.' RV margin, and less often RSV margin, have terebinth as an alternative to oak in a few places. Tradition may also have lent confusion: the oak of weeping Gn 35^{8}, the palm tree of Deborah, Jg 4^{5}, and the terebinth of Tabor (? Deborah), 1 S 10^{3}, may all refer to the same tree. E. W. G. M.—L. H. B.

TERESH.—A chamberlain of Ahasuerus, Est 2^{21} 6^{2}; called in Ad. Est 12^{1} **Tharra.**

TERTIUS.—St. Paul's amanuensis who wrote Romans and added a personal salutation (16^{22}). It was the Apostle's custom to employ a scribe (no doubt dictating shorthand notes, a common practice), but to add a short autograph himself. The autographs probably are: Ro 16^{25-27}, 1 Co 16^{21-24} (expressly), 2 Co 13^{13f} (or 11^{f}) Gal 6^{11-18} (expressly), Eph 6^{23f}, Ph 4^{21-23}, Col 4^{18} (expressly), 1 Th 5^{25-28}, 2 Th 3^{17f} (expressly). In the Pastoral Epistles and Philemon, which are personal letters, the presence of autograph passages is more uncertain. A. J. M.

TERTULLUS.—This name (a diminutive of *Tertius*) is that of the advocate hired by the Jews to speak for them against Paul before Felix (Ac 24^{1}). From his name we should judge him to be a Roman; probably he was not a Jew. It has been conjectured (Dean Milman) that his speech is a translation from the Latin, though Greek was allowed in the law courts. It is a gross piece of flattery, for the Jews were in constant opposition to Felix. It accuses Paul of stirring up disturbances, of being the ringleader of an unlawful sect, and of profaning the Temple (cf the reply in 25^{8}). A. J. M.

TESTAMENT.—The word is not found in the OT. In the NT, it occurs thirteen times in the text of the AV and only twice in the text of the RV and the ARV (He 9^{16f}). It never occurs in the text of the RSV. It is always used to translate the Greek word *diathēkē*, elsewhere rendered **'covenant'** (q.v.), in the AV, RV, and ARV. In the RSV, however in Gal 3^{15} and He 9^{16f}, *diathēkē* is rendered **'will'** with 'covenant' in the margin. In He 9^{15-20}, *diathēkē* is always translated 'testament' in the AV. In the same passage, it is translated 'covenant' three times and 'testament' two times in the RV and the ARV, and 'covenant' three times and 'will' two times in the RSV. An indication of the difficulty involved in its interpretation is given in a marginal note on all five occurences of *diathēkē* in He 9^{15-20} in the RV and the ARV: 'The Greek word here used signifies both *covenant* and *testament*.' In the RSV, however, this note occurs only on the second occurrence of *diathēkē* in He 9^{15} and on its occurrences in He 9^{16f}.

In classical Greek, *diathēkē* means 'a testamentary disposition,' and *synthēkē* 'a covenant' or 'a compact.' The latter word connotes an agreement between two persons regarded as being on an equal footing (*syn-*); hence it is unsuitable as a designation of God's covenants with men. Moulton and Milligan (*The Vocabulary of the Greek New Testament*, p. 148) pointed out that *diathēkē* 'is properly *dispositio*, an 'arrangement' made by one party with plenary power, which the other party may accept or reject, but cannot alter (see Aristophanes, *Birds*, 439). A will is simply the most conspicuous example of such an instrument, which ultimately monopolized the word just because it suited its differentia so completely.' The LXX translators, because this monopoly was not yet established, were free to translate the Hebrew word for 'covenant' (*bᵉrith*) by *diathēkē* which, in its primary sense (*dispositio*), was exactly the needed word.

By the time the NT documents were written, *diathēkē* had come to mean, in common usage, 'will' or 'testament.' The NT writers, however, because of their knowledge of the LXX, also knew *diathēkē* in its primary sense (*dispositio*) and usually so used it. These two meanings of *diathēkē* made possible a meaningful play on words in Greek which is absolutely impossible in English. Both Paul and the author of the Epistle to the Hebrews took advantage of this fact in Gal 3^{15} and He 9^{16f}. In these verses, *diathēkē* is best translated by 'testament' or 'will' if these words are understood to signify 'last will and testament.' All other occurrences of *diathēkē* in the NT are best translated by 'covenant' if it is understood to signify 'an "arrangement" made by one party with plenary power which the other party may accept or reject, but cannot alter.'

In the NT, *testamentum* is the uniform Latin translation of *diathēkē*. Usually, therefore, it means 'covenant.' This use of the Latin word is the explanation of the fact that, as early as the 2nd cent. of our era, the books of the Old and New Covenants were spoken of as the Old and New Testaments. J. G. T.—M. M. P.

TESTIMONY.—See ARK, 1; TABERNACLE, 7 (*a*); WITNESS; and, for 2 K 11^{12}, ORNAMENTS, 4.

TESTIMONY BOOKS.—Cyprian (A.D. 200–258) prepared a collection of Biblical proof-texts arranged under subjects and published it in Latin in three books as 'Testimonies' or 'Ad Quirinum.' A similar collection in Greek has been attributed to Gregory of Nyssa. There are some later collections, particularly one by Bar Salibi (6th cent. A.D.) which survives in Syriac. These compilations are not original; the writers were obviously dependent on earlier works of a similar nature such as Tertullian's 'Adversus Judaeos,' Irenaeus' 'Against Heresies,' and Justin's 'First Apology' and 'Dialogue with Trypho.' J. Rendel Harris (assisted by G. Vacher Burch) in 'Testimonies' (Vol. I, 1916; Vol. II, 1920) attempted to prove that all these books were ultimately derived from a Testimony Book (or Books) which was just such a collection of OT prophecies arranged according to subject matter with brief notes of their sources. This was used to prove to the Jews that Jesus was indeed the Messiah. Harris thought that this was the 'Logia' which Papias says Matthew prepared, and that Papias' own lost five books of 'Oracles of the Lord' were a commentary on it. His method of proof was to collate and compare the use of OT quotations in the NT and the relevant patristic works with special attention to Justin, Irenaeus, and Cyprian. He thought that common argument, common order, community of error and similarity of text where there were divergencies from the LXX and the MT would prove his case. The evidences of the use of Testimony Books that he found in the NT were (1) wrong ascriptions, such as a text from Malachi being ascribed to Isaiah in Mk 1^{2}; (2) recurrent quotations, such as the passages about the Stone in Mk 12^{10} and parallels, Ac 4^{11}, 1 P 2^{7} *et al*; (3) chains of citation such as Ro 3^{10-18} (previously investigated by E. Hatch); (4) editorial prefaces and comments, so common in Matthew; (5) peculiar texts such as Mt 15^{8f} quoting LXX of Is 29^{13} with variations; (6) anti-Jewish controversial matter, such as Ps 110^{1} quoted in Mk 12^{36} and parallels (cf Ac 2^{34-35}, He 1^{13}). The case for Testimony Books found some support from F. C. Burkitt, and more recently it has been restated by B. P. W. Stather Hunt and accepted by Archbishop P. Carrington; but it has been criticised by C. H. Dodd and K. Stendahl. Stather Hunt emphasizes the facts of the conflict of the early Church with Judaism, the Church's appeal to the OT, the motive behind the Gospels of relating the facts about Jesus to the Messianic prophecies, and that few people could afford a complete OT or even complete books of the OT; so that even before the rise of Christianity such selections, probably with a Messianic emphasis, must have been made. Confirmation of this theory has been found at Qumrân where a Messianic florilegium was discovered (published in 1955). The arguments, however, fall short of proving the existence of Testimony Books as written documents.

Dodd and other scholars have urged, first, that such an important work would surely have survived and have been included in the Canon, and second, that the quotation of OT passages in the NT is not necessarily accounted for by the postulate of Testimony Books. The composition of such books was the result, not the presupposition, of the work of early Christian Biblical scholars, and the wide use of NT quotations from the OT in the Fathers is indicative of the influence of the NT itself rather than of common use of a Testimony Book lying behind both the NT and the Fathers. Stendahl's careful investigation of different types of OT quotations in Matthew proves that Matthew's OT quotations come from both the LXX and the MT as well as other possible texts. Any peculiarities or community of error can be explained by the theory of oral tradition. The theory of Testimony Books, therefore, is one possible explanation of certain common features of the use of the OT in the NT and in the Fathers, but the case remains unproven, at least until further light can be shed on the subject by the progress of textual, source and form criticism. F. B.

TESTAMENTS OF TWELVE PATRIARCHS.—See PSEUDEPIGRAPHA, 5.

TESTICLES.—See STONES, I. 2.

TETA, 1 Es 5^{28} (AV).—See HATITA.

TETH.—Ninth letter of Hebrew alphabet, and so used to introduce the ninth part of Ps 119, every verse of which begins with this letter.

TETRARCH.—Originally (in Macedonia) 'ruler of a fourth part,' the title was apt as applied to Herod Antipas, administrator of Galilee and Peraea (Mt 14^{1}, Lk $3^{1, 19}$ 9^{7}, Ac 13^{1}), and to his brother Herod Philip who administered Ituraea and Trachonitis (Lk 3^{1}) because together they had inherited one half of the territory ruled by their father, Herod the Great (Jos. *Ant.* XVII. xi. 4 [317]). When applied to Lysanius of Abilene in Lk 3^{1}, it may be understood less literally as 'ruler of a district.' J. S. K.

TETRATEUCH.—See PENTATEUCH, VI (*a*).

TETTER.—See MEDICINE.

TEXT AND VERSIONS OF OT.—1. *Text of OT.*—In Hebrew the OT consists of three parts: the Pentateuch, the Prophets, and the Writings (or Hagiographa), which by the Jews are reckoned as twenty-four books. In the English Bible, which has a different order and method of counting, the same books form a total of thirty-nine. The OT was originally written in Hebrew except Gn 31^{47} two words; Jer 10^{11}; Ezr 4^{8}–6^{18} 7^{12}–^{26}; Dn 2^{4b}–7^{28}, which are in Aramaic.

The Hebrew alphabet used by the OT writers consisted of twenty-two consonants: it contained no vowels, in this respect resembling the Phoenician, Moabite, Arabic and Syriac alphabets. The old Semitic alphabet was used in Phoenicia as far back as *c* 1500 B.C. The books of the OT were originally written in the older script, but in course of time the MSS were transliterated into the square characters now used in printed Hebrew Bibles. Our knowledge of the pronunciation of Hebrew words, as far as the vowels are concerned, depends on three main sources: (1) Jewish tradition, which is embodied in vowel signs written under, over, or in the consonants of the ancient text; (2) the Greek versions, which transliterate a large number of Hebrew words, especially, but by no means only, the proper names; (3) the Assyrian texts: these, being written in a language which expressed in writing vowel sounds as well as consonantal, give us the vowels of such Hebrew names as they cite.

Though in the Hebrew MSS of the Bible, which are of the mediaeval period, the consonants of the original text are accompanied by the vowels which express the traditional pronunciation, it is known that the written vowels formed no part of the original text; they had to be supplied by the reader.

2. *Date of the addition of vowels of the OT text.*—The date at which the vowels were attached to the consonants of the Hebrew text can be determined only within broad limits. Neither the Talmud (*c* A.D. 500) nor Jerome (A.D. 420) knows anything about the written vocalization. C. D. Ginsburg says that the introduction of the graphic signs took place *c* A.D. 650–680 and that the work of the Massoretes was complete about A.D. 700. It must have been before the 10th cent., for the fully-developed system is employed in the earliest Hebrew Biblical MSS of Massoretic tradition, which date from the beginning of the 10th cent. (or, according to some, from the 9th cent.).

The received text of the Hebrew OT is called the Massoretic Text (MT), because in its present form it rests upon the **Massorah** (Hebrew *massōreth*, 'tradition'), which has been transmitted by Jewish scholars known as the Massoretes. Of special importance here is the insertion of vowel points to indicate the pronunciation. The determinative work was done in the first Christian millennium in two regions: (1) the East or Babylonia; (2) the West or Palestine, whose chief centre was Tiberias, where the Ben Asher family for five or six generations (middle of the 8th cent. to the middle of the 10th) was eminent. Originally both the Babylonian and the Palestinian method of writing vowels was supralinear, but finally there was developed at Tiberias a more precise system of writing vowels and accents, which is still used in our printed Hebrew Bibles. In the first half of the 10th cent. Ben Naphtali was a rival of Ben Asher, but eventually the text of Ben Asher became the standard one.

3. *Earlier attempts to represent vowel sounds.*—Long before the invention of vowel points certain consonants had been used, though neither systematically nor consistently, to indicate the vowel sounds: thus *h* was used to indicate *a*, and sometimes *e*; *w* to indicate *o* or *u*, *y* to indicate *i*. This practice in some measure goes back to the times, and doubtless also to the actual usage, of some of the writers of the OT; but in many cases these consonants used to indicate vowels were added by scribes or editors. This we learn from the fact that passages which happen to occur twice in the OT differ in the extent to which, and the particular instances in which, these letters are employed. Ps 18 occurs not only in the Psalter, but also in 2 S 22; the Psalm expresses these consonants used vocalically where 2 Samuel does not; *e.g.* 2 Samuel writes *'ppny* (v.^{5}) and *ḳdmny* (v.^{6}), where the Psalm writes *'ppwny* and *ḳdmwny*. In some cases Rabbinic discussions prove that words now written with these vowel letters were once without them; so, *e.g.* it appears from a discussion attributed to two Rabbis of the 2nd cent. A.D. that in Is 51^{4} the word *l'wmy* ('my nation') was at that time written without the *w*, thus *l'my*. The importance of this fact for the textual criticism will appear later.

4. *Character of evidence for the text of OT.*—The text of the OT has been transmitted to us through circumstances singularly different from those which mark the transmission of the NT text. In this connexion we may confine our attention to the nature of the evidence for the text of the OT furnished by (1) Hebrew MSS, (2) ancient versions.

5. It has often been stated that one well-established result of the examination of Hebrew MSS is that all exisiting MSS are derived from a single edition prepared by Jewish scholars in accordance with a textual tradition which goes back substantially to the 2nd cent. A.D. In view of the number of variant readings in Hebrew MSS and the discovery of the Dead Sea Scrolls this view needs modification. Many MSS, however, have similar peculiarities, such as the occurrence at certain places of letters smaller or larger than the normal, of dots over certain letters, or broken or inverted letters. For example, the *h* in the word *bhbr'm* (Gn 2^{4}) is written small in many Hebrew MSS; it was doubtless written originally so by accident or owing to pressure of room; but under the influence of a school of Jewish scholars, of whom R. Aqiba in the 2nd cent. B.C. was a leading spirit, all such minutiae of the Scripture came to acquire

a mystic significance. Thus the word just cited really means 'when they were created,' but the small *h* was taken to mean that the words were to be translated 'in the letter *h* he (*i.e.* God) created them' (the heavens and the earth), and this in turn led to much curious speculation. As another illustration of this method of interpretation, which was so important in securing from the 1st or 2nd cents. A.D. onwards a remarkably accurate transmission of the text, the case of the word *wyyṣr* in Gn 2^7 may be cited. The word means 'And he formed'; an alternative orthography for the word is *wyṣr* (with one *y*). Why, it was asked, was it here written with two *y*'s? Because, it was answered, God created man with two *yṣr*'s (*i.e.* two natures), the good nature and the bad. In order to secure the perpetuation of the text exactly as it existed, a mass of elaborate rules and calculations was gradually established; for example, the number of occurrences of cases of peculiar orthography were duly recorded on the margins of MSS of Scripture. The scribes or Sopherim counted all the letters in the OT. In every book they knew the middle letter, the middle word, and the middle verse. With such meticulous information was avoided the possibility of adding or removing words or verses. This textual tradition, known as the **Massorah**, also includes a certain number of variant readings; in this case the one reading (**Kᵉthîbh** 'written') stands in the text, but provided with vowels that do not belong to the consonants in the text, but to the consonants of the alternative reading (**Ḳᵉrê**, 'read,' 'to be read') given in the margin. These two words are Aramaic passive participles. In the Ginsburg text a word having a **Kᵉthîbh** and a **Ḳᵉrê** is left unvocalized in the text, while in a footnote two spellings are given with appropriate vocalization. *E.g.* in Job 9^{30} the word *bmw*, which means 'with,' should, if vocalized, have the vowel *o* over *w*; but in the Hebrew text the vowel actually supplied to the word is *e* under *m*, which is the vowel that really belongs to the **Ḳᵉrê**, which has the letters *bmy* ('in, with the water of'). The value of the Massorah in perpetuating a form of the Hebrew text for many centuries has doubtless been great; but it has also long served to obscure the fact that the text which it has perpetuated with such slight variation was already removed by many centuries from the original text.

But in spite of the Massorah, certain minute variations have crept into the Hebrew MSS and even into the consonantal text. It must not be supposed, however, that all pre-Massoretic readings have been lost. A study of the variants collated by Kennicott (1776–80) and de Rossi (1784–88) shows that a large number of pre-Massoretic readings have been preserved in Hebrew MSS, and in numerous cases these variants find support in the Old Greek or LXX and the Origenian and Lucianic recensions; cf J. W. Wevers, 'Hebrew Variants in . . . Kings,' *ZAW* lxi (1945–48), 43–76. In the meanwhile, our knowledge of the proto-Massoretic text has been extended through the discovery of the Dead Sea Scrolls.

6. *The earliest MSS.*—(1) *The Dead Sea Scrolls.*—The discovery of the Dead Sea Scrolls (1947–55) has furnished material that carries Hebrew examples of the proto-Massoretic text back to the 2nd cent. B.C. and even earlier. Of prime importance in this connexion is the Isaiah MS (1 Q Isa^a), which probably is to be dated in the 2nd cent. B.C. It contains the entire book, and it may be noted that it has thirteen variants which have been accepted by the RSV and cited in the footnotes as from 'One ancient Ms.' In this connexion cf M. Burrows, *The Dead Sea Scrolls*, pp. 305 ff. It has a number of agreements with the LXX as well as various careless mistakes. In spite of all its variants, however, it tends to confirm MT. By using *w* and *y* to indicate vowels it has a rather full vocalization.

Another scroll of Isaiah, incomplete, is known as 1 Q Isa^b.

The Habakkuk Commentary (1 Qp Hab) on chs. 1–2 is a work which was probably composed in the 1st cent. B.C.

TEXT AND VERSIONS OF OT

Among these scrolls are numerous fragments of Biblical MSS, which are of great value in tracing the textual history of the OT. The documents found so far represent copies from the 3rd cent. B.C. into the 2nd cent. A.D. Of Samuel, 4 Q Sam^a is hardly later than 200 B.C., and 4 Q Sam^b is probably from the end of the 3rd cent. B.C. The importance of the Samuel fragments is that they represent a text closely related to the LXX. The portions of Daniel are written in a script of the late 2nd cent. B.C., and accordingly this MS is no more than half a century younger than the autograph of the book. It is furthermore important to have fragments of the books of the Pentateuch as well as of the Major and Minor Prophets; at any rate, in the latter instance, such evidence rules out speculation about very late additions to prophetical works. All the canonical books of the Hebrew OT are represented in the Dead Sea fragments with the exception of the Book of Esther.

(2) *The Genizah Fragments.*—It is estimated that a total of 200,000 fragments of MSS was recovered from the Genizah in Cairo, many of which are Biblical. It was here that about two-thirds of the Hebrew text of the Book of Ecclesiasticus was found, which previously had been known only in Greek. The earliest of the Biblical fragments probably belong to the 5th cent. A.D.

(3) *The Nash Papyrus.*—Thanks to a discovery in 1902 we have this fragment, which apparently is not later than the 2nd cent. A.D.; Dr. W. F. Albright, however, has dated it in the Maccabaean period. It contains in Hebrew the Ten Commandments, in a text based on Exodus and Deuteronomy, and Dt $6^{4f.}$ The order of commandments six and seven is reversed, and the Shema' is introduced by a sentence lacking in MT, but present in the LXX. This papyrus was edited by S. A. Cook in *PSBA* (January 1903).

(4) There are a number of MSS which represent the tradition of the Ben Asher family; the oldest of these are:

(*a*) *British Museum, Oriental* 4445, of Pentateuch. The consonantal text was written probably A.D. 820–850, and the marginal notes cite Ben Asher as the authority.

(*b*) *Cairensis*, which contains the Former and the Latter Prophets, has a colophon, in which it is stated that it was copied by Moses Ben Asher in A.D. 895. It is now in the possession of the Karaite community in Cairo.

(*c*) *The Aleppo MS* of the first half of the 10th cent. It was copied by a scribe in the time of Aaron Ben Asher (A.D. 900–940), who supplied the punctuation and the Massorah. It was in the possession of the Jewish community in Aleppo, who would not permit it to be photographed for use in the preparation of the *Biblia Hebraica*, 3rd edition. It suffered damage in the destruction of the Old Synagogue at Aleppo, and to-day it contains only 294 folios of the presumable original number of 380. It is now being used at the Hebrew University of Jerusalem in the preparation of a new edition of the OT.

(*d*) *Leningradensis.* This MS of the entire OT was copied from the Aleppo MS in A.D. 1008, and accordingly it represents the Ben Asher tradition. It is kept in Leningrad, and it furnished the text for the *Biblia Hebraica*, 3rd edition.

(*e*) *The Petersburg MS of the Major and Minor Prophets*, at Leningrad, was copied in A.D. 916. It represents the text tradition of the West, but the eastern method of writing the punctuation is employed.

(5) The tradition of Ben Naphtali. *The Erfurt MSS*, E^1 (14th cent.), E^2 (13th cent.), E^3 (before A.D. 1000). The punctuation and the text in places follows the Ben Naphtali tradition, while in others there is only the influence of that text.

The Massoretic MSS in addition to having the vowels and accents written, also represent the sectional divisions of the text. In this connexion should be considered the open section (*pᵉthûḥāh*) and the closed (*sᵉthûmāh*), which signify a change of thought; of these the latter denotes a slighter transition than the former. In the Hebrew

TEXT AND VERSIONS OF OT

MSS these sections are indicated by a system of leaving vacant spaces in the text, but in some of the printed editions ס is placed in the text to show where the open section starts, while פ signifies the beginning of a closed one. *E.g.* in Gn 1 an open section begins at the end of v.[5]; likewise at the end of vv.[8, 13, 19, 23, 31]. Many MSS have a closed section in Gn 4[8]. This gap, however, is filled in the LXX and the Samaritan Hebrew with the sentence: 'Let us go out to the field.' In the editions by Ginsburg all these sections are represented by vacant spaces as in the MSS. There are also indicated in the margin of printed Hebrew Bibles the pericopes: the triennial (*sᵉdhārîm*) and the annual (*pārāshîyôth*). Frequently the pericopes coincide with an open or closed section. The verses are ancient divisions, which the Massoretes carefully marked. The chapters, however, are of Christian and not of Jewish origin. This system of enumeration was first applied to the Vulgate in the 13th cent., probably by Stephen Langton, Archbishop of Canterbury, and later was introduced into the Hebrew Bible for facility of reference.

7. *Critical editions of the Massoretic text.*—S. Baer and Franz Delitzsch published in separate parts the individual books except Exodus–Deuteronomy (Leipzig, 1869–95); the text was based on MSS and Massoretic sources. The received text of our standard editions of the Hebrew OT has been substantially that of Jacob ben Chayim in the Second Rabbinic Bible, Venice, 1524–25. C. D. Ginsburg edited two editions, the first of which was published in two volumes (London, 1894); the second in four volumes (British and Foreign Bible Society, 1926) has copious textual notes in Hebrew. He followed the text of Jacob ben Chayim as did R. Kittel in *Biblia Hebraica*, 1st edition, 1905; 2nd, 1912. The *Biblia Hebraica*, 3rd edition (1937), edited by P. Kahle, A. Alt, and O. Eissfeldt, represents the Leningrad MS; for the first time since the Reformation a MS is made the basis of an edition and Jacob ben Chayim is left aside. Mention may also be made of the *OT in Hebrew*, corrected according to the Massorah of Ben Asher, edited by M. D. Cassuto, 1959, and of the Hebrew Bible edited by N. H. Snaith, published by the British and Foreign Bible Society, 1960.

8. *The Samaritan Pentateuch.*—Before passing from the evidence of Hebrew MSS we have to note that for the Pentateuch we have a Hebrew text representing an entirely different recension. This is the **Samaritan Pentateuch.** The Samaritan Pentateuch is a form of the Hebrew text which has been perpetuated by the Samaritans. It is written in the Samaritan character, which far more closely resembles the ancient Hebrew characters than the square Hebrew letters in which the Massoretic MSS are written. There are no known MSS of the Samaritan Pentateuch older than the 10th cent. The MS at Nâblus purports to have been copied in the thirteenth year after the Conquest, but this date is not accepted by scholars. There is one in the John Rylands Library at Manchester, which is dated A.D. 1211–12. What is probably the oldest is in codex form and is kept at the University of Cambridge. It contains a note saying that it was sold A.D. 1149–50, and accordingly it may have been copied some centuries earlier. The value of the recension lies in the fact that it has descended since the 4th cent. B.C. in a different circle, and under different circumstances, from those which have influenced the Massoretic MSS. Though in some respects, as for example through expansion by insertion of matter from parallel passages, the Samaritan is more remote than the Jewish from the original text, it has also preserved better readings, often in agreement with the LXX. An instance is Gn 4[8]; here in the ordinary Hebrew MSS some words spoken by Cain have certainly dropped out; the Samaritan text and the LXX have the additional words 'Let us go into the field'; this is adopted by RSV: 'Let us go out to the field.'

9. *The Samaritan Targum.*—No thoroughly critical edition of the Samaritan Pentateuch at present exists. The material for establishing a critical text consists of the several MSS and also of the Samaritan Targum—a translation of the Samaritan recension into an Aramaic dialect.

10. *Versions: Earliest MSS.*—We come now to the second main branch of evidence for the text of the OT. The evidence of versions is of exceptional importance in the case of the OT. In the first place, the actual MSS of the versions are much older than the earliest Massoretic Hebrew MSS; in this respect, however, the Dead Sea Scrolls have made a great contribution to our knowledge of the Hebrew text. Not counting the papyri, there are Greek MSS of the OT of the 4th cent. A.D. and there is a Syriac MS of the greater part of the Pentateuch of the date A.D. 464. But secondly, and of even greater importance, the versions, and especially the LXX, represent different lines of tradition; in so far as the original text of the LXX itself can be established, it is a witness to the state of the text some two to four centuries before the date at which the stereotyping of the Hebrew text by the Massoretes took place.

The versions of the OT are either primary, *i.e.* made direct from the Hebrew text, or secondary, *i.e.* made from a version. Secondary versions are of immediate importance in establishing the true text of the primary version from which they are made; and only indirectly witness to the Hebrew text. Among them the Old Latin version is of exceptional importance in determining the text of the LXX. On this and other versions of the LXX, see GREEK VERSIONS OF OT, **11.**

11. *Brief account of the Primary Versions.*—The Primary versions of the OT, arranged in (approximately) chronological order, are as follows:—

(1) The earliest **Greek Version,** commonly known as the **Septuagint.** The earliest part of this version, namely, the translation of the Pentateuch, goes back to the 3rd cent. B.C. The remaining parts of the OT were translated at different later periods; but the version was probably, in the main at least, complete before the end of the 2nd cent. B.C. See GREEK VERSIONS OF OT.

(2) The **Targums.** These Aramaic versions may be considered next, inasmuch as they rest on a tradition earlier than the date of the versions yet to be mentioned; it is probable, however, that no Targum was actually committed to writing till some centuries later, after the later Greek versions, perhaps, too, after the Syriac version, had been made.

The Targums are in large part very free, and even diffuse, paraphrases rather than translations of the Hebrew text. They owe their origin to the custom of explaining the Hebrew passages of Scripture read in the synagogues in the language spoken by the people, which was Aramaic (cf Neh 8[8]). The earliest (as is most generally believed) and least paraphrastic of these versions is the **Targum of Onkelos** on the Pentateuch from Babylonia; it does not appear to have been committed to writing before the 5th cent. A.D., and is first mentioned by name by Saadia Gaon in the 9th cent. Far more paraphrastic is the Targum of the Pentateuch known as the **Targum of Pseudo-Jonathan,** or the **Jerusalem Targum.** Fragments of yet a third Targum of the Pentateuch survive, and are known as the **2nd Jerusalem Targum.** Quite distinct from these is the **Samaritan Targum,** which is a translation of the Samaritan recension of the Hebrew text (see **9**). The chief Targum of the Prophets is that known as the **Targum of Jonathan ben Uzziel**: it is also from Babylonia and was put into final form in the 5th cent. A.D. There are also fragments of an old Palestinian Targum preserved in seven MSS of the 7th–9th cents. recovered from the Cairo Genizah. A lost Targum of Job has been recovered (1956) in one of the Dead Sea caves. Targums of the Hagiographa (with the exception of Ezra, Nehemiah, and Daniel) exist, and there are two of the Book of Esther. Cf TARGUMS.

The text of the Targums will be found in Walton's (and other) polyglots, with a Latin translation. Onkelos has been separately edited by Berliner (1884–86), and the Prophets and Hagiographa by Lagarde (1872). A.

Sperber, *The Bible in Aramaic* (1959) contains: 1. The Pentateuch according to the Targum of Onkelos; 2. The Former Prophets according to the Targum of Jonathan. See, further, Hastings' *DB*, article 'Targum.' There is an English translation of the Targums of the Pentateuch by Etheridge (two vols., London, 1862–65).

(3), (4), and (5) The **Greek Versions** (which have survived in fragments only) of Aquila, Theodotion, and Symmachus, all of the 2nd cent. A.D. See GREEK VERSIONS OF OT, **15–18.**

(6) The **Syriac Version,** commonly called the Peshitta. The date at which this version was made is unknown; the Pentateuch may be as early as the 1st cent., while the rest of the books may be of the 2nd and perhaps some of the 3rd. The earliest extant MS of part of this version is, as stated above, of the year A.D. 464; and the quotations of Aphraates (4th cent. A.D.) from all parts of the OT agree with Peshitta. The character of the version varies in different books, being literal in the Pentateuch and Job, paraphrastic for example in Chronicles and Ruth. The text in the main agrees closely with the Massoretic Hebrew text, though in parts (*e.g.* in Genesis, Isaiah, the Minor Prophets, and Psalms) it has been influenced by the LXX.

(7) The **Vulgate.**—The **Old Latin Version** was a translation of the LXX. To Christian scholars acquainted with Hebrew the wide differences between the LXX and versions derived from it and the Hebrew text then current became obvious. As it seemed suitable to Origen to correct the current LXX text so that it should agree more closely with the Hebrew, so at the close of the 4th cent. Jerome, after first revising the Old Latin, making alterations only when the sense absolutely demanded it, prepared an entirely fresh translation direct from the Hebrew text. The Vulgate is derived from this direct translation of Jerome's from the Hebrew in the case of all the canonical books of the OT except the Psalms; the Psalms appear commonly in editions of the Vulgate in the form of the so-called Gallican Psalter; this was a second version of the Old Latin, in which, however, after the manner of Origen's Hexaplaric text, the translation was brought nearer to the current Hebrew text by including matter contained in the later Greek versions but absent from the LXX, and obelizing matter in the LXX which was absent from the later versions. Jerome's Latin version of the Psalms, made direct from the Hebrew, was edited by Lagarde (*Psalterium juxta Hebraeos Hieronymi*, 1874); the edition edited by J. M. Harden appeared in 1922. An elaborate edition of *Psalterium S. Hieronymi de Hebraica Ueritate interpretatum* has been published in *Biblia Polyglotta Matritensia*, 1960. On the extent to which editions of the Vulgate differ from Jerome's translation, see VULGATE. In some cases additional matter (*e.g.* 1 S 14^{41}, on which passage see **20**) has been incorporated from the Old Latin.

The effect of the substitution of Jerome's version from the Hebrew text for the Old Latin version of the LXX was to give the Church a Bible which was more elegant and intelligible and in much closer agreement with the Hebrew text current in the 4th cent. A.D.

12. *Two groups of versions. Pre-eminence of the Septuagint.*—Judged from the standpoint of their importance for recovering the original text of the OT, and for the kind of service which they render to OT textual criticism, the primary versions fall into two groups: (1) the LXX, (2) the rest. The LXX differs, and often differs widely, from the Massoretic text; the remaining versions closely agree with it; the LXX dates from before the Christian era and, what is more significant, from before the rise of the Massoretic schools; the remaining versions date from after the Christian era, and, with the *possible* exception of the Syriac, from after the close of the 1st cent. A.D. The agreement of these versions made direct from the Hebrew text at various dates subsequent to 100 B.C. confirms the conclusion that since that date the Hebrew text has suffered relatively little in course of transmission.

A fuller discussion of the versions of the OT other than the LXX would carry us into *minutiae* of the subject which do not belong to a brief sketch such as the present. On the other hand, the LXX claims further attention even here.

13. *The early history of the Hebrew text.*—The history of the Hebrew text since the 2nd cent. A.D. is uneventiful; it is a history of careful transmission which has preserved the text from any serious deterioration since that date. But the fortunes of the text before that date had been more varied and far less happy. They cannot be followed completely, nor always with certainty. But the main fact is abundantly clear, that between the ages of their several authors and the 2nd cent. A.D. the Hebrew Scriptures had suffered corruption, and not infrequently very serious corruption. Nor is this surprising when it is remembered that the text in that period consisted of consonants only, that in the course of it the character of the writing was changed from the Old Hebrew to the square character still in use (the difference between the two being much greater than that between old black letter type and the Roman type now commonly used), that in the earlier part of the period copies of the books cannot have been numerous, and that in times of persecution copies were hunted for and destroyed (1 Mac 1^{56f}). We are here concerned, of course, merely with such changes as crept into the text accidentally, or such minor changes as the introduction of the expressed for the implicit subject, which belong to the province of textual criticism. The larger changes, due to the editing and redacting or union of material belong to the province of higher criticism, though in the case of the OT it is particularly true that at times the line between the two is not sharply defined. Our chief clues to the earlier history of the Hebrew text, and to the solution of the problems connected with it, will be found in a comparison of MT and the Hebrew of the Dead Sea Scrolls with the Septuagint version, and in certain features of the Hebrew text itself.

14. *The Hebrew Text between c* 250 B.C. and *c* A.D. 100. *The LXX and the Massoretic Text.*—The materials for forming a judgment on the general character of the changes undergone during this period by the Hebrew text, and for the existence of early variant readings in particular passages, are to be drawn mainly from a comparison of the LXX with the various Hebrew texts extant. A much smaller amount of material is to be derived from the quotations in the NT and other early Jewish works, such as the *Book of Jubilees*, written, according to R. H. Charles, at the close of the 2nd cent. B.C.; but so far as it goes this material bears witness of the same general character as that of the LXX.

15. A current solution of the main problem here raised depends on three things: (1) the establishment of the original text of the LXX; (2) the detection of the Hebrew text which lay before the translators; and (3) in cases where the Hebrew text there recorded differs from the present Hebrew text, the determination of the original or older Hebrew reading. A complete solution of the problems will never be reached, for it will be no more possible to establish beyond dispute the original text of the LXX; the detection of the underlying Hebrew text must inevitably often remain doubtful; and when variants are established, there will be in many cases room for difference of opinion as to their relative value. But though no complete solution is to be hoped for, a far greater approximation to such a solution than has yet been reached is possible. A good beginning (though no more) towards the recovery of the original text of the LXX has been made (see GREEK VERSIONS OF OT, **13**), but of really systematic work on the recovery of the underlying Hebrew text there has been far too little. What commonly happens is that in particular passages where the *sense* of the LXX and of the Hebrew text differs, the Greek is retranslated without exhaustive reference to the methods of the translators, and retranslation thus obtained is cited as the variant. In many cases the true variant even thus has undoubtedly been obtained, but in many others a closer and more

systematic investigation of the methods and idiosyncrasies of the translators has shown or will show that, through misinterpretation, the support of the LXX has been cited for variants which there is no reason for believing ever had any existence. See GREEK VERSIONS OF OT, 14.

16. *Distinction between real and apparent variants.*—A difference in *sense* between the Greek version and the Hebrew text as subsequently interpreted by no means necessarily points to a variation in the Hebrew text that underlay the version.

For example, parts of the three Hebrew verbs *šbh* (*to lead captive*), and *yšb* (*to dwell*) and of *šwb* (*to return*) are indistinguishable in the Hebrew consonantal text; the letters *wyšb* may have among others the following meanings, *and he dwelt, and he returned, and he brought back, and he took captive.*

The substitution of one of these meanings for the other occasionally reduces the Greek version to nonsense; inconvenient as this must have been for those who used that version, or versions, like the Old Latin, made from it, it presents no difficulty to those who are attempting to recover the Hebrew original of the Greek version. It may sound paradoxical, yet it is to a large extent true, that for textual criticism the LXX is most useful when it makes least sense; for when a passage makes no sense in the Greek, but can be explained as a translation from the Hebrew, we have the best of reasons for believing that we have before us the original text of the Greek, and through it can recover a Hebrew text of early date. Copyists and translators do not *deliberately* turn sense into nonsense, and sense does not frequently, through mere accidents of transmission, become the particular form of nonsense that can be accounted for by a misunderstanding of a Hebrew original.

As a further illustration we may refer to the Greek translation of the letters *by*; these very commonly occur with the meaning *in me*, but they also represent a particle of entreaty *Oh!* or *I pray!* this particle occurs but rarely, about a dozen times altogether, and its existence was unknown to some of the Greek translators. In the Pentateuch and Joshua it is correctly rendered; but elsewhere it is rendered 'in me' with ridiculous results, as the English reader will see if he substitutes these words for 'Oh' in Jg 6^{13}, 1 S 1^{26}. But again, there is no difficulty in seeing beneath the nonsense of the Greek the true sense and the actual reading of the Hebrew. The ignorance of the translators is as useful to the textual critic as their knowledge.

17. *Euphemistic translations.*—But there are many variations in sense which point to no real textual variants, though both Hebrew and Greek in themselves yield a good sense.

The last clause of the 19th Psalm in the AV, 'O Lord, my strength and my redeemer,' reads admirably; but though the translators give us no clue to the fact, it is *not* a rendering of the Hebrew, it is a translation of the LXX. The Hebrew reads, 'My rock and my redeemer' (so RV, RSV). In this case the LXX rendering is due not to ignorance, but to religious scruple; their rendering is a euphemism. So in Gn 5^{24} the Greek version substitutes 'Enoch was well-pleasing to God' (hence He 11^{5}) for the anthropomorphic 'walked with God' of the Hebrew text; in these cases, if we had not also the Hebrew text we could not discover the original from the LXX with certainty, or, perhaps, even be sure that the translators were influenced by a theological approach. Cf GREEK VERSIONS OF OT, 14.

18. *Relative values of Greek version and Hebrew text.*—These illustrations may suffice to show both that much care is required in using the LXX for the recovery of the Hebrew underlying it, and also that it is wide of the mark to depreciate the textual value of the version by emphasizing the ignorance of the translators. Before either the fullest or the securest use of the version can be made, an immense amount of work remains to be done; but the importance of doing this work is clear, for even the most cautious deductions have already proved that there are differences underlying the LXX and the present Hebrew text, and that in some instances the LXX text is superior. The relative values differ in the case of different books; and to avoid misunderstanding it should be added that in no case would a simple translation of the LXX bring us as near to the sense of the original document as a translation into English from the Hebrew text; nor would it be possible, unless the Hebrew text had survived, to detect by means of the LXX the correct text and the sense of the original. Perhaps the most important general point to remember is that neither the one nor the other would be nearly as valuable by itself as it is when used in combination with the other.

19. *Examples of important readings preserved by the Greek Version only.*—We may now pass to some illustrations of important variations in which the LXX has clearly preserved an earlier text than the Hebrew. These are much less numerous in the Pentateuch than elsewhere; probably the Law, as the most important Scripture, received at an early period something approaching that great care in transmission which was later extended to the entire OT. It is the more remarkable, therefore, that in one section of the Pentateuch (Ex 35–39) we find striking differences in the arrangement of sections in the Hebrew and Greek texts. Other instances of different arrangement or of marked differences in the extent of the material occur in the Books of Job and Jeremiah (see, further, Swete, *Introd. to the OT in Greek*, 231 ff).

20. In some cases matter subsequently lost (through *homoioteleuton* or otherwise), and now absent from the Hebrew text, survives in the Greek.

A striking illustration of this occurs in 1 S 14^{41}. The Hebrew text underlying the Greek version reads, 'Saul said unto Yahweh, the God of Israel [wherefore hast thou not answered thy servant to-day? If this iniquity be in me, or in Jonathan my son, O God of Israel, give Urim, but if this iniquity be in thy servant Israel], give Thummim.' The words in square brackets are absent from the Hebrew text, but certainly belonged to the original, and the origin of the error is clear: the scribe's eye accidently passed by parablepsis from the first occurrence of 'Israel' to the third, and the intervening words were lost. With the loss of these the sense of the last two words 'give Thummim' became obscure, and the punctuators, followed by RV, gave them an indefensible interpretation. In this case RSV emends the text in agreement with the LXX.

21. In other cases the Greek version is nearer to the original by its relative brevity; the additional matter now present in the Hebrew text was subsequently interpolated.

As an instance of this we may cite 1 K 6^{20f}, which RV, following the Hebrew text, renders, 'And he covered the altar [with cedar. So Solomon overlaid the house within with pure gold: and he drew chains of gold across] before the oracle; and he overlaid it with gold.' The bracketed words are absent from the Greek; it is probable that of these words 'with cedar' stood in the original text, but that the rest were absent. The Greek text has also for the first four words above (before the bracket) what appears to be the superior reading: 'And he made an altar.'

22. At times, when either the sense or the text of both the Hebrew and the Greek seems to be remote from the original it is possible from a comparison between the two, to recover the original.

An interesting example of this is furnished by Is 37^{27f} =2 K 19^{26f}. RV, following the Hebrew text, renders, 'They were as the grass of the field . . . and as corn (Isaiah, 'a field of corn') blasted *before it be grown up.* But I know *thy sitting down* and thy going out and thy coming in.' RSV follows the same interpretation. The Hebrew text of the underlined words is *lpny ḳmh wšbtk*; the Hebrew equivalent of 'I know' stands much lower in the sentence, and though it may with difficulty be taken as in the RV, more naturally demands a different object. A reading of the Greek *Quinta* preserved only in a

marginal note in the Syro-Hexaplar closes v.[26] with the phrase 'before thy rising up'; this presupposes Hebrew *lpny ḳmk wšbtk*, which differs from the present Hebrew text by one letter only. The first word, if vocalized as in the Hebrew text and by the Greek translators *liphnê*, means *before*, but if vocalized *l*ᵉ*phānay* it means *before me*. Adopting the latter vocalization, we recover (at least so far as the three words are concerned) the original sense, 'They were as grass of the field . . . and as corn that is blasted. Before me is thine uprising and thy down sitting (cf Ps 139[2]) and thy going out and thy coming in I know.' So great is the difference in sense that the corruption of a single letter may make in a text which contained only consonants, and no marks of punctuation whatever. What appears to have been the true reading of the Hebrew in this case was pointed out by J. Wellhausen, *Composition des Hex. u. d. hist.Bücher d.ATs.*[3], p. 282, n.l.

23. *The Hebrew text before the date of the Greek version.*—If the Hebrew text suffered to a very considerable extent in the ways just illustrated, during the three or four centuries that intervened between the time when the LXX version was made and the time when the Hebrew text was stereotyped and the later Greek versions were made, by nothing short of a miracle could the text have been preserved free from errors of transmission during the centuries that separate the original autographs from the date of the Greek version. This intervening period differs, of course, widely in length; between the age of Isaiah and the Greek translation of the Book of Isaiah lay some six centuries; between the age of Deborah (Jg 5) and the translation of Judges perhaps 900 years; between the age of David (2 S 1[19ff]) and the translation of Samuel 800 years. On the other hand, between the final *compilation* of the Pentateuch and the LXX not more than two centuries elapsed, while in the case of the Book of Daniel the time was less than a half a century.

24. *Means of detecting early corruption of Hebrew text.*—Though the general fact that the present Hebrew text contains corruptions that date from these earlier centuries cannot reasonably be questioned, the detection of the actual cases of early corruption is necessarily difficult, and only within limits is it possible. We are obviously far worse situated in attempting to determine corruptions of this date than corruptions of later date; the LXX often indicates the presence of the later corruptions, but we have no external clue to the earlier corruptions. We have to rely entirely on indications in the Hebrew text itself. One of these indications will of course be the occurrence of nonsense, for the original autographs were intended to convey an intelligible meaning. Another indication will be the occurrence of bad grammar—unless in the case of a particular writer there is reason for supposing that he was not master of the language which he wrote. An interesting illustration of the way in which the latter indication may serve is furnished by some of the references to the Ark.

The Ark is called in Hebrew *h'rn, the ark*, where the first letter is the Hebrew article; or *'rn bryt YHWH, the ark of the covenant of the Lord*; where a word in Hebrew is defined by a following genitive it cannot be preceded by the article, so in this second phrase we have *'rn*, not *h'rn*. Now, in certain passages (*e.g.* Jos 3[17]), our present Hebrew text has the grammatically impossible combination *h'rn bryt YHWH*; some corruption then is present here; and it is probable that the original text had only *h'rn, the ark*, and that the following words are due to the intrusion into the text of an annotator's explanation.

25. *Negative and positive judgments: the justification of conjectural emendation and its limitations.*—The ultimate task of textual criticism is to recover as far as possible the actual words of the original; an intermediate task of the textual criticism of the OT is to establish all the real variants of the Hebrew text underlying the Greek version, and in each case to determine the relative value of the variants. In this way the text which was the common source of the Greek translators and that of the Jewish scholars of the 2nd cent. A.D. is as far as possible recovered. So far negative and positive judgments must necessarily accompany one another; we say, Here the Hebrew text is right, and the Greek text wrong, or *vice versa*. But when we have recovered that common source of the Hebrew and Greek texts, it is wise to distinguish sharply between negative and positive critical judgments. The general fact that there are early errors in the Hebrew text must, as we have seen, be admitted; and, further, no sound criticism of the Hebrew text can proceed far without being compelled to say, This or that is corrupt, even though the Greek version agrees with the Hebrew text or cannot be shown to have differed from it. In some cases where this negative judgment can be passed with confidence, it may be possible with scarcely less confidence to pass to the positive statement. These words are a corruption of these other words; that is to say, the text in such cases can be restored *by conjecture*; but in many cases where the first judgment—These words are not the original text—must be passed, the second judgment ought only to take the form—It is possible that such and such words or something like them were in the original text. In brief, we can more often detect early corruption than restore the text which has been corrupted. The reason should be obvious. We may assume that the scribes and Massoretes knew their Hebrew quite well, and emendation or conjectures should be adopted only as a last resort. Before considering any emendation MT should be carefully compared with the LXX and the other ancient versions. Nonsense (to take the extreme case) must be due to corruption, but the sense which it has obscured may altogether elude us, or, at best, we may be able to discern the general sense without determining the actual words.

There can be no question that it is nonsense to say, as the Hebrew text does, that Saul, who was anointed king to meet a national emergency, was a year old when he began to reign (1 S 13[1]); but it is impossible to say whether the original text attributed to him twenty, thirty, forty, or any other particular number of years. Nonsense is unfortunately more serious in the original language than in a version; we may pass from nonsense in the LXX to the actual original consonants of the Hebrew text, which merely require when thus recovered to be correctly interpreted; but if the Hebrew letters themselves yield nonsense, we are reduced to guessing, and frequently with little hope of guessing right.

26. The preceding paragraphs should have suggested the justification for occasional conjectural emendation in the textual criticism of the OT, and at the same time they should have indicated its limitations. As against a conjectural emendation, it is in no way to the point to urge that the Hebrew text and all the versions are against it; for the agreement of the Hebrew text and the versions merely establishes the text as it was current about, let us say, 300 B.C.–A.D. 100. The principle of conjecture is justified by the centuries of transmission that the Hebrew text had passed through before that date. It may be worth while to notice also the degree of truth and the measure of misunderstanding involved in another common objection to conjectural emendations. Tacitly or openly it takes this form: Critics offer different emendations of the same passage; not all of these can be right; therefore the Hebrew text is not to be questioned. The real conclusion is rather this, The fact that *several* scholars have questioned the text renders the presence of corruption probable, that they differ in their emendations shows that the restoration of the original text is uncertain. The idiosyncrasy of a single scholar may lead him to emend the text unnecessarily; the larger the number who feel compelled to pronounce it unsound, the greater the probability that it is unsound, however difficult or uncertain it may be to pass beyond the negative judgment to positive reconstruction of the text.

27. *Evidence of parallel texts within the OT.*—We have

TEXT AND VERSIONS OF OT

now to consider in what ways beyond those indicated in **24** the Hebrew text, taken by itself, gives indication of the presence of corruptions, or, on the other hand, of having been accurately preserved, and how it is to be used in order to approximate most closely to the original text, and through it to the original intention of the authors of the several books.

Of most importance, so far as it is available, is the evidence of double texts within the OT. There are certain passages that occur twice over in the OT: *e.g.* Ps 18 is found also in 2 S 22; Ps 14 recurs as Ps 53; 2 K 18[13]–20[19] is (for the most part) repeated in Is 36–39; 2 K 24[18]–25[21] and 25[27-30] in Jer 52, and large parts of Samuel and Kings are incorporated in Chronicles. The variations between these parallel texts are of two kinds: some are due to the editor who incorporates in his own the matter common to his work and the earlier work from which he derives it; for example, in drawing on the Books of Samuel and Kings, the Chronicler often abbreviates, expands, or modifies the passages he borrows, with a view to adapting them to his special purpose; or, again, the editor who included the 14th Psalm in the collection in which Ps 53 stands, substituted 'God' for 'Yahweh' (PSALMS **2** (2)). With these changes, which it is the province of higher criticism to consider and explain, we are not here concerned. But the second type of variations is due to accidents of transmission, and not infrequently what is evidently the earlier reading is preserved in the later work; 'and the explanation is very simple: the earlier books were more read and copied: and the more a book is used the worse is its text' (Benzinger). In certain cases there is room for doubt as to the type to which particular variations belong, so, for example, in several variations as between 2 K 18–20 and Is 36–39.

28. *Evidence of mutilated literary forms.*—(1) *Acrostics.*—Thus the comparison of parallel texts furnishes one line of evidence of the way in which the Hebrew text had suffered in transmission before the date of the Greek version. Another proof may be found in the mutilated form in which certain fixed literary forms survive in the present Hebrew text. Most conclusive is the case of the acrostic poems (see ACROSTIC). At times two considerations converge to prove a particular passage corrupt. For example, the early part of Nah 1 consists of a mutilated acrostic: in the middle of v.[4] a word beginning with *d* should occur; instead the word *'mll* beginning with ' is found: but this word *'mll* occurs again at the end of the verse. It is probable that *'mll* in the first has been accidentally substituted for a parallel word which began with *d*.

29. (2) *Rhythm and strophe.*—It is possible that further study of the laws of Hebrew rhythm or metre may give us a valuable instrument for the detection of corruption; much has already been attempted in this way, and in some cases already with results of considerable probability. Similarly, in some cases the strophic division of poems admits of conclusions that are again, if not certain, yet probable. Thus in Is 9[8]–10[4] and 5[26-29] we have a poem in five strophes marked off from one another by a refrain; for a discussion of this problem see the commentaries.

30. *Limited extent of corruption of text of OT.*—The considerations adduced in the two preceding paragraphs have a double edge. They show, it is true, that the Hebrew text has in places suffered considerably; but they also indicate certain limits within which corruption has taken place, or, to state it otherwise, the degree of integrity which the transmitted text has preserved. If in the ways just indicated we can detect the loss or intrusion of lines or words, or the substitution of one word for another, we can elsewhere claim a strong presumption in favour of a poem having preserved its original length and structure. For example, the majority of the acrostics have come down to us with little or no mutilation that affects their length or the recurrence at the right place of the acrostic letters. Similarly the very possibility of determining rhythm must rest on a considerable amount of the text having reached us free from far-reaching corruption. A further consideration of a different kind may be found in the fact that a large number of proper names (which are peculiarly exposed to transmissional corruption) as handed down in the Hebrew text have been paralleled in ancient material brought to light by modern discovery. In many cases it is beyond question that names have suffered in the course of transmission; but the correct transmission of rare, and in some cases strange, names is significant.

31. *Secondary nature of vowel letters: bearing on textual critcism.*—So long as we deal with parallel texts, we are not brought face to face with the question of how to deal with a Hebrew text resting on a single authority. Yet the great bulk of the OT is of this class. How, then, is it to be dealt with, especially when there is no control over it to be obtained from fixed literary forms? The first duty of sound criticism is to disregard, or at least to suspect, all vowel letters (see **3**). We cannot, indeed, assert positively that the original writers made no use of these letters, for we find them employed in certain cases in early inscriptions (Moabite stone, Siloam inscription); but in view of the evidence of the parallel texts of the Hebrew Bible of Isaiah (1 Q Isa[a]) for example, of the LXX, and of Rabbinic references, it is certain that in a large number of cases these vowel letters have been added in the course of transmission. The consequence is that we cannot claim any particular vowel letter for the original author; he may have used it, he may not; particularly in the case of earlier writers, the latter alternative is as a rule the more probable. In other important respects the form of the present Hebrew consonantal text differs from what there is reason to believe was its earlier form.

32. *Similarity of certain letters a source of confusion.*—We have seen above (**13**) that the alphabet in which existing Hebrew MSS are written differs widely from that in use at the time when the OT was written; the letter *yôdh*, proverbially the smallest (Mt 5[18]) in the alphabet in use since the Christian era, was one of the larger letters of the earlier script. It is necessary in doubtful passages to picture the text as written in this earlier script, and to consider the probability of a text differing from the received text merely by letters closely resembling one another in this earlier script.

Thus the letters *d* and *r* are similar in most Semitic alphabets, in some they are indistinguishable; for example, in the Assuan papyri, documents from Egypt of the 5th cent. B.C. (see ELEPHANTINE PAPYRI), *d* and *r* cannot be clearly distinguished, and it was at first disputed whether a particular word which occurs several times is *dgl* or *rgl*. It becomes important, therefore, in dealing with the Hebrew text of the OT to consider the variants which arise by substituting D's for R's. The Hebrew words for Aram and Edom are *'rm* and *'dm* respectively; the context alone is really the only safe clue to the original reading in any particular passage, and the mere fact that the present Hebrew text reads the one or the other is relatively unimportant; thus, for example, the MT is obviously wrong in 2 S 8[13], and probably in 2 Ch 20[2] (in these cases RSV reads 'Edomites' and 'Edom'); cf Gn 10[4] Dodanim, where 1 Ch 1[7] has Rodanim; Is 15[9] where 1 Q Isa[a] has Dibon (accepted by RSV) for MT Dimon.

33. *Division of text into words secondary.*—Finally, it must be remembered that there is good reason for believing that the division of the consonants of one word from those of another had not been a constant feature of the text. Consequently we cannot safely assume that the present division always corresponds to that of the original writers.

34. *The starting-point of criticism in attempting to detect the earliest errors in the text.*—From all this it follows that sound criticism requires us to start from this position: the original writers wrote in a different script from the present, used no vowel signs, no marks of punctuation, and even vowel letters but sparingly; either they themselves or copyists wrote the text con-

tinuously without dividing one word from another, or at least without systematically marking the divisions. Consequently the canon that the history of the text justifies is that that division of consonants and that punctuation of clauses and sentences must in all cases be adopted which, everything considered, yields the most suitable sense; the Massoretic tradition, however, should always receive prime consideration. Emendations without justification in the LXX and other ancient versions should be adopted only when MT does not make sense or when its reading does violence to the context. And yet there are cases where the Hebrew text gives a division of consonants or clauses which are not the original, but have arisen from accident or particular theories of exegesis. Further, where no division of the existing consonants yields any sense, or but an improbable sense, it must be considered whether the substitution of similar consonants will. Whether the text thus obtained has very much probability of being the original will depend on many considerations.

35. *Illustrations of such errors.*—We shall conclude with some illustrations of the variations in text or sense that arise when the foregoing considerations are allowed due weight. It is not to be understood that in all cases the variations from the traditional interpretation (1–3) or text (4) are certainly the true interpretation or text, but they all may at least be seriously considered.

(1) In some cases simply a fresh punctuation of the sentences without any alteration of the consonants whatever gives an important variation in sense. A good instance is Is 1^{12-14}; even in the present text the denunciation of ritual worship is severe; probably it was once more severe. Thus, without any change in the text, we could render—

> 'When ye come to see my face,
> Who hath required this at your hand?
> No more shall ye trample my courts.
> The bringing of oblations is a vain thing;
> Incense is an abomination to me;
> New moon and sabbath, the calling of assembly, I cannot away with.
> Iniquity and the solemn meeting, your new moons and your appointed feasts my soul hateth.'

For *'wn, iniquity*, the Greek version has *ṣwm, fast(s)*. We probably have in the history of this passage a series of attempts to soften down the severity and absoluteness of the prophetic denunciation of the externalities of religion.

(2) In the Hebrew Bible the word for man, *'yš*, is distinguished from the word for *fire*, *'š*, by the insertion of the vowel letter *y*; but in the Moabite stone, the Siloam inscription (written in Jerusalem in the age, as is commonly supposed, of Isaiah), and in Phoenician inscriptions, it is regularly written without the *y*, and is thus indistinguishable from the word for 'fire.' Where either of these words occurs, therefore, we must decide by the context only which was intended. In Is 9^{19} did Isaiah mean, 'and the people are as the food (=fuel) of fire,' or 'as the food of man'? By the change of a single letter, *t* to *y*, in the word rendered 'food,' we obtain for the whole phrase 'like those that devour men,' *i.e.* like cannibals—a reading suggested by Duhm, and, in the parallelism at least, worthy of consideration; the LXX, however, does not favour the emendation. A clear instance of confusion of the two words *'yš* and *'š* is Ezk 8^2: for 'fire' RSV reads with LXX 'a man.'

(3) Mutilation of the sense of the original is sometimes occasioned by incorrect division of words in the present Hebrew text. For examples where RSV took this into account, see Gn 49^{20}, Ps 25^{17}, Hos 6^5, Jer 23^{33}. In Ps 73^4 a division of *l*^{e}*môthām* into *lāmô tām* gives a reading better than the present text: (RSV) 'For they have no pangs; their bodies are sound and sleek.' Another variant of some importance appears when we divide the words in Is 8^8 differently (viz. *'rṣ k 'mnw 'l* instead of *'rṣk 'mnw 'l*). With this reading the verse closes not with a proper name in the vocative, but with a statement, as in LXX—'The outstretching of his wings shall fill the breadth of the land, for God is with us' (cf v.^{10}). In this connexion, however, it should be noted that the Massoretes may have intentionally given two readings in adjacent verses either to show two possible interpretations or to preserve two alternative traditions.

(4) Parallelism or the context often gives great probability to conjectural readings that differ from the Hebrew text by a letter or two, even though the change is not (clearly) supported by the Greek version. For example, in Dt 33^2 the word *mrbbt* may be an error for *mmrbt* (*m* having accidentally been written once instead of twice, and *b* twice instead of once); then the line would read 'from Meribath-kadesh,' which is a good parallel to 'Paran'; cf Meribath-kadesh (32^{51}).

36. *Alternative Readings.*—In spite of what is supposed to be a standard Hebrew text, the variations in the Dead Sea Scrolls, Kennicott and de Rossi testify to the existence of alternative readings, which find support in the LXX and later Greek recensions. In this class should be noted the *K*^{e}*thîbh* and *Q*^{e}*rê*, which in many cases make equally good sense. In this connexion should also be considered the *s*^{e}*bhîrîn* (conjectures), which have been preserved by the Massoretes. This, however, does not exhaust the alternative readings. Some of these may be discerned in MT itself, even though no annotations or outward indications are employed. Frequently the Massoretes combined two readings in one verse; *e.g.* Jer 31^{15}, where MT has *bānêhā* and *'ênennū*. This use of the singular and plural in the same verse shows that there existed two readings for this verse: one where both words were singular, and another where both were plural. By making a conflation neither reading was lost. Synonyms may have been used and interchanged in adjacent verses. In Ezk 27^7 MT has *šēš* (LXX *byssos*) while, 27^{16} has *būṣ*. The error in LXX *tharseis* shows that there was a reading *šēš* in the Hebrew instead of *būṣ*; cf *The J. H. Scheide Bib. Papyri—Ezekiel*, edited by A. C. Johnson, H. S. Gehman, and E. H. Kase, Princeton, 1938, pp. 98–101.

A comparison of the LXX with MT proves that the Hebrew original of the Greek was closer to MT than the notes of many commentators would imply. A study of the variants and alternative readings in the Hebrew leads to the conclusion that for the most part MT represents a good and reliable tradition. With all the evidence available in MT, Hebrew MSS, and the ancient versions we may conclude that we know as much about the text of the OT as we do of that of Shakespeare. For alternative readings, cf O. H. Boström, *Alternative Readings in . . . Samuel*, Rock Island, 1918; J. W. Wevers, *op. cit.*; J. A. Armstrong, *A Study of Alternative Readings . . . Isaiah*, Princeton University dissertation, 1958.

Any study of the subject of this article naturally involves a knowledge of Hebrew. The best edition of the Hebrew Bible is the *Biblia Hebraica*, 3rd ed., and next in order is the text of Ginsburg. In addition to the articles in the larger dictionaries the following may be consulted: A. Bentzen, *Intro. to the OT* (1948); F. Buhl, *Canon and Text of the OT* (1892); M. Burrows, *The Dead Sea Scrolls* (1955) and *More Light on the Dead Sea Scrolls* (1958); F. M. Cross, *The Ancient Library of Qumran and Modern Biblical Studies* (1958); S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel* 2nd ed. (1913), Introduction; C. D. Ginsburg, *Introduction to the Massoretico-critical Edition of the Hebrew Bible* (1897); R. Gordis, *The Biblical Text in the Making: a Study of the Kethib-Qere* (1937); P. E. Kahle, *The Cairo Geniza*, Schweich lectures of 1941 (1947); F. G. Kenyon, *Our Bible and the Ancient MSS*. Revised by A. W. Adams, with introduction by G. R. Driver; R. H. Pfeiffer, *Intro. to the OT* (1941); E. Würthwein, *The Text of the OT*, translated by P. R. Ackroyd (1957).

G. B. G.—H. S. G.

TEXT OF THE NEW TESTAMENT.—1. The text of the NT as read in ordinary copies of the Greek Testament, and as translated in the AV of 1611, is

substantially identical with that printed by Stephanus (Robert Estienne) in 1550, and by the Elzevirs in their popular edition of 1624. To this text the Elzevirs in their next edition (1633) applied the phrase 'Textum ergo habes nunc ab omnibus receptum'; and by the name of *Textus Receptus* (TR) or Received Text, it has since been generally known. The edition of Stephanus was based upon the two earliest printed texts of the NT, that of Erasmus (published in 1516), and that of the Complutensian Polyglot (printed in 1514, but not published until 1522); and he also made use of 15 MSS, mostly at Paris. Two of these (Codd. D and L, see below, 7) were of early date, but not much use was made of them; the others were minuscules (see 5) of relatively late date. The principal editor of the Complutensian Polyglot, Lopez de Stunica, used MSS borrowed from the Vatican; they have not been identified, but appear to have been late, and ordinary in character. Erasmus, working to a publisher's order, with the object of anticipating the Complutensian, depended uncritically upon a single 12th cent. MS for the Gospels, upon one of the 13th or 14th for the Epistles, and upon one of the 12th for the Apocalypse, mutilated at the end. (Erasmus made good the lacuna by translating from the Latin Vulgate into Greek!) All of these were at Basle, and were merely those which chanced to be accessible.

The TR is consequently derived from (at most) some 20 to 25 MSS, dating from the last few centuries before the invention of printing, and not selected on any estimate of merit, but merely as being ready to the editor's hands. They may be taken as fairly representative of the great mass of Greek Testament MSS of the late Middle Ages, but no more. At present we have over 70 papyri, over 230 uncial MSS and nearly 2500 minuscules and about 1700 lectionaries. The oldest of these is a papyrus fragment of Jn 18, dated within the first half of the 2nd cent. The great Chester Beatty papyri of the Gospels and Acts and of Paul belong to the 3rd cent. and the oldest uncial codices to the following century. The history of **Textual Criticism** during the past three centuries has been the history of the accumulation of all this material (and of the further masses of evidence provided by ancient translations and patristic citations), and of its application to the discovery of the true text of the NT; and it is not surprising that such huge accessions of evidence, going back in age a thousand years or more behind the date of Erasmus' principal witnesses, should have necessitated a considerable number of alterations in the details of the TR. The plan of the present article is, first to set forth a summary of the materials now available, and then to indicate the drift of criticism with regard to the results obtained from them.

2. The materials available for ascertaining the true text of the NT, as of other works of ancient literature, fall into three classes: (1) Manuscripts, or copies of the NT in the original Greek; (2) Versions, or ancient translations of it into other languages, which were themselves, of course, originally derived from very early Greek MSS, now for the most part lost; (3) Quotations in ancient writers, which show what readings these writers found in the copies accessible to them. Of these three classes it will be necessary to treat separately, in the first instance, and afterwards to combine, the results of their testimony. It need not be stressed that the available material is only a tiny fraction of what existed once or that much of the material, especially the later material, though catalogued, has not been examined or collated fully.

3. Manuscripts.—It is practically certain that **papyrus** was used for the originals of the NT books, papyrus being in universal use for literary purposes in the Graeco-Roman world. Mark may have been written on a papyrus codex (*i.e.* in book form) but other NT books were written probably on papyrus rolls separately, and would at first circulate separately; and so long as papyrus continued to be used, it was impossible to include more than a single Gospel or a group of short Epistles in one volume. Consequently there could be no collected 'New Testament' at this early stage, and no question (so far as the conditions of literary transmission were concerned) of fixing a Canon of books to be included in such a collection. Papyrus is a material (made from the pith of the stem of the Egyptian water-plant of that name) which becomes brittle with age, and quite unable to resist damp; consequently papyrus MSS have almost wholly perished—from friction and use if they remained above ground, from moisture if they were buried beneath it. With a few exceptions buried papyri have survived only in Middle and Upper Egypt, where the soil is extraordinarily dry. Literary works and business documents have been dug up of late years in Egypt in very large numbers, ranging from about 500 B.C. to A.D. 700, so that the styles of writing in use at the time when the NT books were written are well known to us; but Christianity and its literature are not likely to have penetrated much beyond Lower Egypt in the first two centuries of their existence, and consequently it is perfectly natural that no MSS of the NT older than A.D. 140 are now extant. The 2nd-cent. papyrus codex fragment (P^{52}) of Jn 18^{31-34} and 37^{f} has been mentioned. Other NT papyri range from the 3rd cent. to the 7th. Of the 3rd-cent. papyri the most important are P^{5}, containing fragments of John; P^{20}, fragments of James; P^{37}, verses of Matthew; P^{45-47}, the Chester Beatty papyri, large parts of the Gospels and Acts, of Paul and of Revelation; P^{48}, fragments of Acts; P^{49}, verses of Ephesians; P^{53}, fragments of Matthew and Acts, and P^{64} (which Mr. C. H. Roberts places late in the 2nd cent.), fragments of Matthew. The recently discovered P^{66} (Bodmer) papyrus of John is also of the greatest importance. Its date is *c* A.D. 200.

4. Persecution ceased in the 4th cent. and official copies of Christian books were no more surrendered to pagans. The acceptance of Christianity by the Roman Empire gave a great impulse to the circulation of the Scriptures; and simultaneously papyrus began to be superseded by **vellum** as the predominant literary material. Papyrus continued to be used in Egypt until the 8th cent. for Greek documents, and, to a lesser and decreasing extent, for Greek literature, and for Coptic writings to a still later date; but the best copies of books were henceforth written upon vellum. Vellum had two great advantages over a papyrus roll: it was much more durable and those who used it followed the custom, made popular by Christians rather than pagans, of folding their material into book-form or codex so that it was possible to include a much greater quantity of matter in a single MS, to which also reference could be made more easily. Hence from the 4th cent. it became possible to have complete copies of the NT, or even of the whole Bible; and it is to the 4th cent. that the earliest extant Biblical MSS of any substantial size belong, apart from the Chester Beatty papyri.

5. Vellum MSS are divided into two classes, according to the style of their writing. From the 4th cent. to the 10th they are written in **uncials**, *i.e.* in capital letters, of relatively large size (so-called, probably, because they took up originally one twelfth of a line, not because they were one inch high), each being formed separately. In the first half of the 9th cent. a new style of writing was introduced, by the adaptation to literary purposes of the ordinary running hand of the day; this, consisting as it did of smaller characters, is called **minuscule**, and since these smaller letters could be easily linked together into a running hand, it is also commonly called **cursive**. In the 9th cent. the uncial and minuscule styles are found co-existing, the former perhaps still predominating; in the 10th the minuscules have decidedly triumphed, and the uncial style dies out. Minuscules continue in use, with progressive modifications of form (*e.g.* an increasing use of contractions is made), until the supersession of MSS by print in the 15th cent.; at first always upon vellum, but from the 13th cent. onwards sometimes upon paper. **Paper**, an early discovery in China, found its way into the West eventually through the Arabs, who used it from the 8th cent. onwards.

TEXT OF THE NEW TESTAMENT

6. Uncial MSS being, as a class, considerably older than the minuscules, it is natural to expect that the purest and least corrupted texts will be found among them; though it is always necessary to reckon with the possibility that a minuscule MS may be a direct and faithful representative (*e.g.* 1739) of a MS very much older than itself.

In an *apparatus criticus* of the NT some of the 230 uncial MSS are indicated, always by capital letters, first of the Latin, then of the Greek alphabet and one MS by the first letter of the Hebrew. Many uncial fragments are indicated by numerals preceded by O. Further, since comparatively few MSS contain the whole of the NT, it is found convenient to divide the material under four headings: (1) Gospels, (2) Acts and Catholic Epistles, (3) Pauline Epistles, (4) Apocalypse; and each group has its own numeration of MSS. The uncial MSS which contain all of these groups, *e.g.* A and C, retain these designations in each group; but when a MS does not contain them all, its letter is given to another MS in those groups which it does not contain; *e.g.* D, Codex Bezae, for the Gospels and Acts is different from D, Codex Claromontanus, for Paul. The attempt made by von Soden to adopt a new and 'simpler' system has not been successful; Gregory, von Dobschütz, and Eltester have developed the old system started by Wettstein in 1751–1752.

7. A selection of the most important *uncial* MSS will now be briefly described, so as to indicate their importance in the textual criticism of the NT:

B. *Codex Vaticanus*, No. 1209 in the Vatican Library at Rome, where it has been since about 1481. One of our oldest and best MSS, its evidence was largely responsible for the changes of text embodied in the RV. It is written in a small, neat uncial, probably of the 4th cent., with three columns to the page. It originally contained the whole Bible (except the Books of Maccabees), possibly with additional books, as ℵ and A had, but it has lost everything from He 9^{14} to the end of the NT, including the Pastoral Epistles (but not the Catholic Epistles, which follow the Acts and hence have escaped) and Apocalypse.

ℵ. *Codex Sinaiticus* sometimes cited as 'S,' originally a complete codex of the Greek Bible. Forty-three leaves of the OT were discovered by Tischendorf in the monastery of St. Catherine at Sinai in 1844, and acquired by him for the University Library at Leipzig; while the remainder (156 leaves of the OT, and the entire NT, with the Epistle of Barnabas and part of the 'Shepherd' of Hermas, on 148 leaves) were found by him in the same place in 1859. It was given by the monks of Sinai to the Czar in 1862 and was bought for £100,000 for the British Museum from the Soviet Union in 1933. The Bible text is written with four columns to the page (the narrow columns being a survival from the papyrus period); and palaeographers are now generally agreed in referring the MS to the 4th cent., and it is ranked in importance close to B. Tischendorf attributed the original text of the MS to four scribes, one of whom he believed on rather dubious grounds to have been also the scribe of B; and the corrections to six different hands, of whom the most important are $ℵ^{a}$ (about contemporary with the original scribe, and $ℵ^{ca}$ and $ℵ^{cb}$ (of the 7th cent.). The corrections of $ℵ^{ca}$ were derived (according to a note affixed to the Book of Esther) from a MS corrected by the martyr Pamphilus, the disciple of Origen and founder of the library at Caesarea. It has been held that ℵ itself was written at Caesarea, but this cannot be regarded as certain. Textually it belongs rather to the Alexandrian family; see below **40 ff.**

Θ. *The Koridethi Codex* of the Gospels was discovered in 1906 by Bartholomée at Koridethi in Western Caucasia. The scribe, who seems to have known little Greek, lived approximately in the 8th cent. but worked on a text akin to that found in minuscules grouped as fam.[1] and fam.[13] especially for the text of Mark. It is usually classified as 'Caesarean'; see below.

W. *The Washington codex*, 4th or 5th cent., of the Gospels written in the Western order, Matthew, John, Luke, Mark. The text is almost protean, but the section, Mk 1^{1}–5^{30} gives valuable support to the Old Latin version. At Mk 16^{14f} it contains an apocryphal insertion hitherto known only from Jerome's *Adv. Pelag.* ii. 15, which quotes part of it.

A. *Codex Alexandrinus*, gives an 'Alexandrian text' for Paul but not the Gospels, which are Byzantine. It was probably written at Alexandria in the 5th cent., and is now in the British Museum. From an uncertain, but early, date it belonged to the Patriarchs of Alexandria; it was brought thence by Cyril Lucar in 1621, when he became Patriarch of Constantinople, and was presented by him to Charles I. in 1627, and so passed, with the rest of the Royal Library, to the British Museum in 1757. It contains the whole Greek Bible, with the exception of forty lost leaves (containing Mt 1^{1}–25^{6}, Jn 6^{50}–8^{52}, 2 Co 4^{13}–12^{6}; it also contained originally the two Epistles of Clement and the Psalms of Solomon, but the Psalms and the conclusion of the Second Epistle have disappeared, together with one leaf from the First Epistle. The text of the NT is written by three scribes, with two columns to the page; there are many corrections by the original scribes and an almost contemporary reviser (A^{a}).

D. *Codex Bezae*, in the University Library at Cambridge, to which it was presented in 1581 by Theodore Beza, who obtained it in 1562 from the monastery of St. Irenaeus at Lyons. It contains the Gospels and Acts, in Greek and Latin, the former occupying the left-hand pages and the latter the right. It is mutilated, Ac 29^{22}–end being lost, together with all, except a few words of the Catholic Epistles, which followed. It is generally assigned to 5th or early 6th cent. Its place of origin has been variously supposed to be southern France, southern or western Italy, Sardinia, or Egypt; but the evidence is not decisive in favour of any one of these. Its text is very remarkable, containing a large number of omissions (especially in the Gospels) and a large number of additions (especially in Acts) as compared with the TR. In some places the Latin seems to have been accommodated to the Greek, in others the Greek to the Latin. There is affinity also with some Syriac readings and it has even been suggested that its Greek side is a retranslation from an Aramaic Targumizing version of the original Greek text. Its type of text is usually classed with those of the chief representatives of the Old Latin and Old Syriac versions.

D_2. *Codex Claromontanus*, in the Bibliothèque Nationale at Paris, written probably in the 6th cent., contains the Pauline Epistles in Greek and Latin, the latter being practically independent of the Greek. Preceding the Epistle to the Hebrews is a list of the books of the NT, with the number of *stichoi* (or normal lines of sixteen syllables each) in each of them, which must be descended from an early archetype, since it places the books in an unusual order and includes in the list several uncanonical books (cf descriptions of ℵ and A); the order is Matthew, John, Mark, Luke, Romans, 1 and 2 Corinthians, Galatians, Ephesians, 1 and 2 Timothy, Titus, Colossians, Philemon, 1 and 2 Peter, James, 1, 2, and 3 John, Jude, Barnabas, Apocalypse, Acts, Hermas, Acts of Paul, Apocalypse of Peter (Thessalonians, Hebrews, and Philemon being omitted). The MS was in the monastery of Clermont, whence it was acquired by Beza, who was also the owner of D. It may possibly have been written in Italy. Other Graeco-Latin MSS of the Pauline Epistles are E_3 F_2 G_3, which all go back to the same archtype as D_2.

E_2. *Codex Laudianus*, in the Bodleian Library at Oxford, contains Acts in Greek and Latin, the latter holding the place of precedence on the left. Probably of the 7th cent., it was in Sardinia at an early date, and may have been written there; thence it came to England (probably with Theodore of Tarsus in A.D. 669) and was used by Bede. The Greek text is somewhat akin to that of D; the Latin has been accommodated to the Greek, and is of little independent value. It is the

TEXT OF THE NEW TESTAMENT

earliest MS extant that contains Ac 8^{37}, though the verse was in existence in the time of Irenaeus (late 2nd cent.).

H_3. *Codex Coislinianus* 202, of the 6th cent., consists of forty-one leaves of Paul's Epistles, eight of which are in the original home on Mount Athos, twenty-two in Paris, three each in Moscow, Leningrad, and Kiev, and two at Turin. The MS represents the text of the Pauline Epistles as edited by Euthalius in the 4th cent.

L. *Codex Regius*, of the 8th cent., in the Bibliothèque Nationale in Paris, contains the Gospels. It is remarkable as containing both the shorter conclusion of Mark (see RSVm) as well as the usual longer one, 16^{9-20}, a note before each saying that it is found in some copies. Its readings often agree with those of **B** against TR.

N. *Codex Petropolitanus*, contains the Gospels, written in large silver letters on purple vellum, in the 6th cent. One hundred and eighty-two out of two hundred and twenty-eight leaves (the latter being slightly less than half of the original text) are in Leningrad. It is textually akin to **Σ** which was copied from the same original and not far distant from two other purple MSS **O** and **Φ**, all these MSS giving support to the 'Caesarean' clan, where their witness is not Byzantine.

Σ. *Codex Rossanensis*, at Rossano in Calabria, 6th cent. Contains Matthew and Mark, written in silver letters on purple vellum, with illustrations. See above on N.

O. *Codex Sinopensis*, in the Bibliothèque Nationale at Paris. 6th cent.; 43 leaves mainly of Mt 13–24, written in letters of gold on purple vellum with 5 illustrations like those of **Σ**.

Φ. *Codex Beratinus*, at Berat in Albania, 6th cent., contains Matthew and Mark in silver letters on purple vellum; is is textually akin to **N** and **Σ**, but not so closely related to them as they are to one another.

C. *Codex Ephraemi*, a 5th cent. palimpsest (in the Bibliothèque Nationale in Paris), *i.e.* a manuscript of which the original writing has been partially washed or scraped off the vellum in order to use it again to receive other writing. In this case the original writing was the text of the Greek Bible in one broad column to the page; and this was sacrificed in the 12th cent. in order to inscribe on the same vellum some treatises by St. Ephraem of Syria. Only 64 leaves of the OT now survive, and 145 of the NT (out of 238); and often it is impossible to decipher the original writing.

Δ. *Codex Sangallensis*, of about the 9th cent., at St. Gall, a Graeco-Latin text of the Gospels, the text of Mark being apparently unrevised and of the Alexandrian type; the Latin side, unfortunately, has been assimilated to the Vulgate.

Λ. *Tischendorfianus III*, in the Bodleian Library at Oxford, of the 9th cent., contains Luke and John. Matthew and Mark, written in minuscules, are in Leningrad. This MS is chiefly notable for a subscription stating that its text was derived 'from the ancient copies at Jerusalem.' Similar subscriptions are found in a group of 12 minuscule MSS.

T. A number of fragments from Egypt, mostly bilingual, in Greek and Coptic (Sahidic). The most important, T or T^a in the library of the Propaganda at Rome, consists of 17 leaves from Luke and John, of the 5th cent., with an Alexandrian text. T^1 (otherwise **099**) has the double ending in Mark.

Ξ. *Codex Zacynthius*, a fragmentary palimpsest of Luke, in London, was written in the 8th cent. It alone has the same section divisions as **B** and where the text has not been assimilated to the Byzantine textual type, it is Alexandrian.

Ψ. *Codex Laurensis*, at Mount Athos, written in the 8th or 9th cent., contains Mk 9–end, Luke, John, Acts and Paul. Like **L** it has the double ending of Mark. For the rest of Mark it has been less assimilated to the Byzantine form of text than elsewhere and is Alexandrian.

046. *Codex Vaticanus 2066* at Rome, written in the 8th cent., contains the Apocalypse and textually stands at the head of some 40 minuscules, which diverge from both the textual type behind the uncial MSS and that of Byzantine MSS. This MS is sometimes quoted misleadingly as B_2.

K. *Codex Cyprius*, in the Bibliothèque Nationale in Paris, written in the 9th cent., contains the four Gospels in a Byzantine text.

P^5. (P. Ox. 208 and 1781), a 3rd cent. codex, perhaps a lectionary originally, containing fragments of John. It has many omissions; it agrees with **B** and **ℵ** against **D** and goes closely with **ℵ** (*e.g.* Jn 1^{34}) except in parts of Jn 16.

P^{20}. (P. Ox. 1171), a late 3rd cent. codex, containing fragments of Ja 2–3, supporting the text of **B**, **ℵ** and **C**.

P^{37}. A late 3rd cent. codex, containing fragments of Mt 26. The text supports that of **Θ**, **ℵ** and **B** in that descending order, rather than that of **D**.

P^{45}. Chester Beatty Papyrus, a 3rd cent. codex of the Gospels and Acts (ed. by Sir F. G. Kenyon, 1933) contains large fragments of those books with hundreds of readings of the utmost importance textually. The text of the Gospels seems to be 'Caesarean,' oscillating between a **B**-type and a **D**-type but the text of Acts (*i.e.* of fragments of 4–17) supports the **B**, **ℵ** and **A** text on the whole.

P^{46}. Chester Beatty Papyrus, a late 3rd cent. codex, containing large fragments of Pauline Epistles in the following order, which is unusual! Romans, Hebrews, 1 and 2 Corinthians, Ephesians, Galatians, Philippians, Colossians, 1 and 2 Thessalonians. There is no certain evidence that the Pastorals were included.

P^{47}. Chester Beatty Papyrus, a late 3rd cent. codex, contains fragments of Rev 9–17.

P^{48}. P. Soc. Ital. 1165, a 3rd cent. codex with a Western text of fragments of Acts.

P^{49}. Yale P. 415, a 3rd cent. codex, having fragments of Eph 4–5, of an Alexandrian type textually.

P^{52}. P. Rylands Gr. 457, fragment of a codex written in the first half of the 2nd cent., with portions of Jn 18 in an Alexandrian text.

P^{53}. A 3rd cent. Michigan codex, with fragments of Mt 26 and Ac $9–10^1$ in an indeterminate type of text.

P^{64}. At Magdalen College, Oxford, a codex written *c* A.D. 200 with fragments of Mt 26.

P^{66}. The Bodmer papyrus codex containing about two-thirds of Jn $1^1–14^{26}$, written *c* A.D. 200 with a text standing in the middle of the Alexandrian family. (Cf K. Aland, *TLZ*, lxxxii, 1957, 161–184 and *ZNW*, 1957, 157; A. J. F. Klijn, *New Testament Studies*, iii, 1937, 327–334, and F. Lasserre, *Revue de Théologie et de Philosophie*, 1957, 44–57. For Jn 14–21 cf Victor Martin, *Papyrus Bodmer II, Supplement*, 1958.)

P^{67}. At Barcelona, 3rd cent. fragments of Mt 3 and 5, akin to **ℵ**.

P^{72}. Papyrus Bodmer VII–VIII contain Jude and 1 and 2 P, published by M. Testuz, 1959.

8. Passing to the *minuscules*, we find the number of witnesses overwhelming, though they are but a small part in comparison with the MSS that have been lost. There are more than 2500 such MSS, most of them containing only the text of the Gospels, many of these being in a fragmentary state. It is, of course, impossible to give any individual account of so great a mass of MSS, many of which have never been fully examined though more and more are being collated by the joint efforts of British and American scholars. It is true, however, that the minuscule MSS contain much the same type of text as that underlying the TR. The fact that over 90 per cent. of these MSS contain substantially the late Byzantine or ecclesiastical text may be taken as universally admitted, whatever may be the inferences drawn from it. The most noteworthy MSS are those which depart from this normal standard and ally themselves with some of the early Uncials. If a Byzantine reading is supported by an early papyrus, it is shown not to be the product of late scribal conflation or error unless it is coincidental.

For instance, in the Gospels 33 is akin to the text found in **B ℵ**. Ferrar noted the family group named after him or named Family[13] to which 13, 60, 124, 346, 348, 543,

13, 788, 826, 828 and others belong; Lake noted Family[1] headed by 1, 118, 131, 209; Gregory separated Family[1424], Colwell, Family[2327], and K. W. Clark, Family[2412]. Other such families remain, no doubt, to be discovered and to be connected with particular localities, as the Ferrar group is with Calabria. Families[1] and [13] both seem to witness to the early form of the Caesarean text written probably in Egypt, apart, of course, from harmonization with the Byzantine text. (The numeration of these MSS is that of Gregory, adopted by Eltester and Aland, despite von Soden's alternative system.)

For the Pauline Epistles 33 and 1739 lend valuable support to the Alexandrian text and for the Catholic Epistles the following do the same, 6, 33, 81, 104 and 326; the last four of these, with 1175, support the same text of Acts.

In Apocalypse, where uncials are scarce and minuscules consequently more important, the following give a valuable non-Alexandrian text 2329, 2351, 69, 141; 598, 2302; 1, 2186, 181; 1732; 104.

9. One other class of MSS remains to be mentioned, namely the *Service-Books* or *Lectionaries*, in which the Gospels, Acts and Epistles were divided into portions to be read on each day throughout the ecclesiastical year. These books fall into two classes, according as they contain the lessons from the Gospels (*Evangelia* or *Evangeliaria*) or from the Acts and Epistles (*Praxapostoli*). There are over 1200 of the former and 300 of the latter. Over 100 of these are uncials, but with hardly an exception they are of relatively late date, unless some early papyrus fragments are from an Evangelia rather than from Tetraevangelia. Where it occurs, the uncial style is preserved because liturgical documents tend to be conservative, but the MSS are of comparatively late date, usually 9th cent. or later. Thanks chiefly to American scholars such as E. C. Colwell and D. W. Riddle, these MSS are beginning to be studied. It is hoped that light will be thrown on the history of the Byzantine or ecclesiastical text at least, if not on the older local and divergent textual types.

The standard lists of NT MSS are those of C. R. Gregory, *Prolegomena* to Tischendorf's *NT Graece*, ed. 8, 1864, reproduced in German, with additions, in his *Textkritik des NT*, 1900; of E. von Dobschütz, *ZNW* xxiii, 1924, 248–264; xxv, 1926, 299–306; xxvii, 1928, 216–222; and xxxii, 1933, 185–206; and of K. Aland, *ZNW* xlv, 1954, 179–217, and xlviii, 1957, 145–191.

10. The Versions.—The second class of authorities, as indicated in **2**, is that of the versions, or translations of the NT into languages other than Greek. It is only the earlier versions that can be of service in recovering the original text of the NT; modern translations are of importance for the history of the Bible in the countries to which they belong, but contribute nothing to textual criticism. The early versions may be divided into Eastern (Syriac, Coptic, Armenian, Arabic, Ethiopic, etc.) and Western (Latin and Gothic), but the distinction is of little importance. Age is a more important factor than locality, and the two oldest, and on the whole, most important (though not necessarily the most trustworthy) are the Old Latin and Old Syriac versions, which, moreover, are in many respects akin to one another. Next in importance are the Coptic versions and the Latin Vulgate; and the Armenian and later Syriac versions are also of considerable value. It will be convenient to describe the several versions under their respective countries in the first instance, and to defer the discussion of their characters and affinities until the tale of our authorities is complete.

A. Syriac Versions.—

11. *The Diatessaron.*—The question has been much debated whether the harmony of the four gospels made by Tatian, the Diatessaron, was older than the Syriac version of the separate gospels; in all probability it was, and it influenced them. Tatian, an Assyrian Christian and a disciple of Justin Martyr, compiled (probably about A.D. 170) his harmony either in Syriac or in Greek; the discovery in 1933 of a tiny fragment of the Greek Diatessaron at Dura Europos, written before A.D. 256, does not clinch the argument that Greek was the original language. Tatian's activity was mainly in the East; the Diatessaron circulated most extensively in Syria, where it was almost the sole form of the Gospels in use until the 5th cent.; and a commentary on it was written by the Syrian Father Ephraem. These facts suggest a Syriac origin. However, the Greek name for the Diatessaron and the variant in Mk 9[15] *proschairontes* for *prostrechontes*, unless it was a Tatianic variant with widespread influence, and the Dura fragment, point to a Greek original. It is also increasingly recognized that Latin and other harmonies found in the West depend on an early Latin recension of the Diatessaron, which was more probably a rendering from the Greek than the original of it. Tatian is likely to have used a form of the Greek text as his base, which was current in Rome (*c* A.D. 170), altering it occasionally to suit his own views. Until 1880 the Diatessaron existed only in name, and the very fact that it was a compilation from our four canonical Gospels was a matter of controversy. In that year, however, E. Abbott called attention to the fact that in 1876 G. Moesinger had published a Latin translation of an Armenian treatise which had been printed in 1836 and which was, in fact, St. Ephraem's Commentary on the *Diatessaron*. Subsequently two copies of an Arabic version were discovered and from these the text was published by Ciasca in 1888; since then, the Beyrouth fragments have come to light and a further MS was published by Marmadji in 1935, and an 18th and a 19th cent. codex have appeared, both based on older copies. These texts point to two forms of the Arabic text, which itself was altered, unfortunately, to make it agree with the Peshitta or Syriac Vulgate text (see below). A 16th cent. Persian MS based on a 13th-cent. copy was published by Messina in 1951; it is derived from a Syriac text and preserves many Tatianic readings but not Tatian's order of the sections of his harmony. Some of the Syriac Fathers, *e.g.* Aphraates, witness to Tatian's text, as does Ephraem's commentary, extant only in Armenian (see Leloir's edition).

On the Western side, Codex *Fuldensis* prepared by order of Bishop Victor of Capua (*c* A.D. 545) is a harmony based on Tatian's but made to conform first to an Old Latin, then to the later Latin Vulgate text. The 14th-cent. Liège MS, in Dutch, was published in the middle of the last century; other Dutch versions were collected and published by Plooij and others in 1929–1938. These all point back to one or more Latin harmonies of a Tatianic character, which had been subjected comparatively little to the influence of the Latin Vulgate. Also based on a Latin Diatessaron is the Italian evidence, which appears in Venetian and Tuscan form in MSS of the 13–14th cents. Traces of Tatian's influence have also been found in German, French, and English works; for an English one, see M. Goates' edition of the *Pepysian Gospel Harmony*, 1922.

The material for the reconstruction of the Diatessaron is now so extensive that only a team of scholars is capable of following up the work of Baumstark on this enterprise. It is tragic that the early MSS of the Diatessaron were destroyed. Bp. Theodoret of Cyrrhus in the 5th cent. could boast that he collected and destroyed two hundred copies, replacing them with the four separate Gospels.

Some slight traces of an ancient Syriac text of Acts and Paul exist in the *Liber Graduum* (edited by Kmosko, 1926) as well as in Aphraat's *Demonstrations* and in an Armenian translation of Ephraem's commentaries; whether Tatian was the author of this text is in doubt.

12. *The Old Syriac Version* (OS).—The evidence for the character, and even the existence, of the Old Syriac version is of comparatively recent discovery. Before 1842 the earliest extant Syriac version was the Peshitta (see below), to which, however, a much higher antiquity was assigned than is now admitted. In that year, however, W. Cureton discovered, among the MSS brought to the British Museum from the convent of S. Maria Deipara

TEXT OF THE NEW TESTAMENT

in the Nitrian desert in Egypt, an imperfect Gospel text very different from the Peshitta. This (which was not finally published by Cureton until 1858) was known for fifty years as the Curetonian Syriac, and the relative age of it and the Peshitta was a matter of controversy among scholars. In 1892 Mrs. A. S. Lewis and Mrs. Margaret Gibson from Cambridge discovered in the monastery of St. Catherine at Sinai a palimpsest MS, which was subsequently recognized from their photographs as containing a text closely akin to the Curetonian. Comparison of the two showed that they represented different recensions of the same version, the Lewis or Sinaitic MS (Syr.-Sin.) containing the earlier form of it. Neither is complete, though Bensly, Burkitt, J. R. Harris, and Hjelt added to the knowledge of it, Hjelt visiting Sinai in 1911 to check disputed readings and publishing his results in 1930. The Curetonian (Syr. Cur.) contains nothing of Mark except 16^{17-20}, just sufficient to show that the last twelve verses were present in this form of the version, though they are absent from Syr.-Sin.; of John it has only about five chapters, and there are large gaps in Matthew and Luke. Syr.-Sin. contains a large part of all four Gospels, but none is intact. Both MSS are assigned to the 5th cent., Syr.-Sin. probably being the earlier; but the version which they represent dates back probably to the 3rd cent., perhaps even to A.D. 200, as Burkitt maintained, ascribing it to Bishop Palut. It had widespread influence (denied by Burkitt) even after Bishop Rabbula's time at Edessa. The OS text, which tends to be short, has often an affinity with 'Western' MSS. Streeter took it to witness to a text-type of Antioch rather than to class it with the 'Western'; the scribes of the latter may have been Jewish Christians with a knowledge of Syriac.

13. *The Peshitta.*—Previous to the discovery of Syr.-Cur., the Peshitta was believed to be the oldest Syriac version and was sometimes regarded as the queen of all the versions, a title that has been given more justifiably to the Armenian. Its date was supposed to be referable to the 2nd cent. Even when the superior claims of the OS version came to be generally admitted, the Peshitta was assigned to the 4th cent. at latest, on the ground that traces of it were supposed to be found in the Biblical quotations of St. Ephraem, who died in A.D. 378. Since, however, it was shown (by Burkitt, *S. Ephraem's Quotations from the Gospels*, 1901) that the treatises in which the use of the Peshitta is observable are not the genuine work of Ephraem, this evidence falls to the ground, and there is nothing now to prove the existence of the Peshitta before the 5th cent. Vööbus has found traces of this version as early as A.D. 411 and he would not credit Rabbula of Edessa with its creation, as Burkitt and many others following him did. It was probably the gradual growth of a school rather than the work of one man. (But see M. Black on Vööbus' view, *The Bulletin of the John Rylands' Library*, xxxiii, 1951, 203 ff.) It did not completely supersede its predecessors, as is often alleged, but it appears in both branches of the Syrian Church (Nestorian and Monophysite) whose quarrel dates back to A.D. 431. The name Peshitta means 'the simple,' perhaps to distinguish it from the *Evangelion-da-Mehalletê*, 'the Gospel of the mixed' or the Diatessaron, and from the *Evangelion-da-Mepharreshê* or 'Gospel of the Separated,' *i.e.* four-fold Gospel. MSS of the Peshitta go back to the century of its origin, the 5th, unless its growth started in the 4th. There are over 180 Gospel MSS in this version, and over 150 of Catholic Epistles and Paul. One Gospel MS can be dated A.D. 463–464 and the British Museum possesses another (of Matthew and Mark) of the same century. The Apocalypse, with the four minor Catholic Epistles, was not included in the Syriac canon. The later MSS reproduce the earlier very faithfully, so that the modern edition by the British and Foreign Bible Society (1905–1920), based on the researches of Gwilliam and Gwynn, does not differ substantially from the first (A. Widmanstadt, 1555). Ropes maintains that for Acts the Peshitta preserves some early Western readings embedded in a text akin to that of our early Uncial MSS (*Beginnings of Christianity*, iii, pp. cxlix, 291 ff).

14. *The Philoxenian Syriac.*—Unlike the Latin Vulgate, the Peshitta was not entirely unchallenged in its supremacy. In A.D. 508 Philoxenus, Jacobite Bishop of Mabug in eastern Syria, caused a new translation of the NT to be made by one Polycarp; but of this nothing has come down to us except the four minor Catholic Epistles (which were incorporated into the Peshitta to fill the gap caused by their original omission there) and a single MS of the Apocrypha (at Trinity College, Dublin, published by Gwynn in 1897). The style of Philoxenus was free and idiomatic, and the Greek text on which it was based was that of the majority of the late MSS.

15. *The Harklean Syriac.*—On one view, a complete revision of Philoxenus was made in A.D. 616 by Thomas of Harkel, who converted its idiomatic freedom into extreme literalness, and added various readings in critical notes, which show an acquaintance with a Greek MS or MSS of Western character for Acts at least, second in importance only to that of Codex Bezae itself. About thirty-five MSS of Harkel are known, dating from the 7th and 8th cents. onwards. The Apocalypse, which is now incorporated with the Peshitta, is probably derived from this version. On the other, less likely, view, Thomas did no more than add marginal notes from a few Greek MSS to the version of Philoxenus.

16. *The Palestinian Syriac.*—Yet another Syriac version exists, but in a different version from those hitherto described; for, whereas they all belong to E. Syria, with its centre at Edessa, this is in the Western Aramaic characteristic of Palestine and its neighbourhood. For some decades now no new discoveries have been made of MSS in this version, apart from two fragments published by H. Duensing (*ZNW*, xxxvii, 1938, 42–46). The extant MSS, few in number, are mainly lectionaries. F. C. Burkitt argued that it owed its origin as a version to the efforts of Justinian and Heraclius to abolish Judaism in Palestine in the 6th cent., and that it came again into prominence in the 11th cent.

It has also been suggested that this version was preserved by the Melkites or Royalists after Chalcedon or even that this version rests on the primitive oral tradition of Palestinian Christianity which was not reduced to writing until the 5th cent. The three principal MSS of the version are dated in 1030, 1104, and 1118.

On the Syriac versions see especially articles by Woods and Gwilliam in *Studia Biblica*, vols. i. and iii.; A. S. Lewis, *The Four Gospels translated from the Sinaitic Palimpsest*, 1894; Gwynn, *Apocalypse of St. John in a Syriac Version*, 1897; F. C. Burkitt, *Evangelion da Mepharreshê*, 1904; B. M. Metzger, *The Evidence of the Versions for the Text of the NT*, in M. M. Parvis and A. Wikgren's *New Testament MS Studies*, 1950; A. Vööbus, *Neue Materialen zur Geschichte der Vetus Syra in den Evangelienhandschriften*, 1953, and his *Early Versions of the NT, MS Studies*, 1954, 67–131.

17. *The Armenian Version.*—The first state to accept Christianity as its official religion, Armenia, received the Gospel in Greek form from the West and in Syriac from the South; according to Lazar of Pharpi the written Armenian Gospels were derived from the Greek; according to Koriun and Moses of Chorene, from the Syriac. The latter tradition is probably correct, the earliest translation into Armenian having been undertaken by Sahak and Mesrop *c* A.D. 400 from a Syriac text. There is still doubt whether this was the Diatessaron or an OS text. Hints of this Arm^1 text, as it has been called, can be gleaned from the writings of some of the Armenian Fathers, such as Agathangelus, Koriun, Eznik, Pseudo-Gregory, and John Mandakuni (S. Lyonnet, *Biblica et Orientalia*, xiii, 1950). After A.D. 431, this version seems to have been revised with the help of Greek MSS received from Constantinople, perhaps akin to B and ℵ, and perhaps also of Greek MSS showing, for the Gospels at least, a Caesarean tendency. The

printed text of Zohrab rests on this Arm^2 version. The earliest extant MSS usually omit the last twelve verses of Mark; but one, which has them, has a marginal rubric assigning them to the 'Elder Ariston' (Aristion?), the presbyter known to us by a mention in Papias; this rubric may be due, however, to the guess of a 10th-cent. scribe of this MS, E. 229, derived from the Armenian version of Eusebius, *HE* iii. 39 (4).

On the Armenian version see F. C. Conybeare, article in Hastings' *DB*; J. Armitage Robinson, *Euthaliana*, 1895; F. Macler, *Le texte arménien de l'évangile d' après Matthieu et Marc*, 1919; A. Merk, *Biblica*, vii, 1926, 40–70; E. C. Colwell, *Journal of Religion*, xvii, 1937, 48–61; S. Lyonnet, *Les origines de la version arménienne et le Diatessaron*, 1950, and L. Leloir, *S. Ephrem, Commentaire de l'évangile concordant, version arm.*, 1953 (*C.S.C.O.* 137).

B. Latin Versions.—

18. *The Old Latin Version* (OL).—As Christianity spread westwards, inevitably it came into contact with the Latin-speaking population of the Roman Empire; and a translation of the NT into Latin might naturally be looked for at an early date. Indeed, since the gospel was preached in Rome by St. Paul himself, it might seem reasonable to suppose that Latin versions of the Christian literature would have been required almost as soon as it came into being. Colour might be lent to this view by the theory that 'the magic square,' ROTAS-OPERA-TENET-AREPO-SATOR (which seems to point to 'Pater noster' with A and O written in the form of a cross), found at Pompeii implies that there were Latin-speaking Christians there before A.D. 79. Similarly, several scholars, working independently on the Diatessaron in its Western forms, have been led to postulate a primitive Latin Diatessaron, which may underlie even the OL text. At the same time, one cannot overlook the bilingual character of the Roman Empire, even in Italy. The educated classes spoke and wrote Greek freely; the uneducated classes were largely recruited from the East, and spoke Greek more naturally than Latin. The evidence of the predominantly Greek character of the primitive Roman Church is clear. St. Paul wrote to it in Greek. The names of those whom he salutes are mainly Greek (but was Ro 16 addressed originally to Ephesus?). All the early literature of the Church in Rome was Greek. It is no more than a tempting hypothesis that the Latinisms in the Pastoral letters and the absence of most of the Pauline particles from them point to an original Latin form of these letters. So far as we know, the Church in Gaul used Greek too: the report on the martyrdoms at Vienne and Lyons, which the Christians of that province sent to their brethren in other countries, was written in Greek. Irenaeus (*c* A.D. 135–202), the most famous representative of the Gallican Church in the 2nd cent., came from Asia Minor, and wrote his works in Greek; all the traditions of Gallia Narbonensis were Greek, not Latin. The first theologian to write at Rome in Latin was the 3rd cent. Novatian.

19. There was one large and important province in which Greek had no place, and where Latin was alike the literary and the spoken language. This was Africa, where the Mediterranean coast, and especially the district which is now Tunis, was inhabited by a large Latin-speaking population. When Christianity was first introduced into the province is uncertain; but in the 2nd cent. it was strong and flourishing there. The twelve Christians of Scillium, in pro-consular Numidia, were asked before their martyrdom what they had in their chest; they replied, 'the books and letters of Paul, a righteous man.' ('The books' included, doubtless, the Gospels, if not the prophets as well.) Tertullian (*c* A.D. 150–220) defended the faith hotly. Two lines of argument combine to show that the earliest Latin version of the NT known to us had its home in Africa. The first mention of the existence of a Latin version occurs in Tertullian; and that type of text which, of all those represented by our extant OL MSS, appears on internal grounds to be the earliest, is identical with the Biblical quotations in the writings of Tertullian's junior contemporary and compatriot, Cyprian (*c* A.D. 200–258). Whether the version was actually made in Africa cannot be determined with certainty. It is true that its Latinity agrees with that of certain African writers of the 2nd and 3rd cents. (Apuleius, Arnobius, Lactantius, besides Tertullian and Cyprian); but it so happens that there is very little non-African Latin of that period in existence for comparison with it. The kinship which the OL has with the Syriac has caused Antioch to be suggested (by Sanday) as the original home of the version, that being a metropolis where Syrian and Latin elements met, and whence versions of the Scriptures in either tongue might radiate from a common centre. But the strong general resemblance between the two versions may be due to ex-Jewish converts with a knowledge of Semitic languages and perhaps of Syriac MSS especially, which they may have taken far from Syria itself. There is also a considerable amount of divergence between the two versions in details, so that one cannot be dogmatic. That the original home of the OL was, after all, Rome is the recent plea both of G. Bardy and of C. Mohrmann; Bardy thinks that Latin versions of 1 *Clement*, the *Shepherd of Hermas*, and the *Didache* were soon made at Rome from the Greek and Miss Mohrmann points to the use of Latinisms in the *Shepherd*, *e.g.* 'statio.'

20. The extant MSS of the OL are mainly fragments; for after the supersession of this version by the Vulgate its MSS naturally fell into neglect, and survived only fortuitously. The number of them is a little over 40, and they are habitually indicated by the small letters of the Latin alphabet. The following are the most important:

a. Codex Vercellensis, at Vercelli, containing the Gospels (in the usual Latin order, Matthew, John, Luke, Mark), somewhat mutilated, assigned to the 4th cent.

b. Codex Veronensis, at Verona, containing the Gospels on purple vellum; 5th cent.

c. Colbertinus, at Paris, of the 12th cent., contains the whole NT, chiefly in a Vulgate text; but Mark and Luke mainly and in part Matthew and John (especially Jn 1–6) have escaped harmonization with the Vulgate.

d. The Latin text of *Codex Bezae* in the Gospels and Acts, and of *Codex Claromontanus* in the Pauline Epistles.

e. Codex Palatinus, at Vienna, considerably mutilated; 5th cent. One leaf is at Dublin. It contains the Gospels in silver letters on purple vellum. In the Acts, *e* is the Latin text of *Codex Laudianus*; in Paul, that of *Codex Sangermanensis*.

f. Codex Brixianus, at Brescia, of the Gospels, in silver on purple vellum; 6th cent.

ff^2. *Codex Corbeiensis II*, at Paris, containing the Gospels, but imperfect, of the 5th or 6th cent.

g. Codex Gigas, at Stockholm; a complete Bible of the 13th cent., with Acts and Apocalypse in an OL text. Written in Bohemia, it is a remarkable example of a late survival of OL.

h. Palimpsestus Floriacensis, at Paris; palimpsest fragments, formerly at Fleury, of Acts, Catholic Epistles, Apocalypse, in an African text; see A. C. Clark's edition of Acts.

i. Codex Vindobonensis, at Vienna, with fragments of Luke and Mark in silver on purple vellum; of the 6th cent.

k. Codex Bobiensis, at Turin; contains Mk 8–16 (ending at 16^8), Mt 1–15; 4th or 5th cent. Contains the OL in an early form with slight traces of the apocryphal Gospel of Peter; see A. Bakker's collation.

m. The *Speculum* of Pseudo-Augustine, which contains copious quotations from the NT. It is probably of Spanish origin, and should be reckoned with the Fathers rather than with the MSS.

q. Codex Monacensis, at Munich, containing the Gospels; 6th or 7th cent.

The remaining MSS are, for the most part, only small fragments, of a few leaves each. The Apocalypse is also

found, almost complete, in the commentary of Primasius, written in Africa in the 6th cent.

21. With these MSS must be reckoned the *quotations of the early Latin Fathers*, notably Tertullian (who, however, appears often to have made his own translations, and is also too inexact to be of much service in this respect), Novatian, Cyprian, Hilary, Lucifer of Cagliari, Ambrose, Jerome, Augustine, Tyconius, Priscillian and (as just noted) Primasius. It is usual to classify all these authorities (MSS and Fathers) under three heads of (1) African, (2) European, (3) Italian and to assume that the African type of text is the earliest; it is certainly very rough in style and vocabulary. In both these respects the European is so far modified as to be supposed by some scholars to be the result of fresh translations. The 'Italian' is taken to be a revision of the European but its very existence is in doubt, the words of Augustine (*De Doctrina Christiana*, II, XV [22]; *PL* xxxiv, col. 46) having been challenged, 'In ipsis autem interpretationibus Itala ceteris praeferatur; nam est verborum tenacior cum perspicuitate sententiae.' Burkitt thought that by 'Itala' Augustine referred to the Vulgate; others have emended Augustine's 'Itala' to read 'illa' or 'Aquila.'

The problem of grouping the OL MSS is complicated by the fact that no two MSS represent quite the same type of text. All (except perhaps *k*) have undergone modification in some respect, either by the corrections introduced by scribes in early times, or by contamination with the Vulgate. Cyprian and *k*, so far as they go, represent the African text of the Gospels in what appears to be a fairly pure form; *e* and *m* come next to them; *h* is a good African authority in Acts and Apocalypse, and Priscillian, Tyconius and Primasius in the Epistles and Apocalypse. The leading representatives of the European family are *a* and *b* for the Gospels, with the Latin version of Irenaeus; in Acts, *d*, *g* and Lucifer; in the Pauline Epistles, the Latin texts of *Codex Claromontanus* (D), *Sangermanensis* (E), *Augiensis* (F), and *Boernerianus* (G); and *g* for the Apocalypse. For the 'Italian' group *f* is said to be the most pronounced and it has been taken by Wordsworth and White as the best representative of the OL text which Jerome had before him when he undertook his revision of the Latin NT. (Souter argued, however, that at least for Luke, Jerome used a text like *a*.) Next to *f* in this category *q* is placed—but this category should be subsumed perhaps beneath 'European.' The Latin texts in the bilingual MSS have to be used with caution, as they show signs of assimilation to the Greek. The remaining MSS are either too fragmentary to be of much service, or too mixed in their text to be classified definitely with any family.

In general character, as already indicated, the OL version (especially in its earliest form) belongs to the same class of authorities as the Old Syriac and Codex Bezae, the class, namely, which is distinguished by rather striking divergences from both the TR and the text represented by B and ℵ. The character and claims of this type of text will be considered later; here it will be sufficient to point out the high antiquity which can be established for it through the OL (and still more through the consensus, so far as it exists, between OL and OS), and the great amount of divergence which exists between the several MSS which contain it. It is not possible even approximately to reconstruct the original OL text; it is even a matter of dispute whether it had one original or more. What is certain is that it underwent constant revision and alteration, and that the few and fragmentary MSS which have come down to us, and of which no two agree even approximately with one another, do but reflect a state of textual confusion which was rampant in the Latin Bibles of the 4th cent.

22. *The Vulgate.*—This state of confusion is described in emphatic terms by the great Latin Fathers of the 4th cent., Jerome (*c* A.D. 345–420) and Augustine (A.D. 354–430) and it was to the former that the task fell of attempting to reduce the chaos to order. The credit of inspiring the work which was to become the Bible of the West for a thousand years is due to Pope Damasus (pope, A.D. 366–384). At his request, Jerome, the leading Biblical scholar of the day, who had devoted many years to the study of the Scriptures in the East in their original tongues, being a *vir trilinguis*, undertook, as he says in his preface to the NT, to 'make a new work out of an old one' by revising the existing Latin texts with reference to the original languages. He began with the Gospels, about the year A.D. 382; and at first his revision was on conservative lines. Where the existing text fairly represented the sense of the original, he let it stand, without enforcing complete accuracy; only where errors affected the sense did he feel bound to make alterations. The Greek MSS which he employed have been disputed; Wordsworth and White believed them to be akin to B, ℵ and L, von Soden to his reconstructed I—H—K text, and F. C. Burkitt to B and A, the latter being a late ecclesiastical text for the Gospels. The Gospels were revised by A.D. 383. Doubt has been cast on Jerome's authorship of the Epistles. De Bruyne suggested that the 'Vulgate text' of the Pauline Epistles was actually that of Pelagius, though the latter's text may have been assimilated to that of the Vulgate; Diehl suggested that it went back to Novatian's text. The Vulgate text of Acts has been shown by J. H. Ropes to approximate to that of A and OL MSS, and that of the Apocalypse by H. J. Vogels to the text of ℵ. Vogels thinks that the OL text(s) on which Jerome also based his work for the Gospels approximated to *b-c-ff-i-q*. At about the same time Jerome was beginning his work on the OT by a revision of the Psalter; but for the history of this, see TEXT OF THE OT, **11** (7), and VULGATE.

23. The later history of the Vulgate, as Jerome's version eventually came to be called, is the subject of a separate article. Here it is only necessary to mention that the received text of it, which is found in all ordinary Latin Bibles, is that which was officially sanctioned by Pope Clement VIII. in 1592, and that the critical edition of the NT has been produced by Bishop J. Wordsworth and Dean H. J. White, Dr. C. Jenkins, Dr. H. F. D. Sparks and Mr. A. W. Adams. In 1908 Pope Pius X. ordered the Benedictines to prepare a new edition, which in over 50 years has not progressed beyond part of the OT.

The principal MSS of the Vulgate include:

Σ. *Codex Sangallensis 1395*, of the 6th cent. Nearly half the text of the Gospels is extant on leaves used for bindings. According to C. H. Turner it is the oldest MS of the Vulgate.

A. *Codex Amiatinus*, at Florence, contains the whole Bible. It was written in the N. of England, at Wearmouth or Jarrow, by order of Ceolfrid, abbot of these monasteries, early in the 8th cent., and was taken by him in A.D. 716 as a present to Pope Gregory. Ceolfrid died on the way, but his companions completed the gift, and the MS has since remained in Italy; for some time it was at Monte Amiata, whence its name. Its text was probably derived from one or more MSS brought to England from Italy; it is regarded as among the best extant MSS of the Vulgate. Twelve leaves of a closely cognate MS are in England, one in the British Museum, eleven in private possession.

C. *Codex Cavensis*, at La Cava, near Naples; 9th cent. Contains the whole Bible, written in Spain in a Visigothic hand; it is reckoned among the best of the Spanish family of Vulgate MSS.

D. *Codex Dublinensis*, or *Book of Armagh*, at Dublin; 8th or 9th cent. Contains the NT in an Irish hand.

Δ. *Codex Dunelmensis*, in Durham Cathedral Library; 7th or 8th cent. Contains the Gospels, with a text akin to that of A.

F. *Codex Fuldensis*, at Fulda in Germany; between A.D. 541 and 546. Written by order of Bishop Victor of Capua. Contains the whole NT, the Gospels being arranged in the same manner as Tatian's Diatessaron, on the basis of a copy of a Latin version of that work accidentally found by Bishop Victor; unfortunately the actual text is harmonized with that of the Vulgate.

G. *Codex Sangermanensis*, at Paris; 8th or 9th cent.;

contains the whole NT, Matthew in an OL text. Its text of Acts is most valuable as a Vulgate text.

H. *Codex Hubertianus*, and Θ, *Codex Theodulfianus*, contain the edition of the Vulgate produced by Bishop Theodulf of Orleans, for which see VULGATE.

K. *Codex Karolinus*, and V, *Codex Vallicellianus*, of the 9th cent., represent the edition of Alcuin. (See *ib.*)

L. *Codex Lichfeldensis*, or *Gospels of St. Chad*, at Lichfield, 7th or 8th cent. Contains Matthew, Mark, and Lk 1^{1}–3^{9}.

O. *Codex Oxoniensis*, in the Bodleian Library; 7th cent. Akin to X it contains the Gospels in a text affected by Irish influences.

Q. *Codex Kenanensis*, the *Book of Kells*, at Trinity College, Dublin; 8th cent. Contains the Gospels, lavishly decorated in the Celtic style. Its text, naturally, is of the Irish type.

S. *Codex Stonyhurstensis*, at Stonyhurst College; 7th cent. Contains John alone, in a text akin to that of A and Y. Formerly at Durham and probably written in that neighbourhood, it is connected with St. Cuthbert.

V. See K above.

X. *Codex Corporis Christi Cantabrigiensis*, at Cambridge; 7th cent.; contains the Gospels in a text akin to O. Both MSS at one time belonged to St. Augustine's, Canterbury.

Y. *Codex Lindisfarnensis*, in the British Museum; contains the Gospels; written at the end of the 7th cent., in honour of St. Cuthbert († A.D. 687), with beautiful Anglo-Celtic ornamentation. Some liturgical directions inserted in it show that it was copied from a MS written in Naples, no doubt one brought to England by Hadrian, abbot of a monastery near Naples, who came to England with Archbishop Theodore in A.D. 669. It is closely akin in text to A.

Z. *Codex Harleianus*, in the British Museum; 6th or 7th cent. An excellent copy of the Gospels with a text different from A's. Wordsworth and White relied on A, C, F, Θ, K, T, V in Acts, to which may be added :—

G. *Codex Sangermanensis*, at Paris; 9th cent. Contains the whole Bible, but is particularly good in Acts, so that Wordsworth and White state that their text agrees with it oftener than with any other MS.

O. *Codex Oxoniensis* or the *Selden Acts*, in the Bodleian Library; 8th cent. The text is of the Irish type.

24. The MSS may be grouped as follows :—

For the Gospels; A, S, Y, Δ (Northumbria); also F; Z, Σ (Italy); O and X (mixed Italian and Irish); D, L, Q (Ireland); C, T (Spain); K, V (Alcuin's edition); and Θ, H (correctors) (Theodulf's edition).

For Acts, the most valuable are G and O (Selden), C, A, F and D.

For Paul's Epistles, A, F, D, H; C; Θ, K, V.

For the Catholic Epistles and Apocalypse, A, F, D, V.

Since Jerome's revision was based on OL MSS as well as on Greek Uncials, some of which may have been ancient, his NT at least is of composite character. The historical importance of the Vulgate is dealt with in a separate article.

For the OL version see H. A. A. Kennedy in Hastings' *DB*; F. C. Burkitt, *The Old Latin and the Itala*, 1896; the prefaces by Wordsworth, Sanday, and White to their editions of *Old Latin Biblical Texts*; A. Jülicher, *Itala, das Neue Testament in altlateinischer Überlieferung nach den Handschriften*, 1938–1954 (Matthew, Mark, Luke); H. J. Vogels, *Evangelium Colbertinum*, 1953; M. J. Lagrange, *Critique textuelle, ii, La critique rationelle*, 240–281; B. M. Metzger, in Parvis and Wikgren's *New Testament MS Studies* 1950, 51–55; and A. Vööbus, *Early Versions of the NT*, 1954, 33 ff. On the Vulgate, see Westcott's article in Smith's *DB*, White's chapter in Scrivener's *Introduction*, 4th edition (which deals with both versions); the prefaces to Wordsworth and White's edition of the Vulgate 1899–1954; Lagrange, *op. cit.*, 281–312 and Vööbus, *op. cit.*, 53 ff.

C. COPTIC VERSIONS.—

25. Coptic is the literary form of the vernacular language of Egypt, the descendant of the ancient tongue which we know first in its hieroglyphic form, and later in its demotic, but differing from them in adopting the Greek alphabet, with the addition of certain letters to represent sounds not employed in Greek. Coptic is the outcome of the Greek settlement in Egypt, which took place under the empire of the Ptolemies and continued under that of Rome; and along with the Greek characters the native tongue adopted also a considerable number of Greek words. It is uncertain when this form of writing came into being. It appears in a primitive form in a certain pagan horoscope now in the British Museum, the date of which is probably A.D. 95; and it is reasonable to suppose that it became established as a literary medium in the course of the 2nd cent. It is quite possible that its growth was promoted by the need for it in making the Gospel known to native converts. Christianity was probably introduced into Alexandria or even into other parts of Egypt before the end of the 1st cent., to judge from the date of Greek papyri with a bearing on John. It would have come in the first instance to the Jews of Alexandria and to the Greek-speaking population generally. Even when it penetrated farther, and addressed the native population in its own tongue, its message is likely at first to have been oral, and the earliest Coptic versions of the NT may well have been merely oral paraphrases, such as were the earliest Anglo-Saxon versions. What is, no doubt, the first mention of Coptic Scriptures occurs in the Life of St. Anthony, who is said to have heard the Gospel (Mt 19^{21}) read in church as a youth *c* A.D. 270; and since he was not acquainted with Greek, this must have been a Coptic version, whether oral or written. Early in the 4th cent. the monks of the order established by Pachomius were required by their rule to study the Scriptures. Also between *c* A.D. 300–320 the British Museum papyrus Or. 7594 was written, containing, oddly, a text of Deuteronomy, Jonah, and Acts. Towards the end of the 3rd cent., therefore, at the latest, and possibly by the end of the 2nd (as Hyvernat, Horner, and Thompson maintain), a Coptic translation of the NT (except the Apocalypse) was in circulation. The Coptic versions unquestionably have some very early characteristics, not due entirely to their peasant vocabulary.

26. The Egyptian language was not uniform throughout the country, but possessed various local dialects. Two of these are well marked, and possess a respectable quantity of literature, almost wholly theological. These are the Bohairic, or dialect of Lower (northern) Egypt, and the Sahidic, or dialect of Upper (southern) Egypt. Between the two lie several dialects collectively known as Middle Egyptian, viz. Fayumic, Memphitic, Achmimic, and sub-Achmimic.

27. *The Sahidic Version* (Sah., formerly called Thebaic). —At one time it was held that the Bohairic version (Boh.) was the first in point of age, since it was the version of Lower Egypt, which would have been the first to receive Christianity; but Coptic scholars are agreed that the order of precedence must be inverted. Lower Egypt was very largely Greek speaking, and the language in which the Septuagint was familiar would have been sufficient for a considerable time. In Upper Egypt, though there were considerable Greek communities there also, and in the principal towns Greek must have been generally understood, the population as a whole must have been more Egyptian, and an Egyptian version of the NT would have been required there sooner than in the neighbourhood of Alexandria. The characteristics of the Sahidic version also suit this hypothesis of an earlier date. It is rougher and less literary in style than the Bohairic, and its text is of an early date, akin in some details, though not as a whole, to the OL and the OS; in the OT its text is in some books pre-Origenian. Enough fragments of different dates exist for G. Horner to publish *The Coptic Version of the New Testament in the Southern Dialect* (1911–1924, with a valuable critical apparatus), making a mosaic, as it were, of the remains.

Since 1910 scholars have had access also to MS Morgan 569, a tetraevangelium of the 8th or 9th cent., published by Hyvernat; since 1924 to *The Gospel of St. John according to the earliest Coptic MS*, containing Jn 2^{12}–20^{20}, of the 4th–5th cent., in a Sahidic-Achmimic dialect, published by Sir Herbert Thompson. On the whole Cop.^{sa}, as it is often termed, agrees with B or with D, more often with the former than the latter, and seldom with the latter's peculiar additions (*e.g.* in Acts) or omissions.

28. *The Bohairic Version.*—This, which became ultimately the Bible of the Coptic Church, is better known than Sah., and is preserved in a considerable number of MSS. The date of its origin has been much debated. In favour of an early date is the fact that the Apocalypse was apparently not originally contained in it; this book seems to have been generally accepted after the end of the 3rd cent., but was regarded with some doubt before. A fragment of a 4th (or possibly 5th) cent. MS of Ph 3^{19}–4^{9} in sub-Bohairic, to which P. E. Kahle (jun.) drew attention, and the presence of Bohairic variants in the sub-Sahidic John mentioned above point to the probability that the Bohairic version was in existence during the 4th cent. If the date of the schoolboy's exercise in copying Ro $1^{1-8, 13-15}$ in Bohairic could also be confirmed as of the 4th cent., as Husselmann maintained, the probability would become certainty; but other scholars date the exercise as much as two centuries later. There seems no ground for accepting now Guidi's late date, in the 8th cent., nor on the other hand for asserting with W. H. Worrell that Boh. is older than Sah.

The Bohairic version follows the Greek very closely, being closer to Greek MSS such as L or other secondary Alexandrian Uncials than Sah., and comparatively uncontaminated by Western MSS (known to exist from an early date in Egypt). Divergent readings of the type represented by OL and OS, which are found not infrequently in Sah., are almost absent from Boh. An early Boh. MS of the Gospels is the Curzon Catena (an intermixture of text and commentary) in the Parham Library, which is dated A.D. 889; one of the oldest and best continuous MSS of the Gospels is Huntington MS 17, in the Bodleian, dated 1174. Many others are late and some have Arabic versions in the margin. G. Horner's edition of fragments of Boh. (1898–1905) needs to be supplemented by reference to more recent researches mentioned in W. Kammerer's *A Coptic Bibliography* (1950), especially those by J. H. Ropes, W. H. P. Hatch, P. L. Hedley and H. C. Hoskier.

29. *The Middle Egyptian Versions.*—Of these the Achmimic has left most traces, including fragments of three chapters of John, James and of Jude on one MS, and fragments of Ja 5^{17-20} on another; also a codex of Lk 12–18 of the 4th or 5th cent. exists in fragments and an early 4th cent. fragment of Mt 11^{25ff}. The 'spread' of these fragments suggests that most of our NT existed once in Achmimic; but the date of the version, presumably before the end of the 4th cent.. is uncertain. This version may be an entirely different translation from the Sah. rather than an early form of it. Still less can be said about the Fayumic version. Fragments exist of 2 Thessalonians and of 1 Peter in it.

30. Other versions exist—Georgian, Ethiopic, Arabic, Persian, Sogdian, Nubian, Gothic and Old Slavic—but one cannot dwell at length on these; see B. M. Metzger (*op. cit.*) and A. Vööbus (*op. cit.*). Some of them throw welcome light on texts and versions already discussed, *e.g.* the Georgian seems often to depend on the Old Armenian and to witness to a 'Caesarean' streak in the Gospels; and the Gothic version, the work of Bishop Ulfilas, reflects an early form of the ecclesiastical or Byzantine text. The versions that are of first-rate importance are those that have been described above—the Syriac, Latin, and Coptic versions. Of these the Old Latin and Old Syriac take the first place, both on account of their age, and because they are the chief extant representatives of a very early and important type of text, as will be seen below. Next in textual importance are Sah. and Boh., which give us the evidence of Egypt, the country which has played, perhaps, the largest part in the history of the Greek Bible. Then follow the Latin Vulgate and the Syriac Peshitta, each just too late and too composite in character to be of first-rate importance as evidence of the primitive Greek text, but each the authorized Bible of a great Church. Finally, evidence of some value is to be obtained from the later Syriac and the Armenian versions.

For the Versions in general, see A. Vööbus, *Early Versions of the New Testament, Manuscript Studies*, 1954; cf B. M. Metzger, *New Testament Studies*, ii, 1956, 1–16.

For the Coptic version, see A. Vaschalde, *Le Muséon*, xlvi, 1933, 299 ff and W. Kammerer, *A Coptic Bibliography*, 1950; G. Horner, *The Coptic Version of the NT in the Northern Dialect*, 1898–1905; *idem*, *The Coptic Version of the New Testament in the Southern Dialect*, 1911–1924; H. Hyvernat, *A Check List of the Coptic MSS in the Pierpont Morgan Library*, N.Y., 1919; P. E. Kahle (jun.), *Le Muséon*, lxiii, 1950, 147 ff; J. H. Ropes and W. H. P. Hatch, *HTR*, xxi, 1928, 69 ff; Sir H. Thompson, *op. cit.* and *The Coptic Version of the Acts and the Pauline Epistles in the Sahidic Dialect*, 1932 and H. C. Hoskier's articles in the *Bulletin of the John Rylands Library*, vii and viii.

For the Georgian Version, see R. P. Blake, *Patrologia Orientalis*, xx, 1928, Mark; *ib.* xxiv, 1933, Matthew; *ib.* R. P. Blake and M. Brière, xxvi, 1950, John; *ib.* xxvii, 1955, M. Brière, Luke; R. P. Blake and S. Der Nersessian, *The Gospels of Bert' ay, Byzantion*, xvi, 1943–1944, 226 ff; V. Beneševič, *Quattuor Evangeliorum Versio Georgica Vetus*, i, 1909 (Matthew), ii, 1911 (Mark); J. Molitor, *Das Adysh-Tetraevangelium, Oriens Christianus*, xli, 1957, 1 ff; F. C. Conybeare, *The Georgian Version of the NT, ZNW* xi, 1910, 232–249; *ib.* (Acts) xii, 1911, 131–140; P. M. Tarchnišvili, *Geschichte der kirchlichen Georgischen Literatur, Studi e Testi*, clxxxv, 1955, 313 ff.

For the Ethiopic, see F. da Bassano, *NT aethiopice*, 1934, based on that of T. P. Platt and F. Prätorius, 1899; J. A. Montgomery, *HTR* xxvii, 1934, 169 ff (Acts); cf A. Vööbus, *Early Versions of the NT*, 1954, 243 ff.

For the Arabic, see I. Guidi, *Le traduzioni degli Evangelii in arabo e in etiopico*, Atti della R. Accademia dei Lincei, 1888, iv, i^{a}, 5–37; G. Graf, *Geschichte der christlichen arabischen Literatur*, i, 1944, *Studi e Testi*, 118, 138–185; R. H. Kilgour, 'Arabic Versions of the Bible,' *The Moslem World*, vi, 1916, 383–386; A. Ciasca, *Tatiani Evangeliorum Harmoniae Arabice*, 1888; J. H. Hill, *The Earliest Life of Christ*, 1894; A. S. Marmadji, *Diatessaron de Tatien*, 1935; A. F. L. Beeston, *The Arabic Version of Tatian's Diatessaron, The Journal of the Royal Asiatic Society*, 1939, 608 ff; Vööbus, *op. cit.*, 274 ff.

For the Persian, see B. Walton, *Biblia Sacra Polyglotta*, iv, 1657; B. M. Metzger, 'Tatian's Diatessaron and the Persian Gospel Harmony,' *JBL* lxix, 1950, 26 ff; G. Messina, *Diatessaron Persiano, Biblica et Orientalia*, xiv, 1951; W. J. Fischel, *The Bible in Persian Translation, HTR* xlv, 1952, 3 ff.

For the Sogdian, Nubian and Old Slavic, see B. M. Metzger, in Parvis and Wikgren's *NT MS Studies*, 1950, 49–51, 63–66; G. Bonifante and B. M. Metzger, *JBL* lxxiii, 1954, 217 ff.

For the Gothic, see G. W. S. Friedrichsen, *The Gothic Version of the Gospels*, 1926 and *The Gothic Version of the Epistles*, 1939; A. Wilmart, *RB* xxxvi, 1927, 46–61; F. Kauffmann, *Theologische Literaturzeitung*, 1927, 370 ff; Lagrange, *op. cit.*, 325 ff; W. Streitberg, *Die gothische Bibel*, 1950; Vööbus, *op. cit.*, 299 ff.

31. Patristic Quotations.—The third class of evidence available for textual purposes is that which is derived from the quotations from the NT in the writings of the early Fathers. If we can be sure that a writer is quoting from a MS lying before him, then his quotation gives us the reading of a MS which in many cases must have been earlier than any which we now possess. Sometimes we can be fairly sure of this, as when the quotation

TEXT OF THE NEW TESTAMENT

occurs in a continuous commentary on a single book; or when the writer expressly emphasizes a certain reading as against other variants; or when he quotes the same passage several times in the same way. In other cases it is impossible to be certain that he is not quoting from memory; and this makes quotations from the Synoptic Gospels especially fallacious, since it is so easy to confuse the wordings of the different Evangelists. There is always the danger also that a copyist may have assimilated the wording of a quotation to the form with which he was himself familiar. Consequently evidence of this class, though highly valuable when its surroundings guarantee it from suspicion, has to be handled with great caution. In one respect Patristic quotations have a special value, because they can be both dated and placed. The dates of the earliest MSS and versions are uncertain, within half a century or more, while the date of any given Patristic work can generally be fixed within a few years. The advantage of being assignable to a certain country is one which Patristic quotations share with versions, but it is of great importance in fixing the origin and range of certain types of text. In both respects it will be found that the evidence of the Fathers is of great value in elucidating the textual history of the NT. It is impossible to treat the subject at length here, but the names and dates of some of the most important fathers may be mentioned, and subsequent sections will show what sort of part they play in the operations of textual criticism.

32. The earliest Patristic writings, such as the Epistles of Clement, Barnabas, Ignatius, and Polycarp, and the 'Shepherd' of Hermas contain very few quotations from the NT, and those few are inexact (see *NT in Apost. Fathers* [Oxf. Soc. of Hist. Theol.]). In the third quarter of the 2nd cent. we have the writings of Justin Martyr and Tatian, and we know something of the Gospel text used by the heretic Marcion. From about A.D. 180 onwards the evidence becomes much fuller. Irenaeus (whose principal work was written between A.D. 181 and 189) worked mainly at Lyons, though his home was in Asia Minor. Western texts are also represented by Tertullian (*c* A.D. 150–220), Cyprian (*c* A.D. 200–258), and Hippolytus (flourished *c* A.D. 220); the two former being African writers, and the last named of Rome. In Egypt there are the two very important theologians, Clement of Alexandria (*c* A.D. 160–220) and Origen (A.D. 185–253), and the two scholars who succeeded to the latter's literary inheritance, and founded the library of Caesarea largely upon the basis of his works, Pamphilus († A.D. 309) and Eusebius (*c* A.D. 270–340). In Syria the most notable names are those of Aphraates (flourished *c* A.D. 340) and especially Ephraem († A.D. 378); in Asia Minor, Gregory Thaumaturgus († A.D. 265), Basil of Caesarea (A.D. 329–379), Gregory of Nyssa (flor. *c* A.D. 370), and Gregory of Nazianzus († A.D. 389); in Palestine, Cyril of Jerusalem (bishop, A.D. 351–386), and especially Chrysostom (A.D. 347–407). Returning to the West, the important writers, from a textual point of view as well as from others, are Hilary of Poitiers (bishop, A.D. 354–368), Lucifer of Cagliari († A.D. 371), Ambrose of Milan (bishop, A.D. 374–397), Tyconius (an African writer of the end of the 4th cent.), Priscillian (a Spaniard, † A.D. 385); and, finally, the two great Fathers of the Western Church, Jerome (*c* A.D. 345–420) and Augustine (A.D. 354–430). Later than the first quarter of the 5th cent. it is not necessary to go; for the settlement of the great issues in the textual history of the NT had taken place before this date.

A list of ecclesiastical writers and their principal works is given by Gregory (*Prolegomena* and *Textkritik*). An index of Patristic quotation was compiled by Dean Burgon and is now in the British Museum. Critical texts of the Latin and Greek Fathers have been and are being issued under the direction of the Vienna and Berlin Academies respectively. For the value of Patristic citations, cf K. Lake, *The Text of the NT*[6], 1953, 49 ff, and R. P. Casey in Parvis and Wikgren's *New Testament Manuscript Studies*, 1950, 69 ff; cf A. H. McNeile, *Introduction to the New Testament*, 1953, 413–415.

33. Such are the materials—MSS, Versions, Patristic Quotations—with which the textual critic has to deal; but it is only within the last century that his resources have become so extensive. Two centuries of diligent work were spent in the collection of the evidence of Greek MSS; the most important of all, the Codex Vaticanus (B), has become fully known only within the last ninety years and the next most important Alexandrian Uncial (ℵ) was discovered only in 1859 and published in 1862. The Washington or Freer MS (W) was not acquired till 1906; the Koridethi MS (Θ) was not found and published till 1913, and the vast majority of paypri have not been known till the last thirty years. Of the two most important versions, the Old Syriac was wholly unknown before 1848, and quite inadequately known until 1894; while the Old Latin, though known and studied in the 18th cent. (when Sabatier published his *Bibliorum sacrorum Latinae versiones antiquae*, Rheims, 1743), cannot be said to have been rightly understood and classified before the publications of several scholars who are still living. For many of the Fathers, we still are without editions which can be trusted with regard to their Scripture quotations. The textual criticism of the NT, as now understood, is consequently a science of comparatively modern growth. As was shown above (**1**), the earliest editions of the Greek NT were in no sense critical texts. It is true that MSS were collated for them, but only such MSS as chanced to be easily at the disposal of the editor. No search was made for specially good or old MSS, and (except for a very slight use of Cod. Bezae by Stephanus) the TR was made and established before any of the great uncial MSS had been examined. This is the more remarkable because B was used as the main basis of the text which became the standard text of the Septuagint, that, namely, which was printed at Rome in 1587; but it chanced that no Roman edition of the NT was issued, and consequently the great Vatican MS was little known and less used until the 19th cent. was far advanced.

34. As stated in **1**, the TR of the NT took final shape in the editions of Stephanus in 1550 and the Elzevirs in 1624. It was not until after the latter date that the scientific collation of evidence began. The Codex Alexandrinus (A) was brought to England in 1627, and a collation of it (with D D_2, and several minuscules) first appeared in the great Polyglot Bible edited by **Brian Walton** in 1657. Walton's Polyglot (modelled, so far as its plan and scope were concerned, on the Antwerp Polyglot of 1571–1572, and the Paris Polyglot of 1630–1633, but greatly superior to both in its textual material) may be said to be the fountainhead of the textual criticism of the NT. It was followed during the next century and a half by a series of editions in which, while no attempt was made to modify the actual text, an increasing number of MSS was laid under contribution to supply materials for the *apparatus criticus*. The first of these was that of Dean Fell in 1675; the greatest was that of **John Mill** in 1707, which was remarkable not only for the number of Greek MSS quoted in it, but for its use of the versions, its collection (for the first time) of Patristic quotations, and its valuable *prolegomena*. In the 18th cent. Bentley (whose first appearance in the field of Biblical criticism was stimulated by Mill's great work) made large collections for a new edition, but was unable to make use of them. **J. J. Wetstein,** a Swiss assistant of Bentley, produced in 1751–1752 an edition in which our present notation of the MSS was first introduced; and the list was considerably extended by C. F. Matthaei (1782–1788), F. K. Alter (1786–1787), A. Birch (1788–1801), and, finally, J. M. A. Scholz (1830–1836), with whom the first stage of NT textual criticism may be said to have come to a close.

35. During this first, and most necessary, stage of the collection of evidence, which extends from 1657 to 1830, little was done in the way of classifying the materials thus obtained, or laying down the principles upon which

they should be employed and interpreted. There are, however, some notable exceptions. Mill, in his *Prolegomena*, discussed the true reading of many passages. **J. A. Bengel**, in 1734, divided the MSS and versions into two families, which he called African and Asiatic, and asserted the superiority of the former, consisting of the few most ancient witnesses, over the latter, which included the great mass of later authorities. In this we find the germ of the principle of the classification of authorities. which is now the guiding principle of textual criticism, whether Biblical or classical. It was opposed by Wetstein, who anticipated the advocacy of the TR in our own time by Dean Burgon and others, maintaining that all the most ancient MSS had been contaminated from the Latin, and that only the later authorities were worthy of attention. J. S. Semler (1767) developed Bengel's theory, making a triple classification of authorities, as Alexandrian, Eastern (*i.e.* Antiochian and Constantinopolitan), and Western; and this was elaborated by his pupil J. J. Griesbach (1774–1775), who adopted the same classification, but carried much further the assignment of the then extant MSS and versions to their several classes. Both in his classification and in his estimate of the characteristics of the various families Griesbach went far to anticipate the theory of Westcott and Hort, which is the foundation of contemporary criticism.

36. None of the scholars hitherto named, however, put his principles to the test by producing a reformed Greek text of the NT. This step, which marked the opening of a new era in textual criticism, was taken in 1831 by **K. Lachmann**, a distinguished classical scholar, who, like Bentley before him, but with greater success, resolved to apply to the text of the NT the principles which were admitted as sound in the case of the Greek and Latin classics. This method consisted of selecting some of the oldest authorities (MSS, Versions, and Fathers), and forming his text solely from them, while ignoring the great mass of later witnesses. In putting faith mainly in the most ancient witnesses, in spite of their numerical inferiority, Lachmann only did what every editor of a classical text would do; but he departed from sound principle, first, by absolutely ignoring all evidence outside his selected group; and, secondly, by adopting in all cases the reading given by the majority of his selected authorities, without regard to the internal probabilities of the various readings, or applying any of the tests which textual science provides for discriminating between alternatives the external evidence for which is approximately equal. Moreover, the knowledge of the earlier authorities at Lachmann's disposal was by no means so complete as that which we have at the present day. For these reasons Lachmann's text could not long hold its ground precisely as it stood; nevertheless it did very great service in breaking the monopoly of the TR, and in preparing the way for further progress.

37. The next stage in this progress is marked by the names of Constantine Tischendorf and S. P. Tregelles. As the discoverer of the Codex Sinaiticus, **Tischendorf** achieved the most sensational success in textual history; but he also did admirable service by his collation of almost all the uncial MSS of any importance (except that he was allowed only very limited access to B), and his collection of evidence in his successive editions of the NT (culminating in the 8th, published in 1869–1872) remains the fullest *apparatus criticus* to the present day. His own printed text of the NT fluctuated considerably from one edition to another, and his judgment between various readings was hardly equal to his industry in collecting them; still, in the main he followed the best authorities, and his edition remains one of the principal examples of a text constructed on critical lines. The *prolegomena* to his 8th edition was compiled after his death by Dr. C. R. Gregory, and is a perfect storehouse of bibliographical information; in its latest form (published as an independent work, in German, under the title of *Textkritik des neuen Testaments*, Leipzig, 1900) it is the standard book of reference on the subject.

38. Tischendorf's industry as a collator was rivalled by that of his English contemporary, **Tregelles**, who collated all the extant uncial MSS and some of the chief minuscules, so that his results serve to check and test those of Tischendorf. In his text (published in 1857–1872) he confined himself almost wholly to the uncials, with the versions and Fathers, completely ignoring the TR. In fact, he followed very much the same principles as Tischendorf, and his edition is serviceable chiefly as a means of testing Tischendorf's judgment, and of showing how far two scholars, working independently on the same evidence, arrive at the same results. Unfortunately his text of the Gospels was published before the discovery of ℵ, and his knowledge of B was even less than that of Tischendorf.

39. The evidence accumulated by Lachmann, Tischendorf, and Tregelles, aided by the public interest excited by such discoveries as those of the Codex Sinaiticus and the Curetonian Syriac, produced a general sense of dissatisfaction with the TR, and in England led to an increasing desire for a revision of the AV in the light of modern knowledge, culminating in 1870 in the appointment of the Committees which produced the RV (for which see article ENGLISH VERSIONS, **35–36**). Meanwhile two English scholars were at work on the text of the NT, whose results were destined not only to affect very greatly the revision of the English Bible, but also to lay the foundation of all the textual work of the succeeding generation, and whose influence remains paramount to this day. These were **B. F. Westcott** (afterwards Bishop of Durham) and **F. J. A. Hort**. Their joint work began as far back as 1853, when they were colleagues at Cambridge; and it bore fruit in 1881, when their text of the NT appeared on May 12 (five days before the publication of the RV of the NT), and the *Introduction*, embodying the principles upon which their text was based, in the following September. This volume (written by Hort, but representing the views of both scholars) is the textbook of modern textual criticism as applied to the Greek Bible.

40. The principles of WH are an extension of those of Semler and Griesbach, as described above (**35**), and rest upon a classification of our authorities into families, and a discrimination between the merits of these families. It is in the Gospels and Acts that the textual phenomena are most plainly marked, and it is to them that the characteristics to be described apply most fully; but they are likewise true, in a lesser degree, of the other books of the NT. If the *apparatus criticus* of the Gospels be studied, it will be found that certain MSS and versions tend to agree with one another, and to form groups distinguishable from other groups. Four such groups are in fact distinguished by WH, as follows; the reasons for the names assigned to them will appear shortly. (α) The *Syrian* family, often headed in the Gospels by the manuscripts A and C, but more fully and characteristically represented by the later uncials, such as E, F, K, M, S, etc., and by the great mass of the minuscules, by the Peshitta version, and by most of the Fathers from Chrysostom downwards; from this family, in its fully developed form, is descended the TR. (β) The *Neutral* family, of which the main representative is B, often supported by ℵ, by L, R, T, Z, by the minuscule Evan. 33, and some other minuscules in a lesser degree, by Boh. and sometimes Sah. and frequently by the quotations of Origen; in Acts, Ephesians, and Apocalypse, A and C generally join this group. (γ) The *Alexandrian* family, a sort of sub-species of β, not continuously found in any one MS, but represented by the readings of some MSS of the β group when they differ among themselves, and especially when they differ from B; L, T, and A, C, when they are not Syrian, may be taken as the leading members of the family. (δ) The *Western* family, headed by D among the uncials (with E_2 in Acts and D_2 in Paul) and Evan. 473 among a small group of minuscules, but most authentically represented by the Old Latin and Old

TEXT OF THE NEW TESTAMENT

Syriac versions, and especially by *k* and Syr.-Sin.; it also largely colours Sah., and is found in almost all the early Fathers, notably Justin, Irenaeus, Cyprian, and Clement.

41. These being the main divisions which are found to exist among our authorities, the next step is to discriminate between them, so as to determine which is the most generally trustworthy. Here it is (in addition to the greater minuteness of the examination and analysis of the individual authorities) that the original and epoch-making character of the work of WH is most conspicuous. The first proposition—and one which strikes at the root of the claims of the TR—is this, that *no specifically 'Syrian' reading occurs in the NT quotations of any Father before Chrysostom.* In other words, wherever the Syrian family marks itself off from the others by a reading of its own, that reading cannot be shown to have been in existence before the latter part of the 4th cent. The importance of this proposition is obvious, and it is noteworthy, as showing the value of Patristic evidence, that the proof of it rests wholly on the quotations found in the Fathers. The inevitable conclusion is that the Syrian text is a secondary text, formed (according to WH in Syria, and especially in Antioch) in the course of the 4th cent. This secondary character is also established by an examination of representative Syrian readings (for these, see especially J. O. F. Murray's article 'Textual Criticism of the NT' in Hastings' *DB*, Ext. Vol.). As compared with the rival readings of other groups, they show the ordinary signs of editorial revision, such as the modification of harsh or strange phrases, assimilation of one version of an incident with another, greater literary smoothness, and the like. A special proof of secondariness is found in what WH call *conflate* readings, when one group of authorities has one reading and another has a second, and the Syrian text combines the two. The shortest and simplest example is Lk 24^{53}, where ℵ, B, C, L, Boh. read *eulogountes ton theon*, D, OL, and Augustine *ainountes ton theon*, while A and the general mass of late uncials and minuscules have *ainountes kai eulogountes ton theon*. For other examples of this type see Hort's *Introduction*, and Murray, *loc. cit.*). The conclusion, therefore, is that the witnesses belonging to the Syrian family, although they predominate enormously in numbers, possess little intrinsic weight when opposed to witnesses of the other groups.

42. As between the remaining groups the discrimination is not so easy, and must be made by other methods. The Patristic evidence can show us that the Western text (originally so named because the principal representatives of it were the OL version, the Latin Fathers, and the bilingual MSS) was spread over all the principal provinces to which Christianity penetrated—Syria, Egypt, Rome, Gaul, Africa—and that it goes back as far as we have any evidence, namely to the middle of the 2nd cent. On the other hand, it points to Egypt as the special stronghold of the Neutral text, and the sole home of the Alexandrian. All, however, are of such antiquity that the preference can be given to none on this ground alone. It is necessary, therefore, to look at the internal character of the several texts. Of the Western text WH say (*Introd.* § 170): 'Any prepossessions in its favour that might be created by its imposing early ascendancy are for the most part soon dissipated by continuous study of its internal character.' The chief characteristics with which they charge it are a love of paraphrase; a tendency to interpolate words, sentences, and even paragraphs; free changes or insertions of conjunctions, pronouns, and prepositional phrases; and generally an extreme licence in handling the original text. Alexandrian readings, on the other hand, consist mainly of slight linguistic changes, made in the interest of literary style; they are thus comparatively unimportant, and give rise to little controversy. Over against these various divergences stands the text which WH call Neutral, because it shows few or none of the signs of aberration which characterize the other groups. This text is found predominantly in B, the character of which is so superior that its evidence always deserves the most careful consideration, even when it stands alone.

43. Such is, in briefest summary, the theory with regard to the textual history of the NT propounded by WH. On its first promulgation it was bitterly assailed by the advocates of the TR; but against these its triumph, in the opinion of nearly all students of the subject, has been decisive. More recently the tendency has been to depreciate the pre-eminence of the β or Neutral Text, as being merely the local text of Egypt, and to exalt the δ or Western family, on the ground of its wide and early diffusion and the apparently primitive character of some of its special readings. A further topic of criticism has been the terminology of WH. The term 'Syrian' has been condemned as liable to be confused with 'Syriac'; 'Western' as wholly misleading, since that type of text was widely prevalent in the East also, and probably took its rise thence; 'Neutral' as begging the question of the superior character of the family so described. These criticisms may be briefly dismissed; there is good foundation for them, but they are matters of form rather than of substance. 'Byzantine' might be substituted for 'Syrian' with advantage, and the Egyptian status of the 'Neutral' text might be admitted without abandoning its claims to superiority; but no good substitute for 'Western' has yet been proposed. In some ways it would be better to abandon epithets altogether, and to call the several families by the names of the α-text, the β-text, the γ-text, and the δ-text, as indicated in **40**; or the nomenclature of WH may be retained, but regarded simply as so many labels, devoid of any significant connotation.

44. It is more important to say something with regard to the comparative claims of the β and α texts in the first instance, and the β and δ texts subsequently. With regard to the former controversy, which raged with great warmth after the publication of the RV of the NT, the advocates of the α or Syrian or TR (chief among whom were Dean Burgon, his disciple and literary heir the Rev. E. Miller, and the Rev. G. H. Gwilliam, the editor of the Peshitta) rest their case mainly on the numerical preponderance of the manuscripts of this type, which they take as indicating the choice, deliberate or instinctive, of the early Church, and as implying the sanction and authority of Divine Providence. But to argue thus is to maintain that the textual history of the Bible is fundamentally different from that of all other books of ancient literature, and that the reasoning faculties given to us by God, which are generally recognized as guiding us to the truth with regard to the textual history of classical literature, are not to be employed with regard to the textual history of the NT. There is nothing strange or abnormal in the rejection of a relatively large number of late authorities in favour of a relatively small number of ancient authorities; on the contrary, it is a phenomenon common to nearly all works of ancient literature that have come down to us, the sole difference being that the NT manuscripts, early and late, are far more numerous than those of any classical work, so that the ordinary phenomena are exhibited on a much larger scale. If once it be admitted that the ordinary principles of literary criticism are to be applied to the NT, then the rejection of the TR in favour of one of the earlier families follows as a matter of necessity. It may be added that the course of discovery since the publication of WH's theory has furnished the best possible test of such a theory, that of wholly new and unforseen witnesses, and that it has received therefrom much confirmation and no refutation. The discovery of the Sinatic Syriac, the fuller scrutiny of the versions, the testing of the Patristic quotations (*e.g.* in the case of Ephraem Syrus, who was formerly supposed to have used the Peshitta), the papyrus and vellum fragments from Egypt and Sinai, the examination of more of the minuscule MSS, all these have brought additional support to readings of the β, γ, and δ families, for which the evidence previously available

TEXT OF THE NEW TESTAMENT

was sometimes very scanty, while they have done nothing to carry back the date of the distinctively Syrian readings beyond the period assigned to them by WH, namely, the age of Chrysostom.

45. One point remains to be dealt with in this connexion, namely, the question of the origin of this 'Syrian' or 'Byzantine' text, which thus dominated the NT tradition for considerably over a thousand years. The view of WH is that it was due to deliberate editorial revision, operating probably in two stages, the first revision taking place early in the 4th cent., the second at some time after the middle of that century. Against this hypothesis it has been objected that, if such revisions took place, we should have expected to find some record of them in early Christian literature. We know the names of several editors of the Greek OT during this very century (see GREEK VERSIONS OF OT); is it likely that two revisions of the NT could have been executed and yet have left no trace in history? It has been urged that there is no record of how another great textual change was carried out, namely, the substitution in the Greek OT of Theodotion's version of Daniel for that of the LXX; and it is no doubt true that where the whole available literature likely to deal with such a subject is so scanty, the argument from silence is very precarious. Still it must be allowed to carry some weight, and not a few critics would substitute for Hort's double revision a process of gradual change spread over a considerable period. Such a gradual change would be due to a general consensus of opinion as to the right way to deal with divergent texts, namely, to combine them when possible, and otherwise to soften down harshnesses, to harmonize contradictions, and to give greater smoothness to the literary style. In favour of this hypothesis it may be noted that the MSS themselves show signs of a gradual and progressive development of the α text. The earliest MSS which (in the Gospels) can be classed with this family, A and C, exhibit its characteristics sporadically, not continuously, and not infrequently side with MSS of the β and δ families against readings found in the overwhelming mass of later witnesses. The 6th-cent. MSS, N, Σ, Φ, show the α text in a somewhat more advanced stage; but it is not until we reach the later uncials, such as E, F, K, M, S, Π, that we find it fully developed in the form which we know as the TR. But whether we adopt the hypothesis of a definite revision or that of a gradual process of change in order to account for the existence of the α text, the *fact* of the existence of such a text remains, and its character as a secondary text of relatively late origin must be taken to be one of the established results of criticism.

46. The ordinary English student of the Bible is able readily to appreciate the points at issue in the controversy between the α and β texts, because they are substantially represented to him by the differences (so far as they are differences in text, and not merely in rendering) between the AV and the RV; for though the RV does not go the whole way with the 'Neutral' text, nevertheless its textual departures from the AV are in that direction, and give an adequate general idea of its character. In dealing with the δ text, however, there is no such ready means of realizing its character, since it is not embodied in any English version, or even in any edition of the Greek text. (A partial exception is furnished by Blass' texts of Matthew, Luke, and Acts, and A. C. Clark's and J. H. Ropes's editions of Acts.) Its features must be gathered by an inspection of the *apparatus criticus* of such works as the 'Variorum' edition of the English Bible, or the Oxford edition (with Sanday's appendixes) of the Greek. Even here it is not all plain sailing, since no one MS gives a full and consistent representation of the δ text, and the authorities which are predominantly of this character not infrequently disagree with regard to particular readings. Generally it may be said that the Old Syriac (especially Syr.-Sin.) and Old Latin (especially *k*, *e*, and Cyprian) represent the oldest form of the δ text, while Codex Bezae (D), its chief champion among Greek MSS, has it in a more advanced (and more extravagant) form.

From these some idea of its divergences from the α and β texts may be gathered (though it must be remembered that sometimes α and δ are found in agreement against β, owing to the eclectic compilers of α having adopted a δ reading from the alternatives presented to them; and sometimes, on the other hand β and δ concur in the preservation of some early reading which has been dropped or altered in α). Thus OL and OS (with ℵ, B) omit 'firstborn' in Mt 1^{25}, and the words 'bless them that curse you, do good to them that hate you' and 'despitefully use you' in Mt 5^{44}, while D in both cases has the omitted words; Syr.-Cur. has the doxology to the Lord's Prayer, while D and most OL MSS omit it; OS omits Mt 16^{2f} and 17^{21} (with ℵ, B), while OL and D retain both; in Mt 18^{11}, D, OL, and Syr.-Cur. agree with the α group in retaining the verse, while Syr.-Sin. sides with the β group in omitting it; after Mt 20^{28} a long additional passage (akin to Lk 14^{8-11}) is inserted in D, Φ, OL, and Syr.-Cur. (Syr.-Sin. is defective). Mk 16^{9-20} is omitted by *k* and Syr.-Sin., inserted by D, Syr.-Cur., and most MSS of the OL. At Lk 6^{5} D inserts the incident of the man working on the Sabbath day, but OS is defective here, and OL has no trace of it; in Lk 9^{55} the TR is derived from the δ text (D, OL, Syr.-Cur.), but Syr.-Sin. agrees with the β group in omitting the words 'and said, Ye know not what spirit ye are of,' etc.; D and some OL MSS omit Lk 22^{20}, while other OL MSS and OS transpose vv.^{17f} to this place; Syr.-Sin. omits Lk 22^{43f}, but D, OL, and Syr.-Cur. retain them; in Lk 23^{48} some words are added to the end by OS and g^1; in Lk $24^{6, 12, 36}$, where D and OL have remarkable omissions (which WH are inclined to accept, even against the testimony of B), both MSS of OS contain the omitted passages; but they concur with D and OL in omitting 24^{40}. These examples serve to show both the character of the δ text and the way in which its authorities are divided among themselves—a point of considerable importance; while in Acts the divergences of the δ text (here mainly represented by D and OL, the OS not being extant) are even greater, so much so as to have given rise to the hypothesis that it represents a different edition of the book, due to the author himself. (For a fuller list of notable δ-readings, both in the Gospels and Acts, see Kenyon, *Handbook*, pp. 76, 131–134, 293–299.) The vagaries of individual members of the δ group are occasionally still more striking than those which have been quoted; as when two OL MSS (*a* and g^1) insert in Mt 1^{15} the legend (apparently from the Ebionite Gospel) of the great light which flashed from Jordan at the baptism of Jesus, or when D, *c*, and Sah. state (at Lk 23^{53}) that the stone at the mouth of the sepulchre was 'such as scarce twenty men could roll.' In addition to these substantial additions to or alterations of the text, the verbal divergences are very numerous, proving that an excessive licence was taken by scribes or editors in dealing with the Gospel text.

47. Until quite recently, the special variants of the δ text were almost universally regarded as aberrations, which no one would think of accepting as readings of the original text. It is true that WH were disposed to believe that the passages omitted by the 'Western' authorities in the later chapters of Luke are no authentic part of the Evangelist's original work, but are additions made at a very early date; but this is the only case in which they accepted testimony of this class as superior to that of B and its allies, and few other scholars would at that time have gone even so far as they did. For some time after the promulgation of WH's theory, the conflict raged over the comparative merits of the α and β types of text; and it was only as the superiority of the latter was more and more established that scholars began to investigate more fully the characteristics and claims of the remaining family (ignoring γ, as merely a sub-species of β), for which a very high antiquity could be demonstrated. The claims of the δ text

TEXT OF THE NEW TESTAMENT

received a considerable stimulus from the publication of more of the OL MSS (especially *k*), and above all from the discovery of Syr.-Sin., which is perhaps the most important single member of the group. Further attention was attracted to it by Blass's attempt to show that the δ text in Luke and that in Acts represent different editions of those books, issued by Luke himself at different dates, though few now hold Blass's theory. In F. C. Burkitt's day, and due to his influence, not a few scholars were inclined to attach considerable weight to the evidence of this family, and to hold that the β text, no less than the α, is due to editorial revision, and that the original form of the NT text is to be looked for in the OL and OS to a much greater extent than was previously supposed possible.

48. The main argument in favour of the δ text is its great age and wide circulation, as demonstrated by the Patristic evidence of the 2nd and 3rd cents. It has to be borne in mind, however, that purity of text is due not so much to great age as to care in transmission, and that where such care has been wanting, corruption is both rapid and far-reaching. The papyrus MSS of the Greek classics, written in the first two centuries of the Christian era, which have recently come to light in large numbers, are almost always less accurate than the vellum MS of the 10th and 11th cents.; the reason no doubt being that the papyri are generally cheap copies, circulating among private individuals in the upper provinces of Egypt, while the vellum MSS represent the tradition of the great libraries, in which transcripts would be made more accurately and revised more carefully. So with regard to the early Christian literature: we can well imagine that during the century and a half following the composition of the books, when Christianity was an unauthorized religion, liable to persecution and the destruction of its books, and when Christians themselves looked for a speedy Second Coming of the Lord, there would be little care and little opportunity for the precise collation of manuscripts, and a great possibility of verbal and even material variation in transcription. It is quite intelligible, therefore, that through the greater part of the Christian world inaccurate copies would circulate, and that the more careful preservation of the true text would run in a comparatively narrow channel. And if there was one part of the world in which such care might more than elsewhere be expected it was Egypt, and especially Alexandria, the home of Greek textual criticism, and the home also of the Greek version of the OT. Hence, if the internal evidence points to the β text as the most accurate and authentic in character, the inference to be drawn therefrom is not materially shaken when we find signs that its birthplace was in Egypt, and that its early circulation was in that country, while texts of various shades of the δ type were prevalent elsewhere. That such was the character of the β text was the deliberate opinion of WH, who were perfectly aware of the early and wide attestation of the δ text; and their conclusion is supported by the quite independent investigations of B. Weiss, whose elaborate study (on very different lines) of the texts of the principal uncials led him to the conclusion that, whereas all the rest show marked indications of editorial revision in varying degrees, the text of B, though by no means free from scribal blunders, has the strongest signs of authenticity and originality. It is also to be remembered that it is impossible to form a coherent text of the δ type. The witnesses differ so much among themselves that it is easier to find a majority of them against any reading of that type than in favour of it. This appears even in Blass's attempt to form a δ text of Luke and Acts, and in the other books the task is still more hopeless. Readings of the δ type, in short, have much more the character of results of a common tendency, working more or less independently in different places under similar circumstances, than of the descendants from a common original.

49. Since Westcott and Hort, scholars have grouped minuscules together and related them, if possible, to Uncials; they have investigated the text of the versions and of some of the Fathers; and they have concentrated on splitting up the δ text, recognizing that the term 'Western' is a misnomer.

In *The Four Gospels*, 1924, B. H. Streeter advanced a theory of local texts of Alexandria, Antioch, Caesarea, Italy and Gaul, and Carthage for the Gospels. The primary authority of Alexandria was B; the secondary authorities ℵ, L, Sah., Boh.; and the Patristic, Origen, A.D. 230, and Cyril of Alexandria, A.D. 430. The primary authority of Antioch was Syr.-Sin., the secondary, Syr.-Cur. The primary authority of Caesarea was Θ; the secondary, fam.^{1}, fam.^{13}, 28, 565, 700 and W (for Mk 1^{1}–5^{30}); and the Patristic, Origen, A.D. 240, after his removal from Alexandria to Caesarea in A.D. 231, and Eusebius, A.D. 325. The primary authority for Italy and Gaul was D; the secondary, *b* and *a*; the Patristic, Tatian, A.D. 170, and Irenaeus, A.D. 185. The primary authority for Carthage was *k* for Mark and Matthew; the secondary, W for Mk 5^{31}–end and *e*; and the Patristic, Cyprian, A.D. 250. For the Caesarean family, Sreeter was able to use the work of Ferrar, J. R. Harris, and K. Lake on the minuscules. Since 1924, P^{45} has been discovered and should be added to the primary authority of Caesarea for the Gospels, not Acts, where it agrees with the Alexandrian family.

In 1935 T. Ayuso published his findings on the 'Caesarean' text (*Biblica*, xvi, 369 ff), splitting this family into a pre-Caesarean, which had its home in a remote part of Egypt, represented by P^{45}, W, fam.^{1}, fam.^{13}, and a Caesarean proper, represented by Θ, 565, 700, supported by Origen, Eusebius, Syr.-Sin., and the Old Armenian and Old Georgian; for in 1928, K. Lake, R. P. Blake and S. New had shown that Origen used a Caesarean text in Alexandria, then an Alexandrian text in Caesarea, and then a Caesarean text there. In 1935 also M.-J. Lagrange summed up many years' research (published in the *Revue Biblique*) in his *Introduction à l'étude du Nouveau Testament, Deuxiéme Partie: Critique textuelle, ii, La Critique rationelle*, 2nd ed. In this indispensable work, he made much the same grouping of the evidence for the Gospels as Streeter had done and proceeded with the evidence for the rest of the NT on the same lines, pointing out the lack of evidence for a 'Caesarean' family outside the Gospels. In 1951, W. H. P. Hatch produced his valuable *Minuscule Manuscripts of the New Testament*, in which he made the following grouping (p. 60)—(1) *Western*: D, W^{Mk} and the Pauline D, F, G; OL; Latin Vulgate in part; OS; Harklean margin; Irenaeus, Tertullian and Cyprian; (2) *Old Egyptian*: P^{45} (Luke, John), P^{46}, P^{37}, P^{38}; W (Mark in part and John); fam.^{1}, fam.^{13}, 28; Sah. in part; Harklean margin in part; Clement of Alexandria; (3) *Alexandrian*: (*a*) Proto-Alexandrian, P^{45} (Acts), B, ℵ; (*b*) Later Alexandrian, C, L, T^{a} (Luke, John), W (Luke, John), X, Z (Matthew), Δ (Mark), Ξ (Luke), Ψ (Mark, Acts, Epistles), A (Acts, Epistles), H (Paul), 33; Sah., in part; Boh. in part; Origen partly and Cyril Alex.; (4) *Caesarean*: P^{45} (Mark), Θ, W (Mark), N, O, Σ, Φ, 565, 700; OS, Syr.-Pal. (?), Old Armenian, Old Georgian; Origen in part; (5) *Byzantine*: A (Gospels) and E, F, G, H for Epistles; S, U (mostly), W (Matthew, Luke), Y, Ψ (Luke, John); most minuscule MSS; Peshitta, Harklean text; Chrysostom.

In view of the trend of recent research towards grouping the evidence, it is difficult to accept P. L. Hedley's verdict, (*Church Quarterly Review*, cxviii, 1934, 222) 'All forms of text, with the possible exception of that known to us from [OS], are represented among our Egyptian authorities; and except in the case of [the Byzantine text], it is improbable that one occurred much before another.' Admittedly, the 'Western' text was found in Egypt at an early date, during the 2nd cent., and onwards, and some kind of compromise between it and a more Alexandrian form of text may well have led to the pre-Caesarean text there which spread later in Caesarea and later still through Origen to Cappadocia, Armenia, and Georgia.

The origin of the 'Western' text itself is unknown but it is tempting to connect it with a recognition of certain NT books as canonical during the 2nd cent., perhaps at Antioch. If a popular recension of such books was made between *c* A.D. 125–150, this would account for a hard core of such Western variants, some of which preserve the authentic text of the archetype lost in other streams of tradition, *e.g.* the Alexandrian. To this 'hard core,' found *e.g.* in the Western text of Acts, other 'Western' readings were added later. The origin of the Alexandrian family is also unknown but it seems to have been due to a slight revision of some good MSS preserved at Alexandria, where the textual standards of pagan scribes were of the highest order. An editor of the NT, though he would do well to trust the β family generally, is bound also to consider readings of the δ type on their merits; and that especially when support is found for them from more than one branch of the family. The Latin and Syriac clans or families often differ; but when they agree, the reading which they support may well go back to a very early date, unless the variant can be traced to Tatian. The Codex Bezae, the principal Greek member of the δ family, represents its characteristics in a somewhat extreme form, and readings supported by it alone must be regarded with much suspicion; but in combination with OL and OS, especially where Tatianic influence is not suspected, it becomes an important witness.

50. The great hopes placed in von Soden's work on the text were not realized when *Die Schriften des Neuen Testaments* appeared in 1902–1913. Not only were his new *sigla* for the MSS unpalatable but he also put too closely together the readings of D with Θ, and despite the enormous mass of material that he collected, his work has constantly to be checked (cf H. C. Hoskier, *JTS*, xv, 1914, 307 ff, and A. Souter, *Expositor*, x, 1915, 429–444). The history and bibliography of textual criticism are well set out in Scrivener's *Plain Introduction to the Criticism of the NT* (4th ed., 1894); and C. R. Gregory's *Textkritik des Neuen Testaments* (I, 1900; II, 1902; III, 1908). Shorter summaries of the historical matter, with fuller discussions of the textual problem as it stands since Westcott and Hort, will be found in Sir F. G. Kenyon's *Handbook to the Textual Criticism of the NT*, 2nd ed., 1926, his *Recent Developments in the Textual Criticism of the Greek Bible*, 1933, his *The Text of the Greek Bible*, 1937, and A. W. Adams' revised edition of his *Our Bible and the Ancient MSS*, 1958; cf K. Lake, *The Text of the NT*, 6th ed., revised by S. New, 1953; M.-J. Lagrange, *Critique textuelle*, ii, *La critique rationelle*, 1935; A. H. McNeile, *Introduction to the New Testament*, 2nd ed., 1953, 373–453; A. Souter, *The Text and Canon of the NT*, 2nd ed., 1954. See also A. F. J. Klijn, *A Survey of the Researches into the Western Text of the Gospels and Acts*, 1949, and B. M. Metzger, *Annotated Bibliography of the Textual Criticism of the NT*, 1914–1939, in *Studies and Documents*, xiv, 1955. Also of great value is B. Kraft, *Die Zeichen für die wichtigeren Handschriften des griechischen NT*, 1955. Hort's *Introduction* (forming vol. ii. of *The NT in the Original Greek* by B. F. Westcott and F. J. A. Hort, 1881, is the standard work for a statement of the principles of textual criticism, and for its exposition of the epoch-making theory of the two scholars.

The fullest *apparatus criticus* at present available is that in Tischendorf's *NT Graece*, 1869–72, supplemented by the *apparatus* in Horner's editions of the Coptic version. S. C. E. Legg's edition of Mark, 1935, is more accurate than his edition of Matthew, 1940, and his enterprise is being carried on along different lines by a group of British and American scholars. A. Souter, *Novum Testamentum Graece*, 2nd ed., 1947, and that of E. Nestle (and K. Aland), 22nd ed., 1956, or that of A. Merk, 2nd ed., 1935, or that of J. M. Bover, 1943, or the Greek NT published by the British and Foreign Bible Society, 2nd ed., 1958, would provide a student with a concise but good *apparatus criticus*.

E. G. K.—C. S. C. W.

THADDAEUS.—The lists of the 'Twelve' differ slightly: Thaddaeus (Mk 3^{18}, Mt 10^{3}) is replaced by **Judas** the (son) of James in Lk 6^{15}, Ac 1^{13}. Emanuel Hirsch (*Frühgesch d.. Ev.*, i, 21 f) gives the following explanation: The group of the Twelve was formed first by the paschal appearance of the Lord (1 Co 15^{5}). When one tried to date this group back into the lifetime of Jesus, Judas the traitor was thought to have been a member of it. Hence one of the original Twelve had to be left out: either Judas' namesake Judas the son of James was omitted (Mk 3, Mt 10) or another one, namely Thaddaeus, of whom only his name was known.

The Codex Bezae (D) and a few other MSS have replaced Thaddaeus by **Lebbaeus**—perhaps one of the writers of this codex found in this name the 'Levi' of Mk 2^{14}. Because the gospel had narrated his vocation, he had to be included among the Twelve. This Levi is called 'the (son) of Alphaeus' (q.v.) in Mk 2^{14}. D has replaced these words by 'James the (son) of Alphaeus' here and in the parallel Lk 5^{27}. St. Luke himself has left out the addition 'the (son) of Alphaeus' in 5^{27} in order to avoid confusion with 'James the (son) of Alphaeus.'

THASSI.—The surname of Simon the Maccabee (1 Mac 2^{3}). The meaning of the word is quite uncertain. As likely an interpretation as any is 'the zealous.'

THEATRE.—The name is Greek (literally 'a place for viewing' [a spectacle]), and the thing appears to be of Greek origin also. From the cities of Greece proper, theatres spread all over the Greek and Roman world. The auditorium consisted regularly of a semicircular cavity cut on the side of a hill, much broader at the upper end than the lower. The seats were placed concentrically, being commonly carved out of the rock. The part level with the ground, the orchestra, was occupied by the chorus. The stage and scene were on the diameter, and were of artificial construction, being very often like the front of a temple. The theatres were used for public meetings, as being generally the largest buildings in the cities (Ac $19^{29, 31}$; cf also EPHESUS).

In Palestine as elsewhere drama held an important place in the cultural life of Hellenistic communities, a fact attested by impressive ruins. Of theatres built by Herod the Great, traces have been discovered of what appears to have been the one at Caesarea. But not even the site is known of the one at Jerusalem, so shocking to devout Jews. Along with a great amphitheatre it appears to have served especially the quadrennial Jerusalem Olympics, to which athletes, musicians, and other contestants thronged 'out of every nation' (Jos. *Ant.* xv. viii. 1 [267 ff]).

THEODOTUS.—**1.** One of the messengers sent by Nicanor to Judas Maccabaeus (2 Mac 14[19]). **2.** The author of a plot to assassinate king Ptolemy Philopator, which was frustrated by Dositheus (3 Mac 1[2]).

THEOPHILUS (literally 'beloved of God').—The person to whom St. Luke's two works are addressed (Lk 1[3], Ac 1[1]). That Theophilus stands for a real person and is not a general name for the Christian reader is made probable by the title 'most excellent,' which, when strictly used, implies equestrian rank (Ramsay, *St. Paul*, p. 388). It is used also of Felix (Ac 23[26] 24[2]) and of Festus (26[25]). Further, the name is common among Jews and Gentiles from the 3rd cent. B.C. But some take the title as a mere complimentary address, and therefore as telling us nothing of Theophilus himself. If it is used strictly, we may agree with Ramsay that Theophilus was a Roman official, and the favourable attitude of St. Luke to the institutions of the Empire is in keeping with this idea. So also is the whole purpose of Luke-Acts as an apologia for Christianity, addressed to educated Romans, possibly even to magistrates before whom Christians were being haled. A. J. M.—F. C. G.

THESSALONIANS, FIRST EPISTLE TO THE.—**1. Occasion and Date.**—According to the narrative of Ac 17[1ff], Paul, in the course of his second missionary journey, went from Philippi to Thessalonica, and reasoned there in the synagogue for three Sabbaths, with the result that 'some of them were persuaded, and consorted with Paul and Silas; and of the devout Greeks a great multitude, and of the chief women not a few' (v.[4]). There follows the account of a tumult of the Jews, and of an accusation against Jason, St. Paul's host, who is bound over to keep the peace. St. Paul is sent away by the brethren to Beroea, and thence again to Athens, leaving Silas and Timothy in Beroea. From Athens he sent for them, and waited for some time hoping they would join him there (17[15f]), but apparently he had reached Corinth before they arrived (18[5]). 1 Thessalonians confirms, on the whole, this general picture. Paul is presumably in Corinth, and Silas and Timothy are with him (1[1]). One would gather, however, that Timothy, who has just arrived (3[6]), has come, not from Beroea, but from Thessalonica, whither Paul had dispatched him from Athens under the pressure of the apostle's intense concern for his Thessalonian converts, whom he could not re-visit personally, for 'Satan hindered us' (1 Th 3[1f] 2[17f]). The discrepancy is probably due to a misunderstanding on the part of the author of Acts; but it is also possible that Silas and Timothy had rejoined Paul in Athens and that Paul had then sent Timothy back to Thessalonica.

At yet another point the Acts account is subject to question. The impression is conveyed by Acts that St. Paul's expulsion from Thessalonica followed immediately upon a three week's ministry in the synagogue, but there are indications in the Epistle of a longer stay (*e.g.* 2[7-12]). To these indications may be added the following considerations: (1) While in Thessalonica St. Paul received gifts more than once from his converts at Philippi (Ph 4[16]); and (2) the synagogue ministry does not account for his astonishing success among the Gentiles (Ac 17[4], 1 Th 1[9]). Some have held that the Acts narrative is to be interpreted as implying a brief and almost fruitless appeal to the Jews, followed by a longer and more successful ministry to the Gentile population (cf Ac 13[44-46]). It may be added that at Ac 17[4] there is considerable 'Western' authority for inserting 'and of' before 'Greeks,' thus giving *three* classes of converts besides the women—Jews, devout persons (*i.e.* proselytes), and Greeks (*i.e.* heathen). See also Ramsay, who constructs an 'eclectic' text (*St. Paul the Traveller*, pp. 226, note, 235, note 2).

The *occasion* of the letter, then, was the return of Timothy from his mission: its *date* falls within the eighteen months' period of Paul's sojourn in Corinth—as late as possible, to allow time for the history of the Church as sketched in the Epistle, and yet early enough to leave room for the circumstances of 2 Thessalonians, which is probably later than 1 Thessalonians but falls also in this period. The usual schemes of Pauline chronology assign for the departure from Corinth the spring of some year between A.D. 50 and 54; according to these schemes, perhaps A.D. 52 is the most probable date for 1 Thessalonians. With the possible exception of Galatians (which, if addressed to the churches of South Galatia, *may* have been written earlier), it is the earliest of extant Pauline writings.

2. Contents.—The Epistle does not lend itself to formal analysis. The least doctrinal and most personal of all St. Paul's letters to the churches, it is prompted largely by affectionate gratitude for the 'faith and love' of his recent converts, and for their 'good remembrance' of himself.

The tidings brought by Timothy that they 'stand fast' (3[5-8]) leads the Apostle to begin with an outburst of thankful memories of his mission. This 'thanksgiving,' interrupted by references to his intense longing to see his Thessalonian friends and to the visit and return of Timothy, forms the first and main section of the Epistle (chs. 1–3), the final words gathering up all its desires into a prayer (3[11-13]). Very simple yet profound expression is given to the Christian faith and hope (1[9f]); Jewish hostility is referred to (2[14-16]), but there is no controversial insistence on an anti-Judaic Christianity—a confirmation of early date. In ch. 4 there is warning against the besetting impurity of the Gentile world (4[1-8]), and against a fanatical detachment from the ordinary duties and responsibilities of life (vv.[9-12]). This is followed by a comforting assurance, rendered necessary by the belief in the speedy 'coming of the Lord' which St. Paul shared with his converts (v.[15]), that those of the brethren who have already died will have part in that event equally with those who are yet alive (vv.[13-18]). This theme is carried on to a warning to be watchful against the sudden coming of 'the day of the Lord,' as beseems 'sons of light and sons of the day' (5[1-11]). A general admonition to the Church to respect its leaders and to cultivate peace (vv.[12f]) leads out into a beautiful series of short exhortations, like a 'string of glittering diamonds' (vv.[14-22]), prayer and salutation (vv.[23-26]), the injunction that the letter be read to all the brethren (v.[27]), and the final benediction (v.[28]).

3. Authenticity.—(1) *External testimony.*—Echoes of 1 Thessalonians have been traced in Barnabas, Ignatius, Polycarp, the Didache—none of them, however, certain. It is contained in the Syriac and Old Latin Versions; it belonged to the Marcionite canon, and is named in the Muratorian Fragment. The earliest quotation is in Irenaeus, who attributes the Epistle to St. Paul, and specifies it as the 'First' to the Thessalonians: it is quoted by Clement of Alexandria, and frequently by Tertullian. If regard be had to the personal and non-theological character of the letter, this testimony is ample.

(2) *Internal evidence.*—The simplicity of the letter, the prevalence of the personal note over the doctrinal, its accord with the history in Acts (apart from the slight discrepancies already noted, which a pseudepigraph might have been expected to avoid), and the agreement with Philippians and 2 Corinthians in the writer's attitude of affectionate confidence towards these Macedonian Christians, all make strongly for genuineness, and the Epistle is, in fact, generally accepted by critics of all schools.

The assertion of an un-Pauline doctrinal standpoint (by Baur) takes for the standard of comparison the later Epistles—Galatians, Corinthians, and Romans—and ignores the gradual shaping of Pauline Christianity under stress of problems and controversies as yet hardly in sight. The Jewish opposition is not to St. Paul's distinctive teaching, but to his whole mission (2[14-16]): the declaration that because of persistent rejection of

Christ 'God's wrath has come upon them at last' (2[16]) does not need to imply that Jerusalem is already destroyed (A.D. 70). The rapid progress of the Church at Thessalonica reflects the first enthusiasm of the new faith, and such primitive organization as it exhibits (5[12]) is consistent with other indications of how the primitive Pauline churches were organized.

There is really no reason to doubt that the Epistle gives a genuine and invaluable self-revelation of St. Paul the *man*. All the great Christian truths appear—the divinity of Christ, His death for men, and resurrection, the Christian's union with Him, the gift of the Holy Spirit—but less as doctrines than as vital elements of personal religion, the moving forces of St. Paul's own life and ministry. S. W. G.—J. K.

THESSALONIANS, SECOND EPISTLE TO THE.—**1. Occasion and date.**—Scattered indications fix the letter (if genuine) as written from Corinth, not long after the First Epistle, although some scholars have defended the priority of 2 Thessalonians (see, *e.g.* T. W. Manson in *BJRL*, xxxv, March 1953, pp. 428 ff). Timothy and Silas (Silvanus) are still with the Apostle (1[1], cf 1 Th 1[1]), whereas in Acts there is no further mention of Silas after St. Paul left Corinth. The former letter seems to be referred to (2[15]), and the allusions to St. Paul's ministry in Thessalonica suggest that this was almost as recent as when 1 Thessalonians was written. Very possibly 3[2] is to be explained by the opposition encountered at Corinth, recorded in Ac 18. The reasons for a second letter are hardly evident in any considerable difference of subject-matter; they appear to consist in tidings which had reached St. Paul as to (1) some misunderstanding of his teaching about the Parousia (2[1-3]); (2) increase of persecution (1[4-10]); (3) disorderly conduct on the part of some members of the Church (3[11]); (4) possible letters forged in the Apostle's name (2[2] 3[17]).

2. Contents.—Salutation (1[1f]); thanksgiving (with prayer) for the Church's growth in faith and love in the midst of affliction patiently endured, with assurance of God's vengeance upon their persecutors (vv.[3-12]); warning that the day of the Lord is not yet, but must be heralded by certain signs (2[1-12]); renewed thanksgiving, exhortation, and prayer (vv.[13-17]). St. Paul asks for his readers' prayers (3[1f]), expresses his confidence in them (vv.[6-15]); and between repeated benedictions authenticates the letter by his signature (vv.[16-18]).

3. Authenticity.—(1) *External testimony*.—The evidence already cited for 1 Thessalonians applies also to 2 Thessalonians; the second letter is as well attested as the first.

(2) *Internal evidence*.—Circumstances have already been assigned to the letter, in themselves consistent and not improbable. To these may be added the close resemblance to 1 Thessalonians in subject-matter and phrasing, so obvious that it need not here be detailed. A *literary* dependence of 2 Thessalonians on 1 Thessalonians is practically certain, for the interval necessary to justify a second letter at all forbids the supposition of unconscious repetition. If 2 Thessalonians is by St. Paul, he must have re-read his former letter before writing this and the question naturally arises whether it is likely that he would so reproduce himself. Hence the resemblance to 1 Thessalonians is made an argument against the Pauline authorship of 2 Thessalonians. Moreover, along with the resemblance are found other features which are regarded as un-Pauline and post-Pauline, with the result that the Second Epistle is widely rejected by those who admit the first. The ground of this rejection must be briefly examined.

(*a*) *Style*.—It is freely admitted that this argument is hazardous and indecisive: those who rely upon it would not perhaps quarrel with Jowett's dictum that 'objections of this kind are, for the most part, matters of taste or feeling, about which it is useless to dispute.' The argument must also reckon with the fact that the close resemblance of this Epistle to 1 Thessalonians means the presence in it of some features of Pauline style and vocabulary, while what is exceptional may be due to the new subject-matter. Still, it may be argued that some of the passages which are most closely parallel to 1 Thessalonians show a loss of ease and simplicity which suggest that they have been worked over by another hand. One cannot but note a difference, hard to account for if the same writer is saying the same thing after so short an interval; nor is the change such as marks advance towards the style of St. Paul's later letters.

(*b*) *Subject-matter* (apart from 2[1-12]).—As compared with 1 Thessalonians, very little appears in 2 Thessalonians that is new or convincingly Pauline: something, too, of the warmth and glow of personal feeling has gone. The severity of tone in 1[6-9] cannot perhaps be objected to, in view of 1 Th 2[15f], while 3[6-15] is sufficiently accounted for by an aggravation of the offence already rebuked (1 Th 4[11] 5[14]). The reference to an 'epistle as from us' (2[2]) suggests an earlier correspondence of St. Paul with his churches, of which we have no knowledge, frequent enough to have already given rise to fraudulent imitation. This is not impossible, though the precaution of a certifying signature (3[17]) may seem, perhaps, a little inadequate.

(*c*) *The passage* 2[1-12].—The objection that this contradicts the eschatology of 1 Th 5[2f] cannot be sustained. The earlier passage speaks of a coming of 'the day of the Lord,' sudden and unexpected; if Paul believed that this had been misinterpreted to mean that the 'day' had already arrived (2 Th 2[1-2]), with the result that the ordinary duties of life were being neglected, he might well, without inconsistency, remind the Thessalonians that he had warned them of certain signs which must precede the 'day' itself (2[3-5]).

A more serious doubt is raised by the apocalyptic character of the passage, unique in Paul, and held to show both dependence on later writings and allusion to post-Pauline history. So far, however, as the thought is exceptional, the section may fairly be regarded as a pendant to the equally exceptional section 1 Th 4[15-17], and as more likely to be original than to have been attributed to Paul by a later imitator. The question rather is whether it can be accounted for by *contemporary* ideas, or betrays the facts and conceptions of a later time. The general thought is that the coming of Christ is to be heralded by an outburst of iniquity, described as the 'apostasy' ('falling away,' 2[3]), either headed by or personified as 'the man of sin' (RVm 'the man of lawlessness'; RSV reverses text and margin), 'the son of perdition,' 'the lawless one' (vv.[3, 8]) whose character and coming are more fully described in vv.[4, 9-12]. Already 'the mystery of lawlessness' is at work (v.[7]), but the crisis is delayed, as the Thessalonians know, by 'what is restraining' (v.[6]), 'he who now restrains' (v.[7]). In due season this restraint will be removed, that the lawless one may be revealed, to be slain by the Lord Jesus (vv.[6-8]).

Now, of the elements of this conception, that of an 'apostasy' is not un-Pauline: it appears 2 Co 11[13-15], Ro 16[17-20] (as well as Ac 20[29-30], and throughout the Pastoral Epp.), and is attributed to false teachers. The same idea occurs in Mt 24[5, 11f, 24] ||, 2 Peter and Jude, 1 Jn 2[18, 22] 4[3], 2 Jn [7]. This wide prevalence of the thought in the NT writings, and the constant prediction of 'many' false teachers, false prophets, false Christs, antichrists (1 Jn 2[18]), may suggest as regards our passage (1) that it draws upon a common stock of eschatological ideas; (2) that 'the man of sin' is not necessarily a person but a type (cf 1 Jn 2[18], '*many* antichrists,' but v.[22] and elsewhere '*the* antichrist'), symbolizing tendencies and movements, and therefore only at grave hazard to be identified with any definite historical personage. Hence the appeal to the legend of 'Nero redivivus' (Tac. *Hist*. ii. 8), with its implication of A.D. 68–70 as the earliest possible date for 2 Thessalonians, is quite without warrant.

It is true that our passage has close affinities with Revelation (especially 13[11-18] 19[20f] 20[10]), but this does not necessarily mean dependence. For Ezk 38 f, Dn 7–9

11 f, and later extra-canonical Jewish apocalyptic literature present, under varied historic colouring, the same conception of a final rally of the powers of evil before the last days, and of the triumph of Messiah over 'antichrist.' In *Test. XII Patr.*, this 'anti-christ' is 'Belial' or 'Beliar' (cf 2 Co 6^{15}), in Revelation 'the beast' (symbol of the Roman Empire rather than exclusively of Nero), and it is not necessary to regard 'the man of sin' and equivalent expressions as more personal than these. What is really peculiar to 2 Thessalonians is the assertion of a *restraining power*, holding in check the mystery of lawlessness already *at work*. Can this be explained as historical colour given by St. Paul to current apocalyptic tradition under the circumstances of A.D. 53 or thereabouts?

One answer has been that the Apostle to the Gentiles had lately experienced the determined enmity of the Jews to his whole Christian mission, at Thessalonica, Beroea, and Corinth. Though the Parousia is not yet (2 Th 2^{2}), St. Paul expects it within his own lifetime (1 Th 4^{17}). The traditional 'antichrist' is therefore already to be looked for (2 Th 2^{7}) and might well be discovered in Jewish hatred, bent on the very destruction of Christianity (1 Th 2^{15f}), fortified by its secure hold of the national sanctuary (2 Th 2^{4}), and held in restraint only by the forces of order seated on the Roman power, or, possibly, in the better elements of Judaism itself (2^{6f}). Other explanations of the 'restraining' power have been offered—as, *e.g.* the view that the antichrist is being held back till the gospel can be preached to the Gentiles. However interpreted, the passage would be a development on apocalyptic lines of the outburst of 1^{7-10}, and no necessity would remain for the suggestion, quite unsupported by evidence, that 2^{1-12} is either an interpolation or a genuine Pauline fragment worked up into a spurious Epistle.

So far, then, as doubts concerning 2 Thessalonians are reduced to argument, they can hardly prevail against the tradition of Pauline authorship. Whether misgivings as to style can be relieved by the suggestion that Timothy or Silas wrote in the Apostle's name is doubtful; certainly the repeated 'we' cannot be held to point to such co-operation (cf 1 Th 2^{17}–3^{1}). The trend of modern critical opinion is perhaps indicated in Jülicher's judgment, that the difficulties 'can after all be most easily solved' under the view that the Epistle was written by St. Paul. S. W. G.—J. K.

THESSALONICA (now *Thessalonikē*).—An important city of the Roman province Macedonia, situated on the Via Egnatia, the overland route from Italy to the East, and at the NE. corner of the Thermaic Gulf. Its buildings rose above one another in tiers on the slopes of the hills. The situation is in every respect admirable, and must have been occupied early. This city was founded about 315 B.C., and named after a stepsister of Alexander the Great. Its greatness under Macedonian rule was even extended under Roman rule. It became the capital of the Roman province Macedonia, constituted 146 B.C. It was made a 'free city' in 42 B.C. (Ac 17^{5} knows this fact), and was ruled by its own magistrates under the rather rare title 'politarchs,' who were five or six in number. There were many Jews here, as the possession of a synagogue shows (Ac 17^{1}), and a number of proselytes (Ac 17^{4}). The enemies of St. Paul raised a cry of treason, and a serious riot resulted. Some of Paul's friends had to give security that this would not be repeated. This forced Paul to leave the city. Members of the church here were Jason, Gaius, Secundus, Aristarchus. See THESSALONIANS. A. So.

THEUDAS.—St. Luke makes Gamaliel mention Theudas as the leader of an unsuccessful rebellion of 400 men (Ac 5^{36}). Josephus (*Ant.* XX. v. 1 [97 f]) speaks of a Theudas who gave himself out for a prophet. Theudas was decapitated and his followers killed or taken prisoners by a squadron of the procurator Fadus (A.D. 46–48), *i.e.* at least ten years later than the supposed speech of Gamaliel. In Acts Gamaliel goes on to say: 'After him Judas the Galilean arose in the days of the census'—*i.e.* forty years before Fadus (Jos. *Ant.* XVIII. i. 1, 6 [4–10, 23–25]; XX. v. 2 [102]; *BJ* II. viii. 1 [118], xvii. 8 [433]; VII. viii. 1 [253]) and thirty years before the supposed speech of Gamaliel. Apparently there is some chronological confusion in Gamaliel's speech, which various modern conjectures still leave unsolved. E. H.

THIGH (Heb. *yarēkh*, Gr. *mēros*).—The hollow of Jacob's thigh was strained as he wrestled at Peniel (Gn 32^{25}), and to this is attributed the Jewish custom (enjoined in the Mishnah) of not eating 'the sinew of the hip' (v.^{32}). See SINEW. On the thigh the sword was girded (Ex 32^{27}, Ps 45^{3}, Ca 3^{8}); Ehud's on the *right* thigh because he was left-handed (Jg $3^{16, 21}$). Under the jealousy ordeal the woman's thigh falls away if she has been guilty of adultery (Nu 5^{21ff}). To smite 'hip and thigh' (literally 'leg upon thigh') is a phrase denoting utter discomfiture accompanied by great slaughter (Jg 15^{8}). Its origin is unknown, and its meaning much disputed. In Jer 31^{19} and Ezk 21^{12} smiting upon one's thigh is a gesture of sorrow or terror. In the Hebrew (cf AVm) of Gn 46^{26}, Ex 1^{5}, Jg 8^{30} a man's children are described as coming out of his thigh. This explains the oath taken by placing the hand under the thigh (Gn $24^{2, 9}$ 47^{29}), a special sacredness being ascribed to the organs of generation. In NT 'thigh' occurs only in Rev 19^{16}, where perhaps the meaning is that the name was written on that part of the garment which covered the thigh. J. C. L.

THIMNATHAH, Jos 19^{43} (AV).—See TIMNAH, 2.

THISBE.—The place from which Tobit was carried away captive by the Assyrians (To 1^{2}). Its position is described as being on the right hand (S.) of Kedesh-naphtali in Galilee above Asher. No trace of the site has yet been found. Some commentators maintain that Thisbe was the home of Elijah 'the Tishbite,' but this is very doubtful.

THISTLES.—See THORNS.

THOCANUS, 1 Es 9^{14} (RV).—See TIKVAH, 2.

THOMAS.—One of the twelve apostles. The Synoptic Gospels mention only his name in listing the apostles (Mt 10^{3}, Mk 3^{18}, Lk 6^{15}; cf Acts 1^{18}). But in the Gospel of John he plays an important rôle, particularly in connexion with the resurrection appearances of Christ (Jn 11^{16} 14^{5} 20^{24-29} 21^{4}). Probably as a result of this the importance of Thomas continued to grow in the apocryphal literature of the early Church. According to Eusebius he evangelized Parthia, while according to Jerome he went to Persia. Others ascribe to him the founding of Christianity in India.

The name Thomas appears to be related to an Aramaic word meaning 'twin.' The Greek name **Didymus** used of him by John (11^{16} 20^{24} 21^{2}) also means 'twin,' and is meant to serve as a translation. But as far as we know the Aramaic word was never used simply as a surname and Thomas is itself a good Greek name. Apparently Aramaic speaking people used the Greek name and arbitrarily attached to it the Aramaic meaning which naturally suggested itself. The name gave rise to much speculation in the early Church as to the identification of Thomas and his twin. W. R. S.

THOMEI, 1 Es 5^{32} (RV).—See TEMAH.

THOMOI, 1 Es 5^{32} (AV).—See TEMAH.

THONG.—See LATCHET, DRESS, 6.

THORNS, THISTLES, ETC.—So many words are used in the Hebrew for thorny plant, and they are so variously translated, that it will be convenient to consider them all in one group. In the great majority of cases it is impossible to identify the special species referred to.

1. *'āṭādh*, Jg 9^{14f} AV, RSV **'bramble,'** AVm 'thistle,' RVm 'thorn,' Ps 58^{9} AV, RV, RSV 'thorns.' In Gn 50^{10f}, Atad occurs as a proper name. The *'āṭādh* is probably the buckthorn (*Rhamnus palestina*) or *Lycium europaeum*, a lowly bush.

2. *barḳānîm* (Jg $8^{7, 16}$ **'briers'**), some kind of thorn.

Arabic *berqān* is the *Centaurea scoparia*, a thorny-headed composite common in Palestine.

3. *dardar* (Gn 3^{18}, Hos 10^{8}), some thistly or thorny plant. In modern Arabic *shauket el-dardar* is applied to the star thistles or knapweeds of which *Centaurea calcitrapa* and *Centaurea verutum* are common Palestine forms.

4. *ḥēdheḳ* (Pr 15^{19} 'thorn,' Mic 7^{4} **'brier'**; cf Arabic *ḥadaqa* 'to enclose'), some prickly plant used as a hedge (Pr 15^{19}).

5. *ḥôaḥ* (RSV 2 K 14^{9}, 2 Ch 25^{18}, Is 34^{13} 'thistle'; Ca 2^{2} 'bramble'; 2 Ch 33^{11}, Job 41^{2} 'hook'; Job 31^{40}, Hos 9^{6} 'thorn'; 1 S 13^{6} 'holes'), some shrub, species unknown, with very strong spines.

6. *mᵉśūkhāh*, a thorn hedge (Mic 7^{4}).

7. *naᶜaṣûṣ* (Is 7^{19} 'thornbushes,' 55^{13} 'thorn'), from Aramaic *nᵉᶜaṣ* 'to prick,' a general term for a thorn.

8. *sîrîm* (Ec 7^{6}, Is 34^{13}, Hos 2^{6}, Nah 1^{10} 'thorn'). The reference to the 'crackling of thorns' suggests the thorny burnet (*Poterium spinosum*), which is burned all over Palestine in lime-kilns. *sîrôth*, Am 4^{2}, means 'hooks.'

9. *sillôn* (Ezk 28^{24} **'brier'**); *sallônîm* (Ezk 2^{6} 'thorns').

10. *sārābhîm* (Ezk 2^{6} **'briers,'** literally 'rebels,' as in margin, but text doubtful); Sir 41^{2} suggests 'obstinate.'

11. *sirpadh* (Is 55^{13} **'brier,'** literally the 'burner,' hence perhaps 'nettle').

12. *ṣinnîm* (Job 5^{5}, Pr 22^{5} 'thorns'); *ṣᵉnînîm* (Nu 33^{55}, Jos 23^{13} 'thorns').

13. *ḳôṣ* (Gn 3^{18}, Ex 22^{6}, Jg 8^{7,16} etc.), the commonest and most general word for 'thorns.'

14. *ḳimmôś* (Pr 24^{31} 'thorns'), elsewhere (Is 34^{13}, Hos 9^{6}) 'nettles.' See NETTLE.

15. *śikkîm* (Nu 33^{55} 'pricks'), cf Arabic *shauk* 'thorn' Akkadian *šakāku*, 'be pointed.'

16. *shayith*, only in Isaiah (5^{6} 7^{23f} 9^{17} 10^{17} 27^{4}), always with *shāmîr* (**'brier'**), and translated 'thorns.'

17. *shāmîr*, in Isaiah (see above) always translated **'brier'**; cf Arabic *samur* 'a thorny tree.'

18. *rhamnos* (Gr.), Ep. Jer 7^{1} (AV and RV 'thorn'; RSV 'thorn bush').

19. *skolops* (Gr.), 2 Co 12^{7} 'thorn' (RVm 'stake'). See MEDICINE, 3; PAUL, 7.

20. *akanthai* (Gr.)=Hebrew *ḳôṣ*, Mt 7^{16} 13^{7,22} 27^{29} etc. 'thorns.'

21. *tribolos* (Gr.), Mt 7^{16}, He 6^{8} 'thistle' (AV 'briars' in the latter).

The variety of words used to describe these prickly plants is not surprising, when it is remembered that such plants are ubiquitous throughout Palestine, and for many months of the year are almost the only living uncultivated vegetation. They form the common food of goats and camels; they are burned (Ec 7^{6}), specially the thorny burnet (Arab. *billān*), in ovens and lime-kilns, large areas of land being diligently cleared every autumn for this purpose. Gigantic thistles, sometimes as high as a horse's head, cover whole acres of fallow land and have to be cleared by fire before ploughing can begin. 'Thorns' of various kinds, *e.g.* brambles, oleasters, etc., are commonly used as hedges; and tangled masses of dead thorny branches from the *Zizyphus* and similar trees are used, particularly in the Jordan Valley, as defences round fields, flocks, or tents (Pr 15^{11}, Mic 7^{4} etc.).

E. W. G. M.—A. S. H.

THOUGHT.—In I S 9^{5}, in Mt 6^{25} (as well as in the following vv.^{27,28,31,34}), in 10^{19}, in Mk 13^{11}, and in Lk 12^{11,22,25,26} the English word 'thought' is used in AV in the old sense of 'grief *or* anxiety.' Thus Mk 13^{11} 'Take no thought beforehand' does not mean *do not think or plan*, but 'do not be anxious beforehand' (RSV).

THOUSAND.—See ARMY, 2, NUMBER, 5.

THRACE.—The name Thrace—it was not till A.D. 46 the name of a Roman province—was applied to all the country lying between the rivers Strymon and Danube. After the death of Lysimachus (281 B.C.—see THYATIRA), with whom the prospect of civilization for the country died, it continued barbarous, and was famous only for its severe climate and its soldiers. Of the latter there was a plentiful supply, and as soldiers of fortune they were to be found in the armies of the richer States. They were chiefly cavalry and light-armed infantry. (The name 'Thracian' was hence applied to gladiators armed in a particular way). Kings who employed them in war frequently settled them in colonies after peace was declared. A Thracian horseman is mentioned in 2 Mac 12^{35} (about 163 B.C.) as saving Gorgias, the governor of Idumaea under Antiochus Epiphanes, from capture.

A. So.

THRASAEUS (2 Mac 3^{5} RV; AV **Thraseas**).—The father of Apollonius; but read with RSV 'Apollonius of Tarsus.'

THRASEAS, 2 Mac 3^{5} (AV).—See THRASAEUS.

THREE.—See NUMBER, 7.

THREE TAVERNS.—See TAVERNS, THREE.

THREE YOUNG MEN (AV, RV CHILDREN), SONG OF.—See APOCRYPHA, 10.

THRESHING, THRESHING FLOOR.—See AGRICULTURE, 3.

THRESHOLD.—See HOUSE, 6.

THRONE.—The OT translation of Hebrew *kissē'* or *kissēh*. It is used of any seat of honour: *e.g.* of the high priest (1 S 1^{9} 4^{13,18}), of a judge (Ps 94^{20}; cf AV, RV), of a military officer (Jer 1^{15}); but most frequently of a king (*e.g.* Pharaoh Ex 11^{5}, David and Solomon 1 K 2^{12} etc.), and thus of God Himself (Ps 9^{7} 11^{4} 45^{6}, Is 6^{1}). For a description of Solomon's throne see 1 K 10$^{18-20}$, 2 Ch 9$^{17-19}$. Frequently 'throne' is used metaphorically for *dignity*, *royal honour*, and *power*. Thus 'the throne of David' often stands for the royal honour of David's house (2 S 7^{16}). So God's 'throne' is His sovereign power (cf Ps 45^{6} 93^{2}).

The NT term *thronos* [once (Ac 12^{21}) *bēma*, 'judgment-seat,' is translated 'throne'] is similarly used. It is applied in Rev 20^{4} to the thrones of the assessors of the heavenly judge (cf Mt 19^{28} || Lk 22^{30}); but is most frequently used of the throne of God or Christ (Mt 5^{34} || 19^{28} ||, Lk 1^{32}, Ac 2^{30} 7^{49}, He 1^{8} 4^{16} 8^{1} 12^{2}, Rev 1^{4} 3^{21} etc.). For 'thrones' as a rank of angels, see DOMINION, and cf POWER.

W. F. B.

THROUGHLY.—This is the older spelling of 'thoroughly.' In modern editions of AV we find both forms used, 'thoroughly' in Ex 21^{19}, 2 K 11^{18}, and 'throughly' elsewhere; but in the original edition of 1611 the spelling is 'throughly' everywhere. There was no distinction in earlier English between 'through' and 'thorough,' 'throughly' and 'thoroughly.' In the first edition of AV Ex 14^{16} reads 'the children of Israel shall goe on dry ground thorow the mids of the Sea.'

THRUM.—See SPINNING AND WEAVING, 3.

THUMB.—The thumb is associated with the great toe, and occurs in two different connexions. **1.** We are told that Adonibezek's thumbs and great toes were cut off (Jg 1^{6}), and that he himself had practised this mutilation on seventy kings (v.^{7}). The object seems to have been to render the vanquished monarchs unfit for war and thus for reigning in a warlike age. **2.** In the *ritual* of the consecration of Aaron, and his sons (Ex 29^{20}, Lv 8^{23f}) blood was sprinkled on 'the tip of the right ear, upon the thumb of the right hand and the great toe of the right foot.' The cleansed leper was similarly sprinkled with blood and oil (Lv 14^{14,17,25,28}). The action seems to have symbolized the consecration (or purification) of the whole man, the *extremities* only being touched, just as only the horns of the altar were sprinkled with the blood.

W. F. B.

THUMMIM.—See URIM AND THUMMIM.

THUNDER.—Thunder occurs in Palestine only during the rainy season, particularly at the beginning and the end. In the eastern plateau region thunderstorms are often spectacular, but they may occur anywhere in the country, and are usually accompanied by magnificent cloud effects and torrential rain. In the early period God was believed to come from Edom in a thunderstorm

to help His people, and the idea continues as a literary device in later writing (Jg 5$^{4-5}$, Hab 3$^{3-15}$). According to poetic and popular ideas, thunder was the *voice of God* (Ps 104^{7}, Job 37^{4} etc.), which a soul gifted with insight might understand and interpret (Jn 12^{28f}; cf Mk 1^{11}, Mt 3^{17} etc.). It is the expression of His resistless power (1 S 2^{10}, Ps 18^{13} etc.), and of His inexorable vengeance (Is 30^{30} etc.). Thunder plays a part in afflicting the Egyptians (Ex 9^{23ff}), at the delivery of the Law (19^{16} 20^{18}), and in discomfiting the Philistines (Is 7^{10}). It is not guided by caprice, but by the will of God (Job 28^{26} 38^{25}). It appears largely in the more terrible imagery of the Apocalypse. For 'Sons of Thunder,' see BOANERGES. W. E.—A. D. B.

THYATIRA.—There is a long valley extending northward and southward and connecting the valleys of the Hermus and Caicus. Down this valley a stream flows southwards, and on the left bank of this stream was Thyatira. An important road also ran along this valley, the direct route between Constantinople and Smyrna, and the railway takes this route now. Thyatira was also in the 1st cent. A.D. a station on the Imperial Post Road (overland route) from Brundisium and Dyrrhachium by Thessalonica, Neapolis (for Philippi), Troas, Pergamum, Philadelphia . . . to Tarsus, Syrian Antioch, Caesarea in Palestine, and Alexandria. In its connexion with **Pergamum** this road had always a great importance. Thyatira was built (in the middle of the valley, with a slight rising ground for an acropolis) by Seleucus, the founder of the Seleucid dynasty, whose vast kingdom extended from W. Asia Minor to the Himalayas. The city was garrisoned by Seleucus I. after the battle of Korupedion (281 B.C.). It had no strong location and hence was never a fortress, but only a military post. It held watch against Lysimachus, whose kingdom bordered that of Seleucus on the N. and W., and the colonists were Macedonian soldiers. In 282 B.C., Philetaerus revolted from Lysimachus and founded the kingdom of Pergamum. After the death of Lysimachus, Thyatira was a useful garrison to hold the road, in the interests first of the Seleucids and afterwards of the Pergamenians. The latter were safe from the former if they were in possession of Thyatira. The relation between Pergamum and Thyatira was thus of the closest.

The character of the city's religion is illustrated by the hero Tyrimnos, who is figured on its coins. He is on horseback and has a battle-axe on his shoulder. This hero is closely related to the protecting god of the city, whose temple stood in front of it (cf the temple in Ac 13^{14}). He was considered the divine ancestor of the city and its leading families, and was identified with the sun-god. He also had the title Pythian Apollo, thus illustrating the strange mixture of Anatolian and Greek ideas and names which is so common a feature in the ancient religions of Asia Minor. In conformity with this, he was represented as wearing a cloak fastened by a brooch, carrying a battle-axe, and with a laurel branch in his right hand, symbolizing his purifying power. The city had Pythian games on the model of those in Greece proper, and in the 3rd cent. A.D. the Emperor Elagabalus was associated with the god in the worship connected with them, showing the closer relation which had been effected between the popular and the Imperial religion. It is probable that Seleucus I. had settled Jews in Thyatira, as he certainly did in some of the cities in Asia. Lydia of Thyatira (Ac 16^{14}) had come within the circle of the synagogue, possibly in her native place.

Little is known of the history of the city. The name indicates that it was old Lydian in origin. Seleucid control ended in 190 B.C. It was Pergamene until 133 B.C. The pretender Aristonicus occupied it 133–132 B.C. Thereafter it was in the Roman province of Asia. It must have suffered severely and repeatedly during the fighting between Arabs and Christians, and Turks and Christians, in the Middle Ages. Its situation demands that it be captured and refortified by every ruling power. In Roman times it had been a great trading city, dating its greatest period of prosperity from about the time when the Seven Letters were written. There is evidence of more trade-guilds there than in any other Asian city: wool-workers, linen-workers, makers of outer garments, dyers, leather-workers, tanners, bronze-smiths, etc. **Lydia** probably belonged to one of those guilds. The purple in which Lydia dealt must have been a product of the region of Thyatira, and the well-known Turkey-red must therefore be meant. It is obtained from madder-root, which grows abundantly in that region. The name 'purple' had a much wider meaning among the ancients than among us. The bronze work of Thyatira was also remarkably fine (cf Rev 2^{18}). The ancient city lies buried under a modern town (*Akhisşar*).

The **letter addressed to the Church at Thyatira** (Rev 2$^{18-29}$) is the most obscure of all the seven, as we know so little of local conditions at which it hints. The principles which their prophetess represented were regarded by the author as subversive of true Christianity (see NICOLAITANS). A. So.—E. G. K.

THYINE WOOD (Rev 18^{12} AV and RV; AVm 'sweet'; RSV 'scented') is the *citrus* wood of the Romans, used for the manufacture of costly furniture. The tree, *Thuia articulata*, in appearance like a cypress, about 25-feet high, was the source of this wood.

TIBERIAS.—A town built by Herod (A.D. 16–22) on the western shore of the Sea of Galilee (called the 'Sea of Tiberias' in Jn 6^{1} 21^{1}, and in modern Arabic), and named in honour of the Roman Emperor Tiberius. Allegedly it was erected over the site of an ancient graveyard (Jos. *Ant.* XVIII. ii. 3 [38]). This made it an unclean place to the Jews, and Herod was obliged to use force in order to obtain settlers. It was designed entirely on Greek models, and the fact that it was in spirit and civilization entirely foreign is perhaps the reason why it is hardly alluded to in the Gospels—the sole reference being Jn 6^{23}. There is no evidence that it was ever visited by Jesus. The city surrendered to Vespasian and by him was restored to Agrippa. After the fall of Jerusalem many of the Jews took up their abode in Tiberias, and by a strange reversal of fate this unclean city became a most important centre of Rabbinic learning. Here, late in the 2nd cent., lived Judah the Prince (*Nasî*) or the Holy, editor of Mishnah. Here the 'Jerusalem (*i.e.* Palestinian) Talmud' was compiled. Here the Massoretic vocalization of the Hebrew Scriptures was developed. In the neighbourhood are the tombs of Akiba and of Maimonides. Hadrian built himself a temple here, which is probably portrayed on coins of Tiberias of A.D. 119–120.

Constantine built a church and established a bishopric at Tiberias, but Christianity never flourished there. The Arabs seized it in A.D. 637; the Crusaders lost it to Saladin in 1187. The city was almost destroyed by a great earthquake in 1837. The principal objects of interest are the ruins of a large castle (possibly Herodian), a very ancient synagogue, and—half an hour's journey to the S.—the hot springs of *Emmaus* (the Hammath of Jos 19^{35}, not to be confused with Hamath-Gader, mentioned by Josephus and Pliny, at the railroad crossing over the Yarmuk river). Tiberias has a population of about 16,000.

For the '**Sea of Tiberias**,' see GALILEE [SEA OF].
R. A. S. M.—E. G. K.

TIBERIUS, whose designation as Emperor was Tiberius Caesar Augustus, was the son of Tiberius Claudius Nero (a Roman noble) and Livia whose second husband was the Emperor Augustus. He was born 42 B.C. and died A.D. 37. Augustus, as he grew old, appointed in succession four of his relatives as co-regents, or marked them out as his intended successors. It was clear that he did not desire the succession of his stepson Tiberius, who was reserved, morose, and unlovable. The successive deaths of his nominees compelled him to fall back upon Tiberius, who in A.D. 13 was made co-emperor. A year later he succeeded to the purple. The 'fifteenth year' in Lk 3^{1} may be counted

from the first of these dates, but more probably from the second, thus meaning A.D. 28–29. Tiberius was an able general and a competent Emperor, but the unhappy experiences of his early life made him suspicious and timorous, and he put many of his rivals or supposed rivals to death. In his later years he was much under the influence of a villainous schemer Sejanus. He spent these years in retirement at Capri. A. So—E. R. H.

TIBHATH.—A city of Hadarezer, king of Zobah, 1 Ch 18[8]. The parallel 2 S 8[8] has **Betah**, but the original reading was perhaps **Tebah**, as in Peshitta (cf Gn 22[24], where this occurs as a tribal name). The site is unknown.

TIBNI.—A rival who disputed the throne with Omri for four years, 1 K 16[15, 21].

TIDAL.—The fourth of the four kings who carried out an invasion of Canaan in the time of Abraham (Gn 14[1]). He is called 'king of Goiim,' and the word 'goiim' in Hebrew means the heathen nations, or Gentiles. It is difficult to understand why this king should be called 'king of the nations,' unless it is an honorific title, like 'king of the four quarters,' assumed by Assyrian kings. Tidal has been identified with some probability as Tudhaliash I., the first of a line of kings who ruled the Old Hittite Empire. He may be dated *c* 1700–1650 B.C. S. H. He.

TIGLATH-PILESER (in 1 Ch 5[6, 26] and 2 Ch 28[20] corrupted to the form **Tilgath-pilneser**).—This Assyrian ruler, the *Tukulti-apil-ēsharra* of the monuments, was the third of the name. He began to reign about 745 B.C. (13th of Iyyar), and is supposed to have been a usurper. In the Babylonian chronological list he is called *Pulu*, the **Pul** of 2 K 15[19], and the *Poros* of the Canon of Ptolemy. His reign was a very active and important one. Five months after his accession he marched into Babylonia to overthrow the power of the Aramaean tribes. In 744 B.C. he went to Namri to punish the tribes who harassed the Assyrian border. In 743 B.C. he defeated the forces of Sarduris II. of Urartu at Arpad. Among those who gave tribute on this occasion were Rezin of Damascus, Hiram of Tyre, and Pisiris of Carchemish. Arpad, however, revolted again, and was for three years the objective of Tiglath-pileser's expeditions (742–740 B.C.). In 739 B.C. he went north to Ulluba, and the presence of his armies there enabled him, in 738 B.C., to make head against Syrian and Phoenician resistance. On this occasion he subjected Kullani, supposed to be the Calno of Is 10[9]. Rost suggests that Azriau or Izriau (Azariah) of Judah played some part in this expedition, and among those who gave tribute was Menahem of Samaria (2 K 15[19]). In 737 B.C. his objective was the Medes, in many of whose cities he set up bas-reliefs with the royal image. After this (736 B.C.) his forces were again engaged in hilly Nairi, and reached the mountain of Nal. This led the way to the conquest of Urartu in 735 B.C. In 734 B.C. the Assyrian army invaded Pilishtai (Philistia)—according to Rost, the Mediterranean coast-land S. of Joppa. Gaza was captured, and Hanun, the king, having fled, Tiglath-pileser mounted the throne and set up his image in the palace there. In 733 B.C. came the turn of Damascus and also of Israel, the immediate cause being affairs in Judah. Azariah had died, and after the short reign of his son Jotham, Jehoahaz or Ahaz came to the throne. Taking advantage of the change, Pekah of Israel made an alliance with Rezin of Damascus to attack Judah, and captured Elath (2 K 16[5ff]). Feeling that Judah would be compelled to submit to the allied powers in the end, Ahaz turned to Assyria, sending the best of his own treasures and those of the Temple at Jerusalem to make a worthy present to the Assyrian king (2 K 16[8]), who therefore came to his aid. Pekah and Rezin withdrew their forces from Judah, but, instead of uniting against the common foe, awaited the Assyrian king's attack each in his own territory. Marching by the coast-route, Tiglath-pileser assured himself of the submission of his vassals in N. Phoenica, and attacked N. Israel, capturing Ijon, Abel-beth-maacah, Janoah, Kedesh, Hazor, Gilead, Galilee, and all the land of Naphtali (2 K 15[29]). These names are not preserved in the annals, though 'the broad (land of) . . . -li' may be, as Hommel suggests, the last named. Pekah saved his land from further harm by paying tribute, but things went harder with Rezin, his ally, who shut himself up in Damascus. The siege which followed ended, in 732 B.C., in the capture of the city; 591 towns, including Hadara, Rezin's own city, were razed to the ground. An attack upon Samsi, queen of the Arabians, followed, the result being that a number of tribes—Sabaeans, Mas'aeans, etc.—hastened to propitiate the Assyrian king with gifts. Idi-bi'il, a N. Arabian prince, was made governor on the Muṣrian border. Meanwhile, a number of Israelitish nobles, with Hoshea as leader, revolted, and Pekah fled, but seems to have been murdered. Hoshea thereupon mounted the throne, and bought the recognition of the Assyrian king, who had continued to ravage Syria. Mitinti of Ashkelon, seeing the fate of Rezin of Damascus, seems to have gone mad. He was succeeded by his son Rūkipti, who tried to atone for his father's disaffection by sending tribute and gifts. Metenna of Tyre likewise became tributary. After the fall of the capital, Damascus became an Assyrian province. According to 2 K 16[9], the people were taken captive to Kir, and Rezin was slain. It was in Damascus that Ahaz made homage to the conqueror, and seeing there an altar which took his fancy, had one made like it. Tiglath-pileser, confident, seemingly, of his hold upon Palestine, did not again invade the country. Its States remained for many years more or less tributary to Assyria, according as that power seemed strong or weak. In 731 B.C. Tiglath-pileser was attracted by events in Babylonia. Ukīn-zēr, a Chaldaean prince, having seized the Babylonian throne, the Assyrian king besieged him in his capital Sapia, which he captured in 729 B.C., taking Ukīn-zēr prisoner. In 728 B.C. Tiglath-pileser became king of Babylon, but beyond 'grasping the hand of Bel' (Marduk) as its ruler, took part in no further important event. He probably died when making an expedition against a city whose name is lost; and Shalmaneser V. mounted the throne (25th of Tebeth, 727 B.C.). When at home, Tiglath-pileser resided in Nineveh or in Calah, where he restored the central palace, decorating it with bas-reliefs and the annals of his reign. This building was partly destroyed by Esarhaddon. T. G. P.—T. F.

TIGRIS.—Only in Gn 2[14] (RVm, ASV), Dn 10[4] (RVm, ASV, RSV), where both AV and RV have **Hiddekel** (q.v.), and in all EV in To 6[1], Jth 1[6], Sir 24[25]. The Tigris rises a little S. of Lake Gōljik and flows S. to Diarbekr. After passing Diarbekr it receives the eastern Tigris (which rises in the Niphates mountains) at Osman Kieui. Then it flows through narrow gorges into the plateau of Mesopotamia, where it receives from the east the Greater and Lesser Zab, the Adhem or Radanu, and the Diyaleh or Tornadotus. On the E. bank, opposite Mosul, was Nineveh and a little N. of the junction of the Tigris and Greater Zab, Kalah, and on the W. bank, N. of the Lesser Zab, was Assur (now Kalah Sherghat), the primitive capital of Assyria. The Tigris is about 1150 miles in length, and rises rapidly in March and April owing to the melting of the snows, falling again after the middle of May. Cf also EDEN [GARDEN OF].

TIKVAH.—**1.** The father-in-law of Huldah, 2 K 22[14]; called **Tokhath** in 2 Ch 34[22] (AV **Tikvath**). **2.** The father of Jahzeiah, Ezr 10[15], 1 Es 9[14] (AV **Theocanus**, RV **Thocanus**).

TIKVATH, 2 Ch 34[22] (AV).—See TIKVAH, **1.**

TILE, TILING.—The former occurs in AV and RV in Ezk 4[1] for 'brick'—the usual rendering of the original (so RSV here). For the plan of a city drawn on 'bricks' or 'tablets' of soft clay, which were afterwards baked hard, see Pritchard, *ANEP*, No. 260. '**Tiling**' is found only in Lk 5[19] AV, for which RV and RSV have 'through the tiles.' St. Luke seems here to have adapted the narrative of Mark (for which see HOUSE, 5) to the style of roof covered with tiles, with which his Western

readers were more familiar; or 'through the tiles' is here simply synonymous with 'through the roof' (cf our expression 'on the tiles'). A. R. S. K.

TILGATH-PILNESER.—See TIGLATH-PILESER.

TILON.—A son of Shimon, 1 Ch 4[20].

TIMAEUS.—The father of Bartimaeus (Mk 10[46]).

TIMBREL.—See TABRET, and MUSIC, etc., 4 (3) (*a*).

TIME.—In EV 'time' serves as the translation, or as one element in the translation, of a number of different Hebrew and Greek words and expressions, the precise meaning of which in each instance depends on the context. Thus, duration of 'time' is referred to in such passages as Dn 11[24] ('. . . but only for a *time*'—Heb. *'ēth*) or Ac 18[23] ('After spending some *time* there . . .'—Gr. *chronos*): or the reference may be to a particular moment of 'time' (*e.g.* Gn 21[22] 'At that *time* . . .'—Heb. *'ēth*, Mt 2[7] '. . . what *time* the star appeared'—Gr. *chronos*), to a particular 'time' of day (*e.g.* Ex 9[18] 'tomorrow about this *time* . . .'—Heb. *'ēth*), or of year (*e.g.* Mt 13[30] 'at harvest *time* . . .'—Gr. *kairos*): there are set 'times' for feasts (*e.g.* Dt 31[10] 'at the *set time* . . . at the feast of booths . . .'—Heb. *mō'ēdh*) and a 'time'-limit may be appointed for the fulfilment of a mission (*e.g.* Neh 2[6] 'So it pleased the king to send me, and I set him a *time*'—Heb. *z'man*): there is past 'time' (*e.g.* Is 9[1] 'In the former *time* . . .'—Heb. *'ēth*) and future 'time' (*e.g.* Jos 22[24] '*in time to come* . . .'—Heb. *māḥār*): there is also eschatological 'time' (*e.g.* 1 P 1[5] '. . . in the last *time*'—Gr. *kairos*, 1 P 1[20] '. . . at the end of the *times*'—Gr. *chronos*); and in this eschatological connexion '*the* time' may be used absolutely as almost coterminous with 'the Day' (*e.g.* Mk 1[15] 'The *time* is fulfilled . . .', Rev 1[3] '. . . the *time* is near'—Gr. *kairos* in both cases). It should also be noted that in a few passages in Dan (4[16, 23, 25, 32] 7[25]) and in Revelation (12[14]—obviously dependent on Dn 7[25]) 'time' stands for 'year.'

Of 'Time' in our modern sense, as opposed to 'Eternity,' the Bible has little, if any, conception. For the Biblical writers 'time' was a continuum with several various natural divisions.

The most obvious of these natural divisions was that between **day and night**, brought about by the regular rising and setting of the sun (cf *e.g.* Gn 1[14-16], Jos 10[13]). As 'times of day' are mentioned **morning** (*e.g.* Ps 5[3], Mt 21[18]) and **evening** (*e.g.* Nu 9[3], Ac 4[3]), **dawn** (*e.g.* 1 S 9[26], Lk 24[1]) and **twilight** (*e.g.* Pr 7[9]—not in NT), and **noon** (*e.g.* Am 8[9], Ac 22[6]) and **midnight** (*e.g.* Ru 3[8], Lk 11[5]). To call midnight a 'time of day' reveals immediately the ambiguity in the use of the word 'day' both in the Bible and in current usage: in one sense 'day' includes 'night,' in the other it is contrasted with 'night' (the ambiguity may be conveniently illustrated by the verse 'God called the light Day, and the darkness he called Night. And there was evening and there was morning, one day'—Gn 1[5]). Among the Sumerians and Babylonians the day in the former sense ran from sunset to sunset, and there is reason to think that the OT day in this wider sense also began at sunset—at least in the pre-exilic period (cf *e.g.* Gn 1[5], Lv 23[32], Dt 16[6]). In the more narrow sense the Babylonians further divided, not only the day, but also the night, into twelve **hours** each: in the OT there is no mention of hours, though this does not necessarily mean that they were not known and used (the rendering of the Aram. *shā'āh* as 'hour' by AV and RV in Dn 3, 4 and 5 is inexact and has been rightly abandoned by RSV). In the NT, apart from such general phrases as 'in that hour' (meaning 'at that time' or 'at the same time'—*e.g.* Mt 10[19]), there are a number of more specific references to hours—thus, there are said to be 'twelve hours in the day' (Jn 11[9]), the Crucifixion took place at 'the third hour' (Mk 15[25]), and the uproar at Ephesus went on 'for about two hours' (Ac 19[34]): there is also a reference at Ac 23[23] to 'the third hour of the night.' In both OT and NT we read also of **watches** as subdivisions of the night: in the OT there are three (as in Babylonia), the first (La 2[19]), the 'middle' (Jg 7[19]), and 'the morning watch' (Ex 14[24], 1 S 11[11]): in the NT, Matthew (14[25]) and Mark (6[48] 13[35]) plainly adopt the Roman system of four watches, while Lk 12[38] ('If he comes in the second watch, or in the third, and find them so') is reconcilable with either a three-fold or four-fold system.

Just as the regular rising and setting of the sun was responsible for the division between day and night, so the regular waxing and waning of the moon was responsible for the division into **months**. Of the two Hebrew words for 'month,' one (*yerah*) is consonantally identical with the word for 'moon' (*yārēaḥ*), while the root meaning of the other (*ḥōdhesh*) is 'newness.' The new moon, accordingly, marked the beginning of the month, and its appearance was celebrated by a 'new-moon' feast: these feasts were observed both in pre-exilic (*e.g.* 1 S 20[5], Is 1[14]) and post-exilic (*e.g.* Nu 10[10], Ps 81[2]) times: they are mentioned also by St. Paul (Col 2[16]). When the Hebrews first settled in Palestine they adopted the local Canaanite names for the months, but only four of these names have survived in the OT. It may also have been the practice in the early period to designate the month by number (*e.g.* 1 K 8[2] 'in the month Ethanim, which is the seventh month,' or 1 K 12[32] 'And Jeroboam appointed a feast on the fifteenth day of the eighth month'—though to what extent such passages may be relied upon as preserving a genuine pre-exilic tradition is uncertain). In the exilic and post-exilic periods, however, designation by number became extremely common (*e.g.* Gn 7[11], 1 Ch 12[15], Ezk 24[1], Hag 1[1]), and the original Canaanite names were displaced by the Babylonian, which have retained their place in the Jewish calendar to the present day. A complete list of these Hebrew month-names (with details of their attestation in the OT) is as follows:

1. Canaanite name **Abib** (Ex 13[4] 23[15] 34[18], Dt 16[1]); Babylonian name **Nisan** (Neh 2[1], Est 3[7], 1 Es 5[6]). About the same time of year as our April; the month in which the Passover was celebrated.
2. Can. name **Ziv** (1 K 6[1, 37]); Bab. **Iyyar** (not in OT).
3. No Can. name has survived in OT; Bab. **Sivan** (Est 8[3]).
4. No Can. name; Bab. **Tammuz** (not in OT).
5. No Can. name; Bab. **Ab** (not in OT).
6. No Can. name; Bab. **Elul** (Neh 6[15], 1 Mac 14[27]).
7. Can. name **Ethanim** (1 K 8[2]); Bab. **Tishri** (not in OT).
8. Can. name **Bul** (1 K 6[38]); Bab. **Marchesvan** (not in OT).
9. No Can. name; Bab. **Chislev** (Neh 1[1], Zec 7[1], 1 Mac 1[54] 4[52, 59], 2 Mac 1[9, 18] 10[5]).
10. No Can. name; Bab. **Tebeth** (Est 2[16]).
11. No Can. name; Bab. **Shebat** (Zec 1[7], 1 Mac 16[14]).
12. No Can. name; Bab. **Adar** (Ezr 6[15], Est 3[7, 13] 8[12] 9[1] etc., 1 Mac 7[43, 49], 2 Mac 15[36]).

At 2 Mac 11[30] **Xanthicus**, the name for the first month in the Macedonian calendar, occurs; at 2 Mac 11[21] **Dioscorinthius** may represent a corruption of another Macedonian month-name; and at 3 Mac 6[38] two Egyptian months, **Pachon** (the ninth month) and **Epiphi** (the eleventh month), appear, the former being omitted in some texts. The NT provides no evidence of either the numbering or the naming of months.

The idea of the **week** seems to have arisen as a subdivision of the month. From the frequent occurrence of the tenth day of the month in the dating of events (*e.g.* Ex 12[3], Jos 4[19], 2 K 25[1]) it has been suggested that the month was at one time subdivided into three periods of ten days each. Whether this be so or no, subdivision into four periods of seven days each was undoubtedly more normal; and this is borne out by the fact that the ordinary Hebrew word for week (*shābhūa'*) means 'heptad' (cf Gn 29[27f], Lv 12[5], Dt 16[9f]). The classic OT statement of this seven-day week is to be found in Gn 1, where God works for six days and rests on the seventh. Here the practice of numbering the days of

the week is followed, and this practice is attested elsewhere (*e.g.* Ex 12^{15} $16^{5, 22}$); but the seventh day is more usually called the 'sabbath' (*e.g.* Ex 16^{25f} $20^{8, 11}$). 'Sabbaths' were certainly observed as days of cessation from work in pre-exilic times (cf *e.g.* 2 K 4^{23}, Am 8^{5}, Is 1^{13}—where in each case the 'sabbath' is mentioned immediately after the 'new moon'—and especially Ex 20^{8-11} 34^{21}, and Dt 5^{12-15}). In the post-exilic literature the Hebrew *shabbāth* is used to denote, not only the 'sabbath' proper (*i.e.* the seventh day), but also, occasionally, the 'week' (Lv 23^{15} 25^{8}; cf Nu 28^{10} and Is 66^{23}). This latter usage became established in Aramaic, where *shabbᵉthâ* regularly means 'week' as well as 'sabbath'; and it is further reflected in Greek in the NT where *mia* [*prōtē*] *sabbatōn* [*-tou*] (Mt 28^{1}, Mk $16^{2, 9}$, Lk 24^{1}, Jn $20^{1, 19}$, Ac 20^{7}, 1 Co 16^{2}) is rendered 'the first day of the week.' This 'first day' was known also to Christians as 'the Lord's day' (Rev 1^{10}), and observed as a memorial of the Resurrection. Of other days of the week in the NT we hear only of the sabbath (*e.g.* Mk 1^{21}, Ac 13^{14}) and of 'the day of Preparation, that is, the day before the sabbath' (Mk 15^{42}; cf Mt 27^{62}, Lk 23^{54}, Jn $19^{31, 42}$).

The root meaning of the Hebrew word for year (*shānāh*) is 'change,' and this suggests a concept based on observation of the alternation of the seasons and the agricultural operations associated with them (cf Gn 8^{12}). Before the Exile, the year ran from harvest to harvest (Ex 23^{16} 34^{22}), and 'times of year' were indicated by reference either to the season (2 S 11^{1}, 1 K $20^{22, 26}$) or to the month (*e.g.* Ex 23^{15}, 1 K 8^{2}), though what was the relation between the year and the months at this period is obscure. During the Exile, however, the influence of the Babylonian calendar made itself felt; not only, as has been seen already, were the original Canaanite names for the months displaced by the Babylonian, but the months themselves now definitely became twelfths of the year (with an extra thirteenth month intercalated every two or three years, in order to make up the difference between the lunar and the solar year): furthermore, the beginning of the year was transferred from the autumn to the spring—thus, the spring month, Abib, originally the seventh month, became Nisan, the first (Ex 12^{2}, Est 3^{7}). Yet the Babylonian calendar did not win a complete victory. To-day the Jews distinguish between the 'ecclesiastical year' beginning with Nisan in the spring, and the 'civil year' beginning with Tishri in the autumn—a distinction which is at least as old as Josephus (*Ant.* I. iii. 3 [81]): the origin of the 'civil year' may accordingly be explained as a survival of pre-exilic custom, and a stage in its development traced in the regulations for the observance of 'the first day of the seventh month' in the post-exilic Pentateuchal legislation (Lv 23^{23-25}, Nu 29^{1-6}).

Duration (or lapse) of time, if specific, is expressed in the Bible by numbers attached to one of the natural divisions just discussed (*e.g.* 1 S 13^{8}, Rev 13^{5}). Fixed points are similarly indicated, though of necessity in relation to other fixed points previously determined (*e.g.* Gn 7^{11}, Mk 9^{2}): in the case of 'dates,' the other fixed points are normally either well-known events (*e.g.* Am 1^{1}, Is 20^{1}) or the year of a king's accession (*e.g.* 2 K 18^{9}, Lk 3^{1}). Of instruments to measure time we hear of only one—'the dial of Ahaz' (2 K 20^{8-11}, Is 38^{7f} [AV **sundial**]): since it was called after Ahaz some twenty or more years after his death, the probability is that it was an innovation on his part, no doubt a foreign importation, and perhaps contemporaneous with the altar that he caused to be set up in the Temple as a replica of the altar that had caught his fancy in Damascus on his visit there to do homage to Tiglath-Pileser (2 K 16^{10-16}).

H. F. D. S.

TIMNA.—1. A concubine of Eliphaz, son of Esau, Gn 36^{12}. **2.** A woman of the Esau clan of Horites, Gn 36^{22}, 1 Ch 1^{39}. **3.** A 'duke' of Edom, Gn 36^{40}, 1 Ch 51 (AV **Timnah**). **4.** A grandson of Esau, 1 Ch 1^{36}.

TIMNAH.—1. A town in the hill country of Judah, SE. of Hebron, Jos 15^{57}. It is possible that this was the Timnah visited by Judah at the time of sheepshearing, Gn 38^{12ff} (AV **Timnath**). It is possibly modern *Kh. Tibneh*, W. of Bethlehem. **2.** A place on the N. frontier of the tribe of Judah between Beth-shemesh and Ekron, Jos 15^{10}. At one time it was counted in the territory of Dan, Jos 19^{43} (AV **Thimnathah**); at another it was in Philistine possession, Jg $14^{1, 2, 5}$ (AV **Timnath**). Here Samson celebrated his marriage. His father-in-law is called the **Timnite**, Jg 15^{6}. The town was held by the Hebrews in the reign of Uzziah, but was lost to the Philistines by Ahaz, 2 Ch 28^{18}. It is now *Kh. Tibneh*, 2 miles SW. of Beth-shemesh. **3.** Gn 36^{40}, 1 Ch 1^{51} (AV); see TIMNA, **3.**

TIMNATH.—1. Gn 38^{12ff} (AV); see TIMNAH, **1. 2.** Jg $14^{1, 2, 5}$ (AV); see TIMNAH, **2. 3.** 1 Mac 9^{50}; see TIMNATH-SERAH.

TIMNATH-HERES.—See TIMNATH-SERAH.

TIMNATH-SERAH.—A city assigned to Joshua as an inheritance and burying-place, Jg 19^{50} 24^{30}; called **Timnath-Heres** in Jg 2^{9} and **Timnath** (q.v.) in 1 Mac 9^{50} (AV **Thamnatha**). In the latter it is reckoned to Judaea, but in Jg 2^{9} it is said to be in Mount Ephraim on the N. side of the hill Gaash. The *Onomasticon* identifies it with *Tibneh*, where there are remains of an important place, with a spring and ancient tombs, on the Roman road from Caesarea to Jerusalem, about 14 miles NE. of Lydda. The tombs are on the S. of the road. One, distinguished by size and workmanship, may be that pointed out as Joshua's in the time of Eusebius and Jerome. The Samaritans place the burial of Joshua at *Kefr Ḥâris*, a village some 10 miles S. of *Nâblus*, with two sanctuaries to the E., one of which, *Nebī Kifl* ('the prophet of the portion *or* lot'), may be associated with Joshua. In this case, only the second element in the name has survived. *Heres*, it will be observed, simply reverses the order of the letters in *Serah*.

W. E.

TIMON.—One of 'the Seven' (Ac 6^{5}).

TIMOTHEUS.—1. The AV form of Timothy, **1** (q.v.) everywhere in NT except 2 Co 1^{1}, 1 Ti 1^{2}, 2 Ti 1^{2}, Phn ^{1}, He 13^{23}. **2.** The AV and RV form of Timothy, **2** (q.v.).

TIMOTHY.—1. A native of Lystra, chosen while still a young man as companion and assistant to Paul, on the occasion of the Apostle's second visit to that city. He was the child of a mixed marriage, his father (probably dead at the time of his selection by Paul) being a Greek or Gentile and his mother a Jewess (Ac 16^{1}). It is said that in his childhood he received training in the Jewish Scriptures from his mother *Eunice* and his grandmother *Lois* (2 Ti 1^{5} 3^{15}), although this statement is not probable on historical grounds—as B. S. Easton has shown. Probably he was converted during Paul's first sojourn at Lystra, for on the Apostle's second visit he was already 'a disciple' of some standing, 'well spoken of by the brethren' (Ac 16^{1-2}). Indeed, Paul seems to claim him as a *personal* convert in 1 Co 4^{17}, describing him as his 'beloved and faithful child in the Lord.'

The selection of Timothy was due not only to the wish of Paul (Ac 16^{3}), but also to the action of the Church at Lystra. In his case, as in the case of Paul and Barnabas (Ac 13^{2}), the local prophets 'led the way' (1 Ti 1^{18} RVm) to him; the Pastoral Epistles contain two references which have been interpreted as describing his ordination. Paul caused him to be circumcised (Ac 16^{3}), judging that, as his mother was a Jewess, his not having received the rite would prove an obstacle to his ministry among Jews, and, further, that from his semi-Jewish parentage, he did not come within the scope of the Church's decree which released Gentiles from circumcision.

Timothy at once accompanied Paul through Asia to Troas, and thence into Macedonia. He was left behind at Beroea when the Apostle moved on to Athens, but was summoned to rejoin him (Ac 17^{14-15}). He was then sent back to Macedonia to strengthen the church at Thessalonica, and to bring news of its state to Paul. He rejoined the Apostle in Corinth and cheered him by

a favourable report (1 Th 3[1-8], Ac 18[5]). While in Corinth, Paul wrote his Epistles to the Thessalonians, and included Timothy in the greetings (1 Th 1[1], 2 Th 1[1]). He is next mentioned at Ephesus with Paul, and thence is sent with Erastus to Macedonia in advance of the Apostle (Ac 19[22]). Shortly after Timothy's departure, Paul dispatched by direct sea route his First Epistle to the Corinthians. In this he mentions that Timothy (travelling *via* Macedonia) would shortly reach them (1 Co 4[17]); he asks a kindly welcome for him, and adds that he wishes him to return with 'the brethren' (*i.e.* probably the bearers of the Epistle) to Ephesus (1 Co 16[8] and 10[f]). Timothy may not have reached Corinth on this occasion, being detained in Macedonia; alternatively his visit may have been unsuccessful. The absence in 2 Corinthians of any mention of his being there would support either supposition. In any case he is found with Paul again when 2 Corinthians was written from Macedonia (2 Co 1[1]). When Paul returned to Corinth Timothy was with him, for his name occurs among the greetings in the Epistle to the Romans which was written there (Ro 16[21]). Those scholars who believe that the final chapter of Romans was a separate Epistle originally addressed to Ephesus might wish to assign this text to a different place and date. Timothy is again mentioned as being with Paul at Troas on the Apostle's journey to Jerusalem (Ac 20[4-5]); this is the last reference to him in Acts.

In those Pauline writings which are sometimes called the Epistles of the Captivity, Timothy is named as a companion of the Apostle in his imprisonment (Col 1[1], Phn 1, Ph 1[1]), and Paul considered sending him on a mission to Philippi (Ph 2[19]). In the Pastoral Epistles it is indicated that Paul left Timothy as his delegate in Ephesus, giving him full instructions as to his rule of the Church during Paul's absence (1 Ti 1[3] 3[14-15]). In the other letter which bears his name, he is summoned to the Apostle's side, presumably in his final imprisonment at Rome. It is not possible to place any reliance upon these statements, for much that is said of Timothy in the Pastoral Epistles seems completely inconsistent with what is known of him from other sources, and the best explanation of these documents would appear to be that the name of one of Paul's subordinates has been chosen to represent the new leaders who were emerging in the third generation of the Church, and who stood in need of advice. Thus there is no certain knowledge of Timothy's life in the NT after the time covered by the Epistle to the Philippians. While there is a mention of his having recently been released in He 13[23], this says nothing of the place or circumstances of his imprisonment, and in fact tells no more than that he continued to be a faithful Christian or 'brother.'

2. A leader of the Ammonites who was defeated in many battles by Judas Maccabaeus, 1 Mac 5[6ff 34ff], 2 Mac 8[30] 9[3] 10[24-37] (AV and RV **Timotheus**).

C. T. P. G.—J. H. W. R.

TIMOTHY, EPISTLES TO.—These Epistles, together with that to Titus, form a special group to which Paul Anton gave the name 'Pastoral' in 1726. They are united by common objects and a common literary style. Each of them claims, in its opening words, to have St. Paul for its author, and this claim the Church has accepted throughout the greater part of its history. In recent decades, however, increasing numbers of Biblical scholars have been led to the conviction that these writings cannot be fitted into any period of the Apostle's life, and that they probably belong to the early 2nd cent. It is still debated whether 2 Timothy and Titus may contain genuine fragments of Pauline letters, but if this is so the verses in question have had little influence upon the purpose or teaching of the Epistles.

1. The *situation* presupposed in 1 and 2 Timothy is as follows. Paul, having to go into Macedonia, left Timothy in charge of the Church at Ephesus (1 Ti 1[3]), and wrote telling him how to act during the prolonged absence of his chief (1 Ti 3[14-15]). From other allusions in the Epistles it appears that the journey took Paul to Troas (2 Ti 4[13]), Corinth and Miletus (2 Ti 4[20]), and Crete (Tit 1[5]), and that he proposed wintering in Nicopolis (Ti 3[12]).

It is impossible to fit these visits into the period covered by Acts, and during Paul's two-year stay in Ephesus (Ac 19[22]) it was Timothy and not the Apostle who went to Macedonia. Moreover, two years does not allow sufficient time for such journeys as these Epistles describe. Any such activity on the part of Paul would have to be referred to a period after release from the imprisonment in Rome with which Acts closes. For such a release there is no definite evidence, and the strongest argument in favour of it seems to be a hope expressed by the Apostle in Ph 2[24]. Moreover, if he did regain his freedom, no doubt, as stated in the Muratorian Fragment, he fulfilled his wish of visiting Spain (Ro 15[24, 28]), and the statement of Clement of Rome that he 'reached the bounds of the West' would imply work in the same area. In any period of liberty that Paul may have enjoyed after A.D. 61, there would not have been the opportunity for extensive work both in the western and eastern portions of the Mediterranean world. Accordingly, it seems certain that the names and places mentioned in the Pastoral Epistles all form part of a literary scheme devised to support the teaching of the author.

2. The *external evidence* in favour of Pauline authorship is strong, and includes Irenaeus, Clement, and Tertullian. Polycarp also quotes from 1 Ti 6[7, 10]. On the other hand, the Michigan Beatty Codex of Paul apparently did not contain the Pastorals, for although it is defective its length is known, and these thirteen chapters could have been included only if the handwriting were incredibly compressed. Furthermore, the Muratorian Fragment places these after all the other Epistles, as if they were an addition. The full incorporation of the Pastorals among the other Pauline letters, so that they precede Philemon instead of following it, belongs to the 3rd cent. (see B. S. Easton, *The Pastoral Epistles*, pp. 31–32).

3. Discussion concerning the nature of the *heresies* attacked in these Epistles is affected by one's judgment about their authorship. Those who think of them as produced by Paul himself regard the false teaching as essentially Jewish in origin, citing such phrases as 'the circumcision party' (Tit 1[10]), 'Jewish myths' (Tit 1[14]), and 'quarrels over the law' (Tit 3[9]), or the reference to those who desire to be 'teachers of the law' (1 Ti 1[7]). On this theory the 'endless genealogies' of 1 Ti 1[4] (cf Tit 3[9]) would have to do with the legendary history of the Jewish patriarchs. Yet it is clear that the errors described find expression in an asceticism which condemns marriage absolutely, and prohibits the use of certain foods such as meat and wine (1 Ti 4[1-4, 8] 5[23]). Such rejection of the world can be related more readily to Gnostic belief in the essential evil of matter than to anything which may be found in conventional Judaism, and the 'genealogies' can easily be explained as the long lists of emanations and aeons which were prominent in Gnostic cosmologies. In 2 Ti 2[18] one heresy is distinctly named, the belief that the resurrection was already past; this opinion may have been the same as that which Paul condemned in 1 Co 15[12] as a denial that there could be any material resurrection, but this view of an incorporeal immortality was Gentile and not Jewish. Within Paul's lifetime it is not likely that the Gnostic type of heresy would have made such progress in the Church, but early in the 2nd cent. there is incontrovertible evidence that such teaching had become common.

4. While these Epistles employ the common theological terms of the Pauline writings, the words are used with different emphasis. Thus *faith* describes the objective belief which the individual holds rather than the personal trust and affection which unites the soul to Christ. Similarly *righteousness* denotes a virtue to be reached by personal struggle instead of a relationship to God. While it must be admitted that *faith* occasionally bears an objective sense in Paul's writings (Gal 1[23] and probably 1 Co 2[5]), and that *righteousness* is sometimes spoken of

as a virtue to be acquired (2 Co 9^{10}, Ro 8^{10}). this is far less significant than the fact that the full Pauline use of *faith* as the justifying principle is conspicuously absent from the Pastorals, and that in 1 Ti 1^{14} faith along with love is a *result* of justification instead of being its antecedent (Easton, *op. cit.* 203–204). Another distinguishing feature of these writings is the approach to a formulated creed seen in frequent quotations such as the five *sure sayings*, or the hymn of 1 Ti 3^{16}. These facts are indications of a Church with a history behind it, of Christians of the third generation rather than the first.

5. In the Pastorals *Church Organization* is seen as a major interest. The picture presented is that of the Apostle or the author holding supreme control (1 Ti 1^{20} $2^{1,\ 8}$), while 'Timothy' and 'Titus' serve as his delegates. This reflects the statements that the disciples whose names are used here did serve temporarily as representatives of Paul (1 Co 4^{17}, 2 Co 8^{16-18}, Ph 2^{19}). Here the recipients of the letters appear to hold permanent commissions, and to be given the final word concerning the qualifications necessary in those appointed to the offices of bishop (or elder) and deacon. The bishop and elder are spoken of in similar terms (Tit 1^{5-7}), except for the fact that bishop is always referred to in the singular and elders regularly in the plural (see M. Dibelius, *Pastoralbriefe*, 46 f). The distinction between the two offices (if any) is clearly not that drawn in the Ignatian Epistles between the monarchical bishop and the elders; at most the bishop is a permanent president of the body of elders. Thus one must suppose either that the Pastorals were written some time before A.D. 115, or in an area other than Asia Minor, and the latter alternative is the more probable. It may be argued strongly that they were written from Rome and addressed to smaller churches located in Italy.

Instructions are also given regarding 'women' in 1 Ti 3^{11}, and 'widows' in 1 Ti 5^{3-16}. The former are mentioned in the midst of regulations regarding deacons, and scholars are divided as to whether these are deaconesses or the wives of deacons; in view of the fact that the duties later performed by deaconesses are assigned to the widows of 1 Ti 5^{9-13}, while the qualifications of the women in the earlier chapter are such as one might expect in 'well-managed households,' it seems likely that the AV translators were right in saying 'wives.' In Greek, as in many other languages, the same word does duty for both *wife* and *woman*. The social customs of the 1st and 2nd cents. made it desirable for the Church to appoint women to perform for women the functions that deacons discharged for men, and 1 Ti indicates that these were entrusted to the older widows. The care of indigent widows (1 Ti $5^{3-8,16}$) engaged the Church from the first.

The absence of all instructions regarding *prophets* is in notable contrast to the *Didache*, which probably comes from the same period, and to the discussion concerning them in 1 Co 14^{29-33}. It indicates a growing stress upon the regular functions of the ministry as contrasted with the extraordinary ones. The recipients of these directions regarding Church order and government are clearly subordinate to the writer of the Epistles. Their position may be compared to that of the *Chorepiscopi* of the 3rd to the 12th cents., men in full charge of particular congregations but under the authority of Church leaders of higher rank (see article 'Chorepiscopus,' *Oxford Dict. of the Chr. Ch.*, p. 273).

6. The literary style of St. Paul has had a marked influence upon these Epistles, but the differences are not less striking than the resemblances, and the result is what might be expected in a conscious imitation. Some 36 per cent. of the words of the Pastorals are not found in any other work ascribed to Paul. While expressions technically known as *hapax legomena* range in frequency from 3·3 per page in 2 Thessalonians to 6·2 per page in Philippians, in the three Pastorals the range is from 12·8 to 16·1. For comparison, in the plays of Shakespeare the variation is from 3·4 to 10·4. Words not shared with other NT writers appear in the Pastorals at the rate of 11·0 to 13·0 to the page, in the other letters from 3·6 to 6·8. On the other hand, the accepted Pauline writings share with the later Christian Apologists from 4·2 to 6·2 words per page, while in the Pastorals these figures are from 13·3 to 16·5. A comprehensive treatment of the stylistic issues can be found in P. N. Harrison, *The Problem of the Pastoral Epistles*, pp. 18–86, but these extracts from his argument should suffice to show that the works in question can scarcely be accounted genuine compositions of the Apostle.

Thus the judgment of most modern scholars is that the Pastoral Epistles are not the work of Paul, but of an admirer who wrote within the first decade of the 2nd cent. The probable sequence of the letters was 2 Timothy, Titus, 1 Timothy, and Easton treats them in that order in his commentary. The Pauline terms and references are literary rather than historical. Yet the works are not to be regarded as forgeries. Their first readers undoubtedly were aware of the true author's identity, and recognized that he was bringing the message of his hero up to date. In the ancient world, convention ascribed any vital teaching to the person who had been its original inspiration. Paul's work had inspired the Pastorals, and so they bear his name. The efforts of later Christians to fit them into the Apostle's own life have been the cause of misunderstanding of their message, and of confusion about the life of Paul himself.

J. H. W. R.

TIN.—See MINING AND METALS.

TIPHSAH ('crossing').—**1.** A place named as the NE. limit of the dominions of Solomon, 1 K 4^{24}. It is the classical *Thapsacus*, the chief crossing-place on the middle Euphrates for caravans and armies, after the decline of Carchemish in the Persian period. It lay in the eastward bend of the river where it leaves its southerly course. It is the modern *Dibseh*. **2.** In 2 K 15^{16} Tiphsah (AV, RV) should be corrected to **Tappuah** (q.v.) with RSV, following Lucian's recension of the LXX.

J. F. McC.—H. H. R.

TIRAS.—A son of Japheth, Gn 10^{2}, 1 Ch 1^{5}. Ancient writers identified him with the ancestor of the Thracians, but this is generally abandoned. Others have thought of the *Turusha*, a piratical people who invaded Syria and Egypt in the 13th cent. B.C. The name has also been connected with *Tarsus* and even *Tarshish* (q.v.). Yet another view is that he was the progenitor of the people later known as the Etruscans.

TIRATHITES.—A family of scribes, 1 Ch 2^{55}.

TIRE.—See HEADTIRE and DRESS, 5.

TIRHAKAH.—King of Cush (2 K 19^{9}, Is 37^{9}) who, according to the Biblical narrative, marched out from Egypt against Sennacherib when the latter laid siege to Jerusalem in 701 B.C. The Egyptian and Assyrian armies did not come into contact, as Sennacherib was suddenly obliged to abandon his plans for the capture of Jerusalem. Herodotus preserves a version of the same event. Recently discovered Egyptian evidence shows that Tirhakah was only a boy of eight when this campaign took place and he could therefore hardly have been in command of an Egyptian army at that time. Possibly the author of the Book of Kings has telescoped two campaigns, one in 701 B.C. and the other in the period 689–686 B.C., and it was during the latter that Tirhakah led his army into Palestine. Tirhakah was the third king of the Ethiopian (25th) Dynasty and he reigned over Egypt and Nubia from 690–664 B.C. His whole reign was spent in plotting against the Assyrians and in conflict with them. When he succeeded Shabataka to the throne he moved his capital to the Delta in order to be nearer the Assyrian vassals in Tyre and Sidon and to foment revolt amongst them. Esarhaddon resolved to put an end to these intrigues and invaded Egypt in 671 B.C. He captured the Delta and the city of Memphis, and Tirhakah was forced to flee to Thebes. No sooner had Esarhaddon left Egypt than Tirhakah began to plot with the Egyptian governors appointed by the Assyrians, and he regained control over Egypt. His success was

brief. After three years Ashurbanipal sent an expedition to Egypt and Tirhakah fled to Thebes a second time. He died two years later and was succeeded by his nephew Tanutamon. T. W. T.

TIRHANAH.—A son of Caleb, 1 Ch 2^{48}.

TIRIA.—A son of Jehallelel, 1 Ch 4^{16}.

TIRSHATHA.—A Persian word, corresponding in use to the Assyrian title *peḥāh* = 'governor.' It is found in AV and RV in Ezr 2^{63}, Neh 7$^{65, 70}$ 8^{9} 10^{1}, but RSV translates by 'governor' in all cases. In the first three of these passages it is used of Zerubbabel, and in the last two of Nehemiah. See also ATTHARATES, ATTHARIAS.

TIRZAH.—**1.** One of the thirty-one cities captured by Joshua, according to Hebrew tradition (Jos 12^{24}). It was the seat of Jeroboam I. after Shechem (1 K 14^{17}) and his successors down to Omri (1 K 15^{21} 16$^{6, 8, 15, 17, 23}$). The doubtful reference in Ca 6^{4} compares the Shulammite to Tirzah in beauty. Long disputed, the site seems now settled beyond doubt at *Tell el-Fâr'ah*, a well-watered and strategically significant site *c* 6 miles NE. of *Nâblus* and Shechem, commanding communications from Shechem to Bethshan and the Jordan Valley. The recent excavations of the Dominican fathers De Vaux and Stève have established occupation since the Chalcolithic Age, before *c* 3000 B.C., to the end of the Israelite kingdom. The burnt level which terminates the first stratum of Iron Age occupation may indicate the civil disorders before Omri came to power (1 K 16^{18}). The reduction of the place from an important fortress to virtually an open town just at the time that Samaria was built strongly confirms the view that *Tell el-Fâr'ah* was the site of the old capital Tirzah. **2.** One of the five daughters of Zelophehad (Nu 26^{33} 27^{1} 36^{11}, Jos 17^{3}). H. L. W.—J. Gr.

TISHBE.—In 1 K 17^{1} Elijah is said to be of 'the inhabitants of Gilead' (AV; cf RV). Here RSV follows LXX in reading 'from **Tishbe**' (this involves no change of the Hebrew consonants), and this is certainly correct. Elijah is repeatedly designated the **Tishbite**, 1 K 17^{1} 21$^{17, 25}$ etc. Tishbe is probably modern *Kh. Lisdib*.

TISHBITE.—See TISHBE.

TISHRI (month).—See TIME.

TITANS.—In Hellenic mythology and literature Titans and Giants were primitive, pre-Olympian figures, defeated and disciplined only with the utmost difficulty by the Olympian gods of classical Greece. These two groups of monstrous deviates, though quite distinct in origin, became more and more associated and confused in Greek mythology and literary tradition.

In the LXX version of Samuel, the 'Vale of Rephaim' (2 S 5$^{18, 22}$) is called the 'Vale of the Titans.' Here the word is used in the sense of 'giants,' for the same version of Chronicles translates this name in 1 Ch 11^{15} 14^{9} 'Vale of the Giants.' Thus in interpreting early Hebrew thought for Greek readers, the old shadowy Rephaim (q.v.) were identified with Titans and Giants.

Similarly in the song of victory in Jth 16^{7} we read:

'For their mighty one did not fall by the hands of the young men,
nor did the sons of the Titans smite him,
nor did tall giants set upon him;
but Judith the daughter of Merari undid him.'

Here Greek mythology has been absorbed by Jewish. G. A. B.—H. R. W.

TITHES.—There is no law of tithes (so-called) in the E or J documents though according to both northern (Gn 28^{22}) and southern tradition (Gn 14^{20}) Israel's patriarchs paid tithes. The custom thus seems to be very ancient. The laws in P (Nu 18$^{21-32}$, with corresponding practice in Neh 10^{37f} and Lv 27^{30f}) differ fundamentally from the laws in D (Dt 14$^{22-29}$). A full discussion of these differences and apparently incompatible practices will be found in Pedersen, *Israel* I–II, 308 f and G. A. Smith, *Deuteronomy* (Cambridge Bible), pp. 196–197.

The institution of offering tithes of the fruits of the field and of the flocks is one which dates back to a period anterior to Israelite history. A tenth of the flocks, fruits, and possessions of all kinds, as well as of the spoils of war, was given to their gods by many peoples, not only of Semitic but also of Indo-Germanic race.

In the OT two ideas lie at the root of the custom: the more ancient—apart from its position in the Bible—is that which regards the offering of a tenth to the Deity as His due owing to His being the supreme owner of the land and its produce (Lv 27$^{30-33}$). The underlying thought here is that of propitiation, the idea being that, if the supreme owner does not receive his due, his blessing will fail in the coming year. The other idea, obviously the later, is that of thankfulness for the blessings received (Gn 28$^{20-22}$). The tithes were given in thanks for all the gifts received.

Among the Israelites this ancient custom was taken advantage of by the Levitical priests, who, as those employed in the sanctuary, claimed for themselves, on behalf of God, a tithe of all. It assumed the nature of a direct levy or tax. According to Nu 18$^{21-24}$ the Levites were to receive this in lieu of the inheritance of land which fell to all the other tribes, but they received the tithe on behalf of Yahweh: 'For the tithe of the people of Israel which they present as an offering to the Lord I have given to the Levites for an inheritance' (v.^{24}). The 'heaving' or presenting of an offering *towards* the altar was the substitute for the actual consuming of it *upon* the altar. Although tithes were, of course, intended to be offered once a year (Dt 14^{22}), it would appear from Am 4^{4}. —the words are ironical—that in their excess of 'religiosity' many worshippers brought them more frequently (the Hebrew is rather ambiguous). Though, generally speaking, tithes were offered only to the Deity yet it is clear that they might be given to, or levied by, a king (cf Gn 14^{20}, 1 S 8^{17}, He 7$^{2, 4}$). W. O. E. O.—J. Pn.

TITIUS JUSTUS.—See JUSTUS.

TITLE.—A *titulus* (Jn 19^{19f}) might be inscribed on any material to designate the nature of an article, as when attached to a votive offering, a bottle of wine, or the neck of a slave who was placed on sale. Affixed to the top of the *arbor infelix*, it proclaimed the crime for which the suspended victim had been crucified. That inscribed 'King of the Jews,' which according to Mk 15^{26} (here called '**superscription**' in AV and RV; RSV '**inscription**') epitomized the charge on which Jesus was put to death, is amplified by the other Evangelists; according to Jn 19^{20} 'it was written in Hebrew [presumably Aramaic is intended], in Latin, and in Greek.' It signified that Jesus was leader of a movement that aimed at national independence, and was probably meant to be a warning to other revolutionists. J. S. K.

TITTLE.—See JOT.

TITUS.—Titus Flavius Sabinus Vespasianus, son of Vespasian (q.v.), later emperor, succeeded his father in command of the Roman forces in Judaea in A.D. 69, and in the following year captured Jerusalem and ordered the destruction of the Temple, the treasures of which are represented on the triumphal Arch of Titus at Rome. His brief reign, however, A.D. 79–81, left a memory of gentleness and goodness, perhaps in contrast with his father and his brother Domitian (q.v.). E. R. H.

TITUS.—A convert from heathenism (Gal 2^{3}), said to have been won by St. Paul himself (Tit 1^{4}). He is not directly mentioned in *Acts*, and all that is certainly known of him comes from the Epistles to Galatians and 2 Corinthians. The references in the Pastorals are dubious, for most scholars agree that they come from a later hand than Paul. Neither his age nor his place of birth is told us. We first hear of him when he accompanies St. Paul on his journey from Antioch to Jerusalem—a journey undertaken in connexion with the question of the circumcision of *Gentile* Christians (Gal 2^{1}). He is thus included in the 'others' mentioned in Ac 15^{2}. The Judaistic party within the Church wished to have Titus circumcised (Gal 2^{3}); but the Apostle and those representing Gentile Christianity strenuously resisted (v.^{5}), and one gathers that the decision of the Church was in their favour

(Ac 15^{28f}). The case of Titus thus seems to have been the *test case* in this controversy. From this time we may suppose that Titus continued with St. Paul as one of his missionary companions and assistants, but we have no other distinct reference to him until we turn to the Apostle's Corinthian letters. In 2 Corinthians Titus is mentioned nine times, and it appears that he visited Corinth as the Apostle's delegate—probably three times. On the first occasion, which was a year before the writing of 2 Co 8$^{6, 10}$, he came with an unnamed brother (12^{18}), and on his arrival set on foot the necessary organization to secure the local contributions towards the collection for the poor Christians of Judaea, which the Apostle had inaugurated (1 Co 16$^{1-2}$). After his departure from Corinth serious trouble vexed the Church there, and he was sent a second time to reduce matters to order. Probably on this occasion he was the bearer of the letter referred to in 2 Co 2^{3ff} 7^{8ff}. St. Paul anxiously awaited at Troas the return of Titus (2 Co 2^{12}); but the journey took longer than was expected; and so the Apostle moved on into Macedonia, with a view to meeting him the sooner on his way. Here Titus ultimately reached him, and bringing good news from Corinth refreshed his spirit (v.^{14}). Titus was then despatched a *third* time to Corinth, bearing the letter in which St. Paul expressed his thankfulness for the solution of the difficulties in that Church (2 Co 1–9; cf 8$^{16-24}$). He was charged to complete 'the collection'—the organization of which he had begun the year before (8^{10}).

After these events we do not hear of Titus again, excepting in the Pastoral Epistle which bears his name. From this it has been argued that he accompanied the Apostle, after his release from Roman imprisonment, on a visit to Crete, and that he was left there by him 'to amend what was defective' and to 'appoint elders in every town' (Tit 1^{5}). There is, however, no satisfactory evidence that St. Paul obtained this release, or that he was ever able to undertake any work later than that mentioned in Acts. Indeed, since P. N. Harrison's study, *The Problem of the Pastoral Epistles* (1921), an increasing number of scholars have come to the conviction that the three Pastoral Epistles are pseudonymous, and that the names of Titus and Timothy have been chosen from among the associates of St. Paul to represent the leaders of Christian congregations at the beginning of the 2nd cent. The advice given in the Epistle to Titus is to maintain sound doctrine (2^{1}), to avoid unprofitable discussions (3^{9} AV), and duly to assert authority (2^{15}). In what may well be a fragment from a personal letter of the Apostle addressed to Titus at Corinth, there is a statement that Paul intends to send Artemas or Tychicus to him, and bids him, when this occurs, to join him in Nicopolis, where he hopes to winter (3^{12}). If this verse is from a genuine Pauline communication, it should probably be dated in the course of the controversy in Corinth; but it may be no more than literary colouring. In 2 Ti 4^{10} there is a further reference to Titus as being with the Apostle in his final imprisonment, although temporarily absent in Dalmatia.

Titus and Timothy share the honour of being the most trusted and efficient helpers of St. Paul, and the fact that the former was chosen to deal with so sharp a crisis as presented itself at Corinth shows that prudence, tact, and firmness marked his Christian character.

C. T. P. G.—J. H. W. R.

TITUS, EPISTLE TO.—The Epistle claims Paul as its author (1^{1}), and is said to be addressed to Titus while the latter was acting as his delegate in Crete (1^{5}). As far as our records tell us, St. Paul never made a missionary visit to the island. While he had touched there on his way from Caesarea to Rome (Ac 27$^{7-8}$), on that journey he was a prisoner and probably would not have been allowed to leave his ship; certainly he would have no opportunity for effective evangelization. There might have been time for such a visit during the Apostle's stay at Corinth (Ac 18^{11}) or at Ephesus (Ac 19^{10}), but we have no proof that he made such a journey. Thus Crete may be described as a stage setting for the teaching which this author is concerned to present. The literary style of the Epistle marks it as belonging to the same group as 1 and 2 Timothy, and as being a revision of Paul's teaching for the early 2nd cent. (see TIMOTHY, EPISTLES TO).

The group of Churches to which the Epistle is addressed was evidently deficient in its organization, although a mission area of some years' standing. We read of several cities having congregations in need of supervision (1^{5}), and of elders to be chosen from among those who were fathers of 'believing' (*i.e.* Christian) families (1^{6}). The heresies dealt with are those that are *in opposition* to true doctrine, rather than such as might occur in a newly-founded Church through ignorance of it.

The general character of the Cretans was not high. Ancient writers describe their avarice, ferocity, fraud, and mendacity, and the Epistle itself quotes (1^{12}) Epimenides, one of their own poets, as saying, 'Cretans are always liars, evil beasts, lazy gluttons.' Such faults, however, were not confined to Cretans, and Christianity must always contend with them. Thus the author of this Epistle lays his chief emphasis upon the importance of personal holiness, and insists that right belief must issue in a useful, fruitful life (1$^{15-16}$ 3^{14}). The chief opponents mentioned are unruly men, vain talkers, and deceivers who led men astray for base gain (1$^{10-11}$), men who professed that they knew God but denied Him by their deeds (1^{16}), and men who were 'factious' (RSV 3^{10}). The advice to avoid 'controversies, genealogies, dissensions' probably indicates some form of Gnosticism as the error to be opposed. The additional term contained in 3^{9}, 'quarrels over the law,' has led many interpreters to regard the opposition as Jewish, but the phrase may be no more than the author's effort to relate his own problems to those encountered by Paul (see Easton, *The Pastoral Epistles*, pp. 87 ff, 104). These false teachings resemble closely those of 1 Timothy, despite the Jewish origin ascribed to them here.

The ecclesiastical organization referred to is rudimentary. Elders (1^{5}) are to be appointed, as Paul had been accustomed to provide such officers for the churches which he founded (Ac 14^{23}). From Tit 1^{7} it appears that there is no real distinction between elder and bishop. In this Epistle such appointments seem to be left entirely in the hands of the Christian leader who is represented by the name of 'Titus,' but some consultation with the congregations over whom the elders were to be appointed is implied in the charge (1^{6}) to select only those who are not liable to have any accusation brought against them (see Lock, *The Pastoral Epistles*). Further, the bishop or elder is spoken of as 'God's steward' (1^{7}), so that the authority committed to him was ultimately derived from God and not from man. No mention is made in this Epistle of deacons, deaconesses, or widows, a fact which shows less developed organization than in 1 Timothy.

While the letter claims to be written by St. Paul, the genuineness of that ascription is open to the same objections as in the case of 1 and 2 Timothy. For a discussion of the questions involved in this connexion, see TIMOTHY, EPISTLES TO. The conclusion of the Epistle (3$^{12-15}$), however, may well be a fragment from a personal note brought from the Apostle himself by Zenas or Apollos to Titus when the latter was in charge at Corinth. In that situation the verses would have been most appropriate. At a later date they could serve to crown another author's work with an authentic Pauline conclusion (P. N. Harrison, *The Problem of the Pastoral Epistles*, 115–118). C. T. P. G.—J. H. W. R.

TITUS JUSTUS.—See JUSTUS.

TITUS MANIUS.—See MANIUS.

TIZITE.—A designation, whose origin is unknown, applied to Joha, one of David's heroes, 1 Ch 11^{45}.

TOAH.—See NAHATH.

TOB.—One of the small Aramaean principalities founded to the S. of Mount Hermon and Damascus in the 12th century B.C., the others being Hamath, Zobah, Beth-rehob, and Maacah or Geshur. It was in Tob

that Jephthah lived as an outlaw, Jg 11[3, 5]. Tob joined the rest of the Aramaeans, except those of Hamath (2 S 8[9f]), in helping the Ammonites in their war against king David, 2 S 10[6ff] (AV **Ish-tob**). Tob is perhaps to be identified with modern *eṭ-Ṭaiyibeh*, between Bozrah (see BOZRAH, 3) and Edrei. It is mentioned in 1 Mac 5[13] (AV Tobie, RV **Tubias**), and probably its inhabitants are meant by the **Toubiani** of 2 Mac 12[17] (AV, RV **Tubieni**). J. F. McC.—H. H. R.

TOB-ADONIJAH.—One of the Levites sent by Jehoshaphat to teach in the cities of Judah, 2 Ch 17[8].

TOBIAH.—**1.** A family which returned from exile, but could not trace their genealogy, Ezr 2[60], Neh 7[62], 1 Es 5[37] (AV, RV **Ban**). **2.** The Ammonite who, in conjunction with Sanballat and others, persistently opposed the work of Nehemiah, Neh 2[10, 19] 4[3, 7] 6[17] 13[4, 8] etc.

TOBIAS.—**1.** The son of Tobit, To 1[9] and often. **2.** The father of Hyrcanus, 2 Mac 3[11].

TOBIE, 1 Mac 5[13] (AV).—See TOB.

TOBIEL.—The father of Tobit, To 1[1].

TOBIJAH.—**1.** One of the Levites sent by Jehoshaphat to teach in the cities of Judah, 2 Ch 17[8]. **2.** One of a deputation that came from Babylon to Jerusalem with contributions of gold and silver, Zec 6[10, 14].

TOBIT, BOOK OF.—See APOCRYPHA, **3.**

TOCHEN.—An unidentified town of Simeon, 1 Ch 4[32].

TOGARMAH.—The third son of Gomer, his brothers being Ashkenaz and Riphath, Gn 10[3], 1 Ch 1[6]. In Ezk 27[14] 38[6] mention is made of **Beth-togarmah** (q.v.), which traded for the wares of Tyre with horses and mules. Togarmah is identified with Accadian *Tilgarimmu*, Hittite *Tegarama*, and it lay between Samosata and Melitene.

TOHU.—See NAHATH.

TOI.—See TOU.

TOKHATH.—See TIKVAH, **1.**

TOLA.—The first of the five minor Judges, Jg 10[1f]. In Gn 46[13], Nu 26[23], 1 Ch 7[1] he appears as the son of Issachar; Tola was apparently the name of the leading clan of the tribe. It means 'a worm' (Ex 16[20]), from which came a crimson dye (Is 1[18]). His home and burial place was Shamir (q.v.).

TOLAD.—A Simeonite town, 1 Ch 4[29]; called **Eltolad** in Jos 19[4].

TOLBANES, 1 Es 9[25] (AV, RV).—See TELEM, **1.**

TOLL.—See TRIBUTE.

TOLMAN, 1 Es 5[28] (RV).—See TALMON.

TOMB, GRAVE, SEPULCHRE.—The disposal of the dead among the Israelites was always by **burial.** While spices were sometimes sprinkled among the grave-clothes, there was no religious motive for the embalming of the dead as in Egypt. **1.** The common grave must have been the usual opening in the ground with protective stones laid on the surface; or one prepared slab of stone either quite flat, or with the ridge of a sarcophagus lid, might be used. To judge by the custom of to-day, the grave would often be cut partly or altogether in rock, not because that was preferred, but because the village elders usually marked off for the cemetery a section of ground that was too rocky for purposes of cultivation. **2.** Tombs of a more important kind were made by excavating in the face of a rock to form a chamber about 8 or 9 feet on each side. At the opposite end and on the two sides were three narrow recesses, Hebrew *kôkhîm*, 6 or 7 feet long and about 2 feet wide, cut into the rock at right angles to each wall. Into one of these the dead body was inserted with the feet towards the entrance, which was then covered with a slab sealed around the edges with plaster. **3.** During the two centuries of Greek influence before the Christian era, a somewhat larger form of tomb came into use. The common chamber had on each of its three sides two, and occasionally three, shallow arched recesses, and in each recess a sarcophagus was laid along the line of the wall. The tradition preserved in Jn 20[12] appears to picture a tomb of this character. The tomb discovered N. of the wall of Jerusalem, 'the Garden Tomb,' is of this type. It can be seen to-day in something like its original setting. The opening to the central chamber was guarded by a large and heavy disc of rock which could roll along a groove slightly depressed at the centre, in front of the tomb entrance. Both the primitive Israelite sepulchre and its Greek successor might be of a compound form, having a passage leading from one chamber to another, each with its *kôkhîm* or *loculi*. The most extensive example of such tombs is found in the catacombs of Rome.

The Cult of the Dead, centring around burial rites and the libations and sacrifices at the tomb, was prominent in pre-Biblical Canaan and continued through Biblical times (Jer 16[5–8]) despite attempts to discourage the practices (Lv 19[28] 21[1–5, 10–11]). The pillar or *maṣṣēbhāh*, erected to a departed leader (Gn 35[20]), or even by a living person to assure his remembrance (2 S 18[18]), was supposed to contain the power or *mana* of the departed. There were probably shrines at the tombs of the judges and kings of Israel as there are to-day at the tombs of the Muslim *welis* in Palestine. The tombs of the martyrs came to be venerated in the early Christian Church and later the relics of the departed saint were deposited in the church dedicated to him (or her). This gave rise to the continuing practice of naming a Christian church for a saint.

TONGS.—See ARTS AND CRAFTS, **2**; TABERNACLE, 6 (*b*).

TONGUES, CONFUSION OF.—The belief that the world, after the Flood, was re-populated by the progeny of a single family, speaking one language, is reconciled in the Bible with the existing diversity of tongues by a story which relates how the descendants of Noah, in the course of their wanderings, settled in the plain of Shinar, or Babylonia, and there built of brick a city, and a tower high enough to reach heaven, as a monument to preserve their fame, and as a centre of social cohesion and union. But the Lord discerned their ambitious purposes, and, after consulting with the Divine beings who constituted His council and court (cf Gn 1[26] 3[22]), frustrated their design by confounding their speech, so that concerted action was no longer possible for them. In consequence, the name of the city was called **Babel** (see below), and its builders were compelled to disperse over the face of the earth (Gn 11[1–9]).

The story belongs to a class of narratives (of which there are several in the Bible) intended to explain the origin of various institutions, or usages, the existence of which excited the curiosity of a primitive race. Among these was the prevalence in the world of different languages, which contributed so greatly to produce between the various peoples, who were thus unintelligible to one another, feelings of mutual suspicion and fear (cf Dt 28[49], Is 28[11] 33[19], Jer 5[15]). The particular explanation furnished was doubtless suggested partly by the name of the city of *Babel*, or Babylon (which, though really meaning 'gate of God,' was by a popular etymology connected with the Hebrew word *bālal*, 'to confuse'), and partly by the presence, at or near Babylon, of the ruins of some great tower, which looked as though it had originally been designed as a means to scale heaven. Two such towers, or *ziqqurats*, were the temple of Merodach (or Marduk) in Babylon (supposed to be beneath the mound of *Babil*), and the temple of Nebo in Borsippa (the ruins of which form the mound of *Birs Nimrûd*); and knowledge of one or other of these may have helped to shape the narrative. The character of the narrative makes it impossible to consider it as real history: it bears on its surface manifest evidence that it is a creation of fancy. The question whether the various languages of mankind have really been derived from one common tongue cannot be separated from the question (into which it is unnecessary to enter here) whether the

various *races* of men have sprung from a single stock, *i.e.* 'whether man appeared originally on the globe at one centre or at many centres.' It may be said, however, that philological research has proved that the numerous existing languages are members of a comparatively small number of *families of speech* (such as the Indo-European, the Semitic, etc.); but that between these families of speech, there is so great a difference of structure, that their descent from one original tongue seems highly improbable. At the same time, all languages must have arisen from certain faculties and instincts common to human nature; and the presence, in languages belonging to distinct families, of onomatopoetic, or imitative, words serves to illustrate the essential similarity of human tendencies in the sphere of speech all the world over. G. W. W.

TONGUES, GIFT OF.—1. A phenomenon (*glossolalia*, 'speaking with tongues') that sometimes accompanied the outpouring of the Holy Spirit in the NT. (See SPIRITUAL GIFTS.) Possession of the gift enabled the believer to give voice to ecstatic utterances in moments of high religious excitement. The two primary passages, Ac 2 and 1 Co 12–14, differ in one important respect. In Acts, the speech is in a foreign tongue and is understood by hearers from the appropriate country. In 1 Corinthians it is unintelligible. This difficulty is not insoluble and the passages represent not two distinct phenomena, but one.

Acts 2[1-13].—After being filled with the Holy Spirit at Pentecost, the disciples 'began to speak in other tongues, as the Spirit gave them utterance.' The news spread quickly and a crowd was soon outside the house. Jerusalem, at the time, was full of Jews and proselytes who had come from abroad for the feast. Some were bewildered, 'because each one heard them speaking in his own language,' telling 'the mighty works of God.' Others were not impressed. Peter then seized the opportunity to preach to the crowd.

1 *Co* 12–14.—Among the gifts of the Spirit known to the Corinthians (12[8-10]), the gift of tongues seems to have been sought after most eagerly. Possessors of the gift would arise during worship and pour out a flood of excited but unintelligible speech. It was thought that they had been caught up into heaven by the Spirit to converse in the special tongues angels use (13[1]. Each order of angels had its peculiar tongue. See *Testament of Job*, ch. xlvii). When the ferment was over, someone with the kindred gift of interpretation (12[10, 30] 14[28]) explained the message, if he could.

Paul's advice is shrewd and practical. He claims the gift himself (14[18]) and agrees that it should be sought with other spiritual gifts (14[5, 39]), but he discourages it because speech in a tongue, though it is addressed to God (14[2]), is unintelligible to speaker and hearers, and is unedifying to the Church (14[4]). The 'outsider' does not even know whether to say 'Amen' (14[16]). The gift is thus inferior to prophecy (14[1, 4]). It is mentioned last in 12[8-10] and 12[28]. The danger is obvious. 'Tongues' were an ostentatious gift, giving unlimited opportunity for self-display (14[4]) and the Corinthians, coming from various pagan traditions in which religious ecstasy was common, were peculiarly open to temptation. There was competition to possess the gift and rivalry in giving vent to it. The effect on fellowship and worship was ruinous. Paul insists that the unnoticed gift is often the most worthy (12[22-25]), and he restores a sense of proportion with the 'hymn of love' in ch. 13. In ch. 14 he gives rules to keep the 'tongues' within bounds. No one should put this gift first (14[1-4, 19]). Prophecy is to be preferred because it is self-explanatory (14[24f]). In each service, not more than two or three should speak in a 'tongue.' They should do so in turn and with a pause for interpretation (14[13, 27f]). (One can imagine the pandemonium if two or three spoke at once.) Tongues may be a sign for unbelievers (14[22]), but the wild scenes at Corinth would excite ridicule, not faith (14[23]). The first consideration must always be the edification of the Church (14[12]).

2. Other references.—Other passages have little to add. A promise is made to the disciples that they would speak 'in new tongues' in Mk 16[17], but this passage is part of the later appendix to St. Mark. Cornelius and his friends spoke with tongues at their baptism (Ac 10[46f] 11[15]) and Peter regarded this as a repetition of the apostles' experience at Pentecost. There is a reference to 'tongues' at Ephesus (Ac 19[6]) and there may be allusions in Ac 8[17], Ro 8[15, 26], Gal 4[6], and 1 Th 5[19]. Irenaeus († 202) and Tertullian refer to the gift but Chrysostom (A.D. 347–407) believed that, in his day, the practice had ceased.

3. Later evidence.—'Tongues' have occurred sporadically throughout the history of the Church, especially at times of crisis. In 1685, Louis XIV. began a persecution of French Protestants, some of the worst excesses taking place among the peasants of the Cévennes. Cruelty inspired retaliation, and soon there was widespread insurrection, waged and put down with equal severity. During twenty years of danger and suffering, many devout Huguenots, including women and children, had ecstasies in which they swooned, struggled, groaned and, most interesting, spoke also in pure French, free from their normal dialect. Early in the 19th cent. there were similar happenings in a church in London under the preaching of Edward Irving. Irving's great eloquence in setting forth his belief in the imminent return of Our Lord undoubtedly stimulated those in his congregation who spoke with 'tongues.' Their utterances were short, unintelligible, and usually followed by prophecy. Irving died in 1834, but some of his congregation formed a new Christian community, in which speaking with tongues was practised regularly. Crude and corrupt forms of the gift can still be found among certain minor Protestant sects.

4. Meaning of the gift.—Relying chiefly on Ac 2, most of the Fathers understand 'tongues' as a miraculous endowment to facilitate preaching. Sts. Cyril and Gregory of Nazianzus regarded it as the fulfilment of a prophecy in Ps 19[3]. Others (Gregory of Nyssa, Chrysostom, Augustine) found in Pentecost the NT counterpart to and correction of the disaster of Babel, a view that is still maintained. Some commentators, ancient and modern, have suggested that whatever speech was used at Pentecost, the listeners *heard* in their own dialects. This explanation is far-fetched and unnecessary.

Most of the difficulties arise from the assumption that Ac 2 is normative and the Corinthian phenomenon a deviation. All other examples, however, including those in the NT, imply unintelligible speech. There is, therefore, a *prima facie* case for regarding the Corinthian type as normative and the account in Acts as misleading. This is a more satisfactory hypothesis.

Paul's description of *glossolalia* concurs with a type of religious ecstasy familiar to psychologists. It is well known that extreme excitement tends to inhibit the higher faculties and stimulate the lower ones. Vocal expression is an early development of the human mind, and the reasoning process a late one. Consequently men talk more and think less when they are excited. Similarly a series of meaningless sounds is an earlier development than intelligible conversation. A state of great animation may, therefore, subjugate thought and logical expression altogether and provoke meaningless, animal chatter, normally held in check. Foreign tongues will be used only if they are already hidden in the memory. Excitement may quicken recollection, which probably explains the 'tongues' of the Camisards, who knew the French of the Huguenot Bible. This type of ecstasy requires certain conditions. The first is extreme excitement, due to fear, expectation of the end, or the atmosphere of a revival service. The second is a not too high average mentality, for the disciplined mind is not easily inhibited. Though Edward Irving coveted the gift himself, it was denied him and given to uneducated members of his congregation. The third is some initial prompting. After the first occurrence, the sense of expectancy will promote further manifestations. Fourthly, a group of

kindred spirits is necessary, some of whom, at least, are amenable to this kind of stimulus. The condition is highly contagious. It nearly always occurs in public. *Glossolalia* at Corinth is thus reasonably explained as a state of religious ecstasy in which the believer lost self-control and spoke incoherently at the prompting of subconscious impulses.

What relevance has this to Ac 2? First it must be noted that the list of nationalities is misleading. Sixteen names are mentioned but two languages, Greek and Aramaic, would be sufficient. The majority would speak Greek. Various dialects would be no barrier to understanding odd phrases. Secondly, there is no suggestion that more than odd phrases were uttered in 'tongues.' V.[13] is the end of a section. The comments of v.[7f] do not refer to the sermon that begins in v.[14]. The sermon itself makes no claim that the previous utterances were intelligible. Indeed, the fact that the sermon was necessary argues that the 'tongues' had done little more than excite curiosity. Thirdly, ordinary preaching in a foreign tongue would have evoked a different response. Even those present were not sure what was happening. Some were impressed, but others said, 'They are filled with new wine.' Fourthly, the gift of speech in a strange tongue, if such it was, has never been given a second time. Later manifestations of 'tongues' have all followed the Corinthian pattern. It seems reasonable then to suppose that Ac 2 describes a dramatic instance of *glossolalia* on the Corinthian pattern. The gift of the Holy Spirit induced emotional exaltation as well as devotional ardour. The apostles—one does not know how many, but it may have been more than twelve (2[1])—in rapt sincerity and faith spoke in 'tongues.' Probably their ejaculations included Greek words. The hearers were amazed and some, catching their spirit and recognizing the tones and perhaps the words of adoration, grasped that the burden of their speech was 'the mighty works of God.' Luke's account is, therefore, but a slight exaggeration. What was in fact a 'normal' example of *glossolalia* was, due to the accident of foreigners being present, misconstrued as a peculiar gift of speech in a foreign tongue.

5. Value of the gift.—Without detracting from the vivid experiences of apostolic times, it remains true that the religious application of subliminal phenomena is fraught with danger. Artificially stimulated utterances are not to be compared with the experience of Pentecost. 'For a modern man to indulge in this form of expression means that he must put himself in a state where the controlling apparatus of his mind is not functioning, and where the primitive reactions, which usually sleep in the unconscious, find their way to the surface and represent the individual' (G. B. Cutten). For this reason, and because of the danger of ostentation and self-display, the gift has never been cultivated in the larger Christian communions. It has little to offer either to worship or preaching. Paul's judgment has proved sound. 'Nevertheless, in church I would rather speak five words with my mind, in order to instruct others, than ten thousand words in a tongue!' (1 Co 14[19]). W. D. S.

TONSURE.—In Lv 21[5] RSV renders 'They shall not make tonsures upon their heads,' where AV and RV have the literal rendering 'baldness.' The reference is probably to the practice prohibited in Lv 19[27], *i.e.* the cutting off of the hair from the temples. Herodotus (*Hist.* iii. 8) says that Arab tribes cut the hair away from the temples as a religious rite.

TOOLS.—See Arts and Crafts.

TOPARCHY.—A compound word from Greek *topos* (place) and *archē* (rule), found only in 1 Mac 11[28] (cf 1 Mac 10[30, 38] 11[34] RSV 'districts') among the sacred books, but very many times in the papyri of Egypt (with reference to that country). It means a very small administrative division of territory. Three toparchies were detached from Samaria and added to Judaea in Maccabaean times. A. So.

TOPAZ.—See Jewels and Precious Stones.

TOPHEL.—A place mentioned only in Dt 1[1]. It is usually identified with *eṭ-Ṭafîleh*, SE. of the Dead Sea.

TOPHET, Jer 7[31f] 19[6, 11ff] (AV) = **Topheth** (q.v.).

TOPHETH.—A term of uncertain etymology, designating some locality in one of the valleys near Jerusalem, very possibly in the **Valley of Hinnom** (2 K 23[10]), or near the point of juncture of the three valleys of Jerusalem. It was there that the Jews under Ahaz and Manasseh performed the rites of human sacrifice (Jer 7[31-32]), offering children to Baal, Molech, and other heathen gods. It was defiled by Josiah as a part of his religious reformation, and so came to be an abominable place where the refuse was destroyed, and thus a synonym of **Gehenna** (q.v.). S. M.

TORAH.—See Law (in OT), **2, 3.**

TORCH.—See Lamps, **1**; Lantern.

TORMAH.—In the margin of Jg 9[31] Tormah is given as an alternative rendering of the Hebrew word rendered 'craftily' in RV and 'privily' in AV. It is probable that the word is a corruption of **Arumah** (v.[41]), and RSV so renders.

TORTOISE.—Hebrew *ṣābh*, Lv 11[29] (AV; RV, RSV 'great lizard.') Several kinds of land and water tortoises are common in the Holy Land, but here the reference is probably to some kind of lizard. See Lizard.

TOU.—King of Hamath on the Orontes, who sent an embassy to congratulate David on his defeat of Hadadezer, 1 Ch 18[9f]. In the parallel passage (2 S 8[9f]) the name appears as **Toi** (so Heb., AV, RV; RSV **Tou,** with LXX[B]).

TOUBIANI.—See Tob.

TOW.—1. Hebrew *nᵉʿōreth*, Jg 16[9], Is 1[31]. In the former passage its weakness as soon as it is touched by fire is indicated, and in the latter its ready consumption by fire. **2.** Hebrew *pishtāh* is rendered by 'tow' in AV in Is 43[17] (RV '**flax**'; RVm, RSV '**wick**'), but in Is 42[3] by 'flax' (so RV; RVm, RSV 'wick'), In Ex 9[31] the same word is used for growing flax. See Flax.

TOWER.—See Citadel. For 'Tower of Babel' see Tongues [Confusion of].

TOWN.—See City, Village.

TOWN CLERK.—In Graeco-Asiatic cities under the Roman Empire the *grammateus* (translated 'town clerk') was responsible for the form of decrees presented to the popular assembly. They were first approved by the senate and then sent to the assembly, which formally passed them. At Ephesus (Ac 19[35]) the clerk feared that he would have to account to the Roman governor for the irregularly constituted assembly. A. So.

TRACHONITIS.—Mentioned in Lk 3[1] as the name of the tetrarchy of Philip. It is to be identified with the lava region SE. of Damascus, known to the Greeks as *Trachon*, and to modern Arabs as the *Lejā*. An inscription discovered by Burckhardt in 1810 at Mismiyeh dispels all doubt as to the identity of this region with Trachon. It has ever been regarded as a refuge from invaders. Josephus frequently speaks of the inhabitants of these parts as predatory (*Ant.* xvi. ix. 1 [271 ff]). Augustus gave it to Herod in 23 B.C., along with Batanaea and Auranitis. To Herod the region owed a great deal (*Ant.* xvi. ix. 1 [271 ff]). In 4 B.C. it became the possession of his son Philip, whose rule is described as just and gentle (*Ib.* xviii. iv. 6 [106 f]). Trajan in A.D. 106 transformed Trachonitis into a new province, which he called 'Arabia,' making Bostra (=*Bozra*) its capital.
G. L. R.—E. G. K.

TRADE AND COMMERCE.—The participation of Palestine in the international trade of the Near East is attested by indirect, as well as by direct, evidence. The diffusion of oriental arts and techniques, and the existence of arms, jewels and painted pottery in, for example, both the tells of the Negeb and stratum II of Râs Shamra, show that as early as the 2nd millennium, there was considerable unification of artistic and industrial techniques. This means that there was commensurate

commercial activity, and Palestine, situated between Asia Minor, NW. Mesopotamia and Egypt, could not remain outside the main currents. The Israelites seem to have become merchants only relatively late, and commercial dealings were for a long time in the hands of foreigners. Thus 'Canaanite' came to be synonymous with 'trader.' There is little *direct* evidence of any serious commerce with other peoples before 1050 B.C.; only the occasional Philistine or Syrian vase appears. Later, imports from Phoenicia and Cyprus become more common. The development of commercial relationships seems to have been due primarily to royal initiative, especially to Solomon, who was able both to encourage trade on a large scale and to levy contributions on the traffic of the surrounding nations. Solomon's meeting with the queen of Sheba was, no doubt, what would now be described as 'trade talks.' In the period of the divided kingdoms, trade was carried on within the limits of the local agricultural market. Ahab exercised an exceptional measure of control over the Syrian hinterland (1 K 20^{34}). The 8th cent. was a period of economic expansion in N. and S. But independent international trade is a phenomenon of the Exile. In post-exilic Palestine, commerce was generally in the hands of foreigners—Phoenicians, Arabs or Idumaeans. In the early Christian era, the caravans were monopolized by Palmyrenes and Nabataeans. But the Jews of the Diaspora, forced to abandon their traditional, agricultural mode of life, turned more and more to independent commercial activity.

1. The **products of Canaan** were, in the main, agricultural, horticultural and pastoral, and some of these could be exported, Natural wealth consisted in grain, wine and olive oil (Dt 7^{13}, Neh 5^{11}). Oil was sent to Egypt (Hos 12^{1}) and Phoenicia (Ezk 27^{17}); wine to Phoenicia (2 Ch 2^{10}), as well as wheat, barley, oak timber (Ezk 27^{6}) from Bashan, honey (or *dibs*) and balsam (Ezk 27^{17}), and an unknown substance called *pannag*. Oil and cereals were among the deliveries to Hiram (1 K 5^{11}). Other possible objects for exportation were sand for glass manufacture, bitumen, the purple-fish, wool and leather; and certain fruits and spices (Gn 43^{11}).

2. Of national **industries** we hear little in the OT, but this little is now brilliantly illuminated by archaeology. In Saul's days, according to 1 S 13^{19}, there were no Israelite smiths—a fact there explained as due to the tyrannical precautions of the Philistines; but perhaps we should infer that the Israelites had as yet learned no crafts. Even in Solomon's time, when great progress had been made in other directions, artificers had to be imported for the building of the royal edifices. The place of industry had to be supplied by raiding, and Saul himself is praised for having stripped the finery of his enemies' women to put it on his own (2 S 1^{24}). The heroic David fights with rustic weapons and without armour. The possibility of the peaceful progress which is the preliminary condition of trade would seem to have been provided by the first two kings.

Solomon can now be seen to have exploited this legacy to the full. He must be reckoned as a considerable exporter of copper in the ancient world. His port, Ezion-geber (1 K 9^{26}) has been discovered to be the centre of a flourishing copper industry. Here is the largest smelting refinery yet found in the Near East. Nearby were the ships to convey the products to wherever they could be sold. Remains of copper furnaces, of the period of the Judges, have also been found at Beth-shemesh, Tell Qasîle and Tell Jemmeh. These, together with the discovery of smaller iron-smelting installations S. of Gaza, illustrate the otherwise puzzling description of the Holy Land as 'a land whose stones are iron and out of whose hills thou mayest dig brass' (Dt 8^{9}).

The whole city of Debir seems to have been devoted to the weaving and dyeing industry, and contained up to thirty dye plants. There must have been a loom in nearly every home. There are not a few references to potteries, and there is evidence that Israel was capable of first-class craftsmanship, particularly after the 10th cent. It has been rightly said that 'the old view that the Israelite had no artistic skill must certainly be revised in the field of ceramics.' So far archaeologists have found no Astarte plaques or figurines in any early Israelite levels in central Palestine. This contrasts so strikingly with their frequent appearance in corresponding levels from the 9th cent. onwards, that it is necessary to find the explanation in the anti-idol character of Yahwism.

The housewife of Pr 31 not only makes her own clothes, but sells some to the 'Canaanite' or pedlar. In 1 Ch 4^{21} there is mention of a Jewish family that owned a byssus-factory.

3. We have unfortunately no account of **the financial system** which must have been introduced with the foundation of the kingdom, though the prophecy of Samuel (1 S 8^{11-17}) suggests that the king claimed a tithe of all produce, but in theory had a right to both the persons and possessions of his subjects. Before the end of David's reign we hear of permanent officials appointed by the king; and the need for steady sources of revenue, whence the stipends of such officials could be supplied, is sufficient to cause the erection of an elaborate financial system, with surveys and assessments, tax-gatherers and clerks. The 'numbering of the people,' which lived on in popular tradition as an iniquity earning condign punishment, doubtless belonged to the beginnings of orderly government. For Solomon's time we have something like the fragment of a budget (1 K 10^{14f}), according to which it would appear that the king had three sources of revenue—one not further specified, but probably a land-tax; another, tribute from subject states, governed by satraps; and a third connected with commerce, and probably equivalent to excise and customs. The text implies that these various forms of revenue were paid in gold, which was then stored by the king in the form of shields and vessels. The figure 666 talents of gold is probably an exaggeration but v.^{15a} is the earliest record we have of the taxation of international merchandise. Some potsherds discovered at Samaria prove to be 'administrative dockets recording shipments of wine and oil to Samaria from the towns and districts of western Manasseh, and in a way yet to be clarified, illustrate royal fiscal organization.'

The **gold** must all have been imported, as there are no mines in Palestine; and indeed we are told that it came, with other produce as well as silver, from the mysterious Ophir and Tarshish; and that the enterprise was a joint venture of Solomon and the king of Tyre, the latter probably supplying the vessels, the former the produce which was exchanged for these goods, unless indeed the gold was procured by raiding. If it was obtained in exchange for commodities, we must suppose either that the latter were identical with those of which we afterwards read in Ezekiel, or that the commodities to be exchanged were all supplied by the Phoenicians, the service by which the Israelites earned their share being that of giving the former access to the harbour of Ezion-geber. In favour of the latter supposition, it has been pointed out that the commodities known to have been exported from Palestine at one time or another were ill-suited for conveyance on lengthy voyages, and unlikely to be required in the countries where the gold was procured. There is in the OT no allusion to the practice of coining metal, and where sums of money are mentioned they are given in **silver**; the effect, however, of the quantities of gold brought into Palestine in Solomon's time was not, according to the historian, to appreciate silver, as might have been expected, but to depreciate it, and render it unfashionable. Yet the notice of prices in the time of Solomon (1 K 10^{29}) suggests that silver was by no means valueless, whatever weight we assign to the shekel of the time. While it is clear that all silver in use must have come in by importation, the notices in the OT of transactions in which it would probably be employed are too scanty to permit of even a guess as to the amount in use; and though it is likely that (as in Eastern countries to this day) foreign coins were largely in circulation, there is little authority for this supposition.

4. If little is known of Israelite exports, many objects are mentioned in the OT which were certainly **imported** from foreign countries. These were largely objects of luxury, especially in the way of clothes or stuffs; the material called *'ĕṭûn* (Pr 7[16], RSV 'linen') was imported from Egypt; the ivory to which reference is frequently made during the period of the kingdom (of which so much has been found in Samaria from Ahab's ivory house, 1 K 22[39]), from Ethiopia through Arabia or Egypt; spices and perfumed oils and incense from S. Arabia; gems from one or other of these countries. Cosmetic bowls, used to prepare colours for the face, have been found in considerable numbers in Israelite towns; they are of close-grained limestone and thought to have been imported from Syria. Iron was, before 1200, B.C. a monopoly of the Hittites of Asia Minor. The Philistines first used it in Palestine in the 12th and 11th cents. Only gradually did the Israelites break the Philistine monopoly (1 S 13[19-22]). The first iron implement which can be dated is a ploughpoint from Saul's fortress at Gibeah *c* 1010. It is improbable that enough iron was mined in Palestine itself, and ore had to be imported. Pottery came from the Aegean and Greece. The Palmyrenes brought silk in the Roman period, but by then the variety of imports must have been large. For later (Talmudic) times a list of 118 articles has been drawn up which came from foreign countries into the Palestinian market; this list contains many foods and food-stuffs, materials for wearing apparel and domestic utensils. We should rather gather that in pre-exilic times, food was not ordinarily imported, except in times of famine. Imports of raw materials must have been considerable as soon as the people began to settle in towns. Among the more important imports in Biblical times were horses. The notice of 1 K 10[26], that Solomon had '1400 chariots and 12,000 horsemen, whom he stationed in the chariot cities,' has been marvellously illustrated by the discovery of Solomon's stables at Megiddo (provision for 450 horses), and sheds of similar type at Taanach, Eglon, and perhaps Gezer. 1 K 10[28f] says that these horses were exported from Egypt and Cilicia (land of fine horses and horse-breeding), and that Solomon acted as a middleman, reselling the horses to the Aramaean kings to the north.

Of the **slave-trade** there are very few notices in the OT, and it may be that the reduction of the aboriginal population by the Israelites to serfs, and the almost continuous warfare leading to the constant capture of prisoners, rendered the importation of slaves ordinarily unnecessary. According to Joel (3[4-7]), the Phoenicians acted as dealers, purchasing prisoners of war (in this case Jews), and exporting them to foreign countries. The same may have been the fate of those persons who, for non-payment of debt, were assigned to their creditors (2 K 4[1]). Encampments in and around Ezion-geber are thought to be the location of Solomon's slaves. They were probably prisoners of war, taken in Solomon's successful wars. Solomon could hardly have carried out his enormous building projects without such slave-labour.

5. Persons engaged in commerce.—The words used in the OT for merchants are such as signify primarily 'traveller' (1 K 10[15], RSV 'traders,' 'merchants,' 'traffic'), and convey the idea of going around or to and fro. The use of the word 'Canaanite' for pedlar has been noticed. References to shop-keeping are rare before the exile. In the large cities we may suppose that men of the same trade would establish themselves in the same street. Thus in Jer 37[21] we are informed that the prophet was given daily 'a loaf of bread out of the bakers' street.' In Nehemiah's time different classes of dealers had their locations in Jerusalem—goldsmiths and grocers (3[32]), fishmongers (13[16]); but most articles of general consumption seem to have been brought in day by day by foreigners and others (13[20]), and sold in the streets. The distinction between wholesale and retail dealers perhaps first occurs in the Apocrypha (Sir 26[29] 37[11]). It is worth observing that in the prophetic denunciations of luxury we miss allusions to the shops or stores in which such objects might be supposed to be offered for sale (Is 3[18-24]). Moreover, the verse of Ezekiel (7[12]) 'let not the buyer rejoice nor the seller mourn' suggests that the latter operation was not ordinarily thought of as it is in communities a large portion of which lives by trade, but rather as a humiliation required at times by stern necessity; and there are few allusions to trade in the codes embodied in the Pentateuch, though such are not absolutely wanting. Perhaps, then, we are justified in concluding that the practice of trade was in pre-exilic times largely in the hands of itinerant foreigners; and it is only in NT times that merchandise is regarded as an occupation as normal as agriculture (Mt 22[5]). To the cumbrous process of bargaining there is an allusion in Pr 20[14].

Allusions to the **corn-trade** are rather more common than to any other business, and to certain iniquities connected with it—probably, in the main, forms of the practice by which corn was withdrawn from the market in the hope of selling it at famine prices: this at least seems to be the reference in Pr 11[26]. In Am 8[4-8] the reference is more distinct, and implies both the offence mentioned above and the use of deceitful measures, a wrong also condemned by Micah in a similar context (6[10]). The interpretation of these passages must remain obscure until more light is thrown on land-tenure in Israel, and the process by which the king's share in the produce was collected.

The **foreign commerce** conducted in king Solomon's time is represented in his biography as a venture of his own, whence the goods brought home were his own possessions; and the same holds good of commerce in the time of Jehoshaphat (1 K 22[48f]). There is no evidence that Israelitish commerce was conducted on any other principle before the Exile, after which isolated individuals doubtless endeavoured to earn their livelihood by trade ventures. The foreign commerce of which we occasionally hear in the OT was also conducted by communities (*e.g.* Gn 37[25, 28]), to be compared with the tribes whom we find at the commencement of Islam engaged in joint enterprises of a similar kind. In 1 K 20[34] there appears to be a reference to a practice by which sovereigns obtained the right to the possession of bazaars in each other's capitals—the nearest approach to a commercial treaty that we find in this literature. But at such times as the condition of the Israelitish cities allowed of the purchase of luxuries—*i.e.* after successful campaigns or long spells of peace, permitting of accumulations of produce—it is probable that the arrival and residence of foreign merchants were facilitated by the practice of 'protection,' a citizen rendering himself responsible for the foreign visitors, and making their interests his own—doubtless in most cases for a consideration. The spirit of the Mosaic legislation (like that of Plato's and Aristotle's theories) is against such intermixing with foreigners; and except for forces such as only powerful chieftains could collect, journeys whether on sea or land were dangerous. Of an expedient for commerce like the Arabian months of sacred truce the OT contains no hint.

6. The chief passage in the OT dealing with commerce is **Ezekiel's prophecy against Tyre** (ch. 27). Many commentators think that an editor, wishing to illustrate the glory of Tyre, has introduced into Ezekiel's poem, a prose passage (vv.[9b-25a]), which is more likely to have described originally the commercial relations of Egypt than those of Tyre. But however that may be, the passage remains an invaluable and unique record of Mediterranean commerce in the 6th cent. B.C. In a prophecy of the Book of Isaiah (ch. 23), Tyre is described as the great mart of the time, serving, it would seem, as the chief exchange and centre of distribution for goods of all kinds. Ezk 26[2] is sometimes interpreted as implying that Jerusalem was a competitor with Tyre for the trade of the world, but perhaps it means only that the taking of any great city led to the Tyrian merchants obtaining the spoil at low prices.

7. Trade-routes.—Palestine has no internal waterways,

and goods had to be brought to it either by sea or across desert. Caravans from Cappadocia, Asia Minor, the Caucasus, and the Caspian all came south to join the classic route of the patriarchs from the east, through Aleppo, Hamath, and Damascus. At Kadesh the route divided, the one going west to Byblos, Tyre, and Acco on the coast, passing inland through the plain of Esdraelon, and then through the depression of Samaria and Judaea to Gaza and the south. Another route at Kadesh connected with Palmyra; a third went due south to Damascus, whence it divided again, connecting both with Bethshean and the coast road, and with Rabbath Ammon and Petra which, in the Christian era, became the Nabataean capital and centre of the caravan trade. When Jerusalem became the capital of the country, goods were brought thither probably by the same routes as were in use until the construction of the railways. The unnamed place in 1 K 5[9], used as a port of Jerusalem in the time of Solomon, is in 2 Ch 2[16] identified with Joppa, probably by a good tradition. Elath (Eziongeber) served as the port of Jerusalem on the NE. arm of the Red Sea, and after Solomon's time, was repeatedly taken out of the possession of the Jewish kings, and recaptured (2 K 14[22]). But the Hebrews do not seem to have understood or to have liked the sea. From the 2nd millennium, the ports were mainly in the hands of the Phoenicians. Indeed the Hebrews did not exercise effective control over the coast until Hellenistic times. Jaffa was occupied only under Simon (1 Mac 14[5]), the Hellenized cities of the coast only under Alexander Jannaeus (Jos. *Ant.* XIII. xv. 4 [395]). In the Tosefta, the coast was still not part of the 'clean' territory of the Holy Land.

Josephus (*Ant.* VIII. vii. 4 [187]) asserts that Solomon had the roads leading to Jerusalem paved with black stone, but his authority for this statement is unknown. On the whole, before the Romans, roads were simply the tracks made by constant use. The Romans revolutionized the whole system not only by building roads, but also by setting up mile-stones and by establishing military controls. It is possible that the familiar passage Is 40[3f] alludes to the process of road-making by mounding and excavating. On the other hand the word *m*[e]*sillāh* ('embanked road'), does not necessarily imply road-making, for the road from Bethel to Shechem, thus described in Jg 21[19], was simply part of the configuration of the natural ridge.

8. Transport.—Before the 11th cent. donkeys and mules were the main means of transport, and the movement of traders was restricted accordingly. The domestication of the camel in the 11th cent. was something of a revolution which for the first time enabled the nomad to cover great distances swiftly. It was the coming of these 'ships of the desert' that opened up the traffic in incense from S. Arabia along the 'incense road,' and brought S. Arabia into the Mediterranean world. The first appearance of camels in Palestine seems to have been when a Midianite invasion was repulsed by Gideon (Jg 6[5]). They are mentioned in connexion with goods brought from Arabia (1 K 10[2], Is 60[6] etc.), and even with such as were carried in Syria and Palestine (2 K 8[9], 1 Ch 12[40]). **Caravans** are mentioned in Jg 5[6], Job 6[18], Is 21[13]. Asses and mules remained the main means of day to day transport. Horses provided another means of swift travel, though their use was limited. Horse-breeding had been learned by the Hittites from the Kikkuli of the land of the Mitanni. They had used them mainly with light chariots of war, and probably this was their main use in Israel. It is probable that the ancients did not know the art of harnessing horses effectively, though Dussaud thinks the Assyrians had some form of breast-strap in the 8th cent. When wagons were used to carry commodities to market, they were drawn by yoked oxen.

9. Commercial instruments.—The money-lender appears at the very commencement of the history of the Israelitish kingdom, where we are told that David's followers were to some extent insolvent debtors; and the Jewish law allowed the taking of pledges, but not (it would seem) the taking of interest, except from foreigners. The result of similar legislation in Moslem countries is to make the rate of interest enormously high, and in Palestine it may have had the same effect. Deeds of loan appear not to be mentioned in the OT, though there is frequent reference to the danger of giving security. To the institution of banking there is a familiar reference in the NT (Mt 25[27]); the persons there referred to—like the bankers of modern times—undertook the charge of deposits for the use of which they paid some interest; the money-changers (Mt 21[12] etc.) were, as now, in a smaller way of business. Those who hoarded money more often put it 'under the stone' (Sir 29[10]) than entrusted it to bankers; and this is still probably the favourite practice all over the nearer East. Another common practice was to deposit money with trustworthy persons, to which there is a reference in Tobit (4[20] etc.). In most ancient cities the temples served as places of security, where treasure could be stored, and this is likely to have been the case in Israelite cities also. See, further, USURY.

10. Development of the Israelites into a commercial people.—The prophets appear to have expected that the exiles would carry on in their new home the same agricultural pursuits as had occupied them in Palestine (Jer 29[5]); and it would appear that until the taking of Jerusalem by Titus, and perhaps even later, agriculture remained the normal occupation of the Israelites. It was in exile, where many Jews were compelled to give up their traditional skills, that we find a number of them becoming independent traders and bankers. The first evidence of this is in the 5th cent. The Elephantine Papyri show that Jews in Egypt were active in trade and banking, and in the same period the firm of Murashu Sons at Nippur dealt with people bearing Jewish names. After the conquest of Alexander, *ghettos* began to be formed in the great Hellenistic cities, and the Roman conquests soon led to colonies of Jews settling yet farther west. D. S. M.—D. R. J.

TRADES.—See ARTS AND CRAFTS.

TRADITION.—See LAW (IN NT), 1.

TRADITION, ORAL.—See ORAL TRADITION.

TRAGACANTH, Gn 43[11] (RVm).—See SPICE, SPICES.

TRAJAN.—Marcus Ulpius Traianus, adopted by the childless Emperor Nerva, succeeded him as emperor A.D. 98–117—second of the 'good emperors' who ruled the Roman world conscientiously from Nerva to Marcus Aurelius, A.D. 96–180. A distinguished soldier, Trajan was the last emperor to embark on considerable plans of expansion (probably unwisely), conquering territory N. of the Danube (Dacia, modern Transylvania) and E. of the Euphrates (Armenia and Mesopotamia, mostly abandoned at once by his successor, Hadrian). Preparations for the eastern campaign may account for the watch on possible subversive activities reflected in the correspondence of Pliny the Younger, governor of Bithynia in A.D. 111–112, including his report on trials of Christians and Trajan's reply approving their punishment when formally charged (*Epistles* X. 96–97). To the same period belong martyrdoms in the eastern provinces, such as those of Simeon, bishop of Jerusalem, and Ignatius of Antioch, made famous by the letters, important for church history and theology, written on his way to death at Rome. E. R. H.

TRANCE.—A condition in which the mental powers are partly or wholly unresponsive to external impressions while dominated by subjective excitement, or left free to contemplate mysteries incapable of apprehension by the usual rational processes. The word occurs in AV in the OT in Nu 24[4, 16] (but cf RV, RSV), and in all EV in the NT in Ac 10[10] 11[5] 22[17]. See, further, DREAMS, VISION. H. L. W.

TRANSFIGURATION.—The Transfiguration is a mysterious occurrence in the life of our Lord which conveyed to the three apostles who witnessed it the

true authority of Him who six days before (' about eight days,' Lk 9[28]) had made the first announcement of His coming Passion. Silence regarding it is enjoined by Jesus, and practised by the disciples until the Resurrection, with which it is closely connected in significance. Indeed, many scholars have seen in the episode a predated Resurrection appearance, associated as it is particularly with Peter. The event is referred to by Jesus Himself as a vision (*horama*, Mt 17[9]). It is vouched for by the three Synoptists (Mk 9[2-13], Mt 17[1-13], Lk 9[28-36]). Elsewhere in the NT it is referred to only in 2 P 1[16-18], whose author significantly sees in it a pledge of the Parousia. H. Riesenfeld (*Jésus Transfiguré*, 1947) persuasively connected the representation and many of its details with the Messianic enthronement of Jesus, and found a setting for this in the ideology and symbolism of the Feast of Tabernacles (note the three tabernacles, the six-day period after the Day of Atonement, the Messianic designation, etc.). The mountain in question is probably to be identified with Hermon.

Associated with Jesus are Moses and Elijah, who according to Lk 9[31] spoke of His coming *exodus*. These figures could well suggest not only Christ's imminent exaltation to heaven but also His fulfilment of the Law and the prophets. The cloud is associated with the Divine theophany (cf Ex 24 for this and other details), and the transfigured lineaments and apparel of Jesus with the body of light which the Rabbis and the early believers assigned to the Messiah and indeed to the saints in the New Age. The Divine voice in distinction from that at the Baptism concludes its witness to Christ as ' my beloved Son ' with the admonition, ' Listen to him.' The great lesson for the disciples was that the dreadful shame of His cross was really glory, and that all suffering is ultimately radiant with heavenly beauty, being perfected in Him.

Mark, followed by the other Synoptists, offers us in this narrative a symbolic portrayal of the true nature and final victory of Christ as a kind of window in the story of the way to the Cross. Resting as it well may upon some momentary experience by the disciples of the transcendent majesty of the Nazarene, the recollection comes to us bodied forth in such visionary detail as quickened faith and insight would draw upon from the eschatological poetry of Israel. R. H. S.—A. N. W.

TRANSGRESSION.—See Sin.

TRAP.—See Snare.

TRAVAIL.—The French *travail*, meaning ' labour *or* trouble,' was taken into English without alteration of meaning or spelling. This spelling is found in AV, and it is still sometimes used, especially for the labour of child-birth, and in RSV it is confined to this use, save in Is 53[11]. Thus in Nu 20[14] RSV has ' adversity ' for AV and RV ' travail,' in Ec 4[4] ' toil ' for AV ' travail ' (RV ' labour '). In Ec 2[26] ' work ' for AV and RV ' travail,' and in 1 Th 2[9] ' toil ' for AV and RV ' travail.'

TRAVELLERS, Ezk 39[11] (RSV).—See Abarim.

TRAYS.—See Snuffers.

TREASURE, TREASURY, TREASURER.—1. In OT ' treasure ' and ' treasury ' stand for various Hebrew terms, but both words usually render *'ôṣār*. This shows that ' treasure ' and ' treasury ' are not carefully distinguished in EV, or else that *'ôṣār* itself may stand for either. As a matter of fact the truth lies with both alternatives. Strictly, a treasure is a store of wealth, while a treasury is a storehouse, a place where treasure is kept. Sometimes, however, ' treasure ' occurs in AV where ' treasury ' is meant as Job 38[22] ' Hast thou entered into the treasures (RV ' treasuries '; RSV ' storehouses ') of the snow? '; and, on the other hand, ' treasury ' is sometimes found where ' treasure ' would be the more correct rendering, as Jos 6[19, 24] and RV and RSV of Ezr 2[69]. The indeterminateness of *'ôṣār* is shown by its constant employment for ' treasure ' and ' treasury ' alike. The ' treasure (RV and RSV ' store ') cities ' of Ex 1[11] (cf 1 K 9[19], 2 Ch 8[4]) are cities in which provisions were stored up (cf Gn 41[48, 56]).

2. In NT we find a like ambiguousness in the use of ' treasure,' and also of the Greek *thēsauros* for which it stands. The treasures of the Magi (Mt 2[11]) and the treasure in heaven (Mt 19[21]) refer to precious stores; but it is out of his *treasury* rather than his *treasure* that the good man brings forth good things (Mt 12[35]), and the householder things new and old (13[52]). In Ac 8[27] ' treasure ' renders *gaza*, a word of Persian origin. In Mt 27[6] ' treasury ' represents *korbanas* (the depository of the ' corban ' [q.v.]), the sacred treasury into which the chief priests would not put Judas's 30 pieces of silver. For the treasury of the Temple (*gazophylakion*) into which Jewish worshippers cast their offerings (Mk 12[41, 43], Lk 21[1]) see Temple **11** (*b*). When Jesus is said to have spoken ' in the treasury ' (Jn 8[20]), the meaning probably is that He was teaching in the colonnade of the Temple where stood the treasure-boxes into which the offerings were cast.

Treasurer occurs in OT in Neh 13[13], Ezr 1[8] 7[21], Is 22[15] (RSV ' steward '), Dn 3[2f], representing a different term in each writer. The word is found in NT only in RV and RSV of Ro 16[23] as substitute for AV ' chamberlain ' (Gr. *oikonomos*), but the Ethiopian eunuch is said to have had charge of all the treasure of queen Candace.

J. C. L.

TREE.—' Tree ' is used as a name for the Cross in Ac 5[30] 10[39] 13[29], 1 P 2[24]; cf Gal 3[13]. For sacred trees see High Place, **1**, Israel, II, **1**. (6); and for the various trees of the Bible, see under their respective names.

TREE OF KNOWLEDGE.—In the story of Paradise in Gn 2 it is stated that Yahweh Elohim caused to grow out of the ground in the garden which He had planted in Eden, ' every tree that is pleasant to the sight and good for food, the tree of life also in the midst of the Garden, and the tree of the knowledge of good and evil' (Gn 2[9]). The story goes on to relate that, while it was permissible to eat of all the other trees in the garden, Adam was forbidden to eat of the tree of the knowledge of good and evil under pain of death. In ch. 3 Eve tells the serpent that it is the tree in the midst of the garden which is the forbidden tree. An explanation of the ambiguities in the story has been sought in the theory of two recensions which have been woven together by the editor of the J-E narrative; it was suggested by Budde, on the ground of grammatical anomalies in 2[9], that in the original form of the story there was only one tree, namely, the tree of the knowledge of good and evil. It is clear, however, that for the Yahwist there were two trees, and that the tree of life possessed different properties from those of the tree of knowledge (see Tree of Life). In the mythology of the ancient Near East there are numerous examples of sacred trees guarded by dragons or serpents, and the cult of oracle-giving trees was wide-spread, and is found in Canaan, *e.g.* the terebinth of Moreh (Gn 12[6]). The main problem is the nature of the knowledge acquired by eating of the tree. The serpent tells Eve that they will become gods, knowing good and evil; and Yahweh is represented as saying (3[22]), ' Behold, the man has become like one of us, knowing good and evil.' In the Babylonian myth of Adapa, and similar myths, eating of the food of the gods conferred immortality, not knowledge; but in Babylonian magical texts the knowledge possessed by the god Ea and imparted by him to the priests was magical knowledge, the knowledge of spells and incantations which gave power over evil spirits. This was undoubtedly the kind of knowledge originally envisaged in the story. But to the Yahwist, who had transformed the ancient stories into symbols of the relation between God and man, the forbidden knowledge was of those ' secret things ' which belonged only to Yahweh (Dt 29[29]). S. H. He.

TREE OF LIFE.—In the story of the garden of Eden in Gn 2 it is related that Yahweh Elohim planted two special trees among the other trees of the garden; one of these was the tree of life in the midst of the garden,

and the other was the tree of the knowledge of good and evil, whose position in the garden is not stated (see TREE OF KNOWLEDGE). According to the form of the story as we have it, Adam was only forbidden to eat of the tree of knowledge, and no mention is made of the tree of life; hence it might be inferred that Adam and Eve were free to eat of that tree. But, in the description of the temptation of Eve by the serpent, Eve says that it is the tree in the midst of the garden of which they have been forbidden to eat. Hence it is possible to infer that for the Yahwist the tree of life was identical with the tree of knowledge; but against this is the statement at the end of the story which represents Yahweh as saying that since Adam has acquired the knowledge which makes him 'as one of us,' that is, by eating of the tree of knowledge of good and evil, he must be prevented from acquiring immortality by eating of the tree of life. In the Sumerian and Babylonian myths which underlie the Hebrew story, it is always immortality that man is represented as seeking, and which he is prevented by the jealousy of the gods from attaining. In the Gilgamesh Epic it is the secret of how to acquire immortality that the hero goes in search of in vain. It is generally agreed that the Yahwist has used two different versions of the myth, and to this is due the confusion between the two trees. But there is no confusion in the Yahwist's mind. From whatever source he has derived it, the inspired writer has used the ancient material to give in symbols the picture of God's design for man, to be His representative as head of His creation, in happy dependence upon the source of his life; drawing from the same source in the ancient myths which reflect so clearly man's ruined state, his despair and misery, the author has depicted in symbols the cause of that ruin, in 'man's first disobedience, and the fruit of that forbidden tree.' But, still in symbols, he has let in the light of hope, and God's purpose of redemption. So it is fitting that in Rev 2^{7} the way to the tree of life is opened, and the victor is promised the reward of being permitted to eat of the tree of life, 'which is in the midst of the Paradise of God'; and in the final vision the seer sees the tree of life in the centre of the heavenly city by the banks of the river of the water of life (Rev 22^{1-2}). S. H. He.

TRESPASS-OFFERING.—See SACRIFICE, 15.

TRIAL.—See TEMPTATION.

TRIBES OF ISRAEL.—The Israelite confederacy (nowadays often termed amphictyony) of tribes came to be regarded, ideally, as numbering twelve and as being descended from twelve sons of Jacob (1 K 18^{31}). In Gn 29^{31}–30^{24} and 35^{18} the following relationship of Jacob's sons is given:

Sons of Leah: Reuben, Simeon, Levi, Judah.
Sons of Bilhah (Rachel's maid): Dan, Naphtali.
Sons of Zilpah (Leah's maid): Gad, Asher.
Sons of Leah (additional): Issachar and Zebulun.
Sons of Rachel: Joseph and Benjamin.

Several facts emerge which must be considered in any reconstruction of the history of the tribes. (i) All the sons except Benjamin were born in Mesopotamia, which probably implies that these tribes were in existence before the occupation of Canaan and migrated from Mesopotamia. (ii) That Benjamin was said to have been born in Canaan separates that tribe at once from the rest and may mean that the tribe was only constituted after the occupation. (iii) The order of birth, and the distinction between the Leah and Rachel tribes on the one hand and between the Leah-Rachel tribes and the 'handmaid' tribes on the other, may betoken a difference of standing and priority within the confederacy. (iv) If the Joseph tribe be regarded as in effect two tribes, Ephraim and Manasseh, as it so regularly is, then the number would be thirteen, unless, or until, Levi is omitted from the reckoning because of its priestly status.

The several tribal lists bring further problems to be unravelled by the historian. (1) The Song of Deborah, Jg 5, enumerates ten tribes, separating Ephraim and Machir (Manasseh) as two tribes and making no mention of Judah, Simeon and Levi. Why these three are omitted is not known for certain. It is thought that Judah, although being placed by the birth stories among Leah's first group of children, was a late-comer in joining the tribes of Israel, indeed it may have been as late as David's time, when he became king in Hebron, that this happened. Simeon and Levi may have been regarded as outcasts, following upon the incident narrated in Gn 34 (cf Gn 49^{7}).

The position in the birth stories may suggest that Judah had had a long history before its incorporation in the confederacy. Its association with Hebron is explicit in Jg 1^{10} and implicit in Jg 1^{20} through Caleb which was an associate tribe within Judah.

(2) The Blessing of Jacob, Gn 49, lists twelve tribes, does not separate Joseph into two (22–28), deprives Reuben, the firstborn, of his pre-eminence, ascribes authority to Judah and links Simeon and Levi together in disgrace. (3) The Blessing of Moses, Dt 33, omits Simeon but retains the number twelve by separating Joseph into Ephraim and Manasseh (Ephraim being reckoned as the more important with tens of thousands over against Manasseh's thousands), recognizes the insignificance of Reuben, acknowledges the priesthood of Levi and prays for the reunion of Judah with the other tribes (indicating a date of composition after Jeroboam's rebellion). (4) Finally, there are two census lists, Nu 1^{20-43} and 26^{5-50}. Both lists agree in having twelve tribes, in omitting Levi and in listing Ephraim and Manasseh separately (in that order in Nu 1 and with Manasseh first in Nu 26). Levi is counted separately as a sacred priestly tribe. It is clear that tradition varied about the priority of Ephraim; there seems to have been an early ascendancy of Ephraim (Jg 8^{1} 12^{1}, reflected in Jacob's blessing of them Gn 48^{14}) and a later ascendancy of Manasseh, the firstborn.

Twelve was apparently a conventional number for tribal grouping as may be seen in the groups of Ishmael, Gn 25^{13-16}, Edom, Gn 36^{10-14}, and the Horites, Gn 36^{20-26}. There were, however, six sons of Leah who may have formed a half-size group. The Joseph and Judah tribes may also have been small groupings of tribes. It should be remembered that twelve was the ideal number and that probably at no time in history did the historical situation correspond with the ideal. It is clear that in Deborah's time the number was ten (which would be as suitable a number for a group as twelve would be). The tribes of Israel formed an ever changing group, subject to increase or loss as occasion dictated. Sometimes fusion took place, as with Judah and Caleb, or absorption, as with Judah and Simeon, and sometimes tribes would divide as did Joseph into Ephraim and Manasseh. Loss of tribes might come about by absorption (Simeon), or gradual lessening of strength and final disappearance as with Reuben, or complete change of status, as possibly with Levi from a secular to a priestly tribe. Opinion is divided about the original status of Levi.

The 'system' of Israelite tribes may well have been formed for the first time under the leadership of Moses, but it is not at all certain that the scheme of family relationships, tracing all the tribes to a common ancestor, was formulated at that time. The change of name from Jacob to Israel cannot be dated; it may have been a secondary process reflecting the consciousness of a reconstitution of the associated tribes, or it may have been the result of the fusion of two groups, one honouring the name Jacob as the eponymous ancestor and carrying a wealth of tradition about him, and the other, ultimately the more powerful, honouring the name Israel but carrying little or no tradition. L. H. B.

TRIBUTE, TOLL, TAXING.—1. In OT the subject is obscure. The Hebrew word *mas*, rendered in AV as 'tribute,' properly denotes a body of forced labourers (2 S 20^{24}, 1 K 9^{21} etc.), and then later 'forced service' (RSV 'forced labour' or 'forced levy')—the feudal *corvée*. Solomon had a regular system of levying

provisions for the maintenance of the royal establishment (1 K 4$^{7-19}$), and labourers for the execution of his vast building schemes (5^{13ff} 9^{15}), and also exacted toll from the caravans of merchants that passed through his kingdom (10^{15}). After the fall of the Jewish State, tribute (Heb. *'ōnesh*—indemnity, fine) was imposed on the land by its foreign masters (2 K 23^{33}). In Ezr 4^{13} (cf v.^{20} 7^{24}) we read of 'tribute, custom, or toll,' but have no information as to the precise meanings of the terms and the distinctions between them. Cf TRADE AND COMMERCE, 3.

2. In NT 'tribute' represents three Greek words. (1) *phoros* is properly a land tax; (2) *kēnsos* (originally a property register), a capitation or poll tax. Both were direct Imperial taxes payable by the Jews as Roman subjects; the former in kind, the latter in Roman money. In NT, however, the distinction is not carefully observed (cf Mt 22^{17}, Lk 20^{22}). The RSV similarly tends to equate *phoros* and *kēnsos* by using 'tribute' and 'taxes' alternatively for both words. For the 'money for the tax' (AV 'tribute money') of Mt 22^{19} see MONEY, 7 (*b*). (3) *didrachmon* (Mt 17^{24}, AV 'tribute money,' RSV 'the **half-shekel** tax') was the sum paid by every male Israelite to meet the cost of the daily services in the Temple. See MONEY, 7 (*d*). Toll (*telos*, RSV 'toll' [Mt 17^{25}] and 'revenue' [Ro 13^{7}]; AV 'custom,' *telōnion*, RSV 'tax-office,' AV 'receipt of custom'; RV 'place of toll') must be carefully distinguished from tribute (cf Mt 17^{25}, Ro 13^{7}). It was not a direct tax like (1) and (2), but an impost on the value of exported goods. For details see CUSTOM(S), PUBLICAN. **Taxing** (*apographē*, RSV 'enrollment' [Lk 2^{2}] and '**census**' [Ac 5^{37}, RV 'enrolment']) denotes a registration with a view to taxation for Imperial purposes. See QUIRINIUS.

J. C. L.—A. G. McL.

TRIGON.—See MUSIC, 4 (1) (*c*).

TRINITY, THE.—The Christian doctrine of God (q.v.) as existing in three Persons and one Substance is not demonstrable by logic or by scriptural proofs, but is (like certain scientific and mathematical principles) a necessary hypothesis, above reason but not contrary to it. The term *Trias* was first used by Theophilus of Antioch (*c* A.D. 180), and although not found in Scripture was thereafter used as a brief designation for the doctrine which had been made necessary by the data of Scripture.

The chief trinitarian text in the NT (going beyond such suggestive summary formulae as 2 Co 13^{14}) is the baptismal formula in Mt 28^{19}: 'Go therefore and make disciples of all nations, baptizing them in the name of the Father and of the Son and of the Holy Spirit, teaching them to observe all that I have commanded you.' This late post-resurrection saying, not found in any other Gospel or anywhere else in the NT, has been viewed by some scholars as an interpolation into Matthew. It has also been pointed out that the idea of 'making disciples' is continued in 'teaching them,' so that the intervening reference to baptism with its trinitarian formula was perhaps a later insertion into the saying. Finally, Eusebius's form of the text ('in my name' rather than in the name of the Trinity) has had certain advocates. But the passage can readily be understood (like the rest of the Gospel of Matthew) from the Christian Jewish point of view. It sums up the experience of Christian Jews: their inherited conception of God as 'Father,' their new faith in Christ as the 'Son' (or 'Son of Man'), and their experience of the Spirit which has been given as the earnest and guarantee of the coming New Age. The formula is probably, therefore, not an addition to the text of Matthew. Nevertheless, though an integral part of the original text of Matthew, this does not guarantee its source in the historical teaching of Jesus. It is doubtless better to view the formula as derived from early Christian, perhaps Syrian or Palestinian, baptismal usage (cf *Didache* 7$^{1-4}$), and as a brief summary of the Church's teaching about God, Christ, and the Spirit: God, who is the Father; Christ, who is the Son; the Spirit, who is holy, and one with the Father and the Son.

The stage of Christian teaching reflected in the letters of Paul assumes the subordination of the Son (1 Co 8^{6} 11^{3}), not only before the Incarnation (Ph 2$^{5-11}$) but also at the Consummation and for ever after (1 Co 15$^{24-28}$). Paul never thought out in detail the relations between the Son and the Father. The same is true of the author of John and the Johannine epistles, though the unity of the Father and the Son is repeatedly stressed (*e.g.* Jn 10^{30}). In the Epistle to Hebrews the Son is pre-existent (1$^{1-4}$), but no effort is made to work out a theological statement of the eternal relations within the Godhead. It may be said, very briefly, that the Christology of the NT (see CHRISTOLOGY) is neither 'binitarian,' as has been claimed, nor 'adoptianist.' These 2nd-cent. views were stages in the development which led eventually to the final formulation of the doctrine of the Trinity. The point of view of the NT as a whole is practical rather than speculative, and its formulae have to do with the daily teaching and practice of the Church—the instruction of converts, their baptism and pastoral supervision, the interpretation of the OT, weekly or daily worship, personal religion and the life of Christian piety, prayer, and fasting, the extension of the gospel to all mankind, and the constant expectation of fuller revelation at the Last Day and in the Age to Come. Its language reflects various aspects of Divine revelation and redemption, and also the on-going Christian experience which led eventually to the fullest possible expression of their implications, in creeds, liturgy, homilies and hymns, and in Christian preaching and interpretation of sacred Scripture.

F. C. G.

TRIPOLIS.—An important town in northern Phoenicia, where Demetrius Soter landed when he made his successful attack against Antiochus v. (2 Mac 14^{1}). It was formed by colonies from three cities—Tyre, Sidon, and Arvad—hence the name. The modern *Ṭarâbulus* is two miles inland, its fort occupying the site of the ancient city on the coast.

J. F. McC.—E. G. K.

TROAS.—A city of Mysia on the NW. coast of Asia Minor. It was in the Roman province Asia. It was founded by Antigonus, and re-founded in 300 B.C. by Lysimachus, who named it Alexandria Troas. For a time, under the Seleucid kings of Syria, it gained its freedom, and began to mint its own coins (examples exist from 164 to 65 B.C.). Its freedom continued under Pergamene and afterwards, from 133 B.C., under Roman rule. Augustus made it a Roman colony, and it became one of the greatest cities of NW. Asia. The Roman preference was partly explained by their belief in the early connexion between Troy and their own capital. This place was a regular port of call on coasting voyages between Macedonia and Asia. St. Paul, with Silas and Timothy, approached Troas from the Asian-Bithynian frontier near Dorylaeum or Cotiaeum (Ac 16$^{6-8}$). He did not preach in Mysia on the first visit, though the Western text at Ac 16^{6} makes him do so. On his third journey Paul stopped at Troas after leaving Ephesus, as may be seen from 2 Co 2^{12}, and on the return journey left the ship at Troas to go on foot to Assos (Ac 20$^{5, 13}$).

A. So.—E. G. K.

TROGYLLIUM.—According to the AV (Ac 20^{15}), which here follows the Western text, St. Paul's ship, after touching at Samos, and before putting in at Miletus, 'tarried at Trogyllium.' This statement is no part of the NT text as now commonly read, but it is not impossible, and perhaps embodies a real tradition. Trogyllium is a promontory which projects from the mainland and overlaps the eastern extremity of Samos, so as to form a strait less than a mile wide. There is an anchorage near, still called 'St. Paul's Port.'

A. So.

TROPHIMUS.—A Gentile Christian, a native of Ephesus (Ac 21^{29}), who, with Tychicus, also of the province Asia (20^{4}), and others, accompanied St. Paul to Jerusalem. The Jews, seeing Trophimus with the

Apostle in the city, hastily concluded that St. Paul had brought him into the inner court of the Temple, separated from the outer 'Court of the Gentiles' by a barrier on which were inscriptions in Greek and Latin forbidding any non-Jew to enter on pain of death. This occasioned the riot which led to St. Paul's arrest. Some years later Trophimus was left at Miletus sick (2 Ti 4^{20}).
A. J. M.

TROW.—'To trow' was originally 'to trust,' with which it is connected in origin; but it came to mean no more than 'think *or* suppose.' This is the meaning in Lk 17^{9}, its only occurence in AV. The sentence is probably a gloss; RV and RSV omit.

TRUMPET.—See Music, 4 (2) (*e*).

TRUMPETS, FEAST OF.—The first day of Tishri (October), the seventh month of the sacred year, was signallized by a 'memorial proclaimed with blast of trumpets' (Lv 23^{24}), to call both God and the people to remembrance of their reciprocal positions. It was a day of holy convocation, on which no servile work might be done. The trumpets blown were probably of a different kind from those used at the ordinary new-moon festivals. At the Feast of Trumpets special offerings (cf Lv 23^{24f}, Nu 29^{1-6}) were made: a burnt-offering of a bullock, a ram, and seven lambs, and a sin-offering of a kid of the goats; these in addition to the ordinary daily and monthly offerings. This was one of the lunar festivals of the Jewish calendar, and was the most important of the new-moon celebrations.
A. W. F. B.

TRUST.—See Faith.

TRUTH.—In OT (*'emeth, 'emûnāh*).—*Firmness* or *stability* is the fundamental idea of the root, and to this radical thought most of the uses of the Hebrew nouns may be traced. Often they signify truth in the common meaning of the word, the correspondence, viz., between speech and fact (Dt 13^{14}, Pr 12^{17}). At first the standards of veracity were low (Gn $12^{11\text{ff}}$ $20^{2\text{ff}}$ $26^{7\text{ff}}$ $27^{18\text{ff}}$ etc.); but truthfulness in witness-bearing is a commandment of the Decalogue (Ex 20^{16}), and from the prophetic age onwards falsehood of every kind is recognized as a grave sin (Hos 4^{2}, Ps 59^{12}, Pr 12^{22}). See, further, Lie. Sometimes 'truth' denotes justice as administered by a ruler or a judge (Ex 18^{21}, Pr 20^{28}), and, in particular, by the Messianic King (Ps 45^{4}, Is 42^{3}). Frequently it denotes faithfulness, especially the faithfulness of a man to God (2 K 20^{3}) and of God to men (Gn 32^{10}). When God is described as a 'God of truth,' His faithfulness to His promises may be especially in view (Ps 31^{5}). But not far away is the sense of 'living reality' in distinction from the 'lying vanities' in which those trust to whom Yahweh is unknown (v.^{6}; cf Dt 32^{4}). In some later canonical writings there appears a use of 'truth' or 'the truth' as equivalent to Divine revelation (Dn 8^{12} 9^{13}), or as a synonym for the 'wisdom' in which the true philosophy of life consists (Pr 23^{23}). In the Apocryphal books this use becomes frequent (1 Es $4^{33\text{ff}}$, Wis 3^{9}, Sir 4^{28} etc.).
J. C. L.

TRUTH.—In NT (*alētheia*).—The Greek word (which is employed in LXX to render both *'emeth* and *'emûnāh*) has the fundamental meaning of *reality*, as opposed to mere appearance or false pretence. From this the sense of veracity comes quite naturally; and veracity finds a high place among the NT virtues. The OT law forbade the bearing of false witness against one's neighbour; the law of Christ enjoins truth-speaking in all social intercourse (Eph 4^{25}), and further demands that this truth-speaking shall be animated by love (v.^{15}; cf v.^{25} 'for we are members one of another').

Special attention must be paid to some distinctive employments of the word. (*a*) In the Pauline writings there is a constant use of 'the truth' to describe God's will as revealed—primarily to the reason and conscience of the natural man (Ro $1^{18, 25}$), but especially in the gospel of Jesus Christ (2 Co 4^{2}, Gal 5^{7} etc.). 'The truth' thus becomes synonymous with 'the gospel' (Eph 1^{13}; cf Gal $2^{5, 14}$ etc., where 'the truth of the gospel' evidently means the truth declared in the gospel). In the Pastoral Epistles the gospel as 'the truth' or 'the word of truth' appears to be passing into the sense of a settled body of Christian doctrine (1 Ti 3^{15}, 2 Ti 2^{15} etc.). It is to be noted that, though the above usages are most characteristic of the Pauline cycle of writings, they are occasionally to be found elsewhere, *e.g.* He 10^{26}, Ja 1^{18}, 1 P 1^{22}, 2 P 1^{12}.

(*b*) In the Johannine books (with the exception of Revelation) *alētheia* is a leading and significant term in a sense that is quite distinctive (cf 'light' and 'life'). To Pilate's question, 'What is truth?' (Jn 18^{38}), Jesus gave no answer. But He had just declared that He came into the world to bear witness to the truth (v.^{37}), and the Fourth Gospel might be described as an elaborate exposition of the nature of the truth as revealed by Jesus, and of the way in which He revealed it. In John 'the truth' stands for the absolute Divine reality as distinguished from all existence that is false or merely seeming (cf $8^{40\text{ff}}$, where Jesus contrasts His Father, from whom He had heard the truth, with 'your father the devil,' who 'has nothing to do with the truth, because there is no truth in him'). Jesus came from the bosom of the Father (Jn 1^{18}), and truth came by Him (v.^{17}) because as the Word of God He was full of it (v.^{14}). The truth is incarnated and personalized in Jesus, and so He is Himself the Truth (14^{6}). The truth which resides in His own Person He imparts to His disciples (8^{31f}); and on His departure He bestows the Spirit of truth to abide with them and be in them for ever (14^{17}). Hence the truth is in the Christian as the very groundwork and essence of his spiritual being (1 Jn 1^{8} 2^{4}, 2 Jn 1^{2}). It is there both as a moral and as an intellectual quality—standing midway, as it were, between 'life' and 'light,' two other ruling Johannine ideas with which it is closely associated. Primarily it is a moral power. It makes Christ's disciples free (Jn 8^{32})—free *i.e.*, as the context shows, from the bondage of sin (vv.$^{33\text{ff}}$). It has a sanctifying force (Jn 17^{17-19}); it ensures the keeping of the commandments (1 Jn 2^{4}) and the life of Christian love (3^{13f}). And, while subjectively it is a moral influence, objectively it is a moral vocation—something not only to be known (Jn 8^{32}) and believed (vv.^{45f}), but requiring to be done (Jn 3^{21}, 1 Jn 1^{6}). From this moral quality of the truth, however, there springs a power of spiritual illumination. The truth that is life passes into the truth that is light (Jn 3^{21}). Every one who is of the truth hears Christ's voice (18^{37}); if any man's will is to do His will, he shall know of the doctrine (7^{17}); the Spirit of truth, when He comes, will guide the disciples into all the truth (16^{13}).
J. C. L.—W. D. S.

TRYPHAENA.—Greeted along with **Tryphosa** by St. Paul in Ro 16^{12}, and described by him as workers in the Lord. They were probably sisters or near relations, 'for it was usual to designate members of the same family by derivatives of the same root' (Lightfoot). The common root makes their names signify 'delicate,' 'luxurious'— meaning which contrasts with their active Christian toil. Inscriptions in a cemetery used chiefly for the Emperor's servants contain both names; if we identify them with these, then they would be among 'the saints of Caesar's household' (Ph 4^{22}).

A Tryphaena plays a prominent part in the apocryphal *Acts of Paul and Thecla.*
C. T. P. G.

TRYPHO(N).—An officer of Alexander Balas, who, after the death of the latter, took advantage of the unpopularity of **Demetrius** (q.v.) to put forward Antiochus, the son of Balas, as a claimant to the throne (1 Mac 11^{39}). His real aim, however, was to gain the crown for himself, and this he accomplished after he had murdered in succession Jonathan the Maccabee (12^{39-50}) and Antiochus (13^{31f}). His rapacity led Simon to appeal to Demetrius (13^{34}). The latter was organizing an expedition against Trypho when he was himself made prisoner by Arsaces (14^{1-3}). In the end, Antiochus Sidetes, the brother of Demetrius, attacked Trypho, besieged him in Dor and pursued him when he escaped

thence to Orthosia (15[10-14, 37-39]). Trypho was finally shut up in Apamea, where he committed suicide (Strabo, XIV. v. 2; Jos. *Ant.* XIII. vii. 2 [224]; Appian, *Syr.* 68).

TRYPHOSA.—See TRYPHAENA.

TUBAL.—A country and people in Asia Minor mentioned only in association with **Meshech** (q.v.).

TUBAL-CAIN.—In Gn 4[22] 'the forger of all instruments of bronze and iron,' *i.e.* the founder of the guild or profession of metal-workers. The name seems to be made up of *Tubal* (or the Tibareni, noted for production of bronze articles (Ezk 27[13]) and *Cain* ('smith'), as the ancestor of the Kenites or 'Smiths.'

TUBIAS, 1 Mac 5[13] (RV).—See TOB.

TUBIENI, 2 Mac 12[17] (AV, RV).—See TOB.

TUMOUR.—See MEDICINE.

TUNIC.—See DRESS, 2 (*d*).

TURBAN.—See DRESS, 5; BONNET, HEADTIRE, MITRE.

TURPENTINE TREE.—In Sir 24[16] AV has this for **terebinth** (q.v.), as in RV, RSV.

TURTLE DOVE.—See DOVE.

TUSK.—Ezk 27[15] RSV, for AV and RV 'horn (of ivory).'

TUTOR.—See SCHOOL.

TWELVE.—See NUMBER, 7.

TWIN BROTHERS.—See DIOSCURI.

TWO.—See NUMBER, 7.

TYCHICUS.—A native of the province of Asia, like Trophimus, and a companion of St. Paul on the final journey to Jerusalem (Ac 20[4]). He is named as the bearer of both Ephesians and Colossians (Eph 6[21f], Col 4[7f]). According to the Pastoral Epistles, either he or Artemas was to have been sent to Crete, apparently to take Titus' place (Tit 3[12]); but he was sent to Ephesus, probably instead of to Crete (2 Ti 4[12]).

A. J. M.—J. K.

TYNDALE'S VERSION.—See ENGLISH VERSIONS, 12 ff.

TYRANNUS.—'The hall of Tyrannus' (Ac 19[9]) was a lecture room, rented by St. Paul for his preaching at Ephesus. We do not know if Tyrannus was the former or actual owner of the building or if he was a lecturer himself or if the school only bore his name. Codex Bezae (D) and a few other MSS add the words 'from the fifth to the tenth hour,' *i.e.* from 11 a.m. to 4 p.m. This was the time of the mid-day meal and of the rest taken during the worst heat of the day. 'At 1 p.m. there were probably more people sound asleep than at 1 a.m.' (*BC* iv, p. 239). The glossator may have supposed that the rent for these hours was cheapest. E. H.

TYRE.—City of the Phoenicians (q.v.) situated on the Syrian coast, originally on a rocky island (hence its name *Ṣōr* 'rock,' which has survived to this day as *Ṣûr*). It lay some 22 miles S. of **Sidon** (q.v.) and 35 miles N. of the Carmel headland. It was no doubt settled very anciently. Herodotus (*c* 450 B.C.) was told it was built 2300 years ago (ii. 44). It is mentioned in an Egyptian Papyrus of the time of Rameses II. (1301–1234 B.C.) as a city to which water has to be brought in ships and which is richer in fish than in sand. We hear of it first in the *Tell el-Amarna* letters of the time of Akhenaten (1377–1358 B.C.). Its king Abimilki, a loyal henchman of Pharaoh, complains that the king of Sidon had seized *Ushu*, the mainland suburb (later called *Palai-Tyros*, 'old Tyre,' by the Greeks). Tyre must soon have forsaken its loyalty to Egypt, for Seti I. (1317–1301 B.C.) subsequently subdued it. Under Rameses III. (1197–1165 B.C.) it was again lost.

An early predominance of Sidon over Tyre must be assumed. However, the leadership of Tyre became definitely established about the same time as that of Jerusalem over the Hebrews. In the absence of inscriptions we are heavily dependent for the history of Tyre on the OT, the Assyrian inscriptions, and materials preserved by Josephus from Menander of Ephesus, a writer who apparently drew on official Tyrian records (Jos. *c. Apion*, i. 18 and 21 [116, 155]; *Ant.* VIII. v. 3 [144]; IX. xiv. 2 [283]). Basic for the chronology is the statement that from Hiram I. to the founding of Carthage in the seventh year of king Pygmalion 155 years and 8 months had elapsed. As the founding of Carthage took place in 814 B.C., Hiram I. is to be dated 969–936 B.C., according to the king list of Menander. The date is of great importance for Hebrew chronology, as Hiram is the contemporary of David and Solomon. It is clear that Tyrians needed good relations with the Hebrews to gain strength against Sidon, and that Israel needed Tyrian neutrality in its warring with Philistines and Aramaeans. It is very doubtful whether the border of Israel ever extended to Palai-Tyros, as 2 S 24[7] seems to imply (the reference to Tyre in Jos 19[29] is probably a later addition). If the Hebrews managed to get a foothold in Phoenician territory they evidently found it expedient not to press it. Hiram, indeed, got the territory of Cabul from Solomon (1 K 9[10f]), thus safeguarding or regaining the plain of Acre, and it may well be that the Hebrews soon lost the Mount Carmel region, which they seem to have had in their hands for a while, as the territory of Asher reached the sea S. of Dor (Jos 19[26]). Hiram's power is shown by the fact that he is credited with having founded *Qart-hadast* 'New City,' predecessor of Kition, on Cyprus. He greatly enlarged the island area of Tyre by means of engineering operations, and built new temples for the chief god of the city, *Melqarth* ('king of the city') and *'Ashtart*, and set up a golden stela in the temple of *Baal-shāmēm* 'the lord of the heavens,' *i.e.* of the firmament. That he supplied the Hebrew king with the technical assistance necessary for building and equipping palaces and Temple and sold him the required lumber from the Lebanon Mountains is vividly reported in 1 Kings.

Under the divided monarchy we find Israel's king Ahab with a Tyrian princess for his queen—Jezebel, daughter of Ethbaal (887–856 B.C. according to Menander's figures). A regular covenant existed between Israel and Tyre, which the latter violated by delivering up a whole people to Edom (Am 1[9], but read *Aram* for Edom), *i.e.* deporting an entire Hebrew community. Already in the 9th cent. the Assyrian inscriptions begin to shed light on events. In 876 B.C. Ashurnaṣirpal received Tyre's tribute. Shalmaneser III. likewise collected tribute in 842 B.C. and portrayed the scene on the gates of *Balawāt*, and Adadnirari III. (809–782 B.C.) reports the same thing. Menander gives valuable information about King Elulaeus (725–690 B.C.). He again subjected Kition (which as we know from Assyrian inscriptions had been occupied by Sargon), but when Sennacherib (whose name has been corrupted to **Selampsas** in the Josephus text) came to Phoenicia the cities of Sidon, Acco, Ushu, and others deserted the Tyrian overlord. Tyre was vainly besieged for five years. Sennacherib mentions Elulaeus as *Luli* and misleadingly calls him king of Sidon. He says nothing about Tyre at all (to cover up his failure there) but reports that a whole series of cities rebelled against Tyre and submitted to him. Luli fled to Cyprus where he died. The Assyrian thus confirms Menander's report, and we see that Tyre was, indeed, holding sway over Sidon and the cities southward to Acre in this period. But Sennacherib now handed over the power to Sidon.

Tyre was, however, soon to come to the fore again after the fall of Sidon in 678 B.C. The Tyrian king conspired with the Egyptian Tirhakah, and the city underwent a five year siege by Esarhaddon. In 668 B.C. it submitted to Ashurbanipal. Tyre was involved with Pharaoh Hophra and Judah in resistance to Nebuchadrezzar in 586 B.C. and was besieged for thirteen years—a siege that ended in 572 B.C. with the surrender of its king Ithoba'al III., who was carried off to Babylon. Subsequently we hear of Tyre being ruled by 'judges.' Descendants of the exiled king of Tyre were, however, allowed to reign again by Nabonidus.

The events of Nebuchadrezzar's time are most vividly reflected in Ezk 26–28[19] 29[17–21]. The description of the Ship Tyre unrolls a remarkable picture of Tyrian wealth and far flung connexions, but it is noteworthy that the Hebrew author's horizon is limited to the Near East; he has no clear idea of the vast Tyrian colonization (see PHOENICIA).

The rising power of the Greeks spelt the end of many of the Tyrian colonies. In Carthage (*Qart-ḥadast*), however, Tyre had a daughter city that still was to play a great rôle and that preserved ties with its parent.

In the Persian era the Tyrians naturally became very valuable to the Achaemenid rulers. They assisted Cambyses in his invasion of Egypt. Later we find them aiding the Persians in the wars with Greece. That brought new prosperity and concessions to Tyre and Sidon. The Phoenicians pushed their influence far southward in the Palestinian coastal plain. We hear of Tyrian fish merchants at the gates of Jerusalem (Neh 13[16]). But after the peace of Antalcidas in 387 B.C. the Tyrians (and Sidonians) went over to the side of Persia's enemies. Artaxerxes III. Ochus destroyed Sidon *c* 350 B.C. (cf Is 23[1f], Ezk 28[20f]), whereupon Tyre surrendered. It is uncertain whether the threat against Tyre and Sidon and the districts of Philistia in Jl 4[4–8] is from this period or a later one; it reveals Phoenician traffic in Hebrew slaves, and Jewish hopes of selling Phoenicians as slaves to the Sabaeans.

In 332 B.C. Alexander the Great appeared before Tyre, which refused to admit him. A great siege followed, to which according to some scholars Zec 9[3f] refers. The city was reduced by means of assault from land and sea. Land assault was made possible by the construction of a mole leading out to the island. Originally 200 feet wide the mole has now become an isthmus half a mile wide through sanding up. But Tyre's destruction and the slaughter or enslavement of its population was not the end. It was resettled soon and again became a great city. Strabo speaks of its many storeyed houses, higher than those in Rome, and of its two harbours—the southern, Egyptian one then being open and the northern one a closed harbour. We learn in an inscription of an era of Tyre that began 274–273 B.C. It became Seleucid possession in 198 B.C., but gained autonomy in 126 B.C. This was confirmed by Pompey in 65 B.C. Tyrian territory in the time of Christ extended to Kedesh in Galilee; hence Jesus did not have to go very far toward the city of Tyre to be in its sphere (Mk 3[8] 7[24–31], Lk 10[13]). Tyre (and Sidon) suffered from the anger of Herod Agrippa I. and sent an ambassador to pacify him (Ac 12[20]). There was a Christian church at Tyre, which Paul visited (Ac 21[3f]). Its Jewish or proselyte origin seems likely as there had been Jews there for centuries (see Ps 87[4]).

In subsequent centuries when heathenism was persecuted, a Christian Church was built on the site of the old temple of the god Melqarth. Origen died at Tyre in A.D. 254. Jerome (4th cent.) speaks of it as 'the most noble and beautiful city of Phoenicia.' It fell a prey to the Islamic conquest in A.D. 638, but was taken by the Crusaders in A.D. 1124. It produced a crusader-historian, William of Tyre. In A.D. 1291 the Crusaders gave up Tyre, where the evidences of their fortifications and other structures are still to be seen. These later buildings make excavation of Phoenician Tyre virtually impossible. Exploratory soundings carried on by Renan in 1860 and more recently by Lasseur (1921) have not produced any finds antedating 600 B.C. Poidebard's explorations rediscovered the mole of the Egyptian harbour in 1934, thus confirming Arrian's report that it was a closed one in Alexander's time. By Strabo's time it had evidently sanded up and so one must imagine the beach scene of Ac 21[5] as taking place on the one formed by Alexander's mole. E. G. K.

TYRUS.—Form of the name Tyre (q.v.) often found in AV.

TZADE or ṢADHE.—Eighteenth letter of Hebrew alphabet, and so used to introduce the eighteenth part of Ps 119, every verse of which begins with this letter.

U

UCAL.—See ITHIEL, 2.

UEL.—One of the sons of Bani who had married a foreign wife, Ezr 10[34]; called **Joel** in 1 Es 9[34] (AV, RV **Juel**).

UGARIT.—See RAS SHAMRA.

UKNAZ.—In 1 Ch 4[15] AVm gives 'Uknaz' instead of 'even Kenaz' (AV) or 'and Kenaz' (RV). In all probability something has dropped out of the text, which had originally read 'the sons of Elah: . . . and Kenaz.' This is favoured by the plural 'sons.' RSV reads simply 'Kenaz.'

ULAI.—A large river of Elam, emptying into the Persian Gulf. According to Dn 8[2, 16] and the Assyrian inscriptions, it flowed past the city of Shushan (Susa). It is modern *Kārûn* which, however, does not now flow close to the site of Susa, but to the E. of it. Cf also HYDASPES.

ULAM.—**1.** A Manassite family, 1 Ch 7[16f]. **2.** A Benjamite family, specially noted as archers, 1 Ch 8[39f]; cf also 2 Ch 14[8].

ULCER.—Found in RSV in Dt 28[27] for AV and RV 'emerods,' RVm 'tumour' or 'plague boils.' The Hebrew has the word translated 'tumour' in 1 S 5[6]. See MEDICINE.

ULLA.—An Asherite family, 1 Ch 7[39].

UMMAH.—An Asherite city, Jos 19[30]; we should probably read with some Greek MSS **Acco**. See PTOLEMAIS.

UMPIRE.—See DAYSMAN.

UNCHASTITY.—See MARRIAGE, **7, 8.**

UNCLE.—Hebrew *dôdh* is frequently translated 'uncle' in EV (*e.g.* Lv 10[4] 25[49], 1 S 10[14ff], Est 2[7]), and occasionally more specifically as 'father's brother' (Nu 36[10]; also 2 K 24[17] AV and RV). Sometimes it may perhaps be used more widely of a 'kinsman' (so RVm and RSV in Am 6[10]; AV, RV 'uncle'). In Ca 1[13] and often it is used of the Shulammite's 'beloved.'

UNCLEAN, UNCLEANLINESS.—See CLEAN AND UNCLEAN.

UNCLEAN SPIRITS.—See DEMONS, POSSESSION.

UNCTION.—The same Greek word as that translated 'anointing' in 1 Jn 2[27] is in 2[20] rendered 'unction' (RV and RSV 'anointing'). It is used there metaphorically of the effect of the presence of the Holy Spirit upon the believer.

UNDERGIRDING.—See HELPS; SHIPS, **2** (2).

UNDERSETTER.—Only in 1 K 7[30, 34] (AV, RV), in the difficult description of Solomon's lavers (cf TEMPLE, **6** (*d*)). In older English it meant 'support' (so RSV); the Hebrew word is literally 'shoulders,' and denotes something of the nature of a strut or brace.

UNDERTAKE.—In AV of Is 38[14] 'undertake' has the meaning 'be surety for' (so R4; cf RSV).

UNICORN.—Hebrew *rᵉ'ēm*, Nu 23[22], Dt 33[17], Ps 22[21] etc.; *rêm*, Job 39[9f]; RV and RSV **wild ox** in all passages. This animal is undoubtedly the *rīmu* of the Assyrians,

often figured on their sculptures. A fine bas-relief of this animal was uncovered by the excavations of Nineveh. It is probably identical with the aurochs or *Bos primigenius*, the *urus* of Julius Caesar. It was of great size and strength (Nu 23^{22} 24^{8}, Ps 22^{21}), very wild and ferocious (Job 39^{9-12}), and especially dangerous when hunted, because of its powerful double horns (Ps 92^{10}, Dt 33^{17}). In connexion with Is 34^{7} it is interesting to note the inscription of Shalmaneser II., who says 'His land I trod down like a *rimu*.' The Arabic *ri'm*, the graceful *Antilope leucoryx* of Arabia is a very different animal.

E. W. G. M.

UNKNOWN GOD.—St. Paul walking along the streets of Athens, saw an altar bearing the dedication, 'To an unknown god' (Ac 17^{23}). He used this as the text of his sermon before the Areopagus. Ancient writers refer to the existence of such dedications (Pausanias, I. i. 4; v. xiv. 8, and see the illustration in Deissmann's *Paul*), although an exact parallel to this inscription in the singular is not known. To Paul, however, the point of the inscription lay in its singular usage, for it pointed to the One God of the OT whom he proclaimed.

A. So.—J. C. B.

UNLEAVENED BREAD.—See BREAD, LEAVEN, PASSOVER.

UNNI.—**1.** A Levitical family, 1 Ch $15^{18, 20}$. **2.** See UNNO.

UNNO.—A family of Levites that returned with Zerubbabel, Neh 12^{9} (so RV, RSV with *Kᵉthîbh*; AV **Unni** with *Ḳᵉrê*).

UNTOWARD.—'Untoward' is 'not toward,' *i.e.* not well disposed. It occurs in AV in Ac 2^{40} 'this untoward generation' (RV, RSV 'crooked'). Cf 'untoward to all good . . . forward to evil'—*Judgement of the Synode at Dort*, p. 32. The substitute 'untowardness' occurs in the AV heading of Is 28, Hos 6. The word is still occasionally used, but in the more modern sense of 'unfortunate'—as an 'untoward accident.'

UNWRITTEN SAYINGS.—See AGRAPHA.

UPHARSIN.—See MENE MENE TEKEL AND PARSIN.

UPHAZ.—A supposed country or region mentioned in Jer 10^{9}, Dn 10^{5}, as a source of gold. Probably the word is miswritten for **Ophir** (q.v.).

UPPER GATE.—An unidentified gate of the Temple built by Jotham, 2 K 15^{35} (AV 'higher gate'), 2 Ch 27^{3} (AV 'high gate'). It is possibly the same as the 'upper Benjamin gate' of Jer 20^{2} (AV 'high gate of Benjamin').

UPPER ROOM.—See HOUSE.

UR.—Father of one of David's heroes, 1 Ch 11^{35}.

UR OF THE CHALDEES, whence Abraham set out upon his journey to Canaan (Gn 11^{28-31} 15^{7}, Neh 9^{7}), is usually identified with the well-known city of *Uri* in southern Babylonia, the site of which is marked by the mounds of Muqayyar. Literary and non-literary remains on the site testify to high civilization and international trade. Excavation has shown that the city was in existence early in the 3rd millennium B.C., and became the seat of kings of three Dynasties, under whom arts and crafts attained a very high standard. The chief gods were the moon-god Nanna, *i.e.* Sin, and his consort Nin-gal. Samsu-iluna, son of Hammurabi, razed the walls and burnt the city which had rebelled against the rule of Babylon. Five hundred years later, Kurigalzu, a Kassite ruler, rebuilt local shrines. The last royal builder was Cyrus, king of Anshan and conqueror of Babylon. The latest tablets found *in situ* are of the 5th cent. B.C.

L. W. K.—T. F.

URBANE, Ro 16^{9} (AV).—See URBANUS.

URBANUS.—A Christian greeted by St. Paul in Ro 16^{9} (AV **Urbane**). The name is found several times in inscriptions, including some referring to members of the Imperial household at Rome.

J. L.

URI.—**1.** The father of Bezalel, Ex 31^{2} 35^{30} 38^{22}, 1 Ch 2^{20}, 2 Ch 1^{5}. **2.** Father of Geber, 1 K 4^{19}. **3.** A porter, Ezr 10^{24}.

URIAH.—**1.** One of David's 30 heroes, the husband of Bathsheba. He was a Hittite but, as the name indicates, doubtless a worshipper of Yahweh, 2 S 11, $12^{9f., 15}$, 1 K 15^{5}, Mt 1^{6} (AV here **Urias**). After David's ineffectual attempt to use him for a shield for his own sin, he was killed in battle in accordance with the instructions of David to Joab. **2.** High priest in the reign of Ahaz; called 'a reliable witness' in Is 8^{2}, but subservient to the innovations of Ahaz in 2 K 16^{10-16} (here called **Urijah**). The omission of the name in 1 Ch 6^{4-15} may be due to textual corruption, since it appears in Jos. *Ant.* x. viii. 6 [153], which is based on Chronicles. **3.** A prophet, son of Shemaiah of Kiriath-jearim. His denunciations of Jerusalem and Judah in the style of Jeremiah aroused the wrath of king Jehoiakim. Uriah fled to Egypt, was seized and slain by order of Jehoiakim, and was buried in the common graveyard, Jer 26^{20-23} (AV **Urijah**). **4.** A priest, the son of Hakkoz, Neh $3^{4, 21}$ (AV **Urijah**). He was the father (or ancestor) of Meremoth, an eminent priest, Ezr 8^{33}, 1 Es 8^{62} (AV **Iri**, RV **Urias**). **5.** A man who stood on the right hand of Ezra when he read the Law, Neh 8^{4} (AV **Urijah**), 1 Es 9^{43} (AV, RV **Urias**).

URIAS.—**1.** Mt 1^{6} (AV); see URIAH, **1.** **2.** 1 Es 8^{62} (RV); see URIAH, **4.** **3.** 1 Es 9^{43} (AV, RV); see URIAH, **5.**

URIEL ('El is my light').—**1.** A Kohathite, 1 Ch 6^{24} $15^{5, 11}$. **2.** Father of one of Rehoboam's wives, 2 Ch 13^{2}. **3.** The angel mentioned in 2 Es 4^{1} 5^{20ff} 10^{28} as coming to Salathiel (=Ezra) and rebuking his questioning of God's way by propounding various unanswerable questions. In 1 En 9^{1}, under the form Urjan, Uriel is the fourth of the four archangels, although 40^{9} and ch. 71 have Phanuel. It is possible that the **Jeremiel** of 2 Es 4^{36} is also to be equated with Uriel. In 1 En 19^{1} 20^{2} Uriel is one of the holy watchers; because of his connexion with fire, he is 'the angel over the world and Tartarus.' In the latter capacity he explains to Enoch the fate of the fallen stars and angels, 1 En 21, and the accursed, ch. 27 (and see *Sib. Orac.* ii. 228). A more auspicious function is to explain the names and movements of the stars, $33^{3f.}$, and the luminaries, ch. 72 ff. In later literature Uriel is the angel who helps to bury Adam and Abel in Paradise, and wrestles with Jacob.

C. C. Ro.

URIJAH.—**1.** See URIAH, **2.** **2.** Jer 26^{20-23} (AV); see URIAH, **3.** **3.** Neh $3^{4, 21}$ (AV); see URIAH, **4.** **4.** Neh 8^{4} (AV); see URIAH, **5.**

URIM AND THUMMIM.—These denote the two essential parts of the sacred oracle by which in early times, the Hebrews sought to ascertain the will of God. The RVm (Ex 28^{30}) renders 'the Lights and the Perfections' thus reflecting the view of the late Jewish scholars to whom we owe the present vocalization of the OT text. In this instance the LXX renders by *tēn dēlōsin kai tēn alētheian*, but the Versions offer little help. The LXX varies in its rendering for Urim translating it by *dēlōsis* (manifestation), *dēloi* (*sc. lithoi*) (clear stones), *phōtizō* (to illumine or give light) (Ezr-Neh). Aquila, Symmachus and Theodotion render variously by *phōtismos*, *didachē*. Thummim in the LXX appears as *alētheia*, *hosiotēs*, *teleia*, while Symmachus and Theodotion give *teleiotētes*. OL and Jerome translate Urim by *doctrina*, *demonstratio*, *ostensio*, *doctus*, and for Thummim they give variously, *veritas*, *perfectio*, *sanctitas*, *perfectus*, *eruditus*. The oldest references to the sacred lot suggest that the words express two sharply contrasted ideas. Hence if Thummim denotes innocence Urim should signify guilt, and this term might well seem to be connected with *'ārar* (to curse). Winckler and his followers, however, start from 'light' as the meaning of Urim and interpret Thummim as 'darkness' (the completion of the sun's course). 'Urim and Thummim are life and death, yes and no, light and darkness' (Jeremias, *Das AT im Lichte des alt. Orients*, p. 450, Benzinger, *Heb. Arch.*^{3}, pp. 344 f). Muss-Arnolt (*JE* XII, 384–386) would associate Urim with the Assyrian *u'uru* (pi'el infinitive of *a'aru*) meaning 'to send forth' (an edict) from which

root we have the forms *urtu* and *ertu*=a divine decision. Thummim he would derive from the Assyrian *tamu* (pi'el form *tummu*) with the noun form *tamatu*=an oracle. The two terms might thus constitute a hendiadys, as Engnell suggests (*SBU*, ii, col. 1517). This suggestion might find some support in the LXX renderings of *dēlōsis* and *alētheia* or *didachē* (Aquila, Symmachus, Theodotion) and the Latin variants *doctrina, demonstratio, ostensio* (OL and Jerome).

However obscure the meaning of the terms may be it seems clear that here we are dealing with something that was taken over from the pre-Mosaic period. Lindblom would associate it with the Kenites (*Israels Religion i G.T. tid*, p. 61) while Eichrodt holds it to have originated with the priests of Kadesh, and to have been a survival which disappeared after the institution of the monarchy (*Theology of OT*, 1961, 113 ff). According to Rabbinical tradition Urim and Thummim belong to the five things that disappeared at the time of the Exile (*Sotah* 48b, *Yoma* 21b, Jer. Talm., *Kidd.* 65b). Later references (Sir 23[3] 45[10], Josephus, *Ant.* III. viii. 9 [215 f], and Talmud, *Berak.* 17a) prove that no real or reliable tradition survived on the subject. References in Neh 7[65] Ezr 2[63] and 1 Es 5[40] show that Urim and Thummim were not in use in the post-exilic period. The occurrence of 'Ortom' in the Dead Sea Scrolls (1 QH iv. 6, 23 ; xviii. 29) is simply 'a play on the Biblical Urim and Thummim' (Gaster) and 'has nothing to do with the Urim and Thummim' (Nötscher, *Zur theol. Terminologie der Qumrân-texte*, 93).

The most instructive, as it is historically the oldest, passage dealing with Urim and Thummim is 1 S 14[41f] : the text is that of the LXX (confirmed by the Dead Sea Scrolls) and given by the RSV. 'Therefore, Saul said, O Lord God of Israel, why hast thou not answered thy servant this day? If this guilt is in me or in Jonathan my son, O Lord God of Israel, give Urim : but if this guilt is in thy people Israel give Thummim. And Jonathan and Saul were taken, but the people escaped.' A comparison of this passage with several others in the narratives of Samuel, *e.g.* 1 S 23[3f] 30[7f], 2 S 2[1], where mention is made of 'enquiring of the Lord' the following facts emerge : (1) The Urim and Thummim were two lots closely connected, in some fashion no longer intelligible to us, with the equally mysterious ephod (see EPHOD). (2) As there were only two lots only one question at a time might be put and the question was answered affirmatively or negatively according to the fashion in which 'the lot came out.' (3) To simplify matters in a complicated case, as in 1 S 14[41], it was necessary to decide beforehand the significance to be attached to the two lots. The Mishnah informs us in addition that 'they were not inquired of for a common person but only for a king, for the court, or for one of whom the congregation had need' (*Yoma* vii. 5).

As to the material, shape, etc., of the two lots and the method of manipulation we are left to conjecture. Oesterley and Robinson suggest that they were probably 'flat stones, white on one side, black on the other. If both fell white side upwards the answer was in the affirmative, if black side upwards then negative. If they differed no reply was vouchsafed to the question' (*Heb. Rel.*[2], p. 166 ; cf 1 S 28[6]). It has been suggested with less probability (Kautzsch *PRE*[3] xx, 328–336) that they were arrows and were used as in Babylonian rituals of divination (Ezk 21[21]). Were they contained within the hollow ephod-image which was provided with a narrow aperture so that it was possible to shake the image and yet neither lot 'come out'? To 'come out' or 'fall' seems here to be used in a technical sense (cf Jos 16[1] 19[1]). The early narratives show that the operation of the sacred lot was a special prerogative of the priests, as is expressly stated in Dt 33[8] (RSV) where the Urim and Thummim are assigned to the priestly tribe of Levi ; this is confirmed in Ezr 2[63]=Neh 7[65].

In the P document the Urim and Thummim are introduced in Ex 28[30], Lv 8[8], Nu 27[21] without any clue as to their nature beyond the inference as to their small size ; this inference may be drawn from the fact that they were to be inserted in the high priest's 'breastpiece of judgment.' But this seems merely to be an attempt on the part of P to divest these old-world mysteries of their association with ideas of divination now outgrown and forbidden by the Law. In placing them within 'the breastpiece of judgment' it is not impossible that the later writer was influenced by the analogy of the Babylonian tablets of destiny worn by Marduk on his breast. The analogy, as Muss-Arnolt points out, is close but not complete. No reference to Urim and Thummim is found in the Râs Shamra (q.v.) tablets but Virolleaud has suggested that the ephod was used in that ritual (*Syria*, 1934, pp. 318 f). This interpretation, however, is open to question and G. R. Driver renders the term, which occurs in B*I i. 5, by the general term 'robe' (*Canaanite Myths and Legends*, p. 103).

A. R. S. K.—J. Pn.

USURY, INTEREST, INCREASE.—At the date of our AV 'usury' had not acquired its modern connotation of exorbitant interest ; hence it should be replaced in OT by 'interest,' as in RSV, and as the English Revisers have done in NT. The OT law-codes forbid the taking of interest on loans by one Hebrew from another, see Ex 22[25] (Book of the Covenant), Dt 23[19f], Lv 25[35–38] (Law of Holiness). Of the two terms constantly associated and in EV rendered 'usury' (*neshekh*) and 'increase' (*tarbîth*), the former, to judge from Lv 25[37], denotes interest on loans of money, the latter interest on other advances, such as food stuffs, seed-corn, and the like, which was paid in kind. In Dt 23[20] *neshekh* is applied to both kinds of loan. For the distinction in, *e.g.*, the laws of Eshnunna (*c* 2000 B.C.), see *ANET*, p. 162, §§ 20, 21 ; and in NT times, see Mishnah, *Baba Metzia* v. 1.

To appreciate the motives of the Hebrew legislators, it must be remembered that, until a late period in their history, the Hebrews were almost entirely devoted to agricultural and pastoral pursuits. The loans here contemplated are therefore not advances required for trading capital, but for the relief of a poor 'brother' temporarily in distress, who would otherwise be compelled to sell himself as a slave (Lv 25[47ff]). We have to do with an act of charity, not with a commercial transaction. In similar circumstances loans without interest were made from the Babylonian temple funds and by private individuals, as is still done by the Arabs (Doughty, *Arabia Deserta*, i, 318).

In NT times conditions had greatly changed, and capital was required for many trading concerns. Our Lord twice refers, in parables, to the investment of money with 'the bankers,' so as to yield a proper 'interest' (Mt 25[27], Lk 19[23], both RSV). The rate of interest in Israel is unknown ; in the ancient world generally it was very high. In Babylon a loan system was fully developed before 1700 B.C. : where the loan was of grain or provisions, it was one third ; where of money, it was one fifth. This is confirmed by fragments of the Code of Hammurabi (*ANET*, pp. 168–170, especially §§ 88 ff). See also some examples of the law in operation *ANET*, p. 217 C(3), p. 218 D(2), p. 221 I(3). In the Nuzi documents, interest is as high as a half of the capital.

The papyri from Elephantine in Egypt show members of the Jewish colony there already engaged in the characteristically Jewish business of money-lending (*c* 430 B.C.). Tablets of the business house of Murashu Sons at Nippur (455–403 B.C.) show that Jews did business with this firm, but it is not certain, as some think, that Murashu and his sons were themselves Jewish bankers (see *Documents from OT Times*, ed. D. Winton Thomas, pp. 95 f). For the question of guarantees and surety on loans, see DEBT and TRADE AND COMMERCE, 9.

A. R. S. K.—D. R. J.

UTA (1 Es 5[30] AV, RV).—See UTHAI, 3.

UTENSILS.—See HOUSE, 9.

UTHAI.—**1.** A family of Judah after the Captivity, 1 Ch 9[4]. **2.** One of the sons of Bigvai, Ezr 8[14], 1 Es 8[40]

(AV, RV **Uthi**). **3.** One whose sons returned under Zerubbabel, 1 Es 5[30] (AV, RV **Uta**). Ezra and Nehemiah omit.

UTHI, 1 Es 8[40] (AV, RV).—See UTHAI, **2.**

UZ.—1. A son of Aram, grandson of Shem (Gn 10[23] and 1 Ch 1[17] [in emended text]). **2.** A son of Nahor Gn 22[21], AV **Huz**), whose descendants are placed in Aram-naharaim (Gn 24[10]). **3.** One of the Horites in the land of Edom (Gn 36[28] [v.[21] and v.[30]], 1 Ch 1[42]). **4.** A region which is called the dwelling-place of the daughter of Edom (La 4[21]). **5.** A district containing a number of kings, situated between Philistia and Egypt, or, with a different pointing of the consonants of one word, between Philistia and the country of the Bedouin (Jer 25[20]: the name is not in LXX). **6. Job's** country (Job 1[1]). As the first three are probably tribal designations, all may be regarded as geographical terms. It is not certain that they all refer to the same region. Nos. **1** and **2** seem to point to Mesopotamia. Nos. **3** and **4,** and perhaps **5,** indicate Edom or its neighbourhood. The locality of No. **6** is obscure. Ancient tradition is threefold. In LXX of Job 42[19], Uz is affirmed, on the authority of 'the Syriac book,' to lie on the borders of Idumaea and Arabia. In v.[23] it is located on the borders of the Euphrates. Josephus (*Ant.* I. vi. 4 [145]) associates the *Uz* of No. **1** with Damascus and Trachonitis. The evidence of the Book of Job itself about its hero's home seems to favour the neighbourhood of Edom or N. Arabia. *Teman* (2[11]) was an Edomite district containing the city of Bozrah (Am 1[12]), and *Eliphaz* was an Edomite name (Gn 36[4]). The *Sabaeans* (Job 1[15] 6[19]) were a S. Arabian people who had settlements in the north. *Tema* (6[19]) lay in N. Arabia about 250 miles SE. of Edom. The description of Job, however, as one of 'the children of the East' (1[3]) is most naturally understood to refer to the E. of Palestine. The cuneiform inscriptions have a name *Uzzai,* which has been identified with *Uz,* but the identification is extremely uncertain.

Modern tradition, which can be traced back to early Christian times, locates Job in the Ḥauran, where the German explorer J. G. Wetzstein found a monastery of Job, a tomb and fountain and stone of Job, and small round stones called 'worms of Job.' Another German explorer, Glaser, finds *Uz* in W. Arabia, at a considerable distance to the NW. of Medina. Decision at present is unattainable, both on the general question of the signification of *Uz* in OT and on the special question of its meaning in the Book of Job. All that can be said is that the name points to the E. and SE. of Palestine, and that the Book of Job appears to represent its hero as living in the neighbourhood of the Arabian or Syro-Arabian desert. W. T. S.

UZAI.—Father of Palal, Neh 3[25].

UZAL.—1. Gn 10[27], 1 Ch 1[21]. One of the sons of Joktan. The two sons of Eber, Peleg and Joktan, represent the two main divisions of the Semitic-speaking peoples, viz. the Aramaeans and the Arabs. The sons of Joktan are thirteen in the MT, but twelve in the LXX, which is probably the original number, intended to correspond with the twelve tribes of Israel. **2.** Ezk 27[19], where, instead of 'Vedan and Javan traded with yarn,' we should read, 'and wine from Uzal' (RSV). Here Uzal is one of the places with which Tyre traded. It has been identified with *Ṣan'ā,* the capital of Yemen. 'Bright' or 'wrought' iron is mentioned as one of the exports of Uzal, and *Ṣan'ā* is still noted for its steel. It should, however, be noted that in Ashurbanipal's account of his expedition against the Nabataeans three places are mentioned together, Hurarina, Yarki, and Azalla, whose names bear a remarkable resemblance to Hadoram, Jerah, and Uzal. If Azallu is the same as Uzal, the latter would not lie as far S. as Yemen, but might be in the neighbourhood of Medina. S. H. He.

UZZA.—1. A Benjamite family, 1 Ch 8[7]. **2.** A family of Temple servants, Ezr 2[49], Neh 7[51], 1 Es 5[31] (AV **Azia,** RV **Ozias**). **3.** 1 Ch 13[7, 9ff]; see UZZAH. **4.** A 'garden of Uzza' was attached to the palace of Manasseh, and in it Manasseh was buried, 2 K 21[18, 26].

UZZAH.—The driver of the cart on which the Ark was removed from Kiriath-jearim, 2 S 6[3, 6ff]; he is called Uzza in 1 Ch 13[7, 9ff]. His sudden death led to the temporary abandonment of David's project of transferring the Ark to Jerusalem, and the place of Uzzah's death was called **Perez-uzzah.** In the popular mind Uzzah's death was attributed to Y"'s anger at his presumption in handling the sacred emblem.

UZZEN-SHEERAH.—A place mentioned only in 1 Ch 7[24] (AV **Uzzen-sherah**); possibly modern *Beit Sirā,* W. of Beth-horon.

UZZEN-SHERAH, 1 Ch 7[24] (AV).—See UZZEN-SHEERAH.

UZZI.—1. A descendant of Aaron, 1 Ch 6[51, 51], Ezr 7[4], 1 Es 8[2] (AV **Ezias,** RV **Ozias**). In 1 Es 8[2] AV and RV add 'the son of Meremoth, the son of Zaraias, the son of Sarias,' which RSV, following LXX[B] omits (see RVm). **2.** A family of Issachar, 1 Ch 7[2f]. **3.** A Benjamite family, 1 Ch 7[7] 9[8]. **4.** A Levite overseer, Neh 11[22]. **5.** A priestly family, Neh 12[19, 42]. **6.** Father of Arna and an ancestor of Ezra, 2 Es 1[2] (AV, RV **Ozias**).

UZZIA.—One of David's heroes, 1 Ch 11[44].

UZZIAH.—1. A king of Judah. See next article. **2.** A Kohathite Levite, 1 Ch 6[24]; called **Azariah** in v.[36]. **3.** The father of an officer of David, 1 Ch 27[25]. **4.** A priest who had married a foreign wife, Ezr 10[21]; in 1 Es 9[21] he is called **Azariah** (AV, RV **Azarias**). **5.** A Judahite, Neh 11[4]. **6.** The son of Micah, Jth 6[15] 7[23] 8[10, 28, 35] 10[6] (AV, RV **Ozias**).

UZZIAH, also called **AZARIAH,** was king of Judah *c* 783–742 B.C., succeeding his father Amaziah as a lad of sixteen. Rather strangely the Book of Kings has little to say about him (2 K 15[1–7]), but his reign is quite fully treated in 2 Ch 26[1–23], and the account there can be taken as historical in the main, as verified by archaeology. In his reign Judah reached the height of its power and prosperity. He reorganized the army, and is credited with the introduction of the siege engine into Judah. The walls of Jerusalem were rebuilt and provided with towers. He conquered the northern and eastern part of the Philistine plain, thus gaining control over the important caravan routes there. He rebuilt Elath at the head of the Gulf of 'Aqaba and campaigned in Arabia to give him control of the land and sea routes to and from Arabia and the East. The revival in commerce that resulted helps to explain the prosperity of his reign, which was also furthered by his great interest in agriculture and the raising of live stock. He constructed cisterns throughout the country to collect the winter rains for irrigating the soil. Watch-towers were also built to give protection to the population on the land, for he was a patron of agriculture and a lover of the soil (2 Ch 26[10]). Politically Tiglath-pileser III. of Assyria regarded him as the head of the anti-Assyrian faction in the west. In any case, when Syria and Israel were in a more or less continuous state of internecine warfare, Judah was stable and prosperous, and was a leader in the west. It used to be thought, and still is by some, that the Azariah of Judah mentioned by Tiglath-pileser in one of his inscriptions refers to a prince in Northern Syria, but it is most unlikely that there would be an Azariah of Judah in the north and another at the same time in southern Palestine. Toward the end of his life, *c* 750 B.C., Azariah was stricken with leprosy, and his son Jotham became regent, but Azariah remained the power behind the throne until his death *c* 742 B.C. T. J. M.

UZZIEL ('El is my strength').—**1.** A son of Kohath, Ex 6[18, 22], Lv 10[4], Nu 3[19, 30], 1 Ch 6[2, 18] 15[10] 23[12, 20] 24[24]; the gentilic **Uzzielites** occurs in Nu 3[27], 1 Ch 26[23]. **2.** A Simeonite, 1 Ch 4[42]. **3.** Founder of a Benjamite family, 1 Ch 7[7]. **4.** A musician of the sons of Heman, 1 Ch 25[4]; called **Azarel** in v.[18]. **5.** A Levite, of the sons of Jeduthun, 2 Ch 29[14]. **6.** A goldsmith who aided in repairing the walls, Neh 3[8].

V

VAGABOND.—In AV in Gn 4^{12} 'a fugitive and a vagabond shalt thou be,' *i.e.* a wanderer (so RV, RSV). So in Ps 109^{10} AV and RV 'Let his children be continually vagabonds' (RSV 'wander about'). Similarly in Ac 19^{13} AV 'certain of the vagabond Jews' (RV 'strolling,' RSV 'itinerant'). In all these places the word is used in its older and literal meaning (from Lat. *vagari*, to wander). RSV has 'vagabond' only in Pr 6^{11} 'poverty will come upon you like a vagabond' (AV 'as one that travelleth,' RV 'as a robber,' RVm 'rover').

VAHEB, Nu 21^{14} (RV).—See WAHEB.

VAIL, VEIL.—In AV this word is spelled 'vail' and 'veil'; in RV and RSV uniformly 'veil' (q.v.).

VAIZATHA.—Tenth son of Haman, put to death by the Jews, Est 9^{9} (AV Vajezatha).

VAJEZATHA, Est 9^{9} (AV).—See VAIZATHA.

VALE, VALLEY.—'Vale' is found in AV as the translation of two Hebrew words *'ēmeḳ* and *shᵉphēlāh*; 'valley' represents five Hebrew words, *biḳʿāh*, *gay'*, *naḥal*, *'ēmeḳ*, *shᵉphēlāh* and the Greek *phara*[*n*]*gx*. For *shᵉphēlāh* (a low-lying tract of ground) and *biḳʿāh* (a broad plain) see article PLAIN, and for *naḥal* (wady) see BROOK.

1. The word *gay'* (AV and RV always 'valley') refers to a narrow gorge, a *glen* or *ravine*. A considerable number of such are named in the OT, *e.g.* the valley of Hinnom, beside Jerusalem; of Iphtah-el, between Zebulun and Asher; of Zeboim, SE. of Gibeah; of Salt, etc., while several other valleys are mentioned without a special name being attached to them.

The reference in Ps 23^{4} to the 'valley of the shadow of death' may be simply figurative of a place of peril and loneliness, or, as Gunkel holds, the place through which the ancient Hebrew supposed the soul had to pass on the way to the underworld.

In the Apocrypha, 'valley' is the translation of *phara*[*n*]*gx* and *aulōn*, the former appearing in the NT (Lk 3^{5}).

2. The word *'ēmeḳ* (generally translated 'valley' but 'vale' in AV of Gn 14$^{3, 8, 10}$ 37^{14} and also in RV of Gn 14^{17}, Jos 8^{13} 15^{8} 18^{16}, 1 S 17$^{2, 19}$ 21^{9}; in RSV only of the Vale of Succoth, Ps 60^{6} 108^{7}) means literally *depression*, and is 'a highlander's word for a valley as he looks *down* into it, and is applied to wide avenues running up into a mountainous country like the Vale of Elah, the Vale of Hebron, and the Vale of Aijalon' (*HGHL* 384). Thus the *'ēmeḳ* is broader than a *gay'* and not so broad or extensive as a *biḳʿāh* (plain). A considerable number of vales are mentioned in the OT, *e.g.* of Siddim, of Shaveh, of Hebron, of Achor, of Aijalon, etc.

Other vales are mentioned without special names being attached to them. The fertility of the vale (1 S 6^{13}, Is 17^{5}) and its suitability for cavalry operations (*e.g.* Jos 17^{16}, Jg 1$^{19, 34}$ etc.) are frequently referred to.

W. F. B.

VALLEY GATE.—See JERUSALEM, GATES OF.

VAMPIRE, Pr 30^{15} (RVm).—See LEECH.

VANIAH.—One of the sons of Bani, who had married a foreign wife, Ezr 10^{36}, 1 Es 9^{34} (AV, RV Anos).

VANITY.—The root-idea of the word is 'emptiness.' Skeat suggests that the Latin *vanus* (perhaps for *vac-nus*) is allied to *vacuus* 'empty.' In English literature 'vanity' signifies (1) emptiness, (2) falsity, (3) vainglory. The modern tendency is to confine its use to the last meaning. But 'vanity' in the sense of 'empty conceit' is not found in the English Bible.

1. In the OT.—(1) 'Vanity' is most frequently the translation of *hebhel*, 'breath' or 'vapour.' The RV rightly gives the literal rendering in Is 57^{13}: 'a breath (AV 'vanity') shall carry them all away' (cf RSV). The word naturally became an image of what is unsubstantial and transitory; In Ps 144^{4} man is said to be 'like a breath' (RVm, RSV), because 'his days are like a passing shadow.' In Ecclesiastes 'vanity' often occurs; it connotes what is fleeting, unsatisfying and profitless. 'Vanity of vanities' (1^{2} 12^{8}) is the superlative expression of the idea of the futility of life. Jeremiah regards idols as 'vanity' because they are 'a work of delusion' (10^{15}), 'lies and things wherein there is no profit' (16^{19}). (2) Another Hebrew word (*'āwen*) whose root-meaning is 'breath' or 'nothingness,' is twice rendered 'vanity' in the RV and is applied to idols (Is 41^{29} [RSV 'delusion'], Zec 10^{2} [RSV 'nonsense']). But *'āwen* generally describes moral evil as what is naughty and worthless; the RV therefore substitutes 'iniquity' for 'vanity' in Job 15^{35} [RSV 'evil'], Ps 10^{7} [so RSV]; cf Is 58^{9}. (3) More frequently, however, 'vanity' is the translation of *shaw'*, which also signifies 'what is naught.' In the OT it is used to set forth vanity as that which is hollow, unreal, and false. In Ps 41^{6} RVm 'he speaketh falsehood' is preferable; but the AV 'he speaketh vanity' [RSV 'utters empty words'] exemplifies the close connexion between vain or empty words and lies (cf Ps 12^{2} 144^{8}, Job 35^{13}, Pr 30^{8}, Ezk 13^{8} 22^{28}). (4) 'Vanity' occurs twice as the rendering of *rîḳ* 'emptiness,' and refers to what is destined to end in failure (Ps 4^{2} [RSV 'vain words'], Hab 2^{13} [RSV 'naught']). (5) In the RV it is used for *tōhū* 'waste,' but the marginal alternative in all passages but one (Is 59^{4}) is 'confusion' (Is 40^{17} [RSV 'nothing'], ^{23} [RSV 'emptiness'] 44^{9} [RSV 'nothing']).

2. In the NT.—'Vain' is the rendering of (*a*) *kenos* 'empty,' (*b*) *mataios* 'worthless.' When the former word is used, stress is laid on the absence of good, especially in essential qualities. The true thought is suggested by the RVm 'void' in 1 Co 15$^{10, 14, 58}$. A partial exception is Ja 2^{20}—a rare example of the absolute use of the word [RSV 'foolish fellow']. The 'vain man' is not only 'one in whom the higher wisdom has found no entrance,' but he is also 'one who is puffed up with a vain conceit of his own spiritual insight' (Trench, *NT Synonyms*, p. 181). Even here the primary negative force of the word is clearly discernible; the man's conceit is 'vain,' that is to say, his conception of himself is devoid of real content. He is a 'man who cannot be depended on, whose deeds do not correspond to his words' (Mayor, *Com. in loc.*). *Kenos* is the word rendered 'vain' in the NT, except in the passages cited in the next paragraph.

When 'vain' is the translation of *mataios*, as in EV in Ja 1^{26} and AV and RV [RSV 'futile'] in 1 Co 3^{20} 15^{17}, Tit 3^{9}, 1 P 1^{18} (cf the adverb Mt 15^{9}, Mk 7^{7}), more than negative blame is implied. 'By giving prominence to objectlessness it denotes what is positively to be rejected, *bad*. . . . In Biblical Greek the word is, in the strongest sense, the expression of perfect repudiation' (Cremer, *Bib.-Theol. Lexicon of NT Greek*, pp. 418, 781). In 1 Co 15^{14} the reference (*kenos*) is to 'a hollow witness, a hollow belief,' to a gospel which is 'evacuated of all reality,' and to a faith which has 'no genuine content.' But in v.^{17} the reference (*mataios*) is to a faith which is 'frustrate' or 'void of result,' because it does not save from sin (cf Findlay, *EGT*, *in loc.*).

'Vanity' occurs only three times in the NT (Ro 8^{20}, Eph 4^{17} [both 'futility' in RSV], 2 P 2^{18} [RSV 'folly']); it is always the translation of *mataiotēs*, which is not a

classical word, but is often found in the LXX, especially as the rendering of *hebhel* 'breath' (see above). When St. Paul describes the creation as 'subject to vanity' (Ro 8[20]), he has in mind the marring of its perfection and the frustration of its Creator's purpose by sin; nevertheless, the groanings of creation are, to his ear, the utterance of its hope of redemption. When he says that 'the Gentiles walk in the vanity of their mind' (Eph 4[17]), he is dwelling on the futility of their intellectual and moral gropings, which is the result of their walking in darkness (v.[18]). In 2 P 2[18] the intimate connexion between unreality and boastfulness in speech is well brought out in the graphic phrase, 'great swelling words of vanity.' How pitiful the contrast between the high-sounding talk of the false teachers who were themselves 'bond-servants of corruption,' and yet had the effrontery to 'promise liberty' to those whom in reality they were bringing into bondage (v.[19]). J. G. T.

VASHNI.—Samuel's firstborn son according to AV in 1 Ch 6[28] (following MT); RV and RSV follow the Syriac and one form of Greek and read 'and the second' for Vashni, and then supply **Joel** for the firstborn (cf 1 S 8[2]).

VASHTI.—The queen whom Ahasuerus repudiated, Est 1[9, 11] etc. See ESTHER, BOOK OF.

VAT.—See WINE, **2.**

VAU or **WAW.**—Sixth letter of Hebrew alphabet, and so used to introduce the sixth part of Ps 119, every verse of which begins with this letter.

VEDAN.—In RV the name of a country or city that traded with Tyre, Ezk 27[19]. AV has 'Dan also.' The passage is certainly corrupt, and both names should probably go out. See UZAL.

VEGETABLES.—See FOOD, **1, 11.**

VEIL.—See DRESS, **5** (*b*), KERCHIEFS, TABERNACLE, **5** (*d*), and TEMPLE, **9, 12.**

VENISON.—See FOOD, **5.**

VERMILION.—See COLOURS, **4.**

VERSIONS.—See ENGLISH VERSIONS, GREEK VERSIONS OF OT, TEXT OF NT, TEXT AND VERSIONS OF OT, VULGATE, etc.

VESPASIAN.—Titus Flavius Vespasianus, appointed in A.D. 67 to command the Roman forces in the Jewish War, was the candidate of the eastern armies in the period of civil war that followed the death of Nero. He was proclaimed emperor at Alexandria on July 1, A.D. 69, his supporters were victorious by the end of the year, and he ruled with austere justice till his death in A.D. 79. Though personally unassuming, he was, as divine ruler, credited with two miraculous healings at Alexandria in A.D. 70; the pro-Roman Jewish historian Josephus claimed that his reign fulfilled the messianic prophecies. On his deathbed he is said to have murmured 'I think I am becoming a god' (*puto me deus fio*), in jesting reference to the deification which would follow. E. R. H.

VESSELS.—See HOUSE, **9**; MEALS, **5.** For the 'instruments' or 'vessels' (AV) of the tabernacle, RV has 'furniture' or 'instruments,' according to the context, and RSV uses such words as 'furniture,' 'instruments,' 'furnishings,' or 'accessories' (cf, *e.g.* Nu 1[50] with 3[36]). For the Temple cf 1 Ch 9[29] in AV, RV, and RSV. In Gn 43[11] 'vessels' (AV, RV) is equivalent to 'saddlebags' (RSV 'bags'). In 1 Th 4[4] for 'vessel' (AV, RV), RSV has 'wife,' for which some would understand rather 'body.'

VESTIBULE.—RSV substitutes 'vestibule' for AV and RV 'porch' (q.v.) in all its OT occurrences.

VESTRY occurs only in 1 K 10[22] (AV and RV) 'him that was over the vestry,' where RSV has 'wardrobe'; cf 22[14].

VESTURE.—In AV this word occurs as the rendering both of words denoting dress or raiment generally, as Gn 41[42] (so RV; RSV 'garments'), Ps 22[18] 102[26] (so RV; RSV 'raiment'), and of special words for the plaid-like upper garment of antiquity, as Dt 22[12] (so RV; RSV 'cloak'; see FRINGES), Rev 19[13, 16] (RV 'garment,' RSV 'robe'), for which see DRESS, **4** (*a*). A. R. S. K.

VIAL occurs in OT in 1 S 10[1] (AV, RV, RSV) and 2 K 9[1ff] (RV; AV 'box,' RSV 'flask'), for an oil-flask. In NT, RV and RSV have substituted 'bowl' for 'vial' throughout (Rev 5[8] 15[7] 16[ff]). The *phialē* was a flat vessel, resembling a saucer, specially used for pouring libations of wine upon the altar of a deity.

VILLAGE.—For the OT villages and their relation to the 'mother' city, see CITY. In all periods of Hebrew history the cultivators of the soil lived for greater security in villages, the cultivated and pasture land of which was held in common. Solitary homesteads were unknown. The NT writers and Josephus also distinguish between a city (*polis*) and a village (*kōmē*), the distinction being primarily a difference not of size but of status. Thus in Mk 1[38] the word rendered **'towns'** is literally 'village-cities' (others render 'market-towns'), *i.e.* places which are cities as regards population but not as regards constitutional status. When Josephus tells us that 'the very least of' the villages of Galilee 'contained above 15,000 inhabitants' (*BJ* III. iii. 2 [43]), he is, *more suo*, drawing a very long bow indeed! A. R. S. K.

VINE, VINEYARD.—The usual Hebrew word for 'vine' is *gephen*, used of the grape-vine everywhere except in 2 K 4[39], where *gephen śādeh* (literary 'field vine') refers to a wild-gourd vine. Another word, *sōrēq* (Is 5[2], Jer 2[21]), or *sōrēqāh* (Gn 49[11]), refers to superior vines with purple grapes.

The vine (*Vitis vinifera*) is supposed to be a native of the shores of the Caspian, but has been cultivated in Palestine from the earliest times, as is witnessed by the extensive remains of ancient vineyards. The climate is peculiarly suited to the grape, which reaches perfection during the prolonged sunshine and the dewy nights of late summer. Vines specially flourish on the hillsides unsuited for cereals (Jer 31[5], Am 9[13]). In modern Jordan viticulture is practised almost solely by monks in Christian monasteries, for the Moslems are, by religion, teetotal. Israel, however, has in recent years forged ahead as a wine-producing, even wine-exporting country. The mountain-sides of Israel are newly terraced, intensively cultivated, and experiments with vines and wine-making are being vigorously carried out by Agricultural Institutes. Here, as in many other ways, the state of Israel is changing the countryside, and not always in accord with OT customs. As in the case of the olive, the culture of the vine needs a peaceful, settled population, as the plants require several years' care before bearing fruit (Zeph 1[13]), and constant attention if they are to maintain their excellence; hence to sit under one's 'own vine and fig tree' was a favourite image of peace (1 K 4[25], Mic 4[4], Zec 3[10]). In some districts to-day vines are trained over a trellis at the front door, making a cool summer resort. The Israelites found Palestine ready planted with vineyards (Dt 6[11], Jos 24[13], Neh 9[25]). The steps taken in making a vineyard are described in detail in Is 5[1–7]. The land must be fenced (cf Ps 80[9]), the stones gathered out, the choicest possible plants obtained. A **winepress** was cut in the rock, and a **watch tower** (Is 5[2], Mt 21[33]) was built to guard against intruders. These last included foxes (or jackals) (Ca 2[15]) and boars (Ps 80[13]). In such a tower the owner's family will probably pass all the grape season; during the vintage a large proportion of the people are to be found living in the vineyards. Every spring the soil between the vines must be dug or ploughed up and the plants pruned (Lv 25[3f], Is 5[6]); neglect of this leads to rapid deterioration of the grapes; only the slothful man could permit his vineyard to be overgrown with 'thorns and nettles' and 'the stone wall thereof to be broken down' Pr 24[30f]). The clusters of **grapes** are often enormous (cf Nu 13[23]). When the vintage is over and the leaves turn sere and yellow, the vineyards have a very desolate look (Is 34[4]). The failure of the **vintage** was looked upon

as one of God's terrible punishments (Ps 78[47], Jer 8[13], Hab 3[17]), and a successful and prolonged vintage as a sign of blessing (Lv 26[5]). Of the vast quantities of grapes produced in ancient times a large proportion was, without doubt, converted into *dibs* (Arabic) or **grape honey** (cf Heb. *d^{e}bhash* = 'honey'), a form of thick, intensely sweet grape juice, which is still made in considerable quantity in Syria, but which must have been much more important in the days when cane sugar was unknown. Many references to 'honey' probably refer to this product rather than to that of the bee.

Israel is compared to a vine in Ezk 15, 17, Is 5, and Ps 80. The vine-leaf was a favourite design on Jewish coins. The numerous references to the vine in the NT (*e.g.* Mt 20[1ff] 21[28, 33ff], Jn 15) point to the continued importance of viticulture in those days.

Vine of Sodom (Dt 32[32]).—If the reference is to any particular plant—which is very doubtful—the most probable is the colocynth (*Citrullus colocynthis*); see GOURD. The apple-sized fruit of the curious *'osher* (*Calotropis procera*) has been suggested; but though this answers well to the description by Josephus (*BJ* IV. viii. 4 [484]) of the 'fruits of Sodom' which vanish into ashes, so substantial a tree, with its cork-like bark and large glossy leaves, could in no sense be called a vine.

E. W. G. M.—B. J. R.

VINEGAR.—The light wine of Bible times, in consequence of the primitive methods of manufacture then in vogue (for which see WINE AND STRONG DRINK), turned sour much more rapidly than modern wines. In this condition it was termed *ḥōmeṣ* (literally 'sour [stuff]'), and was used, mixed with water, as a drink by the peasants (Ru 2[14] AV and RV; RSV 'wine'). The Nazirite's vow of abstinence included also 'vinegar of wine' and 'vinegar of strong drink,' *i.e.* of all intoxicating liquor other than grape-wine (Nu 6[3] AV, RV and RSV). The Jewish *ḥōmeṣ* corresponded to the Roman *posca*, the favourite drink of the soldiers, which those charged with our Lord's crucifixion offered Him on the cross—EV 'vinegar' (Jn 12[29f], but not Mt 27[34]; see RV and RSV).

A. R. S. K.

VIOL.—See MUSIC, etc., **4** (1) (*b*).

VIOLET.—See COLOURS, **5.**

VIPER.—See SERPENT.

VIRGIN, an unmarried girl, is in Hebrew *b^{e}thûlāh* (fifty times). EV usually translate 'virgin,' sometimes 'maid' or 'maiden.' In Jl 1[8] the word is used of a young widow. The importance of virginity in a bride was stressed (Dt 22[13f]; cf Gn 24[16]) and in Dt 22[25-29] there are laws for the protection of virgins. The word is used of countries, sometimes with the addition of 'daughter,' *e.g.* Israel (Am 5[2], Jer 18[13]), Zion (2 K 19[21], La 2[13]), Babylon (Is 47[1]), Egypt (Jer 46[11]). A less frequent word is *'almāh* (only Gn 24[43], Ex 2[8], Ps 68[25], Pr 30[19], Ca 1[3], 6[8], Is 7[14]). AV renders 'virgin(s)' in Genesis, Canticles, and Isaiah; RV in Canticles and Isaiah (RVm 'maidens'), but RSV only in Is 7[14] (RSVm; text 'young woman'). Rebekah (Gn 24[16, 43]) is called both *b^{e}thûlāh* and *'almāh*, but it does not appear that *'almāh* always implied virginity. The root meaning is probably 'to be (sexually) mature,' hence 'a girl of marriageable age,' and in one Aramaic dialect the word is used of prostitutes. LXX has *parthenos* ('virgin') in Is 7[14], but later translations substituted *neanis* ('young woman'). For further discussion see IMMANUEL. The NT use of *parthenos* (RSV 'maiden(s)' in Mt 25[1-11]) is straightforward, except that in Rev 14[4] it is used of men, probably implying chastity (RSV), not celibacy; cf 2 Co 11[2]. Ac 21[9] may be the scriptural basis of the later 'order' of virgins. For **Virgin birth,** see MARY, **4,** IMMANUEL, **5,** JESUS CHRIST, **5** (3).

C. W. E.—C. R. N.

VIRTUE.—In Mk 5[30], Lk 6[19] 8[46] (AV) the word 'virtue' is used with the antiquated meaning of 'power,' or 'powerful influence' (Gr. *dynamis*). RV and RSV read 'power.'

VISION.—1. In OT.—The usual Hebrew terms are *ḥāzôn* and *mar'eh*, but the verb *ḥāzāh*, from which the former comes, frequently has as its object *word* (Is 2[1], Am 1[1], Mic 1[1]) or *oracle* (Is 13[1], Hab 1[1]), suggesting that it had something of the double sense of the English *observe*. Through the vision the prophet felt himself admitted to the secrets of God (Am 3[7]) or transported to the very council of God (Jer 23[18, 22]). It is often difficult to tell whether the vision came through an objective or a purely subjective experience, though in either case it involved Divine activity on the spirit of the seer (cf Is 6[1ff] and Jer 1[11ff], Am 7[7ff] 8[1ff]). Frequently the vision is associated with the **dream** (q.v.), but it is always the medium of a Divine communication (cf Nu 12[6]). Where vision and dream are mentioned together, the dream is rather the *form* and the vision the *substance* of the communication (cf Dn 1[17] 2[28] 4[5], Jl 2[28], 2 Mac 15[11ff]). In the darkness, when the eye is closed (cf Nu 24[3] RV; RSV 'opened') and the natural faculties are suspended by sleep, God speaks to men (cf 'visions of the night,' Dn 2[19], Job 4[13], Gn 46[2]). Prayer and fasting were believed to quicken spiritual discernment (Dn 10[2-9]; cf Ac 10[9-11]).

The content of the visions of the pre-exilic prophets was always some relevant message of religious and ethical import to contemporary society, reinforcing the constraint which the prophet felt to declare God's word to his fellows. In the book of Daniel the vision is a literary device to disclose in cryptic symbolism future events, or events that were hypothetically future to the persons to whom they were ascribed.

2. In NT.—The usual Greek terms are *optasia* and *horama*; in the book of Revelation *horasis*. Here the vision is always the medium of a revelation to the seer, rather than of a message for men given to him by its means. Paul receives visions in the night (Ac 16[9] 18[9]), while Stephen has one by day (Ac 7[55]). Peter's vision is said to have come to him 'in a trance' (Gr. 'in ecstasy,' Ac 10[10] 11[5]; cf Gn 15[12] LXX), and Paul has a similar experience (Ac 22[17]). Paul was apparently subject to visions (2 Co 12[1, 7]), and relates an ecstatic experience whose content could not be divulged (2 Co 12[2ff]). His experience on the road to Damascus (Ac 9[3ff] 22[6ff] 26[12ff]) had for him an objective character (Gal 1[11ff], 1 Co 9[1] 15[8]), though it was essentially subjective since it was not shared by those who were with him. Visions are recorded in Lk 1, 2, and the term is once applied to the Transfiguration (Mt 17[9]). In the book of Revelation, as also in 2 Esdras, the vision becomes the literary medium of the disclosure of future events through cryptic symbolism as in Daniel. See also TRANCE.

S. W. G.—H. H. R.

VOPHSI —The father of the Naphtalite spy, Nu 13[14].

VOWS.—As among most of the peoples of the ancient world, the making of vows was of frequent occurrence among the Israelites. The underlying idea in making a vow was to propitiate the Deity; this was done either by promising to do something for Him, or to please Him by the exercise of self-denial. Vows were made from a variety of motives: Jacob vows a vow according to which he will please Yahweh by becoming His worshipper, on condition that Yahweh will keep him safe during his journey and give him food and raiment (Gn 28[20-22]). Jephthah vows to offer to Yahweh the first person he sees coming out of his house on his return from battle, provided he is victorious (Jg 11[30f]). Hannah vows that if Yahweh gives her a son, she will dedicate him to the service of God (1 S 1[11]). These cases are typical: in each something is promised to God, on condition that God will do something for him who makes the vow. But there was another class of vows which were of a more disinterested character, such as the vow of the Rechabites (q.v.) to abstain from wine. The most striking case here is the **Nazirite** vow, according to which a man undertook to lead a strenuously austere life, which was supposed to approximate to the simple life of the patriarchs; that was done out of protest against the current mode of life, which had been largely adopted from the Canaanites; indeed, the Nazarite vow implied,

and was intended to be, a life of greater loyalty to Yahweh (see NAZIRITE).

There are two words in Hebrew for a vow—though they do not necessarily correspond to the two ideas just mentioned: *nedher*, which is a vow whereby a man dedicates something, even himself, to God; *'issar*, a vow by which a man binds himself to abstain from enjoyment, or to exercise self-denial, in honour of Yahweh.

Vows were clearly of very common occurrence in Israel; indeed it would almost seem as though at one time it was deemed generally incumbent on men to make vows; this would, at all events, explain the words in Dt 23^{22}, 'But if you refrain from vowing, it shall be no sin in thee.' A vow having once been made had to be kept at all costs (Dt $23^{21,23}$, Nu 30^{2}, Jg 11^{35}); though, as regards women, they might be absolved by father or husband, under certain conditions, from fulfilling a vow (Nu 30^{1-8}). Persons vowed to God might be redeemed (Lv 27^{2ff}), as could unclean beasts (27^{11ff}) or houses and fields (27^{14ff}); but clean beasts could not be redeemed (27^{9f}). From the expression used in connexion with the making of a vow, 'to bind the soul' (Nu 30^{2}), it would seem that the idea was that if the vow was broken the life was forfeited to the Deity to whom the vow had been made; the warning, therefore, of Pr 20^{25}, Ec 5^{4f}, was needed.

In making a vow in which something was promised to Yahweh, only such things could be promised as were truly the property of him who vowed; for this reason a man might not promise a firstling or the like, as that was already the property of Yahweh (cf Lv 27^{26-29}).

In later times the spirit in which vows were observed appears to have degenerated; Malachi speaks sternly of those who make a vow, and in fulfilling it sacrifice unto the Lord 'a blemished thing' (1^{14}). Another, and still worse, misuse of vows meets us in the Gospels: the spurious piety of some men induced them to vow gifts to the use of the sanctuary, but they neglected, in consequence, the most obvious duties of natural affection; when a man uttered the word **'Corban'** in reference to any possession of his, it meant that it was dedicated to God. Money that should have gone to the support of aged parents was pronounced to be 'Corban,' the son felt himself relieved of all further responsibility regarding his parents, and took honour to himself for having piously dedicated his substance to God (see Mt 15^{5}, Mk 7^{6ff}).

In NT we read that Paul made a vow to abstain from cutting his hair (cf Samson's dedication to be a Nazirite, Jg $13^{5,7}$) for a period (Ac 18^{18}; cf 21^{23f}).

A special collective vow of destruction of enemy persons and property was sometimes made in war (see BAN). W. O. E. O.—H. H. R.

VULGATE.—1. The position of the Latin Vulgate, as a version of the original texts of the Bible, has been dealt with in the two articles on the Text of the OT and the NT. But its interest and importance do not end there. Just as the LXX, apart from its importance as evidence for the text of the OT, has a history as an integral part of the Bible of the Eastern Church, so also does the Vulgate deserve consideration as the Bible of the Church in the West. Although the English Bible, to which we have been accustomed for more than 300 years, is in the main a translation from the original Hebrew and Greek, it must be remembered that for the first thousand years of the English Church the Bible of this country, whether in Latin or in English, was the Vulgate. In Germany the conditions were much the same, with the difference that Luther's Bible was still more indebted to the Vulgate than was our AV; while in France, Italy, and Spain the supremacy of the Vulgate lasts to this day. In considering, therefore, the history of the Vulgate, we are considering the history of the Scriptures in the form in which they have been mainly known in Western Europe.

2. The textual articles above-mentioned have shown that, when Jerome's Biblical labours were at an end, about A.D. 404, the Latin Bible as left by him was a very complex structure, the parts of which differed very considerably in their relations to the original Greek and Hebrew texts. The Canonical Books of the OT, except the Psalms, were Jerome's fresh translation from the Massoretic Hebrew. The Psalms were extant in three forms—(*a*) the *Roman*, Jerome's slightly revised edition of the OL, which still held its own in a few churches; (*b*) the *Gallican*, his more fully revised version from the Hexaplar text of the LXX; and (*c*) the *Hebrew*, his new translation of the Massoretic text; of these it was the second, not the third, that was taken into general use. Of the deutero-canonical books, or Apocrypha, Judith and Tobit, with the additions to Daniel, were in Jerome's very hasty version; the remainder, which he had refused to touch (as not recognized by the Massoretic canon), continued to circulate in the OL. The Gospels were Jerome's somewhat conservative revision of the OL; the rest of the NT was a much more superficial revision of the same. The Latin Bible, therefore, which we know as the Vulgate was not wholly Jerome's work, still less did it represent his full and final views on the textual criticism of the Bible; and, naturally, it did not for a long time acquire the name of 'Vulgate.' The 'vulgata editio,' of which Jerome himself speaks, is primarily the Greek LXX, and secondarily the OL as a translation of it. It is not until the 13th cent. that the epithet is found applied to Jerome's version by Roger Bacon (who, however, also uses it of the LXX); and it was canonized, so to speak, by its use in the decree of the Council of Trent, which speaks of it as 'haec ipsa vetus et vulgata editio.' By that time, however, it differed in many points of detail from the text which Jerome left behind him; and it is of the history of Jerome's version during this period of some twelve hundred years that it is proposed to speak in the present article.

3. Jerome's correspondence and the prefaces attached by him to the several books of his translation (notably those prefixed to the Pentateuch, Joshua, Ezra and Nehemiah, Job, Isaiah, and the Gospels) sufficiently show the reception given to his work by his contemporaries. He complains constantly and bitterly of the virulence of his critics, who charge him with deliberate perversions of Scripture, and refuse to make themselves acquainted with the conditions of his task. Especially was this the case with the OT. In the NT Jerome had restrained his correcting pen, and made alterations only when the sense required it ['Ita calamo temperavimus ut his tantum quae sensum videbantur mutare correctis, reliqua manere pateremur ut fuerant' (*Praef. ad Damasum*)]; and though even these were sufficient to cause discontent among many readers, the openings given to adverse criticism were relatively insignificant. But in the case of the OT the basis of the OL rendering to which people were accustomed was the LXX, the differences of which from the Massoretic Hebrew are often very wide. When, therefore, readers found whole passages omitted or transposed, and the meanings of very many sentences altered beyond all recognition, they believed that violence was being done to the sacred text; nor were they prepared to admit as axiomatic the superiority of the Hebrew text to the Greek, the OT of the Jews to the OT of the Christians. Even Augustine, who recommended and used Jerome's revision of the Gospels, questioned the expediency of the far-reaching changes made in the OT.

4. Nor was Jerome's translation assisted by authority to oust its predecessor. Never until 1546 was it officially adopted by the Roman Church to the exclusion of all rivals. It is true that the revision of the Gospels was undertaken at the instance of Pope Damasus, and was published under the sanction of his name; and the Gallican version of the Psalms was quickly and generally adopted. But the new translation of the OT from the Hebrew had no such shadow of official authority. It was an independent venture of Jerome's, encouraged by his personal friends (among whom were some bishops),

and deriving weight from his reputation as a scholar and from the success of his previous work, but in no sense officially commissioned or officially adopted. It was thrown on the world to win its way by its own merits, with the strong weight of popular prejudice against it, and dependent for its success on the admission of its fundamental critical assumption of the superiority of the Massoretic Hebrew to the LXX. It is not to be wondered at if its progress in general favour was slow, and if its text was greatly modified before it reached the stage of universal acceptance.

5. The extant evidence (consisting of occasional statements by ecclesiastical writers, and their ascertainable practice in Biblical quotations) is not sufficient to enable us to trace in detail the acceptance of Jerome's version in the various Latin-speaking countries. Gaul, as it was the first country to adopt his second Psalter, was also the first to accept the Vulgate as a whole, and in the 5th cent. the use of it appears to have been general there; but Gaul, it must be remembered, from the point of view of Christian literature, was at this time confined mainly to the provinces of the extreme south. Isidore of Seville, however, testifies to the general use of the Vulgate by all churches, as being alike more faithful and more lucid than its predecessors. In the 6th cent. it is probable that its use was general among scholars. Victor of Capua, about A.D. 541, finding a Latin version of the Diatessaron according to the OL text, and being desirous of making it generally known, had it transcribed, with the substitution of the Vulgate for the OL. Gregory the Great († A.D. 604) used the Vulgate as the basis of his commentary on Job, but speaks of both versions as existing and recognized by the Church ('Novam translationem dissero, sed, ut comprobationis causa exigit, nunc novam nunc veterem per testimonia assumo; ut, quia sedes Apostolica utraque utitur, mei quoque labor studii ex utraque fulciatur'). On the other hand, Primasius is evidence of the continued use of the OL in Africa and a considerable number of the extant fragments of OL MSS are of the 6th cent. or later date (see TEXT OF NT, 20). In general it is probable that the old version was retained by the common people, and by such of the clergy as took little interest in questions of textual scholarship, long after it had been abandoned by scholars. In any case, it is certain that the Vulgate was never officially adopted in early times by the Roman Church, but made its way gradually by its own merits. The continuance of the OL in secluded districts is illustrated by the fact that Codex Colbertinus (*c* of the Gospels) was written as late as the 12th cent. in Languedoc, and Codex Gigas (*g* of the Acts) in the 13th cent. in Bohemia.

6. Although this method of official non-interference was probably necessary, in view of the fact that Jerome's version of the OT was a private venture, and one which provoked much hostile criticism, and although in the end the new translation gained the credit of a complete victory on its merits as the superior version for general use, nevertheless the price of these advantages was heavy. If the Vulgate had enjoyed from the first the protection of an official sanction, which Sixtus and Clement ultimately gave to the printed text, it would have come down to us in a much purer form than is actually the case. Under the actual conditions, it was peculiarly exposed to corruption, both by the ordinary mistakes of scribes and by contamination with the familiar OL. In some cases whole books or chapters in a Vulgate MS contain an OL text; for some reason which is quite obscure, Matthew especially tended to remain in the earlier form. Thus Codices g^1, *h*, r^2 all have Matthew in OL, and the remaining Gospels in Vulgate. Codex Gigas is OL in Acts and Apocalypse, Vulgate in the rest of the Bible. Codex *p* of the Acts is OL in Ac 1^1–13^6 28^{16-30}, while the rest of the book is Vulgate. Codices ff^1 and g^2 of the Gospels have texts in which OL and Vulgate are mixed in various proportions. Even where OL elements do not enter to a sufficient extent to be noteworthy, MSS of the Vulgate tend to differ very considerably. In the absence of any central authority to exercise control, scribes treated the text with freedom or with carelessness, and different types of text grew up in the different countries of Western Europe. It is with these different national texts that the history of the Vulgate in the Middle Ages is principally concerned.

7. During the 5th and 6th cents., when Jerome's version was winning its way outwards from the centre of the Latin-speaking Church, the conditions over a large part of Western Europe were ill fitted for its reception. Gaul in the 5th cent., was fully occupied with the effort first to oppose and then to assimilate the heathen Frankish invaders; and even in the 6th cent. it was a scene of almost perpetual war and internal struggles. Germany was almost wholly pagan. Britain was in the throes of the English conquest, and the ancient British Church was submerged, except in Wales and Ireland. Outside Italy, only Visigothic Spain (Arian, but still Christian, until about A.D. 596) and Celtic Ireland were freely open at first to the access of the Scriptures; and in these two countries (cut off, as they subsequently were, from central Christendom by the Moorish invasion of Spain and the English conquest of Britain) the two principal types of text came into being, which, in various combinations with purer texts from Italy, are found in the different MSS which have come down to the present day. From the Visigothic kingdom the Spanish influences made their way northward into the heart of France. Irish missionaries carried the Bible first into southern Scotland, then into Northumbria, then into northern France and up the Rhine into Germany, penetrating even into Switzerland and Italy, and leaving traces of their handiwork in MSS produced in all these countries. Meanwhile Rome was a constant centre of attraction and influence; and to and from Italy there was an unceasing stream of travellers, and not least between Italy and distant Britain. These historical facts find their illustration in the Vulgate MSS still extant, which can be connected with the various churches.

8. In the 6th and 7th cents. the primacy of missionary zeal and Christian enterprise rested with the Irish Church; but in the latter part of the 7th and the first half of the 8th cents. the Church of Northumbria sprang into prominence, and added to the gifts which it had received from Iona a spirit of Christian scholarship which gave it for a time the first place in Christendom in this respect. In the production of this scholarship the arrival of Theodore of Tarsus as archbishop of Canterbury in A.D. 669 happily co-operated, if it was not a chief stimulus; for Theodore and his companions brought with them from Italy copies of the Latin Bible in a purer text than Ireland had been able to provide. There is clear evidence to show that the celebrated Lindisfarne Gospels (Y in Wordsworth's numeration) was copied from one of these MSS, and the same was probably the case with another Northern copy of the Gospels now in the British Museum (Royal 1 B vii.). The great Codex Amiatinus (A) itself, the best single MS of the Latin Bible in existence, was written in Northumbria before A.D. 716, and must have been copied from MSS brought from Italy either by Theodore or by Ceolfrid of Jarrow, by whose order it was made. Other MSS (notably Δ and S), written in the north, are closely akin to these, and must be derived from the same source; and this whole group of MSS furnishes the best text of the Vulgate now available. The centres of English scholarship, to which this pre-eminence in Biblical study was due, were the twin monasteries of Wearmouth and Jarrow, of which the most famous members were Ceolfrid and Bede; but their influence spread widely over Northumbria, and was renowned in the more distant parts of England and western Europe.

9. To this renown it was due that, when a king at last arose in France with a desire to improve the religious education of his country, he turned to Northumbria for the necessary assistance to carry out the reform. The king was Charlemagne, and the scholar whom he invited

to help him was **Alcuin** of York ; and the record of their joint achievement constitutes the next chapter in the history of the Vulgate. Alcuin came to France in A.D. 781, and was made master of the schools attached to Charlemagne's court at Aix-la-Chapelle (Aachen). He was subsequently made titular abbot of Tours, and in A.D. 796 he obtained leave to retire to that monastery, where he spent the nine remaining years of his life († A.D. 805) in establishing the school of calligraphy for which Tours was long famous. His work in connexion with the Latin Bible falls into two stages. To the earlier part of his life at Aix belongs, in all probability, the beginning of a series of magnificent copies of the Gospels, of which several have survived to the present day. Certainly, they date from about this period, and have their home in the country of the Rhine and the Moselle. They are obviously modelled on the Anglo-Celtic MSS, of which the Lindisfarne Gospels is the most eminent example. Prefixed to each Gospel is a portrait of the Evangelist (in the Byzantine style), a full page of elaborate decoration, and another containing the first words of the Gospel in highly ornamental illumination. The English MSS excel their French successors in elaboration and skill of workmanship ; but the French books have an added gorgeousness from the lavish use of gold, the whole of the text being written in gold letters, sometimes upon purple vellum. Hence the whole series of these books (the production of which continued through the greater part of the 9th cent.) is often described as the ' Golden Gospels.'

10. The importance of the ' Golden Gospels ' group of MSS is artistic rather than textual, and although their dependence upon Anglo-Celtic models is obvious, their connexion with Alcuin personally is only hypothetical. It is otherwise in both respects with another great group of MSS, which are directly due to the commission given by Charlemagne to Alcuin to reform the current text of the Vulgate. About the end of A.D. 796, Alcuin established the school of Tours, and sent to York for MSS to enable him to carry out his work. On Christmas Day of A.D. 801 he presented to the king a complete Bible, carefully revised. Several descendants of this Bible are still in existence, and enable us to judge of Alcuin's work. They differ from the ' Golden Gospels ' in being complete Bibles, and in being written in the beautiful small minuscule which at this time, under Charlemagne's influence, superseded the tortured and unsightly script of the Merovingian and Lombardic traditions, and of which Tours was one of the principal homes. The MS which appears most accurately to represent the edition of Alcuin at the present day is the Codex Vallicellianus at Rome (Wordsworth's V) ; with this Wordsworth and White associate the ' Caroline Bible ' (Add. MS 10546 [Wordsworth's K] in the British Museum), and there are some eight or ten other MSS (written mostly at Tours), besides several others containing the Gospels only, which in varying degrees belong to the same group. In text, these MSS naturally show a great affinity to the Northumbrian MSS headed by the Codex Amiatinus, and there is no question that Alcuin introduced into France a far purer text of the Vulgate than any which it had hitherto possessed.

11. Alcuin's attempt, however, was not the only one made in France at this period to reform the current Bible text. Another edition was almost simultaneously produced in western France by **Theodulf,** bishop of Orleans and abbot of Fleury (*c* A.D. 795–821) ; but its character was very different from that of Alcuin. Theodulf was a Visigoth, probably from Septimania, the large district of southern France which then formed part of the Visigothic kingdom of Spain ; and it was to Spain that he looked for materials for his revision of the Latin Bible. The MS which represents his edition most fully (Paris, *Bibl. Nat.* 9380) has a text closely connected with the Spanish type of which the Codices Cavensis and Toletanus are the most prominent examples, except in the Gospels, which are akin rather to the Irish type ; and a contemporary hand has added a number of variants, which are often Alcuinian in character. With this MS may be associated a volume at Puy, and Add. MS 24124 in the British Museum, which are closely akin to the Paris MS, but follow sometimes its first and sometimes its second reading ; the latter (especially in its corrections) has been used by Wordsworth and White along with the Paris MS to represent the Theodulfian edition. All are written in an extremely minute Caroline minuscule.

12. In spite, however, of the labour spent upon these attempts to improve the current text of the Vulgate, the forces of deterioration were more powerful than those of renovation. Theodulf's edition, which was a private venture, without the advantages of Imperial patronage, had no wide sphere of influence, and left no permanent mark on the text of the Vulgate. Alcuin's had, no doubt, much greater authority and effect ; yet its influence was only transient, and even at Tours itself the MSS produced within the next two generations show a progressive departure from his standard. On the other hand, the study of the Scriptures was now definitely implanted on the Continent, and the number of copies of them produced in France and Germany shows a great increase. During the 9th cent. splendid copies of the ' Golden Gospels ' continued to be produced in the valley of the Rhine, and Alcuinian texts at Tours ; while a new centre of Scripture study and reproduction came into existence in Switzerland, at the famous abbey of **St. Gall.** The library and scriptorium of this monastery (many of the inmates of which were English or Irish monks) first became notable under abbot Gozbert (A.D. 816–836), and perhaps reached the height of their importance under abbot Hartmut (A.D. 872–883). Many copies of the Bible were written there, and the influence of St. Gall permeated a large portion of central Europe. Here, too, was produced by Walafridus Strabo, dean of St. Gall before A.D. 842, the original form of the *Glossa Ordinaria*, the standard commentary on the Bible in the Middle Ages.

13. After Alcuin and Theodulf no important effort was made to recover the original text of the Vulgate, though some attempt in this direction was made by Lanfranc, of which no traces seem to survive ; but the history of its diffusion can to some extent be followed by the help of the extant MSS, which now begin to increase greatly in number. The tradition of the ' Golden Gospels ' was carried into Germany, where copies of the Gospels were produced on a smaller scale, with less ornamentation, and in a rather heavy Caroline minuscule, which clearly derive their origin from this source. In France itself, too, the later representatives of this school are inferior in size and execution to their predecessors. Spain and Ireland had by this time ceased to be of primary importance in the circulation of Bible texts. In England a new departure was made, on a higher scale of artistic merit, in the fine Gospels and Service-Books produced at Winchester between about A.D. 960 and 1060, the chief characteristics of which are broad bands of gold forming a framework with interlaced foliage. These details, however, relate more to the history of art than to that of the Bible, and with regard to the spread of the knowledge of the Scriptures there is nothing of importance to note in the 10th and 11th cents. beyond the increase of monasteries in all the countries of western Europe, in the *scriptoria* of which the multiplication of copies proceeded apace.

14. In the 12th cent. the most noteworthy phenomenon, both in England and on the Continent, is the popularity of annotated copies of the various books of the Bible. The ordinary arrangement is for the Bible text to occupy a single narrow column down the centre of the page, while on either side of it is the commentary ; but where the commentary is scanty, the Biblical column expands to fill the space, and *vice versa*. The main staple of the commentary is normally the *Glossa Ordinaria* ; but this, being itself a compilation of extracts from pre-existing commentaries (Jerome, Augustine, Isidore, Bede, etc.), lent itself readily to expansion or contraction, so that different MSS differ not inconsiderably in their contents. The various books

of the Bible generally form separate MSS, or small groups of them are combined. Simultaneously with these, some very large Bibles were produced, handsomely decorated with illuminated initials. Of these the best examples come from England or northern France. These are of the nature of *éditions de luxe*, while the copies with commentaries testify to the extent to which the Bible was at this time studied, at any rate in the larger monasteries; and the catalogues of monastic libraries which still exist confirm this impression by showing what a large number of such annotated MSS were preserved in them, no doubt for the study of the monks.

15. A further step in advance was taken in the 13th cent., which is to be attributed apparently to the influence of the **University of Paris**, then at the height of its renown and the intellectual centre of Europe. The present chapter division of the Bible text is said to have been first made by Stephen Langton (archbishop of Canterbury, 1207–1228), while a doctor at Paris; and the 13th cent. (probably under the influence of St. Louis) witnessed a remarkable output of Vulgate MSS of the complete Bible. Hitherto complete Bibles had almost always been very large volumes, suitable only for liturgical use; but by the adoption of very thin vellum and very small writing it was now found possible to compress the whole Bible into volumes of quite moderate size, comparable with the ordinary printed Bibles of to-day. For example, one such volume, containing the whole Bible with ample margins, measures $5\frac{1}{2} \times 3\frac{1}{4} \times 1\frac{3}{4}$ inches, and consists of 471 leaves. From the appearance of these Bibles (hundreds of which are still extant) it is evident that they were intended for private use, and they testify to a remarkable growth in the personal study of the Scriptures. The texts of these MSS seem to embody the results of a revision at the hands of the Paris doctors. *Correctoria*, or collections of improved readings, were issued at Paris about 1230, and at other places during this century, the best being the 'Correctorium Vaticanum,' so called from a MS in the Vatican Library. This revision, however, was superficial rather than scientific, and is of importance in the history of the Vulgate mainly because it established the normal text which was current at the time of the invention of printing. These small Bibles were produced almost as plentifully in England as in France, and in an identical style, which continued well into the 14th cent.

16. After the Parisian revision of the 13th cent. no important modification of the text or status of the Latin Bible took place until **the invention of printing** two centuries later. The first book to be printed in Europe was the Latin Bible, published in 1456 by Gutenberg and Fust (now popularly known as the Mazarin Bible, from the circumstance that the first copy of it to attract notice in modern times was that in the library of Cardinal Mazarin). In type this Bible resembles the contemporary large German Bible MSS; in text it is the ordinary Vulgate of the 15th cent. During the next century Bibles poured from the press, but with little or no attempt at revision of the text. Some MSS were consulted in the preparation of the Complutensian Polyglot; but the only editions before the middle of the 16th cent. which deserve the name of critical are those of Stephanus in 1540 and Hentenius in 1547, which laid the foundations of the modern printed Vulgate. It is, however, to the action of the **Council of Trent** that the genesis of an authorized text is ultimately due. Soon after its meeting, in 1546, a decree was passed declaring that the 'vetus et vulgata editio' of the Scriptures was to be accepted as authentic, and that it should be printed in the most accurate form possible. It was forty years, however, before this decree bore fruit. **Sixtus V.**, in his short pontificate of five years (1585–90), not only caused the production of an edition of the Greek OT (1587), but in 1590 issued a Latin Bible which he declared was to be accepted as the authentic edition demanded by the Council of Trent. This edition was the work of a board of revisers appointed for the purpose, but Sixtus himself examined their results before they were published, and introduced a large number of alterations (rarely for the better) on his own authority. The Sixtine edition, however, had hardly been issued when it was recalled in 1592 by **Clement VIII.**, at the instance, it is believed, of the Jesuits, with whom Sixtus had quarrelled; and in the same year a new edition was issued under the authority of Clement, with a preface by the famous Jesuit Bellarmine, in which (to avoid the appearance of a conflict between Popes) the suppression of the Sixtine edition is falsely stated to be due to the abundance in it of printers' errors, and to have been contemplated by Sixtus himself. The Clementine revisers in many instances restored the readings of Sixtus' board, which Sixtus himself had altered; and the general result of their labours was to produce a text resembling that of Hentenius, while the Sixtine edition was nearer to that of Stephanus. The bull in which the Clementine edition was promulgated forbade any future alteration of the text and any printing of various readings in the margin, and thereby stereotyped the official text of the Vulgate from that day until this.

17. Clement's bull practically closed the textual criticism of the Vulgate in the Roman Church, though Vallarsi was able to print a new text in his edition of the works of St. Jerome in 1734, and Vercellone published a collection of various readings in 1860–1864. The course of criticism outside the Roman communion can be briefly sketched. Bentley, with the help of his assistants, made large collections for an edition of the Vulgate, but was unable to carry through his task. Lachmann, in the second edition of his Greek NT (1842–1850), added a text of the Vulgate, based on a collation of the Codex Amiatinus and a few other selected MSS. Corssen in 1885 printed a revised text of Galatians as a sample of a new NT, but carried his enterprise no further. The Oxford edition of Wordsworth and White (1889–1954) gives a revised text of the Vulgate NT with a full critical apparatus and introductions; and the very handy *Editio Minor* (1911) reprints the text with a much abbreviated apparatus. In 1907 Pope Pius X. entrusted the Benedictine order with the revision of the whole Bible: Genesis was published in 1926 and the latest part to appear is the eleventh (containing Proverbs, Ecclesiastes, and the Song of Songs), published in 1957. Like Wordsworth and White's larger Oxford edition, the Roman edition offers, not only a revised text, but also a full critical apparatus. F. G. K.—H. F. D. S.

VULTURE.—1. *dā'āh*, Lv 11^{14} (AV; RV and RSV 'kite'); *dayyāh*, Dt 14^{13} (AV; RV 'kite,' RSV 'buzzard'), Is 34^{15} (AV; RV and RSV 'kite'). See KITE. **2.** *'ayyāh*, Job 28^{7} (AV; RV and RSV 'falcon'). In Lv 11^{14} the same word is rendered by 'kite' in AV, 'falcon' in RV and RSV, while in Dt 14^{13} it is rendered by 'kite' in AV and RSV, and by 'falcon' in RV. See KITE. **3.** *peres*, Dt 14^{12} RSV; AV 'ossifrage,' RV 'gier eagle.' In Lv 11^{13} AV and RSV have 'ossifrage,' RV 'gier eagle.' See GIER EAGLE. **4.** *rāhām* (*rāhāmāh*), Lv 11^{18} RV and RSV; AV 'gier eagle.' In Dt 14^{17} RV has 'vulture,' RSV 'carrion vulture,' and AV 'gier eagle.' See GIER EAGLE. **5.** *ḳā'āth*, Zeph 2^{14} (RSV; AV 'cormorant,' RV 'pelican'), Ps 102^{6} (RSV; AV and RV 'pelican'). In Is 34^{11} RSV has 'hawk,' AV 'cormorant,' and RV 'pelican'; in Lv 11^{18}, Dt 14^{17} AV, RV and RSV all have 'pelican.' See PELICAN. **6.** Greek *aetos* in RVm in Mt 24^{28}, Lk 17^{37}. See EAGLE.

W

WAFER.—See BREAD, end.

WAGES.—Under the conditions of life in Palestine in OT times, work on the land, at all times the chief occupation, was done for the most part by the peasant and his family, assisted, in the case of the well-to-do, by a few slaves. The 'hired servants' do not seem to have been numerous, and were sometimes aliens. We have no information about the wages of such field-labourers, as compared with the detailed information about different classes of 'hirelings' in, for example, ancient Mesopotamia and Asia Minor. (See Johns, *Bab. and Assyr. Laws*, ch. xxv, Driver and Miles. *The Assyrian Laws*, pp. 271 ff, E. Neufeld, *The Hittite Laws*, pp. 157, 178.) Dt 15[18] seems to say that a hireling cost the farmer twice as much as a slave, and since the latter received only his keep and a few clothes, it follows that the former will have earned the equivalent thereof, over and above, in wages. The first definite engagement—disregarding the special case of Jacob and Laban—with stipulated wages, is that of the Levite whom Micah hired as his domestic chaplain for 10 shekels a year, with 'a suit of apparel' and his 'victuals' (Jg 17[10]). The next instance is Tobit's engagement of the angel Raphael as his son's travelling companion for a drachma (worth ¼ shekel) a day and all found (To 5[14]). The story may be taken to reflect social conditions before and after 200 B.C. Dt 24[14-15] (cf Lv 19[13]) is designed to protect the 'hired servant' against the unscrupulous employer who is careless in the payment of wages, which, at least in cases of poverty, are to be paid daily.

In the parable of the Labourers in the Vineyard, the labourers are thus paid immediately after the day's work and each man receives a *denarius*. The denarius may be taken as the usual day's wage for a labourer in NT times. It was a silver coin rather more than ¼ the weight of a shilling, roughly equivalent to the drachma. The pay of a Roman legionary was ⅓ denarius per day. A papyrus of A.D. 66 reveals that an apprentice weaver in Oxyrhynchus received five drachmae for food per month and, at the end of the year, twelve drachmae for clothes. The NT period is overshadowed by the evil of unemployment, particularly after the completion of Herod's Temple, when special public works were undertaken to absorb 18,000 unemployed (Jos. *Ant.* xx. ix. 7 [214]). Something like trade unions were not unknown. Thus in ancient times the whole city of Debir was given over to the weaving industry, presumably because craftsmen and merchants in ancient Palestine were organized in guilds. In a much later time, the Talmud, *Bab. B.* 9, permits tradesmen to combine to work on one or two days only in the week, in order to give sufficient employment to each workman. Details of the conditions of hire and the mutual obligations of master and servant are to be found in the Mishnah (*Baba Metzia* vi and vii).

Throughout the Bible there is an implicit assumption that wages are a proper reward for work done. Jesus gave direct instructions that His disciples, engaged on a mission, were to accept hospitality on the principle that 'the workman deserves his wages' (Lk 10[7]). St. Paul accepted this as authoritative direction for the practice of the early Church (1 Co 9[14]; cf 1 Ti 5[18]), and taught that Christian apostles had a right to material reward in return for spiritual ministrations (1 Co 9[11]). This was contrary to the Jewish requirement that a rabbi should practise a trade. Paul and Barnabas in fact worked for their living (Paul having learned the craft of a tent-maker), and some at Corinth objected to the self-imposed freedom which the Apostle exercised in declining the support of the Corinthian church. There appear to have been special reasons why he needed to demonstrate his disinterestedness, and he declined money from any church except the Philippian (4[15]). He makes it clear that he was waiving a right.

The same word (*misthos*) is used for both wages and reward in both LXX and NT, and, in line with the deuteronomic principle of retribution, becomes the expression both of a blessed reward in heaven (Mt 5[17] 10[41f]) and of retribution in the coming judgment. But while Jesus used the conception of wages, he radically transformed it. Wages or reward in the kingdom are, like the wages of the labourers in the vineyard, *not* according to strict justice or human reckoning, but according to Divine grace. The very point of the parable is that the freedom of grace cuts across the operation of the strict principle of retribution. So also St. Paul understood that, while the law of sin and death works ruthlessly and strictly ('the wages, *opsōnion*, of sin is death'), this is the very antithesis of the free grace of Christ (Ro 6[23]; cf 4[4]). Thus the idea of wages is used to demonstrate as much the difference as the similarity in the dispensing of rewards in the kingdom of God. The operation of a human right and an inflexible law is set in opposition to the freedom of the Divine sovereignty and love. A. R. S. K.—D. R. J.

WAGON.—See CART, AGRICULTURE, 3.

WAHEB.—An unknown locality in Amorite territory, Nu 21[14] (RSV; AVm, RV Vaheb); AV renders 'Waheb in Suphah' by 'What he did in the Red Sea.' See also DIZAHAB.

WAILING.—See MOURNING CUSTOMS.

WAIN, THRESHING.—Found only in Job 41[30] RV, where AV has 'sharp pointed things' and RSV 'threshing sledge.' See AGRICULTURE, 3.

WALL, BROAD.—See JERUSALEM, GATES OF.

WALLET.—See BAG.

WALLS.—In Palestine the principal cities were protected by surrounding walls, sometimes of great size. That of Gezer, for instance, was fourteen feet thick. These walls were built of stones set in mud, or else of brick. The walls of houses were generally ill-built structures of the same materials. The choice of material varied with the locality: Eglon (*Tell el-Ḥesī*), for example, was almost entirely a brick town; in Gezer brick is the exception. See also CITY, FORTIFICATION, HOUSE, 4. For the walls of Jerusalem, which may be taken as typical of a city wall, see JERUSALEM.
R. A. S. M.

WALLS, GATE BETWEEN THE TWO.—See JERUSALEM, GATES OF.

WANTONNESS.—See LASCIVIOUSNESS.

WAR.—Many Biblical passages (especially in Deuteronomy) are dominated by the idea of the Holy War; and the religious character of ancient Israelite warfare is also otherwise clear. Israel's wars were 'the wars of the Lord' (Nu 21[14]); the Lord of Hosts was 'the God of the armies of Israel' (1 S 17[45] RV, RSV), and to Him belonged of right the population of a conquered city (see BAN)—an idea which explains the ruthless demand for complete destruction of the Canaanites and the other peoples in Palestine before the Conquest (see *e.g.* Dt 20[16f], and cf Nu 21[1ff], Jg 1[17], Dt 2[34f], Jos 6 f, 8[2, 26f]). In describing warfare use is made of language familiar from the cult (see *e.g.* Nu 32[20ff], Jos 3[5]); during the campaign the warriors adhered to certain rules of abstinence (cf *e.g.* Jg 20[26], 1 S 7[6] 14[24] 21[5], 2 S 11[11]); Yahweh's presence was secured by the Ark accompanying

the army in the field (2 S 11[11]; cf 1 S 4[3ff]). The soldiers were God's 'consecrated ones' (Is 13[3] RV, RSV), and to open a campaign is in the Hebrew phrase 'to consecrate war' (Jl 3[9], Jer 6[4], in both of which passages RV and RSV translate by 'prepare'). The religious character of warfare is also evident in the way in which it was usual to 'enquire of the Lord' by means of the sacred lot (Jg 1[1], 1 S 23[2] etc.) or by the mouth of a prophet (1 K 22[5ff]), *e.g.* in order to ascertain the propitious moment for the start. The practice of anointing or oiling the shield, which is mentioned in Is 21[5] (cf 2 S 1[21]) may have a purely practical origin in the wish to make hostile weapons glance off more readily.

2. In the days before the monarchy the wars of the Hebrews were local and battles were fought by the individual tribes. Rarely, as in the case of the campaign against Sisera (Jg 4), was it necessary to summon a larger army from several tribes. From the days of Saul and David, with their long struggle against the Philistines (who were in military respect a highly organized people with superior weapons of iron), war became the affair of the whole nation, leading to the establishment of a **standing army** (cf already 1 S 13[2] 14[52]; see ARMY). David had a personal bodyguard (2 S 8[18]), apart from the regular army (2 S 10[10]), and archers appear to be in the infantry from about this time. In the reign of Solomon we hear of a complete reorganization of the kingdom (1 K 4[7]), no doubt with a view, among other things, to the conscription of troops, and cavalry and chariots were introduced.

3. Early spring, after the winter rains had ceased, was 'the time when kings go out to battle' (2 S 11[1]). The war-horn (EV 'trumpet'), sounded from village to village on the hilltops, was in all periods the call to arms (Jg 6[34], 1 S 13[3], 2 S 20[1]). How far the exemptions from military service specified in Dt 20[5-8] were in force under the kings is unknown; the first express attestation is 1 Mac 3[56]. The **tactics** of the Hebrew generals were as simple as their strategy. As the army advanced scouts or **spies** were sent out to ascertain the enemy's position and strength (Jos 2[1], Jg 1[24], 1 S 26[4]; cf Gideon's exploit, Jg 7[10ff]). Usually the opposing forces would draw up in a line facing each other. At a given signal each side raised its **battle-cry** (Jg 7[21], Am 1[14], Jer 4[19] [EV, in the last-mentioned passage, translate by 'the alarm of war']) as it rushed to the fray. It was a common practice for a general to divide his forces into three divisions (Jg 7[16], 1 S 11[11], 2 S 18[2], 1 Mac 5[33]). A favourite piece of tactics was to pretend flight, and by leaving a body of men in **ambush**, to fall upon the unwary pursuers in front and rear (Jos 8[15], Jg 20[32]). As examples of more elaborate tactics may be cited Joab's handling of his troops before Rabbath-ammon (2 S 10[9-11]), and Benhadad's massing of his chariots at the battle of Ramoth-gilead (1 K 22[31]). The recall was sounded on the war-horn (2 S 2[28] 18[16] 20[22]). The tender mercies of the victors in those days were cruel, although the treatment which the Hebrews meted out to their enemies was, with few exceptions (*e.g.* 2 K 15[16]), not to be compared to what Benzinger only too aptly describes as 'the Assyrian devilries.' (It should be noted here that 2 S 12[31] should probably be translated as in RSV, and not as in RV.) The captives were sometimes sold as slaves. A heavy war indemnity or a yearly tribute might be imposed on the conquered people (2 K 3[4]). The **booty** fell to the victorious soldiery, the leaders receiving a special share (Jg 8[24ff], 1 S 30[26ff]). The men 'that tarried by the stuff,' *i.e.* those who were left behind as a camp-guard, shared equally with their comrades 'who went down to battle' (1 S 30[24]), a law first introduced by David, but afterwards characteristically assigned to Moses (Nu 31[27]). The returning warriors were welcomed home by the women with dance and song (Ex 15[20f], Jg 11[34], 1 S 18[6f]). As long as the campaign lasted the general and his men would live in tents and booths (cf 2 S 11[11], 1 K 20[12, 16]), but we know very little of their military **camps**. The obscure term rendered by RV 'place of the wagons,' and by RSV 'encampment' (1 S 17[20] 26[5, 7]) is derived from a root which justifies us in supposing that the Hebrew camps were round rather than square. Of the twenty Assyrian camps represented on the bronze plates of the gates of Balawât, four are circular, fourteen almost square, and two have their long sides straight and short sides curved outwards. Two gates are represented at opposite ends, between which a broad road divides the camp into two almost equal parts (see Billerbeck and Delitzsch, *Die Palasttore Salmanassars*, ii, p. 104). As regards the **commissariat**, the soldiers might receive provisions from friends, cf 2 S 17[27ff], or they might live on the booty; the arrangement by which 'ten men out of every hundred' were told 'to bring provisions for the people' (Jg 20[10]) probably reflects a later development. The night was divided into three watches (Jg 7[19], 1 S 11[11]).

A. R. S. K.—P. W.-M.

WARDROBE.—See VESTRY.

WARS OF THE LORD, BOOK OF THE.—A work quoted in Nu 21[14f] to settle a point with regard to the boundary of Moab and Ammon. The quotations in vv.[17f, 27-30] are probably from the same original. This is the only mention of the book in the OT. It is not likely that the work is identical with the **Book of Jashar** (q.v.). It probably consisted of a collection of songs celebrating the victories of Israel. The song in Ex 15[1-19] describing the Lord as 'a man of war' has been thought to be derived from it; also the poem in Jg 5. The date of the book is unknown. If it included Nu 21[27-30] (cf Jer 48[45f]), and if that poem refers to the wars of Omri, as some have thought, the collection will not have been completed before the 9th cent. Nu 21[27-30] may, however, come from the heroic age as Jg 5 does and possibly Ex 15[1-16, 18] (v.[17] seems to presuppose the existence of the Temple); in this case the collection may have been made much earlier. W. F. B.—C. A. Si.

WASHBASIN.—Only Ps 60[8] 108[9], as a figure of contempt. The pot (*sîr*) was also used for boiling (see HOUSE, 9).

WASHPOT.—See WASHBASIN.

WATCH.—See TIME.

WATCHMAN.—A person who patrolled the streets in the night (Ca 3[3] 5[7]; cf Ps 127[1]) or who was posted on watch duty on the walls of a city (2 S 18[24], 2 K 9[17ff], Is 62[6]) or on watchtowers (2 Ch 20[24], Hab 2[1]) or hilltops (Jer 31[6]).

WATCH TOWER.—See VINE.

WATER.—The scarcity of water in the East lends it a special value. Its presence in some form is essential to life. The fruitfulness of the land depends on the quantity available for watering. The Jordan, with its great springs, is too low for the irrigation of anything but the valley. There are many fountains in Palestine, but most fail in summer. The average annual rainfall approaches 30 inches. But this is confined to the months from April to October; and the water would rush down the slopes to the sea, were it not caught and stored for future use. The limestone formation, with its many caves, made easy the construction of cisterns and reservoirs to collect the rain water: thence supplies were drawn as required during the dry months. Wherever water is found, there is greenery and beauty all through the year. In the Maritime Plain plentiful supplies of water are found on digging (Gn 26[15ff]). To fill up the wells would make the district uninhabitable. From Egypt to Palestine the Egyptians had a series of wells to ensure the success of their military campaigns, and invading armies were at times reduced to sore straits by the stopping of wells (2 K 3[19, 25]), or diversion and concealment of a stream from a fountain (2 Ch 32[3f]).

The earliest use of water was doubtless to allay the thirst of man and beast. Refusal of drink to a thirsty man would be universally condemned (Gn 24[17f], Jn 4[7]). It is held a meritorious act to set a vessel of water by the wayside for the refreshment of the wayfarer, but already in Biblical times water was sold in the streets (cf Is 55[1]),

and for flocks water must often be purchased (Nu 20^{17ff}, Dt 2^{28}). Use and wont established certain regulations for the watering of animals, infringement of which frequently caused strife (Gn 29^{2ff}, Ex 2^{16ff}; cf Gn 26^{20} etc.). The art of irrigation (q.v.) was employed in ancient days (Ps 1^{3} 65^{10}, Ezk 17^{7} etc.), and reached its fullest development in the Roman period. To this time also belong many ruins of massive aqueducts, leading water to the cities from distant sources.

Cisterns and springs are not common property. Every considerable house has a **cistern** for rain water from roof and adjoining areas. Importance is attached to plunging in the buckets by which the water is drawn up, this preventing stagnation. The springs, and cisterns made in the open country, are the property of the local family or tribe (cf Gn 21^{25f} 26^{15ff}), from whom water, if required in any quantity, must be bought. The mouth of the well is usually covered with a great stone. Drawing water for domestic purposes is the work of women Gn 24^{11}, 1 S 9^{11}, Jn 4^{7}). In crossing the desert water is carried in skins (Gn 21^{14}).

In the various rites of purification water naturally plays an important part, see Ex $30^{18, 21}$ $40^{7, 30ff}$, Lev 11^{32} 14^{8f} 15^{5} etc. A special rite of drawing and pouring out water is mentioned in 1 S 7^{6}; a similar rite is alluded to in Is 12^{3}. According to later Jewish sources water from Siloam was poured out in the Temple at the Sukkoth festival—no doubt a very ancient rite. Water is furnished to wash the feet and hands of a guest (Lk 7^{44}). To pour water on the hands is the office of a servant (2 K 3^{11}).

According to Gn 1 the primeval, chaotic waters were divided (and thus brought under control) by the creation of the firmament, and the fear of water is reflected in many Scripture passages (*e.g.* Is 8^{7} 28^{17}, Jer 47^{2}, Ps 18^{16} 32^{6} 69^{2} 88^{17}.

The living, *i.e.* flowing, water of the **spring** is greatly preferred to the 'dead' water of the cistern, and it stands frequently for the vitalizing influences of God's grace (Jer 2^{13}, Jn 4^{10} etc.). Water is, in fact, alluded to in many Biblical passages in a metaphorical and figurative way, see *e.g.* (apart from some of the passages already mentioned) 2 S 5^{20} 14^{14}, Is $32^{2, 20}$ 58^{11}, Jer 17^{13} 31^{9}, Hos 5^{10} 10^{7}, Ps 23^{2} 36^{9} 46^{4} 58^{7} 63^{1} 66^{12} 79^{3}, Job 11^{16} 14^{11} 15^{16} 22^{11} 27^{20}, Pr 5^{15} 9^{17} 18^{4} 20^{5} 25^{25}. As for the abundance of water in the Messianic Age, see Is 30^{25} 35^{6f} 41^{18} 49^{10}, Jer 31^{9}, Ezk 47, Zech 14^{8}. See also CITY; JERUSALEM, I. 2, 4. For 'water-gate' see JERUSALEM, GATES OF.

WATER HEN, Lv 11^{18}, Dt 14^{16} (RSV).—See OWL.

WATER OF BITTERNESS.—See JEALOUSY.

WATER OF SEPARATION.—See RED HEIFER.

WATERPOTS.—See HOUSE, 9.

WATERSPOUTS.—Only Ps 42^{7} AV and RV, 'Deep calleth unto deep at the noise of thy waterspouts' (RVm, RSV 'cataracts'). The reference is probably to the numerous noisy waterfalls in a stream swollen by the melting of the snow.

WAVE-BREAST, WAVE-OFFERING.—See SACRIFICE, 2 (13), 12.

WAW.—See VAU.

WAX.—See EDUCATION; WRITING, 8.

WAY.—1. OT usage.—(*a*) Of a road or journey (1 S 6^{9}, 2 K 3^{8}, Jer 2^{17}). (*b*) Figuratively, of a course of conduct or character (Job 17^{9} 22^{15}), either in a good sense as approved by God (Dt 31^{29}, Ps 50^{23}, Is 30^{21}), or in a bad sense of man's own choosing (Ps 139^{24}, Is 65^{2}, Jer 18^{11}). (*c*) Of the way of the Lord (AV), His creative power (Job 26^{14}), His moral rule and commandments (Job 21^{14}, Ps 18^{30}, Pr 8^{32}).

2. NT usage.—(*a*) In the literal sense (Mt 2^{12}, Lk 17^{11}, Ac 25^{3}). (*b*) Figuratively, as in OT of human conduct, or God's purpose for man (Mt 21^{32}, Ja 5^{20}). But the gospel greatly enriched the ethical and religious import of the word. Though Jesus was addressed as one who taught 'the way of God in truth' (Mt 22^{16}), He Himself claimed to show the way to the Father because He is 'the Way, the Truth, and the Life' (Jn 14^{4ff}). By Him 'the two worlds were united' (Westcott). This is equivalent to the Apostolic doctrine that Christ is the Gospel (Mk 1^{1}, Ro 15^{19}). In He 9^{8} 10^{20} there is the similar thought that Jesus by His life, death, and exaltation has opened a way whereby men may enter into the holy presence of God, and enables them also to walk therein. In Acts 'the Way' is used with the distinctive meaning of the Christian faith and manner of life, which is the only 'way' that leads to salvation (9^{2} $19^{9, 23}$ 24^{22}). This is the 'way of the Lord' so often referred to in the OT, of which Jesus became the final and perfect revealer. The development of the conception may be traced in Ac 16^{17} 18^{25f}. In Hellenistic and ancient Jewish literature the term was used of moral behaviour, a 'way of life': see Prodicus's Choice of Heracles (in Xenophon, *Memorabilia*, II. i. 21–34) and the Two Ways in the *Didache*, ch. 1 ff.

R. A. F.—F. W. G.

WAYMARK.—In Jer 31^{21} 'virgin Israel' is called on to set up waymarks and make guideposts to mark the way for the returning exiles. The Hebrew word translated 'waymark' apparently means a small stone pillar, similar to our milestones, with an indication of routes and distances.

WEALTH.—1. Palestine is described in Dt 8^{7-9} as rich not only in cereal but also in mineral wealth. Recent excavations have shown that this is not a poetic description but simple truth. (See TRADE AND COMMERCE.) It is also frequently spoken of as 'flowing with milk and honey' (Ex 3^{8} etc.)—products which were in ancient times considered the marks of fertile lands. The wealth of Israel increased as the country developed; and under the monarchy it reached its height. The increased prosperity did not, however, lead to increased righteousness. If in the times of Isaiah the land was 'full of silver and gold,' it was also 'full of idols' (Is 2^{7f}): the ruling classes oppressed the poor (5^{8}, Mic 2^{2}), drunkenness (Is 5^{11}, Mic 2^{11}) and audacity of sin (Is 5^{18}) were rampant. The national poverty that followed upon the Exile had been removed before the birth of our Lord, as exemplified by the magnificent buildings of Herod. Throughout the OT and NT many instances of wealthy individuals occur: *e.g.* Abram (Gn 13^{2}), Nabal (1 S 25^{2}), Barzillai (2 S 19^{32}), Zacchaeus (Lk 19^{2}), Joseph of Arimathaea (Mt 27^{57}).

2. In the OT the possession of wealth is generally regarded as evidence of God's blessing and so of righteousness (Ps 1^{3f} etc.). In early Israel, blessing consisted primarily in the power of fertility, fertility in the family, the field, and the herd (cf Abraham, Gn 24^{35}), and this posed no urgent problem for faith. By the 9th cent., but more clearly in the 8th cent., the existence of wealth in the hands of unscrupulous rich men created a *social* problem which evoked prophetic denunciation. Accordingly rich men are again and again bad men (Am 2^{6f}, Is 12^{3} 31^{4f}, Pss 37, 49, 73). It became a *problem of faith* demanding theodicy in Jer 12, but especially in the Wisdom literature. Proverbs and Ecclesiasticus maintain the strict connexion between righteousness and blessing. Ecclesiastes is haunted by the vanity of riches in the perspective of life and death. The profoundest discussions (Ps 73, Job) lead to a humble and total trust in the Living God, despite the manifest disconnexion between wealth and righteousness. In the Book of Wisdom, the ungodly rich will be discomfited when they behold the immortality of the righteous (cf especially 5^{1-8}, 'What good has our boasted wealth brought us?'). In the NT full belief in a future life and the expectation of the imminent return of the Lord take the acid out of the problem. Nevertheless some connexion between righteousness and well-being is reaffirmed (1 Ti 4^{8}, cf Mt 6^{33}, Mk 10^{30}), while the necessity of complete detachment from wealth is repeatedly enforced.

3. *Our Lord's position regarding wealth* must be deduced from His practice and teaching. As regards His *practice*, it is clear that, until He commenced His ministry, He obtained His livelihood by labour, toiling

as a carpenter in Nazareth (Mk 6[3]). During His ministry, He and the Twelve formed a family with a common purse. This store, composed, no doubt, of the personal property of those of their number who originally had wealth, was replenished by gifts of attached disciples (Lk 8[2f]). From it necessary food was purchased and the poor were relieved (Jn 4[8] 13[29]). Christ and His Apostles as a band, therefore, owned private property. When our Lord dispatched the Twelve on a special tour for preaching and healing, and when He sent the Seventy on a similar errand, He commanded them to take with them neither money nor food (Mt 10[10], Lk 10[4]); but these were special instructions on special occasions, and doubtless on their return to Him the former system of a common purse was reverted to (cf Lk 22[36]).

As regards Christ's *teaching*, it is important to balance those sayings which appear to be hostile to any possession of wealth, with those which point in the other direction. On the one hand, we find Him bidding a rich young man sell his all and give to the poor (Mk 10[21]), and then telling His disciples that it is easier for a camel to go through a needle's eye than for a rich man to enter the Kingdom of God. He pictures a possessor of increasing wealth hearing God say, 'Fool! This night your soul is required of you' (Lk 12[20]); He follows beyond the grave the histories of a rich man and a beggar, placing the rich man in a 'place of torment' and the poor man in Abraham's bosom (Lk 16[19f]). But there is the other side; for we find that He sympathized deeply with those enduring poverty, assuring them of their Father's care (Mt 6[32]), preaching especially to them the gospel (Mt 11[5]), and pronouncing upon them in their sorrows a special benediction (Lk 6[20]). He showed that He desired that all should have a sufficiency, by bidding all, rich and poor alike, pray for 'daily bread.' If He taught that riches were indeed an obstacle to entrance into the Kingdom of God, He also taught that it was the 'few' (whether rich or poor) that succeeded in entering it (Mt 7[14]). If He told one young man to sell all that he had, clearly He did not intend this counsel to be applicable to all, for He assured of 'salvation' Zacchaeus, who gave but the half of his goods to the poor (Lk 19[8f]). If the builder of larger barns is termed a 'fool,' his folly is shown not to have been mere acquisition of wealth, but that acquisition apart from riches 'toward God' (Lk 12[21]); and if Dives is in Hades, it is evident that he is not there merely because of his riches, for Lazarus lies in the bosom of Abraham, the typical rich Jew. Further, in the parables of the Pounds and Talents (Lk 19[12], Mt 25[14]) He teaches, under the symbolism of money, that men are not owners but stewards of all they possess; while in the parable of the Unjust Steward He points out one of the *true* uses of wealth—namely, to relieve the poor, and so to insure a welcome from them when the eternal tabernacles are entered (Lk 16[9]).

From the foregoing we may conclude that, while our Lord realized that poverty brought sorrow, He also realized that wealth contained an intense peril to spiritual life. He came to raise the world from the material to the spiritual; and wealth, as the very token of the material and temporal, was blinding men to the spiritual and eternal. He therefore urged those to whom it was a special hindrance, to resign it altogether; and charged *all* to regard it as something for the use of which they would be held accountable.

4. In the Apostolic Church, in its earliest days, we find her members having 'all things common,' and the richer selling their possessions to supply the wants of their poorer brethren (Ac 2[44f] 4[34–37]). But this active enthusiasm does not necessarily show that the Church thought the personal possession of wealth, in itself, unlawful or undesirable; for the case of Ananias clearly indicates that the right to the possession of private property was not questioned (Ac 5[4]). Later in the history of the Church we find St. James inveighing against the proud and heartless rich (Ja 2[1–8] 5[1–5]), and St. Paul warning men of the spiritual dangers incident to the procuring or possessing of wealth (1 Ti 6[9f, 17–19]; cf Rev 3[17]). C. T. P. G.—D. R. J.

WEAPONS.—See Armour, Arms.

WEASEL.—Hebrew *ḥōledh*, Lv 11[29], an unclean animal. Since the Hebrew root *ḥāladh* means to 'dig,' and the Arabic *khuld* is the 'mole-rat,' it is practically certain that this latter is the correct translation of *ḥōledh*.

WEAVING.—See Spinning and Weaving.

WEDDING.—See Marriage.

WEDGE (of gold).—Jos 7[21, 24] (AV, RV; RSV 'bar'). See Money.

WEEDS.—**1.** Hebrew *sûph*, Jn 2[5], referring to seaweeds (cf the designation *yam sûph* 'sea of weeds,' applied to the Red Sea [q.v.]). **2.** Greek *chortos*, Sir 40[16] (RV 'sedge,' RSV 'reeds'), used in the same indefinite sense as English 'weeds.'

WEEK.—See Time.

WEEKS, FEAST OF.—See Pentecost.

WEEPING.—See Mourning Customs.

WEIGHTS AND MEASURES.—There never was, in Palestine, a system of weights and measures comparable with that of the great Mesopotamian empires from the 3rd millennium. Some systematization seems to have been attempted under the monarchy; and indeed, several systems seem to have been adopted at different times. The peasants who used stones and odd scraps of iron for weights were satisfied with approximate standards. Such weights as have been discovered provide no absolute measurements, and show how easy it must have been to 'make the ephah small, and the shekel great' (Am 8[5]). Micah denounced the man with 'wicked scales and a bag of deceitful weights' (6[11]), and in Proverbs, 'a false balance' and 'diverse weights' are contrasted with 'a just weight' (11[1]; cf 20[23]). Such weights as have been found (29 inscribed weights altogether) show that weights probably varied according to the region or to the goods sold (*e.g.* wool), or sometimes to both. The variation which is most plainly disclosed in the value of weights is probably true of other measures also. Measures of length, for example, were no doubt based on a more primitive and unscientific system than that of Egypt or Babylon.

I. Measures of Length.

The Hebrew unit was a cubit (½ of a reed, Ezk 40[5]), containing 2 spans or 6 palms or 24 finger's breadths. The early system did not recognize the foot or the fathom. Measurements were taken both by the 6-cubit rod or reed and the line or 'fillet' (Ezk 40[3], Jer 31[39] 52[21], 1 K 7[15]).

The ancient Hebrew literary authorities for the early Hebrew cubit are as follows. The 'cubit of a man' (Dt 3[11]) was the unit by which the 'bedstead' of Og, king of Bashan, was measured (cf Rev 21[17]). This implies that at the time to which the passage belongs (apparently not long before the time of Ezekiel) the Hebrews were familiar with more than one cubit, of which that in question was the ordinary working cubit. Solomon's Temple was laid out on the basis of a cubit 'after the first (or ancient) measure' (2 Ch 3[3]). Now Ezekiel (40[5] 43[13]) prophesies the building of a Temple on a unit which he describes as a cubit and a hand's breadth, *i.e.* ⅞ of the ordinary cubit. As in his vision he is practically reproducing Solomon's Temple, we may infer that Solomon's cubit, *i.e.* the ancient cubit, was also ⅞ of the ordinary cubit of Ezekiel's time. We thus have an ordinary cubit of 6, and what we may call (by analogy with the Egyptian system) the **royal cubit** of 7 hand's breadths. For this double system is curiously parallel to the Egyptian, in which there was a common cubit of 0·450 metres or 17·72 inches, which was ⅞ of the royal cubit of 0·525 metres or 20·67 inches (these data are derived from actual measuring rods). A similar distinction between a common and a

WEIGHTS AND MEASURES

royal norm existed in the Babylonian weight-system. Its object there was probably to give the government an advantage in the case of taxation; probably also in the case of measures of length the excess of the royal over the common measure had a similar object.

We have at present no means of ascertaining the exact dimensions of the Hebrew ordinary and royal cubits. The balance of evidence is certainly in favour of a fairly close approximation to the Egyptian system. The estimates vary from 16 to 25·2 inches. They are based on: (1) *the Siloam inscription*, which says: 'The waters flowed from the outlet to the Pool 1200 cubits,' or, according to another reading, '1000 cubits.' The length of the canal is estimated at 537·6 metres, which yields a cubit of 0·525 to 0·527 metres (20·67 to 20·75 inches) or 0·538 metres (21·18 inches) according to the reading adopted. Further uncertainty is occasioned by the possibility of the number 1200 or 1000 being only a round number. The evidence of the Siloam inscription is thus of a most unsatisfactory kind. (2) *The measurements of tombs.* Some of these appear to be constructed on the basis of the Egyptian cubit; others seem to yield cubits of 0·575 metres (about 22·6 inches) or 0·641 metres (about 25·2 inches). The last two cubits seem to be improbable. The measurements of another tomb (known as the Tomb of Joshua) seem to confirm the deduction of the cubit of about 0·525 metres. (3) *The measurement of grains of barley.* This has been objected to for more than one reason. But the Rabbinical tradition allowed 144 barley-corns of medium size, laid side by side, to the cubit; and it is remarkable that a careful test made on these lines resulted in a cubit of 17·77 inches (0·451 metres), which is the Egyptian common cubit. (4) *Josephus*, when using the Jewish measures of capacity, etc., which differ from the Greek or Roman, is usually careful to give an equation explaining the measures to his Greek or Roman readers, while in the case of the cubit he does not do so, but seems to regard the Hebrew and the Roman-Attic as practically the same. The Roman-Attic cubit (1½ feet) is fixed at 0·444 metres or 17·57 inches, so that we have here a close approximation to the Egyptian common cubit. Probably in Josephus' time the Hebrew common cubit was, as ascertained by the methods mentioned above, 0·450 metres; and the difference between this and the Attic-Roman was regarded by him as negligible for ordinary purposes. (5) *The Mishnah.* No data of any value for the exact determination of the cubit are to be obtained from this source. Four cubits is given as the length of a *loculus* in a rock-cut tomb; it has been pointed out that, allowing some 2 inches for the bier, and taking 5 feet 6 inches to 5 feet 8 inches as the average height of the Jewish body, this gives 4 cubits = 5 feet 10 inches, or 17½ inches to the cubit.

The general inference from the above five sources of information is that the Jews had two cubits, a shorter and a longer, corresponding closely to the Egyptian common and royal cubit. The equivalents are expressed in the following table:—

	Royal System.		Common System.	
	Metres.	Inches.	Metres.	Inches.
Finger's breadth	0·022	0·86	0·019	0·74
Palm = 4 fingers	0·088	3·44	0·075	2·95
Span = 3 palms	0·262	10·33	0·225	8·86
Cubit = 2 spans	0·525	20·67	0·450	17·72
Reed = 6 cubits	3·150	124·02	2·700	106·32

Parts and multiples of the unit.—The ordinary parts of the cubit have already been mentioned. They occur as follows: the **finger's breadth** or digit (Jer 52[21], the *daktyl* of Josephus); the palm or **hand's breadth** (1 K 7[26] Ezk 40[5, 43] 43[13] etc.); the **span** (Ex 28[16] 39[9] etc.). A special measure is the *gōmedh*, which was the length of the sword of Ehud (Jg 3[16]), and is not mentioned elsewhere. It was explained by the commentators as a short cubit (hence EV 'cubit'), and it has been suggested that it was the cubit of 5 palms, which is mentioned by Rabbi Judah. The Greeks also had a short cubit, known as the *pygōn*, of 5 palms, the distance from the elbow to the first joint of the fingers. The **reed** (=6 cubits) is the only definite OT multiple of the cubit (Ezk 40[5]). This is the *akaina* of the Greek writers. The **pace** of 2 S 6[13] is probably not meant to be a definite measure. A 'little way' (Gn 35[16] 48[7], 2 K 5[19]) is also indefinite. Syrian and Arabic translators compared it with the parasang, but it cannot merely for that reason be regarded as fixed. A **day's journey** (Nu 11[31], 1 K 19[4], Jon 3[4], Lk 24[44]) and its multiples (Gn 30[36], Nu 10[33]) are of course also variable.

The **Sabbath day's journey** (Ac 1[12]) was usually computed at 2000 cubits. This was the distance by which the Ark preceded the host of the Israelites, and it was consequently presumed that this distance might be covered on the Sabbath, since the host must be allowed to attend worship at the Ark. The distance was doubled by a legal fiction: on the eve of the Sabbath, food was placed at a spot 2000 cubits on, and this new place thus became the traveller's place within the meaning of the prescription of Ex 16[29]; there were also other means of increasing the distance. The Mount of Olives was distant a Sabbath day's journey from Jerusalem, and the same distance is given by Josephus as 5 *stadia*, thus confirming the 2000 cubits computation. But in the Talmud the Sabbath day's journey is equated to the *mil* of 3000 cubits or 7½ furlongs; and the measure 'threescore furlongs' of Lk 24[13], being an exact multiple of this distance, seems to indicate that this may have been one form (the earlier?) of the Sabbath day's journey. In the Zadokite Document the Sabbath day's journey is limited to 1000 cubits (*CDC* x. 20).

In later times, a Byzantine writer of uncertain date, Julian of Ascalon, furnishes information as to the measures in use in Palestine ('Provincial measures, derived from the work of the architect Julian of Ascalon, from the laws or customs prevailing in Palestine,' is the title of the table). From this we obtain (omitting doubtful points) the following table:—

1. The finger's breadth.
2. The palm = 4 finger's breadths.
3. The cubit = 1½ feet = 6 palms.
4. The pace = 2 cubits = 3 feet = 12 palms.
5. the **fathom** = 2 paces = 4 cubits = 6 feet.
6. The reed = 1½ fathoms = 6 cubits = 9 feet = 36 palms.
7. The *plethron* = 10 reeds = 15 fathoms = 30 paces = 60 cubits = 90 feet.
8. The *stadium* or **furlong** = 6 *plethra* = 60 reeds = 100 fathoms = 200 paces = 400 cubits = 600 feet.
9. (*a*) The *milion* or **mile**, 'according to Eratosthenes and Strabo' = 8⅓ stadia = 833⅓ fathoms.
   (*b*) The *milion* 'according to the present use' = 7½ stadia = 750 fathoms = 1500 paces = 3000 cubits.
10. The present *milion* of 7½ stadia = 750 'geometric' fathoms = 833⅓ 'simple' fathoms; for 9 geometric fathoms = 10 simple fathoms.

We may justifiably assume that the 3000 cubits of 9 (*b*) are the royal cubits of 0·525 metres. The geometric and simple measures according to Julian thus work out as follows:—

	Geometric.		Simple.	
	Metres.	Inches.	Metres.	Inches.
Finger's breadth	0·022	0·86	0·020	0·79
Palm . . .	0·088	3·44	0·080	3·11
Cubit . . .	0·525	20·67	0·473	18·62
Fathom . .	2·100	82·68	1·890	74·49

Measures of area.—For smaller measures of area there seem to have been no special names, the dimensions of the sides of a square being usually stated. For land measures, two methods of computation were in use. (1) The first, as in most countries, was to state area in terms of *the amount that a yoke of oxen could plough in a day* (cf the Latin *jugerum*). Thus in Is 5^{10} (possibly also in the corrupt 1 S 14^{14}) we have '10 yoke' (*semedh*) of vineyard. Although definite authority is lacking, we may perhaps equate the Hebrew yoke of land to the Egyptian unit of land measure, which was 100 royal cubits square (0·2756 hectares or 0·6810 acre). The Greeks called this measure the *aroura*. (2) The second measure was *the amount of seed required to sow an area.* Thus 'the sowing of a homer of barley' was computed at the price of 50 shekels of silver (Lv 27^{16}). The dimensions of the trench which Elijah dug about his altar (1 K 18^{32}) have also been explained on the same principle; the trench (*i.e.* the area enclosed by it) is described as being 'like a house of two seahs of seed' (EV wrongly 'as great as would contain two measures of seed'). This measure '**house of two seahs**' is the standard of measurement in the Mishnah, and is defined as the area of the court of the Tabernacle, or 100×50 cubits (*c* 1648 square yards or 0.1379 hectares). Other measures of capacity were used in the same way, and the system was Babylonian in origin; there are also traces of the same system in the West under the Roman Empire.

II. Measures of Capacity.

The terms '**handful**' (Lv 2^{2}) and the like do not represent any part of a system of measures in Hebrew, any more than in English. The Hebrew 'measure' *par excellence* was the **seah**, Greek *saton*. From the Greek version of Is 5^{10} and other sources we know that the ephah contained 3 such measures. Epiphanius describes the seah or Hebrew *modius* as a modius of extra size, and as equal to 1¼ Roman modius=20 sextarii. Josephus, however, equates it with 1½ Roman modius =24 sextarii. An anonymous Greek fragment agrees with this, and so also does Jerome in his commentary on Mt 13^{33}. Epiphanius elsewhere, and other writers, equate it with 22 sextarii (the Babylonian ephah is computed at 66 sextarii). The seah was used for both liquid and dry measure.

The **ephah** (the word is suspected of Egyptian origin) of 3 seahs was used for dry measure only; the equivalent liquid measure was the **bath** (Gr. *bados, batos, keramion, choinix*). They are equated in Ezk 45^{11}, each containing $\frac{1}{10}$ of a homer. The ephah corresponds to the Greek *artabē* (although in Is 5^{10} six artabai go to a homer) or *metrētēs*. Josephus equates it to 72 sextarii. The bath was divided into tenths (Ezk 45^{14}), the name of which is unknown; the ephah likewise into tenths, which were called *'ōmer* or *'iśśārôn* (distinguish from *homer*=10 ephahs). Again the ephah and bath were both divided into sixths (Ezk 45^{13}); the ⅙ bath was the *hin*, but the name of the ⅙ ephah is unknown.

The **homer** (Ezk 45^{11}, Hos 3^{2}) or **cor** (Ezk 45^{14}, Lk 16^{7}; Gr. *koros*) contained 10 ephahs or baths, or 30 seahs (The term 'cor' is used more especially for liquids). It corresponded to 10 Attic *metrētai* (so Jos. *Ant.* xv. ix. 2 [314], though he says *medimni* by a slip). The word *cor* may be connected with the Babylonian *gur* or *gurru*.

The **lethech** (Ugaritic *lth*) occurs in Hos 3^{2}, and by Vulgate and EV is rendered by 'half a homer.' Epiphanius says the lethech is a large *'ōmer* (*gomor*) of 15 *modii*.

The **hin** (Gr. *hein*) was a liquid measure=⅙ seah. In Lv 19^{36} the LXX renders it *chous*. But Josephus and Jerome and the Talmud equate it to 2 Attic *choes*= 12 sextarii. The hin was divided into halves, thirds (=cab), quarters, sixths, and twelfths (=log). In later times there were a 'sacred hin'=¾ of the ordinary hin, and a large hin=2 sacred hins=⅔ ordinary hin. The Egyptian *hen*, of much smaller capacity (0·455 litres) is to be distinguished.

The **'omer** (Gr. *gomor*) is confined to dry measure. It is $\frac{1}{10}$ ephah and is therefore called *assaron* or *'iśśārôn* (AV '**tenth deal**'). Epiphanius equates it accordingly to 7⅓ sextarii, Eusebius less accurately to 7 sextarii. Eusebius also calls it the 'little gomor'; but there was another 'little gomor' of 12 modii, so called in distinction from the 'large gomor' of 15 modii (the lethech of Epiphanius). Josephus wrongly equates the *gomor* to 7 Attic *kotylai*.

The **cab** (2 K 6^{25}, Gr. *kabos*) was both a liquid and a dry measure. From Josephus and the Talmud it appears that it was equal to 4 sextarii, or ⅓ hin. In other places it is equated to 6 sextarii, 5 sextarii ('great cab' =1¼ cab), and ¼ modius (Epiphanius, who, according to the meaning he attaches to *modius* here, may mean 4, 5, 5½, or 6 sextarii!).

The **log** (Lv $14^{10, 12}$) is a measure of oil; the Talmud equates it to $\frac{1}{12}$ hin or $\frac{1}{24}$ seah, *i.e.* ¼ cab. Josephus renders the ¼ cab of 2 K 6^{25} by the Greek *xestēs* or Roman *sextarius*, and there is other evidence to the same effect.

A measure of doubtful capacity is the *nēbhel* of wine (Gr. version of Hos 3^{2}, instead of **lethech** of barley). It was 150 sextarii, by which may be meant ordinary sextarii or the larger Syrian sextarii which would make it=3 baths. The word means 'wine-skin.'

We thus obtain the table on p. 1035 (showing a mixed decimal and sexagesimal system) of dry and liquid measures. Where the name of the liquid differs from that of the dry measure, the former is added in italics. Where there is no corresponding liquid measure, the dry measure is asterisked.

The older portion of this system seems to have been the sexagesimal, the *'ōmer* and $\frac{1}{10}$ *bath* and the *lethech* being intrusions.

When we come to investigate the actual contents of the various measures, we are, in the first instance, thrown back on the (apparently only approximate) equations with the Roman *sextarius* (Gr. *xestēs*) and its multiples already mentioned. The *log* would then be the equivalent of the *sextarius*, the *bath* of the *metrētēs*, the *cab* (of 6 logs) of the Ptolemaic *chous*. If log and sextarius were exact equivalents, the ephah of 72 logs would=39·39 litres,=nearly 8¾ gallons. This is on the usual assumption that the sextarius was 0·545 litres or 0·96 imperial pints. But the exact capacity of the sextarius is disputed, and a capacity as high as 0·562 litres or 0·99 imperial pint is given for the sextarius by an actually extant measure. This would give as the capacity of the ephah-bath 40·46 litres or 71·28 pints. But it is highly improbable that the equation of log to sextarius was more than approximate. It is more easy to confound closely resembling measures of capacity than of length, area, or weight.

Other methods of ascertaining the capacity of the ephah are the following. We may assume that it was the same as the Babylonian unit of 0·505 litres (0·89 pint). This would give an ephah of 36·37 litres, or nearly 8 gallons or 66·5 sextarii of the usually assumed weight, and more or less squares with Epiphanius' equation of the seah or ⅓ ephah with 22 sextarii. Or we may connect it with the Egyptian system, thus: both the ephah-bath and the Egyptian-Ptolemaic *artabē* are equated to the Attic *metrētēs* of 72 sextarii. Now, in the case of the *artabē* this is only an approximation, for it is known from native Egyptian sources (which give the capacity in terms of a volume of water of a certain weight) that the *artabē* was about 36·45 litres, or a little more than 64 pints. Other calculations, as from a passage of Josephus, where the cor is equated to 41 Attic (Graeco-Roman) modii (*i.e.* 656 sextarii), give the same result. In this passage *modii* is an almost certain emendation of *medimni*, the confusion between the two being natural in a Greek MS. There are plenty of other vague approximations, ranging from 60 to 72 sextarii. Though the passage of Josephus is not quite certain in its text, we may accept it as having the appearance of precise determination, especially since it gives a result not materially differing from other sources of information.

Homer or cor.	1											
* Lethech	2	1										
Ephah, *bath*	10	5	1									
Seah	30	15	3	1								
⅛ ephah, *hin*	60	30	6	2	1							
'Omer or 'issaron, $\frac{1}{10}$ *bath*	100	50	10	3⅓	1⅔	1						
½ *hin*	120	60	12	4	2	1⅕	1					
Cab	180	90	18	6	3	1⅘	1½	1				
¼ *hin*	240	120	24	8	4	2⅖	2	1⅓	1			
½ cab, ⅛ *hin*	360	180	36	12	6	3⅗	3	2	1½	1		
¼ cab, *log*	720	360	72	24	12	7⅕	6	4	3	2	1	
* ⅛ cab	1440	720	144	48	24	14⅖	12	8	6	4	2	1

Name of Measure.	(1) Log=0·505 litre.		(2) Ephah=65 Pints.		(3) Log=0·99 Pint.		Rough Approximation on Basis of (3).
	Litres.	Gallons.	Litres.	Gallons.	Litres.	Gallons.	
Homer (cor)	363·7	80·053	369·2	81·25	405	89·28	11 bushels
Lethech	181·85	40·026	184·6	40·62	202	44·64	5½ „
Ephah-bath	36·37	8·005	36·92	8·125	40·5	8·928	9 gallons
Seah	12·120	2·668	12·3	2·708	13·5	2·976	1½ pecks
Great hin	9·090	2·001	9·18	2·234	10·08	2·232	2¼ gallons
Hin	6·060	1·334	6·12	1·356	6·72	1·488	1½ „
Sacred hin	4·545	1·000	4·59	1·117	5·04	1·116	9 pints
'Omer	3·637	0·800	3·67	0·813	4·05	0·893	7½ „
½ hin	3·030	0·667	3·06	0·678	3·36	0·744	6 „
Cab	2·020	0·445	2·05	0·451	2·25	0·496	4 „
¼ hin	1·515	0·333	1·53	0·339	1·68	0·372	3 „
⅓ cab	1·010	0·222	1·02	0·226	1·12	0·248	2 „
Log	0·505	0·111	0·51	0·113	0·56	0·124	1 pint
⅛ cab	0·252	0·055	0·26	0·056	0·28	0·062	½ „

In the above table, the values of the measures are given according to three estimates, viz. (1) log= Babylonian unit of 0.505 litre; (2) ephah=65 pints; (3) log=sextarius of 0.99 pint.

Foreign measures of capacity mentioned in NT.— Setting aside words which strictly denote a measure of capacity, but are used loosely to mean simply a vessel (*e.g.* 'cup' in Mk 7⁴), the following, among others, have been noted. **Bushel** (Mt 5¹⁵) is the translation of *modius*, which represents seah. **Firkin** is used (Jn 2⁶) to represent the Greek *metrētēs*, the rough equivalent of the *bath*. **Measure** in Rev 6⁶ represents the Greek *choinix* of about 2 pints.

III. Measure of Weight.

The root š-k-l, common to all Semitic languages, signifies the action of weighing. It then expressed, appropriately, the counting and paying of money; and so the noun **shekel** became the unit of weight *par excellence*, and later, the fundamental unit of money. Weights were generally of stone (Pr 16¹¹). The two bronze plates of a balance (*mōzᵉnayim*), together with six stones have been found at Râs Shamra. Its small size suggests that it was normally used for weighing precious objects like gold, silver, perfumes, or spices.

The main denominations in Palestine were as follows: The **talent** (Gr. *talanton*, Heb. *kikkār*, meaning apparently a round, cake-like object). The **mina**: Akkadian *manû*, Hebrew *māneh*, Greek *mna* (cf 1 K 10¹⁷ RSV; AV, RV '**pound**'). The **shekel**: Akkadian *siglu*, Greek *siklos* or *siglos*. As a weight, this was quite unrelated to the money shekel (Gr. *didrachmon*), and references to shekels or other denominations of precious metal, in pre-exilic times, must therefore be to uncoined metal. The shekel was divided into twenty **gerahs** (Bab. *giru*). The Greek designation of the latter as *obolos* is only a rough equivalent, used because the obolus was the lightest unit of the hellenistic system.

The value of these units is difficult to establish. Ex 38²⁵ᵗ equates 1 talent with 3000 shekels. According to the Babylonian system 60 minas=1 talent, in which case 1 mina=50 shekels. It is usually supposed that this was the rate in early Israel (cf 2 K 15²⁰, Dt 22¹⁹). It is highly probable that commercial rates did not always accord with the official scales of the Temple. Some (*e.g.* Barrois) interpret Ezk 45¹² to indicate that Ezekiel aimed to restore a sexagesimal system (the Mesopotamian) which had fallen out of use. But the probable translation of Ezk 45¹² is: 'The shekel shall be 20 gerahs; 10 shekels are a fifth, and five shekels a tenth; 50 shekels shall be your mina.' If this is right, Ezekiel was resisting a change to the Mesopotamian standard (also Syrian) of 1 mina to 60 shekels. In this case also, there would be nothing unusual about the '200 shekels

after the royal weight' in 2 S 14^{26}. There is, in fact, no evidence of the Babylonian system of weights being adopted in Palestine. The Palestine scale would thus be :

kikkar . .	1				
mina . .	60	1			
shekel . .	3000	50	1		
beka . .	6000	100	2	1	
gerah . .	60,000	1000	20	10	1

The evidence of actual weights found in Palestine is as follows : **1.** Weights marked by a conventional sign, followed by a number, presumably indicating the scale of the system. These are usually numbered 2, 4, 8, or 16, and it may be assumed that they are based on the shekel. They offer an average weight of 11·424 grams for the shekel. **2.** Seven weights marked **pîm** (or perhaps *payim*). The meaning of *pîm* is obscure, but it is generally agreed that its value is **1** shekel. On the average the shekel turns out to be 11·14 grams. The discovery of the pîm settles the meaning of 1 S 13^{21}. See PIM. **3.** Seven weights marked **beka'**. This is ½ shekel (cf Gn 24^{22}, Ex 38^{26}), and the average weight of 6·112 grams gives a shekel of 12·224 grams. **4.** Two small bronze weights in the form of a turtle, have been found, but the interpretation of them is doubtful. The one would give a shekel of 21·04 grams, the other 12·495 grams. **5.** Nearly half the inscribed weights are marked **neṣeph** (which etymologically ought to mean 'a half'). The average weight of these is 9·84 grams, half, it has been suggested, of a heavy shekel of 19·7 grams.

Foreign weights in the NT.—The 'pound' of pure nard (Jn 12^{3}) or of myrrh and aloes (19^{39}) is best explained as the Roman *libra* (*litra* in the papyri) of 327·45 grams. The 'pound' in Lk 19^{13f} is the money-*mina* (see MONEY, 7).

For further information see especially K. Galling, *Biblisches Reallexikon*, 1937, pp. 186 f, 366 f, A.-G. Barrois, article 'La métrologie dans la Bible,' in *RB*, 1931, pp. 185–213 ; 1932, pp. 50–76 ; *Manuel d'Archéologie biblique* ii, 1953, pp. 243–258 ; D. Diringer, article 'Weights' in *Documents from Old Testament Times*, ed. D. Winton Thomas, 1958, pp. 227–230.

G. F. H.—D. R. J.

WELL.—See CISTERN, FOUNTAIN, WATER.

WEN.—Lk 22^{22} (AV, RV ; RSV 'discharge') ; see MEDICINE.

WENCH.—This word, once good English, was used in the Bishop's Bible of 1568, and was transferred to AV at 2 S 17^{17} (RV and RSV 'maidservant'). So Wycliffe at Mt 9^{24}, 'Go ye away, for the wenche is not dead, but slepith.'

WESTERN SEA.—See SEA.

WHALE.—**1.** Hebrew *tannîn* ; see DRAGON, **4. 2.** Hebrew *dāgh gādhôl*, the 'great fish' of Jon 1^{17}, is in the LXX and in Mt 12^{40} rendered in Greek by *kētos* and translated 'whale,' though the Greek word has a much wider significance. It is impossible to say what kind of fish is intended in the narrative. See, further, JONAH.

WHEAT.—Hebrew *ḥiṭṭāh*, Gn 30^{14}, Ex 34^{32} etc. ; Greek *sitos*, Mt 3^{12} $13^{25, 29}$, Lk 3^{17} 16^{7} 22^{31} etc. The wheat of Palestine is mostly of the bearded varieties ; it is not only eaten as bread, but also boiled, unground, to make the peasant's dish *burghul*, which is in turn pounded with meat in a mortar (cf Pr 27^{22}) to make the festive delicacy *kibbeh*. Wheat is grown all over the valleys and plains of W. Palestine, though to a less extent than barley, but it is cultivated in the largest quantities in the *Nuqrah* or plain of the Hauran, one of the finest grain-growing countries in the world. The wheat harvest occurs from April to June ; its time was looked upon as one of the divisions of the year, Ex 34^{22}, Jg 15^{1}, 1 S 12^{17}. The expression 'fat of wheat' (AVm and RVm in Ps 81^{16}, 147^{14}) and 'the fat of kidneys of wheat' (Dt 32^{14}) refer to the finest flour of wheat. E. W. G. M.

WHEEL.—The various parts of a cart or chariot wheel are enumerated in connexion with the bronze wheels of Solomon's lavers, 1 K $7^{30, 32f}$. In RSV v.^{33} reads : 'The wheels were much like a chariot wheel ; their axles, their rims, their spokes, and their hubs were all cast' (cf AV and RV). The rims were made in segments and dowelled together. One of the finest specimens of a Roman chariot wheel yet found has the rim, 'which is formed of a single piece of wood bent,' and the hub shod with iron, the latter being also 'bushed with iron' (Scott, *Hist. Rev.*, October 1905, p. 123, with illustrations). For the potter's wheel, see POTTER. Wells and cisterns were also furnished with wheels, over which the rope passed for drawing up the water-bucket, Ec 12^{6}. See also CART, CHARIOT. A. R. S. K.

WHIRLWIND represents two Hebrew words—*sūphāh* (Job 37^{9}, Pr 1^{27} etc., also translated '**storm**' in Job 21^{18}, Ps 83^{15}, Is 29^{6} etc.), and *saʿar* or *seʿārāh* (2 K 2^{1}, Job 38^{1}, Jer 23^{19} etc., also translated '**tempest**' and 'stormy wind,' Ps 55^{8} 83^{15} 107^{25}, Ezk 13^{13} etc.). The words do not necessarily mean 'whirlwind,' and are applied to any furious storm. From the context, however, in certain passages, we gather that whirlwind is intended—a violent wind moving in a circle round its axis (2 K $2^{1, 11}$, Job 38^{1} etc.). It often works great havoc in its path, as it sweeps across the country. Drawing up sand, dust, straw, and other light articles as it gyrates, it presents the appearance of a great pillar—an object of fear to travellers and dwellers in the desert. Passing over the sea, it draws up the water, and the bursting of the column causes the waterspout. God spake to Job from the whirlwind (Job 40^{6}) ; the modern Arabian regards it with superstitious dread, as the residence of demons. W. E.

WHITE.—See COLOURS, **1.**

WHITE OF AN EGG.—See PURSLANE.

WHORE.—This term is replaced generally in RV by **harlot** (q.v.), and does not appear in RSV.

WICK.—See FLAX, TOW.

WIDOW.—Widows, from their poverty and unprotectedness, are regarded in OT as under the special guardianship of God (Ps 68^{5} 146^{9}, Pr 15^{25}, Dt 10^{18}, Jer 49^{11}) ; and consequently due regard for their wants was looked upon as a mark of true religion, ensuring a blessing on those who showed it (Job 29^{13} 31^{16}, Is 1^{17}, Jer 7^{6f} 22^{3f}) ; while neglect of, cruelty or injustice towards, them were considered marks of wickedness meriting punishment from God (Job 22^{9f} 24^{20f}, Ps 94^{6}, Is 1^{23} 10^{2}, Zec $7^{10, 14}$, Mal 3^{5}). The Book of Deuteronomy is especially rich in such counsels, insisting that widows be granted full justice (24^{17} 27^{19}), that they be received as guests at sacrificial meals (14^{29} $16^{11, 14}$ 26^{12f}), and that they be suffered to glean unmolested in field, oliveyard, and vineyard (24^{19f}). See, further, INHERITANCE, I. **2** (*c*) ; MARRIAGE, **6.**

The earliest mention of widows in the history of the Christian Church is found in Ac 6^{1}, where the Hellenists murmured 'against the Hebrews because their widows were neglected' in the daily distribution of alms or food. In course of time these pensioners became an excessive burden on the finances of the Church. We thus find St. Paul dealing with the matter in 1 Ti $5^{3–16}$, where he charges relatives and Christian friends to relieve those widows with whom they are personally connected (vv.$^{4, 8, 16}$), so that the Church might be the more able to relieve those who were 'widows indeed' (*i.e.* widows in actual poverty and without any one responsible for their support) (vv.$^{3, 5, 16}$). He further directs that 'none be enrolled as widows' except those who were sixty years of age, of unimpeachable character, and full of good works ; and he adds that 'the younger widows' should

be ' refused ' (*i.e.* not enrolled) ; for experience had shown that they ' grow wanton against Christ ' and, re-marrying, ' rejected their first faith ' (so RV ; RSV renders ' violate their first pledge '). Since it could not have been the Apostle's intention that only widows over sixty should receive pecuniary help from the Church (for many young widows might be in great poverty), and since he could not describe the re-marriage of such a widow-pensioner as a rejection of her faith, it follows that the list of widows, from which the younger widows were to be excluded, was not the list of those who were in receipt of Church relief, but rather a list of those, from among the pensioner-widows, who were considered suitable by age and character to engage officially in Church work. Therefore we may see in this passage a proof of the existence thus early in the history of the Church of that ecclesiastical order of ' Widows ' which we find mentioned frequently in post-Apostolic times.

WIFE.—See FAMILY, 2 ; MARRIAGE.

WILD OLIVE.—See GRAFTING ; OLIVE.

WILD OX.—See UNICORN.

WILDERNESS, DESERT.—These terms stand for several Hebrew and Greek words, with different shades of meaning. Generally, ' desert ' is the more descriptive rendering, since the terms do not refer to heavily forested regions but to arid, unfertile, barren terrain. However, modern English translations continue to employ both terms, doubtless due to the fact that even ' desert ' is not a perfect description ; the regions referred to are sometimes mountainous in nature, plains where pastures exist after the rains, and settled regions such as that part of the Wilderness of Judah (see JUDAEA) near the Dead Sea where the Qumrân monastery and the Dead Sea Scrolls have been found.

1. *midhbār* (from *dābhar*, ' to drive ') means properly the land to which the cattle were driven, and is used of dry pasture land where scanty grazing was to be found. It occurs about 280 times in OT and is usually translated ' wilderness ' in the AV, and about a dozen times ' desert.' The RSV shows a preference for ' desert ' in many places where AV translates ' wilderness ' (1 Ch 5^{9}, Job 38^{26}, Ps 78^{17}, Is 42^{11}, Mt 15^{33} etc.). It is the place where wild animals roam : pelicans or vultures (Ps 102^{6}), wild asses (Job 24^{5}, Jer 2^{24}), ostriches (La 4^{3}), jackals (Mal 1^{3}) ; it is without settled inhabitants, though towns or settlements of nomadic tribes may be found (Jos 15^{61f}, Is 42^{11}). This term is usually applied to the **Wilderness of the Wanderings** or the Arabian desert, but may refer to any other waste. Special waste tracts are distinguished : wilderness of Shur, Zin, Paran, Kadesh, Maon, Ziph, Tekoa, Moab, Edom, etc.

2. *ʿărābhāh* (probably from a word meaning ' dry ') signifies a dry, desolate, unfertile tract of land, ' steppe,' or ' desert plain.' As a proper name, ' Arabah ' (see Dt 1^{1}, Jos 11^{16} etc.) is applied to the great plain, including the Jordan Valley and extending S. to the Gulf of ʿAqaba, but is applied also to steppes in general, and translated ' wilderness,' ' desert,' and sometimes in plural ' plains,' *e.g.* of Moab, of Jericho.

3. *ḥorbāh* (from a root ' to be waste *or* desolate ') is properly applied to cities or districts once inhabited now lying waste (whether or not in the desert, see Lv 26^{33}) ; it is variously translated as ' wastes,' ' deserts,' ' desolations,' although it is once used of the Wilderness of the Wanderings (Is 48^{21}, RSV ' deserts ').

4. *ṣiyyāh* meaning ' dry ' or ' parched ' when used as an adjective (Is 41^{18}, Jer 51^{43}) is twice translated ' wilderness ' in AV : Job 30^{3} (RV, RSV ' dry ground '), Ps 78^{17} (RV, RSV ' desert,' RVm ' a dry land '). It is used with *midhbār* and *ʿărābhāh* (Jer 50^{12}, Is 35^{1}) and like them refers to arid, desert regions.

5. *tōhû* has the special meaning of a ' wild desolate expanse.' In Job 6^{18} it is the waste where the caravans perish. It is applied to the primeval chaos without form (Gn 1^{2}), also to the Wilderness of the Wandering (Dt 32^{10} ' howling *waste* of the wilderness ').

6. *yᵉshîmôn* is variously translated as ' wilderness ' or ' desert ' (Dt 32^{10}, Is 43^{19-20}, Ps 68^{7} 78^{40} 106^{14} 107^{4}). When the word is used with the Hebrew article it is a place name ' Jeshimon ' (q.v.) and as such may refer to a place near Ziph and Maon (1 S 23^{19} $26^{1, 3}$) or to the region in the Jordan Valley N. of the Dead Sea (Nu 21^{20} 23^{28}).

7. The NT terms (cf LXX) are *erēmos* and *erēmia*, the former being used either as noun or as adjective, with ' place ' or ' country ' understood. The terms are generally translated ' wilderness ' or ' desert ' and as such may refer to the wilderness of Judaea (Mt 3^{1}) or to desert regions that are not specified (Mt 15^{33}). The RSV translates as ' lonely (place) ' occasionally, and takes account of the possibility that the terms could be used for uninhabited areas not technically desert or wilderness in nature (Mt $14^{13, 15}$, Mk 1^{35}, Lk 9^{12} etc.).

On deserts in NT see articles on respective names.

W. F. B.—W. L. R.

WILL.—' Will ' and ' would ' are often independent verbs in AV, and being now merely auxiliaries, their force is liable to be missed by the English reader. Thus, Mt 11^{14}, ' if ye will receive it ' (RSV ' If you are willing to accept it ' ; cf RV) ; Jn 1^{43} ' Jesus would go forth into Galilee ' (RV ' was minded to go forth,' RSV ' decided to go ').

WILL.—See PREDESTINATION, TESTAMENT.

WILLOW.—Hebrew *ʿărābhîm* (cf Arabic *gharab* ' willow ' or ' poplar '), Lv 23^{40}, Job 40^{22}, Ps 137^{2}, Is 15^{7} 44^{4} ; *ṣaphṣāphāh* (cf Arabic *ṣafṣâf*), Ezk 17^{5}. Most of the references are to a tree growing beside water, and apply well to the willow, of which two varieties, *Salix fragilis* and *S. alba*, occur plentifully by watercourses in the Holy Land. Some travellers consider the **poplar**, especially the willow-like *Populus euphratica*, of the same Nat. Ord. (*Salicaceae*) as the willows, more probable. Tristram, without much evidence, considered that *ṣaphṣāphāh* might be the *oleander*, which covers the banks of so many streams.

E. W. G. M.

WILLOWS, BROOK OF THE.—A wady in Moab, Is 15^{7} ; perhaps the same as the Valley of Zered (q.v.).

WIMPLE.—Is 3^{22} AV (RV **shawls**, RSV **cloaks**).—The precise article of dress intended is unknown.

WIND.—The common Hebrew word for wind is *rûaḥ*, which must be variously translated ' spirit ' and ' breath,' according to the context. It signifies that mysterious, incalculable energy which may be regarded as characteristic of God. Wind, for the Israelites, was not merely a meteorological phenomenon ; it was divine energy in the world of nature. The oscillation of thought between spirit, breath, and wind (all of divine origin) may be clearly seen in Ezk 37^{1-14} (cf RSVm) and in the remarkable use of ' pneuma ' in Jn 3^{8}. The winds in Hebrew are designated by the four cardinal points of the compass. ' South wind,' *e.g.* may be either S., SW., or SE. ; and so with the others. Cool winds come from the N., moist winds from the western sea, warm winds from the S., and dry winds often laden with fine sand, from the eastern deserts. Warmth and moisture, therefore, depend much upon the direction of the winds. During the dry season from May till October, the prevailing winds are from the N. and NW. ; they do much to temper the heat of summer (Ca 4^{16}, Job 37^{9}). In September and October E. and SE. winds are frequent ; blowing from the deserts, their dry heat causes the furniture to crack, and makes life a burden (Hos 13^{15}). Later, the winds from the S. prolong the warmth of summer (Lk 12^{55}) ; then the W. and SW. winds bring the rain (1 K 18^{44}, Lk 12^{54}). East winds earlier in the year often work great destruction on vegetation (Ezk 17^{10}). Under their influence strong plants droop, and flowers quickly wither (Ps 103^{16}).

Of the greatest value for all living things is the perpetual interchange of land and sea breezes. At sunrise a gentle air stirs from the sea, crosses the plain, and creeps up the mountains. At sunset the cooling air

begins to slip down seaward again, while the upper strata move landward from the sea. The moisture thus carried ashore is precipitated in refreshing dew.

The 'tempestuous wind' (Ac 27[14]), called Euroclydon or Euraquilo (q.v.) was the E.-NE. wind so prevalent in the eastern Mediterranean, called by sailors to-day 'the Levanter.' W. E.—A. S. H.

WINDOW.—See HOUSE, 7.

WINE AND STRONG DRINK.—Taken together in this order the two terms 'wine' and 'strong drink' are continually used in the OT as an exhaustive classification of the fermented beverages then in use (Lv 10[9], 1 S 1[15], Pr 20[1] *et passim*). The all but universal usage in the OT—in NT 'strong drink' occurs only in Lk 1[15]—is to restrict 'wine' (*yayin*) to the beverage prepared from the juice of the grape, and to denote by 'strong drink' (*shēkhār*) every other sort of intoxicating liquor.

1. Before proceeding to describe the methods by which wine in particular was made in the period covered by the canonical writings it is advisable to examine briefly the more frequently used terms for wine and strong drink. The examination of the term *shēkhār* and its root-meaning shows that it always means intoxicating drink. Among the early Semites a name similar to *shēkhār* and the Babylonian *shikaru* was given to the fermented juice of the date and later it was extended to signify all other fermented liquor (Kennedy, *EBi* iv, 5309 f). At a later period when the ancestors of the Hebrews became acquainted with the vine and its culture the Indo-Germanic term represented by the Greek *oinos* (with digamma, *woinos*) and the Latin *vinum* was borrowed, in the form *yayin*, to denote the fermented juice of the grape. The older term *shēkhār* then became restricted, as we have seen, to intoxicants other than grape wine.

Another term, of uncertain etymology, which occurs thirty-eight times is *tîrôsh*, rendered in the AV variously by 'wine' and 'new wine.' The ARV renders consistently with 'new wine' but the RSV in thirty-four instances renders by 'wine' while in the remaining four cases (Hos 4[11] 9[2], Hag 1[11], Zec 9[17]) it gives 'new wine.' Strictly speaking *tîrôsh* is the freshly expressed grape juice, before and during fermentation, technically known as 'must' (from Lat. *mustum*). In this sense it is frequently named as a valued product of the soil with fresh oil (Dt 7[13] 11[14], *et passim*)—that is to say, the raw, unclarified oil as it flows from the oil-press, to which it exactly corresponds. In some passages of the OT, however, and notably Hos 4[11] where *tîrôsh* is associated with *yayin* and whoredom, as taking away the understanding (AV 'heart'), it evidently denotes the product of fermentation. Hence it may be said that *tîrôsh* is applied not only to the 'must' in the wine vat (v.[3]) but to the 'new wine' before it has fully matured and become *yayin*, or, as Driver suggests (*Joel and Amos*, pp. 79 f) 'to a light kind of wine such as we know, from the classical writers, that the ancients were in the habit of making by checking the fermentation of the grape juice before it had run its full course' (cf *EBi* iv, 5307 f).

Of the rarer words for 'wine' mention may be made of *ḥemer* (Dt 32[14], and, in cognate form, Ezr 6[9], Dn 5[1c]), which denotes wine as a result of fermentation, from a root signifying 'to ferment,' and '*āsîs*, a poetical synonym of *tîrôsh*, and like it used both of the fresh juice and of the fermented liquor (Jl 1[5], Is 49[26]): in Am 9[13] (AV), Is 49[26] (AV) it is rendered 'sweet wine' while in the Joel passage (AV) 'new wine' is given. RSV varies with 'wine' in the Isaiah passage and 'sweet wine' in the other two. 'Sweet wine' suggests the *gleukos* ('new wine') of Ac 2[13] (AV, RV, RSV). Reference may also be made to such poetical expressions as 'the blood of the grape' (Gn 49[11], Dt 32[14]) and to the later 'fruit of the vine' (Mt 26[29] and parallels) of the Gospels and the Mishnah.

2. The Promised Land was pre-eminently 'a land of wine . . . and vineyards' (2 K 18[32]), as is attested by the widely scattered remains of the ancient presses. A normal winepress consisted of three parts, two rock-hewn troughs at different levels with a connecting channel between them. The upper trough or press-vat (*gath*) had a larger superficial area but was much shallower than the lower trough or wine-vat (*yeqebh*; AV, RV 'wine-fat'). A typical press might have the upper trough about 8 feet square and 15 inches deep while the lower was 4 feet square and 3 feet deep (cf Miller, *Encyc. of Bible Life*, 407 f; Heaton, *Everyday Life in OT Times*, pp. 105 f); Dalman, *Arbeit u. Sitte in Palästina*, pp. 354 f). The distinction between the two is entirely obscured in the AV and is not always preserved clearly in the original.

The grapes were brought from the adjoining vineyard in baskets and were either spread out for a few days, with a view to increase the amount of sugar and diminish the amount of water in the grapes, or were thrown into the press-vat right away. There they were thoroughly trodden with the bare feet, the juice flowing through the conducting channel to the lower wine-vat. The next process consisted in piling the husks and stalks into a heap in the middle of the vat and subjecting the mass to mechanical pressure by means of a wooden press-beam, one end of which was fixed into a socket in the wall of the vat or adjacent rock, while the other end was weighted with stones.

While this may be considered the normal construction of a Hebrew winepress it is evident, both from archaeological discoveries and from the detailed references to wine-making in the Mishnah (see Danby, *The Mishnah*), that the number of troughs or vats might be as high as four (see illustrations in Dalman, *Arbeit u. Sitte* iv, 453 f) or as low as one. The object of a third vat was to allow the 'must' to settle and clarify in the second before running it off into the third. When only one vat was used it may have served either as a press-vat, in which case the 'must' was immediately transferred to earthen jars, or as a wine-vat to receive the 'must,' the grapes having been pressed in a large wooden trough such as the Egyptians used (cf Wilkinson, *Anc. Egyp.* i. 385, with illustrations). This arrangement would obviously be required where a suitable rock surface was not available. In such a case, indeed, a rock-hewn trough of any sort was dispensed with, a vat for the wooden press being supplied by a large stone hollowed out for the purpose, an excellent specimen of which from *Tell eṣ-Ṣâfî* is figured in Bliss and Macalister's *Excavations*, etc., p. 24.

Returning to the normal press-system we find that the 'must' was usually left in the wine-vat to undergo the first or 'tumultuous' fermentation after which it was drawn off (Hag 2[16], literally 'baled out') or, where the vat had a spout, simply run off into large jars or into wineskins (Mt 9[17] and parallels) for the 'after-fermentation.' The modern Syrian wines are said to complete their first fermentation in from four to seven days and to be ready for use at the end of two to four months. In the Mishnah it is ordained that 'new wine' cannot be presented at the sanctuary for the drink-offering until it has stood for at least forty days in the fermenting jars.

When the fermentation had run its full course the wine was racked off into smaller jars and skins, the latter being preferred by travellers (Jos 9[4, 13]). At the same time the liquor was *strained* (Mt 23[24]; cf Is 25[6]) through a metal or earthenware strainer, or through a linen cloth. In the further course of maturing, in order to prevent the wine from thickening on the lees (Zeph 1[12]) it was from time to time decanted from one vessel to another. The even tenor of Moabite history is compared to wine which has not undergone this process (Jer 48[11]). When sufficiently refined the wine was poured into jars lined with pitch which were carefully closed, sealed, and stored in the wine cellars (1 Ch 27[27]). The Lebanon (Hos 14[7]) and Helbon (Ezk 27[18]) to the NW. of Damascus were localities specially celebrated for their wines.

No trace is found in the multitude of Mishnah references of any means employed to preserve wine in the unfermented state. It is improbable that with the means

at their disposal the Jews could have done so even had they so desired. **Unfermented wine** was not known in that ancient time.

4. Of all the fermented liquors, other than wine, with which the Hebrews seem to have been familiar, the oldest historically was almost certainly that made from dates (cf **1**). These, according to Pliny, were steeped in water before being sent to the press, where they were probably treated as olives were treated in the oil-press (see OIL). **Date wine** was greatly prized by the Babylonians and is said by Herodotus to have been the principal article of Assyrian commerce.

In the Mishnah there is frequent mention of **cider** or 'apple' wine, made from the quince or whatever other fruit the 'apple' of the Hebrews may signify. The only other wine other than 'the fruit of the vine' mentioned by name in the OT is the 'sweet **wine of pomegranates**' (Ca 8^2 RVm), 'the juice of my pomegranates' (RV, RSV). Like the dates these fruits were first crushed in the oil-mill, after which the juice was allowed to ferment. In the Mishnah we find reference to various fermented liquors imported from abroad, among them the beer for which Egypt was famed. But it is doubtful if **beer** was used by the Israelites though the discovery of innumerable beer-mugs with strainer spouts shows it to have been a favourite drink of the Philistines (Albright, *Arch. of Palestine*, p. 115). A striking witness of the extent to which the wines of the West were imported has been revealed by the discovery of handles of wine jars, especially of *amphorae* from Rhodes : these have been excavated in large numbers from the cities in Southern Palestine.

5. The Hebrew wines were light, and in early times were probably taken without dilution. At all events, the first clear reference to diluting with water is found in 2 Mac 15^{39} : 'it is harmful to drink wine by itself or again to drink water by itself, while wine mixed with water is delicious' and in NT times the practice of dilution seems to have been usual. The wine of Sharon, it is said, was mixed with two parts of water, being a lighter wine than most. With other wines, according to the Talmud, the proportion was one part of wine to three of water.

The 'mingling' or mixing of strong drink denounced by Isaiah (5^{22}) has reference to the ancient practice of adding aromatic herbs and spices to the wine in order to add to its flavour and increase its 'headiness.' Such was the **spiced wine** of Ca 8^2. Jesus on the cross was offered 'wine mingled with myrrh' (Mt 15^{23} ; cf Mt 27^{34} RV, RSV).

6. The use of wine was universal among all classes with the exception of those who had taken a vow of abstinence, such as Nazirites and Rechabites. The priests also had to abstain but only when on duty in the sanctuary (Lv 10^9). A libation of wine formed the necessary accompaniment of the daily burnt-offering and of numerous other offerings (cf Sir 50^{15} ; 'He reached out his hand to the cup, and poured a libation of the blood of the grape ; he poured it out at the foot of the altar'.

The attitude of the prophets and other teachers of Israel, including our Lord Himself, to the ordinary use of wine as a beverage is no doubt accurately reflected in the saying of Jesus ben-Sira : 'Wine drunk in season and temperately is rejoicing of heart and gladness of soul. Wine drunk to excess is bitterness of soul, with provocation and stumbling' (31^{28f}). The Hebrews were aware of the danger and unsparingly denounced the sin of excessive indulgence (Is 5^{11f} 28^{1-3}, Hos 4^{11}, Pr 20^1 23^{39-32}, *et passim*). In the altered conditions of our own day it must be admitted that the rule of conduct formulated by Paul (1 Co 8^{8-13} ; cf Ro 14^{13-21}) appeals to the individual conscience with greater urgency and insistence than ever before in the experience of Jew or Christian.

A. R. S. K.—J. Pn.

WINEFAT, WINEPRESS, WINE-VAT.—See WINE AND STRONG DRINK, 2.

WINK.—To 'wink at,' *i.e.* pass over, is used of God in Ac 17^{30} 'The times of this ignorance God winked at' (RV ; RSV 'overlooked'), and Wis 11^{23} 'Thou . . . winkest at the sins of men' (RSV 'dost overlook men's sins' ; cf RV). It is a good example of the colloquial language of the English Versions.

WINNOW.—See AGRICULTURE, 3.

WISDOM.—The saying in Pr 3^{19f} (cf Ps 104^{24}) draws attention to two features of 'wisdom' as that was understood in Israel. It is essentially practical in character ; and it is, like righteousness and life itself, primarily divine in origin. Man may partake of this wisdom—indeed if he is to make a success of life, he must ; but he will do so only in terms of reverence and piety (Ps 111^{10}, Pr 1^7 9^{10}, Sir 1^{14}). He will, however, never comprehend the fulness of 'wisdom' (Job 28, Ps 139^6, Is $40^{13f, 28}$). Further, there are close parallels between the forms of Israel's wisdom literature and that of the ancient world as that is preserved in the literature of Egypt and Mesopotamia.

Wisdom is that ability required for the good administration of a country's affairs Gn 41^{32}, Dt 1^{13}, for good craftsmanship Ex 28^3, Is 40^{20} ; for the ability of a general, Is 10^{13} ; for a mariner's skill, Ps 107^{27b} (literally 'all their wisdom is swallowed up') ; it may correspond to what we should call 'shrewdness' 2 S 13^3 or 'sagacity' 1 K 16^{28}. Thus it signifies that ability to distinguish between what is advantageous and what is harmful, rightly to assess a situation and to act in such a way as to bring intention to fulfilment. In the Wisdom Literature it becomes an ethical term, implicitly or explicitly related to the will of God. Under the monarchy, **the wise** formed a class comparable to the priests and the prophets. The references to them in the earlier records are scanty, but in Jer 18^{18} they are clearly a well recognized group ; cf Is 29^{14}, Ezk 7^{26}. Among them traditional wisdom was conserved and it was their function to guide the royal policy. Under David, we hear of wise women of Tekoa (2 S 14^{1ff}) and Abel-beth-Maacah (2 S 20^{14ff}) ; these do not form members of a guild but the latter town appears to have been noted as a place where wisdom was conserved. Jer 8^{8f} would suggest that from the sages were drawn the scribes, *i.e.* keepers of the royal archives (from whose records much of the historical material of Kings was derived) and royal advisers. If this be so, we may trace the official activity of the sages to an early period in the monarchy, 2 S 8^{17} 20^{25} and frequently thereafter. When in the post-exilic era prophecy had vanished or was rare, the Torah was complete and the priests were concerned with the conduct of the developed ritual, the functions of the sages was still to give counsel. But now their work was democratized, at least to the extent that they taught their wisdom to those who had leisure to attend a 'house of instruction,' (Sir 51^{23}) ; they also published their collections of wisdom sayings and reflections. Characteristic of these wisdom writers are such quasi-technical terms as discipline (*mûsār*), prudence (*'ormāh*), discretion (*m'zimmāh*), learning (*leḳaḥ*), guidance (*taḥbûlôth*), parable (*māshāl*), riddle (*ḥîdhāh*).

The literary expression of Israel's sages is to be found in the books of Proverbs, Job, Ecclesiastes, Ecclesiasticus, Wisdom of Solomon, 1 Esdras 3^{1}–4^{63}, Tobit, Baruch 3^{9}–4^4, 4 Maccabees, and the Mishnaic 'Sayings of the Fathers' ; Daniel may well be the product of this school in the peculiar circumstances of persecution ; the Joseph story of Gn 39–48 should probably be included here ; and the influence of the sages is to be found in the Psalter (cf Ps 1, 32, 37, 94) and in James. Some would include Song of Songs ; but, unless this collection of love poems was intended from the first as an allegory, it hardly comes into this category. The Wisdom books in their present form come from the post-exilic era ; but they contain within them material of much greater antiquity. The pursuit of 'wisdom' had a long history, and derived much from extra-Israelite sources. That Israel knew and valued this international wisdom is evident from 1 K 4^{30}, Jer 49^7 50^{35} 51^{57}, Ezk 28^{2-5}, Ob ^{8}, Bar 3^{22f}. Comparison can now be made with the wisdom literature of Sumeria,

Babylonia, Egypt and Ugarit, some of which dates from the 3rd millennium B.C. There are two main types, (1) prudential wisdom, usually expressed in brief sentences; (2) reflective essays on the significance of life, often of a pessimistic character. The *forms* of Israel's sapiential writing correspond to the literary types of international wisdom. The closest parallels are to be found with the Teaching of Amen-em-ope (1000–600 B.C.), part of which is reproduced in Pr 22^{17}–24^{22}, and with the Proverbs of Aḥiḳar, a copy of which in Aramaic from an Akkadian original was found among the literature of the Jews of Elephantine. Parallels to Job and Ecclesiastes, though not of the same quality, have also been found in Mesopotamian and Egyptian literature. There are no literary survivals of the wisdom of Edom, but it is evident from its prologue that the Hebrew Job was a development of an original Edomite wisdom story. Apparently also two sections of Proverbs, 30^{1-14} 31^{1-9}, are of Arabian origin since Massa was an Arabian tribe (Gn 25^{14}). The impact of international wisdom upon Israelite thought appears to have come in the reign of Solomon, apparently as the result of his international relationships and trading ventures. In that sense, Solomon is the father of Israel's wisdom literature, so that even as late as 100 B.C. and among the Jews of Alexandria a book of wisdom could be associated with his name. It is by no means impossible that Pr 10^{1}–22^{16} and 25–27 derive from the early monarchy.

It may be noted that in the OT wisdom books there is a striking absence of distinctively Israelite religious terminology; there are few allusions to the covenant, the work of God in history, election, the Messiah, and the Day of Yahweh. In their treatment of righteousness and justice, they commonly speak the same language as the extra-Israelite sages. Apart from the replacement of Ea, Shamash, Re, and Horus with Yahweh, it might almost appear that Israel's wisdom was one with that of the extra-Israelite world; it should be noted however, that the Apocryphal wisdom literature is explicitly integrated into Jewish faith and practice. Yet this 'aloofness' from Israel's distinctive faith is more apparent than real, even in the 'utilitarian' Proverbs. The influence of the teaching of Deuteronomy is apparent throughout, and the use of the name Yahweh, although comparatively rare, could not but create a faith and an attitude to life that the names of Shamash and Horus could not do. It is for this reason that the challenge that confronts the author of Job is of greater urgency than it could be to the pagan. Certainly the Jewish scholars of the 2nd cent. B.C. were not aware of any incongruity. It would seem that in Israel's wisdom literature we have an example of a bold, even exclusive faith, able to assimilate the best of human reflection on life so long as it was recognized that 'the fear of Yahweh is the beginning of wisdom.'

Finally we may notice the remarkable presentation of Wisdom in Pr 8^{22ff}, Wis 7^{22ff}. In the former passage we find a poetic personification of Wisdom; in the latter a presentation which closely resembles what later Christian thinkers would call a hypostasis. This conception of Wisdom as the divine agency (but hardly agent) in the work of creation, would seem to have been used in the NT in some of the finest Christological passages; cf Jn 1^{1-18}, Col 1^{15ff}, He 1^{3}. Wisdom in Sir 24^{1-23} is identified with the Torah in which God revealed Himself as Creator and Saviour; it is in these terms that the Christian finds the appropriate language to speak of Jesus Christ. A. S. H.

WISDOM, BOOK OF.—See preceding article and APOCRYPHA, 6.

WISE MEN.—See MAGI; and, for 'the Wise,' WISDOM.

WIST.—See WIT.

WIT.—The verb 'to wit,' which means 'to know,' is used in AV in most of its parts. The present tense is '*I* **wot**, thou *wottest, he wots,* or *wotteth, we wot*; the past tense *I* **wist,** *he wist, ye wist*; the infinitive 'to wit.' In 2 Co 8^{1} occurs the phrase *do to wit*, i.e. *make to know*—'we do you to wit of the grace of God' (RV 'we make known to you,' RSV 'we want you to know'). The substantive **wit** means in AV 'knowledge'; it occurs only in Ps 107^{27} 'at their wits' end.' **Witty**, which is found in AV in Pr 8^{12}, Jth 11^{23}, Wis 8^{19} (retained in Jth 11^{23} in RV; cf RSV in all cases), has the sense of 'knowing,' 'skilful'; and **wittingly** (Gn 48^{14}; so RV; RVm and RSV 'crossing his hands') is 'knowingly.'

WITCH, WITCHCRAFT.—See MAGIC, DIVINATION, AND SORCERY.

WITHERED HAND.—See MEDICINE.

WITH(E)S.—Jg 16^{7} (AV and RV). This represents a term which probably means 'bow-strings of "green" gut'; cf RSV 'fresh bow-strings.' The English word means a supple twig from a willow (see also CORD).

WITNESS.—This is the rendering of Hebrew *'ēdh* and *'ēdhāh* and of the Greek *martys, martyria,* and *martyreō,* and compounds of this root. The original meaning of the Hebrew root was 'to return,' 'to repeat,' and the noun 'witness' denotes one who can repeat what he has seen or heard. By extension it was used to denote such things as stones erected as memorials of an agreement or event. Hence 'witness' may be:

1. *The person who can testify* to an agreement, to ensure its fulfilment, or to an event, or vouch for parties in debate, *e.g.* Gn 21^{30} (Abimelech as witness to Abraham's digging of a well), Is 8^{2} (Uriah as witness to Isaiah's act). Frequently God is invoked as such a witness, *e.g.* Gn 31^{50} (between Jacob and Laban); cf Job 16^{19}, 1 S 12^{5ff}, Jer 29^{23} 42^{5}. In the NT Paul calls on God to witness to his truth and the purity of his motives (Ro 1^{9}, 2 Co 1^{23} etc.).

2. *The witness in a legal sense,* witnessing an act of conveyancing (Jer 32^{10}) or a betrothal (Ru 4^{9f}), or giving testimony in a lawsuit, where two or more witnesses were required in a capital case (Nu 35^{30}, Dt 17^{6}, He 10^{28}), and in case of conviction the witnesses had to begin the carrying out of the sentence (Dt 17^{7}; cf Ac 7^{58}). Warnings against false witness are frequent (Ex 20^{16}, Pr 12^{17} 19^{5-9} 21^{28} 25^{18} etc.), and one proved to have given false witness suffered the penalty his testimony would have brought on another (Dt 19^{16ff}). See also JUSTICE, II.

3. The person who testifies to what he has experienced by recounting it and making it known. The Israelite people is described as God's witnesses (Is $43^{10, 12}$ 44^{8}). In the NT the Apostles frequently appear as witnesses (*martyres*) of the life, death, and resurrection of Jesus (Lk 24^{48}, Ac 1^{8} 2^{32} 3^{15} etc.), and so also Paul (Ac 22^{14f} 26^{12ff}). The heroes of faith are called 'the cloud of witnesses' (He 12^{1}), John the Baptist witnesses by his preaching (Jn $1^{7f, 15, 32}$), and Jesus Himself is 'the faithful witness' in Rev 1^{5} 3^{14} (cf 1 Ti 6^{13}). *Martys* developed the meaning of *martyr,* and it is so rendered in AV in Ac 22^{20}, Rev 2^{13} 17^{6} and in RV and RSV in Rev 17^{6}.

4. *An inanimate reminder or memorial, e.g.* a heap of stones (Gn 31^{44}), an altar (Jos $22^{26f, 34}$, Is 19^{19f}), the stone set up by Joshua (Jos 24^{27}), the Song of Moses (Dt 31^{26}), Job's disease (Job 16^{8}), or heaven and earth (Dt 30^{19} 31^{28}). In the NT the dust shaken off the disciples' feet is a witness against those who reject them (Mk 6^{11}). See also ARK, 1, TABERNACLE, 7. W. F. B.—H. H. R.

WITTY.—See WIT.

WIZARD.—See MAGIC, DIVINATION, AND SORCERY.

WOLF.—In AV and RV in the OT 'wolf' is always translation of *z'ēbh* (cf Arab. *dhi'b*), Gn 49^{27}, Is 11^{6} 65^{25}, Jer 5^{6}, Ezk 22^{27}, Hab 1^{8}, Zeph 3^{3}. Cf also the proper name Zeeb, Jg 7^{25}. In RV *'iyyîm* is translated 'wolves' in Is 13^{22} 34^{14} (AV 'wild beasts of the islands,' RSV 'hyenas'), Jer 50^{39} (AV 'wild beasts of the islands,' RSV 'jackals'); see JACKAL. The NT term is *lykos,* Mt 7^{15} 10^{16}, Lk 10^{3}, Jn 10^{12}, Ac 20^{39}.

The wolf of Palestine is a variety of *Canis lupus,* somewhat lighter in colour and larger than that of N. Europe. It is seldom seen to-day, and never goes in

packs, though commonly in couples; it commits its ravages at night, hence the expression 'wolf of the evenings,' Jer 5[6] (AV, RV; RSV 'from the desert'), Zeph 3[3]; it was one of the greatest terrors of the lonely shepherd, Jn 10[12]; persecutors are compared to wolves in Mt 10[16], Ac 20[29]. E. W. G. M.

WOMAN.—1. In OT (*'ishshāh*, 'woman,' 'wife'; *nᵉḳēbhāh* [Lv 15[33], Nu 31[15], Jer 31[22]], 'female') woman's position is one of inferiority and subjection to man (Gn 3[16]); and yet, in keeping with the view that ideally she is his companion and 'help meet' (2[18-24]), she never sinks into a mere drudge or plaything. In patriarchal times, Sarah, Rebekah, and Rachel stand side by side with their husbands. In the era of the deliverance from Egypt, Miriam is ranked with Moses and Aaron (cf Mic 6[4]). In the days of the Judges, Deborah is not only a prophetess (q.v.), as other women in Israel were, but is herself a Judge (Jg 4[4]). Under the monarchy, Jezebel in the Northern Kingdom and Athaliah in the Southern, afford illustrations of the political power and influence that a woman might wield. In religious matters, we find women attending the Feasts along with men (1 S 1[1ff] etc.), taking part with them in acts of sacrifice (Jg 13[20, 23] etc.), combined with them in the choral service of the Temple (Ezr 2[65] etc.). And though in the Deuteronomy code woman's position is one of complete subordination, her rights are recognized and safeguarded in a way that prepares the soil for the growth of those higher conceptions which find utterance in Malachi's declaration that divorce is hateful to Yahweh (2[16]), and in the picture of the virtuous wife with which the Book of Proverbs concludes (ch. 31). See, further, FAMILY, MARRIAGE.

2. In NT (*gynē*, 'woman,' 'wife'; *thēleia* [Ro 1[26ff]], 'female'; *gynaikarion* [diminutive from *gynē*, 2 Ti 3[6]], RSV 'weak women').—Owing to the influence of Rabbinism, Jewish women had lost some of their freedom (cf with the scene at the well of Haran [Gn 24[10ff]]) the surprise of the disciples by the well of Sychar when they found Jesus 'speaking with a woman' [Jn 4[27]]). But Jesus wrought a wonderful change. He did this not only by His teaching about adultery (Mt 5[27f]) and marriage and divorce (vv.[31f] 19[3ff]), but still more by His personal attitude to women, whether good and pure like His own mother (there is nothing harsh or discourteous in the 'Woman' of Jn 2[4]; cf 19[26]) and the sisters of Bethany, or sinful and outcast as some women of the Gospels were (Lk 7[37ff] 8[2], Jn 4). The work of emancipation was continued in the Apostolic Church. Women formed an integral part of the earliest Christian community (Ac 1[14]), shared in the gifts of Pentecost (2[1ff], cf v.[17]), engaged in tasks of unofficial ministry (Ro 16[1f], Ph 4[2f]), and by and by appear (1 Ti 3[11]) as holding the office of the **deaconess** (q.v.), and possibly (5[3]) that of the '**widow**' (q.v., and cf TIMOTHY [EPISTLES TO], 5). St. Paul's conception of woman and of man's relation to her is difficult (1 Co 7), but may be explained partly by his expectation of the Parousia (vv.[29-31]), and partly by the exigencies of an era of persecution (v.[26]). In a later Pauline Epistle marriage becomes a type of the union between Christ and the Church (Eph 5[22-33]). And if by his injunction as to the silence of women in the Church (1 Co 14[34ff]) the Apostle appears to limit the prophetic freedom of the first Christian days (Ac 2[4, 17]), we must remember that he is writing to a Church set in the midst of a dissolute Greek city, where Christian women had special reasons for caution in the exercise of their new privileges. Elsewhere he announces the far-reaching principle that in Christ Jesus 'there is neither male nor female' (Gal 3[28]). J. C. L.

WONDERS (Heb. *mōphēth*; Gr. *teras*, *dynamis*, *ergon*, *sēmeion*).—Usually an awe-inspiring, terrifying act manifesting Divine power. In the OT it is often associated with *'ōth*, sign, especially in the idiom *signs and wonders* used of miraculous events of the Exodus (Dt 4[34] 6[22] 7[19] 26[8] 28[46] 29[3] 34[11], Ex 7[3, 9] 11[9f] etc.). The phrase came over into Greek translations of the OT as *sēmeia kai terata*, signs and wonders, an idiom known in Hellenistic Greek. It appears frequently in the NT with reference to the life and works of Jesus or the apostles and the end of the world (Mk 13[22], Mt 24[24], Jn 4[48], Ac 2[22, 43] 4[30] 5[12] 6[8] 7[36] 14[3] 15[12], Ro 15[19], 2 Co 12[12], He 2[4]). Mk 13[22] refers these phenomena to false Christs; 2 Th 2[9] ascribes them to Satan; Rev 19[20], to a false prophet, reminiscent of Dt 13[1-3]. Wonders are regarded as confirmation of claims of prophets, apostles, and other messengers of God. Such omens, portents, and prodigies were characteristic of Near Eastern and Hellenistic religions. Cf SIGNS, MIRACLES. S. V. McC.

WOOD.—See FOREST; also WRITING, **8.**

WOOF.—See SPINNING AND WEAVING.

WOOL.—Woollen stuffs were much used for clothes (Lv 13[47ff], Pr 31[13] etc.); mainly, however, for outer garments. For underwear, linen was preferred, as being cooler and cleaner. Wool, falling swiftly a prey to moths and larvae (Is 51[8] etc.), was not used for wrapping the dead. A garment of mingled wool and linen might not be worn (Lv 19[19], Dt 22[11]). Josephus says this was reserved exclusively for the priests (*Ant.* IV. viii. 11 [208]). Dyed wool is referred to (He 9[19], cf Lv 14[4f]), but its natural colour, white, makes it the criterion of whiteness and purity (Ps 147[16], Is 1[18], Dn 7[9], Rev 1[14]). Wool was a valuable article of commerce (Ezk 27[18]), and it figures in the tribute paid by king Mesha (2 K 3[4]). W. E.

WORD.—Apart from the personal use of 'Word' as a title of Christ (see LOGOS), its Biblical interpretation presents few difficulties. Both in the OT and in the NT the original terms employed may pass from the meaning 'speech' to signify 'the subject matter of speech.' In some passages there is uncertainty as to whether the translation should be 'word' or 'thing.' For example, 1 K 11[41] RVm has 'or *words*, or *matters*' as alternatives to 'the acts of Solomon.' In Ac 8[21] 'you have neither part nor lot in this matter' probably means 'in the matter in dispute,' which was the coveted power of imparting the gifts of the Holy Spirit; but the RVm 'word' is preferred by some expositors, who think that the reference is to the word preached by the Apostles and its attendant blessings (cf Mk 1[45], Lk 1[2]). The AV and RV retain 'word' in Mt 18[16] and 2 Co 13[1] (RSV 'charge'), although Dt 19[15] reads: 'At the mouth of two witnesses, or at the mouth of three witnesses, shall every matter be established' (RSV 'charge'). J. G. T.

WORK.—In the Bible work is represented as appointed for man at the creation (Gn 2[15]), ordained for six days of the week (Ex 20[9]), and part of the normal lot of man (Ps 104[23]). Warnings against **slothfulness** are frequent in Proverbs (*e.g.* 6[6-11] 15[19] 18[9] 19[15] 26[14]). The Rabbis were not ashamed to earn their living, and Paul earned his as a tentmaker (Ac 18[3]; cf 2 Th 3[7f]). He says 'If any one will not work, let him not eat' (2 Th 3[10]; cf Ps 128[2], Pr 20[4], 1 Th 4[11]), though he maintained that he himself was entitled to support from those to whom he ministered (2 Co 9[4-7]). Ben Sira, however, says that wisdom 'depends on the opportunity of leisure' (Sir 38[24]), and deprecates the drudgery of labour (38[25ff]), though he warns against scorning manual labour (7[15]) and recognizes its necessity (38[32]).

God's co-operation in man's work is recognized (Ps 127[1]), and skill in workmanship is declared to be His gift (Ex 35[30-36:2]); without His blessing labour is unavailing (Ps 127[2]).

The law of the **sabbath** (q.v.) provided for a weekly rest, not merely for the free man, but also for slaves and animals (Ex 20[10]), since work is not the whole of life. Christ calls men to labour for more than the meat which perishes (Jn 6[27]), and Paul commends labour in the work of God, *i.e.* in the service of the Church of Christ (1 Co 16[10]; cf Ac 13[2], Ph 2[30]). He calls converts his workmanship (1 Co 9[1]), though he recognizes that here, as in other spheres, man is but the co-worker with God (2 Co 6[1]), without whose blessing toil is fruitless (1 Co

37-9). The author of Hebrews holds before the faithful believer the promise of a sabbath rest (He 4^{11}). H. H. R.

WORLD.—1. In OT.—In general it may be said that the normal expression for such conception of the universe as the Hebrews had reached is 'the heavens and the earth' (Gn 1^1, Ps 89^{11}, 1 Ch 16^{31}), and that 'world' is an equivalent expression for '**earth.**' So far as there is a difference, the 'world' is rather the fruitful, habitable earth, *e.g.* 'the earth is the Lord's, and the fulness thereof; the world, and those who dwell therein' (Ps 24^1; cf 50^{12} 90^2, Is 34^1). The religious sentiments awakened by the contemplation of Nature appear also in references to the heavens and the sea (*e.g.* Ps 8, 19, Job 38, 39). But of the ethical depreciation of the world, so prominent in some NT writings, there are in the OT few traces. The 'world' is to be judged in righteousness (Ps 9^8 96^{13} 98^9), and punished for its evil (Is 13^{11}). The transient character of its riches and pleasures, with the consequent folly of absorption in them, is perhaps indicated by another Hebrew word (meaning 'duration'; cf '*aeon*' below) rendered 'world' at Ps 17^{14} ('men whose portion in life is of the world'); also by the same word at Ps 49^1 (see the whole Psalm). A word of similar meaning is rendered 'world' in AV at Ps 73^{12}, Ec 3^{11}, but RSV gives quite another turn to the sense.

The ethical aspect of the 'world' does not receive any fresh emphasis in the Apocrypha, though in the Book of Wisdom both the scientific interest in regard to the world and the impulses of natural religion are notably quickened (7^{17-22} 9^9 $11^{17, 22}$ 13^{1-9}, cf Sir 17, 18). There is ample contrast between the stability of the righteous and the vanity of ungodly prosperity (*e.g.* Wis 1–5), but the latter is not identified with the 'world.' It is noticeable that in the Apocrypha the word *kosmos*, which in the LXX means 'adornment,' has reached its sense of 'world,' conceived as a beautiful order; in the NT this becomes the prevalent word.

2. In NT.—(1) The word 'Aion' (*Aeon*) is sometimes used in the meaning of world. But the original sense of *aiōn* refers to time. Thus *aiōn* means a long stretch of time, and in some cases eternity (as in Greek since Plato and in LXX since Deuteronomy–Joshua); it may be referred to as in the past or in the future. In the former sense, *e.g.* Lk 1^{70}, Ac 3^{21} (RSV 'from of old,' AV 'since the world began'). The eternal purpose of God is a purpose 'before the ages' (RSV), 1 Co 2^7 (AV 'before the world'); similarly Col 1^{26}, Eph 3^9, Jd ^{25}. With negation: 'never since the world began,' Jn 9^{32}. In the latter sense *aiōn* means the never-ending future, the coming eternity. So the phrase 'unto the *aion*,' *i.e.* 'up to eternal (life),' Jn 4^{14}, '(life) for ever,' Jn 6^{51}, or with a negation 'never' in Jn 11^{26}. Such phrases occur especially in John and Revelation and in doxologies (*e.g.* Ro 1^{25} 9^4), often redoubled 'unto the *aions* of the *aions*,' *i.e.* 'for ever and ever' (Ph 4^{20}, Eph 3^{21}, 1 Ti 1^{17}) or 'unto all *aions*' (Jd ^{25}).

The time as 'aion' is always conceived as the time of the world, either the present world or the future. Hence the conception of 'aion' comes closer to the conception of world, just as in the Hebrew '*ôlām* the significations of time and world are combined. Therefore the translation of *aiōn* is sometimes '**age**' and sometimes 'world,' according to the context. Thus God is called the 'King of ages' (1 Ti 1^{17}), and we find expressions such as the creation of the *aiōns* (He 1^2 11^3) or 'the close of the age' (Mt 13^{39f}) and 'the end of the world' (He 9^{26}).

The conceptions of age and world are combined, especially in the apocalyptic literature. Here the distinction between the present age and the coming age is not only a formal chronological distinction, but the present age means the present world with all the conditions which make it provisional and perishable, declining into all evils and ruled by the demons and Satan. Correspondingly, the coming age is the coming world of eternity with all the splendour and bliss for which the eschatological hope looked forward.

The 'sons of this world' or 'of this age' (Lk 16^8 20^{34}) are the people who are obsessed with the 'cares of the world' (Mk 4^{19}, Mt 13^{22}), who are leading a sinful life (Eph 2^2; cf 1 Ti 6^{17}, 2 Ti 4^{10}). The 'debater of this age' is proud of the 'wisdom of the world' which God has 'made foolish' (1 Co 1^{20}; cf 3^{18}). The present world is controlled by 'the rulers of this age who are doomed to pass away' (1 Co 2^6; cf v.^{8}). St. Paul can even speak of the 'god of this age' (2 Co 4^4), as St. John speaks of the 'ruler of this world' (Jn 12^{31}; cf 14^{30}). But Christ is made the Lord over all worldly powers, 'not only in this age but also in that which is to come' (Eph 1^{21}). Christ has delivered the believers 'from the present evil age' (Gal 1^4); God will show them 'the immeasurable riches of his grace in the coming ages' (Eph 2^7; note the plural form); they have already 'tasted the powers of the age to come' (He 6^5). But now they must be admonished, 'Do not be conformed to this world' (Ro 12^2), and bidden to 'live sober, upright, and godly lives in this world' (Tit 2^{12}). They shall receive 'in the age to come eternal life' (Mk 10^{30}, Lk 18^{30}). 'Those who are accounted worthy to attain to that age . . . are equal to angels and are sons of God . . .' (Lk 20^{35}).

(2) But the most frequent term for 'world' is *kosmos*, which is sometimes extended in meaning to the material universe, as in the phrases 'from the beginning ('foundation,' 'creation') of the world' (*e.g.* Mt 24^{21} 25^{34}, He 4^3, Ro 1^{20}; for the implied thought of Divine creation cf Ac 14^{17} 17^{24}). More commonly, however, the word is used of **the earth**, and especially the earth as the abode of man. To 'gain the whole world' is to become possessed of all possible material wealth and earthly power (Mt 16^{26}, Mk 8^{36}, Lk 9^{25}). Because 'sin came into the world' (Ro 5^{12}), it is become the scene of the Incarnation and the object of Redemption (2 Co 5^{19}, 1 Ti 1^{15}, He 10^5, Jn $1^{9f, 29}$ 3^{16f} 12^{47}), the scene also, alien but inevitable, of the Christian disciple's life and discipline, mission and victory (Mt 5^{14} 13^{38} 26^{13}, Jn 17^{15}, Ro 1^8, 1 Co 3^{22} 4^9 5^{10} 7^{31}, 2 Co 1^{12}, Ph 2^{15}, Col 1^6, 1 P 5^9, Rev 11^{15}). From this virtual identification of the 'world' with mankind, and mankind as separated from and hostile to God, there comes the ethical signification of the word specially developed in the writings of St. Paul and St. John. In this sense St. Paul and St. John like to use the phrase 'this world' (1 Co 3^{19} 5^{10} 7^{31}, Eph 2^2, Jn 8^{23} 12^{31} 16^{11} 18^{36}, 1 Jn 4^{17} etc.).

(*a*) *The Epistles of St. Paul.* To the Galatians St. Paul describes the pre-Christian life as slavery to 'the elemental spirits of the universe' (4^3, cf v.^{9}); through Christ the world is crucified to him and he to the world (6^{14}). Both thoughts recur in Colossians ($2^{8, 20}$). In writing to the Corinthians he condemns the wisdom, the passing fashion, the care, the sorrow of the world (1 Co 1^{20f} 3^{19} $7^{31, 33f}$, 2 Co 7^{10}; cf *aiōn* above), and declares the Divine choice to rest upon all that the world least esteems (1 Co 1^{27f}, cf Ja 2^5). This perception of the true worth of things is granted to those who 'received not the spirit of the world, but the spirit which is from God' (1 Co 2^{12}); hence the saints shall 'judge the world' (1 Co 6^2; cf 11^{32}). In the argument of Romans the thought of the Divine judgment of the 'world' has incidental place, but in the climax St. Paul conceives of the 'trespass' of Israel as leading to 'riches for the Gentiles,' and of the 'rejection' of them as the 'reconcilation of the world' ($11^{12, 15}$; cf v.^{32} and 5^{12-21}). What St. Paul condemns, then, is hardly the world as essentially evil, but the world-spirit which leads to evil by its neglect of the unseen and eternal, and by its blindness to the true scale of values revealed in the gospel of Christ crucified.

(*b*) *The Gospel and First Epistle of St. John.* In these two writings occur more than half the NT instances of the word we are considering. That is, the term *kosmos* is *characteristic* of St. John, and, setting aside his frequent use of it in the non-ethical sense, especially as the sphere of the incarnation and saving work of Christ, we find an ethical conception of the 'world' deeper in its shadows than that of St. Paul. It is true that Jesus is the Light

of the world (Jn 1[9] 3[19] 8[12] 9[5] 12[46]), its Life-giver (6[33, 51]), its Saviour (3[17] 4[42] 12[47]); yet 'the world knew him not' (1[10]), and the Fourth Gospel sets out its story of His persistent rejection by the world in language which at times seems to pass beyond a mere record of contemporary unbelief, and almost to assert an essential dualism of good and evil (7[7] 8[23] 9[39] 12[31] 14[17, 30] 16[11, 20]). Here the 'world' is not simply the worldly spirit, but the great mass of mankind in deadly hostility to Christ and His teaching. In contrast stand His disciples, 'his own who were in the world' (13[1]), chosen out of the world (15[19]; cf 17[6]), but not of it, and therefore hated as He was hated (15[18f] 17[14, 16]). For them He intercedes as He does not for the world (17[9]). In the 1st Epistle of St. John the same sharp contrasts meet us. The world lies within the scope of God's redemptive purpose in Jesus Christ (2[2] 4[14]), yet it stands opposed to His followers as a thing wholly evil, with which they may hold no traffic (2[15–17]; cf Ja 4[4]), knowing them not and hating them (3[1, 13]). It is conceived as under the sway of a power essentially hostile to God,—the antichrist (2[18, 22] 4[3]; cf 'the ruler of this world' Jn 12[31] 14[30] 16[11])—and is therefore not to be entreated and persuaded, but fought and overcome by the 'greater' one who is in the disciple of Christ (4[4] 5[4f]). Faith 'overcomes the world,' but St. John reserves for his closing words his darkest expression of a persistent dualism of good and evil, light and darkness: 'We know that we are of God, and the whole world is in the power of the evil one' (5[19]).

The idiomatic uses of the term 'world' in Jn 7[4] 12[19], 1 Jn 3[17] are sufficiently obvious. For the difficult expression 'an unrighteous world' applied to the tongue (Ja 3[6]), see the Commentaries. S. W. G.—R. B.

WORM.—**1.** Hebrew *sās*, Is 51[8], the larva of a clothes-moth. See MOTH. **2.** Hebrew *rimmāh*, Ex 16[24], Job 25[6], Is 14[11] (RSV '**maggot**' in the last two of these passages). **3.** Hebrew *tôlaʿîm*, *tôlēʿāh*, *tôlaʿath*, Ex 16[20], Job 25[6], Is 14[11] 66[24], Jon 4[7] etc. Both **2** and **3** are used to describe the same kind of worms (cf Ex 16[20, 24]), and most references are to maggots and other insect larvae which breed on putrid organic matter. These are very common in Palestine, occurring even on neglected sores and, of course, on dead bodies (Job 19[26] 21[26]). Jonah's worm (*tôlēʿāh*) was probably some larva which attacks the roots, or perhaps a centipede. The 'worms' of Dt 28[39] were probably caterpillars. **4.** Hebrew *rāḳābh*, Hos 5[12] (AVm; AV, RV 'rottenness,' RSV 'dry rot'). In Pr 12[4] where the same word is also translated 'rottenness,' it is rendered in LXX *skōlēx*, 'wood-worm,' which seems appropriate to the context. **5.** *zōḥᵃlê ʿāreṣ*, Mic 7[17] (AV 'worms of the earth'; RV, RSV 'crawling things of the earth'), may possibly refer to true earthworms (which are comparatively rare in Palestine), but more probably to serpents. See SERPENTS, **10**. **6.** Greek *skōlēx*, Mk 9[44] etc. The expression '**eaten of worms,**' used in describing (Ac 12[23]) the death of Herod Agrippa I., would seem to refer to a death accompanied by violent abdominal pains, such symptoms being commonly ascribed in the Holy Land to-day to abdominal worms (*Lumbricoides*)—a belief often revived by the evacuation of such worms near the time of death. E. W. G. M.

WORMWOOD.—Hebrew *laʿᵃnāh*, Dt 29[18] (AV, RV; RSV 'bitter fruit'), Pr 5[4], Jer 9[15] 23[15], La 3[15, 19], Am 5[7] 6[12] (in the last AV **hemlock**); Greek *apsinthos*, Rev 8[11]. *laʿᵃnāh* was some bitter substance usually associated with **gall** (q.v.); it is used metaphorically for calamity and sorrow. Tradition favours some species of *Artemisia* (wormwood), of which several kinds are found in Palestine. E. W. G. M.

WORSHIP.—**I. In OT.**—**1.** In RSV the term 'worship' and its derivatives occur 112 times, as the translation of six Hebrew and Aramaic verb forms. The most important of these is the Hebrew *hishtaḥᵃweh*, 'to prostrate oneself,' which occurs 86 times. This term for worship is not only predominant in a statistical sense; it expresses the act and the attitude appropriate to the worship of a sovereign deity whose exclusive claim upon Israel is a central OT theme. The remaining terms are: *ʿābhadh* 'to serve' (11 times); *yārēʾ* 'to fear' (Jos 22[25]); *shārath* 'to minister or do service,' especially of a cultic sort (Ezk 20[32]); *dārash* 'to seek or inquire (of the deity)' (Ezr 4[2] 6[21]); and the Aramaic *sᵉghadh* 'to pay homage to' (11 times, all in Dn 3). Numerous additional terms are employed to describe the acts and attitudes of worship, prominent among which are those referring to praise, rejoicing, prayer, sacrifice, making and payment of vows, etc.

2. Little is known of the earliest forms of worship in Israel. In Genesis, the patriarchs are reported to have built altars to Yahweh and there to have called on His name (Gn 12[7–8] 13[18] J, etc.). The slaughter of animals in connexion with the making of contracts or covenants is attested in this period (Gn 15; see also Jer 34[18]) and may reflect similar customs known from the ancient Mesopotamian city of Mari. The worship of the God (or gods) of the patriarchs (the God[s] of the Fathers, Gn 31[42] etc.) apparently required no elaborate priesthood or cult, since the deity was conceived to be almost a member of the tribe, one who accompanied the people in their wanderings, bound neither to a particular land nor to specific cult centres. The God of the patriarchs is reported to have chosen the places and the modes of His appearance to His people.

3. With the appearance of the deity to Moses and the subsequent deliverance of the slaves from Egypt, the foundation of Israelite worship is laid. Israel's God here appears under the name 'Yahweh,' a name for which no etymology or explanation is provided (Ex 3[14–15] is best understood as the refusal to provide an etymological explanation of the name). He is a jealous God, who brooks no rivals. He will not permit any representations of Himself to be fashioned, nor may His name be used in conjuring or other forms of magic (Ex 20[3–7]). The worship of such a deity will (or should) depend upon an understanding of his nature and purpose. The Israelite community of the time of Moses (or shortly thereafter) understood the nature and purpose of Yahweh to be disclosed in His dealings with His people in the concrete events of history. Specifically, the Exodus from Egypt, the covenant at Sinai and the guidance of Yahweh during the wilderness period are understood to be the central revelatory acts by means of which Yahweh's nature and purpose have been made known, and in the light of which He is to be worshipped. Moses is credited with having established the form of Israelite worship and cultic practice (Ex 25–31, 35–40), although numerous innovations are reported and have occurred in subsequent ages. The wilderness period, nonetheless, remains the norm for authentic worship in Israel (Am 5[25], Jer 7[21–23]).

4. The confrontation of Canaanite worship after the Conquest brought many changes into the worship of Israel. Yahweh is conceived to have taken over the powers exercised by the Canaanite high god and his local manifestations, as well as all other numinous and demonic powers. Hence the way is prepared for the adoption of literary and cultic forms which had formerly been associated with the worship of the fertility deities (Jg 5, Pss 29, 68, Hab 3, etc.). The festivals connected with the barley harvest (Passover-Unleavened Bread), the wheat harvest (Pentecost) and the fruit harvest (Tabernacles) are marked by the Yahwistic covenant faith and are transformed into occasions upon which Yahweh's saving deeds are commemorated and the covenant renewed (Ex 12–13, Dt 26[5–9], Jos 24, etc.). The sacrificial rites also take on particular significance under the influence of the covenant faith. Their fundamental meaning is expiatory: the community and the individual acknowledge, through the shedding of blood and the offering of a portion of the produce of the ground, that life belongs to Yahweh its creator. In face of the faithlessness of Israel, Yahweh is understood to have the life of His people fully at His disposal. It is only His love and graciousness which lead Him to accept the sacrificial offerings in place of the lives of those who worship Him.

5. The establishment of the Monarchy was accompanied by an elaborate development in the forms and practices of Israelite worship. The extent of the influence of the 'divine kingship' ideology of the surrounding peoples upon Israelite kingship may be debated, but such influence to some degree is apparent. Yahweh is the king of Israel (Is 6^5); earthly kings rule only at His pleasure or sufferance. Yet as the agents of the deity, the kings were of central importance for Israelite life and worship. David's innovations in the area of worship were considerable, it appears. He appointed his own sons as priests (2 S 8^{18}). He established, or reinstituted, a processional ceremony in which the Ark of the Covenant was brought into Jerusalem on one of the great festivals (probably the autumn festival, 2 S 6; see Pss 24, 132). He is credited with having been the author of many psalms and of having introduced instrumental accompaniment to the music of Israel (Am 6^5). It seems likely that he introduced into Israel a new priesthood, that of the old Jebusite city, Jerusalem, the first incumbent being Zadok.

6. The periods of relative prosperity under subsequent kings were marked by further elaboration of the forms and practices of Israelite worship. Solomon's Temple became the centre for the community's worship and also became a stumbling block for Israelite faith. The close relationship between king and cult tended not only to give too great a place to the king and his family and court in the conduct of worship; it also prepared the way for an understanding of worship as a means of securing or even coercing the favour of Yahweh. Against this and similar corruptions of Israelite worship, including all forms of idolatry, the great prophets inveighed (Am 4^{4-5} $5^{4-5, 21-24}$, Hos 4 f, 8 f, Is 1^{10-20} etc.).

7. With the fall of the Temple, already predicted by Micah (3^{12}) and Jeremiah (chs. 7, 26), one of the most significant developments in Israelite worship occurred. Israel learned that true worship of Yahweh was not dependent upon the existence of one sacred centre, the dwelling-place (or place of appearance) of the deity. Individual **prayer**, by no means absent in the pre-Exilic community, is given a new impetus and status. Much of the psalmody of Israel is produced, or at the least elaborated, during the Exile. The priestly tradition is recorded in detail and set within the framework of the narrative and poetic materials of the Pentateuch. Local gatherings in the houses of exiles prepare the way for the establishment of the synagogues of the post-Exilic period (Ezk 33^{30-33}). The Law of Yahweh itself becomes an object of veneration, especially in the period after the Exile (Pss 1, 119). The restoration of the Temple was indeed of great significance for the post-Exilic community. It was the centre of the earth (Ezk 38^{12}), the place of gathering for Israel on the feast days, the particular site from which came judgment and direction for the life of man (Is 2^3, Mic 4^2). But the restored Temple was never to assume the importance which it formerly had; the **synagogue**, despite the simplicity of its forms of worship and the emphasis upon the study and application of the Law, became the real centre of Jewish life and worship. Hence the fall of Jerusalem in A.D. 70 was in itself no profound threat to the worship of the community of Israel.

8. The basic meaning of Israelite worship is to be found in the quality of the relationship which it both affirmed and established between God and man. OT worship displays a remarkable openness on the part of the community and the individual in their dealings with Yahweh. This is particularly true of the prayers. Unable to make images of the deity, Israel was free to praise the works of God in nature and in history. Since Israel was convinced of Yahweh's sole authority in the assembly of heaven, on earth, and under the earth, she had no recourse but to attribute to Yahweh the misfortunes and calamities which befell her. Yet, convinced also of Yahweh's involvement in the very details of human existence, Israelite worshippers developed a type of prayer which has few parallels in the prayers and liturgical literature of their neighbours. Yahweh may even be accused of deception (Jer 15^{18} $20^{7-8, 14-18}$), or of having forsaken His people (Ps 22^1 etc.). These prayers, scattered throughout the entire OT, reveal how the Israelite man of faith stood ready to wrestle with God for a blessing (Gn 32^{24-32}).

The **Sabbath** (q.v.) was also of decisive significance in the worship of Israel. Although its historical origins remain obscure, it was a well-established part of the worship of Israel by the middle of the 8th cent. (Am 8^5) and is traditionally associated with the wilderness period (Ex 16^{22-30}). The remarkable fact is that nowhere in OT is a prescribed ritual for Sabbath observance to be found: the Sabbath is depicted as a day of rest and rejoicing in the goodness and faithfulness of Yahweh. The Sabbath provided time for reflection; it provided order for the common life of Israel; and it was thus one of the primary occasions for the development of that experience of communion with the living God which is reflected in OT literature and life.

In the act of worship the entire range of communication with the deity was opened. The saving deeds of Yahweh in the past were rehearsed and became an inescapable part of present experience, and the coming triumph of Yahweh's purpose for Israel—and for all mankind—was also, by anticipation, a part of the present. But all worship in Israel was required to find its issue and its authentication in service (Am 5^{24} etc.). Both worship and service were, at their best and truest, theocentric: they were human responses to the prior and determinative action and purpose of Yahweh.

See ADORATION, PRAISE, PRAYER, PREACHING, SABBATH, SACRIFICE, SYNAGOGUE, TEMPLE.

II. **In NT.**—The words most commonly translated 'worship' in NT are *proskuneō* ('to prostrate oneself before the diety or a ruler,' 52 times), *sebomai* ('to show reverence or respect,' 10 times), and *latreuō* ('to serve or carry out relitious duties, particularly of a cultic nature,' 11 times). The nouns *proskunētēs* ('worshipper,' Jn 4^{23}), *latreia* ('worship or service of God,' Ro 9^4 12^1, He 9^1), *eidōlolatreia* ('idol worship,' 1 Co 10^{14}), *thrēskeia* ('worship of God, religion, especially in cult,' Col 2^{18}), *leitourgia* ('service in temple or Christian service,' He 9^{21}), and *sebasma* ('object of worship,' 2 Th 2^4) occur sparingly in the sense of 'worship.' The adjective *theosebēs* ('god-fearing, devout,' Jn 9^{31}) and the verb *sebazomai* ('to show reverence, to worship,' Ro 1^{25}) complete the list of words translated in RSV by 'worship.'

Neither the form nor the content of worship in NT can be fully reconstructed from available sources. It is evident that Christian worship arose out of Jewish practices at both synagogue and Temple. Equally evident is the fact that early Christian worship was fixed upon God's saving work in Jesus Christ. The Jewish Sabbath is quickly replaced in Christian worship by the first day of the week (1 Co 16^2, Ac 20^7), the Lord's Day (Rev 1^{10}), although in the immediate period after Pentecost the community gathered daily (Ac 2^{46}). The Lord's Day is the occasion for celebration of the Resurrection of Jesus, His Resurrection having occurred on the first day of the week (Mk 16^2 etc.). It is also the occasion for confrontation with the living Christ through the Spirit, present with His people, and for anticipation of His return in glory at the Last Day.

In Ac $2^{42, 46-47}$ and 1 Co 12, 14 (see also Col 3^{16-17}) are found the most explicit NT statements concerning the content of early Christian worship. Such worship included the following elements, at the least: proclamation and teaching, prayers, acts of communion (*koinōnia*), especially the Lord's Supper, prophetic discourses, ecstatic speech and its interpretation, and various benedictions and congregational responses. On particular (and probably distinct) occasions the rite of baptism was performed, almost certainly within a setting of Christian worship, although NT contains no more than fragments of liturgical formulas which accompanied the rite of baptism (Mt 28^{19} etc.). The distinction

between the Service of the Word and the Lord's Supper must not be overdrawn. In NT references a *single* service is attested, which probably had its culmination in the Supper (Ac 2^{42}, 1 Co 11$^{28-29}$). Public proclamation of the gospel is quite distinct from the worship of the Christian community, although a proper and necessary corollary of the worship, indeed of the very life, of the community (Ro 1^{9}).

NT worship was concentrated upon the saving acts of God. Large place was given, it is believed, to lessons from OT (particularly the prophets), to the words and deeds of Jesus, and to the apostolic teaching. Paul's letters were probably read in connexion with the worship of the communities to which they were addressed and were also circulated among the congregations. In addition, the prophets were encouraged to speak that which the Spirit summoned them to speak, thus making concretely relevant the apostolic tradition and teaching. Outsiders were admitted to attend, and even to participate in, Christian worship (1 Co 14$^{16, 22-25}$), although the Supper was reserved for believers (1 Co 11$^{27-30}$). The arrangement of the Christian Church at Dura Europos (early 3rd cent. A.D.) indicates that the Supper and the rite of Baptism were celebrated in a different room from that in which the Service of the Word was held.

The *Didache* (9, 10, 14) and the letter of Pliny the Younger to the emperor Trajan (*Epp.* xcvi) contain additional information bearing upon the form and content of early Christian worship. It is impossible to determine, however, the extent to which these sources may properly be employed in the reconstruction of the form and content of worship in the NT period.

The prominence of prayer in NT worship is apparent throughout the entire NT. In the Gospels, Jesus is reported to have withdrawn from the crowds and from the disciples for private prayer (Mk 6^{46} etc.). He taught His disciples how to pray (Mt 6$^{5-13}$, Lk 11$^{2-4}$), even summoning them to pray for those who persecuted them (Mt 5^{44}). The letters of Paul regularly open with the apostle's references to his prayers for his fellow-Christians, who are also instructed to 'pray constantly' (1 Th 5^{17}, Ro 12^{12}). Intercessory prayers occupy a much larger place in Christian worship than was the case in OT or in Jewish worship. Prayers are generally addressed to God, through Jesus Christ, in the power of the Spirit (Eph 6^{18}, Col 3^{17} etc.). The Spirit of God (the Holy Spirit, the Spirit of Christ) gives power and direction to the Christian and to the Church in order that their prayers may be appropriate (Ro 8^{26}, 1 Co 14$^{13-19}$).

The dominant note in NT worship is that of joy and thanksgiving in face of God's gracious redemption of mankind in Jesus Christ. Having the 'first fruits of the Spirit' (Ro 8^{23}), the Christian community rejoices in God's fulfilment of His promise to the fathers of old and waits with eager longing for the culmination of His work at the Last Day. Past, present, and future are united, but not dissolved, in the act of worship. He 'who was and is and is to come' (Rev 4^{8}) is present with His people in worship—and He will come soon (Rev 22$^{12, 20}$). The NT response to this hope and affirmation is: 'Amen. Come, Lord Jesus!' (Rev 22^{20}, 1 Co 16^{22}). W. J. Ha.

WRITING.—1. Origin of writing.—The Bible has nothing to say of the origin of writing, which seems to have been invented early in the 4th millennium B.C. by the Sumerians and almost at the same time by the Egyptians. The cumbersome clay-tablets, which required special clay not easily found in the west, and the complicated ideographic and syllabic cuneiform systems of writing were confined to the east. The beginnings of an alphabetic script have been found in a group of pseudo-hieroglyphic inscriptions, which cannot yet be read, on stone and metal from Gebal (Byblos), contemporary with the Egyptian Middle Kingdom (*c* 2100–1700 B.C.) and in as yet imperfectly deciphered inscriptions from the turquoise-mines at Sinai dated *c* 1850–1600 B.C.; this proto-alphabet was based on the hieroglyphic system of the Egyptians, who had devised a kind of pseudo-alphabet for spelling out proper names and foreign words which could not be represented by pictographs. The famous cuneiform tablets from Ugarit (see RÂS SHAMRA) on the Syrian coast were copied *c* 1400–1350 B.C.; they are written on clay-tablets but in an alphabet with special signs for three vowels (*a, i, u*) with *'āleph*, the glottal stop. The earliest inscriptions in a completely legible and intelligible purely Semitic script are those of several Phoenician kinglets from the same Gebal, dated from *c* 1500 B.C. (?) to 900 B.C. (Byblos I.–IV.). Neither the Ugaritic nor the Phoenician 'alphabets,' however, were true alphabets; it was not till *c* 850 B.C. that the Greeks invented separate symbols to represent vowels pure and simple, thereby creating a true alphabet.

2. Early writing in Israel.—Although cuneiform tablets were in use all round Palestine and even in it, as the Babylonian tablets found at Tell el-Amârna (Tall-al-'Amârinah) show (*c* 1400 B.C.), there is no evidence that the Israelites ever used this system. Whence the Hebrews can have learnt the art of writing is not known; for the OT has nothing to say on the subject and it is not mentioned in the stories of the patriarchs. Their ancestors may have known of the Sumerian and Babylonian systems, especially if they were immigrants from the east, but these never became acclimatized in the west, where they were used only for relatively short periods of time, though long enough for the idea to become well known. The historic Hebrews may have obtained the alphabetic system directly from its Sinaitic inventors or their successors or perhaps rather have learnt it at second hand from the Phoenicians who, if they did not invent it, had at an early age developed its use and did much to diffuse the knowledge of it. The earliest Hebrew inscription is the Calendar of Gezer (*c* 1000 B.C.), which is written to all intents and purposes in the Biblical language; and the oldest written documents mentioned in the OT are the Tablets of the Law (Ex 24$^{12-13}$ 31^{18} E; cf Hos 8^{12}), *c* 850 B.C. The writing on these was 'the writing of God' (Ex 32^{16} E), *i.e.* engraved in lapidary or 'uncial' style, as distinct from that which was scratched 'with the pen of a man' (Is 8^{1}) *c* 735 B.C., *i.e.* cursive script on a potsherd.

3. Character of writing.—The so-called Phoenician alphabet, which the Israelites adopted, consisted of twenty-two signs representing only consonants; the ambiguity thus created came to be partly mitigated by the use of the symbols for several weak sounds as vowel-signs to indicate the long vowels (*'āleph* and *h* for *â*; *w* for *ô, û*; *y* for *ê, î*); but it was not till long afterwards that signs for the short vowels were devised. The OT perhaps mentions two, and only two, of these letters by name; these are *ṣāw* for *ṣ* (emphatic *s*) and *ḳāw* for *ḳ* (Is 28$^{10, 13}$). These suggest that the sound of the letter itself with a helping vowel was originally enough for its name, as it remained approximately ever afterwards for one (*hē'* for *h*). Otherwise, the Hebrews turned the sound into a common noun by adding a normal afformative to it (*ḥēth* for *ḥ*, *ṭēth* for *ṭ*, *bēth* for *b*), when it might be assimilated to a known word (so *bêth*, 'house'), or took a noun beginning with the same letter as its name (*wāw* 'peg' for *w*, *tāw* 'cross' for *t*); in these cases the name arose naturally out of the sound and preceded the sign, which was designed to fit the name (for example, the sign of a hand for *kaph* 'hand,' the name for the letter *k*). When the letter represented a compound sign, it received the name of a common object which seemed to resemble that sign (for example, the sign for *ṣ* being a strengthened form of that for *z*,

they dropped *ṣāw* and called it *ṣādhê* 'grasshopper,' which the symbol had come roughly to resemble). The names then passed through an Aramaic dialect, as their forms show, into the Greek language. The order of the alphabet as given in modern grammars is already found in various acrostic passages in the OT (Na 1[2-14], Ps 9–10, 25, 34, 37, 111, 112, 119, 145, La 1–4, Pr 31[10-31], Sir 51[13-29]), although there are a few variations in some passages, and this is confirmed by lists of letters, more or less complete, which archaeologists have discovered engraved in the same order; but the supposed inverted cyphers (Jer 25[26] 51[1]) are nothing but Rabbinic fictions. The neighbouring Phoenicians and Aramaeans, as also the Jews who spoke Aramaic in Egypt in the 5th cent. B.C., used quite different signs for numbers; but the divergent interpretations of the LXX prove conclusively that the letters of the alphabet served for the same purpose in the manuscripts before them. Direct evidence of this practice comes with the Maccabaean coins on which the number of the year of the revolt is indicated by the letters of the alphabet. The practice known as 'gematria,' whereby pseudo-historical information is extracted from the numerical value of the letters, like Nero's name from the number of the beast (Rev 13[18]; cf Gn 14[14] with 15[2], Ezk 4[4-5]), affords evidence of the pre-Septuagintal use of the letters for numbers. Lastly, the letters were commonly used as abbreviations, not only by Jews in private documents or on coins (for example, *š* (=*sh*) for *shekel* 'shekel,' or *shānāh* 'year') but also in Biblical MSS, where this practice easily accounts for many variant readings, especially of the Divine name and of numbers (for example *š* for *sh*[e]*nayim* 'two,' *shēsh* 'six,' *shebha*[ʿ] 'seven,' and *sh*[e]*mōneh* 'eight').

4. The Script.—The script in the pre-exilic period was, as revealed by archaeology, largely lapidary and formal; but *ostraca* from Samaria (*c* 770 B.C.) and Lachish (*c* 586 B.C.) and *papyri* written by Jews in Egypt (5th cent. B.C.) have revealed cursive forms for use with brush and ink. After the exile the so-called 'Assyrian' or 'square character,' *i.e.* an Aramaic form of the script, displaced the old writing; the ascription of this change to Ezra was but pious fancy, based on a desire to bring a novelty under the sanction of a venerable name. The old style was revived on Maccabaean coins and on those of the First and Second Revolts, evidently as propaganda on behalf of the nationalist cause. The allusion, however, to *iōta* (*yôdh*) as the smallest letter (Mt 5[18]) is only intelligible in reference to the new square script, which must then have been in ordinary use in the 1st cent. A.D. The most noticeable difference between the two scripts is in the use of five final forms in the new script, of which four are nearer to the corresponding forms in the old script; these were in fact the original forms, while the non-final forms were created by bending up the downward stroke leftwards, *i.e.* towards the following letter, and were due to the growth of the habit of running a letter into or joining it with the following letter in cursive writing. These five final forms also came to be used for the hundreds from 500 to 900, which were beyond the resources of the ordinary alphabet of twenty-two letters, since 400 was the last number which this could reach. What the 'tittle' of the NT is (Mt 5[18]) remains uncertain; it may have been the projecting point or tip distinguishing some letters in the square alphabet (for example, *b* from *k* or *d* from *r*) or the fanciful strokes called *tâghin* 'crowns' in elaborated calligraphy. To what extent words were divided or stops were used in ancient Hebrew MSS is not clear. They are divided by a stroke in most Phoenician inscriptions from Gebal or by a stroke or a point in early Aramaic inscriptions; words are separated by points and clauses by a stroke on the Moabite stone (*c* 9th cent. B.C.), which is unique in this respect. The Hebrew Calendar from Gezer has some strokes separating words but drops them after the first two lines; the Samaritan *ostraca* and the inscriptions from the Pool of Siloam (*c* 700 B.C.) regularly use points, while the *ostraca* from Lachish fluctuate in their use of them, to divide words; inscriptions and *papyri* of the Persian period begin to leave spaces between words. The practice of Jewish scribes is not directly known; but the frequency with which the LXX divides words wrongly suggest that they were not generally separated in the MSS which they used. In the Scroll of Isaiah (A) from Qumrân the words are clearly separated by spaces; and by this time the use of final letters was beginning to assist the reader to distinguish them.

5. Post-biblical Hebrew writing.—In Biblical times erasure was described as 'wiping out' (Ex 32[32], J; cf Col 2[14]) apparently with water (Nu 5[23], P), which was of course only possible when non-metallic ink was used; when metallic ink, which eats into leather and can only be scratched out, came into use, the process was called scratching out by the Rabbis, and this term became general whatever ink was used. Occasionally a line was drawn through anything incorrect. Soon, however, erasures came to be disapproved in the Scriptures, especially the Law, and already in the Qumrân Scrolls dots are put above and below a letter or word which has been miscopied; in the same way Biblical MSS show *puncta extraordinaria* over letters or words (*e.g.* over 'and he kissed them' in Gn 33[4]) to indicate that they should be disregarded though not expunged. Another device indicating that the scribes suspected a mistake in the text was the insertion of a vertical stroke called *pāsēḳ* in the text, usually in the middle of a suspected phrase or after a suspected word. Some of the Scrolls have marks in the margin intended apparently to indicate Messianic passages; and legal documents of the 2nd cent. A.D. from the Wilderness of Judah have crosses at the ends of short lines to prevent forged insertions. Between the fall of Jerusalem in A.D. 70 and the completion of the traditional or Massoretic text (Heb. *massōreth* 'tradition') a number of rules were invented for the guidance of scribes copying the Law; these have been collected in the tractate called *Massēkheth Sôph*[e]*rîm* 'tractate for scribes' attached to the Babylonian Talmud. They included the perpetuation even of accidental peculiarities of the archetype and the insertion of signs, whose meaning had sometimes been forgotten, in the text. The most important addition to the text, posterior to the completion of the Talmud, was the insertion of vowel-points. Only the signs of the Assyro-Babylonian cuneiform syllabary had included the vowels in themselves and *'āleph* at Ugarit had three forms according to the vowel with it, while a script without such signs was obviously in danger of misunderstanding (for example *zāraḳ* 'he sprinkled' might be read *zôraḳ* 'it was sprinkled'). All the other Semitic languages originally suffered from this difficulty, which the Ethiopians were apparently the first to try to eliminate by varying the form of the sign for the consonant according to the following vowel. The Syrians first put dots above or below to distinguish otherwise identical words (for example, above for *malkhâ* 'king' but below for *melkhâ* 'counsel'); then they placed the Greek signs for the principal vowels (*a*, *ā*/*ō*, *e*, *i*, *u*) above or below the consonantal signs and finally developed a more elaborate system of dots to distinguish the finer points of pronunciation. After them the Arabs, imitating the Syrians *c* A.D. 700, punctuated texts of the Qur'ân with three signs for the three fundamental short vowels (*a*, *i*, *u*). Jewish scholars, faced with the same difficulties and knowing something of the earlier if not of the later of these methods of vocalization, tried out various devices, of which fragmentary specimens have survived the vicissitudes of transmission, until they hit on two which they finally adopted: the Palestinian or Tiberian in which the signs are put for the most part under, and the Babylonian in which they are put uniformly above, the line. The former is that found principally in the OT, the latter has survived principally in MSS of the Targumim. The Tiberian method, intended to standardize the reading and intonement of the Scriptures in the synagogue, is especially elaborate; for besides the vowel-signs it has an elaborate system of accents indicating whether words were to be read together or with a pause between them. There is some evidence that the use of these signs was

sometimes disapproved, *e.g.* among the Qara'ites for Biblical texts and in other circles for profane texts; but their convenience was such that opposition to them was very slight and soon ceased.

Footnotes had not yet been invented, and the Massoretes adopted an ingenious device for recording variant readings. The familiar series of variants known as *kᵉthîbh* 'written' and *kᵉrê* '(what is) to be read' represent an attempt to preserve two readings known to them: the 'written' text contained the traditional consonants while the 'read' text presented the reader with the vowels of some totally different word which he was expected to substitute for it. This process sometimes yields surprising forms over which grammarians have wasted much ink. Unfortunately, no record has been preserved of the process whereby the text has been vocalized, and this can now only be reconstructed by analogy, *e.g.* by that of the Syriac Scriptures and the Qur'ân, which is entirely unsatisfactory. Clearly there must have been an immense mass of divergent readings between which the Massoretes were forced to make a choice; the LXX is a clear witness to this fact, since it is often demonstrably translating a text which is not the Massoretic text. The Biblical texts and fragments from the caves round Qumrân further illustrate this fact, though some of them are nearer to the Septuagintal and others to the Massoretic text. Unfortunately the Massoretes destroyed all the old MSS on which they had constructed their standardized text, so that their methods cannot be properly studied.

6. Character of writers.—The OT gives little information on such subjects as the methods of instruction and education. It contains only one passing allusion to the monotony of the pedagogue's instruction by endlessly repeating the letters of the alphabet to his pupils (Is $28^{10, 12}$). Quite early, however, even ordinary people may have been able to write (Jg 8^{14}, where the boy comes from a tribe on the Phoenician border; or is 'ticking-off' on a tally-stick meant?); and the numerous alphabetic masons' marks of the Israelite period support this statement. Yet at other times 'one knowing writing' had to be found if anything required to be read (Is 29^{11}); but this statement by no means contradicts that just made. The word *sôphēr*, however, though usually translated 'scribe' in the period of the kingdom (2 S 8^{17} 20^{25} *et al.*), probably meant 'musterer,' *i.e.* the officer responsible for calling up the levy (2 K 25^{19}; cf Jg 5^{14}). Jezebel could write a letter (if indeed she wrote it herself) to the elders of Jezreel and some one of them could read it (1 K 21^{8-11}); and Hezekiah read a letter (2 K 19^{14}). Similarly the author of Deuteronomy fancifully pictured not only Moses as writing down the Law (Dt 31^{24}) but also the king as making a copy of it for himself (Dt 17^{18}); but a personal act on the part of the king or queen must not necessarily be assumed, even though Ashurbanipal boasts of his skill in the 'difficult cuneiform script,' and another king (Cyrus or Nabonidus) is taunted with not knowing it. There are likely too, to have been professional scribes attached to the court (2 K 12^{11}; cf Es 3^{12}) and the local centres of government, as also to the headquarters of the army, as the letters from Lachish suggest; but Baruch seems to have been the first named member of this class (Jer (36^{26}). There will probably have been also persons plying such a craft, like the Muslim *kâtib* 'writer (of letters and legal documents),' for the benefit of private people wishing to employ them for such purposes (Ezk 9^{2-3}). After the Exile *sôphēr* came to denote a professional scribe, when Ezra became 'the scribe' *par excellence* (Neh $8^{4, 9, 13}$ 12^{36}); and such a name as Hassophereth (Ezr 2^{55}, Neh 7^{57}) belonging to a family of returned exiles proves that the business had become hereditary in certain families. Ezra, however, was scribe as well as priest (Ezr 7^{11}, Neh 12^{26}), thus testifying to the fact that the scribal profession was compatible, and might indeed be combined, with that of a priest. The combination of offices, however, is likely to have been accidental; for the Gospels clearly distinguish scribes from priests. The word will probably have already included the work of editing as well as copying the Law and comes soon afterwards to mean something like scholar or *savant* (1 Ch 27^{32}), such as the scribes of the Gospels must have been.

7. Use of writing.—The early history of Israel and Judah must have been transmitted, as Arab records seem to have been, for some period of time by word of mouth (Ps 44^{1}), being thus transmitted from father to son (Ex 13^{8} J); so Solomon's wisdom was spoken, not written (1 K 4^{32f}), and subsequently transferred from one collection to another (Pr 25^{1}). Only notes were apparently taken of Isaiah's utterances (Is 8^{16}; cf 8^{1}) and, when Jeremiah's prophecies were written down, the practice was a novelty which required description (Jer 36^{17-18}); but Habakkuk not long afterwards could speak of writing his words down as a familiar process (Hab 2^{2}). Apart from the tradition of the Tables of the Law there was no formal written Law before the 9th or 8th cent., when written decrees might be issued (Hos 8^{12}, Is 10^{1}) and the 7th cent., when 'the book of the law' was discovered (2 K 22^{8}–23^{3}), and written legal documents began to appear about the same time (Jer 3^{8} 32^{9-14}); but the practice must be older than the first mention of it. Job, too, wished that his indictment might be published in writing for all men to see (Job 31^{35}; cf 13^{26}). When official historical records may have been begun to be written down is not known; but some form of written record must have come into use fairly early in the history of the kingdom. The *mazkîr* or so-called 'recorder' found at the court of David and of subsequent kings (2 S 8^{16} *et al.*),however, was not the keeper of the records but the *nominator* or usher who introduced applicants to the royal presence; he cannot therefore be cited as evidence of the keeping of written archives at so early a date. Otherwise, the references to the keeping of written records (Is 34^{16}, Ps 139^{16}) are too vague to prove anything much; but the practice of book-keeping seems to have been well established by the 2nd cent. B.C. (Sir 42^{7}), and the writing of 'cheques' is mentioned in the NT (Lk 16^{6-7}). Genealogical rolls make their appearance after the Exile (1 Ch 9^{1}), but the archetypes on which they are based must already have been old, so faulty are they (1 Ch 4^{22}; cf 1 Ch 7^{12}, where 'Aher' is not a personal name but means 'another,' indicating a name lost in the archetype); but Arab practice shows that immense genealogies can be memorized, and errors may often therefore be due to failure of memory as much as to defective archetypes. In this period, too, references occur to official documents written in Aramaic and translated into Hebrew (Ezr 4^{7}) and to foreign scripts being learnt by Jews (Dn 1^{4}). In it, too, the complaint is made that 'of making books there is no end' (Ec 12^{12}). Soon afterwards the whole Scriptures are described generally as 'books,' *i.e.* as a library of books (Dn 9^{2}); but no library is mentioned before that which was supposed to have been made by Nehemiah and that actually made by the Maccabees (2 Mac 2^{13}).

Although three written documents in the form of inscriptions can be proved for the 10th cent. B.C. or thereabouts, writing for ordinary purposes such as letters and seals can hardly be proved before the 9th cent. and is not in any sense common before the beginning of the 6th cent. B.C. The purpose of writing, however, in the classical period must have been rather that of keeping a record than the diffusion of knowledge. No objection can then be raised *a priori* to the story that the tables of the Law were put away in the Ark (unlike the Babylonian, Greek, and Roman codes of laws, which were erected in public places); for their contents were supposed to be graven on the memory (Jer 31^{33}), while the written copy was kept merely as an authentic text ready to be consulted in case of doubt (Dt 31^{26}; cf 1 S 10^{25}). The conception of the Law as a book to be read through began after the Exile with Ezra (Neh 8^{1-8}; cf 8^{14} 13^{1}), whence it passed into the practice of the synagogue, where this use of it was fully developed (Lk 10^{26}). Finally, copies of the Scriptures normally

belonged to the community, although occasionally highly placed or wealthy persons might possess books (Jos. *c. Ap.* i. 9 [51]).

8. Writing materials.—The earliest Semitic writings were impressed in clay or incised on stone (Ex 32[16] E; cf Job 19[23f]). Consequently, all words describing writing denote primarily scratching, pricking or cutting: such are Assyrian *maḫāṣu*, 'to jab,' the Hebrew *ḥāḳaḳ* 'hewed,' incised' a text on a tablet (Is 10[1]) and then 'wrote' on a scroll (Is 30[8], Job 19[23]), and *kāthabh* 'wrote,' whose original sense may be seen in the Arabic *kataba* '[pricked], sewed, wrote': and the Assyrian-Babylonian *šaṭāru* 'to write' must once have meant something similar, as shown by the Arabic *saṭara* 'cut, inscribed, lined, wrote' (cf Gr. *graphein* 'to scratch, delineate, write'), a root from which the Hebrew *shōṭēr* 'officer' is derived. The material in Israel was normally stone for public inscriptions such as the Tables of the Law (Ex 24[12] 31[18] E 34[2], Jos 8[32] D), sometimes covered with a hard plaster to give a good surface (Dt 27[2-4, 8]); and stone was of course regularly used for seals. There is also perhaps a solitary reference to an inscription on lead (Job 19[24]), like those bearing Hittite inscriptions which have been found by archaeologists; but incised letters, filled with lead, such as Darius I. had for his name at Behistun, are probably meant. Occasionally a brick might be used, as in the Babylonian fashion, *e.g.* for a plan (Ezk 4[1]); and potsherds, though not mentioned in the OT, were commonly used for correspondence, as the letters from Lachish prove. Whether Isaiah's *gillāyôn* was a plain board of some sort of metal or wood (Is 8[1]) is unknown. **Wooden staves** inscribed with the names of the participating persons are mentioned twice in connexion with a form of drawing lots (Nu 17[2-3] P, Ezk 37[16]). Skins or leather, which were commonly used in the ancient world from an early date, as classical writers and surviving texts on them prove, are not mentioned in the OT; but the letter of the Assyrian king which Hezekiah 'spread' before the Lord (Is 37[14]) will have been written on something soft, such as the Assyrians also occasionally used; and **parchment** is mentioned as the material for notes in the NT (2 Ti 4[13]). Already, too, in the 10th cent. B.C. **papyrus** had been imported from Egypt to Phoenician centres and in the 5th cent. B.C. it was used by the Jewish colony in Egypt for correspondence and legal documents; because of its relative cheapness it ultimately ousted skins for these purposes. It is not mentioned in the OT but is named as the material of an apostolic letter in the NT (2 Jn [12]). The instruments for writing were a graving tool or chisel for inscriptions on bricks or tablets (Is 8[1]), and one called *'ēṭ* for use with leather (Jer 8[8], Ps 45[1]). This seems to have been a **reed-pen** (cf 3 Jn [13]) or brush-like tool, since the cognate Syrian word means 'grass' (Wutz); so the Hebrew term, like the Latin *pinna* 'feather,' from which the English 'quill-pen' is derived, came to denote also one of metal (Jer 17[1], Job 19[24]). The **inkhorn** and palette, for which an Egyptian term was used, became almost the badge of the professional scribe (Ezk 9[2-3, 11]). The **ink** was black, as its Greek name signifies (2 Jn [12], 3 Jn [13]; cf Jer 36[18]). That on the letters from Lachish is said to be metallic, while that on the Judaean Scrolls is non-metallic. So that generally used by Jewish scribes in the 2nd cent. A.D., was non-metallic, being made of soot mixed with oil and gum of balsam, and thus was easily washed off with a sponge; when R. Meir tried sometime after A.D. 100 to introduce a metallic ink, which was more durable and could only be erased with a pen-knife, R. Ishmael condemned the practice, whether as a pagan innovation or as involving damage to the scroll in case of erasure. Lastly, two ink-wells, one of bronze and one of earthernware have been found at Qumrân; and one contained traces of dried non-metallic ink.

An inscription was called simply a 'stone' (Jos 8[32] EJ[R]) or 'tablet' (Ex 24[12] JE). The Hebrew *sēpher* 'writing' may occasionally have denoted an inscription, especially when it is said to be engraved (Is 30[8], Job 19[23]), like the cognate Phoenician and South-Arabian words; but it soon became the ordinary word for any written document and finally for a **book**. When meaning a letter, the plural form was occasionally used (2 K 20[12]); cf 19[14] where, however, skin may be the material, possibly because letters might be written on double or folding **waxed tablets** such as both Assyrians and Romans had and such as Zechariah used to write down the name of his son, since he had been struck dumb and could not speak (Lk 1[63]); but the singular form was usual. The book was in the form of a **roll** or **scroll** of leather, for which *papyrus* might also have been employed when it came into use (Jer 36[1-32], Ezk 3[1-3], Zec 5[1-2]; cf Ps 40[7]). The scroll might occasionally be written on both sides (Ezk 2[9-10], Rev 5[1]); so Aramaic letters on leather, dated 411/10–408 B.C., from the Persian governors to their subordinate officers in Egypt have a summary of their contents and the address on the back or outside. The size of the scroll depended on that of the skin, but several skins could be sewn together to make a long roll, as the Judaean Scrolls show. The ultimate length was further controlled by the need to handle the scroll conveniently; it might contain one long work such as one of the Major Prophets (sixty-six, fifty-two, or forty-eight chapters) or several short works, such as the twelve Minor Prophets (sixty-four chapters). The writing was on the hairy side, which had been rendered smooth by pumice-stone, arranged in columns (Jer 36[23]); and by the 1st cent. A.D. vertical and horizontal lines were impressed on the leather to obtain a proper alignment of the script, as on the Judaean Scrolls. The scroll was wound up in such a way that the end of the text was at the inside and the beginning at the outside; holding the bulk of the scroll in his left hand and the beginning in his right hand, the reader unwound it as he read the columns from right to left and wound it up again when he came to the end (Lk 4[17, 20]). The book-form, arranged by quires or pages, hardly came into use before the 2nd cent. A.D.; and only parchment, never *papyrus*, was made up into books. **Paper**, which superseded parchment in books, was not introduced till imported by Moslems in the 7th cent. A.D. from the Far East.

9. Reading.—Readers in the ancient world normally read aloud, even to themselves; and St. Augustine tells how St. Ambrose surprised onlookers by reading to himself, saying *cum legebat, oculi ducebantur per paginas et cor intellectum rimabatur, vox autem et lingua quiescebant.* Hence the Babylonians and Assyrians said 'to proclaim' and 'to hear' or 'to see,' the Hebrews said 'proclaimed' (*ḳārā'*) and the Greeks 'to hear' (*akouein*); so Hezekiah, when reading a letter 'proclaimed' it (2 K 19[14]), and Jehoiakim and the princes 'heard' Jeremiah's book being read to them (Jer 36[10-23]).

10. Writing as affecting the text of the Bible.—Accuracy in the modern sense was scarcely known in ancient times, and writers freely adapted what they were quoting to their own purpose; so late Assyrian scribes, copying old Babylonian texts, had no hesitation in adapting the spelling and idiom of these to the practice of their own times. The sense, not the form, was to them the essential thing. In the same way parallel texts in the OT freely diverge from one another. The scribes also made other arbitrary alterations to suit their own preconceived notions, *e.g.* to avoid anthropomorphisms or blasphemy: so 'cursed' is changed into 'blessed' when God is the object (1 K 21[10, 13], Job 1[5, 11] 2[5, 9]). Other alterations of the text are sheer errors; for there must have been innumerable gaps or illegible passages in an archetype which have been disregarded or wrongly filled in, and errors in it have been perpetuated or miscorrected. Letters, many of which are in the Hebrew alphabet misleadingly alike, and words, often rare or unknown, have been miscopied; abbreviations have been misunderstood and incorrectly filled in; lines have been omitted or wrongly inserted from a neighbouring column, words inserted from the line above or below through

the wandering of the scribe's eye (cf Gn 4[7], where a clause is repeated from 3[16]). Accidental omissions, duly recorded in the margin, have been copied by a subsequent copyist into the wrong place (cf 2 K 20[7-8] with Is 38[21-22], where the prescription for Hezekiah's boil is given after his recovery from it); and variant readings, originally recorded in the margin, have sometimes crept into the text. Other insertions, which have been introduced from the margins, are liturgical instructions and glosses on rare words as well as the comments, pious or shocked, of the readers; in fact, glosses of every conceivable kind have made their way into the text and must be eliminated if the author's original meaning is to be recovered (see *L'Ancien Testament et L'Orient* [1957], 123–161). The Scrolls from Qumrân show a text which differs often in detail if rarely in substance from the Massoretic text, and therefore represents one which has not yet been standardized by the Massoretes, thereby proving the antiquity of many of these corruptions; and even after its standardization an immense number of divergent readings, of which the majority are trivial matters of orthography, has been preserved from the earlier period or has even crept into texts of a later period, as the collections of Kennicott and De Rossi abundantly prove. However this may be, an end was finally put to all these processes by the Massoretes who, having established the text to their own satisfaction (though on entirely unscientific principles), recorded letters and words, grammatical forms and every sort of peculiarity, in the *massôrāh* 'tradition,' a register of which the origin (like that of everything else in Hebrew literary history) is obscure but which can only have been perfected by meticulous toil during the course of many generations of scholars. Yet even so, the copyists of the Jewish Scriptures do not seem to have been nearly so accurate as the copyists of the Qur'ân; but the problems confronting them were very different. G. R. D.

WRITING CASE.—See INKHORN.

WYCLIFFE'S VERSION.—See ENGLISH VERSIONS, 7 ff.

X

XANTHICUS.—See TIME.

XERXES.—See AHASUERUS.

Y

YAHWEH.—See GOD, **4** (*c*).

YARN.—**1.** This is probably the correct translation of *'ēṭûn*, Pr 7[16] (RV; AV, RSV **linen**). The word is of doubtful etymology and meaning. **2.** Hebrew *mᵉ'ûzzāl*, Ezk 27[19] (RV). This is a very doubtful meaning; cf UZAL. **3.** *miḳwēh*, 1 K 10[28] (AV), *miḳwē'*, 2 Ch 1[16] (AV). This is also very doubtful, as is RV 'drove.' RSV reads 'from **Kue**'; see KUE. See also SPINNING AND WEAVING; TRADE AND COMMERCE, **4**.

YEAR.—See TIME.

YEAST.—Found only in RSV in Gal 5[9] for AV and RV '**leaven**' (q.v.).

YELLOW.—See COLOURS, **1**.

YIRON.—A city of Naphtali, in the mountains, Jos 19[38] (AV, RV **Iron**); probably modern *Yârûn*.

YODH.—See JOD.

YOKE.—See AGRICULTURE, **1**; WEIGHTS AND MEASURES, I.

YOKEFELLOW.—See SYNZYGUS.

Z

ZAANAN.—A place mentioned in Mic 1[11], where there is a characteristic word-play: 'The inhabitress of *Ṣa'ᵃnān* went [*yāṣᵉ'āh*] not out' (for fear of the enemy). Zaanan is generally considered to be the same as **Zenan** (q.v.).

ZAANAIM, Jg 4[11] (AV).—See ZAANANNIM.

ZAANANNIM.—The border of the tribe of Naphtali passed through 'the oak in Zaanannim,' Jos 19[33] (AV 'from **Allon** to Zaanannim'), and the tent of Heber the Kenite was at 'the oak in Zaanannim, which is near Kedesh, Jg 4[11] (AV 'the plain of **Zaanaim**'). RVm takes the preposition 'in' (Heb. *b*) as part of the name, and so reads *Bezaanannim*. The site is unknown.

ZAAVAN.—A descendant of Seir, Gn 36[27], 1 Ch 1[42] (AV **Zavan**).

ZABAD ('he hath bestowed' or 'a gift').—Many names are derived from this root, both in OT and in Palmyrene and Nabataean inscriptions. About thirty-six are reckoned in OT—twenty-three in Chronicles, and nearly all in post-exilic books. In Gn 30[20ᵃ] it is the first explanation of 'Zebulun.' The fuller form is **Zabdiel** or **Zebadiah** ('my gift is Yᵉʰ'). **1.** A descendant of Judah, 1 Ch 2[36f]; perhaps the same as **Zabud** in 1 K 4[5]. **2.** An Ephraimite, 1 Ch 7[21]. **3.** One of David's heroes, 1 Ch 11[41]; perhaps the same as **1**. **4.** One of the murderers of Joash, 2 Ch 24[26]; called **Jozacar** in 2 K 12[21]. See also SHIMEATH. **5. 6. 7.** Laymen who married foreign wives, Ezr 10[27], 1 Es 9[28] (AV **Sabatus**, RV **Sabathus**); Ezr 10[33], 1 Es 9[33] (AV **Bannaia**, RV **Sabanneus**); Ezr 10[43] 1 Es 9[35] (AV **Zabadaias**, RV **Zabadeas**).

C. W. E.—H. H. R.

ZABADAEANS.—The name of an Arabian tribe defeated by Jonathan Maccabaeus in 144 B.C., 1 Mac 12[30ff]. Its home was NW. of Damascus, and is probably

to be identified with *Zebedâni*, near which is the village of *Kefr Zebâd* (cf *RB* xxxv, 1926, 216 f).

ZABADAIAS, 1 Es 9[35] (AV).—See ZABAD, **7.**

ZABADEAS, 1 Es 9[35] (RV).—See ZABAD, **7.**

ZABBAI.—1. One of the descendants of Bebai who had married a foreign wife, Ezr 10[28], 1 Es 9[29] (AV **Josabad,** RV **Jozabdus**). **2.** Father of Baruch who assisted in the rebuilding of the wall, Neh 3[20]. The *Kᵉrê* has, perhaps rightly, **Zaccai,** a name which occurs in Ezr 2[9], Neh 7[14], and is the origin of the name **Zacchaeus** (2 Mac 10[19] and NT).

ZABBUD, Ezr 8[14] (AV, RV).—See ZAKKUR.

ZABDEUS, 1 Es 9[21] (AV, RV).—See ZEBADIAH, **6.**

ZABDI (? 'gift of Y" '; cf **Zebedee**).—**1.** The grandfather of Achan, Jos 7[1, 17f]; called **Zimri** in 1 Ch 2[6]. **2.** A Benjamite, 1 Ch 8[19]. **3.** An officer of David, 1 Ch 27[27]. **4.** A Levite, Neh 11[17]; called **Zichri** in 1 Ch 9[15].

ZABDIEL ('my gift is El').—**1.** Father of one of David's officers, 1 Ch 27[2]. **2.** A prominent official in Nehemiah's time, Neh 11[14]. **3.** An Arabian who put Alexander Balas to death and sent his head to Ptolemy, 1 Mac 11[17].

ZABUD.—The son of Nathan, 1 K 4[5]; perhaps the same as **Zabad, 1.**

ZABULON, Mt 4[13, 15], Rev 7[8] (AV) = **Zebulun** (q.v.).

ZACCAI.—1. The eponym of a family of returning exiles, Ezr 2[9], Neh 7[14]; called **Chorbe** in 1 Es 5[12] (AV **Corbe**). **2.** Neh 3[20] (*Kᵉrê*); see ZABBAI, **2.**

ZACCHAEUS (= **Zaccai,** Ezr 2[9], Neh 7[14], literally 'pure').—**1.** An officer put to death by Judas Maccabaeus for treachery (2 Mac 10[18–22]). **2.** According to Lk 19[1–10], a chief tax collector of Jericho who was attracted to Jesus. He is mentioned only by Luke. W. R. S.

ZACCHUR, 1 Ch 4[26] (AV).—See ZACCUR, **2.**

ZACCUR.—1. A Reubenite, Nu 13[4]. **2.** A Simeonite, 1 Ch 4[26] (AV **Zacchur**). **3.** A Merarite, 1 Ch 24[27]. **4.** An Asaphite, 1 Ch 25[2, 10], Neh 12[35]. **5.** One of those who helped to rebuild the wall, Neh 3[2]. **6.** One of those who sealed the covenant, Neh 10[12]; probably the same as mentioned in 13[13]. **7.** A singer who put away his foreign wife, 1 Es 9[24] (AV, RV **Bacchurus**).

ZACHARIAH.—1. 2 K 14[29] 15[8, 11] (AV); see ZECHARIAH, **13.** **2.** 2 K 18[2] (AV); see ZECHARIAH, **15.** **3.** Lk 11[51] (RV); see ZECHARIAH, **35.**

ZACHARIAS.—1. 1 Es 1[8] (AV, RV); see ZECHARIAH, **19.** **2.** 1 Es 6[1] 7[3] (AV, RV); see ZECHARIAH, **20.** **3.** 1 Es 8[30] (AV, RV); see ZECHARIAH, **21.** **4.** 1 Es 8[37] (AV, RV); see ZECHARIAH, **22.** **5.** 1 Es 8[44] (AV, RV); see ZECHARIAH, **23.** **6.** 1 Es 9[27] (AV, RV); see ZECHARIAH, **24.** **7.** 1 Es 9[44] (AV, RV); see ZECHARIAH, **25.** **8.** 1 Es 1[15] (AV, RV); see ZECHARIAH, **32.** **9.** 1 Mac 5[18, 56] (AV, RV); see ZECHARIAH, **33.** **10.** Lk 1[5] (AV, RV); see ZECHARIAH, **34.** **11.** Lk 11[51] (AV); see ZECHARIAH, **35.** **12.** 1 Es 5[8] (AV); see SERAIAH, **6.**

ZACHARY, 2 Es 1[40] (AV, RV).—See ZECHARIAH, **20.**

ZACHER, 1 Ch 8[31] (AV).—See ZECHARIAH, **1.**

ZADOK.—1. Founder of an important branch of the Jerusalem priesthood. Traditionally (1 Ch 24[3, 6]) his descent was traced from Eleazar the son of Aaron. He lived during the reigns of David and Solomon (2 S 8[17], 1 K 1[8]) as high priest, being associated in that office during the former reign with **Abiathar** (instead of with Ahimelech his son as 2 S 8[17]). Under Solomon Abiathar was deposed and Zadok made sole high priest, Abiathar having unwisely joined Adonijah's attempt at a *coup d'état* (1 K 2[26f, 35]). Apparently the high priestly office remained in the hands of the Zadokites until Maccabaean times. To Ezekiel (as well as to the Qumrân sectarians in the time of Christ) the Zadokites were the only legitimate priests (Ezk 40[46] 43[19] 44[15] 48[11]). **2.** One of David's warriors, an Aaronite, who pledged allegiance to David at Hebron at his coronation (1 Ch 12[28]). **3.** The father of Jerusha the mother of king Jotham (2 K 15[33], 2 Ch 27[1]). **4.** Son of Baanah (see Ezr 2[2]; Neh 7[7]), a helper of Nehemiah in rebuilding the wall (Neh 3[4]); possibly also one of 'those who set their seal' on the covenant (10[21]). **5.** Son of Immer, who helped Nehemiah rebuild a portion of the wall (Neh 3[29]). Perhaps the same as the scribe who was appointed by Nehemiah as one of the treasurers over the storehouses (13[13]). **6.** Son of Ahitub and father of Shallum, a priest in the high priestly line (1 Ch 6[12]; cf Ezr 7[2], Neh 11[11], 1 Es 8[2] [AV **Sadduc,** RV **Sadduk**], 2 Es 1[1] [AV, RV **Sadoc**]). **7.** An ancestor of Joseph the husband of Mary (Mt 1[14] [AV, RV **Sadoc**]).

G. R. B.—J. W. W.

ZADOKITE FRAGMENTS.—See DEAD SEA SCROLLS.

ZAHAM.—A son of Rehoboam, 2 Ch 11[19].

ZAIN or **ZAYIN.**—Seventh letter of the Hebrew alphabet, and so used to introduce the seventh part of Ps 119, every verse of which begins with this letter.

ZAIR.—A place mentioned in 2 K 8[21]. The parallel passage, 2 Ch 21[9], has 'with his princes' for 'to Zair,' but this is probably a corruption of the text in Kings. Zair is unknown, unless it is the same as **Zior** (q.v.).

ZAKKUR.—An exile who returned, Ezr 8[14] (RSV, with *Kᵉrê*; AV, RV **Zabbud** with *Kᵉthibh*); called **Istalcurus** in 1 Es 8[40].

ZALAPH.—The father of Hanun, Neh 3[30].

ZALMON.—1. The hill near Shechem where Abimelech and his followers cut wood for the burning down of the stronghold of Baal-berith, Jg 9[45]. Possibly the same mountain is meant in Ps 68[14] (AV **Salmon**), where a snowstorm is apparently referred to as contributing to the scattering of 'kings' opposed to the people of Yahweh. **2.** See ILAI.

ZALMONAH.—A stopping-place in the wilderness, Nu 33[41f]. It is possibly modern *Bîr Madhkûr*.

ZALMUNNA.—See ZEBAH.

ZAMBIS, 1 Es 9[34] (AV).—See AMARIAH, **8.**

ZAMBRI.—1. 1 Mac 2[26] (AV); see ZIMRI, **1.** **2.** 1 Es 9[34] (RV); see AMARIAH, **8.**

ZAMOTH, 1 Es 9[28] (AV, RV).—See ZATTU.

ZAMZUMMIM.—A name given by the conquering Ammonites to the Rephaim, the original inhabitants of the land, Dt 2[20]. They are described as a people 'great and many and tall like the Anakim' (see REPHAIM). The name Zamzummim has been connected with Arabic *zamzam* 'to talk gibberish.' They may be the same as the **Zuzim** of Gn 14[5], in which case there is probably textual corruption in one of the passages. No secure identification can be suggested.

ZAMZUMMIMS, Dt 2[20] (AV) = **Zamzummim** (q.v.).

ZANOAH.—1. A town in the Shephelah, Jos 15[34], Neh 3[13] 11[30]; it is personified in 1 Ch 4[18]. It is the modern *Kh. Zānûḥ*, SE. of Zoreah. **2.** A place in the hill country of Judah, Jos 15[56]; possibly modern *Kh. Beit 'Amrah*, in the *Wâdī Abū Zenaḥ*, which preserves the ancient name.

ZAPHENATH-PANEAH.—The name given by Pharaoh to Joseph, Gn 41[45] (AV **Zaphnath-paaneah**). It is explained by Egyptian *Ze-p-net-e-f-'onkh*, 'God speaks and he (the newly-born) lives'—a common type of Egyptian name in late times.

ZAPHNATH-PAANEAH, Gn 41[45] (AV).—See ZAPHENATH-PANEAH.

ZAPHON ('north').—A city E. of Jordan, assigned to Gad, Jos 13[27]; mentioned also in Jg 12[1] (so RVm and RSV, for AV and RV 'northward'). It is possibly modern *Tell el-Qôs*.

ZARA, Mt 1[3] (AV).—See ZERAH, **2.**

ZARACES, 1 Es 1[38] (AV).—See ZARIUS.

ZARAH, Gn 38[30] 46[12] (AV).—See ZERAH, **2.**

ZARAIAS.—1. 1 Es 5[8] (RV; AV **Zacharias,** RSV **Seraiah**); called **Seraiah** in Ezr 2[2] and **Azariah** in Neh 7[7]. **2.** An ancestor of Ezra, 1 Es 8[2] (AV, RV; RSV omits); called **Zerahiah** in Ezr 7[4], and **Arna** in 2 Es 1[2]. **3.** 1 Es 8[31] (AV, RV; RSV **Zerahiah**); called

Zerahiah in Ezr 8^4. **4.** 1 Es 8^{34} (AV, RV; RSV **Zeraiah**); called **Zebadiah** in Ezr 8^8.

ZARAKES, 1 Es 1^{38} (RV).—See ZARIUS.

ZARDEUS, 1 Es 9^{28} (RV).—See ZERDAIAH.

ZAREAH, Neh 11^{29} (AV).—See ZORAH.

ZARED, Nu 21^{22} (AV).—See ZERED.

ZAREPHATH.—The Arab village of *Ṣarafand* lies on a promontory about 8 miles S. of Sidon. On the shore in front of it are the scattered remains of what must have been a considerable town, the Zarephath or **Sarepta** (Lk 2^{46} AV) of the Bible. Zarephath originally belonged to Sidon (1 K 17^9), but passed into the possession of Tyre after the assistance rendered by the fleet of Sidon to Shalmaneser IV. in 722 B.C. in his abortive attempt to capture insular Tyre. In Lk 4^{26} it is again called a city of Sidon. Zarephath is included in the list of towns captured by Sennacherib when he invaded Phoenicia in 701 B.C. It was the town in which Elijah lodged during the years of famine, 1 K 17^{8-24}; it is also mentioned in Ob ^{20}.

ZARETAN, Jos 3^{16} (AV).—See ZARETHAN.

ZARETHAN.—A town in the Jordan valley, Jos 3^{16} (AV **Zaretan**); it lay opposite Succoth, 1 K 7^{46} (AV **Zarthan**). It is mentioned also in the obscure text, 1 K 4^{12} (AV **Zartanah**). It is possibly modern *Qarn Ṣarṭabeh*, though some prefer *Tell es-Sa'idîyeh*. See also ZEREDAH and ZERERAH.

ZARETH-SHAHAR, Jos 13^{19} (AV).—See ZERETH-SHAHAR.

ZARHITES.—AV form of **Zerahites**. See ZERAH and IZRAHITES.

ZARIUS.—Called in 1 Es 1^{38} (AV **Zaraces,** RV **Zarakes**) the brother of Jehoiakim (AV **Joacim,** RV **Joakim**), King of Judah, and said to have been brought up out of Egypt by him. The name apparently is a corruption, through confusion of Hebrew *d* and *r*, of Zedekiah, who was a brother of Jehoiakim (2 K 24^{17}). The verse of 1 Esdras is entirely different from the corresponding passage in 2 Ch 36^{4b}.

ZARTANAH, 1 K 4^{12} (AV).—See ZARETHAN.

ZARTHAN, 1 K 7^{46} (AV).—See ZARETHAN.

ZATHOE(S), 1 Es 8^{32} (AV, RV).—See ZATTU.

ZATHUI, 1 Es 5^{12} (AV, RV).—See ZATTU.

ZATTHU, Neh 10^{14} (AV).—See ZATTU.

ZATTU.—A family of exiles that returned, Ezr 2^8 8^5 (not in AV, RV; but supplied in RSV from 1 Es 8^{32}), Neh 7^{13}, 1 Es 5^{12} (AV, RV **Zathui**) 8^{32} (AV **Zathoe,** RV **Zathoes**). Several members of this family had married foreign wives, Ezr 10^{27}, 1 Es 9^{28} (AV, RV **Zamoth**); its head sealed the covenant, Neh 10^{14} (AV **Zatthu**).

ZAVAN, 1 Ch 1^{42} (AV).—See ZAAVAN.

ZAYIN.—See ZAIN.

ZAZA.—A Jerahmeelite, 1 Ch 2^{33}.

ZEALOT occurs in Lk 6^{15} and Ac 1^{13} as a designation of Simon, one of the disciples of Jesus. The Greek *Zēlōtēs* is derived from the Hebrew *ḳannā'* = 'jealous.' (The Hebrew has been preserved by transliteration into Greek in Mk 3^{18} and Mt 10^4, 'Simon the **Cananaean.**') The 'zealot' gave himself over to God to be an agent of Divine wrath and judgment against idolatry, apostasy, or any transgression of the Law which excited God's jealousy (jealousy and zeal both having the same Hebrew root).

For Jews in the Graeco-Roman period. the scriptural prototypes of 'zeal' were: (1) Simeon and Levi (Gn 34; cf Jth 9, Jub. 30); (2) Phinehas (Nu 25; cf Sir 45^{23}, 1 Mac $2^{26, 54}$, 4 Mac 18^{12}); and (3) Elijah (1 K 18^{40} $19^{10, 14}$; cf 1 Mac 2^{58}, Sir 48^{1-12}). Of these Phineas was the most important, for his zeal had been redemptive: 'And the Lord said to Moses, Phinehas . . . has turned back my wrath from the people of Israel, in that he was jealous with my jealousy among them . . . and made atonement for the people of Israel' (Nu 25^{10-13}). The zealous act of Phinehas had been 'reckoned for him for righteousness from generation to generation for ever' (Ps 106^{30-31}). In the 1st cent. A.D., Phinehas was actually referred to as 'the zealot' (4 Mac 18^{12}).

The theology of redemption through zeal for the Law became popular in the Maccabaean period (1 Mac 2^{15-28}, Jth 9, Jubilees 30). One of the main revolutionary parties in the war with Rome (A.D. 66–70) used the self-designation 'zealots' (*BJ* iv. iii. 9 [160–161]). Jesus was remembered by His disciples to have been motivated by zeal when he drove the money-changers out of the Temple (Jn 2^{17}). Paul's persecution of the Church was rooted in zeal for the Law (cf Gal 1^{13-14}, Ph 3^6, Ac 22^{3-4}). It is impossible to connect the Zealots of Josephus with his Fourth sect of Philosophy, since he himself makes no such connexion but rather suggests that the *sicarii* originated in that sect. The question is a complicated one, and we can only state the facts as they are preserved in the sources. It is not improbable that there was a large number of 'zealot' groups constituting the organized resistance to Rome from the time of Pompey onward. Simon, the 'Cananaean,' had probably been a member of one such group before he became a disciple of Jesus—whose opposition to their views, principles, and methods is clear from all the Gospels. W. R. F.

ZEBAIM, Ezr 2^{57}, Neh 7^{59} (AV).—See POCHERETH-HAZZEBAIM.

ZEBADIAH.—1, 2. Two Benjamites, 1 Ch $8^{15, 17}$. **3.** One of those who joined David at Ziklag, 1 Ch 12^7. **4.** One of David's officers, 1 Ch 27^7. **5.** An exile who returned with Ezra's second caravan, Ezr 8^8; called **Zeraiah** in 1 Es 8^{34} (AV, RV **Zaraias**). **6.** A priest who had married a foreign wife, Ezr 10^{20}, 1 Es 9^{21} (AV, RV **Zabdeus**). **7.** A Korahite, 1 Ch 26^2. **8.** One of the Levites sent by Jehoshaphat to teach in the cities of Judah, 2 Ch 17^8. **9.** An officer of king Jehoshaphat, 2 Ch 19^{11}.

ZEBAH ('victim').—A Midianite king, mentioned together with **Zalmunna,** who was killed by Gideon as the result of blood-revenge (Jg 8^{18-21}); both kings had, however, been previously overcome in battle by Gideon, who championed the Israelites against their Midianite oppressors. This victory must have been of vital and far-reaching consequences to the Israelites, for it is more than once commemorated long after as a landmark in the nation's history (Is 9^4 10^{26}, Ps 83^{11}). The death of Zebah and Zalmunna is very graphically described. Gideon commands Jether, his eldest son, to slay them, but being only a youth he is afraid; so the kings ask Gideon himself to kill them; he does so, and takes the crescents from the necks of their camels. This last action may conceivably imply a kindly remembrance of the kings on the part of Gideon, for from 8^{19} it would seem that it was only reluctantly, and from a sense of duty, that he slew them. W. O. E. O.

ZEBEDEE.—Father of James and John, husband of **Salome**; a comparatively rich fisherman, for he had 'hired servants' (see, *e.g.* Mk 1^{20} 15^{40}; cf Mt 27^{56}).

ZEBIDAH.—Mother of Jehoiakim, 2 K 23^{36} (so RV, RSV with *Ḳᵉthîbh*; AV **Zebudah** with *Ḳᵉrê*).

ZEBINA.—One of the sons of Nebo who had married a foreign wife, Ezr 10^{43}.

ZEBOIIM.—One of the five cities of the plain, Gn 10^{19} (AV **Zeboim**) $14^{2, 8}$, Dt 29^{33} (AV **Zeboim**), Hos 11^5 (AV, RV **Zeboim**). The site has not been identified. See, further, PLAIN [CITIES OF THE].

ZEBOIM.—1. A city of Judah, Neh 11^{34}. Its location is unknown. **2.** A valley named in 1 S 13^{18} in describing the route followed by the Philistine marauders. The name means 'the valley of hyenas.' It is probably modern *Wâdī Abū Dabā'*, a branch of the *Wâdī Qelṭ*. **3.** See ZEBOIIM.

ZEBUDAH, 2 K 23^{36} (AV).—See ZEBIDAH.

ZEBUL.—A lieutenant of **Abimelech** (q.v.), who was left by him as governor of Shechem. He cleverly

assisted his master in suppressing the revolt of Gaal (Jg 9$^{26-41}$). The episode is obscure, but he apparently acted loyally from the first; having no force at his command, he was obliged to use craft. This is clear, if vv.^{42ff} belong to a different narrative. C. W. E.

ZEBULUN.—According to OT tradition, the tenth son of Jacob, and the sixth of Leah (Gn 30^{20} E).

The original form of the name is uncertain, there being some evidence in favour of *Zebulon*, and even *Zebul* (*i.e.* without the old nunation). Gn 30^{20} presents a double explanation. One of these (apparently E's) connects it with the verb *zābhad*, 'to endow'; the other (J's) derives it from *zābhal*, 'to dwell,'—because Leah said, 'Now will my husband *dwell* with me.' The Râs Shamra texts attest a noun *zbl*, parallels suggesting quite certainly the meaning 'prince,' doubtless connected with the Assyrian verb *zabālu*, 'to carry, exalt.' Hence Zebulun may be the divine title of the tribal god (cf Asher, Gad). A similar name *Zi-ib-la-an-um*, is found as that of an individual in a text of the early 2nd millennium B.C. at Larsa, and the Egyptian Execration Texts from Luxor, from the 19th cent., refer to *Zblnw* among the Asiatic enemies of the Pharaoh, the name, however, referring not to a tribe but to a chief of the *Sutu*, or Bedouin. Tribes, however, are occasionally named after their chief, and this may be the earliest reference to the Hebrew tribe of Zebulun. It is a pity that the precise locality is not noted in the Execration Texts.

According to Gn 46^{14}, Zebulun is the progenitor of three tribal families through his three sons Sered, Elon, and Yahleel, who went down into Egypt with the other sons and grandsons of Jacob. The first and last of these names are notably like the town names Sarid and Nahalal, which were allotted to Zebulun according to Jos 19$^{10f.}$

At the time of the Sinai census the male **Zebulunites** from twenty years and upwards are given as 57,400, and their lot on the march was cast on the E. of the Tabernacle with Judah and Issachar (Nu 1^{31f} P). In the census in the Plains of Moab their number is given as 60,500 (Nu 26$^{27, 64}$ P).

When the Râs Shamra legends (Keret) were first translated it was thought that there was a reference to Zebulun as a people in Galilee, but that view is now happily exploded.

The boundary line in Jos 19$^{10-24}$ gives only the S. and E. boundaries, and is difficult to follow. Starting on the S. with Sarid (probably *Tell Shudūd*), about five miles SW. of Nazareth, it reached Jokneam, eight miles due W., on the further side of the Plain of Esdraelon. It extended about the same distance E., reaching, at the W. of Tabor, Daberath (which, however, in 21^{28} fell to Issachar), and then apparently turned sharply W. again to Japhia (*Jaffa* by Nazareth), thence NE. to Gath-hepher (probably *el-Meshhed*), N. to Rimmon (*Rummâneh*, overlooking the Plain of the Baṭṭûf from the S.), then W. to Hannathon (the impressive tell of *Khirbet el-Beidawîyyeh* at the W. end of the Plain of the Baṭṭûf), *Hinnatuni* of the Amarna Tablets. The remaining statement that 'the goings out thereof were at the Valley of Iphtahel' (*Wâdī el-Melek*) indicates a SW. direction, though no locality is noted. The N. border (with Naphtali) is not defined, and, as Asher reached Carmel, and marched with Zebulun at the valley of Iphtahel (vv.^{26f}), there is no room left for the access of Zebulun to the sea. The Blessing of Jacob, however, apparently extends Zebulun's territory to the sea (Gn 49^{13}), marching even with Sidon. In the Blessing of Moses (Dt 33^{19}) Zebulun is associated with Issachar in the traffic from the sea, which their occupation of Esdraelon and the Wâdi el-Melek enabled them to exploit, and in the worship at a mountain shrine, surely Tabor (cf Hos 5^{1}). This may well have been the amphictyonic shrine of these two tribes and perhaps others of the older Jacob (Leah) tribes, possibly the 'Israel' mentioned in this locality on the stele of Merneptah (1223 B.C.).

Zebulun shared in the great natural richness and fertility of the rest of Galilee, and the great 'way of the sea' (*via maris*), which ran through its territory from Acco to Damascus, brought it into touch with the outer world and its products.

In the war against Sisera 10,000 men of Zebulun and Naphtali went with Barak, and in the battle, whose issues were of decisive importance to the tribes of Israel, they immortalized themselves by their bravery (Jg 4^{10} 5^{18}). They, like the other tribes, however, could not dislodge the Canaanites from their urban settlements. One of the minor judges, Elon, came from Zebulun (Jg 12^{11}). In later history Zebulun, like the other northern tribes, played an unimportant rôle. According to 2 K 15^{29}, it would appear that Zebulun suffered depopulation when the country was incorporated in the Assyrian Empire as the province of Megiddo. See also TRIBES.

J. A. C.—J. Gr.

ZECHARIAH (Yahweh remembers).—**1.** Brother of Ner and uncle of Saul (1 Ch 9^{37}); called **Zecher** (AV **Zacher**) in 1 Ch 8^{31}. **2.** Son of Meshelemiah, keeper of the N. gate of the tent of meeting (1 Ch 9^{21} 26$^{2, 14}$). **3.** A Levite musician (1 Ch 15$^{18, 20}$). **4.** A priest in the time of David (1 Ch 15^{24} 16^{5}). **5.** A Levite, of the family of Kohath (1 Ch 24^{25}). **6.** A Levite, of the family of Merari (1 Ch 26^{11}). **7.** Father of Iddo, chief officer of Manasseh in Gilead (1 Ch 27^{21}). **8.** A prince of Judah in the days of Jehoshaphat (2 Ch 17^{7}). **9.** A Levite of the family of Asaph (2 Ch 20^{14}). **10.** Son of Jehoshaphat (2 Ch 21^{2}). **11.** Son of Jehoiada the priest, who after his father's death pronounced judgment upon the people for idolatry. By king Joash's command, he was stoned in the Temple court. As he died he said 'May Yahweh see and avenge' (2 Ch 24$^{20-22}$. See also **35**). **12.** A prophet, living in the earlier part of Uzziah's reign (2 Ch 26^{5}). **13.** Son of Jeroboam II. (2 K 14^{29} 15$^{8, 11}$ AV **Zachariah**). See next article. **14.** A man of Isaiah's day, chosen with Uriah the priest as a reliable witness to the tablet containing the name of Maher-shalal-hashbaz (Is 8^{2}). He is described as son of Jeberechiah and might be identical with **16.** **15.** The father of Abi or Abijah, mother of king Hezekiah (2 K 18^{2} [AV **Zachariah**], 2 Ch 29^{1}. **16.** A reforming Asaphite under Hezekiah (2 Ch 29^{13}). Perhaps = **14.** **17.** Head of a Reubenite family (1 Ch 5^{7}). **18.** A Kohathite, an overseer of Temple repair under Josiah (2 Ch 34^{12}). **19.** A chief officer of the Temple under Josiah (2 Ch 35^{8}=1 Es 1^{8} AV, RV **Zacharias**). **20.** The prophet (see ZECHARIAH [BOOK OF]). **21.** One of the family of Parosh (Ezr 8^{3}= 1 Es 8^{30} AV, RV **Zacharias**). **22.** Son of Bebai (Ezr 8^{11}= 1 Es 8^{37} AV, RV **Zacharias**). **23.** A leader sent by Ezra to Casiphia to fetch Levites (Ezr 8^{16f}=1 Es 8^{44} AV, RV **Zacharias**). Perhaps = **21** or **22**. **24.** A descendant of Elam, married to a foreign wife (Ezr 10$^{26, 44}$=1 Es 9^{27} AV, RV **Zacharias**). **25.** One of those who stood by Ezra at the reading of the Law (Neh 8^{4}=1 Es 9^{44} AV, RV **Zacharias**); omitted in AV 1 Es). **26.** A descendant of Perez (Neh 11^{4}). **27.** A Shilonite (Neh 11^{5}). **28.** Son of Pashhur (Neh 11^{12}). **29.** A priest of the family of Iddo in the time of Joiakim (Neh 12^{16}). Perhaps=**20**. **30.** An Asaphite (Neh 12^{35}). **31.** A priest (Neh 12^{41}). Perhaps=**30**. **32.** 1 Es 1^{15} (AV, RV **Zacharias**)= **Heman** of 2 Ch 35^{15}. See HEMAN, **4**. **33.** Father of Joseph, an officer of Judas Maccabaeus (1 Mac 5$^{18, 56}$ AV, RV **Zacharias**). **34.** A priest of the division of Abijah, husband of Elizabeth (Lk 1^{5} AV, RV **Zacharias**), and father of John the Baptist (Lk 1 and 3^{2}). As he was ministering in his turn in the Temple, the angel Gabriel appeared to him and predicted the birth and future work of his son. His disbelief was punished by dumbness, which was only cured when the child was brought to be circumcised and named, when, in obedience to Gabriel's command, he and Elizabeth insisted that he should be called John. Filled with the Holy Spirit he prophesied and spoke the *Benedictus* (Lk 1$^{68-79}$). **35.** The martyr mentioned by Jesus in Mt 23^{35}, Lk 11^{51} (AV **Zacharias**, RV **Zachariah**). The reference appears to be to the death of Zechariah, son of Jehoiada (**11**); and as Chronicles stands last in the Hebrew Bible, the phrase 'from Abel to Zechariah' would indicate the first and

last victims of murder in the OT. In Matthew, however, Zechariah is called 'son of Barachiah,' which suggests confusion with Zechariah the prophet, son of Berechiah (20). No tradition that he died a martyr's death is known. The evangelist or a later copyist may have introduced the father's name, thinking either of the prophet or of a Zacharias son of Baruch mentioned by Josephus as murdered in the Temple by the Zealots (*BJ* IV. v. 4 [342]). Origen's identification of him with the father of John the Baptist (34) is most improbable.

ZECHARIAH (AV **Zachariah**), King of Israel, son of Jeroboam II. and last member of the house of Jehu to come to the throne. He reigned only six months, before being assassinated by Shallum ben Jabesh (2 K 14^{29} 15^{8-12}) who in his turn was killed by Menahem.

H. P. S.—P. R. A.

ZECHARIAH, BOOK OF.—The first eight chapters contain the genuine prophecies of Zechariah. Chs. 9–14 are sharply distinguished from these in form, language, and thought. They are generally regarded as anonymous prophecies (the name of the prophet does not appear) which became attached to the original book, and are often spoken of as Deutero-Zechariah.

I. Chapters 1–8. **1. The Prophet (Zacharias** in 1 Es 6^{1} 7^{3} AV, RV; **Zachary** in 2 Es 1^{40} AV, RV), son of Berechiah, grandson of Iddo (1^{1}), is mentioned only in the book which bears his name and in Ezr 5^{1} 6^{14}, together with Haggai, as concerned in stirring up Zerubbabel and Joshua to rebuild the Temple. The work prospered through their activity.

2. Historical occasion and date.—The dates given in the book itself assign the prophecies to the second and fourth years of the reign of Darius I. The first message (1^{1-6}) is dated in the eighth month of Darius' second year (October–November, 520 B.C.); the section 1^{7}–6^{15} is assigned to the twenty-fourth day of the eleventh month (January–February, 519 B.C.); while chs. 7–8 are dated in the fourth year of Darius, on the fourth day of the ninth month (November–December, 518 B.C.). The prophecies are thus associated with the period of the rebuilding of the Temple (completed according to Ezr 6^{15} in 516 B.C.), though some sayings (*e.g.* 6^{14} 7^{2f}) may be later, and others (*e.g.* 2^{6f}) may be earlier.

3. Contents.—The book opens with an exhortation to return to Yahweh (1^{1-6}), based upon the sad experience of the fathers who had not heeded the word of the former prophets to turn from their evil ways. Zechariah, familiar with the teaching of his predecessors, builds upon the lessons which may be drawn from past experience.

The main body of the book (1^{7}–6^{15}) is made up of a series of eight visions and a symbolic action, together with other prophetic teaching. In the first vision (1^{7-17}), the prophet sees at night in a myrtle-shaded glen, horses and riders who are indicated by the angel who talks with him as being messengers of Yahweh. They report that all is quiet in the earth. The angel calls upon Yahweh: 'How long wilt thou have no mercy on Jerusalem and the cities of Judah, against which thou hast had indignation these seventy years?' In response, assurance comes that Yahweh is displeased with the nations which are at ease. He has returned to Jerusalem, His Temple is to be built, His cities are to overflow with prosperity. Zion shall be comforted and Jerusalem chosen. The second vision (1^{18-21}) is of four horns—the nations which have scattered the holy people—and four smiths who are to terrify them (*i.e.* the nations). In the third (2^{1-5}), the prophet sees a man setting out to measure Jerusalem; but Jerusalem is to be 'open villages,' spreading far and wide, and protected by Yahweh as by a wall of fire. A song follows, calling on the exiles to return; the nations which plundered are to be plundered themselves, and as Yahweh comes to dwell in Zion the nations shall be gathered to Him.

The fourth vision (ch. 3) shows Joshua the high priest standing before the angel of Yahweh. He is clothed in filthy garments and accused by the Satan, but the Satan is rebuked, the garments are removed, and Joshua is clothed in rich apparel with a clean turban on his head. This symbolizes the removal of guilt and Joshua is promised the full exercise of his priestly functions if he walks in Yahweh's ways. The further promise is made that he and his associates are a sign that Yahweh will bring His servant the Branch (cf 6^{12} and Is 4^{2}, Jer 23^{5} 33^{15}), *i.e.* Zerubbabel. The fifth vision (ch. 4) is of a seven-fold lamp, with an olive tree on either side. If the promise to Zerubbabel (vv.$^{6b-10a}$) is transferred to the end of the chapter, it becomes clear that the seven-fold lamp is interpreted as the eyes of Yahweh which run to and fro through the earth. The olive trees are explained as the two sons of oil, standing by the Lord of the whole earth, *i.e.* Zerubbabel and Joshua, governor and priest. It appears in 4^{12} that they actually feed the lamp with oil. The promise to Zerubbabel is that he will complete the Temple, not by might nor by power, but by Yahweh's spirit. The prominent place given in chs. 3 and 4 to governor and priest, secular and sacred leaders, as essential to the national well-being, is significant.

The sixth vision (5^{1-4}) is of a scroll which effects the curse of Yahweh upon thieves and perjurers. The seventh (5^{5-11}) depicts Wickedness, *i.e.* Idolatry, represented as a woman in an ephah, carried away from the land to Babylonia and worshipped there. The land is thus cleansed from sin of all kinds. The last vision (6^{1-8}) shows four chariots going out from between two mountains. The greatest interest is in the one which goes to the north country, *i.e.* Babylonia, to set Yahweh's Spirit at rest there. This may mean both the pouring out of His wrath and the stirring up of His people.

Ch. 6^{9-15} links closely with this last idea in describing a symbolic action, the crowning of Joshua (perhaps originally Zerubbabel). The assurance of the rebuilding of the Temple, and of peace between governor and priest, leads up to a call for help in the rebuilding by returned exiles, and a promise that these things will come about if men obey the voice of Yahweh. The whole series of visions culminates in a restored Jerusalem and a renewed people.

This theme is continued in the third section (chs. 7, 8), where a question concerning fasting leads to a renewed exhortation to obedience (7^{4-14}), and a series of promises of the glory, peace, and prosperity of restored Zion (8^{1-8}). Further words of encouragement and warning (8^{9-17}) are followed by a promise that fasts will be turned into rejoicing, and that many peoples shall come to seek Yahweh, knowing that He may be found with His people (8^{18-23}).

4. Significance.—The historical importance of Zechariah in connexion with the rebuilding of the Temple has already been noted. This rebuilding Zechariah, like Haggai, sees to be central to the hopes of the future. Drawing on the language of earlier prophecy, he warns the people of the disasters which come upon disobedience, but at the same time gives the assurance of Yahweh's willingness to return to His people. The new age can indeed only follow upon Yahweh's presence, and its manifestation in Jerusalem will lead to recognition throughout the nations.

These chapters have often been recognized as an important link between prophecy and apocalyptic. But although some of the symbols reappear later in apocalyptic, and there is at times less of directness in the presentation of the material than in earlier prophecy, and perhaps rather more of literary device, yet the prophetic experience is real and largely, though not entirely, associated with natural phenomena. The interpreting angel appears as in later apocalyptic; but angelic messengers are much older than Zechariah. There is little or no deliberate allegorizing of the visionary experiences; details are not given precise application. What may well be direct prophetic experience is in part concealed within a skilful literary structure, with visions and oracular material interwoven. The stress on prophetic authority and on the reality of the Divine call

(cf 2^9 4^9 6^{15}) places Zechariah firmly within the great line of OT prophecy.

II. Chapters 9–14.—**1. Critical analysis.**—The fact that Mt 27^9 quotes from Zec 11^{12f} as a prophecy of Jeremiah led to the adoption of the view that the section 9–11 was by the earlier prophet, and 12–14 was also regarded as by Jeremiah by some scholars. The recognition of a division between these two sections led on to the view that they were independent, and various dates were proposed, for example 9–11 in the period of Hosea, and 12–14 shortly after the death of Josiah, these dates being based upon the interpretation of allusions in the text. But the suggestion that 9–14 was later than Zechariah was also put forward, and although the Zecharian authorship is still maintained in some circles, it is generally recognized to-day that the whole section is later than Zechariah in its present form. Difference of opinion remains as to whether some much earlier material has been incorporated in the later collection, and as to the occasion or occasions to which the oracles are to be assigned. The division into 9–11 and 12–14 is not altogether satisfactory, though it is indicated by the use of the heading 'Oracle' at 9^1 and 12^1 (as also at the beginning of the Book of Malachi which immediately follows), for 13^{7-9} may well be thought to belong with 11^{4-17}, and it hardly can be believed that $12–13^6$ is by the same author as 14.

2. Dating and interpretation.—It is not possible to connect 9–14 with certainty with any known events in the post-exilic period. The possibility that earlier material has here in some measure been re-interpreted makes it reasonable to suppose that allusions may be present to more than one period of history. The history of the post-exilic period is at some points so little known that dating of the oracles then is hazardous; equally fraught with uncertainty is dating in a well-known period like that of the Maccabees. If a choice must be made, the period following on the conquests of Alexander might well be preferred, but it may be that there has been application of earlier oracles to such a period, and the significance of the material may perhaps be better sought in its stress on the woes and distresses which usher in the new age, and on the establishment of final Divine rule, than in tracing exact allusions to events.

3. Contents.—$9–11^3$ contains mainly oracles of doom upon Israel's neighbours, with promises of dominion and prosperity for Israel, restored to her land. The opening oracle (9^{1-8}) depicts disaster upon Syria, Phoenicia and Philistia, but v.7 suggests the purifying of Philistia and its incorporation into Judah as a new clan. Yahweh returns to His house and protects His people (v.8). The prediction of the coming king (vv.9f) stresses the Divine empowering of the ruler, and the ending of warfare as in Ps 46, Is 2, Mic 4. An oracle of restoration from exile and of victory over the enemies in the power of Yahweh follows (vv.11–16: the mention of Greece in v.13 might be a later application). Yahweh appears as giver of life ($9^{17}–10^2$), and there is a renewed promise of deliverance and return of the exiles (10^{3-12}), with the two kingdoms reunited and occupying the whole land. 11^{1-3} contains a triumphant oracle of disaster. 11^{4-17}, with which many scholars associate 13^{7-9}, contains a complicated allegory of shepherds. Yahweh's beneficent purpose is shown to be frustrated by the obstinacy of His people, as well as by the evil character of their rulers. The 'three shepherds' of v.8 presumably contains a specific allusion but appears to be intrusive and to represent a later reapplication of the original allegory. The significance of the symbolism, *e.g.* in vv.12–13 is now very difficult to gauge.

The second main division of chs. 9–14, beginning at ch. 12, brings a familiar concept of the nations assembled against Jerusalem, but there to be consumed through the power of Yahweh. The reiterated 'on that day' in $12–13^6$ suggests the grouping of various sayings on similar topics. The picture is reminiscent of Zephaniah, Ezekiel, and Joel, and of psalm passages such as Ps 2. The 'day of the Lord' is visualized in terms of the overthrow of the nations to be accompanied—so 13^{1-6}—by the purification of God's own people. There is obscurity in the references to the house of David, perhaps suggestive of a realization of its inadequacy for the tasks to which it is called; and also in the allusions of 12^{10f} which refer to some ritual mourning. The strictures on the failure of prophecy in 13^{2-6} are also strange and difficult to interpret. 13^{7-9} speaks of the overthrow of the shepherds and of the purification of a remnant of the people. Ch. 14 gives another series of apocalyptic pictures of the siege of Jerusalem and the ushering in of the new age. It is to be a day of natural disaster as well as of battle (vv.1–5); but the new age will be of light (v.6), of new life for the land and security for the city (vv.7–11). The nations are judged (vv.12–15), but there is hope for the survivors of disaster to share in the worship of Yahweh. Blessing will be upon those who worship him, and all in Judah and Jerusalem will be sanctified.

4. Significance.—The much more strongly apocalyptic tone of chs. 9–14 contrasts with chs. 1–8; yet both sections are concerned with Yahweh's judgment and deliverance, and emphasis lies in chs. 9–14 upon the new age, and the fulfilment of men's hopes in times of distress and uncertainty. Its triumphant note perhaps accounts for its frequent quotation in the NT.

H. T. F.—P. R. A.

ZECHER.—See Zechariah, **1.**

ZECHRIAS, 1 Es 8^1 (RV).—See Azariah, **9.**

ZEDAD.—One of the points mentioned in defining the northern border of the Promised Land in Nu 34^8, and again in Ezekiel's ideal picture, Ezk 47^{15}. It is probably *Ṣedâd*, SE. of *Ḥomṣ*.

ZEDECHIAS, 1 Es 1^{46} (AV) = **Zedekiah, 6** (q.v.).

ZEDEKIAH.—1. Son of Chenaanah, and one of Ahab's four hundred court prophets, 1 K $22^{11, 24}$, 2 Ch $18^{10, 23}$. **2.** A prophet deported to Babylon with Jehoiachin, Jer 29^{21ff}. He and another, named **Ahab,** are denounced by Jeremiah for gross immortality as well as for falsely prophesying a speedy restoration from Babylon. It was probably their action as political agitators that brought on them the cruel punishment of being roasted in the fire by order of Nebuchadrezzar. **3.** Son of Hananiah, Jer 36^{12}. **4.** A signatory to the covenant, Neh 10^1 (AV **Zidkijah**). **5.** An ancestor of Baruch, Bar 1^1 (AV **Sedecias,** RV **Sedekias**). **6.** See next article.

ZEDEKIAH, the last king of Judah before its fall at the hands of the Babylonians, is known to us not only from the historical books, but also from references in the Book of Jeremiah. He was the third son of Josiah to assume the royal title. Jehoahaz was deposed by the Pharaoh; Jehoiakim had a troubled reign of eleven years, and escaped the vengeance of Nebuchadrezzar by dying just before the Babylonian reached Jerusalem. The young Jehoiachin suffered for the sin of his father, being carried into captivity after three months of barren kingship. With him were carried away the chief men of Judah to the number of eight thousand—Nebuchadrezzar thinking thus to break the seditious temper of the people. Over the remnant left behind Zedekiah was made king. His earlier name, **Mattaniah,** was changed to *Zedekiah* (meaning 'righteousness of Yahweh'), to indicate that the Babylonian monarch, in punishing the treachery of Jehoiakim, had the God of Judah on his side (2 K 24^{17}). We are told by Ezekiel ($17^{13, 19}$) that Zedekiah took an oath of allegiance to his suzerain. For **Zarius** of 1 Es 1^{38} see Zarius.

Nebuchadrezzar's confidence that the people would be submissive after the severe lesson they had received was disappointed. The new men who came to the front were as headstrong as, and even more foolish than, their predecessors. They were blind to the ludicrous insufficiency of their resources, and determined to play the game of politics against the great nations of the world. The court of Zedekiah was the centre of intrigues against the Babylonian power, and the plotters were

fed with promises from Egypt. Zedekiah showed himself a weak man, unable to cope with the situation. In his fourth year ambassadors appeared at Jerusalem from the surrounding nations, to concert common measures against the oppressor. The majority of the prophets encouraged the movement; only Jeremiah saw the madness of the undertaking, and declared against it. His bold declaration of the truth brought upon him the enmity of the courtiers. Zedekiah seems to have been called to account by the great king, to whom he made some explanation which satisfied him, or at least lulled suspicion for a time. The movement itself came to nothing at this time. But in Zedekiah's ninth year renewed promises from Egypt induced the Jerusalemites to revolt, and Zedekiah was too weak to restrain them. Nebuchadrezzar replied promptly by marching in person against the rebels. Jerusalem was a stronghold in which the people had confidence, and they seem also to have believed fanatically that Yahweh would intervene to protect His Temple. This faith was raised to a high pitch by the approach of an Egyptian army under Pharaoh Hophra; for Nebuchadrezzar was compelled to raise the siege to meet the new enemy. The expression of the people's confidence that they had got from Yahweh all that they desired is seen in the indecent haste with which they reduced again to slavery the servants whom they had set free in order to obtain His favour (Jer 34^{8ff}).

The joy was short lived. The Egyptians were hardly a serious problem to Nebuchadrezzar, and soon left him free to resume the siege, which he did with energy. The strongly fortified city was defended by its inhabitants with the courage of despair, and held out a year and a half. During this time they suffered all the horrors of siege, famine, and pestilence. Jeremiah, who still predicted disaster, was arrested, and would have perished in his dungeon had it not been for the compassion of one of the king's slaves (Jer 38). Zedekiah, who believed in him, consulted him by stealth, but could not nerve himself to follow the advice he received. When at last the wall was breached, the king attempted to escape to the Jordan valley, hoping thus to gain the eastern desert. But he was overtaken and carried to Nebuchadrezzar. The victor, considering that forbearance had ceased to be a virtue, slew the captive king's children before his eyes, then blinded the king himself and carried him away in chains to Babylon. The kingdom of Judah had come to an end (2 K 25^{4ff}). H. P. S.

ZEEB.—See OREB AND ZEEB.

ZELA.—A town of Benjamin, Jos 18^{28} (AV, RV **Zelah**); perhaps this name should be joined to the following name, as in LXX, giving **Zela-ha-eleph.** Saul and Jonathan were buried in Zela, 2 S 21^{14} (AV **Zelah**). It is perhaps modern, *Kh Ṣalaḥ*, NW. of Jerusalem.

ZELAH, Jos 18^{28} (AV, RV), 2 S 21^{14} (AV).—See ZELA.

ZELA-HA-ELEPH.—See ZELA.

ZELEK.—One of David's heroes, 2 S 23^{37}, 1 Ch 11^{39}.

ZELOPHEHAD.—A Manassite who died during the wilderness journeyings, leaving no male issue. His five daughters successfully asserted their claim to the inheritance of their father, Nu 26^{33} 27^{1-7} 36^{2-12}, Jos 17^{3}, 1 Ch 7^{15}.

ZELOTES, Lk 6^{15}, Ac 1^{13} (AV)=RV and RSV **Zealot** (q.v.).

ZELZAH.—A place in Benjamite territory, mentioned only in 1 S 10^{2} as the site of Rachel's tomb. This stood in the neighbourhood of Bethlehem, Gn 35^{19f}. Zelzah is quite unknown, and neither LXX nor Vulgate understood it as a place-name, though neither knew what it meant.

ZEMAR.—A Phoenician city mentioned with Sidon and Arvad in Ezk 27^{8} (so RSV, conjecturally emending the Heb., which reads 'Thy wise men, O Tyre,' as AV, RV). From this city the **Zemarites** (q.v.) were named. Abel identifies it with *Tell Kazel*, while others have suggested *Ṭabbat el-Ḥammām*, slightly more to the N.

ZEMARAIM.—A city of Benjamin, near Bethel, Jos 18^{22}. It probably gave its name to Mount Zemaraim, 2 Ch 13^{4}. It is probably modern *Râs ez-Zeimarah*, near Ophrah.

ZEMARITE, THE.—A collective designation of one of the Canaanite communities in Gn 10^{18}, 1 Ch 1^{16}, named along with the Arvadite, and therefore presumably Northern Phoenicia. They lived in the city of **Zemar** (q.v.), Ezk 27^{8}.

ZEMIRA, 1 Ch 7^{8} (AV).—See ZEMIRAH.

ZEMIRAH.—A son of Becher, 1 Ch 7^{8} (AV **Zemira**).

ZENAN.—A town of Judah in the lowland, Jos 15^{27}. It is possibly *'Araq el-Kharba*, W. of Lachish.

ZENAS.—A lawyer whom St. Paul asks Titus to send to him from Crete, with Apollos (Tit 3^{13}). The name is perhaps a contraction from *Zenodorus*.

ZEPHANIAH.—1. The prophet (see next article). **2.** A Kohathite, 1 Ch 6^{36}. **3.** Son of Maaseiah the priest in Jerusalem in the time of Zedekiah the king and Jeremiah the prophet, Jer 21^{1} $29^{25, 29}$ 37^{3}. As next in rank to Seraiah, grandson of Hilkiah (1 Ch 6^{14}), Zephaniah is called *second priest*, 2 K 25^{18}. On the occasion of the final overthrow of Jerusalem he was put to death at Riblah, Jer 52^{24ff}. **4.** The father of one Josiah in Babylon, Zec $6^{10, 14}$.

ZEPHANIAH is the title of the ninth section of the Hebrew collection of the prophetic literature, entitled 'The Twelve Prophets,' which was probably compiled in the 3rd cent. B.C. Like other sections of this work it contains both earlier and later materials, though these cannot always be separated from one another with certainty. In the main the Book of Zephaniah consists of a prophecy of judgment delivered by Zephaniah about 627 B.C.

1. The prophet.—According to the title (1^{1}) Zephaniah prophesied in the reign of Josiah (639–608 B.C.). Since the allusions in ch 1 point to the continuance unchecked of false worships such as those of 'the host of the heavens' which had prevailed under the previous kings Manasseh and Amon we may infer that Zephaniah prophesied before the Reformation of 621 B.C. Two further inferences with regard to Zephaniah are justifiable if, as is probable, the great-great-grandfather of Zephaniah was *king* Hezekiah (1^{1}; cf *Expositor*, July 1900, pp. 76–80): (1) Zephaniah was of royal descent; (2) Like Jeremiah (Jer 1^{6}) Zephaniah when he began to prophesy was a young man—say of some twenty-five years.

2. The Book.—The book of Zephaniah ought not to be read as a continuous whole. 1^{2}–2^{3} may be regarded as a genuine prophecy of Zephaniah save for minor additions, but 2^{4-15} appears to be an insertion formed according to the usual scheme of setting oracles against the nations between oracles of judgment and promise to the prophet's own people. In its present form 1^{2}–2^{3} predicts as near at hand a judgment that is to affect the whole world (in v.^{18} 'the whole land' [AV] is to be translated 'the whole earth' [so RSV]) and it describes in detail how it will affect Judah and summons that people to a solemn repentance (2^{1-3}). The ground of judgment in the case of Judah is found in the prevalence of false worship (1^{4-6}), of foreign fashions (1^{8f}), and disregard of Yahweh (1^{12}). According to the general opinion Zephaniah, like Jeremiah, who was prophesying at the same time, expected the Scythians to be the instruments of this judgment: at this time these hordes of barbarians were pouring down from the highlands of Asia.

Ch. 3 contains (1) a description of the sins of Jerusalem (vv.$^{1-7}$), parallel to ch. 1 and particularizing rather different sins, or a prophetic description of Jerusalem at a later date: (2) a description of a universal judgment from which only the godly remnant of Judah will escape (vv.$^{11-13}$); (3) a description of the glory of the Jews after Yahweh has delivered them from captivity (vv.$^{14-20}$). Pfeiffer holds little if anything in this chapter can be from Zephaniah. Sellin, on the other hand, accepts almost

the whole chapter. Eissfeldt judges vv.1-13 with the exception of vv.8-10 to be by the prophet while vv.14-17 may also be genuine. Vv.18-20 must be assigned to the post-exilic period.

It seems clear that Zephaniah, like the prophets of the 8th cent. and his own contemporary Jeremiah, was primarily a prophet of judgment to come upon his own people. In this respect he differed from two prophets of approximately the same period, Nahum and Habakkuk, both of whom probably prophesied after the Reformation of 621 B.C. Nahum is concerned entirely with judgment on Assyria while Habakkuk is perplexed by what to Zephaniah might have appeared the fulfillment of his prophecy—the present troubles of Judah. Zephaniah marks no new departure in prophetic activity or thought, but by his moral earnestness, and his insistence on the need for single-hearted devotion to the demands of Yahweh for righteousness, he performed for his own generation the service rendered a century earlier by Isaiah, whose influence on his thought and teaching is obvious (cf 1$^{14-17}$ with Is 2^{12f}). G. B. G.—J. Pn.

ZEPHATH.—See HORMAH.

ZEPHATHAH.—A valley near Mareshah, mentioned in 2 Ch 14^{10}. But LXX reads 'north of' for this word, in which case the valley 'north of Mareshah' would be the valley of Elah (q.v.). Zephathah is otherwise unknown.

ZEPHI.—A son of Eliphaz, one of the dukes of Edom, 1 Ch 1^{36}; called **Zepho** in Gn 36$^{11, 15}$.

ZEPHO.—See ZEPHI.

ZEPHON.—A Gadite, Nu 26^{15}; called **Ziphion** in Gn 46^{16}. The gentilic **Zephonites** occurs in Nu 26^{15}.

ZER.—A fortified city of Naphtali, Jos 19^{35}. Its location is unknown.

ZERAH ('shining').—**1.** One of the sons of Reuel, Gn 36$^{13, 17}$, 1 Ch 1^{37}. The name appears again as that of the father of Jobab, one of the early kings of Edom, Gn 36^{33}, 1 Ch 1^{44}. **2.** The younger-born of the twin sons of Judah by Tamar, his daughter-in-law, Gn 38^{30} (AV **Zarah**). He gives his name to the **Zerahites**, Nu 26^{20} (AV **Zarhites**). Of this family was Achan the son of Zabdi, Jos 7^{1}, or Zimri, 1 Ch 2^{6}. Zerah's sons are mentioned in 1 Ch 9^{6}, and Pethahiah (Neh 11^{24}) is one of his descendants. He finds a place in the genealogy of our Lord, Mt 1^{3} (AV **Zara**). **3.** A son of Simeon, and the founder of a family of **Zerahites** (AV **Zarhites**) within that tribe, Nu 26^{13}; also called **Zohar**, Gn 46^{10}, Ex 6^{15}. **4.** A Levite name, borne by a Gershonite, 1 Ch 6^{21}, and by a Kohathite, 1 Ch 6^{41}. **5.** The name of an Ethiopian—or, more probably N. Arabian—who invaded Judah in the reign of Asa (2 Ch 14$^{9-15}$). The story of this invasion is unknown to secular history, and rests solely on the authority of the Chronicler. There has been much controversy as to its historicity, and the question is still involved in obscurity. In any case the numbers in the text of Chronicles (580,000 men in Asa's army, 1,000,000 in Zerah's) are incredibly large.

ZERAHIAH.—**1.** An ancestor of Ezra, Ezr 7^{4}; in 1 Es 8^{2} (AV, RV; RSV omits) he is called **Zaraias**, and in 2 Es 1^{2} **Arna**. **2.** The father of Eliehoenai, one of the returned exiles, Ezr 8^{4}, 1 Es 8^{31} (RSV; AV, RV **Zaraias**).

ZERAIAH.—One who returned with Ezra, 1 Es 8^{34} (AV, RV **Zaraias**); called **Zebadiah** in Ezr 8^{8}.

ZERDAIAH.—A Jew who had married a foreign wife, 1 Es 9^{28} (AV **Sardeus**, RV **Zardeus**); in Ezr 10^{27} he is called **Aziza**.

ZERED.—The torrent-valley (*naḥal*) of Zered is named in the itinerary of Israel's journeyings, Nu 21^{12} (AV **Zared**), immediately prior to their crossing of the Arnon, and in Dt 2^{13} as the point that marked the close of the thirty-eight years' wanderings. It is the modern *Wâdī el-Ḥesâ*.

ZEREDA, 1 K 11^{26} (AV).—See ZEREDAH, **1.**

ZEREDAH.—**1.** The Ephraimite city in which Jeroboam was born, 1 K 11^{26} (AV **Zereda**); probably modern *Deir Ghassâreh*. **2.** A city mentioned in 2 Ch 4^{17} (AV **Zeredathah**). The parallel passage in 1 K 7^{46} has **Zarethan**, which is probably correct.

ZEREDATHAH, 2 Ch 4^{17} (AV).—See ZEREDAH, **2.**

ZERERAH.—A place mentioned in Jg 7^{22} (AV **Zererath**). It is probable that this is the same as **Zeredah**, **2** (q.v.), and that both should be identified with **Zarethan** (q.v.).

ZERERATH, Jg 7^{22} (AV).—See ZERERAH.

ZERESH.—The wife of Haman, Est 5$^{10-14}$ 6^{13}.

ZERETH.—A Judahite, 1 Ch 4^{7}.

ZERETH-SHAHAR.—A Reubenite town, Jos 13^{19} (AV **Zareth-shahar**). It is probably modern *Zārât*.

ZERI.—See IZRI.

ZEROR.—An ancestor of Saul, 1 S 9^{1}.

ZERUAH.—The mother of Jeroboam, 1 K 11^{26}.

ZERUBBABEL (probably='shoot of Babylon': also **Zorobabel** in Apocrypha AV, RV and NT AV).—The son of Shealtiel (1 Ch 3^{17} Pedaiah), grandson of Jehoiachin, king of Judah, and appearing in the genealogies of Jesus as a direct ancestor (Mt 1^{12f}, Lk 3^{27}). He was the leader of one of the bands that returned from the Exile (Ezr 2^{2}, Neh 7^{7}) and was at one time governor (*pehāh* of Judah (Hag 1^{1} etc.). On the question of his relationship to **Sheshbazzar**, see SHESHBAZZAR.

He was exhorted, with Joshua the high priest, to rebuild the Temple (Hag 1^{1ff} 2^{1ff}; cf Ezr 5^{1ff}) and particularly marked out for this task by Zechariah (4$^{6-10}$ 6^{12f}). The Book of Ezra records the difficulties which met the builders from those who questioned their authority to build (Ezr 5^{3ff}), but appeal to Darius revealed that Cyrus had issued a decree authorizing the building, and the work was then brought to a successful conclusion (5^{6}–6). The name of Zerubbabel does not appear in the narrative of the completion of the Temple; nor does that of Joshua, though Haggai and Zechariah are both mentioned (Ezr 6$^{13-15}$). This silence has led to much speculation about Zerubbabel's fate, and not a few scholars have concluded that he was involved in an act of rebellion which led to his removal or death. Zec 6, however, strongly suggests that he did complete the work. Alternative explanations may be simply that his term of office expired, or that he died before the Temple was completed: his age at the time is unknown, but as grandson of Jehoiachin (who was 18 years of age in 597 B.C.), he could have been nearly sixty years of age. The Biblical record contains many examples of such sudden disappearances, leaving the reader uninformed concerning the outcome of events.

The view that Zerubbabel was engaged in rebellion has been thought to find support in Hag 2$^{20-23}$, which designates him as the 'servant of the LORD' and as a 'signet,' *i.e.* executive officer, in a time of upheaval. In Zec 3^{8} and 6^{12ff}, he is clearly designated 'the Branch' (see BRANCH), and reference to a crown might also imply political aspirations. The text in Zec 6 has probably been adapted subsequently to give greater prominence to the high priest. The functions of 'the Branch' are described in terms which indicate hope of an age of peace and well-being, with guilt removed from the land. Nothing in the two prophetic books exhorts to political action, and indeed Zec 4^{6} definitely indicates that the deliverance is to be a Divine action (cf Hag 2), not the result of human rebellion.

Ezr 3^{8} appears to place Zerubbabel's activity in the early years of the reign of Cyrus. But it is not easy to reconcile this with 5^{2}. If both are regarded as historical, then presumably Zerubbabel on the early occasion was in a subordinate position to Sheshbazzar, but it seems more probable that the Chronicler has ascribed to Zerubbabel the earlier stage of the activity which should actually have belonged to Sheshbazzar (cf Ezr 5^{16}).

In 1 Es 3–5, Zerubbabel plays an important part in a contest of wits at the court of Darius I., but it seems very probable that the identification of the hero with

Zerubbabel is not original to the tale, which appears to have been taken over from the earlier sources, given a decided Jewish slant, and then applied to this situation. The mission of Zerubbabel to Jerusalem is here made the sequel to his winning the king's favour in this contest. W. O. E. O.—P. R. A.

ZERUIAH.—The mother of David's officers Abishai, Joab, and Asahel, who are always referred to as 'sons of Zeruiah.' The father's name is never mentioned, and he may have died early; or the mother may have been so remarkable a woman that her husband's name was not preserved; or we have a survival of the ancient custom of tracing kinship through the female line.

In 1 Ch 2^{16} Zeruiah and Abigail are called 'sisters of the sons of Jesse,' but in 2 S 17^{25} Abigail is called the daughter of Nahash. It seems more probable that for *Nahash* in 2 S 17^{25} we ought to read *Jesse*, than that Jesse's wife had previously been married to Nahash the Ammonite. According to this view, Zeruiah would be the daughter of Jesse and sister of David. W. F. B.

ZETHAM.—A Gershonite Levite, 1 Ch 23^{8} 26^{22}.

ZETHAN.—A Benjamite, 1 Ch 7^{10}.

ZETHAR.—A eunuch of king Ahasuerus, Est 1^{10}.

ZEUS, the ancient Greek 'god of the bright blue sky'—and also of the dark thunder clouds—the 'father of gods and men,' as often in Homer, is the only Greek god whose Indo-European origin is unquestioned. He was not the Creator of the world, but its sovereign ruler. The Roman god *Iuppiter* (*Diou-pater*, 'sky father') was thought by the Romans to correspond in attributes with the Greek god Zeus, and hence the two were identified. In modern times the name Zeus has been translated rather loosely as 'Jupiter' (*e.g.* 2 Mac 6^{2}); the RSV correctly uses the Greek word. The name *Zeus* in fact corresponds with the first syllable of Jupiter, and suggests the ruler of the celestial firmament, the one who gives light and causes rain, thunder, lightning, and other natural phenomena in the sky.

He was imagined to have usurped the authority of his father Kronos and thus to have become the chief and ruler of all other gods. As such he was worshipped all over the Greek world. The case of Ac 14^{12f} may be further complicated, if it was not the Greek Zeus who was referred to but the native supreme god of the Lycaonians—who was assumed by the author of Acts to correspond, as their chief god, to the Greek Zeus. But at least Luke did not hesitate to accept the identity, and we can scarcely go behind his narrative. All we know of this god is that his temple at Lystra was outside the city wall (Ac 14^{13}), and that Barnabas, as the big silent man, was taken for him. In Ac 19^{35} the term rendered 'from Jupiter' in AV and RV means simply 'from the sky' (so RSV). A. So.—F. C. G.

ZIA.—A Gadite, 1 Ch 5^{13}.

ZIBA.—A servant, probably a freedman, of Saul. He appears before David (2 S 9$^{1-11}$), possessing fifteen sons and twenty servants, and is consulted as to the existence of any members of the house of Saul. He informs David of the retreat of **Mephibosheth**, to whom David restores the lands of his father and appoints Ziba steward. On David's flight from Jerusalem (2 S 16$^{1-4}$) Ziba followed him with provisions, and accused Mephibosheth of treachery. He received a grant of his master's lands, but on David's return Mephibosheth was able to clear himself and was allowed to retain a half (2 S 19$^{24-30}$). W. F. B.

ZIBEON.—See ANAH.

ZIBIA.—A Benjamite, 1 Ch 8^{9}.

ZIBIAH.—The mother of Joash of Judah, 2 K 12^{1}, 2 Ch 24^{1}.

ZICHRI.—**1.** A grandson of Kohath, Ex 6^{21}. **2, 3, 4, 5.** Four Benjamites, 1 Ch 8$^{19, 23, 27}$, Neh 11^{9}. **6.** An Asaphite, 1 Ch 9^{15}; called **Zabdi** in Neh 11^{17}. **7.** A descendant of Eliezer, 1 Ch 26^{25}. **8.** A Reubenite, 1 Ch 27^{16}. **9.** A Judahite, 2 Ch 17^{16}. **10.** Father of a captain in Jehoiada's time, 2 Ch 23^{1}. **11.** A mighty man of Ephraim, 2 Ch 28^{7}. **12.** A priest, Neh 12^{17}.

ZIDDIM.—A fortified city of Naphtali, Jos 19^{35}. It is possibly *Ḥaṭṭîn el-Qadîm*, now *Kefar Ḥiṭṭîm*.

ZIDKIJAH, Neh 10^{1} (AV).—See ZEDEKIAH, **4.**

ZIDON.—See SIDON.

ZIF, 1 K 6$^{1, 37}$ (AV) = **Ziv** (see TIME).

ZIHA.—A family of Nethinim (q.v.), Ezr 2^{43}, Neh 7^{46} 11^{21}, 1 Es 5^{29} (AV, RV **Esau**).

ZIKLAG.—A town given by Achish king of Gath to the outlawed David, 1 S 27^{6} 30^{1ff}, 2 S 1^{1} 4^{10}, 1 Ch 12$^{1, 20}$. In the national register of cities it is assigned to Judah (Jos 15^{31}) or to Simeon (19^{5}), and is mentioned also in the post-exilic list (Neh 11^{28}). It is possibly modern *Tell el-Khuweilfeh*.

ZILLAH.—See ADAH.

ZILLETHAI.—**1.** A Benjamite family, 1 Ch 8^{20} (AV **Zilthai**). **2.** A Manassite who joined David at Ziklag, 1 Ch 12^{20} (AV **Zilthai**).

ZILPAH.—A slave-girl given to Leah by Laban, Gn 29^{24}, and by her to Jacob as a concubine, 30^{9}; she was the mother of Gad and Asher, vv.$^{10-13}$ 35^{26} 37^{2} 46^{18}. Cf TRIBES OF ISRAEL.

ZILTHAI.—AV form of ZILLETHAI (q.v.).

ZIMMAH.—A family of Gershonite Levites, 1 Ch 6$^{20, 42}$, 2 Ch 29^{12}.

ZIMRAN.—A son of Abraham and Keturah, Gn 25^{2}, 1 Ch 1^{32}.

ZIMRI.—**1.** A prince of the tribe of Simeon, slain by Phinehas, Nu 25$^{6-14}$, 1 Mac 2^{26} (AV **Zambri**). **2.** Son of Zerah, and grandfather or ancestor of Achan, 1 Ch 2^{6}; called **Zabdi** in Jos 7$^{1, 17f}$. **3.** A Benjamite, 1 Ch 8^{36} 9^{42}. **4.** See next article. **5.** 'All the kings of Zimri' are mentioned in the same verse, Jer 25^{25}, with those of Elam and the Medes as among those who were to drink the cup of the fury of the Lord. There is considerable doubt as to what place is meant, or even as to the genuineness of the phrase. It has been suggested that it may stand for **Elam** by Atbash (see SHESHACH).

ZIMRI seized the throne of Israel by the murder of his king Elah, but held it only seven days before **Omri**, another general of the army, asserted himself as claimant. Omri, as is well known, was the stronger, and established himself after disposing of two opponents. The characterization of Zimri, as one who caused Israel to sin by following in the ways of Jeroboam, is due to the author's desire to pronounce judgment on all the kings of the Northern Kingdom, 1 K 16$^{9-20}$. Jezebel scornfully addressed Jehu as 'thou Zimri' (2 K 9^{31}), perhaps with the suggestion that his claim to the throne would be no more lasting.

ZIN (Nu 13^{21} 20^{1} 27^{14} 33^{36} 34^{3f}, Dt 32^{51}, Jos 15$^{1, 3}$).—A region traversed by the Israelites in their desert wandering after the Exodus and before and after the Sinai episode. In Nu 13^{21} 'the wilderness of Zin' is named as the southern limit from which the spies set out to explore Palestine. In Nu 33^{36} it is given as one of the stations in the desert wandering. The brief note 'the same is Kadesh' serves to explain the following verse ('And they journeyed from Kadesh'). Nu 20^{1} records the arrival of the children of Israel 'in the wilderness of Zin' in the first month (the year is not stated), and the following vv.$^{2-13}$ relate the events which took place at Meribah. The remaining two passages, Nu 27 and Dt 32, which are duplicates, refer to the punishment of Moses for his offence at 'the waters of Meribah of Kadesh in the wilderness of Zin.' Hence it may be inferred that the wilderness of Zin was the region round Kadesh, though the later sources in Nu 34^{3f} and Jos 15$^{1-3}$, describing the S. boundary of Canaan and Judah respectively, obviously include the W. escarpment of the *Wâdī ʿArabah*.

The close similarity between the events recorded in Ex 17 and Nu 20, and other points of resemblance

between occurrences before and after Sinai suggest the question whether Sin and Zin respectively of the pre-Sinai and post-Sinai narrative may be variations developed in the course of tradition. Cf PARAN.

ZINA.—See ZIZAH.

ZION (AV **Sion** in NT).—The name of the fortress of the pre-Israelite city of Jerusalem (2 S 5[7]), which was conquered by David and made his capital. The name is frequently used in the Psalms and the Prophets as a synonym for Jerusalem. For the location of David's city see JERUSALEM, I, 4.

ZIOR.—A town in the hill-country of Judah, Jos 15[54], probably modern *Sa'ir*, NNE. of Hebron.

ZIPH.—**1.** A Calebite, 1 Ch 2[42]. **2.** A son of Jehallelel, 1 Ch 4[16]. **3.** A city of Southern Judah, Jos 15[24]; probably modern *Kh. ez-Zeifeh*. **4.** A city in the hill-country of Judah, Jos 15[55]; fortified by Rehoboam, 2 Ch 11[8]. The wilderness of Ziph was one of the refuges of David when fleeing from Saul, 1 S 23[14f, 24] 26[2]. The gentilic name **Ziphites** occurs in 1 S 23[19] 26[1], Ps 54 [Heading]. Ziph is modern *Tell Zif*, SE. of Hebron.

ZIPHAH.—A son of Jehallelel, 1 Ch 4[16].

ZIPHIMS, Ps 54 [Heading] (AV)=**Ziphites** (see ZIPH, 4).

ZIPHION.—See ZEPHON.

ZIPHRON.—An unknown place on the northern frontier of Canaan, Nu 34[9].

ZIPPOR ('sparrow'). — Father of Balak, Nu 22[2, 4, 10, 16] 23[18], Jos 24[9], Jg 11[25].

ZIPPORAH ('bird').—One of the daughters of the priest of Midian, Ex 2[21f], wife of Moses and mother of Gershom. According to 18[3] she had another son. For the incident of Ex 4[24ff] see MOSES.

ZITHRI, Ex 6[22] (AV).—See SITHRI.

ZIV.—See TIME.

ZIZ.—The ascent of Ziz is mentioned in 2 Ch 20[16] as the way by which the allied Moabites, Ammonites and Meunim made their way up from En-gedi to attack Jehoshaphat at Jerusalem. It is modern *Wâdī Ḥaṣāṣah*, SE. of Bethlehem.

ZIZA.—**1.** A Simeonite chief, 1 Ch 4[37]. **2.** A son of Rehoboam, 2 Ch 11[20].

ZIZAH.—A Gershonite Levite, 1 Ch 23[11]; called **Zina** in v.[9], probably by a copyist's slip.

ZOAN.—A city in the NE. of Lower Egypt. It is not mentioned in Genesis, but in Nu 13[22] we are told that Hebron was built seven years before Zoan. In Ps 78[12, 43] 'the fields of Zoan' are named as the place where the miracles associated with the deliverance from Egypt took place. In Is 19[11, 13] 30[4], Ezk 30[14] it is referred to almost as the capital of Egypt, perhaps as being the royal city nearest the frontier. Zoan corresponds to an Egyptian form which became **Tanis** in Greek. It is now *Ṣân el-Ḥagar*, which has been excavated by Montet. It was once known as *Avaris* (Egypt. *Ḥa-w'rt*), which was the Hyksos capital. In the Ramesside period, in the reign of Seti I., it was refortified, and throughout the reign of Rameses II. it continued to be a royal residence and bore the name *Per-Ramesse* (cf **Raamses** in Ex 1[11]). Rameses II. placed in the temple there a colossus of himself in granite, the greatest known, which Petrie calculated from the fragments to have measured 92 feet in height.

ZOAR.—See PLAIN [CITIES OF THE], LOT.

ZOBA, 2 S 10[6ff] (AV).—See ZOBAH.

ZOBAH.—An Aramaean state, the most powerful of the coalition of 'Syrian' states which made war upon David while he was engaged with the Ammonites, 2 S 8[3ff] 10[6ff] (AV **Zoba** in latter), 1 Ch 18[3ff] 19[6ff]. In the time of Solomon, Rezon, a fugitive from the king of Zobah, established himself as king in Damascus. In 1 S 14[47] it is said that Saul fought against Zobah, but this is probably a reflection back to Saul from David's campaign. The exact location of Zobah is not known, but it may have lain between Hamath and Damascus.

ZOBEBAH.—A Judahite, 1 Ch 4[8].

ZOHAR ('tawny').—**1.** Father of Ephron the Hittite, Gn 23[8] 25[9]. **2.** A Simeonite family, Gn 46[10], Ex 6[15]; in Nu 26[13] and 1 Ch 4[24] called **Zerah** (q.v.). **3.** A Judahite family, according to the *Ḳerê* of 1 Ch 4[7] (so AV of 1611). The *Ḳethîbh* is incorrectly reproduced in modern editions of AV as **Jezoar**; RV, RSV have **Izhar** (q.v.).

ZOHELETH, STONE OF.—An object mentioned in connexion with the attempt of Adonijah upon the throne of Israel, 1 K 1[9]. It was near the spring **En-rogel**, which is supposed to be the 'Virgin's Fountain,' in the Kidron valley. It was evidently a sacred rock or stone, and in its neighbourhood was a shrine. The name is usually taken to mean 'Serpent's stone' (so RSV), and while this is not certain there is some reason to think it is sound. The shrine was closely connected with the shrine in Jerusalem where Zadok was priest (cf 2 S 17[17ff], from which it appears that when Zadok's sons were missed in Jerusalem, it was at once thought they might have gone to En-rogel). The **Brazen Serpent** later destroyed by Hezekiah (2 K 18[4]), popularly supposed to date back to Moses, was probably a Jebusite sacred object before David captured Jerusalem, and it may well be that Zoheleth was a natural serpent-like stone near En-rogel, which was venerated as sacred, while the Brazen Serpent served to represent the deity it stood for in the associated shrine inside the city.

H. L. W.—H. H. R.

ZOHETH.—A descendant of Judah, 1 Ch 4[20].

ZOPHAH.—An Asherite, 1 Ch 7[35f].

ZOPHAI.—An ancestor of Samuel, 1 Ch 6[26]; called **Zuph** in v.[35] and 1 S 1[1].

ZOPHAR.—The third in order of Job's three friends, described as a **Naamathite**, Job 2[11] etc. The LXX calls him 'king of the Minaeans.' He may have been the chief of a tribe on the borders of Idumaea; cf JOB.

ZOPHIM.—The field of Zophim' was one of the spots to which Balak took Balaam to view Israel, Nu 23[14]. It is questionable whether we have here a proper name; the Hebrew expression means literally 'field of viewers *or* lookers out.' Such 'places of watching' were naturally situated frequently on the tops of hills. The location must have been somewhere in the neighbourhood of Mount Pisgah. For **Ramathaim-zophim** see RAMAH, 4.

ZORAH.—A town allotted to Judah, according to Jos 15[33] (AV **Zoreah**); but elsewhere spoken of as Danite, 19[41], Jg 18[2, 8, 11]. It is usually mentioned with Eshtaol. It was the birthplace of Samson, Jg 13[2, 25], and he was buried between Zorah and Eshtaol, 16[31]. It was fortified by Rehoboam, 2 Ch 11[10]; it was later repeopled after the exile, Neh 11[29] (AV **Zareah**). The gentilic name **Zorathites** occurs in 1 Ch 2[53] 4[2] (on 2[54] see ZORITES). Zorah is the modern *Ṣar'ah*, on the northern side of the **Valley of Sorek** (q.v.), opposite **Beth-shemeth** (q.v.), which lies on the southern side.

ZOREAH, Jos 15[33] (AV).—See ZORAH.

ZORITES.—A gentilic found only in 1 Ch 2[54], where it should probably be corrected to **Zorathite.** See ZORAH.

ZOROASTRIANISM.—See MAGI.

ZOROBABEL.—AV and RV form of Zerubbabel in the Apocrypha, and AV form in NT.

ZORZELLEUS.—See BARZILLAI, 1.

ZUAR.—Father of Nethanel the head of the tribe of Issachar, Nu 1[8] 2[5] 7[18, 23] 10[15].

ZUPH.—**1.** An ancestor of Samuel, 1 S 1[1], 1 Ch 6[35]; called **Zophai** in 1 Ch 6[26]. **2.** The land of Zuph, 1 S 9[5]; it probably derived its name from having been originally settled by the family of Zuph. The gentilic name **Zuphite**

probably underlies the name **Ramathaim-zophim** (q.v.) of 1 S 1[1]. No known site can be said to contain any certain trace of the name Zuph.

ZUR (' rock ').—**1.** A Midianite prince slain by the Israelites, Nu 25[15] 31[8], Jos 13[21]. **2.** A Gibeonite family settled at Jerusalem, 1 Ch 8[30] 9[36].

ZURIEL (' El is my rock ').—A Merarite chief, Nu 3[35].

ZURISHADDAI.—Father of Shelumiel, the chief of the tribe of Simeon, Nu 1[6] 2[12] 7[36, 41] 10[19].

ZUZIM.—One of the nations defeated by Chedorlaomer and his allies when they went against the cities of the plain, Gn 14[5]. It is described as being in **Ham** (q.v.). It is possible that they are the same as the **Zamzummim** (q.v.), but this does not help much, since they can no more be identified than the Zuzim.

ZUZIMS, Gn 14[5] (AV) = **Zuzim** (q.v.).
